The Geographic Area program is built upon the missions and functions of the three major components. We are attempting to provide a geographic research capability responsive to rapidly changing intelligence needs, a cartographic activity capable of producing accurate and meaningful effective maps and charts, and a map library reference service providing which produces provides intelligence personnel with the most recent and best map coverage available anywhere in the world. The component ~~parts~~ of our program related to the above objectives are as follows:

*OK to type!*

D R-A-F-T  
JAB:jmc  
22 June 1960

TO: Assistant Director, ORR  
FROM: Chief, Geographic Research  
SUBJECT: Briefing Notes on Geographic Area activities for FY 1961

*Smart*

The Geographic Area program naturally ~~breaks down~~ <sup>divided itself</sup> into three major segments related to the three components' missions and functions, as follows:

A. Geography Division

1. Geographic research will continue ~~to be devoted to the~~ <sup>its</sup> direct support of other intelligence programs. The largest single activity will be that in support of operational planning for clandestine collection and field activities. Sizeable parts of the research effort will also ~~be devoted~~ <sup>be devoted</sup> to the NIS program, special overt collection programs including  studies related to major intelligence targets, and support of analyses and estimates in the field of Soviet science and military capabilities (2) In fulfillment of our own intelligence responsibilities, we will continue the evaluation of Soviet accomplishments in the fields of mapping and geodesy, analysis of geographic factors involved in situations of special concern to United States plans and policy, and reporting on the geographic base of significant changes in areas of intelligence concern, as well as a comprehensive study of the role of ~~Soviet~~ <sup>SINO-SOVIET</sup> geographers in economic, military and political planning in the USSR, ~~and~~ the Satellites *and China*.

3. Although geographic production is ~~mostly~~ <sup>largely</sup> unprogrammed, it is anticipated that more research effort will be required on Southeast Asia, Trans-Saharan Africa, and Latin America. More production may be required in support of Guided Missiles, nuclear energy, and Polar activities intelligence.

4. The Soviet urban area analysis program will be sizeable and may well increase, given the possible development of new leads and sources.

5. Throughout the year, the main thrust of activity will consist of contributing geographic analysis to the solution of critical intelligence problems in all fields.

B. Cartography Division

1. The program of the Cartography Division will, in large part, be determined by the kinds of requests received from the components of CIA and the Department of State. (D) Using the pattern established by our present activities, we can project the continuation of a sizeable NIS program involving the production and revision of standard and page-size maps, Chapter I Summary maps, as well as ~~these~~ <sup>subject maps</sup> for various Chapters and Sections of the NIS. The total number of items <sup>is</sup> /estimated to be between 275 and 300 for the next Fiscal Year.

3. Another program of work which in all probability will increase in volume and importance is [REDACTED] <sup>25X1X4</sup> During the past six months, requests for map assistance in this program have more than doubled. During the coming year, the Division is already committed to give additional assistance to [REDACTED] in the printing of City Plans produced by them. <sup>25X1X7</sup>

4. The Cartography Division is also involved along with the Geography Division in the City Plan Program to supply the DD/P with planimetric drawings of selected cities of the USSR. Already scheduled is a new list of twelve cities agreed upon jointly by DD/P, the Guided Missiles Task Force, and other components in the Agency.

5. A large block of effort will continue to be <sup>allocated</sup> ~~allocated~~ to the production of maps, charts and graphs for the NIE's, economic intelligence reports, geographic reports, <sup>and for the</sup> current <sup>daily</sup> and weekly publications of OCI, and ~~the~~ scientific intelligence reports.

6. The Department of State will receive <sup>as</sup> ~~the~~ support required for the <sup>preparation</sup> ~~inclusion~~ of graphics <sup>for</sup> in various departmental publications and <sup>for</sup> ~~for~~ such separate maps as consular districts and areas closed to foreigners in the USSR and Satellite countries.

7. The Cartography Division will continue its substantial support to a number of operational activities of the DD/P providing <sup>25X1X4</sup> ~~██████████~~ <sup>25X1X4</sup> ~~██████████~~ program involves the assignment of personnel for limited periods to ~~██████████~~ areas and the production of many detailed sketch maps for field use.

8. Two external research contracts are being sponsored by the Cartography Division. The first, ~~to~~ to be completed in September 1960, will provide five maps of "Asia and its Fringing Islands" at the scale of 1:5,000,000. The second contract, which is to be started in FY 1960, calls for the compilation of <sup>17 special purpose maps</sup> ~~Special Purpose Map Projections~~ <sup>for the</sup> ~~purpose of plotting great circle and straight line distances for use by~~ <sup>to be turned to support</sup> components of the Agency in the analysis and presentation of selected intelligence data.
