

(b)(3)

27 March 1979

MEMORANDUM FOR THE RECORD

SUBJECT: [REDACTED] - MKULTRA Subproject 22

A letter was sent to [REDACTED] on 28 December 1978 asking for information about work he may have participated in or might know anything about at the University of Illinois, [REDACTED], and the Butler Health Center in Providence, R.I. as well as training courses conducted at Agency facilities or under Agency sponsorship. Because we received no reply to that letter I telephoned [REDACTED] on March 19, 1979. [REDACTED] seemed willing to cooperate and assist but said that he had not responded to my letter because he had been involved in a heavy teaching schedule at the time it arrived and had wanted to chat with the head of the University Counsel before answering. He said he would have that chat now and call back in a few days. When I didn't hear from him I telephoned again on 27 March 1979.

In the second conversation [REDACTED] said that the University Counsel had been fully occupied with a labor dispute on the University campus on the other side of town and there had been no opportunity to consult with him. [REDACTED] said he had our interests in mind and would consult the University Counsel at the earliest opportunity. He said that, after reviewing my letter again, he felt certain that there would be nothing he could tell us that would be helpful. I asked him if he had received substances for testing from [REDACTED] at Montana State University. He replied that the name of [REDACTED] meant nothing to him and he did not remember having anything to do with Montana State University. I asked him if the address 81 Bedford St. in New York City meant anything to him and he said it didn't ring any bells. I told him that our file indicated that he may have visited that address and we were interested in knowing whether he might recall anything about the visit or the manner in which those premises were used. He didn't deny that he might have been there but disclaimed any recollection of such a visit.

[REDACTED] acknowledged studying at the [REDACTED]. He recognized the name of [REDACTED] but knew nothing about any research that might have been done involving drugs. He knows nothing about work that might have been done at the [REDACTED] or the Butler Health Center in Providence, R.I. He did not recognize the names of [REDACTED].

I reminded [REDACTED] that our only interest was to identify individuals who might have been harmed by having been administered drugs without their knowledge or consent. [REDACTED] said he was certain he had no information that would be helpful to us. There seems to be no purpose in pursuing further the inquiry with [REDACTED]
