SECRET

MEMORANDUM FOR: Chief, DO/DOB

SUBJECT   : Radio Transmissions

1. I just learned that the commo section is using their equipment at 100 watts output to train personnel other than ours. At the present time transmissions are being made to ⬚ who is training a student in New York.

2. When I agreed to stick my neck out to alleviate a situation which was not critical to begin with; it was with the understanding, and agreement of you, ⬚, and me that 100 watts would be used for only DOB classes. This was done because of my committments to the Post Signal Officer wherein I agreed to call him in advance of each such broadcast to give him the duration and frequencies of each transmission. I also told him we would use 100 watts on a periodic basis only. These provisions were made known to you, ⬚

3. The following is not addressed to you--it is damned disgusting to know that there are those within the Agency who have such little regard for the career of an Army officer. When I said earlier, "I agreed to stick my neck out", I was not merely using a cliche--I used it in its literal sense. As far as the Post Commander of Fort Meade is concerned, I am the Commandant of TTEG and I alone am responsible for whatever this unit does or fails to do.

4. Of more importance to the Agency is the fact that these transmissions could cause TTEG to be restricted from future commo training and operations regardless of power output. Another fact to be considered is that the Post Signal Officer is also responsible for the telephone system. If he had cause to be unhappy with TTEG, I have no doubt that we would lose our privilege of letting the students place long-distance phone calls from here.

5. One unfortunate condition which exists in this area is the fact that I can exercise no control whatsoever in commo operations. I do not have the background or knowledge to know whether commo is on the air or not. They could tell me they are not broadcasting and show me their equipment, but still be broadcasting on something else without my knowledge.

6. I found out about this when I asked if ⬚ were around.

```
                   Commandant
                   Fort Meade Site (TTEG)
```
