Undersea Features

approved by the

UNITED STATES BOARD ON GEOGRAPHIC NAMES

Prepared in the

Geographic Names Division, U.S. Topographic Command
Coordinated and published by the Central Intelligence Agency
Washington, D.C. 20240, September 1969

APPROVED FOR RELEASE: 2007/02/20: CIA-RDP01-00707R000200020002-3

FOREWORD

Introduction

This gazetteer contains 1,775 official standard names for undersea features of the world, approved as of April 1, 1969 by the Board on Geographic Names (BGN) and the Secretary of the Interior for use by the United States Government. About 1,790 unapproved variant names are cross-referenced to the approved names. It is the first cumulative listing of standardized undersea feature names published by the BGN. It is issued to make the names available as widely as possible and to facilitate communication within the oceanographic community related to both the names and the designations of undersea features.

How the names are listed

The first section of this gazetteer is an alphabetized, cross-referenced list of all the names included. Unapproved variant names are cross-referenced to the approved names by use of the word "see." Users of the gazetteer should always refer to main entries for approved names. The second section lists the names within blocks bounded by parallels and meridians at 30-degree intervals shown on the frontispiece.

Designations

The second column of the gazetteer contains designations that identify the kind of feature to which the name applies. The designator term is usually the generic term in the approved name, but will differ when a generic that is not properly descriptive under BGN definitions is retained as part of a name in established usage. In names of features that constitute dangers to surface navigation, generics have been changed where necessary to make them properly descriptive and emphasize the danger.

The following are the designations and definitions currently used by the BGN. Designations not appearing in this gazetteer because no names of such features had been approved as of its date, are indicated by an asterisk (*).

**archipelagic apron*—a gentle slope with a generally smooth surface on the sea floor, particularly found around groups of islands or *seamounts*.

bank—an elevation of the sea floor located on a *continental (or island) shelf* and over which the depth of water is relatively shallow but sufficient for safe surface navigation.

basin—a depression of the sea floor more or less equidimensional in form and of variable extent.

canyon—a relatively narrow, deep depression with steep slopes, the bottom of which grades continuously downward.

**continental borderland*—a region adjacent to a continent, normally occupied by or bordering a *continental shelf*, that is highly irregular with depths well in excess of those typical of a *continental shelf*.

**continental rise*—a gentle slope with a generally smooth surface, rising toward the foot of the *continental slope*.

**continental (or island) shelf*—a zone adjacent to a continent or around an island, and extending from the low water line to the depth at which there is usually a marked increase of slope to greater depth.

continental (or island) slope—the declivity seaward from a shelf edge into greater depth.

cordillera—an entire mountain system including all the subordinate ranges, interior *plateaus* and *basins*.

escarpment—an elongated and comparatively steep slope of the sea floor, separating flat or gently sloping areas.

fan—a gently sloping, fan-shaped feature normally located near the lower termination of a *canyon*.

fishing area—used only once, to designate Suitcase Seamounts; this term has not been incorporated in the BGN list of standard terms and definitions.

fracture zone—an extensive linear zone of unusually irregular topography of the sea floor characterized by large *seamounts*, steep-sided or asymmetrical *ridges*, *troughs*, or *escarpments*.

gap—a steep-sided depression cutting transversely across a *ridge* or *rise*.

knoll—an elevation rising less than 1,000 meters (or 500 fathoms) from the sea floor and of limited extent across the summit.

**levee*—an embankment bordering one or both sides of a *sea-channel* or the low-gradient seaward part of a *canyon* or *valley*.

moat—an annular depression that may not be continuous, located at the base of many *seamounts* or islands.

plain—a flat, gently sloping or nearly level region of the sea floor.

plateau—a comparatively flat-topped elevation of the sea floor of considerable extent across the summit and usually rising more than 200 meters (or 100 fathoms) on all sides.

province—a region composed of a group of similar bathymetric features whose characteristics are markedly in contrast with surrounding areas. Used only once in this gazetteer, as a designation for Guadelupe Arrugado, an area characterized by subdued corrugations on a scale previously unreported. Arrugado has not been incorporated into the BGN standard term list.

reef—an offshore consolidated rock hazard to navigation with a least depth of twenty meters (or ten fathoms) or less.

ridge—a long, narrow elevation of the sea floor with steep sides and irregular topography.

rise—a long, broad elevation that rises gently and generally smoothly from the sea floor.

saddle—a low part on a *ridge* or between *seamounts*.

seachannel—a long, narrow, U-shaped or V-shaped shallow depression of the sea floor, usually occurring on a gently sloping *plain* or *fan*.

seamount—an elevation rising 1,000 meters (or 500 fathoms) or more from the sea floor, and of limited extent across the summit.

seamount chain—several *seamounts* in a line with bases separated by a relatively flat sea floor.

seamount group—several closely spaced *seamounts* not in a line.

seamount range—several *seamounts* having connected bases and aligned along a *ridge* or *rise*.

section of sea—used only once, to designate the Dangerous Ground in the South China Sea for which no approved term was appropriate; this term has not been included in the BGN standard term list.

**shelf edge*—the line along which there is a marked increase of slope at the outer margin of a *continental (or island) shelf*.

shoal—an offshore hazard to navigation with a least depth of twenty meters (or ten fathoms) or less, composed of unconsolidated material.

**sill*—the low part of the *ridge* or *rise* separating ocean *basins* from one another or from the adjacent sea floor.

slope—see *continental (or island) slope*.

spit—used only once, to designate Howell Hook, a feature shaped like a spit. However, the feature lies at a depth of 144 to 180 meters, and since no other such features at this depth have come to the Board's attention, the term has not been incorporated in the BGN list of undersea terms.

spur—a subordinate elevation, *ridge*, or *rise* projecting outward from a larger feature.

strath—a broad elongated depression with relatively steep walls located on a *continental shelf*. The longitudinal profile of the floor is gently undulating with greatest depths often found in the inshore portion.

tablemount—a *seamount* having a comparatively smooth flat top.

terrace—a bench-like structure bordering an undersea feature.

tongue—used only once, to designate Catoche Tongue, a lateral protrusion from an *island slope*; this term has not been incorporated in the BGN list of standard terms and definitions.

trench—a long, narrow and deep depression of the sea floor, with relatively steep sides.

trough—a long depression of the sea floor, normally wider and shallower than a *trench*.

valley—a relatively shallow, wide depression with gentle slopes, the bottom of which grades continuously downward. This term is used for features that do not have canyon-like characteristics in any significant part of their extent.

NOTE: "Deeps," which were really deep soundings rather than physical features, were once given names with "deep" as the generic term indicating the class of thing named and commonly with the ship's name as the specific term identifying the individual thing within the class. Deep soundings are now identified on charts by a notation of the ship making the sounding, the sounded depth, and the year rather than by name. All names including the word "deep" have been dropped, whether or not they are listed as cross-references.

Latitude and longitude

The third and fourth columns indicate geographic coordinates, with the longitude based on Greenwich. Coordinates serve only to identify the features named.

Locational references

Features such as reefs, shoals and banks can usually be identified on nautical charts that have long been published by official government agencies in various countries for navigational use. Index maps showing the area covered by each chart are readily available in catalogs available from the publishing agencies. For bathymetric features, however, it is usually necessary to consult relatively recent special charts issued by both government and private agencies. One that will be useful in locating many of the larger features named in this volume is:

H.O. Misc. 15,254, *The World*, 12 sheets, Naval Oceanographic Office. With the rapid accretion of new knowledge of the oceans, new features are being identified and named faster than charts can be revised to show them. Some are shown only on small maps in journal articles; still others have yet to appear in published material. It is not feasible to cite all the sources, nor to indicate in which category individual names fall. However, a general list of source material follows:

Maps and charts published by the following organizations:

1. Naval Oceanographic Office, Suitland, Maryland.
2. Hydrographic Department, British Admiralty, London.

3. Coast and Geodetic Survey, Washington, D. C.
4. Geological Survey, Washington, D. C.
5. Scripps Institution of Oceanography, University of California, La Jolla, California.
6. Lamont Geological Observatory, Columbia University, Palisades, New York.
7. Woods Hole Oceanographic Institution, Woods Hole, Massachusetts.
8. National Geographic Society, Washington, D. C.
9. American Geographical Society, New York, New York.

Periodicals

1. *Deep-Sea Research*, Pergamon Press, Oxford, England.
2. *Marine Geology*, Elsevier Publishing Company, Amsterdam, Netherlands.
3. *Bulletin of the Geological Society of America*, The Geological Society of America, New York, New York.
4. *Journal of Geophysical Research*, American Geophysical Union, Washington, D. C. 20037.

Books

1. Sailing directions by the Naval Oceanographic Office; pilots by Coast and Geodetic Survey and British Admiralty.
2. *The Encyclopedia of Oceanography*, edited by Rhodes W. Fairbridge; Reinhold Publishing Company, New York, New York, 1966.
3. *The Sea*, three volumes, M. N. Hill, general editor; Interscience Publishers, London, England, 1963.
4. *Submarine Geology*, second edition, by Francis P. Shepard; published by Harper and Row, New York, New York, 1963.
5. *Marine Geology*, by Ph. H. Kuenen; published by John Wiley and Sons Inc., New York, New York, 1950.
6. *The Floors of the Oceans; The North Atlantic*, by Heezen, Tharp and Ewing; published by the Geological Society of America, New York, New York, 1959.

P R E F A C E

All of the decisions by the Board on Geographic Names on these undersea names have been approved upon the recommendation of its Advisory Committee on Undersea Features. Present members of the Committee are Charles D. Rouse (Acting Chairman) and Fredrick Edvalson of the Naval Oceanographic Office, Miller J. Tonkel of the Coast and Geodetic Survey, Joshua I. Tracey, Jr. of the Geological Survey, and I. Eugene Wallen of the Smithsonian Institution. Meredith F. Burrill, Executive Secretary of the Board on Geographic Names, is a member ex-officio. Staff geographers Fred G. Alberts, William Lloyd and Boyd D. Peterson have assisted the Committee at various stages. Starting on January 9, 1963, the Committee has met about 100 times.

Past members and their affiliations at time of membership include: John V. Byrne, National Science Foundation; Joe S. Creager, National Science Foundation; John B. Hersey, Office of Naval Research; Harry S. Ladd, Geological Survey; John Lyman, National Science Foundation, later Bureau of Commercial Fisheries; H. W. Menard, Executive Office of the President; Harley D. Nygren, Environmental Science Services Administration; Roger S. Revelle, Department of the Interior; Harris B. Stewart, Jr. (the first Chairman), Coast and Geodetic Survey; and Lorne G. Taylor, Coast and Geodetic Survey.

Undersea name policies

BGN policies applied in the official standardization of the approved names in this gazetteer are as follows:

1. The Board will consider appropriate name proposals by United States nationals for undersea features in international waters.
2. The Board will consider name proposals for features under United States territorial waters on the same basis as other domestic names.

3. The Board will ordinarily approve names of undersea features beyond limits of the United States that are bestowed by other countries or nationals of other countries unless there is some conflict or other question. Generics in English, if appropriate to the feature, will be accepted; those in other languages will be translated.
4. Appropriate specific terms for names include, but are not limited to, the following:
 - a. Names, or specific terms of names, of associated features.
 - b. Descriptive terms, if properly descriptive of unique and verifiable characteristics.
 - c. Names of vessels from which undersea features have been discovered.
 - d. Surnames of persons associated with undersea exploration.
 - e. Names of organizations that have sponsored or supported oceanographic exploration, or institutions that have made contributions to this field of knowledge.
5. Names considered inappropriate include:
 - a. Names applied to similar features elsewhere.
 - b. Full names or unwieldy titles of individuals, institutions or organizations.
 - c. Names of commercial products or their manufacturers.
 - d. Names of individuals proposed because of relationship or friendship with the proponent.
6. Existing names that have been applied for many years may be accepted even though they do not coincide with the above policy.

Reporting of errors

It is requested that all who use this gazetteer aid in its correction for future editions by reporting errors to the Board on Geographic Names, Department of the Interior, Washington, D. C. 20240. A statement of the source of the correct information will be helpful.

Geographic names or their spellings do not necessarily reflect recognition of the political status of an area by the United States Government.
