## FOREWORD

This seven-volume gazetteer contains about 400,000 entries for places and features in the Union of Soviet Socialist Republics, including the Baltic States and certain former Japanese islands whose incorporation into the Soviet Union is not recognized by the U. S. Government.

The entries for the Habomai Islands and Shikotan-tō are the same as those contained in the gazetteer of Japan. In all other cases the names in this gazetteer supersede those in all earlier lists issued by the Board on Geographic Names for the areas covered.

Names herein include official and provisional standard names and unapproved variant names, the latter cross-referenced to the standard names. *Users of the gazetteer should always refer to main entries for approved names.*

The scale of map coverage varies between 1:100,000 and 1:1,000,000, depending upon the sources available. The average scale is larger in European than in Asian areas.

In compiling the gazetteer, sources dated between 1959-1970 were used, including all Russian name changes announced in *Vedomosti SSSR* and *Vedomosti RSFSR* through February 1970.

Most of the more important entities can be identified and located by the approved name or a recognizable variant of the approved name on political-administrative (oblast, ASSR, SSR) maps published by the Glavnoye Upravleniye Geodezii i Kartografii (Main Administration of Geodesy and Cartography).

### Interpretation of entries

Some of the information in the gazetteer is expressed in code numbers and letters explained below.

Name.—Approved standard names and unapproved variant names appear in the first column. The variant names are always cross-referenced to the standard names by use of the word "see." Where part of a name is underlined, the use of the non-underlined part is optional. Where two or more names

are approved for a feature, each is identified in parentheses and any or all may be used. Names that include specific and other elements (except names of populated places) are alphabetized by specific part; thus the name Mys Aachim is listed as Aachim, Mys. Those generic terms that are transposed are listed in the glossary below.

Except for names in Estonia, Latvia, Lithuania, the Habomai Islands, and Shikotan-tō, all approved names were derived from Russian Cyrillic sources using the BGN/PCGN 1947 Transliteration System for Russian Cyrillic as given on page ix. Place names in the area of Estonia and Latvia described by Soviet sources as a part of the Pskovskaya Oblast' have been transliterated from the Cyrillic alphabet. Roman-alphabet Estonian, Latvian, and Lithuanian names or spellings were given preference in the corresponding Baltic areas. Approved names in the Habomai Islands and Shikotan-tō were transcribed from Japanese sources by the Modified Hepburn system.

Diacritical marks are illustrated in the following words: Posëlok, Pristan', Raz'yezd, Jōgi, Kuçi, Bergi, Bārta, Ilanka, Ežeras, Upë, and Stor-Tjukā. With the exception of the Latvian Ģ, which should be written ģ in lower case, the same marks are to be used whether the names are written in capitals or lower-case letters.

In hyphenated names for the Habomai Islands and Shikotan-tō, the word following a hyphen should be in lower case when a combination of capital and lower-case lettering is used. In all other instances words following hyphens are capitalized.

Designation.—The second column contains designations or abbreviations of designations, as follows:

1. The Cyrillic letter e is transliterated as ye initially, after vowels, and after ʹ and ʹ; elsewhere as e.
2. The letter ё is not considered a separate letter of the Russian Cyrillic alphabet, and the dieresis is often omitted. When printed in Cyrillic as ё, it is transliterated as yë or ye initially, after vowels, and after ʹ and ʹ; elsewhere as ʹ or e; that is, the use of the dieresis is optional.
3. Both ж and ы are transliterated as y, but these letters rarely occur initially and the likelihood of confusion is slight; the ж usually occurs only as the second part of diphthongs, while the ы occurs before other vowels or between consonants.
4. This system provides no means of distinguishing between the transliterations of the Cyrillic letter и and the и letter combination; however, the latter occurs infrequently.
