I can hear them now. Some of the proponents would say, "What a dreadful thing; pulling the rug out from under the President while he is in Rumania fighting communism," and so forth. This is the situation I do not wish to face. I was not trying to put it off on the President. It is my judgment it is bad policy to vote on this kind of an amendment while he is in Rumania. I would not agree to vote on it while he is there. On the other hand I am willing to discuss and vote on a number of other amendments I am interested in before that time, if the Senator from Mississippi is willing.

Mr. STENNIS. Mr. President, this concern about the President is all news to me. It is totally new. The President knew the bill was pending. The President did not ask that it be deferred. I never heard of anyone—the Senator from Arkansas or anyone else—advising the President not to go or to hurry back, nor was anything said about deferring it until he got back, until after he was gone.

I just do not see the logic or reason or anything connected with it except that it seems to jar the opposition a little here just to suggest that the President is interested in this matter; and it does affect his position in this conference. That is a part of the picture here. There is nothing to be said with him here or gone that can change that. It is simply a part of the facts of life.

Mr. President, I wish to point out further that I do not have any particular personal choice in this matter. However, this is the 25th day of July and this bill has been under consideration by the committee and the Senate itself since a very few days after the inauguration in January. It contains all of the hardware for the military system for the fiscal year that started 3 weeks ago on July 1, 1969. We are already in the new fiscal year. This is merely an authorization bill, ordinarily contemplated to be passed by March or April. It is for the ships, submarines, airplanes, research and development, the missiles, and everything in the way of hardware.

I know from experience it is highly important that this matter be completed as soon as reasonably possible. No one is more in sympathy than I am with the procedure that everyone should have his say and get the facts. But the hearings on this subject have been going on in the Committee on Foreign Relations for about as long as we had the matter in the Committee on Armed Services. So if there are any real new facts to be developed, they could be developed in a few days as well as in a few months. I do not think there are many new facts to be developed unless it is something really new.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. STENNIS. I shall yield in just a moment.

I think the bill should move along. We have lost a lot of time. I blame myself for not getting the bill here earlier, but there were requests for delay back then and they were legitimate requests. Everything is held up now, the whole program. I hope the bill will move along.

Mr. FULBRIGHT. Mr. President, I wish to make two comments. First, the President did not ask me about the advisability of making the trip. If he had I would have given it, but it would have been presumptuous for me to have given advice otherwise. That trip is his own idea. I did not have any opportunity to do so.

I wish to ask the Senator whether his committee at any time took testimony with regard to the effect upon the communications between the radars and the computers, and between the computers and the missiles. What is the effect of nuclear radiation upon such communications?

Mr. STENNIS. That is a form of jamming—what is ordinarily called jamming of one kind or another. I am sure that the matter has been fully gone into by scientists for both sides and by others who have to pass on the practical side of these matters. I know that they testified there were no problems that could not be overcome. This has to be worked out as they have to work out matters regarding Polaris and others. Yes, I think that matter is fully taken care of.

Mr. FULBRIGHT. I have seen no testimony. I was told no later than yesterday that there has been no testimony of the effect of radiation upon the system because, of course, this is a difficult thing to do. Under the test ban treaty, it is not easy to conduct a nuclear explosion in the air to test its effect upon communications. That is what was pointed out to me yesterday.

Frankly, I never thought of that. As the Senator knows, this was an aspect of it that had not occurred to me but, obviously, it is rather difficult to test the effect upon a missile or upon a system such as the ABM of a nuclear test in the atmosphere where that explosion will take place.

I was only asking: Has the Committee on Armed Services ever had any testimony on this question?

Mr. STENNIS. I am sure I definitely remember testimony about the possibilities, all the possibilities of jamming, and the working of the computers and the radars and all the rest of it. I cannot

CONGRESSIONAL RECORD — SENATE

July 25, 1969

put my finger momentarily on testimony directed to that point.

Mr. FULBRIGHT. I want to ask the Senator whether he would be good enough to ask his staff to locate such testimony and submit it to me by next Monday or Tuesday, whenever it is convenient. I will be very much interested in seeing it, to check whether the advice I was given is true.

But that is only one aspect of it. The main point that I wish to make, and I again ask the Senator to consider it, at least between now and Monday, if he is interested. In promoting or pushing the bill through to enactment—and I certainly do not wish to delay it—why we cannot take up other amendments and make that much headway and get them disposed of? They should not take nearly so much argument because many are simple amendments in their purpose, as the Senator knows. He and I discussed these same things last year. We already had some communication with the Senator from New Hampshire (Mr. McINTYRE) earlier this session.

My own amendments will take me only 10, 15, or perhaps 30 minutes, so that we could dispose of some of them and get rid of a number of other amendments before the major one. I think the Senator will agree that the No. 1 amendment in significance is initiation of deployment of the ABM.

Mr. STENNIS. I do not know about that suggestion, so far as the authors of the amendment are concerned, that it be taken down, but even if it were, we have debated this question now into its third week and my opinion is based upon experience that if we take away or take off and leave the main issue alone, and abandon this part of the debate, we will have to go all through the debate again.

It will be almost like a new subject when it comes up again. I think that it would make the Senate look rather silly to spend 3 weeks and then abandon that part of the debate without some very substantial reason and then go over and go to talking about some experiments without any specifics somewhere on behavioral sciences or a subject of that kind which has little or nothing to do in a substantial way, that is, with our military program. I think the Senator is capable of making a decision now and we should proceed on this.

Mr. FULBRIGHT. I beg to differ with the Senator. I have been in the Senate 25 years now and this is the first time in those 25 years that there has been a serious debate upon an important item in the defense budget. I believe the Senator from Mississippi agreed with me the other day that this is the first time the Senate has understaken to examine and in a way to exert influence on a decision of this kind. I am not sure whether it has been 2 or 3 weeks, but I do not believe that is very long. I can remember that the Senator and I have taken much longer than that on other issues of a domestic nature which we thought were important, for the sole reason of informing the public.

The Senator and I have joined in an effort to enlighten the public on certain subjects in which we were interested. Very often we performed a public serv-

ice in that connection. That is what the Senate is for. I think this issue of whether the Senate is to have any real influence in decisions on a department of this Government, a bureaucracy which absorbs nearly one-half of the total budget, is equally important. It is so important that it would certainly justify 2 or 3 weeks or whatever length of time the Senator just said that we have spent on it. In other words, the ABM is an important matter. The other items are of much less importance.

I do not believe that we would revert back to the beginning at all. We can lay it aside pending the final hearings, but most important, I think it would be bad policy to vote on the ABM issue at this time.

For example, suppose the vote should go against the President—which I hope it will and I will do everything I can to make it go against the President—it would be embarrassing for the President to be in Rumania and have the headlines read that one of the major proposals of the President of the United States had been rejected by the Senate. I would not like that to happen while he was abroad.

When I am abroad, I am very careful in what I say about our internal politics. I try never to say anything that is even critical of our own policy when I am abroad.

It is a different situation, and I am sure it would embarrass the President if the Senate should vote to assert its prerogatives of giving advice and of approving or disapproving a matter of this importance while the President is in Rumania.

I do not believe we should do that. I still think that the Senate has enough respect for its own functions. I think there are enough Senators who think that the Senate is sufficiently important that it should play a role in the balance of our Government, that we should not be completely under the control of the military bureaucracy of our Government.

Really, that is what the ABM is a symbol of; namely, whether the Senate has got enough independence from the influence of the great manufacturers of this country, the great industrial enterprises, and the military bureaucracy. Whether we have it, I do not know. I think we have. I think that Senators do have such pride and such feeling of responsibility in being Senators that they will assert their right to play a role in the Government of the United States.

I have been extremely impressed by the outspoken position of the new Senators in this body, men who have just been elected, who are closer, I would say, then I am to the pulse of the electorate as to what is going on, because they were elected for the first time. It is remarkable how interested they are in being Senators and not stooges of the military.

Mr. STENNIS. Mr. President, will the Senator yield? Will he yield right there?

Mr. FULBRIGHT. I yield right there. I withdraw the word "stooge." I overspoke myself. I did not mean that in the way the Senator may think.

Mr. STENNIS. I do not think the Senator can withdraw an insult unless he apologizes for it.

Mr. FULBRIGHT. I apologize for us-

ing the word "stooge." I overspoke myself.

Mr. STENNIS. I am proud of the Senator. I believed he would, as a gentleman.

Mr. FULBRIGHT. I was overspeaking myself, but I will try, in a moment, to be more precise as to what I intended to say, if the Senator will allow me.

Mr. STENNIS. Yes. I accept the apology of the Senator.

Mr. FULBRIGHT. I apologize for using the word, although I did not use it as applying to the Senator from Mississippi. I used it in the negative. I said they did not wish to become.

What I have been trying to say is that for 25 years the Senate has never challenged what the Military Establishment has asked for, to my knowledge, of any consequence. Perhaps it has on something little. The usual challenge was, "Look, you ought to have more planes. You have asked for 1,000. You ought to have 2,000."

This is not just because of the military. We all know the country we have. Each industrial State has great enterprises that employ thousands of people whose jobs are dependent upon those programs. There is no secret about it.

In the State of Washington, what is the biggest employer? Boeing Aircraft. In the State of Missouri, what is the biggest single employer, with 50,000 workmen? That means 50,000 votes. It is McDonnell Aircraft.

I do not need to call the roll. From General Electric, from Bell Telephone, it is all over the country. It is the kind of country we have. We are proud of it. It is effective. It is a very productive economy. I am not criticizing it. I am calling attention to it.

We are elected, are we not? All of us got here by getting more votes than our opponents. That is what I mean. The word "stooge" is not the right word. I was just shortcutting. What I was trying to say was that what President Eisenhower referred to as the military-industrial complex has a tremendous influence in this country. The Senator from Mississippi really does not challenge that.

Mr. STENNIS. Yes; I will challenge it at the right time.

Mr. FULBRIGHT. That it has a great influence?

Mr. STENNIS. I will challenge the Senator's whole remarks when the Senator has concluded.

Mr. FULBRIGHT. Look at the advertisements in the newspapers. Look at the books being published—two books within a week, one by the great Hudson Institute. What is the Hudson Institute? Well, it is an institute created by the Pentagon, supported by millions of dollars of the taxpayers' money that goes into the Hudson Institute that subsidizes Mr. Herman Kahn and his associates. They write books which invariably support the major issues in which the Pentagon is interested.

That is a fact of life.

We have the Institute of Defense Analyses. We have a hundred other "think tanks." We have the Rand Corp. These are supported primarily either by the Pentagon or by big industrial enterprises or through contracts made by such companies. I am not referring to a

S 8602

CONGRESSIONAL RECORD — SENATE

July 25, 1969*

particular company with a particular "think tank," but, in general, the big companies of this country build the machinery and the gadgets that are paid for by part of the \$80 billion which is supplied by the Government for that purpose. They are the people who support these companies.

I am not saying that in a critical way. I am not saying they should not. There is no other way, under our system, to build a defense establishment. I have no alternative, and I am not saying it in a critical way. It is a fact of life, however, that these people have gradually been able to build up the greatest military machine the world has ever seen, with the biggest budget the world has ever seen.

What the Senate ought to do, and what I am trying to do, and what I think other Senators are trying to do, is to bring back into our Government the system of the checks and balances provided for in our Constitution, so that in the future the Senate of the United States will be in a position, whenever it is proper and appropriate, to raise a question about any part of the defense budget.

As I have said, it is, in a sense, the first time in 25 years that the Senate has made a serious effort to curtail a particular weapons system.

Articles have appeared recently that nobody has challenged, particularly by Bernard Nossiter, in the Washington Post. He outlined a number of weapons systems, amounting to, I think, \$30 billion, or something like that, that had been started, experimented with, and abandoned because they had been misconceived.

I do not say that because I think they should not have been tried. I know a certain amount has to be done. But in the past we have simply accepted them without any question. We hear around here an analogy with automobiles. It is suggested that the ABM is an Edsel. I saw one this morning. It is a sort of folklore that grows up. Everybody knows what the Edsel was. The Edsel was a mistake. Everybody agrees to that. That does not mean Ford does not make a good car. It does. It is making good cars now. Somebody just made a mistake. If someone had had the foresight at the time, it would have saved Ford \$3 or \$4 million.

I am not saying that we cannot make an ABM or make a missile. We know we can make one if we want to spend enough money and if it is the proper design. What I am saying, and what I think some of those who share my view are saying, is that this is not a proper design. Somebody has taken a concept called the Sentinel and overnight changed it and now calls it the Safeguard. I think even the Sentinel was very questionable. But they have changed it to Safeguard. The evidence is that the designs for the Sentinel are not proper for Safeguard, and therefore it ought not to be pursued at this time to the point of deployment.

All that Senators who are leading the opposition in this issue are saying is, "Look, it is premature to make a commitment to this weapons system. This weapons system could easily involve anywhere from \$10 billion to \$50 billion."

I know all these estimates and this numbers game can be challenged. This same principle was involved in the C-5-A, on helicopters, on tanks, and so forth. I do not want to get into that. But all I am saying is, "Just do not deploy this system. Do further research and if, after further research, you still think it is good, bring it back and we will look at it again."

All we are really doing is asking for a year's delay in deployment. That is all I believe the amendment of the Senator from Kentucky means—just wait for 1 year before deployment.

Mr. COOPER. That is right.

Mr. FULBRIGHT. That is all we are asking, bearing in mind the history of the requests from the Pentagon, the enormous cost of Government, and, above all, the very serious domestic budget situation we have, when every day we see the market going down.

Yesterday I spent nearly all day talking about the tax bill. The administration wants the surtax imposed right away, and they do not want any delay about it. The other day, when the President invited some of us to the White House, he had four Secretaries of State, present and past, impressing on us the dire situation in this country and the dire need of the surtax. Not once did he or anyone else say they might cut the budget.

Mr. STENNIS. Mr. President, may I say to the Senator, before he gets off the surtax, I have been glad to yield to him all this time. I do not care to keep the floor indefinitely.

Mr. FULBRIGHT. That is all right.

Mr. STENNIS. I do have some responses to make as far as the Senator's remarks are concerned.

Mr. FULBRIGHT. I will stop now, if he wishes.

Mr. STENNIS. So if he could conclude his remarks within a reasonable time, I would appreciate it.

Mr. FULBRIGHT. I will be glad to.

Mr. STENNIS. I am not asking him to stop now.

Mr. FULBRIGHT. I will either stop now and resume later or make a few more remarks. I do not wish to inconvenience the Senator.

Mr. STENNIS. Just a reasonable time.

Mr. FULBRIGHT. All right. There are different views of what "reasonable" is, but I will try to make my remarks reasonably short.

Mr. STENNIS. Yes.

Mr. FULBRIGHT. The point comes back to this, and I submit to the Senator it is a very serious one. In view of all our circumstances, in view of the domestic situation that I have mentioned, in view of the President's own pleading that we enact a tax, and so on, for the control of inflation, which is becoming very acute and tends to destroy the confidence of the people in their own Government, in view of the protests we have had in this country, in view of the history of the last 3 or 4 years, beginning with the riot in Watts, and going to other riots, then finally leading to the protests in our universities, all these are signs of something wrong in our great country.

I know we are interested in trying to make our country as great as it is capable of being. Everyone has that purpose. The only difference among us is as to what it is that is great. Where is the priority? Is the building of an ABM now, as a symbol of our capacity, or a controlled defense budget more important? Are we so threatened by external enemies, in contrast to internal difficulties, that we must put that above everything else?

The delay for 1 year of the deployment of the ABM—that is what this argument is all about. That is important monetarily, but I still think the most important consideration of all is to reestablish the Senate of the United States as a coequal body, as a body that is capable of raising questions of this kind, and capable of making a decision in the face of the kind of influence and power that is represented by the great industrial enterprises of this country, and the Pentagon with all of its tremendous bureaucracy and its influence, all of which I do not criticize as such, but it does relate to whether or not the Senate still is an important body.

Lastly, I say to the Senator from Mississippi that when, as they often do, historians engage in looking at other great countries that have declined, right on back to the classic case of Rome, they find, for example, that the decline and destruction of Rome began with the decline and destruction of the Roman Senate. I only remind the Senator of that because there have been many other instances, also.

Mr. STENNIS. I thank the Senator.

Mr. President, in response, and with all deference to the Senator from Arkansas, the question we had here was really not an issue, just a discussion of whether next Monday we would discuss further the possibility of a vote on this bill. I think I gave my reasons for wanting to continue on this part of the bill, since the Senate set its course and made this amendment the pending measure.

But, Mr. President, I have fully made up my mind that no one could come here and impute bad motives, sinister influences, or anything that infers those things toward the membership of this body with reference to the military program, and go unchallenged. I challenged the Senator from Arkansas when he called us stooges, and I am very glad he apologized for that. But, in words that are a little more respectable, but have the same meaning, he said it over again when he asked, Is the Senate going to submit to military bureaucracy and the hyphenated industrial complex?

I think the Senator ought to prove those charges by something more than his bare, bald statement that he has made here before, and given to the press over a period of months. He ought to prove them with something substantial, other than just his assertion, or withdraw them.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. STENNIS. Well, I want to make my point now.

Mr. FULBRIGHT. On that point—

July 25, 1969

Mr. STENNIS. To show just how one Senator, at least, feels toward such assertions.

Mr. FULBRIGHT. I would like to offer just one proof of the kind the Senator has requested, and I refer to the Starbird memorandum, which was itself generated in the Pentagon by General Starbird, submitted to Secretary Resor, and published. If that is not proof of their capacity to organize strength, I do not know what is.

Mr. STENNIS. The Senator has, in effect, called names here, and made charges. He has been making them for many months. I say if we submit to things like that without proof, it will get to where a man will be afraid to go on the Appropriations Committee, the Armed Services Committee, or any of the others that has a responsibility to this Nation, of coming in here with what its members think is a sound military program, lest he have to face charges from the Senator from Arkansas—I do not know of any others, but there may be others who make the same charges—that he is base in his approach, that his motives are bad, and that he is serving some ulterior purpose instead of the welfare of this Nation. I am not going to let the membership of our committee, and I exclude myself, be so charged by any Senator, without his being severely challenged. I call on the Senator now to prove some instance of some particular Senator who has had a bad motive in mind when he took a position on these bills.

Mr. FULBRIGHT. Will the Senator yield?

Mr. STENNIS. Yes, I yield.

Mr. FULBRIGHT. In the first place, the Senator has completely misrepresented the position I took. I said this is the nature of our country. It is not a bad motive to serve one's constituents.

Mr. STENNIS. I yielded to the Senator, now, for the purpose of giving an illustration, not to make that speech again about the bad motives of the membership.

Mr. FULBRIGHT. But the Senator completely misrepresents what I said.

Mr. STENNIS. I did not misrepresent anything.

Mr. FULBRIGHT. I made no charge of bad motives. I said it is the kind of country we live in. To illustrate, in my own case, I have always supported the poultry raisers of Arkansas, because they are an important industry, and I have gone out of my way to do it. I do not consider that a bad motive. We do not happen to have an electronics industry in Arkansas of any consequence. It may well be if we had, I would have been representing them. This is nothing bad; it is the nature of our democratic system.

Mr. STENNIS. All right; I yielded to the Senator to give an illustration.

Mr. FULBRIGHT. The Senator challenged me.

Mr. STENNIS. I ask him to be courteous enough—

Mr. FULBRIGHT. Let me ask the Senator this: What did General Eisenhower mean when, in his last statement, he warned us about the military-industrial complex? Was he charging the Senator with bad motives?

Mr. STENNIS. Mr. President—

The PRESIDING OFFICER (Mr. Cook in the chair). Does the Senator yield further?

Mr. STENNIS. I yielded for an illustration only, Mr. President, and I do not yield further just at this moment.

My purpose here is not to engage in debate. I have said what I wanted to say on that point. My purpose is not to engage in a personal controversy. I will respond in the same pattern to anyone else who makes any such assertion.

Our purpose here now is to begin these discussions, that will perhaps lead to a disposition of this matter. I think we have given notice and we will have a good discussion.

I mention one other thing, though, about the President's absence. As far as a personal basis is concerned, I think the sooner the President gets back the better it would suit me. I would like to see him back in the country soon, and I am sure he will be.

But I think, as a very practical matter, no one knows how many votes there are here on each side; but if I were wanting to vote, if it were to my advantage, if I had the votes, I would say, "Vote now." The Senator from Arkansas referred to our previous debates here. When we think we have the votes, we are usually ready to vote; but I do not think this time anyone knows. However, I am willing to vote anyway, after reasonable discussion by everyone who wishes to be heard.

So I think that about covers the point I wanted to make.

Mr. COOPER. Mr. President, will the Senator yield briefly?

Mr. STENNIS. I yield to the Senator from Kentucky.

Mr. COOPER. The Senator from Arkansas was not present in the Chamber when the Senator from Michigan (Mr. HART) and I began our colloquy with the Senator from Mississippi (Mr. STENNIS); and the Senator from Texas (Mr. TOWER); so I shall repeat something of what was said before.

Senator HART and I offered this amendment for ourselves and many other Senators. Since April 18, 1968, we have worked together on these amendments. So we have believed we had some responsibility to lead the way toward a disposition of this issue. We have had discussion over the past 2 weeks and with other sponsors of the amendment.

I must say that we did not think we had any responsibility at all to make the amendment the pending business until this week. The first week was one for the Senator from Mississippi to explain the bill and to support the different sections of the bill. Last week, as we know, it was impossible to have any rational discussion of the amendment. Senator HART made the amendment the pending business at the earliest date possible—Wednesday of this week.

We have had discussions with the Senator from Mississippi and the majority leader, Senator MANSFIELD. We propose, on Monday, to give notice that the subject of a day certain for voting will be raised in the Senate so that everyone who is interested in the amendment, proponents and opponents alike, may be here to give their views.

I have said that as far as I am con-

cerned, I approve moving toward the vote as quickly as is possible.

I cannot speak for anyone else. I have told the Senate that I understand that the Senator from Tennessee (Mr. Gore) intended to have a hearing on Wednesday morning which would bear upon the ABM and that I was sure he would not want to vote until after the hearing.

I want to be open. One of the difficulties that those of us who support the amendment have had in agreeing to vote comes from several factors—and I think I might as well state them—is that some feel, and I must say that I am one of them—that it has been very difficult to secure information from the Defense Department.

I have been able to secure information because I have written time after time to the Secretary of Defense to Dr. Foster and the CIA. I must say that I have received information. However, as it is not made public many Senators have not had the opportunity to have the same information.

Mr. President, another development that disturbs many who support the amendment is the statements made before the closed hearing. Statements were made that last minute intelligence had been received just before the closed hearing began. That intelligence was not available to all, and there was no way to answer because one would not challenge the honesty of the Senators. However, we did not have the opportunity at the time to examine and question that at its original source. Since the closed hearings, I have written the Department of Defense for answers on some of the information that was presented. I must say that from those answers one could exercise a judgment one way or the other for they were not definitive beyond judgment.

I have been informed that the Senator from Missouri (Mr. SYMINGTON) is interested in reported studies in the Defense Department that would throw great light on this issue.

All of these factors made it apparent to me that we cannot agree on a certain date until these questions have been answered satisfactorily.

The Senator from Michigan and I want to bring these issues in the open on Monday.

I do believe that the meeting will be helpful and profitable in the discussion of these matters.

In fairness, Senator HART and I want to be open about these matters.

Mr. STENNIS. Mr. President, I thank the Senator for his remarks. It is always a pleasure to deal with the Senator. I know how earnest he has been in the matter.

Mr. HART. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. HART. Mr. President, I thank the Senator for his remarks. I think they clarify our motive in suggesting that we have the discussion and indicate to the Senator from Mississippi some of the concern we have had.

Mr. STENNIS. I appreciate the remarks of the Senator very much.

Mr. President, I yield the floor.

Mr. FULBRIGHT. Mr. President, I wish to comment further upon the idea

of the Senator from Mississippi that I am attributing bad motives to him. I assure the Senator that it does not mean that people who disagree with him challenge his motives.

I can understand that the Senator has different responsibilities because of his committee chairmanship and his long experience and association with the Pentagon and all of that. That is perfectly natural. It affects all of us.

I would not for a moment exclude myself from any of the things I have said, and I did not intend to reflect on the motives of anyone.

I do think it is a fact of life in the kind of country in which we live. We are representatives. We represent in a very real sense the interests of our different communities. In those communities there are diverse and different interests. So, naturally we have different views. And in our minds we are the products of our own experiences. And those experiences include our associations with different people.

We are all the products of every experience we have had in life.

It was the furthest thing from my mind to try to attribute a bad motive to the Senator from Mississippi or to anyone else. However, it is a fact of life.

The other day we had a man named Casey before our committee who, I am sure, is a very reputable lawyer in New York. He has been nominated to be a member of the Advisory Committee on Disarmament. He had formed a committee, of which he is chairman, supporting the ABM. It is perfectly legitimate for him to do so.

He had obtained the names of a great many people—many of whom were very prominent people—among whom were the directors of 11 of the most prominent corporations, all of which have large contracts on the ABM.

There is nothing bad about this. There is not a bad motive intended. Is it not perfectly natural that if one is a director of a corporation which is playing an important part in the production of a great weapons system, he would be interested in it?

I think it is the most natural and human thing in the world that that would happen.

If there is some implication of bad motive in it, I certainly do not see it. If so, I apologize. The word "stooge" was the wrong kind of word to use. It leaves an implication that I did not intend. What I was trying to say was that in a country as rich and big and powerful as ours, we have very great interests growing up. The biggest of all is what we call the bureaucracy of the Pentagon, because there is not any corporation, not even General Motors or General Electric, that has quite the equal in resources of \$80 billion. I do not quite remember the resources of General Motors. However, it is not large.

This is a tremendous conglomerate of power. I make no point that there is anything bad about it. Every man, so far as I know, in the Pentagon today is doing his duty. I would not for a moment say that General Starbird, when he developed his so-called memorandum which

was published, was not doing his duty. He was clearly doing his duty as he saw it. He had the responsibility of promoting and selling to Congress and to the country the ABM system. And he put it down in writing, and Mr. Resor, I believe, approved it—one or the other of them approved it. They were both involved in it. It was called the Starbird memorandum.

It outlined and sought to muster together an organization of all of the various influences which are available to the Pentagon and tried to make the sale and get a favorable decision. That is his duty. He was given the responsibility of doing that.

The last thing I want to do is to imply a bad motive to General Starbird. As far as I can see, he is doing exactly what he was told to do by his organization. There is nothing bad about that at all. However, it is a fact of life.

The Senator from Kentucky has no such organization. He cannot write a letter and say to all the great corporations of the country, "Will you please get your people together and will you solicit speeches? Will you have them written, and will you write books and will you do this and do that?" All of it is set out in the memorandum. I do not wish to misspeak what is said in the memorandum. But, as a result of that, we do see books being published. Two books were announced last week, both in support of the ABM. I do not know that the Senator from Kentucky can produce a book against the ABM. He has to use whatever he has in his own mind and what he picks up from hearings, and so forth.

It is true that a large number of independent scientists, none of whom is on the payroll of the Senator from Kentucky, on the payroll of the U.S. Senate, my payroll, or on the payroll of anyone else I know of who is involved in this argument, came and gave their testimony. Many of them are heads of universities that have nothing to do with this. Some of them may have something to do with it, an indirect interest; but whatever they do, it was not on the side of the Senator from Kentucky. It was on the side of the Pentagon. And I admired them.

In any case, I make no point of the motives. This is a matter of judgment, and I think it is perfectly legitimate to point out that in some cases I am not sure that their judgment is not influenced by these things. That is no crime. It is not a sin that you are influenced by our constituents or by your employer or by your own experiences. If you have spent your life in creating electronic devices, I am certain there grows up in your mind a desire always to respond to any challenge. If you are an electronics engineer and someone says to you, "Here is a challenge to you. Do you think you can shoot down a missile that is traveling at 20,000 miles an hour and shoot it down with another missile?" Immediately you say, "Yes, I bet I can do that, if you give me enough money and enough time."

It is like the story of the man who said, "Why does a man climb Mount

Everest?" And the other fellow replied, "because Mount Everest is there." It is a challenge to him. There is no good reason to do it. I do not think there is any good reason to the ABM, other than that it is a challenge to Dr. Foster and some of his colleagues. They just want to do it. The trouble with that is a practical matter. I have no doubt he can do it in a normal peacetime operation, without interference from external elements such as radiation. I am not at all sure it can be done in an attitude of hostility, where someone is shooting at you with nuclear weapons.

It is like going to the moon. We are very proud of going to the moon. I doubt seriously that it would have been so easy to go, or possibly at all, if some other country was trying to thwart you, was interfering with your communications. I would doubt that it could be done.

I think the Senator from Mississippi misconceives the nature of the argument. I think it is perfectly legitimate to call attention to the fact that some of the arguments made in support of this could be less than objective or free from an interest in the ABM as a weapons system, aside from whether or not it is in the interest of the country or whether or not it is as important as some other priority. Even though it might be good under some circumstances and could be justified, in view of the financial situation of this country, in view of the inflationary pressures, and in view of the requirement for added taxes, is it justified?

This is where I come back to the Senate. I do not think General Starbird or General Wheeler or General X, Y, or Z feels that it is his responsibility—and I do not think it is his responsibility—to weigh such things as inflationary pressures, the budgetary situation, the need for the tax bill, and all the other elements that the Senate should take into consideration.

It seems to me that the Senator from Kentucky and his colleagues in this body have a different function to play from that of the Joint Chiefs of Staff.

I think that the Joint Chiefs of Staff, under our system of Government, are given a special, restricted responsibility. I make no criticism now, or at any other time, of the Joint Chiefs of Staff discharging their responsibility in the way they see it. I do criticize myself and the Senate for having accepted, for at least the 25 years I have been in the Senate, as an infallible sort of dictate from above, the judgment on all these weapons systems of people like Dr. Foster or the Joint Chiefs of Staff.

In this case, Dr. Foster is the principal advocate of these various systems, as I understand it—and, of course, his predecessors. He happens to be the current one. His predecessors had the same role, and their role was to propose weapons systems of any kind they could imagine that might be useful. It is our role to take a look at them, to try to make some judgment as to whether or not they are essential under the present conditions, and to do the best we can.

Speaking for myself—I will leave out everybody else—I have not done my part, I know, in the last 25 years, because I

July 25, 1969

sure that if I made a motion to cut any always believed it was hopeless. I was of these programs, I would not get any votes, because nobody ever had, and so there was no use in trying.

Furthermore, the circumstances did not exist. During much of that time we had what is called the dollar gap. We were too prosperous compared with the rest of the world. We were looking for ways to spend money abroad as well as at home, and nobody raised the question about budgetary matters of any consequence. Now that is all changed, and that is the reason why a number of others and I are raising these questions. I think I have been too negligent too long in coming to a feeling that it is my responsibility at least to have hearings about it in order to give experts in this area an opportunity to express themselves.

I think that is the function that the Senate, peculiarly, has. We have to weigh all these things.

I do not make these criticisms of the Senator from Mississippi, any member of his committee, or the Joint Chiefs of Staff. What I am trying to say is that they have their responsibilities and they play their part, and others play theirs. I do not criticize the big corporations. In the common language of the street, they are doing their thing; they are doing what they are set up to do, whatever they may make. That is all they are doing. But it is our job—and we are sent to the Senate as representatives—to make judgments of the whole, broad spectrum of our policy and to make judgments as to priorities.

With regard to an immediate vote, one other thing that I believe the Senator from Kentucky did not mention is the fact that practically a week has gone by with the moon shot, and everyone's attention has been diverted in watching this great exploit. Whether or not it is very significant, as has been represented, I do not know. History will have to prove that. In any event, our attention has been engaged. The Senator from Mississippi will not deny that our attention has been diverted from the affairs on the floor of the Senate to the moon shot, which has taken out practically a week of the debate that has been in progress.

Mr. President, in order to fortify this question, since it has been raised, it is my understanding that the Starbird memorandum was first proposed with regard to the Sentinel system. It is also my understanding that after it was revealed and discussed in the Washington Post, and comments made here, it was canceled or withdrawn, or whatever is done to a memorandum. Whether another one has been prepared, I am not sure. But I believe that as a result of that it has been declassified and that it would be proper to put it into the RECORD as a part of my comments, because I think it is appropriate to the comments that the Senator from Mississippi made a moment ago in which he asked me for proof of what I had alleged to be a capacity for organization of influence behind a program such as the ABM.

So I shall ask unanimous consent to have printed at this point in the RECORD a copy of the so-called Starbird memorandum. While it goes to the Sentinel

system, I believe the Safeguard is the legitimate heir, by direct descent, of the Sentinel.

Mr. President, I ask unanimous consent to have the memorandum printed in the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

PUBLIC AFFAIRS PLAN FOR THE SENTINEL SYSTEM

1. References:

a. Part No. 1.01, subject: Sentinel System Charter, SSMP, 3 Nov. 1967.

b. DOD Memorandum OASD(PA) 22/1, subject: Sentinel System Public Affairs Plan, 15 March 1968.

c. AR 360-11, subject: Army Information Guidance for Sentinel Program, 23 August 1968.

d. AR 1-20, subject: Administration Legislative Liaison, 26 Jan. 1967.

2. Purpose and scope:

a. This plan establishes guidelines, implements policy and assigns responsibilities for an active public affairs program on a country-wide basis regarding the Sentinel System and the Sentinel deployment program; it sets forth specific DA information objectives and milestones, suggests certain techniques and delineates responsibilities for the planning, execution and evaluation thereof.

b. The provisions of this plan apply to all U.S. Army elements and to all individual industrial firms and civilian contractors participating in the production and deployment of the Sentinel System.

3. Background:

a. On September 18, 1967, the Secretary of Defense announced the decision to produce and deploy a Communist Chinese-oriented ballistic missile defense system. This system will be deployed at 15 to 20 locations in the continental United States, Alaska, and Hawaii. On November 3, 1967, the Secretary of Defense named this ballistic missile defense system the Sentinel System and announced the appointment of LTG Alfred D. Starbird as the Sentinel System Manager (SENSM). Also on November 3, 1967, the Secretary of the Army approved and issued the Sentinel System Charter which, in part, states: "The Sentinel System Manager will develop and, when so directed, assure the timely, effective deployment of the Sentinel System, and will provide a single point of contact within the Department of the Army for the coordination and direction of all activities pertaining to the Sentinel Systems. . . . The Sentinel System Manager, within instructions issued by the Chief of Staff of the Army, will exercise staff supervision over all Army Staff elements and participating organizations of the Department of the Army for planning, direction, and control of the Sentinel program. . . . The Sentinel System Manager will utilize to the maximum extent, compatible with System requirements and within guidance issued by the Chief of Staff, the functional and process oriented capabilities of the Army Staff. . . ."

b. Opposition to the Sentinel deployment decision has arisen and been publicly expressed in three sectors of public opinion: in certain segments of the U.S. Congress, in scientific circles and in citizen/public official interest groups in local communities. Congressional and scientific opposition centers around questions as the Sentinel technical and operational feasibility, cost, disarmament, the international arms race and national priorities and is national in scope. The local interest groups raise these same national questions but also base their opposition to the Sentinel deployment decision on various factors stemming directly from such actions and proposed actions as

(2) real estate acquisition, (3) effects of construction on the local environment, and (4) eventual impact of the Sentinel installation and its personnel on the community. Initial adverse reaction from private citizens and local public officials has been the direct results of site validation and acquisition actions which are a necessary prelude to the initiation of construction operations, and are vital to the Sentinel program.

c. The SENSM, in coordination with OCLL and OCINFO, will conduct a public affairs program, on a country-wide basis, to accomplish the objectives established herein.

4. Objectives: The objectives of the program are:

a. To gain public understanding of the reasons for a United States ballistic missile defense (BMD) system oriented on the developing Communist Chinese offensive ICBM nuclear capability.

b. To insure that all sectors of public opinion are fully informed of Sentinel System developments, progress, effectiveness and objectives (within the bounds of national security).

c. To inform the public regarding the reasons for the Sentinel deployment decision, the rationale behind it and why it is necessary and important to obtain real estate for use as Sentinel operational sites in particular geographic areas in implementing the Sentinel deployment decision.

d. To gain the understanding of the people of affected communities by keeping them informed of Sentinel oriented activities in their area. Such information will explain the general methods of site selection and validation, the local and national importance of the site, and the impact of Sentinel-connected activities in the community.

e. To provide timely, factual, and authoritative information by:

(1) Timely release of information on activities which will affect local communities.

(2) Responding to queries for information.

(3) Providing briefings and information fact sheets to members of Congress (OCLL coordination required), local governmental leaders and officials, military audiences, scientific, fraternal, and civic groups and organizations, and representatives of news media.

(4) Preparing informational or educational articles for general news and mass communication media, military, scientific and professional journals that are service-oriented.

(5) Preparing exhibits for showing before appropriate groups.

5. Concept: This program will use a gradual approach to the attainment of the objectives stated above. The thrust of the program will be directed primarily toward explaining the military requirement and strategic concepts inherent in the Sentinel deployment decision. As subordinate but related goals, the program will emphasize that the Sentinel System is specifically designed to meet a strategic defensive military requirement; that it is being deployed in an efficient and economical manner; that it is designed to provide a defense against a possible Communist Chinese nuclear ICBM attack through the late 1970's; (with the capability to continue to deny or at least substantially reduce damage from threats in later years); that it concurrently provides a limited added defensive capability over our Minuteman ICBM sites with the option of improving that defense if needed; that it provides added protection of our population against a possible accidental ICBM launch by any one of the world's nuclear powers; that it will complicate any attack on the United States by the Soviet Union; that its effectiveness in fulfilling its national missions requires the acquisition of Sentinel operational sites in certain selected areas for the emplacement of its missiles and radars.

S 8606

CONGRESSIONAL RECORD — SENATE

July 25, 1969

6. Responsibilities:

- a. SENSM will monitor the overall program for CoFSA and will be consulted on all substantive implementing decisions or actions.
- b. CINFO will:
- (1) Serve as the initial DA staff level point of contact and coordinating agent on all public affairs matters pertaining to the program.
 - (2) Assume for the SENSM overall responsibility for coordination of all Sentinel, public affairs matters with the Army staff, other services when appropriate, applicable Unified and Specified Commands, and OASD(PA).
 - (3) Provide support and assistance to SENSM, as feasible and appropriate, in implementing the SENTINEL public affairs program.
 - (4) Arrange speaking engagements, as appropriate, for the CoFSA, VCoFSA, and senior members of the Army staff to provide opportunities for public explanation of the SENTINEL System.
 - (5) Establish within OCINFO a Sentinel Public Affairs Coordinating Committee (SENPAAC) to provide for periodic review, advice and on-going coordination, development and evaluation of the Sentinel public affairs program. The membership of this committee will include, but not be limited to, representatives from the following commands and agencies: OCINFO, OCLL, Chief of Engineers, ODCSOPS, OCEd, and the Sentinel System Organization (SENSCOM 1.0). The SENPAAC will meet periodically on the call of CINFO and submit appropriate analyses and recommendations to SENSM through CINFO.
- c. OCLL, DA will:
- (1) Provide support and assistance to SENSM as appropriate in implementing the SENTINEL Public Affairs Program.
 - (2) Provide a representative to SENPAAC.
 - (3) Coordinate with OATSD(PA) as appropriate.
- d. ODCSOPS, DA will:
- (1) Provide support in those SENTINEL public affairs related to the military requirement and strategic concept of the SENTINEL System.
 - (2) Provide a representative to SENPAAC.
- e. OCRD, DA will:
- (1) Provide support in those SENTINEL public affairs areas relating to scientific and technical matters or to the Nike-X Advanced Development Program.
 - (2) Provide a representative to SENPAAC.
- f. OCE, DA will:
- (1) Provide support in those Sentinel public affairs areas relating to Sentinel Systems real estate acquisition and facilities design and construction.
 - (2) Provide a representative to SENPAAC.
- g. All elements of the Sentinel System Organization, CONARC, AMC, ARADCOM, and STRATCOM will provide support in those Sentinel public affairs areas germane to their mission and functional areas and as specifically assigned elsewhere in this plan.
- h. The basic public affairs responsibilities of CINFO, SENSM, and participating organizations are included in AR 360-11. The SENSM has established as his staff agent for administration of the Sentinel Public Affairs Program the Information Officer assigned as Chief of the Information Office of the SENSCOM. The SENSCOM Information Officer will coordinate all Sentinel public affairs matters for the SENSM and will be the principal point of contact within the Sentinel System Organization on such matters.
- i. Within instructions issued by the SENSM the SENSCOM Information Officer may clear and release the information described in paragraph 5.a(3), AR 360-11.
- j. Time phases for the execution of the Sentinel Public Affairs Program are established in paragraph 4.a, AR 360-11. Basic responsibilities are with CG, ARADCOM during Phase I (initial briefings of public of-

ficials), the SENSCOM Information Officer acting for the SENSM during Phase II (prior to IOC) and (with CINCONAD, CINCPAC) during Phase III (subsequent to the IOC of individual sites).

k. The SENSCOM Information Officer will coordinate activities pertaining to visits to Sentinel installations, facilities or sites by representatives of news media or the public during Phase II, and will advise OCINFO directly on appropriate matters, with an information copy of all notifications furnished to the SENSM. CINCONAD and CINCPAC exercise this responsibility during Phase III.

l. Sentinel information release requests will be processed through the SENSCOM Information Officer, who will transmit his recommendations to OCINFO for staffing within the DA, and, as necessary, with appropriate Unified and Specified Commands, and OASD(PA). It will be the responsibility of OCINFO to coordinate all proposed releases with the SENSM. The following schedule will apply:

- (1) News releases and photos will arrive at the SENSCOM Information Office not less than 15 working days before the intended release date.
- (2) Speeches and films will arrive at the SENSCOM Information Office not less than 25 working days before the intended publication date.
- (3) Briefing texts and technical papers will arrive at the SENSCOM Information Office not less than 25 working days before the intended publication date.

m. The following expands upon the statements of responsibilities contained in AR 360-11 only to the extent required to assure accomplishment of all aspects of the total public affairs program.

- (1) CG, ARADCOM:
 - (a) Plan, supervise and execute the SENTINEL public information and public affairs responsibilities assigned in AR 360-11, and assure appropriate coordination with other participating organizations.
 - (b) During Phase II, submit proposed SENTINEL related public information releases, not previously cleared, to SENSCOM Information Officer for review and appropriate action.
 - (c) Support and assist the SENTINEL information and public affairs activities of SENSCOM, USAEDH, SENLOG, STRATCOM and SENSEA.

(2) CG, SENSCOM:

PHASES I AND II

- (a) Monitor and coordinate for the SENSM overall Sentinel public affairs and public information activities.
- (b) Furnish necessary data on Sentinel public information and public affairs matters as appropriate to SENSM and OCINFO, DA.
- (c) Review proposed information material to include displays and obtain clearance for its use from the SENSM, OCINFO, DA; and DODOASD(PA) as appropriate.
- (d) Coordinate with OCINFO, DA and SENSO proposed information actions involving other military services, i.e., Sentinel System tests requiring Navy or Air Force launched target vehicles or interface with Navy or Air Force operational systems of those under development.
- (e) Review and coordinate with OCINFO, DA and SENSO, information plans prepared by major DA commands and agencies.
- (f) Coordinate with OCINFO, DA and SENSO appropriate Congressional notifications through OCLL, DA concerning Sentinel information to be released.
- (g) Advise SENSM and OCINFO, DA of impending developments in the Sentinel information program.
- (h) Provide individuals to brief Members of Congress, public officials, news media representatives and the public as stipulated by SENSM.

PHASE I

- (a) Provide CG, ARADCOM with qualified members of the Phase I initial briefing teams as authorized by SENSM.
- (b) Assist other DA commands and staff agencies as appropriate.

PHASE II

- (a) Conduct Sentinel Community Relations briefings as appropriate.
- (b) During Phase II(a) and Phase II(b) monitor, coordinate and assist the community relations activities (AR 360-61) of the Division Engineer, USAEDH, at potential or approved Sentinel sites, as appropriate.
- (c) During Phase II(c) plan, supervise and conduct community relations activities (AR 360-61) at approved Sentinel sites.
- (d) Review for technical accuracy, security and consonance with SENSM policy proposed information materials submitted by all participating organizations and contractors; submit to OCINFO, DA for clearance as required by references b and c; advise originating agency and OCINFO of changes in the text of the proposed material made during the SENSCOM review.
- (e) Conduct other public information and public affairs activities in consonance with the responsibilities of the SENSM as specified herein and in AR 360-11.

PHASE III

Provide such public affairs assistance as may be required to facilitate turn-over of Sentinel sites to CONAD/PACOM and to insure continuity and consistency of Sentinel site community relations activities with on-going Phase II community relations activities at other sites.

(3) Division Engineer, USAEDH:

PHASES I AND II

- (a) Coordinate and supervise the Sentinel information, public relations and community relations activities of Engineer Districts and Divisions.
- (b) Submit public information releases concerning Sentinel related engineer activities which contain material or information not previously cleared for publication through the SENSCOM Information Officer for review and appropriate action.
- (c) In coordination with SENSCOM conduct, as appropriate, other Sentinel public information and public affairs activities.
- (d) Provide individuals to brief Members of Congress, public officials, news media representatives, and the public as stipulated by SENSM.
- (e) Provide CG, ARADCOM and CG, SENSCOM with qualified members of the ARADCOM initial briefing team and subsequent SENSCOM briefing teams as required.
- (f) Support and assist the Sentinel related public information and public affairs activities of CG, ARADCOM as appropriate.
- (g) During Phase II(a) and Phase II(b), in coordination with CG, SENSCOM, plan, supervise and execute Sentinel public information, public affairs and community relations (AR 360-61) activities, as appropriate, in Engineer Divisions and Districts.
- (h) During Phase II(c), support and assist the Sentinel public information, public affairs and community relations activities of CG, SENSCOM, as appropriate.
- (4) CG, SENLOG: Support and assist the Sentinel information and public affairs activities of ARADCOM, SENSCOM, USAEDH, STRATCOM and SENSEA, as well as other participating organizations, as appropriate.
- (5) CO, SENSEA: Support and assist the Sentinel information and public affairs activities of ARADCOM, SENSCOM, USAEDH, SENLOG and STRATCOM, as well as other participating organizations, as appropriate.
- (6) Other Participating Organizations:
 - (a) Plan, supervise and execute appropriate public information and public affairs activities in consonance with DA policy as stated in AR 360-11 and this document.

July 25, 1969

(b) Support and assist the Sentinel information and public affairs activities of SENSM, ARADCOM, USAEDH and other commands and agencies as appropriate.

(c) Coordinate all SENSM identified activities through the SENSOCOM Information Officer.

7. EXECUTION: The SENTINEL System public affairs program will be a responsive implementation of the policy guidance contained in references (a), (b), (c), and (d) as expanded and restated herein.

a. Information Kit. A kit will be assembled and distributed to all commands (to include applicable Unified and Specified Commands) and agencies participating in the Sentinel System Program for use in response to requests for information and to serve as background information.

(1) The SENSM will have the overall responsibility for assembling the kit and for procuring appropriate inputs to it from all commands and agencies participating in the Sentinel System Program and for processing its contents.

(2) The kit will include, but shall not be limited to, the following:

(a) Kit folder.

(b) A fact sheet on the Sentinel System which tells within the bounds of security regulations: What the Sentinel System mission is; what the functions of major Sentinel subsystems and components are; how the Sentinel System will operate; when deployed in CONUS, that Sentinel will be an operational element of CONAD; and when deployed in Hawaii, that Sentinel will be an operational element of PACOM; its defensive coverage area (schematic national footprint chart) and how operational sites are selected, validated and acquired for Sentinel radars and missiles.

(c) A chart showing all commands, agencies, contractors and subcontractors participating in the Sentinel Program together with a capsulized statement of mission or contract requirements.

(d) A listing of Sentinel information milestones as specified herein. (See Inclosure 1 hereto)

(e) Biographies and photos of key service personalities associated with the Sentinel System Program.

(f) Photos or artist-concept sketches of Sentinel missiles, radars, site lay-outs and test or training installations.

(g) Copies of all news releases of national import which have been made on the Sentinel Program.

(h) Copies of major speeches or articles pertaining to the Sentinel System considered appropriate for general distribution.

(i) Copies of major statements or testimony on the Sentinel System made by key DOD and DA personalities.

b. Press Releases.

(1) Press releases will be made when justified by newsworthy Sentinel activities executed in the public environment or by the accomplishment of a Sentinel Information Milestone (see AR 360-11 and Inclosure 1, hereto, for Sentinel Information Milestones). Such releases will normally originate with the Army element or Sentinel contractor or subcontractor having immediate responsibility for or cognizance of the event being reported. Releases will be cleared as required by AR 360-11.

(2) Requests for information about the Sentinel program received from members of the press, radio or television will be met with an affirmative response within security regulations.

c. Magazine Articles: All magazine articles and responses to queries will be processed in accordance with references b and c.

(1) Magazine articles will be prepared by Army staff members or major DA subordinate commanders having operational cognizance of the Sentinel Program for submission to military, scientific and professional journals

and publications that are service sponsored or oriented.

(2) OCRD will encourage and assist in the preparation for magazine articles on the Sentinel System by civilian scientific or technical writers of national stature.

(3) There will be an affirmative response to specific requests made by representatives of civilian, military and technical magazines for information about the Sentinel System Program.

d. Interviews.

(1) Requests by representatives of national news media to interview senior DA operating officials regarding the Sentinel System will be met affirmatively.

(2) Officials granting interviews will ascertain to the extent feasible the questions that will be asked concerning the Sentinel System by the news media representatives; where questions regarding the Sentinel System are asked which are outside the context of previously cleared Sentinel material, or where an answer to a question would reveal classified information, the official being interviewed will decline to answer. Every effort will be made to anticipate the questions that will be asked by the interviewing reporter; where unclassified Sentinel information has not been previously cleared which is responsive to the anticipated questions, the anticipated question and the proposed answer will be submitted to OCINFO for review and clearance by SENSM and OASD(PA).

(3) Requests by representatives of local or regional news media to interview Army officials concerned with Sentinel activities in their circulation/broadcast area will be met affirmatively. Officials granting such interviews will be guided by paragraph 6.d(2) above, and the provisions of AR 360-5.

e. Speakers Program. An active speakers program will be established. Senior Army personnel associated with the Sentinel Program will participate in this program to the maximum extent feasible in order to explain to the American people the reasons for the Sentinel deployment decision, the strategic rationale supporting the deployment decision and why it is necessary and important to obtain real estate in particular areas for Sentinel operational sites for the System's missile, radars and supporting facilities.

(1) Speech engagements in support of this program for senior Army staff members will be coordinated by CINFO.

(2) Speech engagements in support of this program for senior Sentinel commanders and members of their staffs will be coordinated by major Command Information Officers.

(3) Every effort will be made to interest high-ranking military and civilian personnel within DOD in making public statements in support of the Sentinel System Program and the Sentinel deployment decision.

(4) OCINFO, DA and major Command Information Officers will maintain a library of quotations and public statements about the Sentinel System and the Sentinel deployment decision for insertion in speeches made by participating personnel.

(5) A standard briefing text with appropriate slides will be prepared by the SENSM, with appropriate inputs from participating commands and agencies and cleared in advance with OASD(PA). The SENPACC will review this briefing text periodically and suggest update inputs as appropriate. Copies of this briefing text will be distributed to major DA commands/agencies participating in the Sentinel Program.

f. Exhibit Program. If available, mobile exhibits cleared by OASD(PA) may be used in conjunction with speeches, panels, conventions and symposiums in which the Sentinel System is discussed.

(1) CG, SENSOCOM and the Division Engineer, U.S. Army Corps of Engineers Division, Huntsville (USAEDH), will coordi-

nate and collaborate on the construction of several mobile Sentinel exhibits suitable for display at Community Relations briefings conducted in local communities in connection with Sentinel site validation, acquisition and construction activities.

(2) Requests for utilization of all exhibits in civilian sponsored fairs, expositions, conventions, etc., will be coordinated by OCINFO with the SENSM and OASD(PA) on a case-by-case basis. (Note: This does not apply to exhibits at Sentinel Site Community Relations Briefings conducted by SENSOCOM or USAEDH personnel).

g. Sentinel Site Community Relations Briefings.

(1) SENSOCOM and USAEDH will collaborate and prepare a Sentinel Site Community Relations Briefing Text, with supporting slides, which (after appropriate clearance by OASD(PA)) will be used by Corps of Engineers, SENSOCOM and ARADCOM personnel in briefing, as appropriate, local governmental officials and citizens groups regarding Sentinel site activities underway or anticipated in local communities.

(2) These briefings will be designed to inform recipient audience groups regarding the reasons for the Sentinel deployment decision, the strategic rationale supporting the deployment and why it is necessary and important in implementing the Sentinel deployment decisions to obtain real estate in particular areas for use as operational sites for Sentinel radars, missiles and supporting facilities, and the operational roles of CINCONAD and CINCPAC after IOC. Whenever briefings are given in Unified Command areas, or in communities adjacent to military installations, the commanders concerned will be notified beforehand.

(3) The briefing text shall also include factual information identifying potential Sentinel sites in or near the local area where the briefing is given, and appropriate comments regarding site acreage requirements, site physical lay-out and functions, anticipated site population data, estimated site pay-roll data, how potential sites are validated and acquired (described entire decision-making process to include Title 10 action required by law), expected or anticipated effects of potential Sentinel sites on local property values, tax structure and payments, schools, sewers, water supply, fire protection, police protection, TV and radio reception, roads, highways, and safety to include its radiation and nuclear accident aspects.

h. Operation Understandings.

(1) CG, ARADCOM will periodically update ARADCOM's Operation Understanding Program to highlight appropriate aspects of the Sentinel decision and its supporting deployment program.

(2) Corps of Engineers Districts and Divisions participating in the Sentinel Program, and SENSOCOM, will nominate appropriate citizen leaders and officials from local communities adjacent to potential Sentinel sites to ARADCOM for participation in ARADCOM's Operation Understanding.

(3) CG, ARADCOM will issue invitations to nominated citizens to participate in Operation Understanding as feasible and appropriate.

i. SENTINEL Training.

(1) CG, CONARC will develop a Sentinel Training Public Affairs Plan for implementation at the earliest feasible date.

(2) This plan will be submitted to OASD(PA) for review prior to implementation. (See AR 360-11).

j. Press Visit to National Missile Ranges.

(1) CG SENSOCOM will develop, in coordination with OCINFO and OCRD, a Public Affairs Plan supporting a visit or tour by news media representatives to Kwajalein Island or to White Sands Missile Range to witness appropriate portions of Sentinel System tests.

S 8608

CONGRESSIONAL RECORD — SENATE

July 25, 1969

(2) These plans will be submitted to OASD (PA) for review prior to implementation (see AR 360-11).

k. Radio/Television.

(1) A program to acquaint service personnel with salient portions of the Sentinel System and the Sentinel deployment decision through Armed Forces Radio and Television will be conducted. CG, USCONARC, in coordination with CG, ARADCOM, will develop a plan to implement this program as part of the overall DA Command Information Program.

(2) There will be an affirmative response by all commands and agencies participating in the Sentinel Program to requests by commercial radio and television for cleared Sentinel newsworthy items to include film clips of missile flights, photos and taped interviews.

1. State officials and Civilian Aides to the Secretary of the Army, state Governors, state Adjutant Generals of the National Guard, Civilian Aides to the Secretary of the Army and other state officials as appropriate will be kept informed by direct mail or by personal visits by senior officers regarding Sentinel plans or activities which will or may have an effect in the respective states or areas of these officials. Specific notifications or briefings of these officials will be as directed and authorized by the SENSOM.

m. Local Officials. CG SENSOCOM and the Division Engineer, U.S. Army Engineer Division, Huntsville, will coordinate activities to keep local government officials informed as to activities which affect their areas. Co-operating Corps of Engineers division and district engineers will maintain liaison with public officials in affected communities to keep them informed of Sentinel-related real estate and construction activities which will impact on those officials' areas of interest.

Mr. FULBRIGHT. Mr. President, I wish to say to the distinguished Senator from Mississippi that I apologize for that word "stooge" or any implication or any other word I used that would reflect on his good faith and good judgment. I think he is discharging his duty and he always has. I have told him on many other occasions in matters which have nothing to do with this matter that the Senator from Mississippi has made one of the greatest contributions of anyone I know of around here. He has been given some very difficult assignments by the Senate, and he has always discharged them with great integrity and judgment.

I hope he knows that there is room for legitimate differences of opinion on this particular system at this particular time and under these particular conditions of our financial situation that afflict the country at this particular time. I do not think the Senator should take offense because we differ on this particular weapons system.

Mr. President, there have been many more occasions on which we agreed than differed in the last 25 years, if my memory serves me correctly. I hope the Senator will understand that there is room for difference of opinion on the ABM.

Mr. STENNIS. Mr. President, will the Senator yield for a brief statement?

Mr. FULBRIGHT. I yield.

Mr. STENNIS. I appreciate the Senator's remarks. I want the RECORD to clearly show that the remark I was taking exception to was saying that the Senator should not submit to the military bureaucracy or the industrial complex.

I really feel kind enough toward the Senator from Arkansas personally. I do not feel I was speaking for myself at all. I had made up my mind I was going to speak for the other 98 Senators if these charges were made again. That is the way I feel about it. There are no ill feelings toward the Senator from Arkansas at all.

As much as I can, and with my years of experience, I leave myself out of what he has said. I speak for the other 98 Senators.

Mr. FULBRIGHT. With respect to the other 98 Senators, I do not think the Pentagon comes up and says, "Senator X, you do so and so." That is never the way it works.

I say this is characteristic of our country. A Senator is serving an important interest or a friend in an important matter. I confess I am influenced by it. I am very much influenced by rice growers, cotton growers, and poultrymen. I do not lie down and do exactly what they say, but I am influenced by them. They are important elements in my State. We have that kind of representative democracy. The only kind of government which does not have that kind of influence is a dictatorship where there is one man who is not responsible to anyone. We do not have that kind of government. I was seeking to make that plain, and what I think General Eisenhower was calling attention to: The probability of the growth of this kind of influence which he warned us against; that we must be on our guard against the growth of it because it could become so influential.

I was not impugning the motives of anyone. This is the type thing that can occur when there is the growth of such an enormous organization which dispenses so much money in our society. That is all I meant.

I had forgotten to mention another matter, but the Senator has reminded me of it. This has no bearing on that aspect. However, it has been remarkable to me that Senators who were elected last year have the attitude that they do on this question. I think it is significant. I do not know of any of these Senators and I am not being personal, but I think it reflects a feeling that is very widespread in this country. It is made up of very different things: First, the war in Vietnam, probably more than anything else. The great and overwhelming emphasis that has been given the war in Vietnam since 1965. I do not wish to review all of the record about that. I had my part in the beginning of it, of which I am not very proud, as the Senator knows. I was mistaken in my judgment. I think I was misled partly because I had been—what shall I say—complimented by the President and my judgment was a little warped and I did not exercise the judgment I should have been capable of exercising at the time in 1964.

But that is water over the dam. I think these new Senators come here free from past commitments. They come here fresh from the electorate and they look at these things with a fresh look. They are not burdened with some of the old alli-

ances and influences that I and others have. I thought it extremely interesting and extremely reassuring. The most encouraging thing politically about this year is the quality and the intelligence of the men who were elected and who were sworn in last January. I think it is interesting that so many of them look on the ABM in what I think is a very enlightened manner.

Mr. HOLLAND. Mr. President, I cannot pretend to speak for any Senator except one and that is the senior Senator from Florida. I found out a long time ago that the 100 Senators are very, very different in their points of view. They are different in their experience and in their background. That background helps to make the attitudes of each of us.

The distinguished Senator from Arkansas, whom I am happy to call my friend, whom I was happy to support in his resolution of a few days ago after it had been changed in several important particulars to which I called his attention, has a background different from any of us. Certainly, I would expect that background to reflect somewhat in his point of view. My own background reflects mine.

I speak for no one but myself at this time. I came into this debate knowing very little about the subject. I am not privileged to be a member of either the Committee on Armed Services or the Committee on Foreign Relations. I came with somewhat of an inclination to support my President, although he is not of my party, because I knew that he was hoping—and the Nation was hoping—that he would soon begin a difficult confrontation with the Soviets, a summit conference on the question of whether we should have a limitation of armaments.

But I declined to make any commitment, and I stated to the press from time to time that I would make no commitment, until after the Senate had had a closed session and I could have access to classified information to which I had not been entitled up to that time, by reason of the fact that I was not a member of either the Committee on Armed Services or the Committee on Foreign Relations.

I attended very carefully the closed session, which had been requested, by the way, by Senators who oppose the ABM item in this important bill. I must say that I came out of that session not with a feeling that it had raised difficult questions for me and might bring me to feel that opposition to the deployment of the modified ABM was appropriate at this time but, instead, with a feeling that it had done exactly the opposite. I came out of the closed session feeling that the case of the President in asking for the modified ABM system and the position of those who were supporting him was made much stronger because of what we saw and heard in the closed session than it was by what is general knowledge.

With that background, let me say now that it is my very strong feeling that we should vote for the inclusion of the ABM in its modified form. I call attention to the fact that we are asked to vote for

July 25, 1969

CONGRESSIONAL RECORD — SENATE

S 8609

it—and it is what the President has asked us to do—as an authorization just prior to his entering a conference with the Soviets at the summit on the important question of limitation of armaments. I have voted for many authorizations which did not find fruition later in appropriations. I have voted for some appropriations based on authorizations made before that time which did not come into full fruition because the money was not actually expended.

What we are talking about now is only the first step in a change of direction from what we voted for last year and the year before last—a system which was primarily designed to protect cities, for what I think is a sounder, smaller program to protect our retaliatory power by protecting a part of our missile strength from destruction in the event we are attacked by forces from outside with nuclear weapons. It is my strong feeling that we would make a very great mistake—a very great mistake, indeed, at this particular time, to withhold this authorization.

I invite attention to the fact that this is only an authorization. Going to the summit conference for the important purpose which will carry him there, the President, under the circumstances now existing, will go either with an authorization, indicating that Congress, speaking for the people are back of him or without an authorization, indicating that there is great difference in our country to the extent that a majority of Congress is against him in that particular.

I think that any of us who have been through many conferences—I do not pretend to have been through any of as great importance as this one, and I do not suppose any other Senator has—but to go there without the assurance given by the facts, given by what has taken place, that his country is back of him is, in my judgment, to send the President there in a very weakened position and one which I do not wish to impose upon him.

Now, Mr. President, insofar as the backgrounds of the various Senators are concerned—and I question the motives of no Senator, and never have—I invite attention to the fact, again, that we are all of a different background.

If I may contrast the very distinguished background of the Senator from Arkansas with the much more modest background of the senior Senator from Florida, the Senator from Arkansas is a Rhodes scholar, he was the president of a university, and he saw at first hand the workings of the parliamentary system in Great Britain. The Senator from Arkansas has admired that system to the extent that he has expressed on this floor what amounts to questions as to whether it is wise—as we do—to separate the executive from the legislative, or whether the British parliamentary system may be a sounder and better system.

The Senator from Arkansas is in all ways a man of peace, a man of learning, a man of science, a man of great understanding—and, if I may say so, a man of very wonderful personality.

From that background he comes to one conclusion. I wish that I could say I have come to that conclusion, but from a

very different background. In war quite a while as a young man, in law practice, and in public affairs in my own State of Florida as a young man, and also as an older man both in the legislature for a long while, and then as Governor, and now here in the Senate, with entirely different committee assignments and with entirely different interests in many fields of study, certainly not the same interests and scholarship which my good friend has, I come to the conclusion that the practical, commonsense thing is for us to stand back of the President in this authorization.

Mr. FULBRIGHT. Mr. President, will the Senator from Florida yield?

Mr. HOLLAND. I yield.

Mr. FULBRIGHT. First, I, of course, cannot resist thanking the Senator for the implications in his remarks which are most complimentary to me about some of my past activities, although I do not think they are particularly relevant to this point. Let me say one other thing about this present situation. The Senator from Florida left out his own accomplishments. He has had a very long and distinguished career as Governor of his State, as a Senator, and as a public servant in many other ways.

Mr. HOLLAND. I thank my good friend.

Mr. FULBRIGHT. We know that. No man in the Senate is more respected for attention to his duties and the contributions he makes to the Senate in many different ways, in his integrity, and so forth, than the Senator from Florida.

On many occasions, we have been on the same side of controversial issues. The Senator from Florida has always taken the lead in those and has done a very fine job.

But on this particular question, I have had some pretty bitter experience myself in adopting the attitude, "He is our President; therefore, we should follow him." Perhaps that is one of the things which has made me most skeptical about that particular approach. That is the point the Senator from Florida, apparently, really is making.

Mr. President, I felt that way in 1964. In 1964, I went out of my way as much as any man in the Senate to support the then Democratic candidate for President of the United States. I made speeches here and elsewhere, particularly in my own State. I was one of the few office holders in my State who made public speeches and took the responsibility of organizing a campaign in the summer of 1964.

I was chairman of the committee which reported to this body a resolution sometimes called the Gulf of Tonkin resolution. I later found out that that resolution, in my view—and I am more convinced now than I ever was—was based upon false information. It was not directly given by the President. It was given to my committee by his appointees. Of course, I think he has to take the responsibility for it. That was the beginning, in my view, of the greatest tragedy this country has suffered since the Civil War.

Maybe that is part of our background that makes me most skeptical just to say,

"Well, the President wants it, so let us give it to him."

That is where I think I differ with the Senator. Perhaps it is because of my experience. The Senator from Florida did not go through that experience. He did not have the same responsibility for it. I doubt, being only one Member of this body, that I could have influenced the outcome in that situation, because it was a highly emotional one. The House of Representatives had voted unanimously for it, and in this body there were only two skeptics. Perhaps that is one of the deciding elements why I do not feel that, because the President wants it, we should give it to him.

I have great respect for the President. He used to be a Member of this body. He used to be a Member of the other body. He has moved from this end of the avenue to the other end. I have great respect for him as a public servant, but I do not think he is infallible.

I differ with the Senator from Florida as to the effect on his representation at a conference, assuming he goes to a conference. I could make as good an argument for the view that we should go there without trying to impress the Russians that we can overcome them, that we are the "big fellow," and we do not want to do anything unless they do this or that. I think it would be more effective if we approached them a little from the standpoint of equality.

I think the Russians suffer from the feeling that we are trying to outdo them; that we are the richest nation—everybody knows that—that we have great missiles—as everybody knows—that we spend at least 25, if not 30, percent more on our defense than they do. This is a psychological thing. The Senator thinks it strengthens the President's hand. I am not sure that it does not make it more difficult to arrive at an understanding, even on that basis.

Mr. HOLLAND. I thank the Senator. I say again, I do not question his motives or objectives. I did not in connection with his sponsorship of the Gulf of Tonkin resolution. I supported him. We had a long colloquy on it on the floor—

Mr. FULBRIGHT. I was wrong.

Mr. HOLLAND. I believed everything he told me. I reexamined it the other day. I think all the things he told me were true. They had to do, generally, with the relations of the nations in the Southeast Asia area, if the Senator will look at the colloquy, and not with the question of the soundness of the facts as related to him, and by him to us, as to what had taken place in the Gulf of Tonkin. They had to do more with the relationship of the various nations in in that area.

I believe in the Senator from Arkansas, and I have tried to say so, but I do not always agree with him, and neither do I always agree with my President. But when I send my President, as I hope I may be a party to sending him, with every good wish, to confront the Soviets, I want him to have every assurance of support and backing from his own people that we can give him. When I know it is not a final expression we are asked to make, but simply an authorization, and when I know they know that just

July 25, 1969

as well as we do, whether or not we pass this authorization, I want him to go there feeling that he is backed by his own people and his own Congress, and I think they should have the knowledge that he is so backed.

May I say, with reference to this whole question, that I have not blindly supported the President of the United States. The Senator from Arkansas spoke of a President whom we jointly helped elect in 1964. I think the Senator knows, without recounting them, how many times, in my conscience, I opposed that particular President, and I did so, and sometimes strongly. One of them was last year, just before he left office, when he tried to name as Chief Justice of the Supreme Court a man who I felt was not of the proper philosophy, as was shown by his own actions upon the high Court. The Senator may not know some of the things visited upon the Senator from Florida because of his position then, but the Senator from Florida did not waver.

So far as his support of the Defense Department is concerned, the Senator from Florida has frequently differed with it. I remember last year and the year before they wanted expensive, big ships to be stationed in various parts of the earth, full of all kinds of implements of war and peace, so that when anything broke out at remote areas of the earth, we could act very quickly. The records of the Congress show I opposed that.

Mr. FULBRIGHT. It was taken out in committee, was it not?

Mr. HOLLAND. When they were trying to build a very impressive and large bomber—I do not remember the name of it, but it was an alphabetical name—the Senator from Florida opposed it. Another time, when they were trying to build an additional nuclear carrier, the Senator from Florida opposed it.

The Senator from Florida has, on frequent occasions, opposed the Defense Department, and he stands ready to do so again. But the feeling of the Senator from Florida at this time is that, if he were going into an argument, confronting our only great potential hostile force in the world, he would want to have the assurance of the backing of his own people, as shown by the vote of the Congress, which represents the people of this country; and the Senator from Florida would not want to send him there naked, and not clothed with that expression of support.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. HOLLAND. I will yield, but may I finish with just one additional comment?

I remember when the question came up on the issue of selective service a few years ago. The Defense Department was begging for an extension. I remember that the Armed Services Committee was begging for an extension. I remember that, finally, after long debate, the Congress extended selective service by one single vote. That was the margin in one House of the Congress. And within a few weeks, Pearl Harbor fell upon us, and we realized how terrible a handicap we would have been under without an extension of selective service.

I think this is one of the issues we may be divided on, just as the Congress was then divided; but I think I am entitled to have a very strong conviction, which I do have in this instance. I promise nothing further, because I may vote against the President next time it comes before us. This is not because he asks for it. It is because he is going to represent the people of this Nation. I think he should go with the assurance of our support and that in giving him that support he will carry greater weight and greater strength with respect to those with whom he will be in difficult contest—and that is what amounts to when he gets into such an experience as that conference will be.

Mr. FULBRIGHT. Mr. President, if the Senator will yield—

Mr. HOLLAND. I yield.

Mr. FULBRIGHT. I think the Senator misconstrues the issue. The issue of the ABM goes beyond that conference. We have already had a vote which clearly supports the President on the conference. If the Senator will look at the debate on the Nonproliferation Treaty, he will see that article VI of the treaty commits us to discussions with the Soviets for the purpose of stopping the spiraling of the arms race. That was put in there at the urgent request of the smaller countries who were parties to the treaty. It was put in as article VI of the treaty itself. We discussed it in the committee. I discussed it on the floor. The vote for it was overwhelming. I think 80 Members of this body voted to advise and consent to the Nonproliferation Treaty.

That is the vote which is relevant to the President's going to a conference with Russia.

This issue is on just one item in a military bill, which, it seems to me, is utterly irrelevant to the President's discussions on armaments.

If the Senator wants to take an item which is more relevant, it would be the question of the MIRV. Much was said about it in the hearings before our committee. It was revealed that that is a far more dangerous weapon and much more likely to disrupt a conference. I refer to our proceeding with MIRV.

I could make a far better argument, I think, if we want to strengthen the President and place him in a position they could not challenge, for laying on the table the fact that we have MIRV, that we have MIRV-ed our weapons, and that we are absolutely invulnerable because of our strength.

I do not think that is really the way to approach a conference, if we are serious about seeking an agreement with the Russians. I would say that the ABM is of little consequence. The Russians have tried an ABM. They started to deploy one. They got it half way in, and they discovered it was a bad deal and quit deploying it. This is the information we had, and the Senator knows we had it.

Mr. HOLLAND. I listened to the information in the closed hearing. It was not entirely to that effect.

Mr. FULBRIGHT. I beg to differ with the Senator. That is as far as you could go in reading anyone's mind. This was the conclusion of the intelligence community, that they had stopped and were

not proceeding, and what they are doing is what we are saying we ought to do now, which is only to conduct research on it. They are not proceeding to deploy.

One thing that is very difficult to deal with is when the proponents of deployment get up and say, "The Russians have an ABM. Shouldn't we have?"

What the Russians have is absolutely nothing like what is proposed here. It is around only one city. If anything, it is like Sentinel, which we have abandoned, which was designed for the protection of a city. But they got it halfway up and decided it was a bad deal, and they have stopped deploying it. That is the uncontroverted testimony of the Chairman of the United States Intelligence Board. We had this information before we even got into this controversy over a year ago, when this matter came up with regard to the Galosh system.

They are not proceeding to build it because they know it needs further development, and maybe they cannot make it work at all; they do not know. That is the only rational conclusion one can draw from what they have done.

I do not see how the Senator thinks this would be a vote of confidence in the President. If any vote could be that, it was the vote on the nonproliferation treaty, which has a specific article on this subject. This is simply one item. I suppose, one could pick out any item in this bill and say a vote for it is a vote of confidence.

Why is it? I cannot understand the Senator's point that if we should vote not to deploy, but simply to go ahead as the Senator from Kentucky suggests, it would be interpreted abroad as a disavowal of the President. I think that is an absolute non sequitur. I do not think anyone would interpret it that way, and certainly not the Russians, because they know what an ABM is, even if we do not. They know how faulty it is. If they did not, why did they not proceed to put it in, not only around Moscow, but around Leningrad, Kiev, Irkutsk, and so on? Obviously because they have not been able to make it work up to this time, and there is grave doubt whether they can.

I have no purpose of disavowing the President, if and when he goes to meet with the Russians.

Mr. HOLLAND. I am sure the Senator does not, but there are Senators who think that to agree to the amendment would weaken the President, and the Senator from Florida, for one, is very strongly of that feeling.

I ask the Senator to go back with me a little bit. I think, in the first place, we here in this country are not as cautious as we should be in our dealings with the Russians. I hope that they are frank this time. I hope that the fact that Mr. Gromyko has indicated that they would like to have this conference for arms control may be taken at face value. But my memory goes back to some things that make me a little more cautious than I would be otherwise, and I am a little bit inclined to be suspicious and cautious, and I make no apology for so being.

I remember that we thought we had an assurance from the Russians that they would not explode a nuclear weapon in

July 25, 1969

CONGRESSIONAL RECORD — SENATE

S 8611

outer space, and we woke up suddenly to find that they had done so, and that they had secured information which we wished we had, and which we cannot get because we are, of course, conforming to the later treaty on that subject.

Mr. FULBRIGHT. May I say that was not a treaty.

Mr. HOLLAND. May I finish my point on this matter?

Mr. FULBRIGHT. Just as a point of—

Mr. HOLLAND. May I please finish my point?

Mr. FULBRIGHT. It was not a treaty. That is the only point I wish to make. There is no such treaty.

Mr. HOLLAND. I supported the Senator in his nonproliferation treaty, and was glad to do so. I thought it was the patriotic thing to do so, just as I think now that in order to give our President the greatest strength and the greatest showing of unity at home, we should support him in this request, which comes from the Armed Services Committee on a perfectly nonpartisan and bipartisan basis.

I remind the Senator that not only did the Russians completely breach their agreement with us with reference to the explosion of a nuclear body out in space, but that this same man, Gromyko, when the Russians had transported some of their great weapons, some of their long-distance missiles, into Cuba, and they were installed there, and the President had on his desk the picture taken by some of our people in the Air Force showing that the missiles were there, and right where they were, this same man, Gromyko, came into the office of President Kennedy and told him that this was all a pipedream, that Russia had not sent any of its missiles to Cuba.

The Senator well remembers that, because I think he was close to that situation as the distinguished chairman of our highly distinguished Committee on Foreign Relations, I am sure that he knew all about that, and he knows of the rather atrocious misstatement made by Mr. Gromyko to our late, beloved President John F. Kennedy.

Then I remember that, though they were committed by treaty to give us access to Berlin, that they forgot all about that commitment, and we had to go through the very expensive but very effective airlift program, to show that even though they did violate it, we did not propose, because of a few million dollars, to abandon the people of Berlin on our commitment to them and to our allies in Europe.

Knowing these things, it seems to me that we would appear rather naive, that we would appear over optimistic, that we would appear over credulous to the Russians and to the world if, at this time, we took at face value—though I hope that later we can take it at face value—the assurance of Mr. Gromyko that they want to limit arms. We all know how badly we need to curtail the arms race, and I think Russia needs just as badly to curtail it; perhaps they need it more than we do. I think we would look very naive indeed, however, if we took the fact that he has approached us on this subject as a sort of assurance that the

difficult objective was going to be worked out, and that therefore we were going to abandon what we had already entered into as a program to protect our retaliatory strength—not to make an offensive gesture of any kind, but in order to defend, if we needed to make use of them, the continuing availability of our weapons up in the areas of our Midwest where they are in place.

Mr. President, I feel so strongly about this issue that I felt that I should place this statement in the Record at this time. I am not prepared to discuss now, though I have read a great deal on the matter, the scientific questions that are involved. But those questions have been adequately discussed. I simply wish to bear down on this one point: that I think we would make a great mistake to leave the Nation with the feeling that we did not propose to support our President on this first step—and that is what this is—that as far as the modified ABM is concerned, and that we did not propose to support him just prior to the time that he goes away to this all-important conference. I feel that we should do so, and I do not think I need to remind my distinguished friend that I have very frequently opposed the Presidents, not just this President—though I have not had much chance to oppose him yet, because he has not asked for much that has come to the floor as yet—but I have frequently opposed my own Presidents, if one can so speak of those who belong to the party to which he and I both belong—and I opposed the previous President of the other party, under whom I had the privilege to serve together with the Senator from Arkansas.

I do not feel an obligation to support everything they ask for, and never expect to do so. But I feel that in this instance, whether he had asked for it or not, we should arm him with the additional assurance that his Nation is behind him; that we are taking this first step, an authorization step only, on a program designed to protect our retaliatory power.

There is no crime in protecting our retaliatory power. There is no offensive action of any kind in doing that. I think we should begin on that path at this time.

I thank my friend the distinguished Senator from Arkansas for his patience. He knows how I feel toward him. I have shown that frequently by what I have said and how I have voted on the floor of the Senate.

I think the Senator is wrong in his conclusion at this time, although from the best of motives. I think he is entitled to know what my decision is, why I have made it, and why I feel the President will be a much stronger advocate of what we want him to stand for when he goes to have a summit conference with the Russians if he goes with the knowledge not only of himself and the Russians, but also of the world, that his Nation stands behind him in the beginning of an effort to protect our retaliatory power so that always we need not fear destruction at the hands of one who tries to destroy us by nuclear weapons.

I thank the Senator.

Mr. FULBRIGHT. Mr. President, I have a few words to say in response.

There are a number of points that the Senator raises. I would be more than willing to cosponsor, sponsor, or vote for a resolution which in no uncertain terms states that we are behind the President in his efforts to reach some agreement on the limitation of armaments and so forth.

As I say, I consider the vote on the nonproliferation treaty, which contained article VI, to be just such a vote. I feel that this is just a weapons system on which there certainly is great doubt.

The Senator will agree that when we take the testimony of the scientists—and especially if we take into consideration those scientists who were the advisers of the previous Presidents, Eisenhower, Kennedy, and Johnson, who are not now in the employ of either the Pentagon, the Government, or a contractor—and put it against the others, it is very impressive. I think that there is doubt about the state of the art at the present time.

As to the retaliatory strength that the Senator has mentioned, we have the weapons. There is no question about the number of weapons we have in place at four different locations: the Minuteman in silos, the Polaris in the submarines, the Poseidons in the Polaris, and the weapons at airports and even abroad.

The deterrence grows from the belief on the part of the Russians that we will use them. The way they were designed and the way they will operate as deterrents is that when our radars and satellites indicate the Russians are attacking, they will be released and destroy them. This is the whole theory of deterrents. It works now. It will work in the future.

In my opinion, I do not believe the ABM is relevant to the proposed conference with the Russians in any substantial way.

The question is whether we will use them. I think we will. They understand that; we understand that.

What we are going for now is—and it is the purpose of the conference—that we cease to escalate and cease to spend all of our money, or so much of it, on both sides for this nonproductive instrumentality known as nuclear weapons.

All we are doing in creating MIRV and ABM is stepping up an arms race and doing exactly the opposite of the purpose of the conference.

With reference to the conference—and I do not believe I am naive about it—I think it is very dubious that we will get any results, because I think there is great question about our credibility in really meaning to go forward with a restriction on the number of armaments because we are now making the decision to put in ABM. We have already begun the MIRV. Contracts were let and publicly announced a week or two ago for the deployment of MIRV.

Many of our best authorities have said that this is a more significant thing than the ABM because once we get the MIRV in operation, it is very difficult to find out what is going on by means of satellite or any other means.

S 8612

CONGRESSIONAL RECORD — SENATE

July 25, 1969

There is no reason to be very optimistic about it. That is another reason, it seems to me, that we can agree this is not likely to promote an agreement. I am not so optimistic when it comes to getting an agreement. I would like to get an agreement. However, in the meantime, I do not want to spend all of our money on this.

Actually, with respect to the Senator's point of view about supporting the President, the day before yesterday the President had a large number of Senators and Representatives at the White House at 8 o'clock in the morning. And the present Secretary of the Treasury and his three predecessors were there.

What was he talking about? The ABM? No. He was talking about the surtax and its importance.

I would say that a vote against the surtax would be perhaps a more significant disavowal of the President than a vote against the ABM. At least the President gave the surtax far greater prominence in his efforts at prevailing upon the Senators. There were more Senators and Representatives present to listen to his very fervent pleas for the surtax than he has ever had present concerning the ABM.

Am I going to be in a position to say, "I can't vote against the surtax because it would be a disavowal of the President and he would go abroad without the full support of his Congress." Surely, to me the surtax is just as relevant to the purpose of the conference as is the ABM.

I do not think the ABM is so significant to the Russians one way or the other.

They know it is a rather insignificant thing. What I am really interested in is not going down the endless road of pouring our money into weapons systems which serve no useful purpose. We have serious matters to consider, and I agree with the President about inflation and the surtax.

The only criticism I made about his presentation at the White House with his people was that he spoke only about taxes, nothing about cutting the budget. I think that budgetary matters are as important as taxes. But that is another subject. I raise it at this point merely to say that the President himself has given, within the last 2 weeks, greater attention to persuading us of the necessity for a surtax than he has for the ABM. I think the ABM, even from his point of view, is merely another item in the overall program which his new Secretary of Defense, because, I am sure, of his feeling and his duty, is urging upon the President.

But I do not believe the President thinks at all that the ABM is as significant as the Senator from Florida thinks it is to support him. If it is support, and that is all it is, I would be more than willing to submit a resolution of support, backing the President 100 percent in his efforts in Moscow, if that is all it would take to satisfy the Senator from Florida on that point. If he has some other point, that is another matter. But I would have no hesitancy in backing the President in that way.

I do not believe there is a relevant connection between the ABM and backing the President in his conference on the limitation of armaments. Some persons have already said that the ABM is a defensive weapon. Why should the Russians particularly care about it? I do not think the Russians particularly care. In the first place, they know it will not work. Second, it would be expensive. It would weaken us to divert money to the ABM, which is useless, instead of procuring more MIRV's or Poseidons, which are more dangerous. I think the Russians would be glad to have us proceed down this futile path.

It has been suggested that we ought to go all out in the arms race because the Russians will go bankrupt before we will. That argument has been suggested by some columnists and others who think that we cannot make an arrangement with the Russians anyway. They make the argument the Senator has made, that the Russians cannot be trusted.

They call attention to the fact that the Russians exploded a nuclear weapon before we did. Actually, that was not under a treaty. They had made no formal agreement; it was a tacit understanding which they broke. I do not think the Senator was correct in saying that there was a treaty—in other words, a formal agreement. It was what might be called a gentlemen's agreement, although that might not, perhaps, be appropriate in this connection.

I dislike to be in a position of trying to defend the Russians. They have done many things of which I do not approve. I think they have made many mistakes. I do not approve of their having gone into Czechoslovakia. I think it was a great mistake on their part. But I must say, also, that I did not approve of our intervention in the Dominican Republic in violation of treaties. We had made treaties with Latin American countries at Rio de Janeiro and other places, in which it was said in no uncertain terms that we would not intervene in those countries—the Senator knows that—but we did intervene directly against those treaties. So I do not like to use that type of thing.

I think that big countries, when they feel that their interests are threatened, rightly or wrongly, and mostly wrongly, intervene.

I certainly do not approve of the misrepresentation about Cuba, but neither do I approve of the misrepresentation about the Gulf of Tonkin to my committee.

Surely, the Senator does not take the position that we are the only good people and that we have never gone against any of our treaties—going back to the Indians or anybody else. The Senator will not approve of the way we treated the Indians. The Senator will not approve of the way we treated the Filipinos after the Spanish-American War. I do not approve of it; I do not think history approves of it. I think we were absolutely without justification. It was a cruel and barbarous thing to do, after we had cooperated with Aguinaldo and then turned upon him and destroyed him.

But those are things that big countries have done, and I do not think any of us are without fault.

I am not trying to defend the Russians and say they are good people and we can trust everyone. The only purpose in having a conference with them is that their interest in this instance coincides with ours. We did make a treaty with them in the Antarctic. There was a great deal of opposition. I believe 30 Senators voted against it. To my knowledge—and we inquire from time to time—the Russians have abided by it to the letter, to this day, because their own interest coincided with ours. It was a good treaty. So far as I know, they have abided by the Nuclear Test Ban Treaty, as well as we have. Both of us, I think—I know we did—inadvertently allowed a little to escape in our underground testing. I do not think it was intentional, and they have made no point of it, nor have we in their case. I think we all are subject to making mistakes or doing things we should not do.

Now, that has nothing really to do with this. What it comes back to on the ABM, the point I am trying to make, is that in all good faith I think the Senator, to some extent, misconceives the relevance of the ABM to the support of the President. I do not want to weaken the President; I do not think it does weaken him; and I am willing to do whatever the Senator thinks appropriate, other than this type of thing, to support him, if the Senator thinks it is necessary. I do not think it is necessary. I believe that the vote of 80 Senators on the Nonproliferation Treaty, with article 6 in it, is all the backing the President needs from this body to go to Moscow with the full assurance that they know he is speaking for us when he makes a proposal to limit armaments.

On the contrary—and I will end with this—I think that in proceeding with ABM and with MIRV, we are guilty to a degree of talking out of both sides of our mouth. On the one hand, we are saying we want to limit armaments. On the other hand, we are proceeding with both the MIRV and the ABM.

This is a characteristic which has been much in the public eye. The Senator knows about what was called the credibility gap and how it afflicted the last administration to the point that people felt there was a degree of talking one way and acting another. I do not like it. I think it destroys the faith of our people in their own Government. I believe this is bad.

If we are really serious about this negotiation, if we really mean to try to get an agreement, to be consistent with that I think we should, as the Senator from Massachusetts has so well put it, have a moratorium on the MIRV, and we should suspend the ABM at least until after the conference. I think that logically we could be accused of saying: "You voted 80 to 16, or whatever it was, to say we will proceed to a conference, and you turn around and begin to deploy ABM's and MIRV's. So you are speaking one way and acting another."

July 25, 1969

CONGRESSIONAL RECORD—SENATE

S 8613

As our Indian friends, who had so much experience with us, said, "The white man speaks with a forked tongue"

And I think we could be guilty of it. Mr. HOLLAND. I thank the Senator.

I just want to make it clear that, so far as the Senator from Florida is concerned, he thinks that the authorization to proceed with the ABM is a necessary ingredient of our effort to remain strong. The Senator speaks of how strong we are. It is a defensive effort to make sure that we have the retaliatory force not only to defend ourselves but also to wipe out an opposing enemy, if we have to, if we are first attacked. No real criticism can be made of a nation that tries to protect its power to defend itself.

The Senator knows full well that so far as the Senator from Florida is concerned, he has not been summoned to the White House, he has not talked with the President, and he has not talked with the Secretary of Defense. He has been forced, so far as his information about classified material is concerned, to rely upon the closed session, at which he heard a great deal, and it made him feel that there was a good case made for the authorization of the ABM.

I want to make it very clear, also, that the Senator from Florida has not been approached by anybody of the industrial-military complex to which the Senator has referred; but he has been approached by his own people, who did not know how he was going to stand. I had a count made of my thoughtful letters—from my own people the other day, and they were practically 3-to-1 in favor of the ABM, some 1,500 to 500. Many of them take the position that since it is a purely defensive effort, they feel that by all means it is necessary to help us preserve our strength. And that is what it is for.

I hope the Senator will not mind if I tell him a little story about something that happened to me many years ago. The Senator will recall that shortly after World War I, we used to have Armistice Day celebrations every November 11. The Senator from Florida, as one who had taken part in that war, was called upon at times to make speeches on Armistice Day. He recalls one that he made at the fine little city of Arcadia, Fla.

The host there was the preacher of the Methodist church, the largest place of meeting in the city, who later became a very distinguished bishop of the Methodist church. His name was John Branscomb, and I am certain that the Senator will recall him.

After the Senator from Florida had completed his speech, the customary type of speech made in those days about Armistice Day, about the efforts to make the world safe for democracy, about our having successfully fought a war to end all wars, and then with something about preparedness thrown in for good measure, we were all talking in front of the church. The preacher, who was a dear friend of mine, the Reverend Branscomb, said:

Well, Judge Holland—I happened to be a judge at that time—I want to tell you that I thought you made a fine speech, except the

part about preparedness. I don't believe we ought to stay militarily prepared. I don't believe we ought to arm. I believe we ought to be peaceful.^a

I questioned that very mildly and finally we both turned to an old friend who was standing by. His name was Dr. Aurin. He was the dean of all doctors in south Florida at that time. As a young man he had fought in the Spanish-American War as a cavalryman. Brother Branscomb said:

What do you think about it? What is your judgment?

Dr. Aurin said:

I have been here a long time. I was here in the days when there was much disorder here every Saturday night. The cowboys would come to town and the Indians would come to town and there would nearly always be a fight, there would nearly always be a shooting, and there would nearly always be all kinds of scraps. One of the things I noticed was that when a man came to town with a six shooter strapped to his hip where everyone could see it, nobody ever picked a fight with him.

That ended the discussion. For years I was good friends with Brother Branscomb. We both became trustees of Florida Southern College. He would frequently recall that incident.

I think that to have the ABM is to have a pistol on our hip where it is available and where all the world knows it is available; and we have the striking strength, if the need comes to strike back, so we can demolish anyone that has the effrontery to attack us. It is not an offensive effort; it is a defensive effort.

I want the Senator to realize that those who would confront us may honor us the more if we try to move from a position of strength rather than from a position of relative weakness.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield.

Mr. FULBRIGHT. In his last phrase, the Senator made reference to "relative weakness." That, I think, might be the key to the entire matter. The relative weakness is utterly inappropriate to our situation. I realize the Senator is not on our committee, and he could not possibly have heard the testimony from official witnesses about our relative strength and have any idea that we are relatively weak. We are relatively very powerful. There are many ways this can be judged.

In the first place, there is no question, according to people in authority, that we are spending at least 4 to 3 in purchasing dollars. This is translated by the best authorities as the purchasing power, not the number. We went into the matter in great detail.

I asked, "How do you estimate what the two countries are spending?" Of course, we have twice as much productivity as they have and they may be spending a little more of their GNP percentagewise, but we are spending far more in purchasing power.

Mr. HOLLAND. Our wages and living costs are vastly more than theirs.

Mr. FULBRIGHT. I am sure the Senator is being misled if he believes

that. This is the very thing we asked the Director of the CIA to translate for our committee. Taking into account the cost of living, the cost of materials and everything else, he comes up with a ratio of 4 to 3, which is considerably more. We have these weapons, sufficient to destroy all of Russia several times over.

I beg to suggest that the analogy of the six shooter on the hip with hydrogen bombs is not appropriate. The days of six shooters, and rocks, and slingshots is gone. There was a different concept then. We are talking about nuclear weapons.

Nuclear weapons translate into hydrogen bombs which can utterly demolish a country. At the same time, they are piled up far beyond the capacity to destroy them completely, far beyond anything in the Soviet Union.

I also call attention to the fact that the ABM is not intended or designed to do anything about protecting the *Polaris* submarine or the weapons in airplanes. It is only designed, even if it were effective, for the Minuteman. So you have all these Poseidons, and more than enough to destroy the whole Soviet Union.

The Senator is talking about only one aspect. If there is only that insignificance, why does the Senator oppose it? I am absolutely convinced we have more weapons than they have. We could destroy them. The deterrence is there. The best people in the military will confirm that, except when they are trying to make a sale on the ABM.

The Senator said that his constituents favored the ABM 3 to 1.

Mr. HOLLAND. 1,500 to 500.

Mr. FULBRIGHT. This is the result of the kind of misleading advertising and polls that I referred to. There have been polls in full-page ads. The question is: "The Russians have an ABM to protect them; wouldn't you like to have one?"

If that is not a loaded question, I do not know what is. Anyone who knows nothing about the ABM would say, "Sure, the Russians have it; we should have it also." This is the type thing which creates an impression.

Mr. HOLLAND. Has the Senator seen the page-long ads of the opponents of the ABM? I have.

Mr. FULBRIGHT. I have seen some of them, but they are very few compared to the others.

We had a Mr. Case before our committee the other day. He is the chairman of a committee which took a poll. The question was: "The Russians have the ABM to protect themselves. Don't you think we should have one?" How could anyone who has not heard anything about this help but say "Yes"? It says nothing about the facts. There is not a word in it that is factual at all. This feeling has been created by this very sort of thing which I mentioned a while ago. It is a good illustration of the military-industrial complex, because among the sponsors of that advertisement were representatives of 11 of the biggest contractors in the country, companies like General Electric, IBM, and

so on. The directors of those companies pay for such ads.

As I have mentioned, they are putting out books. Mr. Herman Kahn of the Hudson Institute is publishing a book that I am sure will be spread all over the United States. I do not know who will pay for it, but undoubtedly it will be plenty of people. The \$80 billion in the Defense budget is such an enormous amount of money that no one can conceive of it.

The Senator says we have to be strong. Nobody has ever been as strong as we are.

Mr. HOLLAND. The Senator was present in the Chamber during the closed session the other day, was he not?

Mr. FULBRIGHT. Yes.

Mr. HOLLAND. The Senator knows that neither he nor I can reveal the information disclosed there, but with respect to nuclear submarines does the Senator remember that information?

Mr. FULBRIGHT. Yes, I remember the reference of our having 41. It is not secret. It has been in the newspapers.

Mr. HOLLAND. Does the Senator remember the information about the ones they are constructing?

Mr. FULBRIGHT. Yes, they are building submarines, but we are doing it, too, and we can build them faster and we will if we need them. It was only a few days ago that some of our people thought we have so many more than we need that they are thinking of retiring 10. We can destroy Russia 10 times over and some of the more thoughtful people said, "Why should we keep this up at a cost of hundreds of millions of dollars?"

This brings me to one further point. I do not wish to belabor my argument with the Senator. If we have to build everything that comes up, there is no limit—we are already outspending them—unless one assumes we are more stupid than the Russians. We are doing lots more than they in the way of defense. I do not think we are stupid. I think our industrialists are more competent and efficient. There is no way to accept that result. We are already strong enough.

When the Senator refers to a position of strength in which we should go to this conference, we are in a position of strength.

I think we run a risk, by continuing to build the MIRV and ABM, of destroying credibility and creating a situation in which the Russians and everybody else will say, "The Americans are not serious about this. They talk one way and act another way."

But we want to negotiate by proceeding with MIRV which is the most dangerous development since the hydrogen bomb itself.

Mr. HOLLAND. Are not the Russians proceeding with a similar three-headed monster of their own?

Mr. FULBRIGHT. But we were proposing that we stop. Everyone agrees, I think, that we are ahead of them insofar as the rate of development and the place of development are concerned. The Committee on Foreign Relations held a hearing with three or four of the best scientists we have. They said that MIRV is the most dangerous new development in the sense of preventing an agreement, because it cannot be supervised or—that is not the right word—

Mr. COOPER. Observed.

Mr. FULBRIGHT. Observed. In other words, we cannot tell what the other parties are doing. That is why we wanted to have a hearing. We had one. It was a good one.

When we go to the extent of proceeding with MIRV, under these circumstances, we are setting the stage for a failure in any conference. I do not think by threatening people, by saying we are coming in with twice as many weapons, that we are likely to create an attitude or an atmosphere in which we would get any agreement. If we want to sabotage that matter, that is one way to do it.

Mr. HOLLAND. I do not agree with that last statement at all. I think, to the contrary, if we do not proceed with an authorization, which is the first step only of this project, that the very reasonable conclusion for the Russians to reach is that again we are showing we are a bunch of saps, that we believe everything they say, that we are naive, because Mr. Gromyko comes this time to say that, "We sincerely want to limit armaments, so let us have a summit conference," and we regard that as already completed.

I think that we should go to the conference and do everything in our power to bring it out to a successful conclusion, but I do not believe that we will do it by the overoptimistic approach under which we would abandon what we were beginning to do, simply on the strength of his having said that we want to do thus and so. We have seen enough of him heretofore to know that he talks out of both sides of his mouth.

Mr. FULBRIGHT. That is not new. That was a conciliatory speech. This proposal for negotiating on arms limitations was made nearly a year ago. The preceding administration was seriously getting ready for a conference at the time of Czechoslovakia. We suspended it then and the preceding President—I happen to know from my own knowledge, because the last time I saw him was on his very question—asked me if I thought it was wise to proceed with negotiations with the Russians on arms limitations. That was in the early part of December. I said, so far as I could see, it was. It is my understanding, but this is second-hand, that subsequent to that the incoming administration vetoed the idea. But the Senator should not imagine all of this to be some devious idea of Gromyko's in his speech the other day. This matter has been underway for over a year.

Mr. HOLLAND. I understand that, but I know that the recent hope and the recent effort stem from the statement made by Mr. Gromyko. The Senator knows that that is true. It is not the first thing on this negotiation—

Mr. FULBRIGHT. No.

Mr. HOLLAND. The Senator spoke of the preceding President. Does the Senator take the same position that he does with reference to the ABM?

Mr. FULBRIGHT. I do not know about the ABM. I have not talked to him about that. I am talking about negotiations. The Senator brought in the question of negotiations.

Mr. HOLLAND. The press states that the preceding President has exactly the

same conviction that the present President has.

Mr. FULBRIGHT. With all deference, that is not persuasive with me.

Mr. HOLLAND. I thought the Senator was relying upon the preceding President.

Mr. FULBRIGHT. Oh, no. The Senator was talking about the Gromyko speech. In all fairness, I do not think that because he made a conciliatory statement, that we should make the argument that he is double dealing in order to proceed. On that theory, then they could condemn us.

But I do not attach that kind of condition to the speech he made. One of his main points was that he would like to have better relations with us and maybe we should exchange some Senators and Representatives to come over there. I do not know what he has in mind, in the long run. But we should try to eliminate expenditures and I said I do not think it was a wise policy to spend each other into bankruptcy. The real reasons the Russians want a conference is the reason I want one; namely, to quit breaking ourselves by spending our money on non-productive enterprises. I think the demands by my constituents for sewer projects, water projects, roads, jobs, and so forth, are so great that this is a foolish and very irrational way to proceed—that is, to continue to spend our money in this way.

I am confident that the Russians feel the same way. They need money as badly as or worse than my constituents. This is ultimately the most persuasive reason not to continue an unlimited arms race.

Mr. HOLLAND. Again I appreciate the candor and always the motives of my distinguished friend, but it seems to me that we would be extremely naive to change our plans. The reason we require this new authorization at this time is that we are changing our plans for a cheaper program and for a clearly defensive program. I think just to change those plans on the eve of sending our President over there is not strong but weak.

It is for that reason, among others, that I want this project to be approved.

Now, Mr. President, one more thing. One of my friends from Virginia has sent me a fine editorial from the Daily Progress, published in Charlottesville, Va., an editorial on Tuesday, July 22, 1969, entitled, "Senator Byrd's Warning."

I have read the editorial, as it quotes from the CONGRESSIONAL RECORD, with a great deal of appreciation. I have read the comments made by the editorialist on that warning of our distinguished colleague from Virginia with a great deal of appreciation also; and I ask unanimous consent to have the editorial printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR BYRD'S WARNING

Sen. Harry F. Byrd Jr. of Virginia had a great deal of common sense packed into a speech he made to the Senate last week in support of a \$20 billion Defense Department authorization for military weapons and research and development.

July 25, 1969

CONGRESSIONAL RECORD — SENATE

S 8615

First off, Sen. Byrd declared his support for a reduction in the \$23 billion authorization sought for the Defense Department by President Johnson before he left office. The Nixon Administration reduced this by \$1 billion and the Senate Committee on Armed Services, of which Sen. Byrd is a member, cut out another \$2 billion.

Sen. Byrd supports the \$20 billion authorization now proposed and in doing so he warned those who would curtail the nation's strategic offensive capability.

"All of us would like an end to the arms race," said the Virginia senator.

"All of us would like to devote to more constructive purposes the money being sought for weaponry.

"But the day that those objectives can be accomplished is not yet here—nor does it appear imminent.

"For the foreseeable future a strong military posture remains essential to our national survival.

"We cannot take a chance on just what might be the intentions of other nations.

"Hours of discussion have been consumed on the floor of the Senate as to the intentions of the Soviet Union, as to whether it intends to seek a first-strike capability against the United States.

"Frankly, I do not know just what the intentions of the Soviet Union are, nor, I submit, does any other member of the Senate. Nor does the President, nor the Secretary of Defense, nor the Central Intelligence Agency.

"In recent years, the Soviet Union has greatly increased its offensive capability. The Soviet Union is continuing to increase its offensive capability. The Soviet SS-9 missile has the capability of knocking out a U.S. missile site. It is our strong offensive missiles upon which we rely to deter any nuclear aggressor.

"The entire strategic concept upon which the United States has been relying to avert a nuclear war is that the United States be so strong that any foreign power deploying missiles against us would know that we could retaliate by destroying him who struck the first blow.

"Today, we are in such a position. But we must constantly be on the alert. These major weapons systems have a long lead time. We must legislate today for four and five and six years hence. We cannot let down our guard—not until the day, not yet discernible, when effective arms control agreements can be reached."

These are not pleasant words to hear or read but they are comforting to the extent that they face up to hard facts and the price the United States must pay in today's world. Once the nation learns to accept a burden that it must shoulder despite its natural reluctance, the stronger our national security will be. In today's world we cannot afford to drag our feet, to take chances or to make educated or uneducated guesses as to what our potential enemies intend to do.

Mr. HOLLAND. Mr. President, I yield the floor.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum. The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR MCINTYRE ON MONDAY

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that at the conclusion of the remarks of the Senator from Hawaii (Mr. FONG) on Monday next, under the order already agreed to, that the able Senator from New Hampshire (Mr. MCINTYRE) be recognized until, and not to extend beyond, 12 o'clock noon.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMUNICATIONS RELATING TO EXPRESSIONS FROM BRITISH OFFICIALS ON LANDING OF AMERICANS ON MOON

Mr. BYRD of West Virginia. Mr. President, I have been asked by the Vice President to call attention to a communication from the British Embassy addressed to the Vice President, in which communication there is conveyed to the Vice President a letter from the Right Honorable Lord Shackleton, of the British House of Lords, together with an official extract from the House of Lords' official report of July 22, 1969.

The letter to the distinguished Vice President from Lord Shackleton reads as follows:

HOUSE OF LORDS.

DEAR MR. VICE PRESIDENT: Today in the House of Lords I was asked by Lord St. Oswald a Private Notice Question: "Whether in view of the unique and inspiring achievement of the Moon Landing by the American Astronauts, and its importance to human history, it would be desirable for this House to convey their admiration to the Senate of the United States of America."

This suggestion was warmly supported in the Lords by Lord Jellicoe, Deputy Leader of the Conservative Party, Lord Byers, Leader of the Liberal Party, and Lord Snow, a former Minister speaking from the Labour Benches. It was clear that the proposal had enthusiastic and unanimous support in all quarters of the House and I hasten therefore to transmit this message of admiration and congratulation to you, Mr. Vice-President, in the hope that you will do us the honour of conveying this message to the United States Senate.

May I add my own personal warmest regards and admiration.

I remain,

Yours sincerely,

SHACKLETON.

The British Embassy asks that Lord Shackleton's message be read into the CONGRESSIONAL RECORD and also that the extract be included in the CONGRESSIONAL RECORD; and, at the request of the distinguished Vice President of the United States, the Presiding Officer of the Senate, I ask unanimous consent that the letter from the British Embassy addressed to the Vice President, the letter addressed to the Vice President by Lord Shackleton, and the extract from the House of Lords' Official Report dated July 22, 1969, be included in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

BRITISH EMBASSY,

Washington, D.C., July 24, 1969.

The VICE PRESIDENT OF THE UNITED STATES.

MY DEAR MR. VICE PRESIDENT: In the Ambassador's absence from Washington I should like to convey to you the attached letter from Lord Shackleton, the Leader of the House of Lords, together with an official extract from the House of Lords Official Report of 22 July, 1969.

Lord Shackleton would be most grateful if it were possible for his message and the extract to be read into the Senate Record.

Yours sincerely,

F. E. TOMPKINS.

HOUSE OF LORDS.

DEAR MR. VICE PRESIDENT: Today in the House of Lords I was asked by Lord St. Oswald a Private Notice Question: "Whether in view of the unique and inspiring achievement of the Moon Landing by the American Astronauts, and its importance to human history, it would be desirable for this House to convey their admiration to the Senate of the United States of America."

This suggestion was warmly supported in the Lords by Lord Jellicoe, Deputy Leader of the Conservative Party, Lord Byers, Leader of the Liberal Party, and Lord Snow, a former Minister speaking from the Labour Benches. It was clear that the proposal had enthusiastic and unanimous support in all quarters of the House and I hasten therefore to transmit this message of admiration and congratulation to you, Mr. Vice-President, in the hope that you will do us the honour of conveying this message to the United States Senate.

May I add my own personal warmest regards and admiration.

I remain,

Yours sincerely,

SHACKLETON.

EXTRACT FROM HOUSE OF LORDS OFFICIAL REPORT, JULY 22, 1969

LORD ST. OSWALD. My Lords, I beg leave to ask the Question of which I have given Private Notice; namely, to ask the Leader of the House whether, in view of the unique and inspiring achievement of the moon landing by the American astronauts and its importance to human history, it would be desirable for this House to convey their admiration to the Senate of the United States of America?

LORD SHACKLETON. My Lords, I hope the House will agree that I was justified in allowing this Question on grounds of urgency and certainly in relation to timeliness. Speaking personally, I very much welcome the noble Lord's suggestion. He and I have both had a great interest in this subject for many years, so he is perhaps not surprised that I should be so much in agreement with him. Strictly speaking, this would probably be best done by a Motion on the Order Paper. On the other hand, if the House is in general agreement and there is not any dissenting voice, I would certainly be willing to make the feeling of the House known by conveying a message to the Vice President, who is the President of the Senate, to indicate our great admiration for this achievement; and I personally hope, whatever anyone may think about the best way of spending money, that this will be a real and vital unifying force for the whole of humanity.

LORD BYERS. My Lords, I am quite sure that my colleagues on these Benches would wish to be associated with the action that the noble Lord has proposed.

EARL JELlicoe. My Lords, I am certain that what the noble Lord has suggested would equally meet the feelings of all our colleagues on this side of the House in admiration for

OVAL

S 8616

CONGRESSIONAL RECORD — SENATE

July 25, 1969

an extraordinary technical and extraordinary human performance.

Lord SNOW. My Lords, I should like to support this suggestion, if I may, speaking as one whose belief in the future of space exploration is not unqualified. Nevertheless, I suggest that this is probably the most remarkable single technological achievement yet made by man, and also an example, which is more important, of really astonishing and enduring human courage, which helps to make us feel proud for once of belonging to the same species; and I hope that this particular pride might give us the courage to attack more mundane problems, such as too little food and too many people.

Lord ST. OSWALD. My Lords, in thanking the noble Lord for his response, which does not take me entirely by surprise, I wonder whether I could add two observations which I did not think appropriate to include in the substantive Question, which I hope will be allowed by the Rules of Order: first, I should like to say how particularly and personally pleasant it is for me to have been able to address this Question to the Leader of the House in the person of the noble Lord, Lord Shackleton, knowing and sharing with him, as I do, his philosophical and cordial enthusiasm for this kind of endeavour, especially when it is crowned with triumphant success as in this case. Second, the universal nature of the achievement was most beautifully expressed some years ago in certain words, themselves a reflection of Zen Buddhism, which I beg leave to repeat: "One moon and one only is reflected in all waters, All moons in the water are one with the one moon."

Lord SHACKLETON. My Lords, I am much obliged to the noble Lord. We have gone so far out of order on this occasion, when clearly the House is tolerant in this matter, that I think I should be safe in saying that there will be no dissentient voices. I therefore greatly welcome the noble Lord's initiative. It would not be for me to discuss what the future space policy of this country should be, but I noticed yesterday in another place that at the time the astronauts blasted off from the moon there was a certain Member of Parliament quite properly called Mr. Moonman on his feet. I will certainly convey in the warmest way possible the feelings of your Lordships' House.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. SPONG. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ABM

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength

of the Selective Reserve of each reserve component of the Armed Forces, and for other purposes.

Mr. SPONG. Mr. President, for many weeks I have been engaged in an intensive review of President Nixon's recommendation to deploy the first phase of the Safeguard anti-ballistic-missile system. It has been difficult to arrive at a decision on this issue because of basic disagreement among eminent scientists on the efficacy of the system itself, and because of the wide diversity of expert opinion on how deployment will affect prospects for arms limitations and a lessening of international tensions. Moreover, my study has been complicated by that fact that I do not serve on the committees which have examined these issues, and therefore have not had the benefit of hearing first-hand the testimony submitted at the hearings.

My evaluation of the testimony on the technical aspects of the ABM, and an appraisal of this Nation's history of scientific and technical accomplishments, is persuasive that a missile defense of our Minuteman sites can fulfill the objectives of its design. As the Armed Services Committee said in its report on this issue:

The testing and design work on both the missile and radar components, and the computers, so far has not indicated that there are insuperable technological problems confronting the Safeguard system. It is prudent that any doubt on this question be resolved in favor of confidence in the system.

It our scientists can resolve technical problems involved in epochal achievement of landing a man on the moon, they should be able to integrate successfully the components of the ABM. Questions relating to the feasibility of other projects—most notably the hydrogen bomb and the Polaris missile—have been resolved by the scientific community. Accordingly, there is justification for the belief that our scientists and technicians can overcome any problems that may arise during deployment.

Deployment of the first phase of the system at two Minuteman sites is a logical extension of the research and development program which dates back to 1956, when the Nike-Zeus system was started. I would be constrained to oppose proposals limiting the administration to continued research and development in view of testimony that the first phase of the system is a prototype installation needed to enable the Defense Department to conduct shakedown tests and expose any problems not encountered in research and development. It is only through first-phase deployment that the system can be tested as a coordinated unit. Research and development cannot give answers to technical issues that only operational experience can provide.

In view of the intensity of opinion on this subject, I am confident that the Congress will assess the ABM situation on a continuing basis. Hopefully, with the reporting system recently announced by the Armed Services Committee, cost overruns and wastes which have occurred in the development of other defense projects can be avoided. The quarterly reports to be filed with the committee

under its reporting system should provide up-to-date cost information on all weapons, and prevent recurrences of the miscalculations of the past.

One cannot deal with the question of ABM deployment solely on the basis of its technical feasibility. My consideration of whether deployment should proceed inevitably has involved the larger question of the effect of Safeguard upon arms control. Initially, it seemed necessary to decide whether first-phase deployment would have an adverse effect upon the convening of discussions on arms limitations. A review of the history of the ABM has persuaded me that a favorable vote should not impede efforts to begin these talks. Soviet Premier Aleksei N. Kosygin said at a news conference in February 1967, that defensive systems, which prevent attack, are not the cause of the arms race, but constitute a factor preventing the death of people. As has been affirmed time and again during the debate on the ABM, Safeguard in no way can be considered an offensive weapon. It is intended to intercept incoming ballistic missiles fired by an aggressor, thereby protecting our deterrent. Within a week after Congress appropriated funds last year for deployment of Sentinel, Soviet Foreign Minister Andrei Gromyko expressed a willingness on behalf of Russia to discuss disarmament. Similar overtures were made earlier this month.

In view of Russia's reaction following the last ABM vote, and the more recent expression of interest by Mr. Gromyko, I have concluded that the Soviets, on the basis of their own utterances, cannot consider as provocative a favorable vote on the first phase of Safeguard.

In my judgment, a far more serious threat to arms limitations arises from MIRV, the offensive multiple warhead missiles being developed by both the United States and Russia. MIRV, a weapon which presents difficult on-site inspection problems, should be a top-priority matter for discussion at the forthcoming negotiations. I recognize that it is uncertain whether Russia's multiple warheads are independently targetable, but it must be assumed that it will be only a matter of time before the Soviets in fact have developed this weapon. In any event, the leadtime involved in MIRV deployment is shorter than that for Safeguard. Should the Soviet Union perfect and deploy multiple independently targetable re-entry vehicles, a hard-point defense system would become absolutely necessary in this country.

A moratorium on MIRV would serve to preserve the existing second-strike capability of the United States and Russia, whereby either side could absorb an attack by the other and effectively retaliate. This situation promotes stability, because a first strike would constitute an invitation to destruction. A MIRV agreement could prevent mutual first-strike capability, whereby each side could destroy the other by firing its missiles first. Such capability would have a destabilizing effect, because the side which attacked first would win.

Because of the destabilizing effect of MIRV deployment, and because of the

July 25, 1969

present absence of an agreement on testing and deployment of this system, it would seem desirable to me to support first-phase deployment of the ABM until we know the extent to which arms negotiations will be successful. If the talks lead to an acceptable agreement, it may not be necessary to proceed with further ABM deployment. On the other hand, if there is a breakdown in negotiations, or it appears they otherwise will not be productive, the United States at least will have initiated first-phase deployment of a defensive system which will provide a measure of protection against incoming ballistic missiles.

Because of the escalatory effect of MIRV, I shall support Senate resolution 211, sponsored by the Senator from Massachusetts (Mr. BROOKE), which expresses the sense of the Senate that the President propose to Soviet Russia an immediate bilateral suspension of tests of multiple independently targetable offensive weapons, subject to national verification or such other measures of observation and inspection as may be appropriate. The resolution also provides that the United States should declare its intention to refrain from additional flight tests of multiple re-entry vehicles so long as the Soviet Union does so.

Mr. President, as is obvious from my preceding remarks, I have decided to support the committee majority and vote for first-phase deployment. However, I reserve judgment on future authorizations and appropriations for the system. I shall be guided in subsequent voting by progress in arms control talks, estimates of the extent of offensive weapons deployment by Russia and China, and by evaluations of progress pertaining to both offensive and defensive weapons technology.

Proceeding with first-phase deployment may well serve the desirable purpose of providing an incentive for productive talks on arms limitations. It is a better response at the present time to the Soviet buildup than an increase in our offensive forces. First-phase deployment would serve notice only that we desire to provide a measure of protection for our deterrent force while arms talks are in progress, and give the President an additional measure of flexibility in the range of options available as a response to an attack.

It is my hope that the negotiations will be successful and it will not be necessary to proceed with subsequent phases of deployment. Because a defense of Washington is contemplated in a later phase, I have expressed to the Department of Defense my concern over planning and property acquisition for prospective ABM sites in metropolitan Washington.

Both the United States and Russia have much to gain from productive talks on arms control for both offensive and defensive weapons. The President, our Commander in Chief, is of the opinion that congressional approval of Safeguard would strengthen his hand in negotiations on arms limitations. If the United States acts unilaterally to stop deployment of defensive weapons, with the

knowledge of Russia, it could encourage the Soviets to prolong talks on arms control while they continue their weapons development. Moreover, the system could guard against accidental or irrational attack upon our strategic forces, and provide a measure of protection in the event of a nuclear ultimatum.

I recognize there is a great division of opinion in the Senate on this issue, and respect the deep conviction which has motivated those on either side of the debate. It would seem desirable to me for the Senate to express its intent to proceed with a measured deployment of ABM, with a willingness to create further offensive and defensive nuclear weapons development if the Soviet Union will do likewise.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. SPONG. I am pleased to yield to the Senator from Colorado.

Mr. DOMINICK. Mr. President, I have had the pleasure of serving in this body with the distinguished Senator from Virginia, and serving on committees with him, and wish to congratulate him on his talk. I think he has made a very careful analysis of the problems we face, of the situation vis-a-vis the Soviet Union, of our prospective problems in the seventies, and of the question of arms limitation talks with the Soviets.

I think his conclusions, particularly with respect to the deployment of the ABM, are certainly shared by many. The question of what we should do with respect to the MIRV has, of course, still not been fully debated in this body. It would involve the question of the Poseldon, and would involve title III and a few other things of that kind, on which research and development have already gone forward. But I suspect we will be into that at some length after we finish the debate on the pending measure. Meanwhile, I simply wish to express my thanks to the Senator for his careful consideration of the situation, and I welcome his support on behalf of the ABM.

Mr. SPONG. I thank the Senator from Colorado. Mr. President, I yield the floor.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADJOURNMENT UNTIL 11 A.M. MONDAY

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 11 o'clock on Monday morning next.

The motion was agreed to; and (at 4 o'clock and 47 minutes p.m.) the Senate adjourned until Monday, July 28, 1969, at 11 o'clock a.m.

CONFIRMATIONS

Executive nominations confirmed by the Senate, July 25, 1969:

U.S. AIR FORCE

Gen. John P. McConnell, FR611 (major general, Regular Air Force), U.S. Air Force, to be placed on the retired list in the grade of general, under the provisions of section 8962, title 10, of the United States Code.

Gen. John D. Ryan, FR1418 (major general, Regular Air Force), U.S. Air Force, to be appointed as Chief of Staff, U.S. Air Force, for a period of 4 years beginning August 1, 1969, under the provisions of section 8034, title 10, of the United States Code.

Lt. Gen. Seth J. McKee, FR4279 (major general, Regular Air Force), U.S. Air Force, to be assigned to positions of importance and responsibility designated by the President in the grade of general, under the provisions of section 8066, title 10, of the United States Code.

The following-named officers to be assigned to positions of importance and responsibility designated by the President, in the grade indicated, under the provisions of section 8066, title 10, of the United States Code:

In the grade of general

Lt. Gen. John C. Meyer, FR4496 (major general, Regular Air Force), U.S. Air Force.

Lt. Gen. Jack J. Catton, FR4719 (major general, Regular Air Force) U.S. Air Force.

In the grade of lieutenant general

Maj. Gen. Harry E. Goldsworthy, FR1631, Regular Air Force.

Maj. Gen. John W. Vogt, Jr., FR8709, Regular Air Force.

Maj. Gen. Timothy F. O'Keefe, FR4603, Regular Air Force.

Maj. Gen. George S. Boylan, Jr., FR4836, Regular Air Force.

Maj. Gen. George B. Simler, FR9236, Regular Air Force.

Maj. Gen. David C. Jones, FR9887, Regular Air Force.

Maj. Gen. Paul K. Carlton, FR8693, Regular Air Force.

The following officers for appointment as Reserve commissioned officers in the U.S. Air Force, to the grade indicated, under the provisions of sections 8218, 8351, 8363, and 8392, title 10, of the United States Code:

To be brigadier general

Col. Clarence E. Atkinson, FG751239, Delaware Air National Guard.

Col. William J. Crisler, FG822388, Mississippi Air National Guard.

Col. Jack Motes, FG1180275, California Air National Guard.

Col. Earl G. Pate, Jr. FG781393, Tennessee Air National Guard.

U.S. ARMY

The following-named officer, under the provision of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in grade as follows:

To be lieutenant general

Maj. Gen. William Joseph McCaffrey, O22065, U.S. Army.

Lt. Gen. Richard Giles Stilwell, O21065, Army of the United States (major general, U.S. Army), for appointment as senior U.S. Army member of the Military Staff Committee of the United Nations under the provisions of title 10, United States Code, section 711.

The following-named officer to be placed on the retired list, in grade indicated, under the provisions of title 10, United States Code, section 3982:

To be lieutenant general

Lt. Gen. Harry William Osborn Kinnard, O21990, Army of the United States (major general, U.S. Army).

S 8618

CONGRESSIONAL RECORD — SENATE

July 25, 1969

The following-named officer, under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President, under subsection (a) of section 3066, in grade as follows:

To be lieutenant general

Maj. Gen. George Irvin Forsythe, O24510, Army of the United States (brigadier general, U.S. Army).

IN THE NAVY

Adm. Thomas H. Moorer, U.S. Navy, for appointment as Chief of Naval Operations in the Department of the Navy for a term of 2 years.

Vice Adm. Kleber S. Masterson, U.S. Navy, and Rear Adm. Robert J. Stroh, U.S. Navy, for appointment to the grade of vice admiral when retired, pursuant to title 10, United States Code, section 5233.

Rear Adm. C. Edwin Bell, Jr., U.S. Navy, having been designated for commands and other duties determined by the President to be within the contemplation of title 10, United States Code, section 5231, for appoint-

ment to the grade of vice admiral while so serving.

D.C. COURT OF GENERAL SESSIONS

William S. Thompson, of the District of Columbia, to be an associate judge of the District of Columbia court of general sessions for the term of 10 years.

IN THE AIR FORCE

The nominations beginning LaVerne F. Huston, to be lieutenant colonel, and ending Donald C. Zartner, to be 2d lieutenant, which nominations were received by the Senate and appeared in the Congressional Record on July 8, 1969; and

The nominations of Col. William R. Jarrell, Jr., to be Registrar, U.S. Air Force Academy, and Richard H. White, to be 2d lieutenant, which nominations were received by the Senate and appeared in the Congressional Record on July 15, 1969.

IN THE ARMY

The nominations beginning Claude W. Abate, to be captain, and ending James E. Robert, Jr., to be captain, which nominations were received by the Senate and appeared in

the Congressional Record on June 26, 1969; and

The nominations beginning Jimmie B. Kinder, to be major, and ending Dwight Williams, Jr., to be 2d lieutenant, which nominations were received by the Senate and appeared in the Congressional Record on July 10, 1969; and

The nominations beginning Glenn E. Nida, to be colonel, and ending Gerald D. Cox, to be 2d lieutenant, which nominations were received by the Senate and appeared in the Congressional Record on July 18, 1969.

IN THE MARINE CORPS

The nominations beginning Hugh E. Loftin, to be captain, and ending Wayne M. Wynkoop, to be 1st lieutenant, which nominations were received by the Senate and appeared in the Congressional Record on June 26, 1969; and

The nominations beginning Garland S. Bishop, to be 2d lieutenant, and ending Bruce M. Windsor, to be 2d lieutenant, which nominations were received by the Senate and appeared in the Congressional Record on July 2, 1969.

"I insist that the jets have got to go from Washington Nation." This approach would bar small business type jets as well as commercial aircraft, and the legislation is the first to be introduced in the Senate aimed at barring a particular type of aircraft from a particular airfield.

What aroused me was the statement made on the Senate floor, "that this bill will probably be sent to committee and buried." The Senate Commerce Committee does not operate in that manner. However, if a proposal in a bill is lacking in merit then perhaps it should be buried, if one must use that word.

I pointed out on the Senate floor that the discontinuance of jets at National would result in a serious cost of manpower to the nation. The shuttles alone carry approximately 20,000 persons per day, and adding one hour ground travel time for each per day would result in thousands of hours of loss in productivity to the nation's economy.

It is easy to say bar the jets, but all possible effects from such a move must be considered before such action is taken.

I would like to be able to forecast how the move to repeal the investment tax credit will make out in Congress, but the whole tax situation is too confused at the moment. The bill is now out of committee and will soon be before the Senate.

I know how important this credit is to all industry, let alone the business most of you are in.

All of you know the Congress, over the years, has created various boards and commissions to do some of the work for which Congress is responsible. The Civil Aeronautics Board is one of these.

This Board for the past couple of years has been struggling with the Transpacific Route Investigation. It was all pretty much decided in 1968, but this Administration reopened and rejected the case because it said it feared there were some political pay-offs in the awards. New or improved authority was then granted by the Board to four carriers, and a new carrier was selected for a fifth route.

The President then disapproved that selection, and while he did not name another carrier in so doing, he laid down some interesting guidelines.

This raises some questions. Is this a pre-emption of authority that belongs to the CAB?

Is not the President's responsibilities confined to considerations of foreign policy, national defense and security? The Federal Aviation Act may need an amendment.

It was a pleasure to be here and discuss some of the problems that give us mutual concern. Thank you.

ORDER OF BUSINESS

Mr. EAGLETON. Mr. President, I ask unanimous consent that I may address the Senate for 10 minutes.

The PRESIDING OFFICER (Mr. ALLEN in the chair). Is there objection? Without objection, it is so ordered.

THE ABM SYSTEM

Mr. EAGLETON. Mr. President, as the Senate decides whether to authorize the deployment of an anti-ballistic-missile system, there are several facts of which we can be relatively sure in this unpredictable and ever-changing world.

We know deployment will be extremely costly. On March 14, we were told it would cost \$6.6 billion. Since then estimates have risen by \$1.2 billion for nuclear warheads and again, to include approximately \$500 million to extend the system to Hawaii, and \$2.5 billion for

research, development, and testing of the systems components. The cost is now estimated at between \$10.3 and \$10.8 billion.

If history is a guide to the future, we may expect to pay an even higher cost for a system which fails to meet specifications—more money for less performance.

A Brookings Institution study indicated that missiles generally cost 300 to 700 percent more than original estimates.

A recent study indicated that the more complicated electronic systems procured by the Pentagon seldom perform to even 60 percent of specifications, even after extensive testing. And it is impossible to test the Safeguard as a system.

With inflation still rampant, prime interest rates at 8.5 percent and possibly still rising, we do not need and cannot stand the added inflationary pressures caused by further imprudent Government spending.

A second fact of which we can be relatively certain is that the irresistible logic of the arms race will produce renewed efforts to counter the ABM, further escalating the arms race.

A kind of sustained overreaction is common in the field of weapons systems, and the weapons race does not need a further stimulus at a time when we appear to be, at long last, ready to explore arms control agreements with the Soviet Union.

These distasteful facts are the certainties of the ABM debate—but they are not crucial. The way each Senator answers two other questions is crucial.

First. Will the creditability of our nuclear deterrent be threatened in the mid-1970's?

Second. Is the Safeguard ABM system the most efficient way to meet such a threat?

For the last 19 weeks the Pentagon's case for an ABM has been predicated on a new-found fear that almost all of our nuclear force could be simultaneously destroyed in a first strike by the enemy, leaving us without the power to retaliate with a devastating second strike on the Soviet Union.

Previously the Pentagon toyed with a variety of other threats to justify ABM—an accidental enemy launch, a purposeful Soviet attack, a small and suicidal attack by the madmen in China, and so forth.

Thrown in for good measure are the arguments that only through deployment can further research and development be useful, that the ABM, whether it works or not, is an important bargaining point in arms limitation talks, and simply that the President thinks he needs it.

But finally the Pentagon decided Safeguard is needed to protect our land-based strategic forces. Secretary Laird cites continued development by the Soviet Union of the SS-9, a large rocket comparable to our Titan 2, as the new threat. The SS-9 is capable of carrying three 5-ton multiple warheads. By 1975, an estimated 500 could be deployed.

This constitutes, according to Secretary Laird, a threat to our Minuteman

ICBM, the backbone of our land-based retaliatory force.

The threat is calculated on assumptions which are highly questionable; an accuracy of one-fourth mile for a single 5-megaton warhead delivered against a Minuteman silo, a failure rate of only 20 percent, and a capability to retarget, almost instantaneously, missiles for those that fail.

According to many noted scientists, such assured accuracy is extremely difficult to achieve, especially with an SS-9 with either MIRV's or, as is more likely, MRV's.

A 20-percent overall failure rate is highly questionable with a system as complicated as the SS-9 with either MIRV's or MRV's.

The problems of retargeting are almost insurmountable in the 1970's.

As was indicated in the joint report of Drs. Wiesner, Rathgens, and Weinberg:

Clearly this would be extremely difficult even if one were concerned only about retargeting to compensate for launch pad and boost phase failures, but Mr. Laird apparently postulates reprogramming to compensate for other failures as well, including presumably those that occur during separation of the several multiple warheads, which may occur fairly late in the trajectory. The United States rejected the retargeting concept for its own single-warhead missiles some years ago. Yet, Mr. Laird assumes the Soviet Union may adopt and be willing to rely on such a concept with multiple warheads where the problems are much more difficult than for single warheads.

But even if we accept Secretary Laird's questionable assumptions, our second-strike retaliatory capability is not based solely—or even primarily—on our intercontinental ballistic missiles which the ABM is designed to partially protect.

It currently includes our 41 Polaris submarines with their 658 nuclear missiles. Thirty-one of these submarines will have their missiles replaced by the Poseidon missile, each with approximately 10 warheads and greater range—raising our undersea missile total to 5,120.

Also, it includes about 640 Strategic Air Force bombers around the world, 7,000 tactical nuclear weapons in Western Europe, many deliverable to the Soviet Union; and an unspecified number of nuclear weapons at other foreign bases.

I find no one who convincingly argues that this aggregate retaliatory force can be almost instantaneously obliterated—now or in the 1970's.

If development of MIRV's and MRV's continues, the land-based forces of both the Soviet Union and the United States may be vulnerable to a preemptive attack, but not in the mid-1970's as prophesized by Secretary Laird.

At such time, strategic countermeasures to protect our land-based missiles may well be needed; and this raises the second critical question: Is the Safeguard system an effective means—much less the most effective means—of meeting a threat to our deterrent, should such a threat arise?

I doubt it. In the first place, there are technical problems inherent in the ABM itself.

Joseph O'Connell, Chairman of the National Transportation Safety Board assured us of the safety of air travel. He did not give us a date or time, but it seemed clear to me there was a warning in his testimony to not wait too long before updating the equipment and all that goes with it.

We heard from the President of the Air Transportation Association. It seems this Association has teamed up with the Aircraft Owners and Pilots Association to maintain the latter's opposition to users taxes in any form. Their joint plan would help airports by taxing tickets, but there would be no tax on general aviation. General aviation airports would be maintained by yearly \$50 million appropriations.

Their general approach was to the airports, the airways problem being left to the government. The failure of the appropriations approach to airport problems should be well known to everybody in this room, and it is one of the reasons the whole system is so far behind the times.

The proposed legislation from ATA-AOPA would create a fund for airport development by increasing the domestic ticket tax from 5 to 7 percent with a \$2.00 head tax on enplaning international passengers. This tax would bring in about \$123 million and could be used in both the terminal and landing areas.

It would authorize the guarantee of locally issued bonds, and the account would be broken down with half going into a discretionary account and the other 50 per cent into a direct airport account. The Act would set out how and what percentage of the discretionary fund could go where, such as 62 per cent for large hubs, with the direct account going to airport sponsors based on a ratio of enplaning passengers.

After this phase of the hearings closed, the ATA wrote Chairman Magnuson changing their approach a little. They will go along with the Administration's passenger tax and international head tax, but they want the 5 per cent tax on freight cut to 2 per cent.

This narrows the gap a little, and that is all to the good. Unless we can find common ground in this problem, progress will not be easy.

Suddenly, in the middle of all this we had some union testimony, some of it constructive, a great deal of it pointing up the overall problem we have with our airport/airways program. The Air Traffic Controller is a very important part of our whole system, and as we upgrade it, bring in new and better equipment, his lot will be much better.

We will look over his entire working arrangement, salary, hours, retirement and what have you at the proper time.

However, I must comment on the power of the spoken word. Some words were spoken by certain witnesses in our hearings and two days later several hundred controllers phoned in sick from all over the country.

We reopen our hearings again tomorrow, this time officially on the legislation itself. There is a third phase on planning for the 1980's, but first things first, so while we can put this last phase off a while, we should not delay too much. In the 1980's there will be 2½ million people airborne at a given time.

I have spoken here in a rather light vein but please understand that I, and I am sure I can speak for the Committee, am grateful for the hard work and efforts our witnesses put forth preparing their statements. They have given us more up-to-date information, statistics and ideas than we have had in a long time, and this will be very helpful as we make our final decisions.

I am deeply dismayed, and I now speak in all seriousness, that the day before the Senate Commerce Committee reopens the hearings on airport/airways development

there seems to be a pervasive attitude within the aviation community that Congress again this year will fail to take action on this matter of greatest importance to us all.

There seems to be a spirit of resignation among many in the aviation business that the acrimony, controversy and dispute over financing an expanding and modernized aviation system will again force us in the Congress to do nothing.

This feeling—this pessimism is especially disturbing after sitting in the Committee for several days listening to a parade of witnesses come forward to warn of the perils facing the nation's aviation system unless we take action and take it now. We heard that lack of modern navigation and guidance equipment is creating situations in which accidents occur, accidents which probably would never happen if our system was as modern and well equipped as it can and should be. We have heard that instrument landing systems—that great friend and back-up of pilots in bad weather, exists at only about half of the nation's airports which have air carrier service and that radar—a great aid in keeping airplanes from running into each other—is even scarcer outside of the major metropolitan hub terminals.

We have listened to the airlines' witnesses as they told us that air transportation will at least double in the next ten years requiring airport investment anywhere between 8½ and 14 billion dollars if we are merely to keep pace with this tremendous growth.

The National Business Aircraft Association informed us that business aviation is facing a grave threat to its very existence because the FAA has been forced to greatly restrict the number of hourly operations at the nation's five most congested airports, often making it impossible for the busy executive to make a last minute decision to fly to New York or Chicago or Washington.

We have been told that air traffic controllers—often working six and seven days a week for months on end because of critical shortages in high density areas—are fed up and are about to quit the control service for a career with less strain and demand.

These problems are real, they are critical, they are pervasive and they threaten to wreak chaos on what has been the world's greatest air transportation system. And we know this growth, which we all look forward to, will continue only if we provide a system to move people and airplanes more safely and efficiently. There is not one of you here today who will not agree that the failure to act—the failure of all of us—has created the problems we are facing today, and they are only a prelude to the nightmares we can expect tomorrow if we continue to sit on our hands.

In light of this overwhelming evidence of the fact that our aviation system has reached the point of over-saturation and that future mobility of millions of Americans is in peril, why then is Washington full of doom sayers who either say that Congress will again retreat to an impasse or that we ought to put off a decision for another year or two in order to better assess who is to pay for this expanded system and how.

We will be lost if we do not pull together.

If we are going to argue about who pays what, with each defending his own position thereby hoping to save for a year or two a few cents in fuel tax or a percentage or two on the air passenger ticket tax, then we will be doing a great disservice to all Americans who rely upon air transportation. Today, this negative attitude is going to stifle our air transport system as surely as Pennsylvania Avenue will be clogged with traffic at 5 p.m. tonight. And just as certainly—if this defeatist attitude prevails—those very interests who are fighting so doggedly against contributing revenues to meet some of the costs of a better system will be denied use of that system simply because it will not absorb

the increasing use to which we all wish to put it.

Certainly there are private interests who may have the clout—as we sometimes call it—to kill a program that is drastically needed by the country and they are able to stop action because the economic stakes appear to be high. But I would caution that the economic penalties for inaction, for continuing to use and abuse a system designed for the piston fleet era will be even greater. One hundred million dollars a year in fuel wasted on the taxiways will seem to be small change 5 years from now if we continue to allow selfish interests to deter us from this urgent task.

And so I would ask all in the aviation community—one of the greatest enterprises in the history of our country to think again about the costs of delay and inaction. I would ask them again to realize that none of us will get precisely what we want in a new, modern system, but on the other hand we will all receive some of what we want and that is the spirit in which the system operates so as to serve many diverse and essential elements of aviation. Each of us will pay a price for this tremendous growth to which we all look forward and if the price seems a little high in one area or a little inequitable in another let that not deter us from beginning.

All segments of aviation can and must find common ground on which action can be taken and certainly the Congress, and its committees on which the responsibility rests, are willing and anxious to find solutions which may not be perfect to everyone but which will not allow us to stifle the great system of aviation upon which we have come to rely so heavily. For if we do not act—if we continue to procrastinate and do nothing we will be assured of a system that all of us will find a nightmare.

In other words, get ready to give up something, and get ready fast.

I think the time has passed when Congress could sit back and await indefinitely for an agreement from industry. We have done too much of that already.

I think when these hearings are over the Committee must sit down and hammer out a bill.

I think we must do this no matter what industry does, but we want your help and we need it.

So please help us! Help us with a solution: Don't be a part of the problem.

We need the kind of teamwork that put our astronauts on the moon.

We must, as I said, hammer out a bill. Some are advocating a temporary measure, and we could be forced into such a position. The National Business Aircraft Association backs such an idea. They say an emergency exists so let's have an emergency temporary program.

They suggest legislation that would expire in 18 or 24 months and that would place a 5 cents per gallon tax on all aviation fuel. It would raise \$460 million per year with \$276 million for the airways and \$184 million for the airfields.

During the 18 or 24 month period a cost/benefit, cost/allocation study would be made so that a sound long-range plan could be established. This could certainly be an emergency answer.

Let's consider again what we are up against. Delivery rate on commercial jets is better than one a day. General Aviation is adding about 160 new aircraft each month—many of them jets. Public demand for air transportation is growing about 20 per cent a year while air cargo has tripled over the past five years.

There is another piece of legislation you should be aware of. It is S. 2570, a bill that among other things would phase out pure jet aircraft from the use of Washington National Airport. The sponsor of the bill said,

July 24, 1969

S 8551

Its indispensable components are a complex radar system and its complex computers. Each ABM site depends on one radar, and should it break down or be destroyed, all intercept missiles would be useless.

And yet this extremely expensive radar system, according to most estimates, is 10 times more vulnerable than the offensive missiles it must defend. The Soviet Union could target their SS-11's with far smaller payloads, against the radar—either exhausting the supply of missiles available to protect it or destroying it with the smaller payload carried by the SS-11. In so doing, the Soviets would be able to target their larger SS-9 at the missile silos where the larger 5 megaton warhead is essential.

The computers would be the largest and most complex ever built. Up to 20 data-processing units with a capacity equivalent to 100 large commercial computers, would be involved.

These computers would have to be programmed to perform many tasks at the same time.

According to a recent report:

The computer would have to interpret the radar signals, identify potential targets, track incoming objects, predict trajectories, distinguish between warheads and decoys, eliminate false targets, reject signals from earlier nuclear explosions, correct for blackout effects, allocate and guide interceptor missiles, and arm and fire them if they get within range of a target. All this must be done continuously and with split-second precision during the short period—ten minutes at most—between the time the attacking missiles first appear and the moment of impact.

This complex computer system can never fully be tested. Far simpler computers and computer programs have malfunctioned, even after years of testing.

The "soft" missile site radar and the computer systems are the weak links in a weak system—and without them the system is entirely useless.

Eminent scientists, such as Dr. George Kistiakowsky and Dr. Wolfgang Panofsky, have suggested that more efficient and less costly defenses for our ICBM's may be technically feasible. If there is a better way, let us find it. But let us not waste money on a system that will not do the job.

But even if the ABM, as now constituted, worked perfectly, the Russians can render it obsolete a few months after it is deployed by simply producing more offensive missiles. As Drs. Wiesner, Rathgens, and Weinberg point out:

At the rate of SS-9 growth assumed by Mr. Laird, at most three additional months of production would completely offset Phase I of the Safeguard deployment, and at most one year's production would completely negate the Phase II deployment.

My colleague from Missouri, Senator SYMINGTON, an acknowledged and respected defense expert, has continuously called for the declassification of a Pentagon chart which is purported to show that even if the intricate electronics of Safeguard work perfectly, at the projected rate of Russian missile production, the system could be overwhelmed by the addition of relatively few missiles.

I would like to join Senator SYMINGTON in his request that the classified chart presented by the Department of Defense

to the Senate Armed Services Committee be made public.

I, too, believe this chart makes a devastating and decisive case against deployment of a costly system which will be obsolete shortly after it is finished—billions of dollars for a few months of doubtful protection.

Should we ever legitimately need protection for our land-based retaliatory force, there are several more effective, less costly methods.

More ICBM's could be constructed with far less leadtime at far less cost. Secretary Laird states:

It only takes 18 to 24 months from the start of construction to the operational availability of an ICBM in a silo.

This alternative would allow decisions for the mid-1970's to be made in the mid-1970's based on hard information and facts—not on the speculation and possibilities of 1969.

Another alternative is the addition of more Polaris submarines. The Polaris provides an invulnerable retaliatory capability not likely to be challenged by the mid-1970's. The addition of the Poseidon missile provides 10 times the present number of warheads and increases the range, making ASW even more difficult. The leadtime on submarine construction is approximately 3½ years, which also allows for more realistic planning.

Still another possibility is superhardening. Using Secretary Laird's assumptions, if we tripled the hardness of the silos, the Soviets, in order to maintain the same kill probability, would be forced to use a 20-megaton warhead. The size of such a warhead would preclude the use of multiple warheads on the SS-9 and thus the projected 1975 first-strike capability of the Soviet missile force would be reduced from 1,500 deliverable 5-megaton warheads to 500 20-megaton warheads—no threat to our over 1,000 land-based missiles.

It is true that superhardening could be offset by improvements in Soviet accuracy from one-fourth of a mile—as hypothesized by Secretary Laird—to one-sixth of a mile. But if such advance were made, the yield of Russian warheads could be reduced to 1½ megatons to have the same kill probability against unguarded sites. The SS-9 could carry at least four or five 1½-megaton warheads and therefore only three-fourths to three-fifths as many SS-9's would be required to destroy our Minuteman. The remaining missiles would be more than enough to offset either phase I or the full Safeguard system.

Why does the Pentagon continue to press for an ABM system? In a June 8 editorial, the St. Louis Post Dispatch offers one explanation:

Of course everybody knows what the script calls for. Long before mid-1970's, the Pentagon would undoubtedly go to Congress with the alarming news of a forthcoming Safeguard gap, and the public would be told that national security imperatively demanded an enormous expansion of the antimissile system. This is, quite obviously, the true mission of Safeguard—to serve as the first stage of an unlimited escalation of the nuclear arms race, guaranteeing juicy contracts and military proliferation and cold war psychosis far into the future.

If we buy this system, it will have to be expanded if it is not to be completely useless. The Pentagon must also know that the Russians can expect to keep even or ahead of the ABM simply by building a few more offensive missiles which are less expensive to produce. I think it is time the Pentagon leveled with Congress and the American people.

And I think it is time Congress leveled with itself.

More weapons, defensive or offensive, do not necessarily mean more security. A vote for another weapon is not necessarily the patriotic or even the prudent thing to do.

It is not patriotic or prudent to vote for a costly weapons system which will provide very little security for a very short time.

It is not patriotic or prudent to vote for a costly weapons system of such technical uncertainty to meet an equally uncertain threat.

It is not patriotic or prudent to vote for a costly weapons system which will stimulate the arms race for the next decade—the reaction and counterreaction we are all so familiar with.

We are told on the Senate floor that "Clearly, we cannot discount the danger that these men—leaders of Russia—who are showing themselves unequal to the need for reforms at home, may make serious errors of judgment in their conduct of affairs abroad." Can the Russians think less of this country and this body, which after free and open debate would direct our wealth to build a costly, unneeded, unworkable weapons system.

I believe the Pentagon has failed to make its case that our deterrent is threatened or that the proposed Safeguard system is the best way to meet such a threat should one develop.

Several Senators addressed the Chair. The PRESIDING OFFICER. The Senator's time has expired.

Mr. COOPER. Mr. President, I ask unanimous consent that I may proceed for 2 minutes.

The PRESIDING OFFICER. The Senator from Kentucky is recognized for 2 minutes.

Mr. COOPER. Mr. President, I believe the Senator from Missouri has made one of the clearest speeches on the subject that has been made in the Senate in this debate. It is analytical, well reasoned, and comprehensive. I think it has been made with such simplicity that almost anyone could understand and comprehend the involved issue.

The Senator is a new Member, and I think it is a great thing that those Senators who have come here this year have entered into the debate and contributed a great deal.

Mr. EAGLETON. Mr. President, I thank the distinguished Senator from Kentucky, and I take the word simplicity in the nicest sense of that term.

Mr. PERCY. Mr. President, I associate myself with the comments of the Senator from Kentucky. I think his statement is a concise, clear, and forthright statement that can be understood by every Senator and by the average American citizen who is deeply involved and concerned about the problem.

Would the distinguished Senator from Illinois' great sister State of Missouri tell

me whether there are defense contracts in the State of Missouri that would be affected by the ABM system?

Mr. EAGLETON. One of the largest employers in our State is the McDonnell Douglas Corp. and the Douglas branch thereof, a merged corporation, would be one of the significant contractors for the ABM system.

Mr. PERCY. I know well the McDonnell Douglas Corp., and I know Jim McDonnell, one of the really great men of American industry. He, above many other men I know, has been responsible for the success of our space program.

I think this great company wants to produce what they are told to produce. I have never heard any sort of campaigning by them for any particular military system. They serve the interest of the Government and the American people.

I think it is rather interesting that, though the company headquarters are in Missouri and the company is affected by the ABM system, both Senators from Missouri oppose the deployment of the ABM system.

It is significant also that we have a proponent of the ABM system from the great State of Washington, a State that has no such contract.

So, clearly, self-interest or parochial concern is of no interest to anyone concerned, that I know of, in the debate.

The debate far transcends any interest in the military-industrial complex.

The matter concerns the question of where we put our national priorities, what is important, and whether we have a sufficiency of security and adequacy of protection for our national interest.

I think this debate has been greatly enhanced by the clear and forthright statement of the distinguished Senator from Missouri.

Mr. EAGLETON. Mr. President, I am very pleased to hear those fine remarks from the Senator from Illinois.

I hasten to add a footnote and an observation to make it abundantly clear for the Record that at no time during the many weeks this ABM debate has gone on, both directly and indirectly, has any amount of pressure, even the smallest amount of pressure directly or indirectly, been applied to me by any member of the McDonnell-Douglas Corp.

They are magnificent people. They are fine producers of excellent machinery, and they have let me make my decision for myself without trying to influence it by any parochial question which might apply with respect to that corporation's future profits.

I think the point brought out by the Senator from Illinois is an excellent point to have made clear in the Record.

Mr. President, I yield the floor.

Mr. MURPHY. Mr. President, I have been most interested in the presentation of the distinguished Senator from Missouri.

I have spoken on the matter on the floor several times. There is disagreement, and honest disagreement.

It seems that after all the hearings—and I am a member of the Committee on Armed Services—closed hearings and open hearings and all of the evidence received, we had to conclude that all con-

cerned thought that we should have some defensive system.

I heard no one disagree with that.

I listened while some said this system would work, this system would not work, and this system might work. But all the scientific experts agreed, after questioning, that the only certainty as to whether it would or would not work would come after the components required to make the ABM system were assembled. In other words, it was necessary to construct one; it was necessary to put it together; it was necessary, as the President has asked, to deploy one.

Then some said that the system might not work. Almost all the experts agreed that all the component parts had been tested and that all of them worked. It was merely a matter of opinion, not scientific expertise, when they said they thought it might not work.

I have heard statements on end. One scientist in California told me that it had only a 14-percent chance to work. I asked him how he arrived at that, but he was not certain.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The PRESIDING OFFICER (Mr. ALLEN in the chair). The hour of 2 o'clock having arrived, the Chair must lay before the Senate at this time the unfinished business, which will be stated.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

The PRESIDING OFFICER. The question pending before the Senate is the amendment offered by the Senator from Michigan (Mr. HART).

ORDER OF BUSINESS

Under a previous order, the Chair at this time is to recognize the Senator from Illinois (Mr. Percy). Will the Senator from Illinois yield to the Senator from California, so that he may conclude his statement?

Mr. PERCY. I am very happy to yield so that the Senator from California may finish his statement.

Mr. MURPHY. I thank the distinguished Senator.

THE SAFEGUARD ABM SYSTEM

Mr. MURPHY. Mr. President, I have heard opponents of the ABM system suggest that we could build additional intercontinental ballistic missiles, while at

the same time they argued against an ABM system because an ABM system might encourage an arms race. This is the widest inconsistency I could imagine.

The Russians have said that they do not consider ABM as another step in the arms race to be an argument. They consider ABM as a defensive weapon, exactly as we consider their ABM system. I may say that the Russians have deployed ABM systems for a period of 3 years.

The matter of adding to our ICBM's has been considered, and it was a question, in my opinion, whether to do so would accelerate the arms race. It would create exactly the situation that we would want to avoid in the upcoming meetings between the President of the United States and the Russians.

We have heard of the simplicity of removing the radar of this system. I assure Senators that there has been much testimony by experts that would contradict such a proposal. It would not be that simple.

All the scientific experts with whom I have had a chance to speak—and they include the man who was actually placed in charge of the development of the space program, General Schriever—agree that there may be a better system someday in the future; that new ideas may be developed; that all sorts of knowledge may be obtained as a result of the moon shot. But at present, considering the present state of the art and the present capabilities, the ABM Safeguard system is the only one that is now available. They beg, very simply, to put together the component parts and make them work, to have a chance to build one, to take the bugs out; and if it does work, we will have a defensive system already built. This has been done not by the Department of Defense, not by the Pentagon, but by the President of the United States, who makes this request, simply and directly—and I believe practically—for the security and the future of our Nation. He has asked for it as quickly as he can get it, so that it will be on his side when he goes to the arms negotiation, in the hope of finding a way to come, at long last, to a means of limiting all armaments and, hopefully, eventually to get rid of all armaments.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MURPHY. So, Mr. President, I should like the Record to show that, after all the evidence and all the arguments, I am more convinced than I was at the outset—and I assure my colleagues that I attended with an open mind—that we need the ABM, that we can afford it, that it is the best possible protection at the present time, and that I believe the President's request for it should be acceded to.

Mr. SAXBE. Mr. President, will the Senator yield.

Mr. PERCY. I yield.

Mr. SAXBE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. Will the Senator yield for that purpose, without losing his right to the floor?

Mr. PERCY. I yield for that purpose.

The PRESIDING OFFICER. The clerk will call the roll.

July 24, 1969

The bill clerk proceeded to call the roll. Mr. PERCY, Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. CRANSTON in the chair). Without objection, it is so ordered.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Hackney, one of its reading clerks, announced that the House had passed a bill (H.R. 9825) to amend subchapter III of chapter 83 of title 5, United States Code, relating to civil service retirement, and for other purposes, in which it requested the concurrence of the Senate.

HOUSE BILL REFERRED

The bill (H.R. 9825) to amend subchapter III of chapter 83 of title 5, United States Code, relating to civil service retirement, and for other purposes, was read twice by its title and referred to the Committee on Post Office and Civil Service.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, navel vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each reserve component of the Armed Forces, and for other purposes.

THE ABM DEBATE AND NATIONAL SECURITY

Mr. PERCY, Mr. President, for 4 months now, there has been a nationwide debate in our country over three letters: ABM. The public and public officials are engaged in a learning experience that is as complicated as it is vital to the future of our Nation. The Senate is learning in full view of all the people. It is learning to ask questions, make suggestions, and express its concern—not simply over the Defense Department's expenditure of \$80 billion a year but also over the risks of war and peace that envelop that \$80 billion budget.

The executive branch of our Government is also learning. It is learning how to answer questions in public that it never before had to answer. It is learning how to explain complex and classified issues so that the American people can better express their wishes. It is learning not to make its decisions without great care, and it knows as never before that it is going to have to justify them.

The results of this collective learning process are good and necessary. Inevitably,

however, some confusion has developed as to what the debate is really all about. Unless the purposes of the debate are made clear, legitimate questions and answers will be seen as attacks and counterattacks while decisions on the merits of the issues will fall victim to wasteful political compromises. If the debate turns into mutual accusations about personal motives, we shall never get down to the facts. If we do not get down to the facts, if we do not reach agreement on whether it is necessary or prudent for the United States to begin deploying a nuclear ballistic missile defense now, we could find ourselves jeopardizing our national defense while adding nothing to our security—all at enormous cost.

Perhaps it is best to begin by making clear what the debate should not be about.

It should not be an attack on the so-called military-industrial complex. It is patently unfair to charge that our military leaders and the aerospace industry are conspiring to feed on fear in order to sell billion-dollar gadgets for profit.

The problem is with those who are still convinced that our safety lies solely and exclusively in more and newer weapons systems, because "that is the only way to deal with the Russians." If the public has not been well served, it is not because of these men. It is because so many have sat silent for so long without asking the hard questions.

Nor should this debate be a disguised attack on President Nixon. The President's performance in his high office has received, and I believe justly, widespread popular support. The support certainly includes the President's handling of foreign affairs.

Specifically, with respect to national security policy, he deserves the highest praise for his reformulation of U.S. strategic doctrine. The President has stated:

The only way that I have concluded that we can save lives, which is the primary purpose of our defense system, is to prevent war, and that is why the emphasis of this system is on protecting our deterrent.

He has rejected a heavy city defense because it "tends to be more provocative in terms of making credible a first-strike capability against the Soviet Union." In his April 18 press conference, he said that he did not want to put any American President "in the position where the United States could be second rather than first or at least equal to any potential enemy." His Secretary of State has made it quite clear that the administration is flexible to the extent that "if the U.S.S.R. wants to go out of the ABM business, we can, too." The Nixon doctrine should be admirably suited to decisions which can brake the spiraling, dangerous arms race.

The ABM debate encompasses three objectives:

First, to determine and reorder national priorities;

Second, to subject the defense budget to the same kind of scrutiny as other appropriation requests; and

Third, to explore whether a unilateral decision on the part of the United States to deploy ABM's now on the eve of nego-

tiations with the Soviet Union on strategic arms limitations, makes any sense.

We must examine our national priorities. In the light of our tragic Vietnam experience and because of growing civil disaffection, we are trying to seek out a new and proper balance between our domestic and international goals.

We cannot have a meaningful debate on priorities, we cannot set a meaningful national-international balance, without giving careful attention to the \$80 billion defense budget, an expenditure which would constitute fully 60 percent of the Federal budget over which Congress can exercise discretionary action.

The specific focus of the ABM debate is whether we need to deploy it now, later, or not at all.

The administration's position is that we must begin deployment now.

Some critics are determined never to deploy.

My position is that I favor not going forward now, both because I strongly believe that it is in the national interest to use the time to improve the design, and because we can make a better decision regarding deployment later, in the context of arms limitation talks with the Soviet Union.

This debate does not rest on whether the proposed system will provide effective protection for our deterrent strike forces, though scores of scientists believe that it does not.

This debate does not rest on whether the Soviet Union or Communist China has embarked on a strategy which will enable either nation to attack the United States with impunity by the mid-1970's. Such a strategy is unrealistic and would be suicidal. Rather this debate rests on our hopes, and the hopes of all mankind, for a genuine and lasting peace. For if we mean to have peace then we must recognize the futility and the danger of military strategies which have no regard for global politics.

Now is the time to take the initiative for peace.

Now is the time when we possess the ability to launch a devastating attack upon any nation that would dare to strike us first.

Now is the time, before deploying a new generation of strategic weapons, to try to prevent a situation whereby the Soviet Union would be compelled to escalate their own weaponry.

Certainly we can accept President Nixon's dictum that we must not be in an inferior strategic position to any other power. We must have the power to deter aggression against our country. And we do have that power. We must have the will then to use our power should any aggressor attack us. And we do have that will.

Our second-strike capability is so awesome that we can safely decide not to deploy Safeguard at this time. Those who want to deploy now say the two Minuteman wings need to be protected by late 1973, and, the whole system should be operative by the end of 1975.

These timing requirements are based on the prediction that the Soviet Union will develop and deploy all they are capable of, regardless of cost. Secretary

Laird's estimate is that, by 1975, the Soviets could have as many as 2,500 ICBM's compared to our 1,000, while exceeding our total of 41 Polaris submarines, and deploying as many as 2,000 ABM's relative, to say, the 1,000 projected under Safeguard.

It is the opinion of almost all Soviet watchers that the Russians are not seriously contemplating the vast expenditures that this estimate would entail.

Indeed it is hard to believe the Russians would expect that they gained anything after having done so. But, let us nevertheless assume they will do so by 1975 and let us further assume that Safeguard will in fact provide a significant added measure of deterrence and protection against such a threat. Does this mean that a year or so from now it will be too late to make the Safeguard decision? In my judgment, it does not.

Our scientists and engineers have given us an alternative. Simply stated, this alternative involves continuing present research and development, engineering and testing and evaluating an ABM system. If we did only this now and if we were also willing to spend a reasonable additional sum of money to meet a shorter deadline, we could still do all that Safeguard advocates desire and have it in operation by 1975 if that course appeared necessary.

In addition to the fact that we have time before we have to make these decisions, there is a second and more basic point that calls for delay. We can make a better decision later. A postponed decision would be better on two counts:

First, it would give us a chance to take the measure of the Soviet Union's intent in arms talks;

Second, it would allow us the time to make necessary improvements in Safeguard technology and strategy.

Most of the ABM debaters understand quite clearly that the United States and the Soviet Union now each has sufficient forces-in-being as well as the technology, additional resources, and the will to compensate for or to negate new strategic deployments by the other side. Whatever we do, they can match, and whatever they do, we can match. This is the basic point governing the futility of the strategic arms race. What has not been made clear by this debate is the conclusion to be drawn from this mirrored capability. The operative conclusion is that neither Washington nor Moscow can make sensible strategic decisions unilaterally.

I am not saying that arms control talks will solve all our problems. But I am saying that these talks may indeed constitute an important initiative for moving further away from a nuclear holocaust. And, moreover, I am saying that what we will learn from those talks, and what we will fail to learn, will help us make better strategic decisions.

For example, we have announced over the last few years that our Minuteman force will stabilize at 1,000 missiles. Secretary Laird claims that the Soviets have the capability for a fixed land-based force of 2,500 by 1975. We should ask the Soviets how many they intend to build, and we can check their answers accurately over a period of time by counting the ICBM silos they construct. We can

test their intent regarding a ballistic-missile-defense system. Is it in the interests of both nations for both to deploy an ABM system? Or is it better for neither to deploy?

If Moscow is willing to talk numbers and needs in a mutually reciprocal context, if each side talks about what it believes deterrence requires, then a great deal of the speculation and uncertainty that make both want more and newer weapons can be dissipated.

Mr. MURPHY. Mr. President, will the Senator from Illinois yield for a question?

Mr. PERCY. I yield.

Mr. MURPHY. The Senator asked the question, would it not be better for neither side to deploy ABM's? Does not the Senator have the knowledge that the Russians have already deployed an ABM?

Mr. PERCY. Yes, they have deployed it, as I understand it, from the intelligence reports I have, but they have considerably slowed down or even stopped deployment of the system. They may have stopped. But the slowdown may be for one of a number of reasons. They may have decided to abandon the whole project as worthless, as we abandoned the idea of Sentinel. They may have decided to go back into research and perfect a better system. That is exactly what the opponents of deployment are now suggesting we do about the Safeguard system—that we perfect the system for to have the capability, but not to deploy it now.

Mr. MURPHY. The Senator gave the impression that there was a balance between what the Soviets had and what we had, but that neither should go ahead with the ABM. I merely rose to point out that they started their deployment 3 years ago, and they have quite a few already deployed around Moscow. The reason for the slowdown is the uncertainty, so far as my information goes, and to improve it, or they may have found out it is not successful—hopefully—but I do not think there has been an exact answer as to the reason for the slowdown. The point I want to make is that the Russians do have an ABM already deployed and we do not, and that is not exactly what the Senator is saying.

Mr. PERCY. The Senator is not suggesting that we should adopt a policy that whatever the Russians do, we should do. I do not suggest that kind of policy. If they make a bad mistake, I am realistic enough to believe that there is no reason for us to go ahead and make the same one.

Mr. MURPHY. The Senator's premise is not very logical. I did not suggest that whatever they do, we do.

Unfortunately, a false premise leads to a false conclusion and it gets developed; and sometimes the main thrust of the discussion gets lost. My point in rising was to emphasize the point in the Senator's remarks that the Russians have the IBM. As a matter of fact, they have another system which is deployed all over the Soviet Union that we think is built for another purpose. So that actually they have two, and we do not have any. That is the reason I do not believe we should react to everything the Russians

do. Certainly, I do not think that. We worry about how many warheads they have as compared to how many warheads we have.

I think the main thing is to be conscious of the fact that within the past 5 years we have lost a distinct military advantage. I do not think anyone will argue against that. It is my opinion that as long as we have a distinct military advantage, as long as the character of America and the policy of America is known; namely, that we are not going to attack anyone, or start a war, that we insure a great degree of safety for the security of our country.

On the other hand, we know historically from what the Russians have said, to my knowledge, going back 30 years, every time they have had a meeting lately—I should not say the Russians, I should say the Communists—the Moscow Communists, the Peking Communists, and the Castro Communists—that they all seem to wind up with the main theme, "We must destroy America. We must destroy imperialistic America."

We are not imperialistic. However, we have won the door prize. In a closed society like a dictatorship, it is always necessary to have a "heavy," a "bogeyman"; someone to scare everyone with. "You do what I say, or else."

We do not have that in our society. It is not in the character of the American Nation. I believe that those charged with the security of our Nation are making certain that we are able to do whatever is necessary to protect the safety of the Nation. I do not believe we should be negligent. Where there is a question of making a mistake, I think we are bound to make that mistake in favor of the safety of our country and not in favor of, maybe, saving a few dollars, or giving some scientists a few more months to do research work. All the scientists have agreed that in the present state of the art, this is the only system. They all say we can find a better one. I am sure that we can. I would hope that science would find one so much better we would never need to continue with another—hopefully this would be a lot less expensive.

I would hope more than that. I would hope the President of the United States would be more successful in his meeting with the Russians. I would hope they would come to an absolute agreement and say to us, "Don't you build an ABM or don't you build any more ICBM's and we don't build any more."

I think we would all be very pleased if that happened. But as long as they continue to inveigh against us, as long as they use us as the target, as the design, for destruction, I think we have to take them at least partially at their word and be prepared to think perhaps they mean it.

I can remember some years ago I bought a book for a dollar. It was called "Mein Kampf." It was written by a madman in Germany. I read it. I told some people about it. They thought I had lost my mind. When I read it, I believed that man meant what he said. He did. Look at the terrible trouble he caused. If we had listened to him in the beginning, if we had taken proper precautions in the

July 24, 1969

beginning, if the people in his country had been careful in the beginning, the chances are he never could have created the great destruction he did.

This is the only reason for the debate. I, as the Senator knows, have the greatest regard for my colleague. He and I together would like to see the solution of these problems. But I must keep to the point in making the final decision. From what is factually clear and correct as I have been able to hear the facts in all the hearings before the Armed Services Committee, both open and closed hearings—and the distinguished Senator from Missouri, referred to the closed session of the Senate which took place—we must be realistic and deal in facts. If we had done that in the past in our dealings with the Soviets, we would not have had all this trouble. When we do not deal in facts, they lose respect. They think we are silly. I dealt with them for many years as an adviser on the cultural exchange. It was exactly the same kind of negotiations. They would ask 5 for 1, and settle for 3 for 1. They told us they would have to get more in return, because they would be in trouble when they got home.

That is the trouble with a dictatorship. Two fellows are watching the first fellow, and four are watching the other two, and it all piles up, so nobody makes a decision because they are fearful of making a mistake. That is the trouble. They lost about 7 years in the development of the country. I have watched them.

Mr. PERCY. Mr. President, I am glad to yield for a question—

Mr. MURPHY. I did not mean to make a speech. I got carried away.

Mr. PERCY. I may have trouble sorting through all the Senator's comments to find a question, but he made one important comment—

Mr. MURPHY. The question was this: I thought my colleague had said that neither the Soviet Union nor the United States should build the ABM system. I merely wanted to point out that the Soviet has already built and deployed its ABM system. The Soviets have quite a few of them around Moscow. They have another system, which is around the country, which we think is aimed perhaps at our Tactical Air Force.

Mr. PERCY. I very much appreciate my colleague's repeating the question. I will try to respond to it, because he made another very important comment, that we should try to deal with facts in this case.

It is true that there is a beginning, and it might be or it could be the end—we do not know—of an ABM system around Moscow. The system is limited to Moscow. All the military authorities I have talked with in our own Department of Defense feel it presents no real problem to them whatsoever. They can saturate it. They can penetrate it very easily. Probably that is recognized by the Soviets.

Mr. MURPHY. I would just like to know how they propose to saturate it. I have not heard that.

Mr. PERCY. By penetration. If they have 67 ABM's, we send over 68 ICBM's. When they have sent up their 67, they have exhausted their supply.

Mr. MURPHY. In other words, our military experts have told the Senator that the Soviets have an ABM system around Moscow containing missiles, and we can send one missile over to destroy it?

Mr. PERCY. We can send one additional missile beyond the number of ABM's they have deployed. It is just simple arithmetic. In fact, I do not have to go so high.

Mr. MURPHY. There is more than arithmetic involved. I assure the Senator that if we have an ABM, they cannot send one missile plus one missile to destroy our ABM. I am not sure that is disclosing any secret, but I assure my colleague that is a fact.

Mr. PERCY. Does my distinguished friend from California doubt the accuracy, the power, or the will to use that power on the part of our Defense Establishment? Does he doubt the second-strike capability that we have in this country?

Mr. MURPHY. I do not doubt the second-strike capability. What we are talking about, and the whole purpose of the debate, is to protect the second-strike capability so that we may have a second-strike capability, so that if somebody attacks us, we may be able to respond. That is what the ABM is all about. That is what it is for. It is not to hit anybody else. It is to destroy incoming missiles that would destroy our second-strike capability.

I must tell my distinguished colleague that I am forced to leave the floor. I dislike to leave. I will hurry back if I can.

Mr. PERCY. I would like to comment on one other aspect, to be as factual as we can, and that is what respect to whether or not the Soviets have an ABM system deployed around the U.S.S.R. beyond Moscow. It is my understanding that whatever they have is an anti-aircraft system. What we thought was an ABM system around Leningrad turned out not to be an ABM system, but an anti-aircraft system. We have an anti-aircraft system deployed, as they have, but theirs is just as obsolete in the kind of warfare we are talking about and trying to avoid as is our own defense, covered by snow and Arctic wastes, which is useless against the type of missile attack which might be made against us.

Mr. MURPHY. If my colleague will permit, when I spoke of the second system, I was not speaking of an anti-aircraft system; I was speaking of the Tallinn system, which is not really an anti-aircraft system. It is an antimissile system. But I have been advised that we think that may be targeted against our strategic aircraft.

The defense of both countries, strangely enough, is laid out in three elements. It takes in the land-based system, the ICBM's; submarines, which they are building at a much faster rate than we are; and the manned bombers. They have some "dandies," there, too. They have medium manned bombers that are excellent, and they have airbreathing missiles that can stay up a long time. So things are not as happy as they were 5 years ago, and that is why I am concerned.

I thank the Senator for his patience.

Mr. PERCY. Mr. President, just to complete my own comments on these pertinent questions, it is my understanding—and I would stand to be corrected if I am wrong—that there is not an ABM system deployed around Russia; that there is an ABM system that has not been completed around Moscow; but Dr. Foster, head of research and engineering in the Department of Defense, in hearings before the Senate Armed Services Committee, said that we have already targeted the Moscow Galosh system out of existence. I think that testimony from such an authority in the Department of Defense is adequate to answer whatever questions have been asked me by my distinguished colleague from California.

Let me continue my comments.

The fear of the unknown, whereby a nation must attempt to plan for all eventualities, would no longer be a telling argument for escalation of the arms race. If, on the other hand, Moscow delays or refuses this kind of dialog and exchange of information, we would conclude the worst about Soviet intentions. We would then be in a position to make decisions accordingly based on knowledge, not fearful speculation.

Quite apart from arms talks with the Soviets, there are some basic engineering questions that indicate the value of delay. There is strong evidence to believe that the Safeguard is not the best system we can devise to accomplish its stated purpose. Here let me simply repeat some uniform concerns of the most qualified U.S. scientists and former high Pentagon officials—concerns which have not to date been adequately dealt with by the Pentagon.

Since the Sprints would be blinded and inoperable if the MSR radars were destroyed, how can we first deal with the problem of MSR vulnerability? Do we need hundreds of Sprints just to defend these radars? Should we seek to find new ways to harden these close-in radar sites? Should we disperse from one radar to a multiplicity of radars?

What can be done generally about Soviet saturation tactics? If the Soviet Union does expand its missile force, add multiple warheads and then MIRV's, thus having several thousand separately deliverable warheads, how can only "several hundred" Sprints now visualized under Safeguard hope to defend our ICBM's successfully.

These are only a few of the dozens of questions that have been raised by the scientific community regarding the improvement of the Safeguard system. These questions need answers before deployment.

This is one way of stating the case for holding off a decision, pro or con, on deploying Safeguard now. Specifically, I am opposed to a decision that begins the process of starting to gear up for full production of a missile defense system in the United States now. Once any part of this system is begun in the United States, the decision is taken out of our hands—the inertia of military weapons systems dictates that the whole system will inevitably be deployed. And will be deployed regardless of the success of the arms talks and regardless of what the Russians do. Any deployment in the

July 24, 1969

United States may make a sham of the arms control talks.

I say this despite Pentagon statements about annual reviews and phasing decisions.

I say this because the Pentagon has unequivocally told us that the full system will be deployed "as the Chinese ICBM threat continues to increase."

I say this because that would put us right back in the game of building an ABM system for defense of cities which President Nixon says would be very provocative and destabilizing, and which scientists in and out of the Pentagon believe cannot be effectively provided and would be wasteful.

I am not prejudging the ultimate decision on ABM's. Circumstances might dictate ultimately that we all would support a workable and well-thought-out missile defense system in time. I would be in favor of going ahead with a U.S. missile defense system—hopefully a better system than Safeguard—if the Soviets insisted on deploying a more significant one of their own and we were convinced of its value. We could not afford to let the Soviet Union get that kind of technological jump on us without responding in kind.

It is because of these considerations that the Congress has struggled with the decision on ABM. The ABM debate has not been a foolish one with all the truth on one side. The unfortunate aspect of the debate is that we are trying to settle it all now.

Richard Nixon, as our President and Commander in Chief, has a real responsibility for the Nation's defense, for not taking unnecessary risks with our security. He faces great new uncertainties in the strategic nuclear balance of power. These uncertainties breed fears and demands that are difficult to assess and resist. Both the United States and the Soviet Union are on the verge of being able to deploy a whole new generation of strategic weapons.

We do not know with certainty what effects these new weapons will have on the system of mutual deterrence, that balance which prevents holocaust and keeps the nuclear peace. We never will have this certainty. President Nixon himself made this clear with his own statements on strategic doctrine and with his concept of "sufficiency." What we need is enough, not necessarily more and more. We cannot eliminate risks to ourselves without increasing risks to others. If others are placed in greater jeopardy, they will react from fear, just as we are being entreated to do.

In regard to Safeguard, there is merit to President Nixon's desire to maintain the retaliatory capability of our Minuteman force. This is part of a very sensible doctrine that seeks to maintain separate retaliatory capability in each of our major strategic force components—land, sea, and air. It may well be too risky to place our deterrent capability solely on any one component. This, in turn, means we may have to do something about the potential vulnerability of our Minutemen. But the Pentagon has far from made a convincing case that the sole answer to this problem is to deploy Safeguard now.

Just as the President has responsibilities and problems, so does Congress. We have responsibility, with the President, to determine the Nation's needs and priorities. This should be a cooperative, not a competitive, process. In fulfilling our responsibilities to the American people, many in Congress are simply not convinced that Safeguard, just as we were not convinced that Sentinel, is either right or necessary at this time.

Because our doubts and our questions have not been answered satisfactorily or convincingly, many of us—which may well be a majority—will have to vote our judgment and conscience against Safeguard.

But this is not the way this decision has to be made. There is no need and nothing to be gained from an outright confrontation between Congress and the President. There is a middle ground which does not compromise national security. Indeed it enhances the future security of this Nation.

First, we should not make the decision today that would commit us to deployment of an ABM system in the United States.

Second, we should begin arms limitation talks immediately and make the next round of ABM decisions based on what we learn or can agree to at these talks.

Third, we should continue with research and development, engineering, testing, and evaluation. Speaking for myself and not for my colleagues, I would also approve the preproduction of long leadtime items such as radar components and computer software.

Fourth, we should take steps to deploy a full unit of an improved ABM system at Kwajalein.

This approach would allow us to meet any contingency in the middle and late 1970's. It would keep necessary vital technical personnel together, working as a unit, and it would enable production lines to be readied for a more proven design. It would also allow for fuller testing—which deployment in the northern United States would not. This approach would make the curtailing of the arms race feasible without incurring any new risks.

At the same time, I would like to renew the proposal for a mutual moratorium on MIRV testing, a proposal in which I joined with the Senator from Massachusetts (Mr. Brooke) and 40 other Senators of both parties. I believe firmly that the only way to remove the threat that derives from multiplying numbers of deliverable warheads and increasing their accuracy is for both sides to agree to stop testing them. We did achieve an agreement to prohibit atmospheric testing of nuclear weapons. We did achieve an agreement with the Russians to also prevent the proliferation of nuclear weapons to other countries. This is the next logical step, and should be the first order of business at the arms talks.

Mr. President, I should like to point out one deep concern that I have, in which I am joined by many others in this body.

We can accurately determine whether the Russians, and they whether we, are

testing a MIRV. But once it is tested, designed, produced, and deployed there is no way that we can inspect adequately the integrity of a limitation agreement without on-site inspection.

I think from our past experience in negotiating we know that this presents an exceedingly difficult problem. I would not consider very useful an agreement that would not be in our mutual self-interest, an agreement that could not be clearly understood, or an agreement that could not be clearly enforced.

We know now that neither an offensive nor a defensive weapons system can be deployed without detection, either by the Soviet Union or by ourselves. We would know if they were cheating, and they would know if we were cheating. The technology and scientific capacity we now have for satellite reconnaissance insures the integrity of such an agreement.

Yet we could not ensure the usefulness of our current means of detection once MIRV had been deployed. This is why the urgency for a mutual—and I say mutual, not unilateral—agreement is the highest order of priority in an arms limitation talk.

And this is not the time to commit ourselves to production of an ABM defense system. If the great debate that has taken place throughout the land has proved any one point, it has proved that now is not the time to expand the world's nuclear arms race. It has proved that both the time and opportunity for further steps toward peace may coincide. We should make every effort toward this end, and take steps that will in any way endanger the possibility that we have today of coming to accord and mutual agreement so that we may stop and arrest the arms race in which both nations are now actively and wholly engaged.

Mr. MURPHY. Mr. President, will the Senator yield?

Mr. PERCY. I yield to the Senator from California.

Mr. MURPHY. Mr. President, does the Senator have knowledge of whether the Russians have tested MIRV?

I am trying to establish whether the Russians are ahead of us in the matter of testing, adapting, and employing MIRV.

Mr. PERCY. I presume that we both are at a stage now where we are pushing ahead rapidly. I presume they have certainly done some research, development, engineering, and testing, and so have we.

Mr. MURPHY. Have we tested MIRV, to the knowledge of the Senator?

Mr. PERCY. I assume we have done a great deal of design, engineering, research, and development. And as a matter of fact, from my recent experience on a Polaris submarine, there seemed to be no hesitation in their capability for going ahead with the Poseidon.

Mr. MURPHY. Mr. President, I have no knowledge that we have tested an operational MIRV. I do have knowledge that it is believed that the Russians have tested MIRV.

I therefore suggest that they might be a little ahead of us.

July 24, 1969

CONGRESSIONAL RECORD — SENATE

S 8557

The Senator spoke about arriving at a treaty controlling nuclear testing in the atmosphere. I wonder if the Senator recalls the circumstances preceding that treaty when, during the time that the treaty talks were going on, the Russians did test in the atmosphere and did take advantage of our trustworthy nature and did gain a tremendous advantage and knowledge and did a great deal to change the balance because of that testing. Is the Senator aware of that?

Traditionally, we find that our country is asked to slow down and not take the initiative. I know that we had MIRV available to us 6 or 7 years ago. For one reason or another, it was pushed aside by the then civilians who made those decisions. I believe that Secretary McNamara was responsible.

I am just as hopeful as is my distinguished colleague that the day will come when we will not have to worry about these armaments.

I must point out, however, that the ABM is not a move in the arms race. It is a defensive weapon. It can never be made into an offensive weapon. The Russians know that. They have said so. As a matter of fact, when it was first indicated that we might go ahead, they immediately said, "Let us sit down and talk disarmament."

This is perhaps the way we should approach the matter. Maybe over the years we have been dealing with them in the wrong way. I know that history is replete with the story of people who have tried to deal with the Soviets from a position of weakness. They have accomplished very little. However, people who from time to time have had a confrontation with strength backing up their design—as we had in Greece, Lebanon, and Cuba—always seem to be able of accomplishing something.

I wonder if perhaps that is not the way they would rather have the meeting take place.

I am sure of one thing—and I know that my distinguished colleague will join me in this—that I do not think he nor I nor any other Senators have thought of anything or any condition or have as much scientific or technical knowledge of the matter as has the President of the United States.

I always come back to that same point. I know of the sleepless nights spent worrying about the matter. We have to be right. A mistake in this matter could be absolutely vital to the future of our Nation.

I am sure that the President finally came to the conclusion that, in his best judgment, he wanted to have a Safeguard missile, he wanted to be able to protect our second-strike capability so that in the event anyone got a crazy idea that they wanted to attack us or in case anyone made a mistake or there was a misfire, we could destroy the incoming missile before it would do any damage.

He decided at long last that this was what he wanted. That is his responsibility. He has that responsibility in the name of a majority of the people of this country.

I think that in the event there is any question, this fact ought to weigh very

heavily in making the final decision. It is his job. Our responsibility is advice and consent.

Actually, our job is also to debate the bill and then act on the bill that we worked over in committee to supply an amount of money, not for policy, but for procurement, to supply the funds for the armed services to buy the things they need, pay the salaries, and keep up the installations.

The debate became part of that. However, in the bill, if that is all we are talking about, there is a matter of less than \$800 million involved.

Some have said that once we start, we can never stop. I can. I have stopped a lot of things. We can stop the day we decide to do so. As a matter of fact, the President in his request provided for exactly that. He said that at the end of the year we will look at the matter, and if we do not need it, we will stop it.

If the negotiations are successful, we can stop it then. We should not even start it, if the negotiations are successful before we start. We should not go beyond that point.

I point out that if we do not start it and start it now, the best advice I can get is that we would lose 2 years before we got to the actual finished product. And those 2 years, in the judgment of those in the top jobs of Government, we cannot afford to waste at this time.

Mr. PERCY. Mr. President, with respect to MIRV testing, it is my understanding that half of the MIRV tests have been completed by us with positive results. The Soviets have tested, to the best of my knowledge, MRV. We are ahead of them in MIRV.

As to whether we would be dealing from strength because of having gone into the production of a weak ABM system, I do not see that that argument is particularly strong. I do not think the Soviets would be greatly impressed if we were to go into production on it.

If we wanted to expend our resources in that way and have a low level in our defense systems, I do not think it would be particularly worrisome to them, any more than we should be particularly worried by the so-called ABM system they have deployed in part around Moscow.

I feel it would be a great mistake for us to just simply say that they have one and therefore we have to have one and had better rush into production, no matter what the vulnerability of certain parts of the system is and no matter what the weakness of that system may be.

We have talked a great deal about MSR. We might well talk about the electrical power that will operate this particular system, and we might get into that at some point in the future.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PERCY. I yield to the Senator from Tennessee.

Mr. GORE. Mr. President, I thank the Senator for his very able address, to which I have listened with close attention.

I have not found a way vocally to distinguish with any distinction—in the pronunciation, at least—between MIRV

and MRV. The best pronunciation I can give to either is "MIRV." Some distinction will be found in the testimony of Secretary Laird, beginning at the bottom of page 45:

MIRV is certainly something that is negotiable as far as any arms limitation talks are concerned. It is true the Soviet Union has gone forward with testing of multiple reentry vehicles, and we are going forward with testing MIRV-ed vehicles. We do not plan any deployment of multiple reentry vehicles until [deleted].

I wish to point out, for the benefit of the Record and for the benefit of the senior Senator from California, if he should need such information, that in this statement the Secretary of Defense make a clear distinction between multiple reentry vehicles and the multiple independently targeted reentry vehicles.

I think I have heard all the intelligence briefing before my subcommittee—indeed, I know I have. No evidence has been presented to my subcommittee that the Soviets have tested any multiple independently targeted reentry vehicle. They have tested some MRV's which fell in patterns which contain some interest to some people. On the contrary, the United States has tested, as the Secretary has said, MIRV weapons. So in this category the United States is far ahead, as the United States is far ahead in many other respects.

So if it comes to negotiating from a position of strength, I do not know how we could reasonably assume that the United States would be in a more advantageous position next year or the year after or any other time in the future. Indeed, as I tried to say to the Senate on Tuesday, the United States and the Soviet Union, though not on a basis of equality in destructive capacity, are on a basis of equality in one respect—they have the capacity to destroy each other several times over.

Now, when two nations are in such a juxtaposition, does the Senator know of any measure of their mutual security so great as an understanding on the limitation of further deployment and possible use of nuclear weapons?

Mr. PERCY. I think the distinguished Senator has brought out an exceedingly important point, and it is a point that I really tried to get at in my speech.

In the remarks I made, I tried to separate those who are just for deployment today, those who are for having the capability to deploy but who are against deployment now, but are for continuing research, development, testing, and so forth, and those who simply—and I think we should categorize them and isolate them—are against doing anything with the Soviet Union "because you cannot trust the Russians." If that is their philosophy and if that is their approach, then I think they clearly should stand up and say: "We oppose the President of the United States on this policy matter. We oppose the Joint Chiefs of Staff, the Defense Department, the State Department, and everyone else, because we are against negotiating with the Soviet Union."

Let them then not hide behind this general opposition or general proposition of deploying the ABM. Let us argue

that out, on whether or not, as a matter of national policy, we want to sit down and see whether we have a community of interest in stopping the arms race.

As I understand the President of the United States, he has clearly said, "I am willing to sit down and negotiate." In fact, he set a date and said he would be flexible as to where those talks are to be held. There is no question in my mind that MIRV and ABM and other nuclear offensive and defensive systems will be on the agenda. This action has been approved by the National Security Council.

As to those distinguished colleagues and friends of ours who simply are going to fight any attempt to agree with the Soviet Union on anything, we should clearly have them isolated in one separate category and separated from many of their colleagues—the vast majority in the Senate—who feel that it is utter madness for us not to see whether we do not have a community of interest.

I should like to ask a technical question of the distinguished Senator from Tennessee, because he has participated in all the discussions that have taken place before the subcommittee of which he is chairman.

Is it not important that we reach a mutual agreement to cease the testing, because once we have finished the testing, design, and development, and begun the production and deployment of MIRV, we would then require on-site inspection, and our present methods of satellite reconnaissance would not be adequate to insure the integrity of the agreement? I believe, and I believe that he believes, we should have agreements with the Soviet Union, the integrity of which can be preserved by our known technology.

Mr. GORE. In reply to the distinguished Senator, I wish to refer once again to the statement of the Secretary of Defense that "MIRV is certainly something that is negotiable as far as any arms limitation talks are concerned."

So the answer to the Senator is affirmative, in the view of the senior Senator from Tennessee, but affirmative in the view of the position of the administration, also.

(At this point Mr. SAXBE assumed the chair.)

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. PERCY. I yield.

Mr. JAVITS. I came in at the end of this discussion, but heard both arguments.

I believe it is important to emphasize—and I should like to check with the Senator from Illinois, who I know has made a very fine and thoroughgoing speech in defense of our position—that there are two separate ideas here, both very valid.

I like very much Senator PERCY's concept that if you do not trust the Russians, then make no agreements with them at all, and you do not have to trust them to make an agreement. We just have to look at the history of previous agreements to which they have agreed to see whether they have stuck by them. They horse around in a big way and will take us any time they can when there is no agreement; but the disarmament

agreements, like the nuclear nonproliferation and the testing in the atmosphere, have been observed, as have others.

There is another thought in what the Senator from Tennessee has said, which I would like to confirm, and that is the question of risk. I spoke on that yesterday. I debated it with the Senator from Texas (Mr. TOWER).

The question is, Which is the greater risk? We are not saying that there is no risk in not deploying; but we say the greater risk is in deployment, rather than in nondeployment, because we are so far committed without a commensurate benefit that we lose on the exchange and the hope of freezing the nuclear arms race at this point.

The question I should like to ask the Senator is this: The argument made against that point, which both Senators made and which I made yesterday, is that suppose the people who argue that way may be correct. It may very well be that there is a great difference in risk between the two, but the Russians say that they do not care if we deploy or not. Therefore, they are not going to be inhibited by a consideration of whether we deploy or not. Therefore, the situation will be in the same position if we do not deploy.

I wish to ask this question. Is not the difficulty with that argument, "Sure, the Russians are being very conservative. They are operating the same way. They have their hands in the same cookie jar. Their leaders are doing exactly what we are doing."

Somebody has to have the enterprise to lift this whole operation above that mundane grocery store level—without any disrespect to grocery stores—but everybody is thinking the same thing: Arms under the sea bed.

I wonder if the Senator would care to comment.

Mr. PERCY. I am not a Soviet expert but I have talked with them as I have with our national leaders as to whether or not we have a mutuality of interest here. The best information I have is that the Soviet Union finds that when they are spending a high proportion of their gross national product on defense systems and strategic systems that they are feeling the effect. They have people who want more and more consumer goods. They have all these unmet needs such as housing, automobiles, or whatever it may be.

As they look at Eastern European countries, particularly the window on the West, and into Western Europe, they see great dissatisfaction on the part of the people if they are not provided what they have come to expect all these years.

They have a great mutuality of interest because they know if they continue the race we will have a greater offset because we have a greater capacity to produce. They can simply appropriate the money without having the matter debated in Congress, but they do know they have to fulfill the promises they have been making to the people for some time. They have a great community of interest.

We could offset each other by the actions we take and continue the race and build and build and build; but I cannot feel any safer with all the weapons we have built in the last 10 years

than I did 20 years ago. In fact, the reign of terror is substantially greater. I think it is time we deescalated. However, someone always says, "Let us try this new system we have. We have an ABM that we would like to produce. We have a MIRV that we would like to produce." Then, the other side will say, "We have another system we would like to produce." When is this race going to end? Mr. JAVITS. Never.

Mr. PERCY. The time is now. There is a great mutuality of interest. As I listened several days ago to the distinguished Senator from Washington, (Mr. JACKSON), I was afraid when he was speaking that he was really leading up to saying, "You cannot trust the Russians and, therefore, do not negotiate." I was exceedingly pleased at the end of his analysis when he said, "Of course, I want negotiations; we all want negotiations."

I was very interested yesterday in listening to one of the proponents for the deployment of the ABM, the distinguished Senator from Idaho (Mr. JORDAN), a revered and respected colleague. I have now read every word of his statement because I have tremendous respect for him. Both of us serve on the Joint Economic Committee. He said:

The most compelling need of the present times is to stop this devastating nuclear arms race. This is a long, hard road—but like any long journey, it must start with a single first step. That first step is serious negotiation by the principals at the bargaining table. Whether steps to deploy a Safeguard ABM system would advance or retard negotiations is again a matter about which the experts disagree. Frankly, I do not know. The President thinks we need the start that this bill gives us and he thinks we need it now. He thinks we are protecting valuable leadtime should negotiations fail. Personally, I might be willing to take that "risk for peace" which proponents endorse.

I repeat once again that the safety of this country depends on two things: our capacity to retaliate against anyone who deals a first strike, and our willingness to use that capacity and strike if we have ever been struck. Let the Russians or the Chinese never doubt that we have the capability—no matter what they throw at us—to devastate them and that we have the will to do it should they dare strike against us. With that sufficiency on our part and, I presume, a sufficiency on their part, is not today the day to say, as the Senator from Washington and others have said, that we have a basis for agreement?

Mr. JAVITS. I agree and the way to do it is to say that we propose to move in view of the proven fact it does not jeopardize our security.

Mr. PERCY. Mr. President, I yield to the Senator from Maryland.

Mr. MATHIAS. Mr. President, I wish to thank the Senator from Illinois for a very thoughtful discourse today and to note that his discourse is based not only on his long experience in business affairs and his experience as a Member of the Senate, but it is also based on the experience he has had as an industrialist and businessman in a highly technical industry which has given him insight into this very difficult and complex situation, which is denied a great many of us. I appreciate the leadership he has

July 24, 1969

taken and the time he has taken today to wrestle further with this very difficult problem.

In the last few minutes there has been reference by our good friend, the Senator from California, and in the quotation which the Senator from Illinois just read from yesterday's debate with respect to the role Congress should play in this matter. The Senator from California—and I regret he has temporarily left the Chamber—said the primary responsibility lies with the President to make these determinations; that the President spends many sleepless nights.

I think we all appreciate the tremendous burdens that rest on the President in matters which relate to national security. I do not think anybody in any way can diminish the role of the President as Commander in Chief of the armed services and in connection with the security of the United States. I do not think anybody in any way wants to pretend that this tremendous burden is not one that is very heavy for any man to bear.

However, this is the point at which not only do we have to be clear ourselves but I think also the country has to be clear. I was at a meeting last night, and I think it is all too easy for people to fall into the frame of mind that if the President wants it it is automatic that it has to be that way.

That is not the way the Constitution says it. In article I of the Constitution, section 8, it states that the Congress shall have the power to provide for the common defense. As if to underscore this power of the Congress and the discretion vested in Congress, the same section further provides that Congress shall declare war and do various other acts in relation to the armed services.

I do not say this in derogation of the President's powers in this area, but merely to emphasize that we have a role to play here, which is not to rubber-stamp, not merely either to approve or veto, but to make a subjective judgment.

That is what the Senator from Illinois, I think, has done. He has made a subjective judgment which weighs not just the mere question of cost, but the question of the desirable course of action, what the effect of that course of action will be, does it actually increase the security of the Nation, or could, in fact, a given course of action decrease the security of the Nation?

That is our job. It is not a job that any member of the executive branch, be he President, Secretary of Defense, or a member of the Joint Chiefs of Staff, or anyone else, can do for us. It is our job.

The Senator from Illinois, I think, has illustrated the intelligent way to go about that job.

Mr. PERCY. Would the distinguished Senator from Maryland, who has served in the other body and now in the Senate, give me the benefit of his judgment on an answer that might be given to those who merely say that the President wants this, he has said it is in the national interest, and in the interest of national security that we have it, and

therefore we have an obligation to vote for it?

This has been said not only in this Chamber many times but also by many of our constituents, by the newspapers in our home States, and certainly in some very, very tough letters I have received.

If this principle had not been followed at another time, we might have questioned the decision of two Presidents which took us into a land war in Asia, something that the Joint Chiefs of Staff, General MacArthur, and other military authorities have said above all else we must avoid. Would it not have been far better for this country if Congress had been able to stand up and prevent that action from carrying us from an advisory role to a fighting role and putting the whole interests of Presidents of this country on the line in a guerrilla-type war 11,000 miles away? Would not our national security have been better off if Congress had resisted two Presidents of the United States in the decisions that they made, decisions which were made in utter honesty, with complete devotion to the country, and patriotically, feeling that what they were doing was in the national interest?

Today, would not Congress, looking back, and would not the country, looking back, say that Congress somehow, should have prevented those decisions from being made as they were made?

Mr. MATHIAS. The very best answer I can give to the Senator is to refer to the vote which was taken in the Senate a few weeks ago on the national commitments resolution. A great majority of Senators who voted on that resolution—and a great majority of Senators voted for it—were Members of either one House or the other of the Congress during the tragic period in which we became more and more deeply involved in Vietnam. Out of the bitterness of that experience, we rolled up the kind of majority behind that national commitments resolution which is now a part of the history of the Senate.

Mr. PERCY. Although I realize my distinguished colleague was in the House last year, and not in the Senate during the debate on the Sentinel system—and I voted against deployment of the Sentinel system—the argument was used in this Chamber, by editorial writers, and by constituents writing to me, "How can you possibly vote against the deployment of an ABM system when the President of the United States has said it is necessary in the national interest?"

At that time, I, together with some of my colleagues, declared that we were voting against it in conscience because we felt it was wasteful, that it would not do the job it was presumed to do, and that it could not defend the cities. We felt we must not lead the country to believe that the cities would be protected once we dragged in the bombs and put them around the cities, for it would escalate the nuclear arms race because it was provocative.

What does one do then, when we say the policy is to support the President, when the next President that came in

said that in the national interest we would not deploy the Sentinel system? In this instance, I think President Nixon was absolutely right. One of the great decisions he has made was to take away the potential for the deployment of a thick system which he himself, by word and implication, said was wasteful and could not accomplish what it was pledged to do. He himself said it would be provocative and would call forth retaliation from the Soviet Union, just as we responded when we thought they were building an effective ABM system.

So that I hope we never hear this argument again on this floor, that we must vote for something merely because the President in his judgment says it is in the national interest. I simply could not feel, in principle, that that should be the principle that governs us. If each of us is governed by conscience and what we think is right, we have a deep responsibility to create and form our own judgment because we are a totally separate and distinct branch of Government.

Mr. MATHIAS. The Senator is absolutely correct. As a Member of the other body last year, the same question was before the House, whether to deploy the Sentinel system. I voted against it last year. I do not believe that we are yet at the point that we should deploy.

However, how easy our job would be, easy to the point of being superfluous, if all we had to do was accept the President's recommendations. In fact, I venture to say to the Senator from Illinois that neither he nor I should be here. If that is the way Congress has to act, I do not believe any of us should be here.

This is a duty of conscience as well as of judgment. As the Senator from California said, the President undoubtedly has spent many sleepless nights considering this question. I think that all of us have devoted a great deal of thought and conscience to it.

As I have said before in the Senate, I walked through the atomic ashes of Nagasaki and Hiroshima less than 30 days after both bombs had been dropped. Thus, I know what happens when atomic or nuclear devices fall upon a city, because I have seen the results. If one needs anything to stimulate his conscience, just have that experience.

I know that this body is not only discharging the duty which is provided for it in the Constitution, but it is also discharging the duty which every one of us is called upon by our consciences to perform. That is why I am extremely grateful for the manner in which the Senator from Illinois is conducting this debate this afternoon.

Mr. PERCY. I thank my distinguished colleague very much.

Several Senators addressed the Chair. Mr. PERCY. Mr. President, I am happy to yield to the distinguished chairman of the Armed Services Committee, the Senator from Mississippi (Mr. STENNIS).

Mr. STENNIS. I thank the Senator from Illinois for yielding to me. I commend him for his closely reasoned and well put together speech in which he stated his points with clarity and in a challenging way.

July 24, 1969

I think he is really contributing to this debate, although I think his contribution is on the wrong side; but still it is a contribution, and I am glad to salute him.

Let me ask the Senator this question. Virtually all of us here have agreed that there should be a continuation of the research and development program as to the ABM; that it is not only desirable, but necessary. Is that correct? That is the Senator's position, anyway, and I do not know of any dissent from it.

Mr. PERCY. Absolutely. I think that should be clarified once and for all, because in oversimplifying the reporting of the debate, some newspapers and news media have called us pro-ABM and anti-ABM. I do not know of anyone who is anti-ABM or against our having the capability and capacity to deploy, if needed, the finest, the best ABM system that we know how to put together. It is a question of whether we are ready for deployment and do we have to go into deployment now, on the eve of negotiations?

Mr. STENNIS. I think there is unanimity on the part of all of us about the need for continued research and development, which recognizes that there is a problem here that must be contended with.

Mr. PERCY. And evaluation and testing.

Mr. STENNIS. Some Senators have agreed—and I understand the Senator from Illinois has said—that sometime later we may have to have an ABM system. That was one of the points the Senator made. Is that correct?

Mr. PERCY. That is correct.

Mr. STENNIS. So all Senators, then, including the Senator from Illinois, recognize by those positions that there is a threat confronting us, and that we should not just be dilatory; we should be moving to some degree in trying to face that threat.

Mr. PERCY. There is a potential threat, without any question whatsoever. We must guard ourselves against that threat and have the capability for meeting it.

Mr. STENNIS. And try, with the limitations the Senator puts on it, to be able to meet it.

That brings the Senator to the field, then, that his only limitation on the ABM is its deployment and advance testing. That is what the Senator objects to primarily, so far as the weapons are concerned?

Mr. PERCY. I have one other departure, which I should like to make clear, in which I differ with Senators who have opposed deployment. I simply feel that we should give the Department of Defense a little extra leeway. I have to look at it as a man who has spent his entire life in industry. If we cannot reach agreement, if these talks fail, and if we are convinced that we have a system that is reasonably invulnerable and can be deployed and can be truly effective and a deterrent for our second-strike capability, I want to be sure we minimize the loss of time and that we complete the design.

So I would be willing to include as a part of the \$345 million in the bill—this

is not a military spending attack; this is not a charge against the military industrial complex; this is a judgment of whether we should go ahead—a provision to authorize the production of certain long leadtime component parts which take considerably longer than other parts in that design. So these funds would be used not only to perfect the design, but even to take the risk that we might throw away these parts and never use them, but to get the production lines going on those parts that are most difficult to complete.

I would be glad to illustrate, if it is necessary, what I mean by that modification.

Mr. STENNIS. To describe the long leadtime items, does the Senator mean?

Mr. PERCY. The type of components and parts which I have in mind.

Mr. STENNIS. If the Senator wishes to, now would be a good time to do it. It would be well to do it, if it is not classified.

Mr. PERCY. It certainly would not be classified. This is simply a principle. Rather than take the ABM system, which is highly complex, which is composed of computers, radars, missiles, and so forth, let me take an illustration of something which is simpler, but serves the purpose.

Suppose we decide now, with the interest in outer space, to develop, and take the great deal of time needed to develop, a far-out-reach telescope which would permit us to see into the universe much more than we can now discern. The design of a telescope, which we have never put together, has been completed. We have never built it. In fact, it is in the same state of the art as the ABM system is today. We have tested certain parts of it, but not the whole. Say we need 100 of them deployed around the world. Do we go to the deployment of all 100, or do we complete one and build it and test it functionally before we build any parts?

My compromise or suggestion is that what we do is go ahead with our evaluation and testing and build one model and make sure it works, but at the same time we test the parts in the telescope. It would have metal, cylinders, springs, washers, all sorts of retaining rings, and glass components. Some would be simple glass components and some would have deep curves which would be difficult to grind and which would require hand honing. Some of these take years to build, just as parts of the ABM do.

I would be quite willing to authorize the production of those components of the optical system that will take perhaps twice as long as all the other components. If we started grinding 100 sets of the glass and we went ahead with the deployment, we would not have lost a bit of time, because all the other parts of the components could be completed before we completed the long lead-time parts. If we decided they would not work, or perhaps there was some other national priority and we decided not to build the 100 telescopes, then we would have to throw away the lenses that had been made, and we would have thrown away only one or two percent of the cost of the total component parts.

Mr. STENNIS. I thank the Senator.

The Senator recognizes the potential threat, as he calls it, and that something ought to be done about it toward preparation to meet it. So the Senator's objection really goes to that part of the bill which is in the field of diplomacy or international political situations. At least, that is the major part of it. That is where the President comes in. I am one of those who have said that the President's position is entitled to a great deal of consideration. No one stands stronger than I for the legislative branch, the Congress, in making its judgments, and that is a direct mandate in the Constitution, which we have to make here. But is not the President, whoever he may be, probably the best judge of what he needs to take to the negotiating table with him? That is my point. After all is said and done, this is not a matter of opinion; it is a matter of judgment; it is a matter of projecting into the future. It pertains to weapons. After all is said and done, is not the Chief Executive's opinion of what he needs to represent us entitled to a great deal of weight and the most worthy consideration?

Mr. PERCY. I think it is due a great deal of weight. If I may be somewhat partisan, I would say, on the part of a Republican who respects the President and has worked with him over the years, to know I am opposing a man whose judgment I respect so much has given me great cause for sleepless nights. But I also know that, in the end, the President, in this particular instance, though his opinion should be given more weight than anyone else's, is not infallible.

I would like simply to illustrate that by citing the judgment of another President, Lyndon Johnson, who took the advice of the Joint Chiefs of Staff when they said the only way to bring about negotiations was to bomb in the north.

There were many people who believed that for a long time. I did for a long time. I took a position opposite the position of some of my colleagues in my class in the Senate, on national television, opposing the cessation of bombing at that time.

But over a period of months, after many, many deaths, and after agonizing reappraisals, I finally came to the conclusion that the only way to bring about negotiations would be to cease the bombing; and the President of the United States himself rejected his former judgment, he ceased the bombing, and the negotiations in Paris began.

It is another question as to how to make the negotiations successful. But in that case, I could not simply say the President's judgment was infallible and I should not exercise my own conscience and judgment. I did in that case, and I am doing the same thing in this case.

Mr. STENNIS. I do not object to the Senator's exercising his judgment. My point is a good deal farther down the line than that, and, with all deference to the Senator, the bombing, stopping the bombing and starting it, were matters involving an act of war itself, an act of a shooting war going on, where men were dying by the hundreds every day, and we had committed, at that time, close to a

July 24, 1969

S 8561

half million men before the bombing ever started.

With all deference, I do not think the Senator's analogy will hold up. Here we have involved diplomatic relationships at a negotiating table, involving the question of limitation of arms, and so forth. The President of the United States, who is our chosen representative—it makes no difference about party, as the Senator says—needs this weapon at that table, as well as for a part of our national arsenal. I think that if we just withdraw that, or hold back, and say, "You shall not have it, now run along and represent us at this international table," we are cutting the rug out from under him, and will be doing a great injury. I know others think otherwise, and I respect their opinions.

I am confident that ultimately this proposal will prevail. No one can be certain, no one has an absolute answer, no one knows what will be the conditions in 1975.

I conclude by saying again, I think the Senator has put together a mighty good, cogent piece of reasoning here, and I commend him for it. I can tell from the tone of his voice that he is concerned about this matter, and wants to go just as far as he possibly can without supporting the ABM as it is in the bill.

I think the President of the United States did not want to go any farther than he thought was necessary. He has always trimmed these matters down, and, while I do not like to use the word "compromise," he has been very reasonable about it; and I think this is a minimum.

I do not see how anyone can condemn him for changing from the Sentinel to the Safeguard ABM when he did it all in one sentence. Even if his judgment was bad in part, I do not see how it can be upheld in one part and condemned in another. It was his judgment, and a very courageous judgment, too, because the simple thing would have been to say, "Well, in view of all the other troubles we have, let this one go." But he did not do that, and I commend him for taking his stand.

I thank the Senator very much for yielding.

Mr. PERCY, Mr. President, I am very grateful for the Senator's generous and gracious comments, and would like to simply state for the record the deep gratitude that I think this country should have for the distinguished chairman of our Committee on Armed Services. In the past, when the Department of Defense urged deploying Nike-Zeus and Nike-X, Congress had to have an independent judgment in those cases, and the President had to have an independent judgment. President Eisenhower decided not to go ahead; President Kennedy decided not to go ahead; and, if my recollection is correct, though I was not in Congress at the time, I believe that the distinguished Senator from Mississippi was deeply concerned about committing this country to the deployment of a system that might possibly be obsolete before it was finished, that might not be—in the light of the cost-conscious economy and the state of the budget—worth the kind of money we would be

putting into it, and technically might not be ready for production.

I think we were saved \$20 billion to \$40 billion by the Senator's judgment and by his patience. I know that he feels that today conditions are such that it is wise to go ahead. I do not feel that we are hurting the President's hand in negotiations simply because of the word "capability." We have talked about the Russian capability of destroying us many times over. I do not think there is a member of the Politburo who would ever question our capability to produce an ABM system, and a better system than they could ever produce. They have the utmost respect for our technical competence and for our scientific community. But I think they must have read, and certainly read carefully, all of the scientific testimony that we have had about the problems that are involved in this particular system at this particular time.

It has not been fully put to work. That is a statement of fact. It has not been fully tested; that is a statement of fact. It is nowhere near certain that it will provide the kind of deterrent protection that we think it will.

We have mentioned before on the floor of the Senate the vulnerability of the MSR. We know it would be a lot better, now that we are designing for point defense, to have multiplicity of radars and hardened radars. I am not permitted to mention, in open session, the vulnerability of that particular radar; but the Senator knows full well that the SS-9 would never have to be used to knock out that radar today.

A question that has never been raised on the floor of the Senate, to my recollection, and a point of interest to me as I have been trying to research this system, and determine where it is strong and where it is weak—and where it is weak is not from debating holes in it—by asking the Department of Defense what we are doing to strengthen that end of it, because I want us to have the ability to deploy the best system, if we ever need it. The power source alone gives me pause.

I ask the Senator if he would be satisfied with the power source, which today depends on commercial power. We know ourselves, in the midst of a snowstorm—I was in New York City one time when the power went out, and we had to walk up and down all the stairs. We know that power blackouts occur just through natural phenomena, just from overloading, much less a few hydrogen bombs exploding around us.

Can we feel content and absolutely safe with a system using normal commercial power sources, and only shifting to hardened diesel generators if need be, or if as some member of the Department of Defense said, "The balloon goes up"?

We all know, and I know, having been in the military service 3 years, the degree of maintenance that is required for generators, and how to keep them in absolutely tiptop condition, you have to turn them over; and if we have 30 minutes' notice to turn them over, do we know that we would even have a power source to operate this vast complex of

computers, radars, and all of the other paraphernalia required? I mention this, not as a debating point, but as a point that I am probing deeply now, to see what more we may need to strengthen and improve, test and evaluate the integrity of this system, so that, should we ever have to go into one, we will go into a good one.

I do not think the Russians are impressed one bit by our rushing into production today with a system that is as vulnerable as Safeguard is, and that offers as little protection to our second-strike forces as it would, considering the whole complex of second-strike forces we have available to us should we ever need them. We have them and would use them, and they had better not ever believe we would not.

Mr. STENNIS, I do not know whether they are impressed with our moonshot or not. We made pretty good headway, but we had to take that one step at a time, so we started early. I know we have to take this one step at a time also, and I think the bell is already ringing for us to make this much of a start, anyway, this year.

I thank the Senator again for yielding to me.

Mr. DOMINICK, Mr. President, will the Senator yield?

Mr. PERCY, I am happy to yield to my colleague from Colorado.

Mr. DOMINICK, Mr. President, I simply wish to say to the Senator that, while I did not hear all of his talk, I did hear a good deal of his colloquy with the Senator from Maryland concerning the question of the President's requirements. I wish to emphasize a point that I think has been made by the Senator from Mississippi, and also the Senator from Illinois in his colloquy with the Senator from Mississippi, and that is: Because the President has said that in his opinion it is essential to national security, a great deal of weight should be given to that opinion.

Some talk has been reported in the Senate and in the newspapers that merely because the President suggests something, some Senator ought to oppose it automatically. I have heard it said over and over again that, "I am not going to be influenced by what the President's opinion is."

It strikes me that in this kind of a situation, what the President's opinion is and what the Soviet Union's opinion is would be very important to the security of our country. I think the Senator would agree with that.

Mr. PERCY, I would agree. Not only that, but within the last 30 minutes, I have indicated that this is what has caused me sleepless nights and deep concern and caused me to cast aside many projects that I wanted to work on so that I could go back and do research to make certain that my judgment was not wrong in this particular case.

I feel that the President's judgment and the judgment of the National Security Council should be given greater weight than any other single factor and should be taken into account. However, I point out that they have made decisions in the past that have been wrong.

They may be making decisions at present that are wrong. It is possible that they can make decisions in the future that will be wrong.

We have a totally separate responsibility to make our own judgment.

Mr. DOMINICK. I completely agree. As a matter of fact, some 4 years ago I started making speeches and pointing out the need for the Senate and the Congress as a whole to regain some more influence and exercise more judgment in the foreign relations field.

I totally agree with the Senator. The problem as I see it is that a lot of people do not understand this, and that, therefore, as an exercise in independent judgment, they automatically oppose what any President suggests, be he Republican or Democrat. I know that the Senator is not like that, but some others are.

Mr. PERCY. Mr. President, automatically, under either a Democratic or Republican President, I presume that the President for the most part is always acting in the national interest and that he at that stage is above purely partisan action. That is not to say that he is not partisan on occasion. However, when it comes to national security, I could not imagine and could not name any President who has ever been partisan in that respect.

I am naturally partisan in many matters. It is only with the deepest of misgivings that I take a position contrary to that of the President and the National Security Council.

Mr. DOMINICK. Mr. President, in connection with the decision concerning the position the country might be placed in if we do not go forward with the Safeguard system, it would seem to me, having listened to the arguments over a period of about 2½ or 3 weeks, that those who are against the Safeguard system are in fact relying on the offensive capability of our country to inflict a second strike in the middle 1970's.

If our land-based ICBM's that we now have deployed are in fact threatened, then the only position that those who do not want to put up the Safeguard system can take is to say, "We increase our offensive weapons, or we make a preventive strike."

I personally do not want to do either. I do not want to see the number of offensive weapons increased because it might create a real holocaust in the world.

I think, therefore, that when we deploy an ABM system which will defend our credibility, we are doing our best to protect the security of our country. We cannot then be increasing the number of offensive weapons. Does the Senator agree that there is logic in the argument?

Mr. PERCY. Mr. President, I think that there is, except for one point. I think the decision has already been made by the President and the National Security Council that we would not build an ABM system if the Soviet Union does not. So, that decision has been made. Secretary Rogers reiterates the position, as does the Department of Defense and the administration, backed up by every witness we have heard, that if they want to go ahead with an ABM system, we will

go ahead with an ABM system. So, with relation to all of the talk about a Chinese strike and an accidental launch, or whatever it might be, there has been a thorough analysis and appraisal and a balance has been reached on the judgment that if the Soviets want to go out of the ABM business, we will go out of the ABM business.

I regard that as a very significant decision. And I assume that the distinguished Senator would support that decision of the President and the National Security Council and, in fact, advise—as doing the distinguished Senator from Washington—talks getting underway to see if we can reach agreement.

Mr. DOMINICK. That is totally correct. I think in each instance that this has been said, it has also been added that they do not anticipate that the Soviet Union would leave itself wide open to an attack by the Chinese and that, therefore, they would retain a degree of their defensive capability in the ABM system, and that we should, too.

Mr. PERCY. Here I think we are coming into accord. This demonstrates that the proponents and the opponents are not really as far apart, if we clarify the matter, as we did with the distinguished Senator from Mississippi.

It is a question of whether we rush into production. I think we are together here, because I have said many times that if as a result of those negotiations, we both decide that it would be well to deploy an ABM system, I would be perfectly willing to go ahead and do so, because then that would not be provocative. That would not be escalating the nuclear arms race. We would be starting to work together in an area where we think we have a mutuality of interest, to stop the arms race.

I think that would be sensible. But let us wait and see. The President said, "Let us go ahead and get the talks under way by the end of this month."

I do not have any inside information as to what the Soviet Union is willing to do. Perhaps Ambassador Dobrynin is in Moscow now, seeing about the talks.

Let us get under way with the talks and see if they have any real basis for reaching agreement. If so, why should we rush into production at this particular point of an invulnerable ABM system?

Mr. DOMINICK. That is exactly the phrase, "rush into production," that I wanted to question the Senator on.

We are talking about \$345.5 million today, because that is the only deployment phase involved. Included in that figure there is \$600,000 for long leadtime missile components.

We do not have any actual procurement of the missiles involved. We do have the ability to test this system on a deployed basis if we go forward with the long leadtime items we are talking about.

This is not what I would call rushing into production on all the items, in the context that is usually taken. Is that not true?

Mr. PERCY. No; that is not true in the context in which I would say rushing into production. Certainly the distinguished Senator from Colorado has had a great deal of experience with the mili-

tary. And I think I have, not only as an officer in charge of production control a quarter of a century ago in the Navy here in Washington, but also as a defense contractor for some 24 years, and a part of the industrial-military complex.

I am deeply impressed with the inertia of these things once they get going. I would like to reiterate one illustration of what it is like when we get into production and then try to stop it.

Mr. DOMINICK. We cut off the F-111B with no problem last year. We took \$2 billion out of the pending bill with no problem.

Mr. PERCY. Mr. President, I have seen and experienced this inertia and I feel that once we get the production lines geared up and going, we will have 1,000 reasons why we should not stop production.

There is psychologically quite a difference between not going into production on something and going into production on an item and then stopping production. If we try to stop production, there will be thousands of employees and thousands of contractors in 172 different congressional districts which are touched by the ABM.

I think it is exceedingly difficult. And as I have tried to point out before, I think that by going into production while we are still designing, we will lose time in the end. I think the best way to put an item into production is to put it into production after we have finished the research, design, evaluation, and testing. We can then put one together and know that it works.

Then we can go into production. But if we start to go into production on pieces, parts, components, and segments, and such things, and then rush the program through at the same time that change orders, modifications, research, design changes, and testing are being made, we will cause a great waste of money and a considerable waste of time.

Mr. DOMINICK. A philosopher has said that a long journey starts with but a single step. But that does not necessarily mean there must be a long journey every time one takes a single step.

Mr. COOK. My President, will the Senator yield?

Mr. PERCY. I am glad to yield to the Senator from Kentucky.

Mr. COOK. I should like to clear up one point with the distinguished Senator from Colorado. When we talk about improving our offensive capabilities and creating nuclear havoc throughout the world, we ought to make it clear that, as of now, this country—and obviously it is public knowledge—has 1,054 ICBM's. If we MRV them—and that means at least three nuclear warheads apiece—we will have 3,162. If we MIRV them, we can go as high as 10,540.

I should like the RECORD to show, so far as I am concerned, that if it is said we can create a nuclear holocaust by increasing our production of ICBM's, we already have the needed capability for producing a nuclear holocaust. We have enough nuclear warheads to destroy any enemy throughout the world. We have the capability to do that.

July 24, 1969

CONGRESSIONAL RECORD — SENATE

When the American people are given—and I am not saying that the Senator from Colorado has done so—the impression that if we improve our offensive capabilities and produce more, we are in fact putting this country in a position to cause nuclear havoc throughout the world, the people ought to know that the Nation indeed has that capability. I wanted to get this point into the Record.

Mr. PERCY. It is a very valid point.

I think the most important word that has been added to the defense vocabulary was added by President Nixon, who used the word "sufficiency." I feel that we have a sufficiency of second-strike capability as not to cause anyone, other than an utterly mad person, to push that button if they know that we have the capability and will to retaliate, as we certainly do have.

Mr. PELL. Mr. President, will the Senator from Illinois yield?

Mr. PERCY. I am glad to yield to the Senator from Rhode Island.

Mr. PELL. Following up on the point made by the Senator from Illinois, the Disarmament Subcommittee of the Foreign Relations Committee asked a panel of distinguished scientists what would be the effect of a nuclear exchange with present weapons. His reply was that it would not only destroy the Soviet Union and the United States, but that it would also make the Western Hemisphere uninhabitable. So I think the question is whether we will make it uninhabitable or more uninhabitable.

I should like to return to a point the Senator from Illinois mentioned, which struck a chord in my memory. He spoke of first-strike and second-strike capabilities. Am I correct in saying that the Pentagon's definition of first strike is that it means one side can knock out the other side without any appreciable harm to the first side?

Mr. PERCY. That is correct; that the other side does not have the capacity to strike back.

Mr. PELL. Is it not to our advantage, basically, that the present balance of terror be retained? That means that neither side has the capacity for a first strike, but that both sides have the capacity for a second strike. That would be the best way of avoiding nuclear war. To my mind, nuclear war may come from an accident or because of automaticity of response. But it will not come because of a thoughtful decision to the effect taken either in the Kremlin or the White House.

Mr. PERCY. I think that would be my understanding.

Mr. PELL. So it would be best for both sides to avoid having a capacity for first strike. Along the same line, would it not be correct to say that when we examine our present arsenal and add to it the MIRV and the ABM, we will have a capacity for a first strike?

Mr. PERCY. I think the closer we get to that possibly the greater will be the fear on the other side. I am always concerned about someone who deals from fear.

Possibly the buildup by the Soviet Union is giving them the feeling that they can now afford to negotiate. Still, they also know what the buildup is cost-

ing them. They may feel that they now have such a sufficiency to retaliate against us that we will not need a first strike.

I was interested to probe whether there was fear in the Soviet Union that we might make the first strike. It is not possible to test these reactions accurately. I have not talked to any Soviets about it, but I have talked with persons from countries that deal with them. I was shocked to find that there is a considerable body of fear that we will use our weapons. That fear exists among allies and friends in neutral nations. So we can well imagine the fear the Soviet Union might have, because we have dropped the bomb, and we do have a tremendous capacity.

They have escalated, out of fear, to develop a second strike. I do not believe they have the capacity for a first strike. I think they are rational enough human beings to know what would hit them if they ever tried it, because they do not have first-strike capability, in my judgment.

I have heard it said that the Soviet Union is the only country to have a first-strike capability. If by that is meant that they have the capacity to hit us so hard that we cannot retaliate, I have no intelligence that would lead me to that conclusion.

The distinguished Senator from Rhode Island is a member of the Committee on Foreign Relations. He has heard the testimony of many persons and has the advantage of their views. I wonder if he would concur in that judgment.

Mr. PELL. I would. But I think that neither side has first-strike capability today.

Looking at the record, thinking of what has been said in the past, and thinking back to the time of Korea, when some serious leaders in the country discussed the possibility of using nuclear weapons, one can well imagine that the Soviet Union would become anxious and nervous, and that that would be the time when an accident could occur. Therefore, it seems to me that it would be wisest to concentrate on a policy of both sides having a second-strike capability, but neither having a capacity for a first strike. That argument seems to me to be pretty compelling.

Mr. PERCY. The distinguished Senator from Rhode Island has made a valuable contribution to the colloquy. I have not heard the point better expressed.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. PERCY. I yield to the distinguished Senator from Texas, a member of the Committee on Armed Services and a seatmate of mine.

Mr. TOWER. I think the Russian intelligence is probably very good. I am sure that as a result of their intelligence, they are aware that we do not have a first-strike policy. As to the institution of a first-strike policy, we are not so deployed as to be able to launch a first strike. I do not think any Senator would, under present circumstances, authorize a first-strike capability on our part.

The Senator from Texas, who is often regarded as a hawk, would certainly not support that notion. I think there are

reasons to believe that the Soviets, though they may not now have the kind of first-strike capability that would cause them to launch a first strike against us with impunity, be building in that direction. We should not think only in terms of the current situation, but in terms of what the conditions will be in the mid-1970's. That is what we are looking at—not the situation as of now, but the situation as it will be in the mid-1970's.

Mr. PERCY. I think that is the responsibility of the President, the Department of Defense, and the Committee on Armed Services.

Certainly, I know the distinguished Senator from Texas has been called a hawk and I have been called a dove. I am not an ornithologist. I do not know what those terms imply exactly. However, no one should imply that I would not be cognizant that our greatest security does lie in strength and in our will as a people to use that strength, and also in the degree of sacrifice we are willing to make to provide the defense establishment that will put us in a position where we will always have a second-strike capability against any adversary. I would say that I would adopt that as a policy.

Our only question relates to today, 1969. Do we need to take this action in connection with what I consider to be a vulnerable system, to go into production on something that has not been fully proved and tested?

If the Senator could take me to see a Safeguard system so that I might see a complete testing of that system—which I do not think is possible—I certainly would feel we should look at it in the context of what is happening, possibly, in 1975. However, our actions are too often geared to what we think they might possibly do, rather than to what we think they might rationally do.

In my judgment, in the judgment of one of my dearest friends who was Deputy Secretary of Defense in the Eisenhower administration and who was in that Department for 8 years, and in the judgment of many other distinguished and knowledgeable people, it is felt we do not need to deploy, nor should we deploy, the Safeguard system today to maintain a second-strike capability.

Mr. TOWER. Mr. President, those of us who are proponents of the ABM system—and that is, the whole bag of research, development, and deployment—are accused of proceeding on assumptions. I, in turn, have accused opponents of proceeding on assumptions. I am prepared to agree to a stipulation at this point that both sides are proceeding from assumptions. If all of us are honest with each other we can concede that. Certainly, we are making assumptions.

I think my side proceeds more on enlightened and educated assumptions. However, be that as it may, the fact is that if we are proceeding on assumptions, again we come back to what sounds like "old saw" around here and that is that in proceeding on assumptions, if we are going to err, let us err on the side of safety.

To return to testing and evaluation, those two words have been left out of the discussion too much. We talk too

S 8564

CONGRESSIONAL RECORD — SENATE

July 24, 1969

much about research and development. However, there must necessarily follow, as night the day, testing and evaluation. The fact of the matter is that Admiral Rickover—and I have made reference to this quotation two or three times in this debate and will probably refer to it five or six times more—has said:

You can go through all of the research and development and you can keep on researching and development; but eventually if you are going to determine whether or not the thing will work you are going to have to haul off and make one.

We feel that in a testing and evaluating situation it can proceed on a much more effective basis and provide much more knowledge in time and at much less cost over the long haul.

Mr. PELL. Mr. President, will the Senator yield?

Mr. PERCY. I yield to the distinguished Senator from Rhode Island.

Mr. PELL. Mr. President, I have one question in connection with one of the points raised by the Senator from Texas. I would agree with him that we do not have a first-strike policy. There is no question about that. However, would it not be a correct statement that successful MIRV plus successful ABM equals first-strike capability?

Mr. TOWER. I must say we could not develop a first-strike capability. I do not foresee that we will. At least, we will not be so arranged as to be able to implement a first-strike capability. We are treading on the narrow edge of classified ground here and I am a little hesitant to pursue it much beyond this point. I think it is an enlightened assumption but I think the assumption is that we will not have a first-strike policy.

Mr. PELL. I agree with the Senator that we do not have a first-strike policy.

Mr. TOWER. Indeed, we would not have unless Congress approved it and there will be no first-strike deployment without the knowledge of the Committee on Armed Services, the Committee on Foreign Relations, and this body.

Mr. PELL. I agree with the Senator, but I also wish to add a further thought. I do not wish to push this matter too far. I agree with the Senator's statement about the delicacy of the ground we are on. However, if both the ABM and the MIRV were a success, we would have the capacity, although certainly not the policy; and I think it is very dangerous in this world to even have the capacity.

Mr. TOWER. Even with MIRV, it depends on when there is deployment and whether it is aimed at missile sites or aimed at cities.

Mr. PERCY. Mr. President, I think the colloquy this afternoon again has demonstrated the deep and strong feelings which we all have. We are trying to deal with the facts and we look at the facts in different ways.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. PERCY. I yield.

Mr. TOWER. May I say that that is today's massive understatement.

Mr. PERCY. I believe we do have the second-strike capability. The Russians know it. Let them never be uncertain of the fact that we will continue to keep our

capability so that if we are ever struck we will strike back.

With the program we have for not only hardening, but the deep-rock hardening of our missile silos, our ICBM's, the tremendous power we have in our nuclear submarine fleet, the capability we have to keep that capability ahead of anything the Soviets could throw against it, the thousands of intermediate missiles we have deployed in Europe, with all the hundreds of bombers available for take-off in moments, armed with nuclear weapons, I cannot see that any attack would be made on us or would be made on us by anyone who was rational, or who would not recognize, those things being so, that they would bring forth their own total destruction.

I do not feel that the ABM Safeguard system adds one iota to our national security or our national interest. I think the forthcoming talks, on which we all agree, would get underway in a better atmosphere if we were not in production or going into production on another nuclear system, whether it is offensive or defensive in character.

I yield the floor.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROMOTION OF HEALTH AND SAFETY IN THE BUILDING TRADES AND CONSTRUCTION INDUSTRY

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 311, H.R. 10946.

The PRESIDING OFFICER. Is there objection?

There being no objection, the Senate proceeded to consider the bill H.R. 10946 to promote health and safety in the building trades and construction industry in all Federal and federally financed or federally assisted construction projects, which had been reported from the Committee on Labor and Public Welfare, with amendments, on page 2, line 3, after the word "or" strike out "contractor" and insert "mechanic"; in line 8, after the word "on" strike out "the record after an opportunity for an agency hearing," and insert "proceedings pursuant to section 553 of title 5, United States Code, provided that such proceedings include a hearing of the nature authorized by said section."; and in line 22, after "U.S.C." insert "38,".

Mr. WILLIAMS of New Jersey. Mr. President, on behalf of the Committee on Labor and Public Welfare, I reported H.R. 10946, Calendar No. 311, on July 15, 1969, with an accompanying report, No. 91-320. The act would require all construction contractors and subcontractors to meet health and safety standards on construction projects under contracts

entered into under legislation subject to Reorganization Plan No. 14. Construction is a very hazardous occupation in terms of both the frequency of accidents and their severity. Data for 1966, from the National Safety Council, show that the construction industry had an accident frequency rate of 12.24 per million man-hours worked—a rate that was almost twice the all-industry rate of 6.91.

Department of Labor statistics, higher for most industries than those of the National Safety Council, show very high rates for construction, ranging from 20.7 per million man-hours worked for electrical work, to 24 for heavy construction, to 28.8 for general building, to 43.9 for roofing and sheet metal work.

Additional evidence of the hazardous nature of construction is found in the data which reflect the severity of injuries. The severity rates, indicating how badly workers are injured, place construction with a higher number of days lost to accidents per million man-hours worked than any industry except mining, lumber, and marine transportation.

Put another way, the men who risk their lives erecting the buildings that house the Government of this country, who build our roads and bridges, our State universities and hospitals, these workers do not have the benefits of protective legislation. There are no requirements that safe and healthful working conditions prevail for them. This bill corrects this inequity.

I wish to make some observations concerning due process as part of the legislative history of this bill.

Section 107(d)(3) provides that any person aggrieved by the Secretary's action under subsections (b) or (d) may obtain judicial review. This section is designed to assure complete judicial safeguards for contractors and subcontractors who are aggrieved by actions of the Secretary of Labor.

Other elements of the bill are designed to insure due process in enforcement. For example, the Secretary, under section 107(b), can only determine noncompliance after a formal agency hearing. So too, is a formal agency hearing required prior to the Secretary's determinations under section 108(d)(1).

Mr. President, the report of the committee should be corrected as follows:

First. On page 7, line 5 of section 107(a): delete the word "owrk" and insert in lieu thereof "work".

Second. On page 7, line 8 of section 107(a): delete "," after the word "health".

Third. On page 7, line 9 of section 107(b) after the word "section" insert "after an opportunity for an adjudicatory hearing by the Secretary".

Fourth. On page 7, line 14 of section 107(b) delete the words "a violation" and insert in lieu thereof "noncompliance".

Fifth. On page 7, line 14 of section 107(b) after the word "Secretary" insert "after an opportunity for an adjudicatory hearing by the Secretary".

Sixth. On page 8, line 1 of section 107(d)(3): delete "paragraph" and insert in lieu thereof "subsections".

Seventh. On page 8, line 2 of section 107(d)(3): delete "(1)" and insert in lieu thereof "(b) or (d)".

S 8330

CONGRESSIONAL RECORD—SENATE

July 22, 1969

nations on the Executive Calendar, beginning with "New Reports."

There being no objection, the Senate proceeded to the consideration of executive business.

The ACTING PRESIDENT pro tempore. The nominations on the Executive Calendar will be stated, beginning with "New Reports."

DEPARTMENT OF JUSTICE

The assistant legislative clerk proceeded to read sundry nominations in the Department of Justice.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the nominations be considered en bloc.

The ACTING PRESIDENT pro tempore. Without objection, the nominations are considered and confirmed en bloc.

AMBASSADORS

The assistant legislative clerk proceeded to read sundry nominations of ambassadors.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the nominations be considered en bloc.

The ACTING PRESIDENT pro tempore. Without objection, the nominations are considered and confirmed en bloc.

ORGANIZATION FOR ECONOMIC COOPERATION AND DEVELOPMENT

The assistant legislative clerk read the nomination of Joseph A. Greenwald, of Illinois, to be the representative of the United States of America to the Organization for Economic Cooperation and Development.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of those nominations.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to, and the Senate resumed the consideration of legislative business.

THE CALENDAR

Mr. MANSFIELD. Mr. President, with the concurrence of the distinguished senior Senator from South Dakota (Mr. MUNDT), and with no loss of time to him, I ask unanimous consent that the Senate proceed to the consideration of measures of the calendar, beginning with Calendar No. 313 and the succeeding measures in sequence.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

MR. AND MRS. WONG YUI

The bill (S. 92) for the relief of Mr. and Mrs. Wong Yui was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 92

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Mr. and Mrs. Wong Yui shall be held and considered to have been born in China.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 322), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to deem Mr. and Mrs. Wong Yui to have been born in China.

SFC. PATRICK MARRATTO (RETIRED)

The bill (H.R. 3379) for the relief of Sfc. Patrick Marratto, U.S. Army (retired), was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 323), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of the proposed legislation is to relieve Sfc. Patrick Marratto, U.S. Army (retired), of Springfield, Mass., of liability to the United States in the amount of \$786.20, the amount of an overpayment of compensation as a member of the U.S. Army in the period beginning June 1, 1950, and ending January 31, 1967, because of an administrative error. The bill would also authorize the refund of any amounts withheld or repaid by reason of the liability.

MR. AND MRS. A. F. ELGIN

The bill (H.R. 6585) for the relief of Mr. and Mrs. A. F. Elgin was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-324), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of the proposed legislation is to pay \$317.40 to Mr. and Mrs. A. F. Elgin, of Spokane, Wash., in full settlement of their claim against the United States for reimbursement for the cost of transporting the automobile of their son after they had received official notification that the son was killed in action in Vietnam.

Mr. MANSFIELD. I thank the distinguished Senator from South Dakota for his graciousness.

The ACTING PRESIDENT pro tem-

pore. Under the previous order, the Chair recognizes the Senator from South Dakota (Mr. MUNDT) for an hour and a half.

SAFEGUARD: STRATEGIC NECESSITY AND PATHWAY TO FUTURE DISARMAMENT

Mr. MUNDT. Mr. President, I rise today in support of the appropriations bill for military procurement, as reported by the committee, and against the amendments to delete funds for production and deployment of the Safeguard system.

During the debate that has preceded, Senators have presented carefully reasoned arguments both for and against deployment. Extensive hearings have been held before both the Foreign Relations and Defense Appropriations Committees, on which I am privileged to serve. In addition, we have had much evidence provided to us by our Central Intelligence Agency as it regularly appears before the oversight group headed by the Senator from Georgia (Mr. RUSSELL), on which I also serve. We have listened to many expert witnesses in these hearings. From these lengthy deliberations in three different committees, as well as the Senate debate on this item, I cannot but conclude that it would be dangerous to delay action on Safeguard as is proposed by amendments now before the Senate.

This judgment arises from two factors basic to the future security of the United States. First of all, we must keep the Soviets and any other adversary convinced that no combination of their offensive and defensive weapons could be used against the United States without incurring swift and devastating retaliation. That is what the militarists refer to as deterrent.

Past history clearly demonstrates how easy miscalculation on the part of the enemy can lead it to make an attack which has resulted in our entry into war. As long as an adversary thinks the weapons deployed on both sides are in balance or that advantage is enjoyed by the United States, it would not start an attack. This is the premise. I shall develop the arguments bearing on this concern later in my remarks, but before doing so I wish to comment on the second factor which may be overlooked by the opposition to my point of view.

The objective of all good and sane men on this earth is to reduce and ultimately eliminate the risk of a military nuclear exchange between massively armed powers. I am certain that it is this threat that has opinion so vigorously divided on the issue before us. To many Senators opposed to Safeguard, there is the view that this system if deployed will be a further expansion of the arms race. They argue that as defensive weapons improve, it only triggers greater escalation of counterimproved offensive weapons. One begets the other. And there is some merit to what they say. After all, what has been happening these last 20 years?

PROCEEDINGS AND DEBATES OF THE 91st CONGRESS, FIRST SESSION

Vol. 115

WASHINGTON, TUESDAY, JULY 22, 1969

No. 122

Senate

The Senate met at 11 o'clock a.m. and was called to order by Hon. MIKE GRAVEL, a Senator from the State of Alaska.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

O Thou who art above and beyond but ever near, we stand in Thy presence this day to thank Thee for man, for the majesty and mystery of his person, for the brilliance and ingenuity of his mind. We rejoice that "when the morning stars sang together" at the dawn of time, Thou didst crown all creation by making man in Thine own image, and breathing Thy creative spirit into him.

Eternal Father, we thank Thee now for the new dimensionless and unfathomable vistas opened to all mankind, as by his wisdom and in Thy good providence man has slipped the bonds of earth and soared to lunar lands and spaces. Give Thy servants journeying mercies on the return voyage to the haven of home amongst us on this planet.

As we offer our thanks and praise for the wonder of the realms beyond, we enlist anew in the service of Thy higher kingdom to abolish poverty, to eliminate injustice, to banish hate and war that the sins of earth may not be exported because Thy kingdom of righteousness has first been fulfilled here. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., July 22, 1969.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. MIKE GRAVEL, a Senator from the State of Alaska, to perform the duties of the Chair during my absence.

RICHARD B. RUSSELL,
President pro tempore.

Mr. GRAVEL thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Friday, July 18, 1969, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Hackney, one of its reading clerks, announced that the House had passed, without amendment, the following bills of the Senate:

S. 38. An act to consent to the upper Niobrara River compact between the States of Wyoming and Nebraska; and

S. 1590. An act to amend the National Commission on Product Safety Act in order to extend the life of the Commission so that it may complete its assigned tasks.

The message also announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H.R. 7517. An act to amend the Canal Zone Code to provide cost-of-living adjustments in cash relief payments to certain former employees of the Canal Zone Government, and for other purposes;

H.R. 11363. An act to prevent the importation of endangered species of fish or wildlife into the United States; to prevent the interstate shipment of reptiles, amphibians, and other wildlife taken contrary to State law; and for other purposes;

H.R. 11609. An act to amend the act of September 9, 1963, authorizing the construction of an entrance road at Great Smoky Mountains National Park in the State of North Carolina, and for other purposes; and

H.R. 11651. An act to amend the National School Lunch Act, as amended, to provide funds and authorities to the Department of Agriculture for the purpose of providing free or reduced-price meals to needy children not now being reached.

HOUSE BILLS REFERRED

The following bills were severally read twice by their titles and referred, as indicated:

H.R. 7517. An act to amend the Canal Zone Code to provide cost-of-living adjustments in cash relief payments to certain former employees of the Canal Zone Government, and for other purposes; to the Committee on Armed Services.

H.R. 11363. An act to prevent the importation of endangered species of fish or wildlife into the United States; to prevent the interstate shipment of reptiles, amphibians, and other wildlife taken contrary to State law; and for other purposes; to the Committee on Commerce.

H.R. 11609. An act to amend the act of September 9, 1963, authorizing the construction of an entrance road at Great Smoky Mountains National Park in the State of North Carolina, and for other purposes; to

the Committee on Interior and Insular Affairs.

H.R. 11651. An act to amend the National School Lunch Act, as amended, to provide funds and authorities to the Department of Agriculture for the purpose of providing free or reduced-price meals to needy children not now being reached; to the Committee on Agriculture and Forestry.

ORDER FOR RECOGNITION OF SENATOR PACKWOOD, SENATOR GOLDWATER, AND SENATOR PERCY

Mr. MANSFIELD. Mr. President, I ask unanimous consent that immediately following the speech of the distinguished Senator from Hawaii (Mr. IWOUYE), the distinguished junior Senator from Oregon (Mr. PACKWOOD) be recognized for not to exceed 20 minutes, to be followed by the distinguished junior Senator from Arizona (Mr. GOLDWATER), for not to exceed 30 minutes, to be followed by the distinguished junior Senator from Illinois (Mr. PERCY), for not to exceed 30 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that at the conclusion of the remarks of the distinguished Senator from Illinois (Mr. PERCY), there be a period for the transaction of routine morning business, with statements therein limited to 3 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider nomi-

S 8329

July 22, 1969

sources available, for many years I have grappled with the ever-mounting burden of military expenditures. So in serving on both the Subcommittee on the Department of Defense of the Appropriations Committee and on the Foreign Relations Committee, I am concerned when resources are depleted at the expense of urgent necessities to develop our country in agrarian and urban areas—not for ourselves alone, but for the crying needs of the world as well. Practical and credible disarmament would unleash funds to promote the humane objectives upon which this Nation was founded.

So here we are. The dilemma seems to extend endlessly to the future. The threat to national security must be countered. To do so requires larger and larger appropriations and less and less return from the revenues collected. The temptation is strong to cash it all in and hope that the Russians, seeing our good intentions and faced with the same problems, will follow suit.

CHINESE MISSILE THREAT

However, a new problem intrudes. Hardly a week has passed in recent months that the press fails to report a fresh border incident between China and the Soviet Union. These accounts are vague, but some of these incidents have been pretty large scale. And the Chinese have demonstrated under test conditions that they can build thermonuclear warheads. Speculation is frequently voiced that they will begin deploying missiles with nuclear warheads by 1972. Some disagree about the day, month, or year, but no one has said that they are not going to do it sometime in the reasonably early future. Thus, the Russians must be intimidated by the bellicose attitude of the Chinese growing more and more belligerent as an arsenal of nuclear missiles in China draws nearer.

Under these circumstances, it would be foolhardy for either the United States or the Soviet Union to scrap all of its missiles. Some must be kept to preserve the balance against China if not against each other. China must remain convinced that it cannot launch a successful surprise attack. So some minimum level of missiles must be kept by all sides to deter another's possible aggression.

SAFEGUARD AND DISARMAMENT

All right, then, that is the base line toward which we must negotiate. How do we get rid of the rest of the missiles, and stop the submarine and bomber production races? I contend that the salvation is the development of a defensive system such as Safeguard in which both sides, that is the U.S.S.R. and the United States, share the conviction that their defensive missiles are adequate to offset any threat which could be posed by reduced numbers of offensive missiles. That, to me, is the critical but perhaps realizable objective of future negotiations.

There was support for this opinion expressed early in the hearings before the Committee on Foreign Relations. The Senator from Tennessee (Mr. GORE) made the full text of the statement available to Senators, who can find it on pages S3439-S3440 in the CONGRESSIONAL RECORD for April 1, 1969. The witness was

Dr. Donald G. Brennan, recognized as an outstanding mathematician and a highly regarded scientist in the field of arms control. Quoting briefly from his statement, here is what he said:

We might begin at once with a Soviet-American understanding about a ceiling on offensive forces, expressed in inspectable terms such as gross weight, and an understanding that we might both build up defenses. Such an agreement is clearly in the common interest of both the United States and the Soviet Union and should prove realizable. By the mid-1970's, if the defenses are in place and appear to have the capabilities now expected of them, there should be enough confidence in them to begin some gradual reductions of the offensive forces on both sides, reductions which would require only modest inspection because the defenses would (if suitably deployed) sharply diminish the effectiveness of clandestine missiles. The defense would then become even more effective against the then-reduced offensive-force threat, which would facilitate further reductions in offensive forces. Just how far this process might go would depend on the technological and political circumstances then prevailing, but I should not be surprised to find that by 1980 one might reduce the risk of Soviet-American strategic nuclear war to negligible proportions. The defensive forces themselves might, of course, be reduced along the route, but not eliminated. It should be clear that there would be some effective "disarmament" of the offensive-force potentials as soon as the defenses were working, even before direct reductions of the offensive forces.

It is this prospect persuasively argued by Dr. Brennan that is our avenue toward successful disarmament, through Safeguard which I hope those now disposed to the contrary will seriously consider. I think it is vital that we look at the pitfalls that could ensue if we remove this option from any future negotiating table.

RISK OF SOVIET MISJUDGMENT

Returning to the first point, that is, insuring that the Soviet leadership remains convinced of our ability to impose unacceptable counterdamage to their territory and populace if Russia attacks the United States, I should like to bring up some additional points. There are two considerations: intentions and capabilities. The former is difficult to weigh; the latter perhaps not as much so. I am concerned with what these capabilities are, but equally important, what they are believed to be in the minds-eye of Soviet leadership. Here, I cannot help but recall an old Indian saying:

Great father keep me from judgment until I have walked a mile in the other brave's moccasins.

We must very definitely dwell on what the Russians are thinking. They look at our annual "Posture Statement." That is the document that is released each year by the Department of Defense when the Secretary presents the President's proposed military program for the following fiscal year. I am sure Senators are familiar with it. The Russians do not accommodate us quite as well. However, to get the word out to all the officers and in turn the troops from border to border, they do have something somewhat like ours. It is now in its third edition. This very interesting document is entitled "Military Strategy" and is edited by Marshal V. D. Sokolovsky. The ex-

tracts which I will be quoting are from the third edition published in Moscow in 1968. The English translation is not available yet in published form but a copy of the translator's transcript has been made available to me.

In reading the second edition, published in 1964, and the third, published in 1968, the changing attitude among the military leadership of the Soviet Union is very pertinent to the decision the Senate will make on Safeguard.

In my reading of this document, the following quotations are new to the earlier version, portending a greater confidence, false or well-founded, to mount a successful strategic conflict against the West. The document says:

The success of world socialism, which is becoming the decisive factor in the development of human society, the bankruptcy of the colonial system, the unsolvable contradictions of the capitalistic camp, and the desire of the peoples of the world for peace, clearly show the legality of the historically unavoidable downfall of the obsolete world system of imperialism. This strongly motivates the imperialists, primarily those of the USA, to forestall the imminent destruction of their dying system and, by means of war, change the development of world events so unfavorable to them. It is for this reason that modern imperialism threatens the peace and security of nations.

In describing the essence of war, Marxism-Leninism uses as its point of departure the position that war is not an aim in itself, but rather a tool of politics.

Politics prepares war and creates, for the benefit of strategy, favorable conditions in the economic and ideological respects.

The acceptance of war as a tool of politics determines the relation of military strategy and politics, based completely on the dependence of the former on the latter.

The main attention of military strategy is directed to studying the conditions under which a future war may arise, a detailed study of the peculiarities of the strategic deployment of the armed forces, the methods of delivering the first strike and conducting the first operations, as well as the method of strategic utilization of the different services of the armed forces.

The preparation of foreign policy for war includes such measures as the signing of treaties, the formation of coalitions, the safeguarding of the neutrality of neighboring countries, and others.

It is important for military strategy to assure neutrality of a number of countries or of individual countries; this task is also assigned to diplomacy.

The wars between States with different social systems, the highest form of class struggle, are particularly decisive. In wars between States with the same social system, when there are no social contradictions between the antagonists, the political and strategic aims, the experience of imperialist wars show, are usually limited. In such wars, long before economic and military exhaustion of the belligerent states is reached, compromises of various types are possible.

The nature of military strategy is often influenced by such factors as the general historical, national, and political traditions of a country. For instance, Britain in its foreign policy always adhered to a clearly pronounced policy of watchful waiting, over-safeguarding, having someone else do their dirty work for them. This influenced their military strategy, which avoided decisive engagements, refused to take even reasonable risks, and always looked for devious, indirect roads to victory.

It is apparent that when the very outcome of the war depends largely on the number and the effectiveness of the strikes at the

July 22, 1969

very beginning of the war, it is hardly reasonable to count on the potential capabilities of a country and to reserve a large part of the manpower for military operations during later periods of war. An overwhelming majority of military theoreticians in the highly developed countries of the world is coming to these conclusions.

Diplomatic and economic struggle does not stop in wartime, but these forms of political struggle are entirely dependent on the decisive form, that of armed conflict.

Under conditions of nuclear rocket war, the resolution of the main aims and problems of war will be accomplished by strategic rocket troops, by delivery of massed nuclear rocket strikes.

Mr. President, I interpolate here, for the benefit of those opposed to the ABM deployment, to suggest that they read this statement with care, direct from the top military strategists of Moscow, made just 12 months ago when they say, "by delivery of massed nuclear rocket strikes."

Mr. President, that is what this debate is all about.

Are we going to stand here and accept with no effective defense against it that kind of massed nuclear rocket strikes which the Russians have told us less than a year ago they expect to deploy against us if war comes?

Surely, Mr. President, Senators should have learned something from reading "Mein Kampf," in which Hitler told the free world in advance what he was going to do, and then did it.

Here we have it in black and white, in the Russian language, translated from their military papers.

They tell us now that if war comes, they expect to deliver massed nuclear rocket strikes against us.

I ask those in this body with little faith in our Defense Establishment, or in the capacity of the great, inventive genius of America—which just last Sunday placed men on the moon for the first time in the history of mankind—to build the comparatively simple devices required in the ABM in order to protect us against the very massed nuclear rocket strikes the Communists, in cold print, have told Americans they will launch against us if war comes, to read their statements very carefully.

Mr. President, that is the nubbin of this debate.

The burden of argument shifts to those who say: "Do nothing, or delay doing something, or engage alone in research and development, but do not deploy the weapon you have built."

What are those Senators going to say to their constituents when those constituents question them as to what they have done to protect America and its people against the announced intention of the Russians to strike us with massed nuclear rocket strikes?

Now, Mr. President, reverting to reading from this very interesting Russian document, I continue:

Ground troops with the aid of aviation will perform important strategic functions in a modern war; by rapid offensive movements they will completely annihilate the remaining enemy formations, occupy enemy territory, and prevent the enemy from invading one's own territory.

Consequently, over-all victory in war is no longer the culmination, nor the sum of indi-

vidual successes, but the result of a one-time application of the entire might of a state accumulated before the war.

Mr. President, let me interpolate again: Let those Senators among us who question the intention, or desire, or capability of the Russians to launch a first strike attack against us, let those Senators who do their homework, read what the Russians have said to their own troops in their military papers in their own language. They put it very clearly. The debate between those Senators who shrug it off and say, "They are not going to try anything very devastating such as an overwhelming first strike. We do not have to be much concerned about that," and get all involved in the forensics and the semantics of what a first strike means, let them read what the Russians have actually said from the top down to their own generals and their troops.

Let me read it again because it is cruelly cold when we see it in print in black and white, as translated from the Russian language. Here it is:

Consequently, overall victory in war is no longer the culmination, nor the sum of individual successes, but the result of a one-time application of the entire might of a state accumulated before the war.

We better be sure we are ready for whatever the Russians mean by "a one-time application of the entire might of a state accumulated before the war." Remember, Senators, the Russians said that we did not. I continue to read from what I believe to be one of the most revealing and significant documents thus far made available to Senators in the course of this debate:

Once the military operations on land and on sea have been started, they are no longer subject to the desires and plans of diplomacy, but rather to their own laws, which cannot be violated without endangering the entire undertaking.

In response to the statement made by the English military theoretician, Kingston-McCloughry—"In the event of such a war, nuclear war, all politics would come to an end and universal mutual annihilation would begin"—Marshal Sokolovsky remarked:

It is quite evident that such views are a consequence of a metaphysical and anti-scientific approach to a social phenomenon such as war, and are a result of idealization of the new weapons. It is well known that the essence of war as a continuation of politics does not change with changing technology and armament.

My reading of Marshal Sokolovsky's "Military Strategy" draws me inevitably to the conclusion that the Soviet military mind, at a minimum, grows ever more strident as their confidence in the proficiency of their weapons has increased. Summarizing my reaction to this document from the study and analysis of this rather amazing and highly illuminating Russian document, the following comments seem valid:

First. The Soviet military-political complex is concerned with the attitude of the Soviet citizen toward the United States. It is using the current Vietnam war to advantage to explain why "mod-

ern imperialism threatens the peace and security of nations."

Second. The Soviets have not changed the doctrine that war is a tool of politics.

Third. In preparation for war, the Soviets continue to adhere to the practice of using diplomacy for signing treaties, forming coalitions, and safeguarding the neutrality of neighboring countries.

Fourth. Under conditions of nuclear war, Soviet military strategy dictates the delivery of a massive number of nuclear rocket strikes and the on-time application of its entire might at the very beginning of the war.

Fifth. When military operations begin, contrary to what they espouse for us, Soviets will not rely on diplomacy because such action could endanger the entire undertaking.

Sixth. The statement, "It is well known that the essence of war as a continuation of politics does not change with changing technology and armament," is very significant. In short, it appears that the Soviets find nuclear war acceptable if it can serve their political objectives.

Other documents are available which are important to our consideration. In "Soviet Rocket Troops," edited by Col. Gen. V. P. Tolubko and published in 1969, the statement is made:

The Armed Forces have now received rockets which operate on new, highly effective fuel including solid fuel. The new propellant has made the operation of rockets extremely reliable and simple. In addition, the new propellant has made it possible to store rockets for lengthy periods and to maintain them in a high degree of readiness for launching. With regard to the Rocket Troops, the author stated that they can perform underground launchings not just of single rockets, but also salvo launchings.

In a broadcast Moscow Radio reported on April 20, 1968, that Soviet ICBM's have highly maneuverable launchers that constantly change their launching position and are always ready for immediate action.

SOVIET ABM EFFECTIVENESS

Turning from the broad scope of Soviet strategic beliefs, I should now like to discuss the Soviets' attitude toward their own ABM. In "Commanders of Fiery Arrows," published in 1964, Marshal Malinovsky is quoted as saying to the 22d Congress of the Communist Party that Soviet scientists and engineers had successfully solved the problem of destroying missiles in flight.

In a book written by T. W. Wolfe, entitled "Soviet Military Policy Trends Under the Brezhnev-Kosygin Regime", Soviet Colonel Rybkin is quoted. He declared that the damages of a nuclear war could be limited by, first, achieving a quick military victory over the enemy, and second, using ABM systems to counter the enemy's missile forces. With regard to the position that nuclear war should be avoided, Rybkin stated that such a position was theoretically false and politically dangerous.

Mr. President, this might be a little statement that our disarmament representatives, soon to be sent somewhere to meet with the Russians, should tuck away in their hatbands when they sit down for their conferences, with Russian theoreticians on record with that statement with

July 22, 1969

CONGRESSIONAL RECORD — SENATE

S 8333

regard to the position that nuclear war should be avoided. Rybkin stated that such a position was theoretically false and politically dangerous. If nothing else, this thinking on their part should suggest that when, as, and if we negotiate, wherever we meet with them, wherever they meet with us, we negotiate at arm's length and insist, as we always have, and as I hope we always shall, on unchallenged and unchallengeable mutual inspection as a basic point in any disarmaments which are agreed upon.

It is significant that Lt. Col. E. Rybkin also stated that the damages of a nuclear war could be limited by achieving a quick military victory over the enemy and using ABM systems to counter the enemy's missile forces. In other words, nuclear war is practical if you hit the enemy sufficiently hard in your first strike. The deployment of a Soviet ABM system indicates that the Brezhnev-Kosygin regime subscribes to the same theory. It should also be assumed that the Soviet ABM system conforms with Soviet political objectives in the manner outlined by Marshal Sokolovsky in "Military Strategy."

Extracts from still another document, "Soviet Rocket Forces," authored by P. T. Astoshenov and published in 1967, are even more chilling:

The USSR far outstripped the United States not only in creation of intercontinental and other rockets, but also in the area of antimissile defense. All of us with a sense of patriotic pride grasped the report of the Minister of Defense of the USSR about the fact that in our country we have successfully solved the problem of destruction of rockets in flight.

Mr. President, I think I should read that again, for the benefit of Senators who may not have heard it on the floor, but who will get it from reading the RECORD, Senators who are still on the fence or who may have made a hasty decision, on the basis of inadequate evidence, to oppose the ABM because it cannot work, or because, for some curious reason, a Senator sitting under the dome of the Capitol has decided that an ABM around Moscow is unworkable and, on that basis, he has made his decision. I think he would have a hard time discussing with his colleagues, on the basis of what Mr. Astoshenov says, the author of "Soviet Rocket Forces," written in Russian for the Russians, not in English for Americans, but translated for us so we now know what he says, in which he says very definitely:

All of us with a sense of patriotic pride grasped the report of the Minister of Defense of the USSR about the fact that in our country we have successfully solved the problem of destruction of rockets in flight.

Mr. President, that stands as clearly as the path to this country's schoolhouse. We may have beaten the Russians to the moon—we know we have—but they have beaten America to the creation of a defense system for the people against ICBM's—and we know that also. I hope we will not let false pride in an achievement as great as putting a man on the moon cause us to be reckless about our own defenses, on the assumption that the Russians are unable, because they did not get there first in their effort to

get a man on the moon, to have established an ABM system in which they have confidence and in which, they tell their people in their language, they take great pride in having developed.

Continuing to quote from this highly revealing and somewhat disturbing and chilling document of P. T. Astoshenov:

One of our antimissile complexes included long-range pilotless interceptors. During training firing, with the aid of such antimissile missiles, we clearly intercepted the warhead of a ballistic missile flying at cosmic velocity ((orbital velocity)) . . . Still more effective is another Soviet antimissile missile. It is able to destroy the warhead of ballistic missiles at a great distance from the protected objects.

My reason for dwelling on the subject of Soviet attitudes toward nuclear war, strategic missiles, and the interaction of offensive and defensive weaponry is to forestall misimpressions and possible delusions concerning the latitude of choice which they believe they enjoy.

COST OF SOVIET ARMAMENTS

Senators will remember that in the Export-Import Bank debate, having to do with the question of lending U.S. money to the Soviet Union for a Fiat plant—built by Italians, financed by Americans, located in Russia, to make implements of war.

I developed the evidence that the Soviets since 1963 had stripped the domestic sector of their economy to increase the military industrial base. Increases at that time in the Soviet military budget amounted to a staggering 12 percent annually. Studies prepared by the Joint Economic Committee indicate that by 1968 the Soviet military industrial base had surpassed that of the United States. For years now the Soviets have doubled U.S. expenditures for strategic forces. Fortunately the Senate stopped the Fiat deal.

The toll of these investments is high. For, as is known Soviet total production is less than half of ours. The agriculture and consumer-goods sectors have been shoved aside, so much so that productivity in these industries is less than that realized during the Tsarist regimes, taking into account population growth.

So what does this tell us? From 1963 to now, we have consistently reduced our strategic weapon plans, both deployed and for replacements. We have scrapped thousands of bombers; we have limited our interceptor forces; we have stalled and slowed down production of Polaris submarines. And what has the Soviet done? The gesture seems wasted. They have ignored the evidence. Instead, they have redoubled efforts to surpass the strategic posture of the United States.

PROJECTED SOVIET CAPABILITIES

These commentaries from Soviet policy document, written in Russian and now available to us in translation, do not suggest to me that their intentions are growing more peaceful. As I mentioned before, intentions are part of it.

The second part of this concern with respect to the Soviet strategic posture concerns the present and projected Soviet capabilities. Of course, very specific information is highly classified. Some of it we have received in our secret ses-

sion of the Senate. Senators sitting on the appropriate committees have of course learned it long ago.

The chairman of the Committee on Armed Services has made available to Senators a letter which was recently addressed to him in response to his request by Mr. Melvin Laird, our Secretary of Defense. In this letter, the full text of which can be found on page S7865 of the CONGRESSIONAL RECORD of July 10, 1969, the Secretary recounts the great growth in Soviet capabilities as a consequence of the heavy investments. The heart of this assessment, in which CIA Director Richard Helms concurs, is told in the concluding paragraphs from which I will now quote:

1. The Soviet Union could acquire a capability to destroy virtually all of our Minuteman missiles. To be able to do so, in the present context they would need: (a) at least 420 SS-9s with three independently-targeted re-entry vehicles which have a capability of separating from one another by some relatively small number of miles; (b) each of these re-entry vehicles would have to have a warhead of approximately 5 megatons and a reasonably good accuracy; (c) the SS-9s would have to be retargetable; and (d) the range would have to be sufficient to reach all of the Minuteman silos.

2. The Soviet Union could acquire a capability to threaten severely the survival of our alert bombers. To do so in the present context they would need; (a) a force of about 15 Y-class (Polaris-type) submarines on station off our shores; and (b) the ability to launch the missiles on a depressed trajectory.

3. Although we confidently expect our Polaris/Poseidon submarines to remain highly survivable through the early to mid-1970s, we cannot preclude the possibility that the Soviet Union in the next few years may devise some weapon techniques or tactic which could critically increase the vulnerability of those submarines. Nor can we preclude the possibility that the Soviet Union might deploy a more extensive and effective ABM defense which could intercept a significant portion of the residual warheads. In any event, I believe it would be far too risky to rely upon only one of the three major elements of our strategic retaliatory forces for our deterrent.

In summary, Mr. Chairman, it is entirely possible that the Soviet Union could achieve by the mid-1970s a capability to reduce, in a surprise attack, our surviving strategic offensive forces below the minimum level required for "Assured Destruction," and thus gravely weaken our deterrent. In my judgment the overall strategic balance between the United States and the Soviet Union is much too close to run that risk. Therefore, something more must be done now to ensure a favorable strategic balance in the mid-1970s and beyond.

Short of achieving a workable agreement with the Soviet Union on the limitation of strategic armaments, which will take some time, we are convinced that the approval of Phase I of Safeguard would be the most prudent and economical course we could pursue at this particular juncture. This action would place us in a position to move forward promptly not only with the defense of our Minuteman and bomber forces should the Soviet threat develop as I have described, but also with the defense of our population against the Chinese ICBM threat should that emerge during the next few years.

In your letter of July 3rd, you also asked whether the Director of Central Intelligence, Richard Helms, concurs in my formulation of the threat. I have furnished a copy of this letter to Director Helms and he assures me

S 8334

CONGRESSIONAL RECORD — SENATE

July 22, 1969.

that he has no disagreement with the statements concerning the potential Soviet and Chinese Communist strategic capabilities as seen from the intelligence point of view.

The Senate has debated ABM and delayed development and deployment for 5 years now since the Soviets began deployment of their system. The Soviets, from the information I have related previously in my remarks, properly see this to their advantage. The country-to-country comparisons are going down, down, and down on our side and up, up, and up on theirs.

As I have said before, we must have nuclear disarmament. I share the opinion of others that the world's needs cry for a stop to this folly of continuing nuclear stockpiling of arms, one country as against the other.

I look forward to promising results when the President's proposed arms limitations talks begin. But I am a realist. Having made this huge investment, at great sacrifice to their economy, what do you think the Soviets are going to say when we propose, "You break up your antimissile system and we'll tear up our blueprints?" Why, of course, they will laugh at us; the terms are not equitable; they would never enter into such a one-sided concession, and they should not be expected to do so.

Beyond this, returning to the point previously made concerning the legitimate apprehension that both the United States and the Soviet Union must share toward the day Chinese nuclear missiles appear on the launching pad, I firmly believe the avenue for successful disarmament is toward the direction of "light offense—heavy defense." Technology and the pace of earlier developments leave too little promise for other alternatives.

As Senators, by our oath of office to support the Constitution, we are pledged to provide for the common defense. Greatly expanded quantities of Soviet nuclear weapons and higher confidence in them held by the Soviets if not offset by matching United States defense will, in my opinion, leave us short on that oath. The time to ante up is here; though the cost be high, we cannot shortchange our Defense Department experts who say we must increase the deterrent of the United States.

To my knowledge, no other weapon system has been subjected to such intensive and protracted research as the Safeguard. Dr. John Foster, who before committees of the Senate has established a record for avoiding premature commitments, states that an ABM system is now ready for production. He had expressed reservations in years before. In 1966, 1967, and 1968, he said there was more testing to be done, more experiments required. Now, he says, we can have confidence. He is the Government's No. 1 expert in these matters; we are not. I abide by his counsel. If we are ready and the requirement is clearly there, and I believe it is, let us get on with it, thankful that through Providence we are prepared to fulfill our obligations to our fellow countrymen and support the President.

ABM IS AMERICA'S BEST INSURANCE PURCHASE

Mr. President, it is now very apparent that even among those Senators who op-

pose President Nixon's Safeguard ABM package, some are having serious "second thoughts" about the wisdom and defensibility of their all-out opposition, including some who curiously enough voted to support the ABM program sent us by President Johnson a year ago, although that was a far more extensive and expensive program, but who now with a Republican President have announced opposition to the far less expensive and more effective ABM program sent us by President Nixon. Some of those who have consistently opposed this defensive installation whether proposed by a Democratic or a Republican President are also backing down a bit from their earlier all-out opposition to ABM.

We have before us a variety of amendments which while different in detail, all propose that we continue the research and development expenditures for ABM but that by one device or another we delay and deny the deployment without which, of course, the R. & D. expenditures lose their reality of purpose. Certainly, if we do not intend to install and deploy the results of the research and development, it occurs to this Senator we had better spend our money on some other weapons systems designed to protect our lives and security rather than to go on the record for spending vast sums of money for research and development of an ABM system we decline to test out in the laboratory of life through early deployment.

Still, many Senators who just do not quite trust the early judgments they have made to curtail this ABM development which our military leaders and experts tell us is so important to the protection of our peace and our people, now urge us to adopt an amendment which would still provide all of the research and development dollars required but then deny our country the benefits and the protection which can come only from actual deployment on the sites selected as essential to our national defense. To me, Mr. President, this is an inconsistent position for any Senator to take on an issue of this magnitude.

It seems to me it is inconsistent to attempt to straddle the fence by financing the expensive blueprints but denying the dollars required to complete the construction and installations required for the blueprints, or the research findings if you prefer, to be put to effective use.

And how much, Mr. President, is involved in that part of this appropriation required for the deployment phases of ABM? I asked that question of Secretary of Defense Melvin Laird when he was a witness recently before our Senate Committee on Foreign Relations. That was a closed session, but subsequently portions of the testimony were released. The part I am about to read is part of that which was subsequently made available to all Senators.

Mr. President, here are the facts as recorded in those hearings and I quote, now beginning on page 41 of our committee report date June 23, 1969:

Senator MUNDT. Mr. Secretary, can you give us the exact difference in terms of dollars between research and development on ABM which everybody seems to favor, and the controversial phase of deployment?

Secretary LAIRD. As far as this year's budget is concerned, Senator, the total amount involved we have asked this Congress for is—

The CHAIRMAN. That is 1970.

Secretary LAIRD. 1970.

The CHAIRMAN. Fiscal?

Secretary LAIRD. \$800 million in fiscal year 1970. President Johnson and Secretary Clifford asked the Congress in their original fiscal year 1970 budget for \$1,800 million in NOA. (New obligatory authority). This has been reduced by President Nixon's request to \$800 million for procurement, R. & D.—the total program as far as Safeguard is concerned—for fiscal 1970.

Senator MUNDT. I have seen Secretary Packard quoted on the difference in cost if we did what everybody wants to do, which is research and development, and if we started the deployment preparation for this next fiscal year, which would be \$400 million.

Secretary LAIRD. That is approximately correct because of the total amount in this budget about \$400 million is in the research and development area.

Senator MUNDT. What we are really arguing about then, to make it clear, is whether or not to put \$400 million in this budget for deployment.

Secretary LAIRD. That is approximately correct. That figure is not exactly \$400 million. I will supply the exact figure for the record. (The following note was later added by the Defense Department: the revised fiscal year 1970 budget includes about \$393 million in NOA (new obligatory authority) for deployment.)

I think it is about time in this debate, Mr. President, that we get down to specifics and to precise cost figures about the controversial question "to deploy or not to deploy?" The fruits of the research and development program which virtually all Senators now appear to favor.

How much is a billion dollars? With a total American population of slightly over 200 million people, Mr. President, a billion dollars is almost exactly five dollars per man, woman, and child in the United States. With this in mind, any school boy can use his competence in division and determine that the \$393 million involved in the deployment costs and aspects of this debate on ABM come to substantially less than half a billion dollars—less than \$2 per man, woman, and child in America, in that portion of this appropriations bill required for the current fiscal year.

In other words, Mr. President, we can buy the protection provided by the full Nixon Safeguard ABM program by adding the cost of less than \$2 per individual American more than what even the most determined opponents of ABM appear willing to spend for research and development of the same weapons system.

For \$2 per American, we can buy this important insurance against national catastrophe for an entire fiscal year. Next year and for the next several years—if Russia remains adamant and refuses to join with us in some nuclear arms limitation formula—we would continue to pay approximately \$2 for each of us to keep this insurance policy in force against the potentiality of an atomic attack.

Mr. President, verily, I believe the Safeguard ABM system is indeed America's best insurance purchase. Many people spend more than \$2 for trip insurance on a single vacation trip by air. Others thoughtlessly buy a \$2 ticket at a race

July 22, 1969

CONGRESSIONAL RECORD — SENATE

track and think nothing of it. In New York City, for example, one "night on the town"—one visit to a theater, a night spot, or a first-class restaurant would cost the customer much more than his entire share of the Safeguard system for the next 10 years—once you separate out the deployment costs from the total ABM package, and I repeat again, even many of the opponents of ABM—perhaps most of them at this time in the debate—have now come around to recognizing the merit of this system by demonstrating a willingness to finance the research and development required. They object only to the \$2 per year per individual in this country which is the additional cost involved in providing the essential deployment required to make certain that what has been designed as a protective weapon will function effectively as such.

Mr. President, while I totally disagree with the position, I can understand a Senator's motivation when he denounces the entire ABM concept and votes to deny, unilaterally, to the United States the means to defend itself. While I think a Senator is terribly and dangerously in error when he votes to kill entirely the ABM defensive weapons system to protect the United States on the basis "we might better use the money for educational purposes, for pollution control, or to enrich life in our urban centers," I can also understand the motivation causing him to make this unthinking and unreasoned mistake in his choice of spending priorities. But what I cannot understand, is either the logic or the motives of a Senator who says he is willing to vote what the Defense Department requests for research and development of an operative and effective ABM complex and then also votes to deny his Government the right to test it for workability and to deploy it at its operational sites so that we can learn from the laboratory of life whether we have come up with the optimum answer to our self-defense or whether still additional research is required to eliminate any possible deficiencies in the system.

A SUMMARY OF THE ARGUMENTS INVOLVED

Mr. President, after the lengthy and significant debate in the U.S. Senate, it seems to me that the arguments pro and con with regard to this ABM decision boil themselves down to five significant areas of disagreement. It would seem that any Senator evaluating this debate who decides for himself that on as many as three out of five of the controversial issues the weight of the argument is with one side or the other, that Senator would want to vote "Yes" or "No" depending upon where his judgment leads him in deciding these basic issues. In fact, since the security and survival of our country are involved, I would think that if on any one of these five basic issues a Senator is driven by judgment or conscience to accept the affirmative side, he should vote "Yes" and support the President's ABM position.

I would now like to summarize what I believe to be the pertinent points in controversy.

First, there appears to be dispute among us as to the "Do we need to make a maximum effort to safeguard our

country against a possible attack from Russia or China" argument?

On this point, Mr. President, I sincerely believe the weight of evidence overwhelmingly supports the thesis that the United States of America must never permit itself to lag behind the military strength of its potential enemies if our lives and our freedom are to remain secure. The surest path to war insofar as the United States is concerned is to permit our defenses to become outmoded or inadequate to the point where some foreign power or creed is led to believe that it can blackmail us into capitulation or, failing in that, that it has the military power to impose its will upon us. Thus, I firmly believe that to remain free, we must remain strong, and that to enjoy peace, we must endure the costs of a totally adequate and sufficient defense system.

Second, is the "Will it work effectively" argument as related to the proposed Safeguard-ABM defense proposal?

It appears to be on this issue that a large part of the controversy has developed. Equally competent nuclear scientists are divided on this issue, although the predominant expert military opinion believes the ABM to be both an effective and a necessary development if we are to come up with the capacity to take a possible first strike from a foreign foe and have the retaliatory power not only to strike back but—and this is most important—to demonstrate to such a foe that a surprise attack launched against us would be suicidal from the standpoint of the attacker. Once a potential enemy comes to believe that we can recover from a surprise attack and return against that enemy a thoroughly devastating strike against him, there is little likelihood that he will engage in such a self-defeating act of war.

However, Mr. President, debate will never determine an accurate answer to the question, "Will it work?" The only way to be sure on that point is to research, develop, design, and deploy an ABM system which can be tested on its operative site. Additionally, I should add that if those of us who believe it will work are wrong and should win the vote, all we shall have lost is the money expenditure involved, but if those who oppose the ABM and believe it will not work are wrong and should win the vote, we may, indeed, have lost everything dear to all good Americans—including a second chance to try to rectify this tragic error in judgment.

Mr. President, I submit it is far better to have the ABM system developed and not need it than it is to need it and not have it available.

Third comes the "Can we afford it" argument as related to the ABM.

Earlier in this presentation, I have pointed out that there is, indeed, a very small dollar involvement in this debate between those who would proceed with research and development and deny deployment and those of us who would spend the added \$2 per year per American individual required to add the needed deployment to the costs of research and development.

I just cannot see the wisdom in spending vast sums for the research and de-

velopment of a weapons system and then enacting a legislative prohibition against utilizing the fruits of these efforts through testing them thoroughly by deployment on their sites of proposed operation. On this point, Mr. President, I believe more Americans are concerned about the question, "can we afford longer to delay this necessary addition to our defense system?" than are concerned about the question, "can we afford the \$2 per year per individual required to make sure we are able to defend ourselves and our military deterrent to the maximum required?"

Fourth, we have heard much in this debate about the "will it help or harm our efforts to enter meaningful negotiations with the Russians on nuclear disarmament" argument?

Mr. President, Russia, as we all now know, already has an ABM system installed around Moscow and is testing and developing additional antiballistic missiles. We have none. I completely favor pressing forward with nuclear disarmament talks with the Russians because, in the end, I firmly believe the only complete protection against possible mutual annihilation through a nuclear war is to set up a system of complete nuclear disarmament accompanied by unchallenged and unchallengeable mutual inspection rights on both sides.

To bring this about, however, we must mutually disarm and both sides must cut back and destroy their nuclear armaments to a degree that neither side has any advantage over the other and neither has the capacity to make an effective attack against the other—whether by surprise or following some demanding ultimatum.

On this point it seems to me every realist in the Senate must recognize that for the United States to have any chance of inducing the Russians to join us in such a mutual disarmament of our nuclear weapons, it is imperative that we do not permit the U.S.S.R. to out-strip us or to out-arm us in any important aspect of nuclear armament. And, make no mistake about it, Mr. President, the monopolized capacity—or the believed capacity—to ward off any atomic attack through use of antiballistic missiles is too great an advantage to give to any potential foe of the United States.

Certainly, should the Senate deny our Government the right to proceed with an ABM system we would be sending our negotiators with the Russians to the conference table devoid of any "trading stock" in this area of discussion.

Does any Senator really believe that any American negotiator could go to such a conference and successfully say to the Russians, "We propose as an important step in disarmament that you tear down and demolish your ABM installations on which you have spent many billions of dollars, and in return we shall promptly tear up our blueprints and shut down our research laboratories." To assume that, Mr. President, is to attribute to the Russian Communists a naivete and a stupidity which they simply do not have.

Fifth, the final major point in controversy is the argument involving the "should we concentrate on producing of-

fensive nuclear weapons of greater and greater sophistication and destructive power or should we balance our military posture by including an effective defense against the other fellow's striking power?"

On this point we should remember that this is the United States that we are arguing about. Were we a totalitarian power, bent on aggression, and subject to the whims of a single individual, quite an argument might be made in favor of developing a striking power so fearsome and so destructive that we could rely upon our will and capacity to kill or to frighten any potential foe from ever making an attack against us. However, we want neither war nor domination nor imperialistic acquisition. We want peace in these United States.

We will never launch a surprise nuclear attack against any foe. All Americans know that. More important, Mr. President, all foreigners also know that. Therefore, unless we maintain a safe balance of our defenses against our offensive striking power we sharply lessen the deterrent to war represented by our nuclear might.

I should also like to emphasize with regard to this issue, the very practical and perceptive point made the other day in the highly persuasive and effective speech made by Senator WIN PROUTY, of Vermont, when he was outlining his reasons for supporting the ABM. Once we have developed an effective defense against the other fellow's intercontinental missiles, we shall have evolved a procedure whereby we need not rely solely upon launching our own missiles on a murderous trip through the skies to kill hundreds of millions of people in other lands. Once we have the capacity to intercept and destroy incoming missiles, we will have "bought ourselves some highly valuable time" to first ascertain the source of an attack upon us, and to determine whether by accident or by design, before being compelled to launch against an enemy our highly destructive nuclear missiles.

A protective screen capable of warding off an atomic attack against us and capable of providing protection for our retaliatory striking power—and perhaps, eventually, for many of our centers of population and production—gives us a "second choice" before committing our country to the callous business of exterminating an entire nation as our sole and only available defense against an attack against us which conceivably might emanate from the impetuous action of a single madman or even come as the result of accident rather than intention.

Mr. President, on balance, it appears to me that there is only one sound, prudent, and responsible decision we can make when it comes time to vote on the President's request to move forward with his proposed Safeguard ABM system. We should comply with that request.

We should vote to approve the modest request for funds and the meaningful request for authority to assure our fellow countrymen that our country will never fall prey to any foreign power seeking to impose its way of life and its domi-

nation over us. To do that safely and surely in this modern era, we must research, develop, and deploy the best available offensive and defensive weapons system that the state of the art provides. In the instant case, Mr. President, that means we should approve the committee's report in support of ABM.

Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. INOUE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR ALLEN

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that following the address by the Senator from Illinois (Mr. PERCY), the distinguished and very able junior Senator from Alabama (Mr. ALLEN) be recognized for not to exceed 20 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. Under the order previously entered the Senator from Hawaii is recognized.

ANTI-BALLISTIC-MISSILE STATEMENT

Mr. INOUE. Mr. President, the most crucial decision facing this first session of the 91st Congress, and perhaps this and a number of subsequent Congresses, is the decision now before us on deployment of the antiballistic system known as Safeguard.

This decision has been much debated. It has been the subject of much controversy in our Nation's press and our Nation's colleges. It has been the subject of extensive hearings and debate in our Armed Services Committee and here on the floor of the Senate. It has been debated throughout the life of this Congress and this administration and was debated in preceding Congresses. Despite this lengthy and full examination of the Safeguard system it continues to divide men of good intention, of deep concern and commitment to the welfare and security of this Nation.

The debate divides our experts as it divides our citizens and the Members of this body. This division is no less real among those of us on the Armed Services Committee who have heard all the secret testimony than among the Members of the Senate as a whole, who have now also heard a summary of that testimony. And as a measure of the profoundness of this issue we see a public equally polarized.

The division is not a partisan one albeit a larger percentage of the President's party supports his proposal than is true of the opposition. But the division

is real, and the decision we are about to make is of critical importance to the future of this Nation and the peace of the world.

A number of issues have been raised about this system's deployment which casts doubt as to its cost, its workability, its justification, and which question its potential effect upon our security, upon our adversaries' decisions, and upon the very future of civilization.

While the decision we are about to make is a most crucial one I would suggest its true significance is not based on the question of technical feasibility, although serious doubts are justified. The inability to test this system operationally will always limit our knowledge of its reliability. We are being asked to approve a system indescribably complex. We are being asked to authorize deployment of a system for which some components are still undeveloped and untried.

I do not question our ability to develop a system which will destroy some incoming nuclear warheads in flight. But whether the ratio destroyed is one in four or three in four will not alter my opposition. Even if we accept the estimates that our ABM could destroy more than 70 percent of incoming nuclear warheads those which will not be stopped will make the halting of others a matter of small moment.

The degree of its perfectibility is not the crucial issue, however. How many strikes, fifty or more times as powerful as the bomb at Hiroshima or Nagasaki, are we willing to consider acceptable? I refuse to support a national policy which envisions such destruction as acceptable.

Neither is the decision we are about to make of such significance because of its cost. This is true whether we calculate that cost to be merely the \$759,100,000 in this authorization bill, or \$7.9 billion, \$12 billion, \$40 billion, or even an eventual several hundred billion dollars, as has been estimated by some. Demands on our resources have never been greater, nor our unmet needs more obvious or more pressing, but savings alone do not justify my opposition.

Yes, we have good reason to question the allocation of our resources when this Government requests \$44 for the education of each American boy and girl while requesting \$20,400 for ammunition for each North Vietnamese, and Vietcong regular or guerrilla estimated to be in South Vietnam.

We have good cause to be concerned when we find an administration so short for funds at home that it will slash \$25,000 from our tuberculosis program in Hawaii while going forward with the development of an F-14 fighter plane which will have a price in excess of 100 times that for each plane.

We have good cause to question our system of national priorities when we cannot find funds to feed poor children or save our cities, while the billions spent in the name of national security go largely unquestioned and unchecked. But cost is not the primary reason for my concern.

Nor is my concern primarily a response to the changing rationale being put forth in defense of the deployment

CONGRESSIONAL RECORD — SENATE

July 22, 1969

of an ABM system although we have good reason to question its shifting rationale. A system is suspect which is sold first as the answer to a possible attack by the Chinese on our cities only to be repackaged—after objection by those to be saved from such an attack—with but slight modification. It is now sold as the ideal weapon to protect our missile silos from a Russian first strike and our cities from accidental attack. We have good reason to question a defense system designed against an assumed threat which the Secretary of Defense and the Director of our CIA cannot agree as being a goal of the Soviet high command. But my deepest concern is not primarily because this is indeed a "missile in search of a mission."

Nor is my concern so great because of the inconsistencies of those who advocate deployment, although this too causes me some uneasiness. We find the President defending a two-site system while his Secretary of Defense refuses to endorse a proposed compromise because it fails to provide authorization for the acquisition of 12 sites.

While I am concerned with the testimony which demonstrates that our Safeguard system can be overwhelmed by the enemy through only a relatively small increase in his offensive capacity neither is this the reason for my ultimate objection. Rather that objection is based on my firm belief that we are now at one of those watersheds in our Nation's history when we must decide our course for administrations and generations yet to come.

I believe we must make a decision now as to whether our security and our future lies in the direction of ever increasing levels of armed might and another great step in the arms race, or whether we will finally also take some risks in the name of peace. For let there be no question about it—an additional giant step in this arms race—even with a so-called defensive weapon—will only heighten the level of terror. To deploy Safeguard is not to embark on a course without risk. It is not a harmless American "security blanket."

We Americans have spent a thousand billion dollars in defense against a possible Russian attack since World War II. Many billions of these have been wasted as we now know. This is not to say that the threat was not real but rather that our mutual response has provided no real security but only an increase in the level of terror.

In his June 4 Air Force Academy address, President Nixon stated:

The adversaries in the world today are not in conflict because they are armed. They are armed because they are in conflict and have not yet learned peaceful ways to resolve their conflicting national interest.

I believe that such a view of the world is unreal and unrealistic. The level of arms is not alone the result of conflict but also increases the level of conflict. Our response in the Cuban missile crisis was not a response to a new level of conflict but a response to the introduction of a new level of armed threat. We developed MIRV in response to Galosh, not because Galosh represented a new

level of conflict; but, rather, because it might make inoperative some of our retaliatory power.

Today we are at long last moving toward negotiations with the Soviet Union over our mutual level of armaments. For us at this time to upset the delicate parity which presently describes our relationship is to destine those negotiations to failure.

I say this not because I believe the Soviets will automatically respond favorably to a unilateral reduction in our military capability, for I do not believe they will. Nor do I take this position because I believe the Russians will respond to a sign of weakness on our part with restraint on theirs. They will not.

I oppose present deployment of the ABM Safeguard system because it will in fact frustrate our efforts at achieving a higher level of security. Security can only be achieved through a mutually agreed upon limit on the level of our armaments. The Russians will never agree to negotiate meaningful reductions from a position of announced inferiority. If we seek to negotiate with a new weapon system as one more high card in our deck, then they will refuse until they likewise have acquired an added increment of power—and so the cycle continues while our cities smoulder, our poor remain underfed, our air grows ever more polluted, and our dreams for a better future are daily tarnished and frustrated by the demands of today's escalating arms race.

We must, therefore, move forward to the pending negotiations while in a period of delicate balance—as equal participants—seeking a mutual victory over the forces of conflict which have so dominated our thoughts and our lives. If we have learned a single lesson from these past 25 years of negotiation and competition with the Soviet Union, it is that every stimulus we provide engenders their response. The atomic age and the age of intercontinental ballistic missileery has brought us to that stage where there can be no hope for peace nor for victory over a like armed adversary through increased power. The only possible victory is a mutual victory over the continuing upward spiral in the level of armaments. This, then, must be our search.

Our deterrent capacity remains. Such deterrence is based not alone on our land-based ICBM's but includes our Polaris fleet, our strategic bombers, and the additional nuclear striking power we have in our arsenal at sea and abroad.

I urge, therefore, my colleagues in the Senate to join with me in opposition to this so-called Safeguard system. We are at an important juncture in our Nation's history, and indeed in the history of man. The choice is clear. The time is now.

ORDER OF BUSINESS

Mr. GOLDWATER. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. GOLDWATER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

The Chair would advise the Senator from Arizona that the Senator from Oregon, who was to speak next, is not in the Chamber and, therefore, under the previous order, the Senator from Arizona (Mr. GOLDWATER) is recognized.

Mr. GOLDWATER. Mr. President, I thank the Chair. I will be very happy to yield to the Senator from Oregon when he comes into the Chamber, with the understanding that—

The ACTING PRESIDENT pro tempore. The Chair would suggest to the Senator from Arizona that he should proceed now with his entire statement.

Mr. GOLDWATER. I thank the Chair.

ABM DEBATE—GENESIS

Mr. GOLDWATER. Mr. President, as a member of the Committee on Armed Services and as a concerned American citizen, I wish to address my colleagues at this time on the military procurement bill with special emphasis on that part of it which deals with the administration's request for the Safeguard ABM system.

As my colleagues are aware, I returned to the Senate this past January after a 4-year absence. And because of this, I have taken the trouble recently to go back and trace the genesis of the argument for a missile defense in this country to counter, in part, the vast, three-stage Galosh system which the Soviet Union has been deploying over the past 5 years.

Mr. President, I think that we have heard so many arguments pro and con and listened to so many different kinds of scientific experts and military strategists that we may have obscured the most simple, fundamental reason why this Congress must approve an ABM.

That reason is that President Nixon, acting in his capacity as Commander in Chief of the armed services, has recommended the Safeguard system as an essential requirement for the defense of the American people. Since this dispute arose some years back, two Presidents, three Secretaries of Defense and succeeding members of the Joint Chiefs of Staff have all argued the necessity of erecting a missile defense in this country.

It is imperative, I believe, for us to understand that the officials with the very best information about this Nation's defenses and this Nation's vulnerabilities are in agreement on the need for an ABM. Against this, we have the very active and vocal opposition of many members of this Senate and of the intellectual and scientific communities.

Let me make it abundantly clear that I mean no disrespect to my colleagues, nor for the distinguished professors and scientists who oppose ABM, when I state that the safety of the American people is far too important to be left to the judgment of non-experts.

The American people elected President Johnson as their Commander in Chief in 1964 and he recommended an ABM system for their protection. He was supported in this decision by former Defense

S 8338

CONGRESSIONAL RECORD — SENATE

July 22, 1969

Secretaries Robert McNamara and Clark Clifford. By the same token, the American people elected Richard Nixon as their Commander in Chief in 1968, and he recommended an ABM system for their protection. In this he was supported 100 percent by the present Secretary of Defense Melvin Laird.

I believe it makes a great deal of difference—much more difference than it has been accorded during these days of debate—to understand that it is one thing to stand outside the arena of direct responsibility and oppose a system for the defense of 200 million Americans, and it is quite another thing to act as President or Secretary of Defense and carry on your shoulders the very heavy and very direct burden of responsibility for the safety of our people.

It is easy enough for a member or even all the members of the Senate Foreign Relations Committee to decide a matter of military importance and argue the point on the Senate floor in connection with this military procurement bill. It is even something different for members of the Armed Services Committee—who come closer to that arena of responsibility of which I spoke—to stand in opposition to our Commander in Chief, to our Secretary of Defense, and to our military Chiefs of Staff.

But I wonder how many of the opponents, if they were to find themselves tomorrow sitting in the oval office of the President and feeling the awesome weight of official responsibility, could reject the advice of his military advisers and forgo the deployment of a missile defense system designed to protect the people he has been elected to lead.

Mr. GORE. Mr. President, will the Senator yield?

Mr. GOLDWATER. I am happy to yield.

Mr. GORE. The Senator has just raised a question of the propriety of acting contrary to the recommendation of the Joint Chiefs of Staff with respect to the deployment of an ABM or other methods to protect the people. Is that correct?

Mr. GOLDWATER. I would not say that was correct in my interpretation. I can understand how the Senator could understand it that way. I said previously that I made no criticism, nor would I deny any Member, the right to act as he feels. I merely say that I do think deference should be paid to people who have been trained throughout their lives in strategic and tactical problems and weaponry. That is my position.

Mr. GORE. I thought I heard the Senator correctly. Would the Senator mind reading the last sentence he read just before I asked him to yield?

Mr. GOLDWATER. I wonder how many of the opponents, if they were to find themselves tomorrow sitting in the oval office of the President and feeling the awesome weight of official responsibility, could reject the advice of his military advisers and forego deployment of a missile defense system designed to protect the people he had been elected to lead.

Mr. GORE. Now will the Senator yield?

Mr. GOLDWATER. Yes.

Mr. GORE. The reason why I asked the Senator to yield at that point was that it was the Sentinel model of the ABM system that was designed to protect the people of our cities. The Joint Chiefs of Staff urgently recommended that; urgently recommended the deployment of an antiballistic missile system around our principal cities. Indeed, they said it was necessary for our national security that the people of our principal cities be protected by the deployment of an ABM system.

It would be interesting to know the precise date when the Joint Chiefs of Staff changed that recommendation. This is one secret that we have not learned. So far as the record shows, the Joint Chiefs of Staff recommended the deployment of the Sentinel model of the ABM until, after a little political commotion in Boston and Seattle and Chicago, there was a political recommendation that the deployment of ABM be changed from about the cities to around two missile complex sites in Montana and North Dakota. These facts make the sentence which the Senator just covered quite interesting, indeed.

Mr. GOLDWATER. Of course, the Senator realizes that I was not here when the system he is referring to was voted by the Senate. I returned either shortly before or shortly after the decision on Safeguard was made. So I do not think I can say any more than what I have said in the sentence the Senator asked me to reread. I do not think I would change it unless I were privy to what went on here when the so-called thin system was voted on.

Mr. GORE. What I wished to suggest to the Senator was that the present ABM deployment is not, in fact, designed to protect the lives of the people. Instead, it is proposed to protect certain missile silos. So when I heard the Senator make the statement, I rose to suggest to him that he might wish to revise the sentence.

Mr. GOLDWATER. No; I would not wish to. Because of the Senator's reference to people, I think that the defense of any weapon system is a defense of the people. It may be a roundabout way, but to put all our eggs in the defense of the cities, I think even the proponents, as well as the opponents, of the ABM will admit would be a very difficult task. We developed a weapons system that was designed to protect this country by its being a threat. If we do not protect it and it is not a constant threat, it offers no retaliatory possibilities at all. I look upon this deployment as a people saver, even though it is indirect, a defense of weapons.

Mr. GORE. Will the Senator yield further?

Mr. GOLDWATER. I yield.

Mr. GORE. In the context of nuclear war technology, and in view of the enormous stockpiles of offensive nuclear weapons possessed by both the United States and the Soviet Union, it appears to the senior Senator from Tennessee that the only measure of protection of American lives, the only measure of security for either country is the avoidance of nuclear war. And in that context,

it is difficult indeed for me to see how the proposed ABM system provides any protection, whatsoever, to the American people. Indeed, after months of study, it is my conclusion that it would render the people less secure, not more secure.

Mr. GOLDWATER. Well, of course, I think that is one of the bases on which the opponents and proponents disagree in this matter. I see in this ABM system a system that will protect our weaponry, and therefore a system that can add to our retaliatory capability.

I will join the Senator from Tennessee in hoping and praying that we can have a meaningful discussion with the Soviets on disarmament. I would be the chief advocate for it. But I have not seen anything in my years that would lead me to believe that such a discussion either is imminent or that it would be productive. I hope I am as wrong as I can be. I have no more choosing for this type of weapon than does the Senator from Tennessee.

Mr. President, I continue with my statement.

I would ask each and every Member of this body to try and place himself behind that Presidential desk flanked by the American flag and decide once and for all that he could afford to rest the safety and the security of all peace-loving Americans on the assumption that our potential adversaries will conclude an honorable agreement for arms limitations.

Sitting in such a seat of responsibility, can any of us here today state definitely that the construction of a purely defensive system comparable to the one that already exists around the major Russian cities would set off another round in the so-called arms race?

Could any of us, sitting in that seat of responsibility, decide that domestic problems were far more important than the possible safety of the people involved in those problems? Could we convince ourselves that the rebuilding of our inner cities and the construction of badly needed urban renewal projects would lessen the danger of a possible enemy attack?

Could any of us sit at that desk and say to ourselves because some scientist believed that the Safeguard will not work, we should not attempt it at all? In fact, I might say, Mr. President, that after what happened this past weekend, I cannot believe that any scientist or any American can say about any idea, "It will not work." What we did in reaching and walking on the moon called for much more precise computerization and activity than would be required with the weapons system we are talking about.

Do we not remember that other Presidents were told that the A-bomb would never work and that development of an H-bomb was not feasible?

Are we not eternally grateful to the late President Franklin D. Roosevelt for moving ahead with the Manhattan project and obtaining what was then considered the ultimate weapon before it fell into the hands of the madman, Adolf Hitler? Are we not grateful to former President Harry Truman for his courage and foresight in overriding the opposition

July 22, 1969

CONGRESSIONAL RECORD — SENATE

man's total experience. We honor them for journeying into the unknown and for bringing back to us some of the experiences of man's feeling when he walks on another planet.

On July 15, 1969, I placed in the CONGRESSIONAL RECORD at page S8148 a petition from my constituents in Texas asking that the day man walked on the moon be declared a holiday. On July 16, President Nixon declared Monday, July 21, 1969, a day of participation for all the people of this Nation, in man's first landing on another celestial body. Not only did this Nation participate; virtually all of mankind with access to broadcast news media participated. Never in the history of mankind have so many people of so many different nations participated with such elation at one event in the history of man.

The victory of Armstrong, Aldrin, and Collins was no military victory; it was no conquering of people; it was no laudation of man over his fellow beings. It was an exploration in space for all mankind, a conquering of space, a conquering of the realm of the unknown, in the hope that man might find there benefits to humanity.

Some writers say that man seeks another Eden. I think that he seeks whatever is unknown. It is the intellectual curiosity of man to unlock the secrets of nature and the secrets of the universe and to apply those secrets, not selfishly to his own use, but unselfishly for the progress of the human race. It is in this spirit that I commend Neil Armstrong, Edwin "Buzz" Aldrin, and Michael Collins, and congratulate NASA and all those who participated, for this great achievement in the history of the human race.

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each reserve component of the Armed Forces, and for other purposes.

The PRESIDING OFFICER. The Senator from Tennessee is recognized.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield for the purpose of a short quorum call, with the

understanding that he will not lose his right to the floor?

Mr. GORE. I yield.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum. The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ABM, DEFENSE AND SECURITY

Mr. GORE. Mr. President, the destructiveness of nuclear war today makes the avoidance of war between the nuclear powers the only measure of their mutual security.

Never before have two great nations had such a mutuality of interest as now exists between the United States and the Soviet Union. It is the mutuality of self-preservation—the first law of nature and man.

This places a very high value on deterrents—deterrents to the initiation of nuclear war. This equation of deterrence has particular application today between the United States and the Soviet Union.

When the proposed deployment of an anti-ballistic-missile weapon system is considered in its broad context, it is my opinion that it would endanger rather than enhance our security. It would likely make an armaments limitation agreement more difficult, if not impossible, to attain, and thus ultimately could degrade our deterrence.

We foresaw years ago that our strategic bombers were becoming vulnerable. We decided to build the Minuteman.

We foresaw the possible vulnerability of the Minuteman, so despite the great cost, we built a fleet of nuclear missile submarines. Rightly or wrongly, our offensive capability in this regard is now being augmented by replacing the Polaris missile with Poseidon missiles.

Now, in spite of the fact that each of our 41 nuclear submarines may soon have the capability of destroying 150 cities, an addition to all other destructive power, it is urged that we must now deploy an anti-ballistic-missile system around two missile sites in Montana and North Dakota.

This ABM system is a weapons system in search of a mission. We have heard every possible kind of argument for it, and many of these are contradictory. We were told at first that we had to have an ABM because of the Chinese threat. The Chinese do not even have an ICBM.

Next it was said that we had to have an ABM because the Russians had an ABM of their own around Moscow. But now it is clear that this system is mostly of the kind that we considered obsolete years ago, and that it has only 64 interceptors to stop our thousands of warheads, in the event they were used.

We were told next that we must have an ABM system because the Russians were building a missile defense throughout Russia. But now it is clear that this Tallinn system has no significant capability against missiles.

Until a few months ago, were told by

the Joint Chiefs of Staff that our security required deployment of ABMs around 25 or 50 cities to protect our people. Then all of a sudden we were told that defense of the people in our cities is impractical and impossible. Apparently because of a commotion in Boston and Seattle, it is no longer necessary to the security of this country that we protect the people of our cities.

We are told that we must begin to deploy the ABM so that we can test its operational capability, something that can better be done at Kwajalein, where our test facilities are located.

Finally, we are told that we have to protect our deterrents. Even if this were necessary, the proposal would at the very best, or very most, involve only a small fraction of our nuclear weapons and, according to many experts, ill-suited to the purpose.

So, this weapons system, though eagerly searching for a mission, surely has not yet found it.

Former Secretary of Defense Clark Clifford, in a recent speech, said:

The hard fact is that we may never again expect to be in as favorable a position as we now enjoy for entry into talks about a freeze in strategic nuclear armaments. Technological developments may well make any arms limitation agreement more difficult to develop and enforce a year from now, or 6 months from now, than it is today.

The Senate has ratified a treaty, the Nuclear Nonproliferation Treaty, which obligates us to enter into good faith negotiations for a limitation of the nuclear armaments race. The conference, we hope, is soon to begin. The 18-nation Disarmament Conference is underway in Geneva. Yet another escalation in the nuclear armaments race is now proposed.

Our real security rests in stopping the nuclear armaments race, not in promoting it.

The Constitution assigns to the President the responsibility of being Commander in Chief of the Army and Navy of the United States. But it assigns to the Congress the broad responsibility to "provide for the common defense and general welfare of the United States" and the specific powers "to raise and support armies" and "to provide and maintain a navy."

The responsibility of the Congress to provide, through legislation, for the common defense is not optional but obligatory and carries with it, pursuant to the principle of the separation of powers, the duty to reach independent judgments. The powers of the national government were deliberately divided because, as Madison wrote in the Federalist:

The accumulation of all powers, legislative, executive, and judiciary, in the same hands, whether of one, a few, or many, and whether hereditary, self-appointed, or elective, may justly be pronounced the very definition of tyranny.

There are other definitions of tyranny—and other forms. The strong can be tyrannical—but so can the weak. Pride often tyrannizes—and so does fear.

William Pitt once said:

Necessity is the argument of tyrants, it is the creed of slaves.

Tyranny has been called the antithesis of law; it might also be called the enemy of choice.

We in the Congress are now facing a choice. We must choose wisely and not under the compulsion of pride or fear.

The Congress is now in the process of discharging its responsibility through its annual review of the request of the President for authority and funds to be allocated to the Department of Defense.

The use of nuclear weapons at Hiroshima and Nagasaki—the only times they have ever been used in warfare—ushered in a new age in the development of arms and armaments. But compared to the destructive power of the nuclear weapons now in the arsenals of the United States and the Soviet Union, the atomic bombs of Hiroshima vintage are as but mere toys. The awesome destructive power of modern weapons employing the principles of hydrogen explosion, and the capacity of both ourselves and the Soviets to produce and deliver them has led to the kind of arms stalemate that has aptly been called "a balance of terror." The sophisticated nuclear devices deployed today in silos and in submarines, as well as in long-range bombers, are perhaps the first weapons of which it might accurately be said that they were produced, not for use in war, but as a means of avoiding war. Rational men of whatever persuasion are bound to understand that there can be no winner in a nuclear exchange. Surely the leaders in the Kremlin, our major nuclear adversaries, understand this, and I daresay that the leaders in Peking will understand it as their nuclear capability becomes more sophisticated and as they join the still limited club composed of major nuclear powers.

All this is but another way of saying that we do not produce and deploy nuclear weapons to further any desire on our part to destroy the Soviet Union, or anyone else. We produce and deploy nuclear weapons primarily for the purpose of convincing any potential enemy that a nuclear attack upon the United States will bring sure and sudden destruction upon the attacker.

Today both the United States and the Soviets have what can properly be called a credible deterrent. We have the capacity, even though struck a mighty first blow, to retaliate sufficiently to destroy any attacker—and our leaders would have, I believe, the will to retaliate. On the other hand, the Soviets could likewise inflict upon us so much damage in the way of lives and destruction as to make meaningless any discussion of who might be the winner of a nuclear conflict.

Thus, the basic underlying issue in the debate on the Safeguard ABM system is whether deployment of this system, as proposed by the President and the Department of Defense, would enhance or damage our chances of avoiding nuclear war and the devastation that nuclear war would bring. This was the theme that underlay the arguments for and against the system as presented to the Disarmament Subcommittee, and this is why I stated to Secretary Laird when he ap-

peared before the subcommittee that I wished to "join issue" with him on this, his principal argument.

Although proponents of ABM deployment still from time to time pay lip service to the mission of defending against a Chinese attack in the 1970 time period and to defense against accidental launches, neither of these alleged missions for Safeguard is seriously advanced as justification for deployment. Militarily, proponents rely almost entirely upon the mission of defending Minuteman missiles from possible attack by the Soviet Union as justification for ABM deployment.

And so, Mr. President, let us examine this proposal in the light of the only true measure of whether it will enhance the security of the people of the United States—will the proposed ABM deployment aid our efforts to avoid the outbreak of nuclear war? Will Safeguard make more credible our capacity and our will to retaliate and thus deter a would-be attacker from launching an attack he might otherwise launch?

It is my considered opinion that an ABM system is not needed to establish or preserve a credible nuclear deterrent and that it would not effectively contribute to our deterrent if a need could be established. Further, it is my view that deployment of Safeguard at this time would intensify the arms race, make more difficult if not impossible the attainment of an arms limitation agreement, and thus imperil, rather than enhance, the security of the people of the United States.

The characteristics of a credible deterrent include both the capacity to retaliate and the will to do so. It is not sufficient that we possess the capability and the will to use it—it is also necessary that potential adversaries know that we have the capability and that they believe we would employ it. Thus, in order to analyze the effect of Safeguard deployment it is necessary that we consider not only what it is and what it might be capable of doing, but also how it might be regarded by the Soviets and what would be their reaction to it.

In fact, granted all the assumptions of ABM proponents concerning the threat, a strong case can be made that deployment of any kind of defensive missile system would actually degrade the credibility of our deterrents. As I pointed out earlier, the effectiveness of our deterrents is a function of both our capability and our will. No matter how many weapons might survive an attack, their existence will not effectively deter a would-be aggressor unless he believes we would use them to retaliate. If we possess only offensive missiles, then the only means we would have with which to respond to an attack would be the counterattack. If an aggressor should conclude that we might delay launching missiles at him until we learned the results of our efforts to shoot down the missiles he had launched at us, he might more readily conclude that he could attack without unacceptable risk of damage to himself. Many military tacticians have relied on the adage that "the best defense is a good offense," and, until recently, this has been the approved concept of our nuclear defense posture. Now, apparent-

ly, the administration professes to believe we can no longer rely on this concept because it presumably believes that our offense is not good enough. I do not agree. If any aggressor knows that the only way we can react is to send death and destruction his way, he is more likely to use restraint than if he is permitted to think we may have a choice between defense and offense.

Mr. President, it seems clear to me on the basis of the facts as they appear from evidence submitted to the Disarmament Subcommittee that this Nation does not need the Safeguard system to preserve the credibility of our retaliatory capability; that the proposed plan would, at best, be only marginally effective and quite expensive; and that its deployment well might degrade credibility of our determination to retaliate. On this basis, some might argue that we should go ahead because we just might be wrong about our nuclear strength vis-a-vis the Soviets and that no harm could come from adding defensive capability to our offensive capability.

But much more than just the expenditure of enormous sums of money is involved. Continued escalation of the nuclear arms race constitutes inherent danger of the greatest magnitude. The action-reaction phenomenon that has characterized the arms race for the past two decades has already resulted in the production and deployment by both ourselves and the Soviets of sufficient weapons to destroy each other many times over.

If this madness continues, it may well be, as Dr. Herbert York puts it, that we shall have to rely upon machines to determine whether doomsday has arrived.

The Disarmament Subcommittee, which I have the honor to chair, held a series of hearings on how to protect and defend the United States, at which arguments for and against the Safeguard system were heard. Secretary of Defense Laird, Deputy Secretary of Defense Packard, and Gerard Smith, Director of the Arms Control and Disarmament Agency, and others presented the administration's case before the subcommittee. Secretary of State Rogers did so before the full Foreign Relations Committee. And Secretary Laird and CIA Director Richard Helms discussed various questions relating to the ABM before the full committee in a classified executive hearing, a sanitized transcript of which is on each Senator's desk. The outside experts who testified before the subcommittee, in the order of their appearance, were:

Dr. Hans Bethe of Cornell University, former director of the Theoretical Physics Division at Los Alamos, member of President Eisenhower's Science Advisory Committee, winner of the Nobel Prize for physics in 1967.

Dr. Donald G. Brennan, of the Hudson Institute, a past president of the institute.

Dr. Daniel J. Fink, of General Electric, former Deputy Director of Defense Research and Engineering in the Department of Defense.

Dr. Carl Kayson, director of the Institute for Advanced Study, Princeton University, Deputy Special Assistant to

President Kennedy for National Security Affairs.

Dr. James R. Killian, chairman of the Board of MIT, Special Assistant to President Eisenhower for Science and Technology.

Dr. George B. Kistiakowsky, of Harvard University, President Eisenhower's Special Assistant for Science and Technology and member of the President's Science Advisory Committee in both the Eisenhower and Kennedy administrations.

Dr. Wolfgang Panofsky, director, Stanford Linear Accelerator Center, Stanford University, member of President Kennedy's Science Advisory Committee.

Dr. George W. J. Rathjens of MIT, Director of Weapons Systems Evaluation Division of the Institute for Defense Analyses, former Chief Scientist for the Advanced Research Projects Agency, Department of Defense and also former Special Assistant to the Director of the Arms Control and Disarmament Agency.

Dr. J. P. Ruina of MIT, former Director of the Advanced Research Projects Agency and former president of the Institute for Defense Analyses.

Dr. Marshall D. Shulman, director of the Russian Institute, Columbia University.

Dr. Allen S. Whiting, Center for Chinese Studies, University of Michigan.

Dr. Herbert York, of the University of California at San Diego, former Director of Defense Research and Engineering in the Department of Defense and member of President Eisenhower's Scientific Advisory Committee.

Dr. Jerome B. Wiesner, provost of MIT, Special Assistant to President Kennedy for Science and Technology.

Dr. Edward Teller, associate director of the Lawrence Radiation Laboratory, University of California and former director of the Livermore Laboratory.

Dr. Donald F. Hornig, vice president, Eastman Kodak Co., Special Assistant to President Johnson for Science and Technology and presently a consultant at large to the President's Science Advisory Committee.

Dr. Gordon J. F. MacDonald, vice chancellor, University of California, Santa Barbara, former executive vice president of the Institute for Defense Analyses and a member of the President's Science Advisory Committee.

Dr. Eugene P. Wigner, professor of mathematical physics, Princeton University, recipient of the Nobel Prize for Physics in 1963.

Collectively, these men represent great wisdom and experience in scientific and foreign policy matters. All of them have held high government positions. All are recognized and acknowledged leaders in their fields. Not all of them were opposed to the deployment of the Safeguard system but most of them were, as will be clear from my remarks today, and among those opposed were all four former Presidential Science Advisers—Drs. Kistiakowsky, Killian, Wiesner, and Hornig.

In his testimony before the subcommittee on March 21, the Secretary of Defense listed five objectives of the so-called Safeguard system. For the sake of orderly examination, I will discuss them

in the order in which he listed them, not in the order of their importance.

The first objective was described by Secretary Laird as follows: He told the subcommittee.

It clearly rejects a provocative expansion into a heavy defense of our cities against a Soviet attack.

Secretary Laird then went on to observe that, first, the original Sentinel system could have been construed as a provocative deployment because it would have been deployed around cities. The Soviets could thus have concluded that it was aimed at making it possible for us to strike first because we would be able to defend against a retaliatory attack. The Safeguard system, on the other hand, cannot be construed as provocative because it protects missile sites which shows that we are interested only in insuring that a Soviet first strike could not destroy our capacity to retaliate; and second, thus, the Safeguard system's "direction is away from arms escalation" because it will "require no reaction at all from the Soviet Union—provided the Soviet Union has a responsible deterrent nuclear war policy, as we do here in the United States."

The subcommittee hearings brought out the following points regarding this first objective listed by the Secretary of Defense.

While the Department of Defense has declared that the decision to deploy Safeguard "rejects a provocative expansion into a heavy defense of our cities," merely declaring that a decision is not provocative obviously does not insure that others will agree with that declaratory judgment. Despite the fact that we are ahead of the Soviet Union in the number of nuclear warheads we can deliver, and the further fact that we have more than enough nuclear warheads to destroy the 50 largest cities in the Soviet Union many times over, we regard their ability to deploy about the same number of ICBMs as we have deployed, and their construction of a primitive and ineffective ABM system around one of their cities, as provocative. At least, the administration has been provoked into recommending the deployment of an ABM system, justifying it on many grounds, as will be clear in my remarks, but principally on the ground that the Soviets are deploying a number of missiles with large megaton warheads similar, it should be noted, to the Titan II missiles that we decided years ago were not as effective as Minuteman missiles with smaller warheads. We have a tendency to regard the deployment of almost any Soviet weapon or weapons system as provocative. Why should they not regard as provocative our deployment of an ABM system which is more effective than theirs and will have many times more interceptors?

Was the Sentinel system rejected, or to put it more accurately amended, because the Soviets considered it provocative—or because the Americans it was designed to protect considered it provocative? The Secretary of Defense told the subcommittee that the fact the decision to amend the Sentinel system was announced soon after public protests

against the construction of certain sites was "coincidental" as far as he was concerned. The coincidence, I must admit, strains my credibility.

I also find it difficult to understand why the Soviets should agree with Secretary Laird that we have a "responsible" deterrent policy and that therefore deployment of the Safeguard system will not "require" them to react. As a number of eminent witnesses before the committee pointed out, we first developed multiple reentry vehicles, or nuclear warheads, and then multiple independently-targeted reentry vehicles, or MIRV's, as well as Poseidon missiles on our submarines in response to their development of an ABM system. Secretary Laird was the sole witness to deny that our MIRV was a response to their ABM. He claimed that MIRV was "not related to Galosh"—the ABM system partially deployed around Moscow—"because we started appropriating funds for the development of this program prior to the time we knew Galosh was in being." But his own deputy, Mr. Packard, does not agree, for when talking about the Soviet installation of "an ABM system around Moscow" he commented that "we had a proper counter to the Soviet moves and possible intentions for we were developing multiple guided warheads that could be installed on strategic missiles," and he made it plain that in his mind there was "no question that the appropriate response to the ABM defense of cities is a large number of small multiple warheads." Dr. Kistiakowsky said flatly that the development of MIRV's was undertaken "upon learning of the start of the deployment of the Soviet ABM." And both General Wheeler and Secretary of the Navy Chafee, in their testimony before the Armed Services Committee, said that the development of Poseidon was necessary because of the Soviet ABM system. I quote General Wheeler's statement:

Poseidon is necessary to assure the continued effectiveness of our fleet ballistic missile system against Soviet targets as they become defended by anti-ballistic missiles.

I now quote Secretary Chafee:

Therefore, we must continue our efforts to insure that we anticipate Soviet technological advances and avoid the loss of our deterrent effectiveness. Such a development is the Navy's Poseidon missile, designed to maintain the effectiveness of our sea-based strategic weapons despite the introduction of Soviet anti-ballistic missile systems. The Poseidon weapon system will be ready to meet this threat and to continue the sea-based deterrent strength that has been so important to our security in the sixties.

Thus, anticipating an effective Soviet missile defense—anticipating a fact that is not yet a fact—we began to deploy weapons to neutralize that defense. Faced with part of an ABM system around only one Soviet city, Moscow—the so-called Galosh system of 64 defensive missiles, to use the figure provided by Secretary Laird, which would be ineffective against an American missile attack of more than 64 missiles or a smaller number of American missiles using sophisticated penetration aids—we began the steps which could increase the number of our targetable missile warheads by fitting land- and sea-based mis-

S 8400

CONGRESSIONAL RECORD — SENATE

July 22, 1969

siles with between three and 10 or more multiple independently targeted warheads. And now, anticipating a future Soviet threat to our land-based missiles—again anticipating a fact that is not yet a fact—we propose to deploy Safeguard to defend against that unrealized capability. Given our reaction to anticipated Soviet developments in the weapons field, how can we expect them not to react in anticipation of the continued growth of ours?

Dr. Herbert York told the subcommittee:

No one today can outline in detail what kind of a chain reaction a Sentinel or a hard-point defense deployment would lead to.

Dr. York termed the view that the deployment of the Safeguard system would mark the end of the chain reaction the "fallacy of the last move"—the assumption that we could make a move in the nuclear weapons field and expect that our nuclear adversary would not react. And proceeding with phase I of the Safeguard system—the deployment of defensive missiles around two complexes of offensive missile sites—is, of course, not one last move but two, for there is little reason for the Soviets to assume that we will not proceed to phase II and the deployment of defensive missiles in 12 sites throughout the country and around the Nation's Capital.

In explaining the "option" to move to a second phase, Mr. Packard showed the subcommittee a chart which called for constructing the full number of 12 sites if there were a "greater" Soviet submarine threat to the SAC bomber force or if the "Chinese ICBM threat continues to increase." Surely we cannot expect the Soviet Union to stop their production of Polaris-type submarines when they have only eight and we have 41 and when we are in the process of replacing Polaris with Poseidon, which will multiply the number of our submarine-launched missiles by a factor of 10 or more. And as the Chinese are still testing missiles, but do not yet have an ICBM, it seems likely that the "Chinese ICBM threat" will continue to increase. Thus, if the "option" to complete the 12-site system is conditioned on either a Soviet attempt to narrow the gap between their nuclear missile submarine capability and ours, or on a Chinese attempt to deploy ICBM's, there is no "option" at all, as far as moving to phase II is concerned. That "option" is, rather, a foregone conclusion.

Expecting the Soviets not to react to our deployment of an ABM system, implies—it seems to me—a faith in Soviet restraint completely at variance with the administration's view of other aspects of Soviet behavior. I will discuss at a further point Secretary Laird's comments on the increasing Soviet military threat, a development that he considers to be the very denial of restraint. How can the administration expect the Soviets to be so restrained as not to react to our deployment of the Safeguard system when the administration rests its case for Safeguard deployment on the lack of Soviet restraint in military spending and in the development and deployment of nuclear missiles? Is this selective restraint a verifiable and predictable char-

acteristic of Soviet behavior and, if so, how has it been verified and on what assurance can it be predicted? Or is it a combination of wishful thinking, self-deception, and artful—but fallacious—argumentation? Which is it? It cannot be both.

So much for Secretary Laird's first stated objective. I turn now to the second objective which is the principal ground on which the administration's argument for Safeguard rests. Secretary Laird said about the Safeguard:

It offers more protection, as needed, to our deterrent forces.

In his statement before the committee he restated this objective by saying that the chief value of the Safeguard system was that it "protected the credibility of our deterrent." The Secretary and the Deputy Secretary explained that:

First. The credibility of our deterrent depends on how many of our offensive Minuteman missiles can survive a first-strike nuclear attack, for in order to deter a potential attacker that attacker must be positive that enough missiles or bombers will survive to destroy him.

Second. The Soviet Union has decided to develop a first-strike capability. There is no other explanation for the recent increase above 200 in the number of Soviet SS-9 missiles, a missile able to carry up to a 25-megaton warhead, which is a larger megatonnage than that required to destroy cities but is of the size required to destroy hardened missile sites. There had been a "feeling," as Mr. Packard put it:

The (number of) SS-9 was going to level off at a number somewhere below 200.

Furthermore, the Soviets are testing multiple warheads on the SS-9. To quote the Secretary directly:

With the large tonnage the Soviets have they are going for our missiles and they are going for a first-strike capability. There is no question about that.

Third. Our Polaris submarines by themselves will not be a "sufficient and credible deterrent" from 1972 on.

Fourth. Our bombers are vulnerable to missile attack on the ground unless they receive sufficient advance warning. The long-range perimeter acquisition radars, which are part of the Safeguard system, would give our bombers "greater warning time" against long-range missile attacks. Furthermore, the Soviets have launched eight or nine nuclear missile submarines and can now build "one a month," as the Secretary of Defense told the subcommittee on March 21, or eight per year, as he told the House Appropriations Subcommittee on May 22. If large numbers of Soviet submarines carrying missiles are stationed close to our shores, the short flight time of these missiles to our bomber bases would reduce the takeoff time available to our bombers. These missile-carrying submarines thus limit the potential effectiveness of our bomber force. The Soviets are outpacing us in both strategic offensive and defensive forces by a ratio of 2 to 1—4 to 1 in proportion to GNP—and, as of today, "have in being and under construction more ICBM launchers than the 1,054 possessed by the United States."

Fifth. If we do not deploy an ABM system, but merely continue research and development, we would be left, in the words of Secretary Laird, "with no option to provide defense for our deterrent on the schedule that might be required by the Soviet threat if we do not reach an agreement with the Soviets on limiting strategic forces." If we build only a prototype ABM installation at this point, and hold up deployment until the prototype had been tested, we would delay any kind of an ABM system by "3 or more years," to quote Secretary Laird.

Sixth. For all of the above reasons, the decision to deploy cannot be delayed beyond the budget for fiscal year 1970.

Testimony before the committee revealed that:

First. The Safeguard system will, in phase I, protect, as Secretary Laird stated the case, "30 percent of our Minutemen." But even assuming that this statement is correct—which I assume only for purposes of argument—why is it so important to protect 30 percent of our Minutemen? The implication is that the Soviets could destroy the remaining 70 percent of our 1,000 Minutemen; our 41 Polaris submarines each of which now carries 16 missiles but which will, in the near future, carry at least 160 warheads; and our 650 intercontinental bombers.

Second. But are we protecting even 30 percent of our Minutemen? Testifying before the Armed Services Committee, Dr. Panofsky pointed out that the protection offered by the Safeguard system in phase I could be offset by an increase in Soviet offensive forces of only a small percentage. Even in phase II, according to Dr. Panofsky, given the limited number of Spartan and Sprint defensive missiles in the Safeguard system, our Safeguard could be offset by a Soviet offensive increase "on the order of 10 percent."

Third. The administration contends, and I agree, that the credibility of our deterrent depends on a potential adversary's sure knowledge that a sufficient number of our deliverable nuclear weapons will survive an attack to be able to inflict unacceptable damage on the attacking country. That being so, it is obvious that a nuclear attack on the United States would have to be massive and synchronized for it to succeed in destroying our deterrent whether or not we have an ABM defense system. Most, if not all, of our Minuteman missiles, Polaris submarines on station, and strategic bombers would have to be destroyed—enough of them destroyed at any rate, to render retaliation ineffective.

Dr. Panofsky expressed "considerable skepticism" to the subcommittee that "an attack of the kind envisaged by the Department of Defense witnesses could be mounted by the Soviets with any confidence of success." Testifying before the Armed Services Committee, he went further. He called a first strike threat an "extremely implausible projection of our available intelligence, including that concerning the SS-9," said that he knew of "no technical prospects or of any current intelligence" indicating a threat to Polaris and argued that destruction of both bombers and land-based missiles

July 22, 1969

CONGRESSIONAL RECORD — SENATE

S 8401

together was itself "extremely implausible." Dr. Wiesner pointed out that the Soviets would also need "large numbers of high-accuracy multitude warheads, a much better air defense system, an effective ASW capability and a truly effective nationwide ABM system." He added:

Clearly the Soviet Union is far from having these combined capabilities now, and there is essentially no reason to believe that they will move into such a position by 1975 or even later.

Finally, there is the question of whether the Safeguard system would work at all, given the highly complicated technology involved in what Dr. Wiesner has called the most sophisticated and intricate system that man has attempted to build. Now I do not make any pretense at being a physicist, a mathematician, or an engineer. Yet at the same time I am going to be faced with the responsibility of having to vote on the question of providing funds for a system which I have no way of knowing personally will or will not work. It would certainly seem to me that I would be acting irresponsibly if I were to ignore expert scientific opinion. Yet a number of scientists—among the most eminent in our country—told the subcommittee that they had grave doubts about the system from a purely technical point of view. Dr. York, a former Director of Defense Research and Engineering, spoke of the possibility of a "catastrophic failure" in which no interceptors at all might fire. Dr. Kistiakowsky, a former Presidential science adviser, agreed with Dr. York that—

Massive failure cannot be excluded for a system that must function the very first time it is tried out as a whole.

Some scientists who appeared before the subcommittee argued that further research and development was necessary to develop a more efficient system. Dr. Panofsky called the Safeguard a poor engineering decision because it took the components from the Sentinel system, which had been designed to defend cities, which are soft targets, and used them for the different purpose of a hard point defense system. While it is necessary to intercept at high altitudes to protect cities, he pointed out, missiles attacking hard point targets can be intercepted at low altitudes, which means that the system designed for hard point defense—including the radar components—can be simpler and less expensive than the system designed to defend cities or soft targets. Summing up his argument, he said that "did not make sense" to take a city defense system and give it a dual capability of hard point defense and bomber defense, and that if we needed a hard point defense system, one should be specifically designed for that purpose.

Dr. Hornig remarked:

But the uneasy feeling persists in my mind that, although Presidents may change, Secretaries of Defense may come and go, and the philosophies enunciated by our political leaders may change, the design of our ABM system hardly changes at all. It includes the same radars, the same rockets and largely the same deployment which was contemplated for the "heavy" defense.

Safeguard continues to look like a first step toward a much bigger, much more expensive and still ineffective system.

A number of witnesses commented on one particularly ill-designed component of the Safeguard, ill-designed given the declared objective of the system: the missile site radar. It was pointed out that the radar was badly matched to a defense of missile silos because it was far more vulnerable than the silos themselves. It cannot be hardened; it has far less resistance to shock wave or nuclear blast than a missile; and there is only one per Safeguard site. Thus, it would be a prime target for the attacker because if the radars were destroyed the whole system would collapse. The radars are thus a useful target for the smaller Soviet SS-11 missiles, and there are far more SS-11 missiles than SS-9 missiles in the Soviet inventory. Hence, the SS-11's could knock out the Safeguard system by blinding it so that Safeguard would not be able to neutralize a single SS-9 missile.

It was also pointed out that the system will go into production before the components have even been assembled and before some have even been built—the Par radar being a case in point—that there are no working examples of computer programs of the scale required by the Safeguard system, and that furthermore the computer will never be able to be tested in its operational environment because of the impossibility of simulating nuclear attack. Even Dr. Teller, an advocate of deployment, explained that he favored deployment because of the value of the experience that a "pilot operation" would provide. Admitting that "we do not know whether defense or additional offensive force will be cheaper and more effective," he concluded that "we shall never find out unless we make an actual attempt" by deploying. Dr. Teller subsequently defined the difference between his position and that of Dr. Wiesner in two sentences:

He says research and development. I say pilot operation.

To which Dr. Wiesner replied that testing could be done more effectively at Kwajalein.

I will turn now to the assertion that I have said I regard as the principal ground on which the administration's case must stand or fall: the statement by the Secretary of Defense:

With the large tonnage the Soviets have they are going for our missiles and they are going for a first-strike capability. There is no question about that.

The Secretary is quite wrong in at least one respect, for there is a question about whether the Soviets are going for a first-strike capability. That judgment is not supported by intelligence authorities, for example. The U.S. Intelligence Board, our top intelligence body, has never so found. Nor is that statement supported by the Secretary of State. Only some 2 weeks after Secretary Laird's statement, the Secretary of State said in a press conference:

I have difficulty in believing that the Soviet Union could initiate a first strike . . . Certainly it is difficult to understand why the Soviet Union is deploying SS-9s . . . And

I think when we enter the SALT (Strategic Arms Limitation) talks, one of the first questions we want to raise with them is why. Why would you have a 25-megaton missile? But insofar as whether they are doing it with the intention of actually having a first strike, I don't believe that.

If there were "no question" about the Soviets "going for a first-strike capability," the Secretary of State would hardly have spoken as he did. And if there is a question in his mind, is there any reason why the rest of us should not wonder?

But there are questions not only in the executive branch, but also in the mind of the Secretary of Defense. In a closed meeting of the full Committee on Foreign Relations on June 23, Secretary Laird suddenly changed his definition of first strike—changed it from the generally understood concept of a knockout blow to the more limited meaning of ability to attack our hardened missile sites. In my opinion, he thereby destroyed his own principal justification for requesting immediate deployment of the Safeguard system.

Fourth. The third argument of Secretary Laird's with respect to the need to protect our deterrent by protecting our missile sites was that our Polaris submarines would not be "sufficient and credible deterrent from 1972 on." The Secretary made it plain that he was referring to a growing Soviet capability to locate and destroy our nuclear submarines while on station but he offered no explanation of how this might be accomplished.

The Secretary's assertion would be disquieting if true but can we accept it with confidence? Only a year ago, in hearings before the Senate Armed Services Committee, the Chief of Naval Operations, Adm. Thomas H. Moorer, was asked:

Admiral, we have put a great many of our chips on the invulnerability of the Polaris submarines. Do you have a high degree of confidence that this invulnerability will be maintained, and what operations do you foresee in the event of a technological breakthrough on the part of the Soviets that would reduce or eliminate the invulnerability.

Admiral Moorer replied:

I have a very high confidence that this will be maintained for several reasons.

Present for a brief time at our subcommittee hearings was Representative ANDERSON of Tennessee, formerly captain, U.S. Navy, who commanded the first nuclear submarine to transit the Polar Cap. I asked him at the hearing what he thought about the Polaris submarines as a deterrent force. He replied, and his statement appears in the hearing record:

There have been statements made recently, leaving the implication that when we get to 1972, 1973, 1974, some of the technology that the Soviets are working on will be adequate to neutralize our Polaris submarines. I checked around some and I find no evidence whatsoever to support such a statement.

Finally, to clear up any possible uncertainty on this point, I wrote Secretary of the Navy Chafee on May 28 and asked him for a specific statement "on the vulnerability of Polaris submarines in the period 1970 through 1980." The Secretary replied in a letter dated June 12, which

S 8402

CONGRESSIONAL RECORD — SENATE

July 22, 1969

I had printed in the CONGRESSIONAL RECORD and which also appears on page 604 of the subcommittee hearings, and said that his views were in accord with those Mr. Packard had expressed before the House Armed Services Committee on April 14 at which time Mr. Packard had said:

We expect the Polaris to remain highly survivable until at least the late 1970's.

Secretary Chafee added, incidentally:

I have strong confidence in the continued effectiveness of Polaris-Poseidon submarines. To the best of our knowledge the Soviets have not been able to detect or track any of these submarines while on station. This is the principal reason for my confidence.

Fifth. The next point made by Secretary Laird and Mr. Packard related to the vulnerability of our strategic bombers to attack from land or submarine-launched missiles, the greater warning time the Safeguard system would provide and the relatively greater importance that must be attached to Minuteman as a second-strike weapon because of the vulnerability of bombers to submarine launched missiles.

I would like to make several observations on this point. First, Dr. Panofsky pointed out to the subcommittee that there would be sufficient time in the case of an ICBM attack on missile sites to get bombers in the air—and sufficient time in the case of a submarine attack on bombers to launch missiles. The extra warning time of a few minutes provided by the Safeguard long-range radar was thus not necessary, in his view. Second, the vulnerability of bombers on airfields can be countered by dispersing bomber bases—especially by moving them inland—and by keeping a number of bombers in the air on alert, as Dr. Wiesner, and several other witnesses suggested. Third, it has occurred to me that since our strategic bombers are stationed not only in the United States but on airfields abroad as well, a Soviet first strike would not only have to knock out all missile sites and air bases in the United States, and all of our Polaris submarines on station, but a considerable number of airfields in other countries as well. Finally, while Secretary Laird regards the growing Polaris-type Soviet submarine fleet as a potential threat to our bombers, our Poseidon submarine missile fleet is "designed to maintain the effectiveness of our sea based strategic weapons despite the introduction of Soviet anti-ballistic-missile systems," to quote again Secretary of the Navy Chafee's statement to the Armed Services Committee. How can it be that we and the Soviets have such different objectives for the same weapons system?

Sixth. Regarding Mr. Laird's statement that the Soviets are outspending us in offensive and defensive forces and have more ICBM launchers in being or under construction than we do, I must say that it would surprise me if the Soviets were not spending proportionately more than we are. The fact is, though, that while they may be devoting a greater percentage of their GNP to defense, our defense budget is running at about a third higher than theirs, and their spending on offensive and defensive

weapons has remained relatively constant for the past decade. And while the Soviets have a few more ICBM launchers deployed and under construction than we do, they still have fewer land-based ICBMs, around 1,000 compared to 1,054; fewer long-range strategic bombers, 150 compared to 650; and fewer nuclear ballistic missile submarines, eight or so compared to 41.

The further fact is that we are phasing out older missiles and replacing them at a more rapid rate than they are and that we are far nearer to having a MIRV capability than are they.

We have already had the experience of living through an illusory missile gap. I hope that we are not going to be presented now with a prospective delusory missile gap, the product of presenting only some of the relevant information; that relating to the number of ICBM launchers, in this case; without presenting all of the relevant information; that relating to strategic bombers and submarine launched ballistic missiles; and presenting, too, theoretical extrapolations of Soviet weapons development as though they were confident predictions.

Of course, there is a point beyond which offensive capability becomes unnecessary overkill. The United States presently has enough nuclear weapons to attack about 2,400 different targets in the Soviet Union; the Soviet can now attack about 1,100 different targets in the United States. Assuming that 250 warheads could devastate the 50 largest cities in either country, and that the capability of destroying the 50 largest cities in either country constitutes a credible deterrent, the United States has 2,100 more nuclear warheads than it needs to destroy these 50 cities and the Soviet Union has 845 more nuclear warheads than it needs to destroy the 50 largest cities in America.

This is one way of measuring overkill. A second way of measuring is to compare the number of separately targetable strategic warheads per city for the 50 largest cities in the United States and the Soviet Union. Dividing the number of warheads possessed by each country by 50, the United States has about 48 warheads per city and the Soviet Union 22. Yet one hit is sufficient for the awful task.

I am, therefore, not alarmed by Soviet defense spending and the prospect of parity with the Soviet Union in the number of land-based intercontinental missiles. We are still far ahead of the Soviets in the number of nuclear warheads. Both we and the Soviets have more than enough warheads to destroy each other. I am alarmed only at the senseless drive in both countries for more weapons when these additional weapons are not necessary. I am dispirited only at the lack of interest in taking advantage of a situation in which the Soviets are approaching parity in land-based intercontinental missiles to negotiate mutual controls instead of regarding the situation as requiring new weapons systems which not only do not add to our security but threaten to begin a new cycle of action and reaction in this expensive and dangerous area.

Seventh. A number of witnesses before the subcommittee disagreed flatly with

the assertion made by Secretary Laird and Mr. Packard that if we do not set in motion immediately steps to deploy an ABM system, but merely continue research and development, we will be left without the option of a ballistic missile defense for our deterrent by the time such a defense will be necessary. Most expressed the view that we could afford to wait for up to a year to see whether negotiations with the Soviet Union would be fruitful.

Furthermore, if we must have an "option" to defend against a threat of a Soviet first-strike capability, there are other methods of defending our deterrent which are more reliable, less expensive and involve shorter lead time. Putting more concrete around missile sites—superhardening—is one way. Building more nuclear missile submarines and more intercontinental missiles is another. But instead of considering these steps we have chosen a method which is extremely costly, which is of questionable reliability and which requires the longest leadtime of all.

The third objective stated by Secretary Laird was his claim that the Safeguard system "offers protection, as needed, of the entire country from a small attack, such as the kind of attack that could possibly be delivered by the Chinese Communists during the decade of the 1970's or from an accidental launch." Let me first discuss the Safeguard as protection from a Chinese attack.

As we all know, the Chinese do not now have ICBM's, and Mr. Packard told the subcommittee that the Chinese were "no further along" in developing a missile than they were 3 years ago. But the Cultural Revolution and other political disruptions notwithstanding, we must obviously assume that there may be Chinese missiles operational in the 1970's. Secretary Laird estimates that this will be in the "1972-73 time period" and "in the time period of 1975 and beyond that the Red Chinese could have the capacity and the capability to have 15 or more missiles," a statement he amended before the House Appropriations Subcommittee on May 22 to "10 to 25 operational ICBM's" assuming an initial operational capability in late 1972 which the Secretary implied he did not think would be achieved but was more likely to be delayed "perhaps as much as 2 or 3 years later." Nevertheless, to be prudent we must assume not only that the Chinese will have an ICBM capability in the mid-1970's but that this capability will grow and that the Chinese will also develop a full range of sophisticated accessories, such as decoys and other penetration aids. We must thus consider a theoretical system of defense against a Chinese nuclear missile attack in two stages: when China's ICBM capability is very limited, and when that capability is far greater.

When the Chinese missile force is small, we would not need a defense system which would preserve a percentage of our offensive missiles. A small Chinese force would, by definition, not be large enough to destroy more than a minute percentage of our missile force. What is needed when China's missile force is small, then, is not a system which would defend a few missile sites but a system

July 22, 1969

CONGRESSIONAL RECORD — SENATE

which would provide "some protection over the entire country," as Dr. Fink pointed out to the subcommittee.

In phase I of the Safeguard system, of course, there will be protection of only a "footprint" area around the two defense missile sites. The rest of the country will be unprotected. Furthermore, the Par radars in Phase I "will have faces only to the north because that is the direction from which the Soviet threat would be expected," to quote Mr. Packard. Thus, protection against a Chinese attack requires going to phase II.

The Safeguard system, when fully deployed in phase II, will, its supporters claim, provide some protection for the entire country, but only some protection. Full effectiveness is not claimed. Some Chinese missiles would get through, especially if equipped with penetration aids. Dr. Bethe told the subcommittee that it was "entirely logical that the Chinese might develop such aids 'at the same time' as they develop the ICBM itself. The result would be some destruction in the United States, but in China the result of our retaliatory strike would be massive destruction ranging all the way to the verge of total annihilation. The sole effect of Safeguard, and this would be true only of the fully developed system, would be perhaps to reduce somewhat the destruction in the United States. Safeguard would not affect the credibility of our deterrent as far as the Chinese are concerned for it is thoroughly credible now, and will continue to be thoroughly credible, in the face of the projected limited Chinese ICBM capability.

When we talk about a Chinese attack during the period when China has only a limited ICBM capability we are talking about the possibility of an "irrational" Chinese action, for a limited Chinese attack which would surely result in a devastating attack on China could only be irrational. In his testimony before the subcommittee, Secretary Laird implied that the Chinese were "different" from the Soviets, as far as the area of rational action is concerned. Yet what arguments can be cited for assuming that the Chinese will act irrationally to the point of suicide? We have never argued that the Soviets might act irrationally in the matter of a nuclear attack. The Chinese have not acted irrationally as far as their foreign policy is concerned. Their words have been irrational but their actions have not been. Dr. Alan Whiting told the subcommittee:

I see no basis in fact or theory for attributing a significantly higher likelihood of irrationality to Chinese as compared with Russian decision makers.

Before the House Appropriations Subcommittee on May 22, Secretary Laird raised the specter of Chinese "nuclear blackmail" as an argument for Safeguard deployment. But it would be the height of madness for a country with a minuscule missile force to threaten to blackmail a country with the nuclear weapons we have at our command, for the obvious answer to such a threat is a pre-emptive nuclear strike. This argument, too, assumes a strong suicidal urge on the part of the Chinese, an assumption

with no basis in logic or in history, an argument which, in sum, clutches at straws or what we often call weak reeds.

How long will it be before China will have not a few missiles but hundreds with sophisticated penetration aids as well as nuclear missile-carrying submarines and ship-launched ballistic missiles? All of these "may be in the Chinese inventory in the next decade," Dr. Jack Ruina told the subcommittee. When this happens, of course, the situation will be exactly as it is now with respect to the Soviet Union. The same arguments will apply for and against a hard point defense system and for and against a defense of our cities. But there will be a double twist. For if the Soviet Union now regards a city defense as "provocative," a position with which Secretary Laird agrees as evidenced by his statement that the first objective of the Safeguard system is that "it clearly rejects a provocative expansion into a heavy city defense," presumably it will hold the same view in the future.

As Dr. York pointed out to the subcommittee, "to protect against China we will eventually have to build up an ABM to the point where it will be provocative to the Soviet Union." Thus, if we decide to attempt some defense against Chinese attack, we will be hoist by our own petard to a higher level of defense which we ourselves have admitted is provocative.

As for protecting against an accidental launch, I would certainly favor any system that could afford this protection. But there are those who should know who say that while with further research and development a system could be designed to attempt to achieve this objective, the Safeguard system—with its particular combination of radars, Sprint missiles and Spartan missiles—is not designed to meet this need. It should be realized that in phase I, the Safeguard system will protect against an accidentally launched missile only if that missile is headed toward the two sites at which Spartan and Sprint missiles will be deployed. Protection of the whole country against an accidentally launched missile is thus not even a theoretical possibility unless defensive missiles are deployed in all 12 sites. But even then, is there protection against an accidental launch? Dr. Panofsky has said that if an accidental launch included decoys or multiple warheads, the modified Sentinel system could be "penetrated." Even if only a single missile without decoys were involved, and assuming perfect reliability of the Safeguard system, this single missile could be stopped only if the "state of alertness of the system in peacetime can be kept at a high enough level."

Now the question of the state of alertness is a complicated matter. The chances are that a deliberate missile attack, even a so-called surprise attack, would probably be preceded by at least a noticeable change in the political atmosphere, if not a period of tension. An ABM system, like the rest of the Nation's defense establishment, would be placed in a state of alert. But there would be no such warning signs before an accidental launch. On the contrary, such an acci-

dent could occur at any time including a time of least tension. Thus, in thinking about protection against an accidental launch, it is well to recall Dr. York's comments to the subcommittee on the conflicting requirements of a "stiff trigger," to prevent the accidental firing of a defensive missile, and a "hair trigger," to provide a sufficiently rapid intentional firing of a defensive missile in the case of surprise attack. Both intentional and accidental launches are possible in any missile system—offensive or defensive.

But the chances of an accidental launch are, in fact, greater in the case of a defensive system. This is so because the time in which the decision to launch must be made is so short—10 minutes at the maximum, according to Mr. Packard—that it is inevitable that the responsibility for launching would necessarily be delegated to lower command echelons and eventually, as weapons improve and machines become more complex, to computers. Mr. Packard told the subcommittee that there would be "adequate time to assume command and control by the President," but 10 minutes does not strike me as long enough to insure presidential action, given the communications problems involved. Thus, the more effective a system is for intercepting accidental launches, because the finer its "hair trigger," the greater the chances the system will itself err and launch a missile accidentally, because the looser its "stiff trigger" will be.

The accidental launch of a defensive missile would not be a cause for great concern if it could definitely be detonated or intercepted at a sufficiently high altitude so that no damage would be caused. But the accident that launched the defensive missile might cause other related accidents as well. Having launched a defensive missile in error, a computer might also erroneously instruct it to explode at a low level. Or the missile might, again accidentally, trigger an automatic Soviet reaction and bring a retaliatory attack. Thus, in developing a system to protect us from accidents, we may well increase the likelihood of accidents so that the rise in the level of risk will be far higher than the rise in the level of protection.

Furthermore, if we are entitled to a system which we allege will, among other things, protect us from accidental launches, surely the Soviets and the Chinese will make a similar claim. But since protection against accidental launches requires a general area defense system, and not a system which can protect only hardened missile sites, this justification, like the others used, inevitably forecasts an escalation of the arms race with proliferating finely tuned defensive systems and new offensive systems to neutralize them. But this subject belongs more properly in my discussion of Secretary Laird's fourth and fifth objectives.

Secretary Laird described the fourth objective of the Safeguard system in the following way:

It offers the Soviet Union an added incentive for productive arms control talks.

S 8404

CONGRESSIONAL RECORD — SENATE

July 22, 1969

In the course of testimony before the subcommittee, Mr. Packard and Mr. Smith, and Mr. Rogers in his appearance before the full committee, also said that:

First. As even the first two Safeguard system installations will not be operational before 1973, there is ample time to negotiate agreements with the Soviet Union, so that Safeguard "opens the door wider to mutual arms control." Furthermore, "it should not take us years but months to determine if the Soviet Union is seriously interested in entering into arms control arrangements," to quote Mr. Smith, and if they are, deployment of the Safeguard system, which will be subject to annual review and appraisal, can be stopped. On the other hand, Secretary Laird told the subcommittee that "if the Soviets should slam the door on an agreement, the modified ABM would permit us to continue steps toward protection of our retaliatory forces" which would be important because "a Soviet rejection of meaningful negotiations would demonstrate a Soviet determination to continue to build toward a low-risk, first-strike force."

Second. The Safeguard system "requires" no military response from the Soviet Union, as would be the case if we were increasing the number of our offensive missiles and bombers. "It shows them that any effort on their part to achieve a successful first strike is fruitless" to quote Mr. Packard, but does so "without threatening their second strike deterrence."

Third. As a result of our announced intention in 1967 to deploy the Sentinel system, it is likely that any Soviet military reaction is already in train and would not be further affected by the deployment of the Safeguard system. Nor will the prospects for negotiations be affected because the Soviets had first indicated their willingness to negotiate after the decision to deploy Sentinel was announced and have reaffirmed their willingness to talk on several occasions since in public and in private talks with American officials.

Fourth. As the Soviets deployed their own ABM system first, they can hardly criticize us for deciding to do likewise or argue that our decision prejudices arms talks particularly since their system is already in place and ours is not.

Fifth. Quoting Secretary Rogers' statement to the Foreign Relations Committee on March 27:

We cannot predicate our security decisions, that we have to make now, on the potential success of future endeavors in the disarmament field.

Sixth. The Safeguard system will be a "further incentive" for discussions on the limitation of both offensive and defensive weapons.

Proceeding first to the point that there is time to negotiate agreements before the first Safeguard sites become operational and time—anywhere along the line—to stop the process of deploying the Safeguard system if the negotiations are successful, it seems to me that this argument assumes that we can make time work only one way—for us but not against us. Faced with the prospect of an ABM system that will be

operational in 1973, either the Soviets will enter into an agreement with us before that date, which will make it unnecessary for us to go ahead, or, if no agreement has been reached, deployment will begin and the objectives Secretary Laird claims for the system will be achieved. Heads, we win; tails, they lose.

But will they lose or will we? If the Safeguard system is as ineffective as many contend, and the Soviets are willing to ignore it, it will not affect the negotiations and will not have resulted in a Soviet reaction. But we will have spent billions of dollars for a system that does not protect us and that has not given us a negotiating advantage. The assumption that the Soviets will be willing to ignore it as either ineffective or harmless—to conclude, as stated in the second point above, that Safeguard "requires" no Soviet military response—would, again, call for considerable restraint on their part. In fact, as I have pointed out before, it would require more restraint than we ourselves have shown in response to their Galosh ABM system. Not only have we developed MIRV's and Poseidon missiles in response, but the administration's arguments imply that Galosh is another reason which justifies our deploying Safeguard. In how many ways must we react to new Soviet weapons systems? And in how many ways do we expect them not to react to new weapons systems of ours?

Of course, if the Safeguard system is effective, the Soviets will surely react. Even though the system is to be deployed around missile sites and thus does not affect Soviet second strike capabilities, how can they be sure that, once developed and deployed, it will not be turned into a "thick" system which would affect their second strike capability, despite Secretary Laird's assertion that Safeguard "cannot develop into the thick system surrounding our cities that the other proposed Sentinel system could have developed into." If "we cannot predicate our security decisions, that we have to make now, on the potential success of future endeavors in the disarmament field," to quote Secretary Rogers again, surely neither can they.

Time will work in another way as well. Once begun, weapons systems are difficult if not impossible to stop. The best time to stop them is before they are started, before rationales and justifications can shift, as has already been true in the case of our ABM, and before programs develop large and powerful constituencies.

As for the argument made by Safeguard proponents that the Soviets' military reaction to a Sentinel-type deployment was probably already in train and would not be affected by any deployment on our part, Dr. Marshall Shulman told the subcommittee:

I don't see how we can know that they have discounted it. As a matter of fact, you could probably make as strong a case for the opposite view.

Whether or not the Soviets have "discounted" the deployment of Safeguard, the point is that while the Soviets have continued to be willing to enter into

arms limitation talks—and initially indicated their willingness after the decision to deploy the thick and "provocative" Sentinel system was announced—they are, at the same time, adding to their arsenal of nuclear weapons. The arms race is still escalating, literally before our eyes.

There is one final comment that I would like to make on the subject of the "incentive" this decision is said to offer the Soviet Union for arms control talks. The use of the word "incentive" means, to me, that somehow we regard the prospective deployment of Safeguard, especially because it is to be deployed in phases, as some sort of a bargaining card in arms control talks with the Soviets.

I quote again from Dr. Shulman's statement to the subcommittee:

It would not be wise to deploy an ABM system in the belief that it would improve our bargaining position in relation to the missile talks. To do so would be more likely, in my opinion, to strengthen the position of those on the Soviet side who are only too ready to argue that the United States is too committed by its system or its pressure groups to an arms race to be seriously interested in its abatement.

I also quote the statement to the subcommittee of Dr. Carl Kaysen:

The future capacity to deploy, and perhaps to deploy a better conceived and designed system, is all the bargaining card we need. Actual deployment, by revealing what we are doing, diminishes rather than increases the effectiveness of our bargaining position.

Finally, I quote Secretary of State Rogers before the Committee on Foreign Relations on March 27:

In none of my talks with the Soviets has any Soviet representative suggested that the decision [on an ABM system] would affect the initiation of talks or their outcome. (emphasis added)

Can the Safeguard decision not affect the outcome of arms control talks but yet be a bargaining weapon?

Secretary Laird's fifth objective is really a summation of the other four. It is that the Safeguard system "provides the protection needed for the safety and security of our country—but only the protection that is needed." He explains that the Safeguard plan "permits us to respond to the Soviet threat, not as we project it, but as it develops in the months and years ahead. We neither add to our weapons inventory nor do we incur the costs for a threat that possibly will not materialize."

I would disagree with the Secretary, and so would most of the witnesses who appeared before the subcommittee, on his fundamental premises which are that deployment of the Safeguard system at this time would provide us with protection and thus enhance our security. I have already stated the relevant arguments: that our nuclear weapons arsenal is so vast that it could not be destroyed by any Soviet force that can be foreseen at this time; that the Safeguard system is of doubtful effectiveness and requires more research and development before it is deployed; that its deployment seems bound to cause a new cycle of action and reaction which will escalate the arms race at tremendous cost without provid-

July 22, 1969

CONGRESSIONAL RECORD — SENATE

S 8405

ing greater security; that an irrational Chinese attack seems no more likely than an irrational Soviet attack; and that Safeguard not only will not protect against an accidental launch but, in attempting to do so, may actually increase the risk of accidental nuclear explosion. In brief, the dangers inherent in the Safeguard system seem to me—to many of my colleagues, to many distinguished physical and social scientists and to many, many Americans—to outweigh by far the benefits of Safeguard, if indeed there are any benefits at all.

The Safeguard decision is not just another political or military decision. It is a decision which affects all Americans in fundamental and important ways. It will use large amounts of their tax monies directly and even larger amounts indirectly because of the weapons developments it will spawn—monies that could be used for problems pressing in on us at home. Thus, it will affect what we have come to call the quality of life in our country. It will, in my opinion, and in the opinion of many others, also affect the quality of international life for it will set off a new round in the armaments race, with all the dangers and tensions that it involves, as the Soviet strive for at least parity with us in nuclear weapons systems and as we strive to maintain "sufficiency."

In fact that next step in the race is almost upon us—the deployment of MIRV's, the weapon response to ABM. We are ready to deploy these weapons "not in the too distant future," according to the Secretary of Defense. The submarine version of MIRV's, the Poseidon, will be deployed "unless we conclude some agreements that would dictate otherwise," according to Mr. Packard.

The important issue involved in MIRV deployment is, simply, that while we can detect Soviet MIRV tests, and they can detect ours, there is no way of detecting deployment. After MIRV's have been tested to the point where they can be deployed, and we have almost reached that point, there is no way of knowing whether the number of warheads has been multiplied by two or three or five or more. The Soviets will not know how many warheads we will have—although it has been reported that we can multiply our submarine-launched missiles by about 10 and our land-launched missiles by three—and we will not know how many they have. Not knowing how many warheads are deployed by another state, each country will assume the worst. New systems of defense and offense, and thousands of new nuclear warheads, will be produced. Land-based missiles in fixed sites, like Minuteman, may well become obsolete, making Safeguard or any ABM system defending ICBM's unnecessary, and be replaced by other less vulnerable but even more lethal nuclear weapons systems. Control agreements will be beyond reach because verification will be impossible.

Hence, we are suddenly close to meeting, we and the Soviets, on the same plateau, barren and rocky though it is. It is the plateau of nuclear equality. It is not equality in weapons, for we have

far greater numbers of weapons, but equality in other ways. We are equal, in a sense, because we can destroy one another and a large part of the world as well. We are equal, too, because we will both soon be able to deploy a weapon—MIRV's—which will make verifiable agreements impossible. We are equal because we are both spending more on weapons than we should. We are equal because we do not trust one another, and see little reason to trust one another.

This plateau of nuclear equality, on which we and the Soviets stand momentarily poised, could prove to be the highest point reached in the nuclear arms race. Or it could be the point of departure for the next stage in that race which will lead us both to be better armed but less secure. The question before the Senate is clear: Who will take the first step—and in what direction?

URGENT NEED FOR ESTABLISHMENT OF A NATIONAL MINERALS POLICY

Mr. ALLOTT, Mr. President, on July 9, the Mineral Materials and Fuels Subcommittee of the Interior and Insular Affairs Committee conducted hearings on S. 7119, a bill to establish a national minerals policy. This is a bill which I have introduced in previous sessions of Congress and believe should have been enacted into law before now.

At the hearing, a most impressive group of the key executives of the industries which are closest to the necessity in such a policy, testified on behalf of this legislation. Most of these witnesses who were assembled, took time out of their busy schedules to be there. The members of the American Mining Congress, of which Mr. Cris Dobbins is the president, testified in full. Mr. Dobbins' excellent introductory and closing statements, I know, were founded upon his vast, keen personal acquaintance with the broad spectrum of our national minerals, from extraction to actual employment, past, present, and future. By reading it, all of the Members of Congress will be better acquainted with the need for a law establishing a national minerals policy.

I, therefore, ask unanimous consent that the statements of Mr. Dobbins be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF CRIS DOBBINS

Mr. Chairman and Members of the Committee: I am Cris Dobbins, Chairman and President of Ideal Basic Industries, Inc.

I am President also of the American Mining Congress, a trade association of U.S. companies that produce most of the nation's metals, coal, and industrial and agricultural minerals. Its membership also includes more than 200 corporations that manufacture mining and mineral processing equipment and supplies, as well as financial institutions with a business interest in the mining industry.

My colleagues and I appreciate this opportunity to appear before you to support the development of a national mining and minerals policy.

Through our several witnesses we hope to demonstrate the need for such a policy.

First, however, let me indicate how we interpret the concept, "Policy," and how we believe it might function to produce the desired result.

In a sense, almost every enactment by the Congress of a law relating to minerals is an expression of national minerals "policy." In this sense, the considerable number of existing laws pertaining directly to mining and minerals—the organic acts of the Geological Survey, the public land laws the stockpiling legislation, all define the national "policy." In addition, the vast accumulation of existing laws having an impact on mining and minerals—laws on internal revenue, environmental quality, aid to education, and so on, interact importantly with the minerals "policy."

But each of these legislative enactments is passed to meet a particular problem or purpose; seldom are they viewed altogether as an integrated expression of overall policy. As a result, they are not coordinated, there are contradictions one against another, and their relative priority is not determinable.

The executive branch of the government, charged with the responsibility of implementing all the laws, consequently lacks the clear direction which it needs effectively to achieve the intention of the Congress.

The articulation of a broad "Policy," such as the proposed mining and minerals policy, will, we believe, be of great value to the executive branch and to the nation, both in the implementation of existing legislation and in the development of future legislation.

It will serve as a statement of fundamental principles or objectives, an indication of Congressional priority, a "bench mark," if you will, against which the executive branch can measure proposed action and the Congress can measure proposed new legislation.

Moreover, by charging the Secretary of the Interior with overall responsibility for effectuation of the policy, the Congress assures itself of a fully responsible source of advice and counsel as to whether the Congress' objectives are being achieved and of recommendations as to further Congressional action which might from time to time be necessary.

The testimony you will hear from my colleagues is based upon this understanding of the concept of the term "Policy" as it is used in S. 719.

Our first witness is Mr. Andrew Fletcher, Honorary Chairman of St. Joseph Lead Company, who will provide you an over-view of the problems and opportunities facing the United States in regard to mining and minerals. He will be followed by Mr. James Boyd, President of Copper Range Company, who will discuss implications of the proposed policy on development and manpower in mining and minerals; Mr. David Swan, Vice President—Technology of Kennecott Copper Corporation, who will discuss environmental quality; Mr. Charles F. Barber, President of American Smelting and Refining Company, who will discuss the use of public lands; Mr. Lindsay F. Johnson, President of the New Jersey Zinc Company, who will discuss stockpiling; Mr. Fred W. Peel, of Miller and Chevalier, who will discuss tax policy and mine finance; and Mr. Donald J. Donahue, President of American Metal Climax, Inc., who will discuss foreign trade.

Following Mr. Donahue's statement we will all be pleased to respond to any questions you may have for us.

(Remarks of other American Mining Congress witnesses were made at this point in proceedings.)

Mr. Chairman and Members of the Committee: I hope that in these several presentations we have been able to demonstrate the broad scope and nature of the problems and opportunities facing our nation in regard to mining and minerals, and the importance of a Congressional declaration of National Policy on this vital subject.

It is clear, we believe, that such a Policy has implications to research, development and manpower, to environmental quality, to the use of public lands, to the subject of stockpiling, to tax policy and mine finance, and to foreign trade. Overall it has the most profound implications to the economic future of the United States which is based so heavily on a continuing supply of raw materials—both domestic and foreign.

The mining industry of the United States, which we represent here today, is dedicated to meeting the raw material requirements of our nation. The support and encouragement of a National Mining and Minerals Policy will help greatly in continuing to achieve that objective.

We thank you for this opportunity to present our views and we would be pleased to respond to any question you may have for us.

PRESIDENT NIXON'S MESSAGE ON THE POPULATION EXPLOSION

Mr. ALLOTT. Mr. President, I want to speak for a few moments this evening with respect to the growth of hunger and population in the world.

I am reminded of the biblical passage from Isaiah 8: 21 which reads as follows:

And it shall come to pass that when they shall be hungry, they shall . . . curse their King and their God.

The word "crisis" hangs in the air over discussions of food and population as the realities of life, ordered by a harsh and stern Nature, catch up with mankind in the last third of the 20th century.

Today many of us cling to an optimistic faith in the inevitability of progress, to the assumption that the fate of man on earth is destined to improve as time goes on.

Yet in his message to Congress last Thursday, President Nixon notes that if present rates of population growth continue, it is likely that the earth will contain 7 billion human beings by the end of this century.

It is in the developing nations of the world—

Said the President—

that population is growing more rapidly today. In these areas we often find rates of natural increase higher than any which have been experienced in all of human history. With their birth rates remaining high and with death rates dropping sharply, many countries of Latin America, Asia and Africa now grow ten times as fast as they did a century ago. At present rates, many will double and some may even triple their present populations before the year 2000.

And what of the quality of life? As the President said last week:

Despite considerable improvements in agricultural technology and some dramatic increases in grain production, it is still difficult to feed these added people at adequate levels of nutrition.

Protein malnutrition is widespread. It is estimated that every day some 10,000 people—most of them children—are dying from diseases of which malnutrition has been at least a partial cause.

The question, then, can be simply stated: Has the less-developed world lost the capacity to feed itself?

Today, there exists no shortage of experts willing to provide an answer.

The world will face the greatest famine in history by about 1980, says Rene Du-

mont, the French agronomist now director of research at the National Agricultural Institute in Paris. World population, he notes, is year by year outstripping food production.

Dumont wrote in late 1967:

Throughout the Third World, since 1959, population increase has been 26 per 1,000 per year and food production has increased for only 15 to 20 people per 1,000 per year. There are others—

Dumont adds—

who go farther than I do and say that it's already too late to avoid the terrible catastrophe and that it could come as soon as 1975.

Terrible catastrophe? The greatest famine in history? It does sound a bit extreme, until one does some arithmetic.

Tonight in the world, 170,000 deaths; twice as many births. It has been that way for years.

The result? Prior to World War II today's hungry nations were exporters of grain. By the 1960's they had become importers. In the 1930's Latin America exported more grain than the United States and Canada combined but by 1950, Latin America had become a grain importer.

The Netherlands Indies was a major prewar supplier of copra on the world market before World War II. Today's Indonesia, in contrast, exported in 1964 only one-half of the amount of 1938, although the total amount grown was greater than the crop of 1938.⁴

Add similar examples of corn in Nicaragua, wheat in India, soybeans in China, beans in Chile and the same result within the former exporting nations becomes more graphic. Swollen populations have consumed the surplus formerly exported and they must now import increasing amounts of food each year.

Grain exports-imports are an example:

Net import (-), export (+) of grain for Asia (not including Japan), Africa (not including South Africa), and Latin America (not including Argentina):⁵

Period:	[In millions of metric tons]
1934-38	+3
1948-52	-6
1957-59	-12
1961-63	-22
1964-65	-26
1965-66	-28
1966-67	-34
1967-68	-29

It is not just the dimension of this change that has caught the world off guard, it is the speed at which it has taken place.

It is a simple but indisputable fact—

Says GEORGE AIKEN, ranking Republican on the Senate Agriculture and Forestry Committee—

that world food supplies are running second to world population. We need an agricultural production to match the population re-

¹ The (London, England) Observer, December 10, 1967.

quirements. Despite the great progress that has been made in production yields, we cannot take the outcome of this crucial race for granted.

Says Senator MILTON YOUNG:

Concerning food needs in this country we have the capacity to produce all of our nation's needs for at least the next half century and perhaps far beyond. The farmers of this nation continue to produce more per unit each year with no end in sight. They are now producing enough to meet our domestic food demands plus up to \$6 billion worth of farm commodities for export annually. This is done at a time when we have a government program to keep idle more than 35 million acres of American cropland!

We must be concerned, however, about the population explosion around the world. The major problem involved here is one of finding a way to make our food available to these people other than through highly subsidized or donation programs.

Dr. Raymond Ewell believes—

The world is on the threshold of the biggest famine in history. If present trends continue, it seems likely that famine will reach serious proportions in India, Pakistan and China in the early 1970's . . . Such a famine will be of massive proportions affecting hundreds of millions.⁴

Swedish economist Gunnar Myrdal sees a "world calamity" in "5 or 10 years."⁵

W. Arthur Lewis writes:

We cannot be confident that world food production will increase during the next two or three decades at the desired rates.⁶

At the December 1967 OECD Ministers' Meeting a report on the food problem of the developing countries was presented by the Secretary General of OECD Thor-kil Kristensen. Notable points:

It is a matter of concern that in the first seven years of the 1960's the following phenomena have coincided:

Food production in the developing countries has grown more slowly than demand;

The area of good new land that could easily be brought under cultivation in developing countries has been sharply reduced;

The population of developing countries has been growing at an increasing rate;

Surplus stocks of grain in North America have roughly speaking been exhausted through shipments to less-developed areas;

Development aid from the richer countries has on the whole stagnated;

The debt burden of many developing countries has been rising fast.⁷

WHAT OF NEW SCIENTIFIC DEVELOPMENTS?

In May 1969, Addeke H. Boerma, Director-General of the United Nations Food and Agriculture Organization, said:

For one thing, the varieties that have so far been produced are not suited to some climatic conditions, so that there will be a need to test the behavior of existing varieties in many countries and to promote research in others in order to create varieties there which are locally suitable. Again, the new varieties will not yield their full capacity without the assistance of many other elements. These include primarily large quantities of fertilizers, plant protection chem-

S 8236

the long-range Spartan missile that works—they have successfully demonstrated the short-range Sprint missile. Now they say, let us put them all together in a single system and we will make the whole thing work. Can we doubt them? Can we doubt this type of demonstrated performance? I think not. These men are equipped with the facts—their recommendations are based on proven capability. They have testified before us that no question has been raised by outside experts that they had not raised in their own internal debate and for which satisfactory answers had been found. With these types of assurances, how can we doubt them.

The chance of a nuclear war today, I believe, is zero due to our overwhelming strategic deterrent. As I conceive it, the primary job of our Government is to keep this chance at zero—for without security, we have nothing. Nuclear war is the one thing that we absolutely cannot afford. We have two routes available to do this job. The first is to counter any attempt by any nation to overcome our deterrent force. We do this by improving, modifying, adding to or substituting weapons systems to insure that we can respond overwhelmingly in the case of attack. The second, and in my judgment the best course, is to reach some meaningful international agreements limiting strategic arms and thus insuring through agreement, rather than through investment in arms, that we can deter nuclear aggression.

These two courses are not separate routes. They are closely interrelated and intertwined to that point in the road where the arms agreement is signed. We must approach the bargaining table with the Soviets fully convinced that we will not allow them to overcome our deterrent no matter what the cost to us—no matter what the cost to them. We must approach the arms limitation talks with a club in one hand and a pen in the other, allowing them their choice. They must be convinced of the futility of proceeding with an arms race. We must present them with a posture that leaves no doubt as to our resolve.

The initial result we are looking for in strategic arms limitation talks is a method of insuring ours and the Russians' mutual deterrent capability without the need to further engage in the arms race and without reducing our security.

A properly designed agreement to limit strategic forces can better insure the security of both the United States and the Soviet Union. Our task in negotiating such an agreement should be eased by the growing realization on both sides that a first strike capability will not be permitted to develop regardless of the effort and money expended for that purpose. The Safeguard decision would be a clear indication of intent to the Soviets of our attitude in this regard.

The needs of the world are too urgent to waste the world's wealth on useless competition in strategic weapons. But the prospect for ending this competition rests on the attitudes and actions of both the Soviet Union and ourselves—not us alone.

The opposition to the Safeguard system strongly advocates the opposite position. They say that the deployment of these defensive weapons will accelerate the arms race and will make it more difficult to negotiate with the Russians. My answer to them is this—and please listen to these words carefully—"I believe that the defensive systems, which prevent attack, are not the cause of the arms race, but constitute a factor for preventing the death of people." These words represent well the point of view of those supporting the Safeguard system, but they were not spoken by a Safeguard advocate. These are the words of Soviet Premier Kosygin. This statement by Mr. Kosygin certainly does indicate an understanding of a defensive system.

Safeguard is a defensive system. The United States' decision to deploy a defensive ABM has been matched by an intensified Soviet interest in arms control. The Safeguard system makes it very clear to all nuclear powers, large and small, that we seek only to protect our deterrent forces—so that, in case of attack, we will be assured of the ability to destroy the attacker.

As someone once said:

Our pleas for peace are measured not by the sincerity with which they are spoken, but by the strength we can array to enforce them.

We cannot read the minds of the Soviet leaders, nor can we readily determine their intentions. We must base our decisions on their known capabilities. It does appear, though, that they understand the defensive nature of our Safeguard system. If they are ready for arms control—so are we. But, if arms control should fail, then the Safeguard system will give us the edge on deterrence.

A prudent person seeking a prudent decision on the difficult question of our strategic posture can do no other than to conclude that the phased Safeguard system is the prudent answer.

Mr. President, we must remain secure as a free nation. Our days must be days of preparedness and reality. One of the realities we must not forget is that weakness invites aggression, while strength deters it.

Preparedness in this nuclear age must constitute more than a sword; it must include a shield, as well.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll. Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. I do so only to express my deep personal thanks to the distinguished Senator from Wyoming for his graciousness in allowing so many of us to infringe on the time which he had asked for yesterday. I want him to know that I am deeply grateful and thankful for his graciousness, his courtesy, and the kindness he has shown us; but these are attributes of the Senator from Wyoming.

Mr. HANSEN. Mr. President, I am in-

deed grateful and appreciative of the very kind remarks of my beloved friend, the distinguished majority leader. The things he says about me have been said about him so many times that I shall not repeat them now; but I do appreciate his kind remarks.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. HANSEN. I yield.

Mr. STENNIS. I want to thank the Senator as well as commend him for taking time to put together in such concise and definite form his thoughts on this important question. As always, we know where he stands; he has expressed himself well, and has made a great contribution to the debate on this subject.

Mr. HANSEN. I thank the distinguished Senator from Mississippi very much.

Mr. President, I yield the floor.

The PRESIDING OFFICER. Pursuant to previous order, the Senator from Colorado (Mr. ALLOTT) is recognized for 30 minutes.

THE MANAGEMENT OF THE NATIONAL PARK SYSTEM

Mr. ALLOTT. Mr. President, George B. Hartzog, Jr., who is director of the National Park Service, was chosen to deliver the distinguished alumni address to the Federal Executive Institute in Charlottesville, Va., on July 12. Mr. Hartzog is a graduate of the Institute, which serves the development needs of career executives in the upper levels of our Government; and because his speech, "National Park Service Management," evidenced insight which I know will be of interest in the Senate, I ask unanimous consent that the text of Mr. Hartzog's remarks be printed in the RECORD at this point.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NATIONAL PARK SERVICE MANAGEMENT

(By George B. Hartzog, Jr.)

It is a great privilege and pleasure to participate in this reunion of the graduates of the first and second sessions of the Federal Executive Institute. For the high honor you have bestowed on me to present this first Distinguished Alumni address, I am deeply grateful.

I remember my attendance here as one of the highlights of my career. I shared many hours of good fellowship; made new friends among my colleagues in the Federal service; and gained new insights into our mutual problems and aspirations.

It is my firm belief that this Institute has the highest potential existing today for significant improvement in the quality of management within the Federal career service. I congratulate the Civil Service Commission, Dr. Sherwood, the faculty and the staff of the Institute for creative leadership in Executive Education. This pioneering effort has been difficult. You have accepted the challenge with vigor and imagination. You have achieved results and I predict even greater success in the years ahead.

Dr. Sherwood, in extending the invitation on behalf of the Alumni, suggested that I discuss with you the management of the National Park Service, with particular emphasis on policy leadership, the relationship of management to the political processes, and the special management needs of the National Park Service. Since you are all "old

CONGRESSIONAL RECORD — SENATE

S 8235

able to count on an orderly source of income.

But, in the meanwhile, the first priority is not to engage in a fight between the Democratic policy committee and certain members of their party, or certain members of our party.

We are not concerned here about personalities, or whether some group in the Senate wants to get the jump on another group in the Senate. In the course of it, I will tell the people who will get jumped. It will be them—the people of the United States. They will get jumped on. They will be jumped on every day if they do not get some kind of tax relief. Inflation will cool itself a little more and a little more and get tighter and tighter around them as it spreads its burden more seriously and harder upon the people of this country.

Mr. President, the weather yesterday registered its highest discomfort index for the year in Washington. I hope that today I may have raised the level of the discomfort index of those people who would dare to say to the people of the United States, "Stay on the tax roll. Face inflation. We have got a little family argument going on our side and we have not been able to decide it."

Mr. MANSFIELD. Mr. President, will the Senator from Wyoming yield me 2 minutes to reply to the Senator from Pennsylvania?

Mr. HANSEN. I am happy to yield to the Senator from Montana, provided I do not lose my right to the floor.

Mr. MANSFIELD. Mr. President, may I say, first, that I am not interested in dispensing "merces" to the low-income groups in this country.

What I am interested in is, if possible, to dispense justice to all our citizens.

So far as holding up this legislation is concerned, I would say to my distinguished friend, the assistant minority leader, that we on our side would be willing—very willing—to extend the withholding levels added by the original surcharge for 60 days, 90 days, or to the end of the year.

We would like to see at the same time something in the way of justice done for all our people. So far as I am concerned, let me say that I am willing to take my case to Montana's 56 counties.

So far as my index is concerned, it is quite comfortable. I feel that I am doing what I think is right. I do not believe there is a Member of this body who has ever accused me, even though I am a politician, of playing politics with any issue.

I think that the welfare of the country—and that means the people of this Nation—must always come first.

What I have tried to do is not place the blame, as my distinguished friend from Pennsylvania has, and who, in his philippic, without mentioning the Democratic Party, has in effect threatened us on the basis of the present issue.

If that is the case, so be it.

The gauntlet has been thrown down.

We accept it.

We will not allow anyone to blame us for the increase in the interest rate by 2½ percent since the beginning of this year, for the increase in the cost of liv-

ing, and for all the other inflationary spirals that have come into existence during the past 6 or 7 months while the surtax has been in full effect.

We both have a case. We should rest that case. I will not decide it. The Senator from Pennsylvania will not decide it. The Members of this body will decide it—both Democrats and Republicans.

I thank the distinguished Senator from Wyoming for being so gracious in yielding me this time.

ORDER FOR RECOGNITION OF SENATOR JAVITS

Mr. JAVITS. Mr. President, I ask unanimous consent that when the Senator from Nebraska (Mr. CURTIS) has concluded his remarks, and there are quite a succession of unanimous-consent requests to speak, that I may be recognized for 20 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

CLOSED SESSION ON ABM

Mr. SYMINGTON. Mr. President, will the Senator from Wyoming yield to me briefly without losing his right to the floor?

Mr. HANSEN. Mr. President, I am happy to yield to the Senator from Missouri, provided I do not lose my right to the floor.

Mr. SYMINGTON. Mr. President, I thank my good friend from Wyoming.

Mr. President, after noting remarks made to the press just prior to the closed session yesterday, and also reports this morning in the press about that session, and also statements made on the television media last night, I now see no reason for another closed session on the ABM.

Later, during further discussion of this matter in open session, I shall present to the Senate in greater detail my reasons for this course.

Mr. President, I thank the Senator from Wyoming for yielding to me at this time.

Mr. THURMOND. Mr. President, will the Senator yield?

Mr. HANSEN. Mr. President, I yield to the Senator from South Carolina for 1 minute, without losing my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

PERSONAL STATEMENT

Mr. THURMOND. Mr. President, this morning an article in the Washington Post reported that I stated in a speech to Prince Georges County Young Republicans last night that opponents of the Safeguard antiballistic missile are "people who don't believe in America, in free enterprise, people who are against our way of life." While the words actually quoted were a portion of my remarks, they were given in a context referring to radicals and violent-prone leaders who are disrupting the processes of law and order in our cities. My remarks on the ABM and violence in America were both contained in this speech, but it is incom-

prehensible how the reporter confused my remarks on these two completely different subjects. I hasten to set the record straight.

I certainly did not question the sincerity of those who are not supporting the President's Safeguard program. The people in America who are fighting the ABM are fully within their rights and are doing what they consider best for this country. In supporting the ABM, I am doing likewise.

A SWORD AND A SHIELD

Mr. HANSEN. Mr. President, the decision to deploy Safeguard stands on a solid foundation of reasoned judgment. It was developed on demonstrated fact—not conjecture. It was conceived from a proven capability—not wishful thinking. It took into account all factors—not just isolated incidents.

The structure of the decision has withstood the test of dissent.

Objections have been raised against it, but each has been satisfied—each rejected—to leave the basic decision even stronger for its examination.

I think it would be worthwhile at this time to review two basic reasons for supporting the President's phased Safeguard program—the first is its ability to do the task for which it is designed—the second, to examine its role in the arena of arms control.

Last Wednesday, this Nation launched a mission to place a man on the moon. It seems inconceivable to me that anyone could doubt the technical competence of a nation that could achieve such a feat. The United States of America has the scientific, technological, and industrial base to put an American on the moon. The United States of America has the scientific, technological, and industrial base to develop an anti-ballistic-missile defense that will work.

Mr. President, the Safeguard program is the culmination of more than 13 years of research and development effort and the expenditure of about \$5 billion, including all the various projects related to ballistic missile defense. An ABM program was first presented to the Congress in 1955. It moved into full-scale development in 1958. In 1963, the initial program—the Nike-Zeus system—was abandoned because, with the mechanically steered radars which it employed, it could not cope with the kind of attack the Soviets could mount in the late 1960's. For this reason, a new improved system, known as the Nike-X, was placed in development. This system was to use new phased-array radars and a new high acceleration terminal defense missile, the Sprint. In 1964, a program was initiated to develop a new, long-range interceptor with a high-yield warhead. This was the Spartan missile.

This review was just to give you some indication of the time our scientists have spent on the system and the confidence the Congress has shown in these scientists by our continued allocation of funds for this development.

For our investment, those scientists have provided us with a missile site radar that works—they have developed

as the Democratic Policy Committee by promptly reporting to the Senate a bill which would improve upon the House-passed measure and add some meaningful tax reform in addition to that which is already in the House bill.

I might say that I have often been advised by a President or a Secretary of the Treasury or even by my Majority Leader that a bill was important or that it had something in it that should not be there or that it lacked a feature which should be in it. That is nothing new to me. If I had not received the guidance of the Democratic Policy Committee I would have known what to do with this bill. Major revenue measures are no novelty to the Committee on Finance.

I do not presume to speak for the Democrats on this Committee nor do I presume to speak for the Republicans except as they authorize me to speak for them. But in proceeding with the consideration of the surtax bill I am not unmindful of the major tax reform measure being readied for House action by the Committee on Ways and Means. That Committee has dedicated itself to tax reform and the President and the Secretary of the Treasury has committed the Administration to tax reform. The Senate itself is gripped with tax reform fever.

But the pressing business now is to maintain the fiscal integrity of the Federal government and give the President the tools he says are needed to contain inflation.

As Chairman of the Committee on Finance it is my purpose to try and bring men of good will together so that the dual goals of fiscal policy and tax reform can be achieved in the best interest of the nation. I thought that was also the purpose of the resolution of the Democratic Policy Committee.

Mr. WILLIAMS of Delaware. Mr. President, I appreciate the statement the Senator from Louisiana has made. I appreciate his willingness to call the committee into executive session on Thursday in order that we can consider the possibility of taking action on reporting the surtax bill from the committee.

I think it is very important that we do consider in our committee major tax reform proposals, and I agree completely with the chairman that to do so properly will take rather extended hearings.

I do not think it is good for the country or for the economy of the country to postpone action on the surtax or the question of repeal of investment credit until after the hearings have been completed on major tax reforms and the committee can act. That could take until October.

I was hoping that we could proceed in an orderly manner. I was hoping that we could act on the surtax bill, which came from the House, and then, as the chairman has already announced, proceed next week to the hearing of any reform proposal of any Senator. By holding these hearings now we would be ready to mark up the bill soon after it is received from the House. Perhaps the House would have included their amendments as a part of the House bill; if not we could consider their suggestions.

I think we need major tax reform. The country is desirous of it. I have a strong interest in it; however, if we try to combine the two the delay will do a great disservice to the country.

I appreciate the fact that the chairman is willing to call the committee into executive session later this week and give us a chance to decide on reporting the surtax bill.

I would welcome the presence of the Democratic policy committee if they want to appear before the Finance Committee and express their views.

However, in all due respect to the Democratic policy committee, as I have pointed out, this is a measure that affects the country as a whole. It is a measure on which the Senate as a whole, both Republican and Democratic Senators, have a vital decision to make. I do not think the decision as to what we should not do is one that we can delegate to either the Republican policy committee or the Democratic policy committee. I think that this is something we should sit down together and work out.

I most respectfully point out to my colleagues on the other side of the aisle that when the tax bill was passed last year it was enacted in a bipartisan manner. It was cosponsored by Senator Smathers of Florida and me, and while President Johnson was in the White House.

I think the question of an extension of this topic now merits that same bipartisan approach at this time. And I hope that we can get it.

Again I want to express my appreciation to the chairman of our committee for his courtesy in extending to the minority members an opportunity to express their views by calling this executive session for later this week.

Mr. CURTIS. Mr. President, I commend the distinguished chairman of the Finance Committee, who is always fair and always considerate to members of his committee and Members of the Senate.

The Senator keeps in mind the interest of our total economy. We are faced with very definite problems. We need more revenue. The financial situation is acute.

It is easy to have a lot of talk about tax reform, and there should be tax reform.

Many of the provisions about which there is discussion of having reform have been in the Internal Revenue Code for 30, 40, or 50 years. We cannot strike them out either in the committee or on the floor without giving people a hearing.

I will give an illustration. One of the proposals relates to gifts that have an appreciated value to churches, hospitals, and colleges.

It would be unthinkable to change the status of that until we had heard from all parties involved. And to insist on combining the proposals for reform in the revenue bill may result in having neither reform nor a revenue bill.

Mr. President, I thank the Senator.

ABM

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The PRESIDING OFFICER. The Chair lays before the Senate the unfinished business, which will be stated.

The LEGISLATIVE CLERK. A bill (S. 2546)

to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each reserve component of the Armed Forces, and for other purposes.

The Senate resumed the consideration of the bill.

The PRESIDING OFFICER. Under the previous order, the Senator from Nebraska (Mr. CURTIS) is recognized for 30 minutes.

Mr. CURTIS. Mr. President, one of the major responsibilities of our Government is to maintain the peace and avoid the involvement in war. It is when the United States is strong—spiritually, economically, and militarily—that we will have the greatest success in preventing both large wars and small wars. Strength and firmness on the part of the United States are instruments of peace. Vacillation and appeasement are invitations to war. Such is the verdict of history.

I shall support the anti-ballistic-missile proposal because I am convinced that to do so enhances the cause of peace. I am convinced that to fail to provide for this defensive weapon will lessen our chances for peace. At a time like this, we should give to the President of the United States our unified support and every instrument that strengthens his position in dealing with the Communist world.

An awesome responsibility rests on the President of the United States. He is committed to the task of carrying on discussions with the Soviet leaders. I appeal to my colleagues to do all that is within their power to strengthen the position of the United States in these momentous times.

We should all realize the gravity of the situation. This is one issue where the outcome may rest upon one Senator. Theoretically, at least, it is possible for one Senator to bring into being an anti-ballistic-missile system to add to the strength of our Nation, or for that same Senator, by his vote, to tip the scales so that the measure is defeated. We should approach this not as a popularity contest. Fifty-one votes will authorize the ABM, which will bring protection to our country, add to its strength, and give us something that will deter aggression. A mere 49 votes for the ABM, assuming all Members of the Senate are present and voting, will deny this protection, not to the President personally but rather to our country.

Today there is a movement afoot to downgrade those who are charged with the defense of our country. There are those who preach disarmament and stress rapprochement with a potential enemy that understands only strength. There are some who view our relations with the Communist world by a double standard. When the Communists develop a new nuclear weapon system it is not destabilizing. When the United States proposes a defensive nuclear system it is an escalation.

15, 1969

S 8101

would otherwise be the case. There was a lot of reluctance to cutting individual income taxes—and revenues—in the face of the budget deficits we were experiencing.

The second fact is that the Senate invariably acts more swiftly on major tax legislation than the House of Representatives.

Applying this history to the present situation we observe that the House Ways and Means Committee has already devoted four months to tax reform.

The most optimistic predictions are that they will send us a bill in August—three months away. Assuming they meet that schedule and that we begin hearings in the Finance Committee right after Labor Day (Congress will be in recess from August 13 until after Labor Day) it would probably be December before the Senate passes the bill. Even so it would be a tremendous accomplishment to pass a major tax bill in less than one year.

Now, as I have mentioned, the Committee on Finance and the Senate are becoming more innovative and effective in the tax legislative processes. For instance, when other approaches had failed, a tax amendment assured the legality of the merger of the two major professional football leagues and fostered the single player draft, thereby reducing a tremendous financial strain on that industry. The tax check-off amendment, by which a taxpayer could direct the use of \$1 of his tax payment for presidential campaign purposes, is another illustration of Senate innovation in the tax area. Although the tax check-off was suspended a few months after it was enacted—and the suspension itself was Senate motivated—it has focused the attention of the nation on a problem we are going to have to deal with, probably before the next presidential election in 1972.

Indeed the 10 percent tax surcharge and the restraint on Federal spending in this fiscal year—which has made possible the first budget surplus in a good many years—was enacted as a Senate amendment. I would have preferred a change in the tax rates to the surcharge and my own amendment to provide an increase in the tax rates was at the desk when the surcharge amendment was agreed to. The many, many complaints we have had about the surcharge suggest to me that we would have done better from the standpoint of the public relations if we had taken the rate increase route.

In the Revenue Act of 1962 a Senate amendment (which I offered) assured enactment of the investment tax credit. It required that the depreciable basis for the property involved be decreased by the amount of the investment credit so that there would be no pyramiding of tax benefits. A Senate amendment calling for reporting to the tax collector of interest and dividend payments made to depositors and shareholders closed off a massive "leakage" in the tax system. This amendment was offered after it became clear that withholding of tax on this sort of income would not be passed.

The tie-breaking vote I cast in the Committee on the question of taxing foreign income of United States corporations and their subsidiaries probably saved those provisions. I cast that vote by telephone from Louisiana after the case for and against the amendment had been explained to me by Senators calling from the executive session of the Committee.

In the Revenue Act of 1964 a move in the Finance Committee to substitute an increase in the personal exemption for the rate reductions provided by the House bill was successfully resisted, guaranteeing that American taxpayers would realize their first tax rate reduction since the Korean War.

In another area, one of the important Senate amendments to the 1964 Act deleted a series of House provisions which would have

substantially liberalized the capital gains treatment for property held longer than three years. This liberalization had been linked to a proposal to tax unrealized appreciation in value of property held at death, but in a last-minute maneuver the House Ways and Means Committee decided not to change the law with respect to property held at death. However, it left the provision lowering the capital gains tax in the bill.

We deleted those provisions in the Finance Committee and during the debates on the bill we demonstrated for the Senate how capital gains have permitted many high income individuals to pay inordinately low taxes. I have observed that in terms of sheer size capital gains is the "granddaddy" of all the tax preferences, and we just could not justify making capital gains still more rewarding and we made this attitude stick in conference.

More currently, the present move for tax reform really got its start as a Senate amendment which we prevailed upon the House to accept, calling on the President to submit recommendations for tax reform to Congress by December 31, 1968. Those recommendations, actually submitted by Treasury technicians in February of this year are now the backbone of the tax reform effort underway in the House Ways and Means Committee.

So in a large measure the present tax reform move owes its momentum to two significant developments, both of which occurred in the Senate. First, the enactment of the surtax, which has created a great unrest among taxpayers across the land, causing a public demand for tax reform. Secondly, was the advance work on tax reform done by the Treasury Department in response to the Senate amendment calling for tax reform suggestions. When the call came much of the work was already done.

CONSIDERATION OF THE SURTAX BY THE SENATE (Press release of Committee on Finance, U.S. Senate)

Before ending this phase of hearings on the surtax bill, the Chairman would like to make his position on this bill clear, if that is possible. To begin with, I am thoroughly confused about whatever it is that the Democratic Policy Committee wants this Committee to do. I have been a member of the Senate for more than 20 years and a member of the Committee on Finance for more than 16. During those years I have managed major revenue bills recommended by former President, John F. Kennedy and Lyndon B. Johnson.

But unfortunately, I had no such experience with the present policy of the Democratic Policy Committee, because at that time the Democratic Policy Committee did not seek to provide guidance to Committees and Committee Chairman about House revenue bills much less provide such guidance even before the bills reached the Senate. The procedure is completely new to me and therefore, I find myself groping for an answer just as the Policy Committee itself is groping for an answer to its own policy.

Before this bill came to the Senate, the Democratic Policy Committee requested me to meet with that Committee and discuss tax reform suggestions. The Democratic Policy Committee had one expert with them, a fair, distinguished and able man who is a former high government official. I was invited back again two weeks later without any prior knowledge of the subject to be discussed. At that meeting the Democratic Policy Committee agreed to a resolution as follows:

"Whereas, the Senate Majority Policy Committee, having met and considered the matter of the extension of the income tax surcharge, hereby resolves:

"That meaningful tax reforms should be adopted as a means of achieving an equitable

national income tax policy, and further resolves,

"That any proposal to extend the income tax surcharge be considered simultaneously with recommendations on meaningful tax reform and further resolves,

"That the present income tax withholding rates be continued after June 30, 1969 for a period of one quarter to permit full consideration and disposition of the reform and extension of the surtax."

The original text of this resolution used the words "full and comprehensive tax reform" instead of "meaningful" as was in the published resolution. It is because I pointed out to the Policy Committee that it could take many months or even years to draft a full and comprehensive tax reform measure that the word "meaningful" was substituted for "full and comprehensive" in its resolution.

I explained to the Policy Committee that tax reform meant different things to different people. It was my suggestion that the Committee on Finance should report whatever bill the Committee could agree upon, and Senators could offer any amendment they chose when the bill reached the floor.

It was my thought that the Senate would approve those amendments that a majority of the Senators favored and vote down those amendments which a majority of the Senate did not favor. We have proceeded that way with revenue bills for the twenty years that I have served here.

This important measure has been of major concern to the President of the United States and to the Secretary of the Treasury. Both of them have expressed fear of the utter chaos that could descend upon this nation, if this bill—which is the only Administration measure at this point seeking to maintain a stable economic and fiscal condition in our land—should fail to be enacted.

Their concern has been shared by public expression of every living ex-Secretary of the Treasury, including such men as Joe Barr, Henry Fowler, Douglas Dillon, Bob Anderson, George Humphrey and John Snyder. All of these financial leaders have deplored the present situation which jeopardizes the ability of the Federal government to pay its debts currently. They deplore the plight of the President and they deplore the plight of the nation if this bill should fail. It would be of the utmost concern to all of them and to the President if the present surtax should not be expeditiously extended. Therefore, as Chairman of this Committee, I undertook to set up a schedule which would bring this bill before the Senate prior to the expiration date set by law—July 31. That is the basis upon which this Committee is proceeding.

Now, it has been suggested that two bills should be reported by the Committee on Finance before the first bill is considered. That came as a surprise to me when it was first suggested, just as it surprised Senator Muskie who was a member of the Policy Committee. His remarks on the Floor yesterday suggested that he felt the two bills approach was contrary to the resolution of the Democratic Policy Committee.

Fortunately for us, the task today is simple—we will now conclude the hearings of the public witnesses testifying on the suspension of the investment tax credit. I would hope that we can hear Senators next week who desire to testify on the tax reform proposals they plan to offer to this bill. Then I will seek to obtain for the Committee the benefit of further guidance, after which the Committee can then decide if it wishes to hear further testimony or commence voting.

As Chairman of this Committee I regret that there has been a misunderstanding of how I intend to proceed with this bill. It was my intention to satisfy the views of the President, Secretary of the Treasury as well

July 15, 1969

The international graveyards of history are full of the corpses of those who believed that appeasement and weakness would not be challenged by an aggressor.

Today, America stands at a crossroads. While we debate whether or not a defensive system is needed to protect our retaliatory capability, the Soviet Union is expanding its offensive on all fronts.

Ad hoc committees against the ABM are being formed. Anti-ABM books are being written and leaflets are being distributed. The propaganda mills of the unilateral disarmers are going full tilt.

It is interesting to note that those groups who stress that the Safeguard ABM system will not work because it has not been tested in the environment in which it must be used are some of the same groups who pleaded so eloquently for the limited test ban treaty. This treaty prevents the United States from testing in the atmosphere or outer space. I voted against the limited test ban treaty, and I well remember during the debate that we were all assured that we could accomplish whatever nuclear tests were needed for our defense underground. Would those opponents of the ABM now suggest that we abrogate the limited test ban treaty in order to test the ABM? I think not.

I believe those who told us then and tell us now that the ABM can be successfully tested without the resumption of atmospheric testing. I am concerned when I hear those who do not have the awesome responsibility of decision criticize and carp. I wonder about those who, when they were in government, raised no objection to ABM concepts, but now without the responsibility of command speak so eloquently in opposition from their ivory towers.

I believe Dr. John Foster, Director of Research and Engineering for the Defense Department, when he stated before the Armed Services Committee that the ABM will perform the task assigned to it.

Let me point out some of the reasons the United States needs an ABM system.

The Soviet Union has one and possibly two ABM systems—the first around Moscow, and the second, the so-called Tallinn system, spread throughout the Soviet Union. These systems are already deployed. We, on the other hand, have none.

The Soviets have greatly increased their offensive capability. Former Secretary of Defense Clark Clifford in his prepared statement of January 16, 1969, said:

We estimate that as of September 1, 1968, the Soviets had approximately 900 ICBM launchers operational, compared with 570 in mid-1967, and 250 in mid-1966, an increase of well over threefold in a period of little more than two years.

According to Adm. H. G. Rickover, the Soviet Union has greatly increased its offensive ballistic missile submarines. In a letter to the Senator from Rhode Island (Mr. PASTORE), vice chairman of the joint committee, Admiral Rickover said:

In the single year 1968, the Soviets put to sea a new type ballistic missile submarine

as well as several new types of nuclear attack submarines—a feat far exceeding anything we have ever done. . . .

In November 1967, former Secretary of Defense McNamara revealed that the Soviet Union had developed a fractional orbital bombardment system—FOBS. This FOBS target cannot be determined until 3 minutes and 500 miles from the target.

Secretary of Defense Laird revealed in testimony before the Senate Armed Services Committee that the Soviet arsenal contains over 200 SS-9 missiles, each one capable of delivering up to 25 megatons on our Minuteman missiles.

Despite overwhelming evidence of a recent increase in the Soviet offensive as well as defensive capability, we still hesitate to defend ourselves.

The anti-ballistic-missile system proposed by President Nixon on March 14, 1969, is a defensive system to protect U.S. retaliatory capability. It has been suggested by some that this defensive move on our part constitutes an escalation of the East-West arms race. Nothing could be farther from the truth. Rather than escalation, a defensive ABM system is a stabilizing factor. Even opponents of the ABM system concede that it is not another round in the arms race.

In an exchange with the Senator from Missouri (Mr. SYMINGTON) during hearings before the Foreign Relations Committee, Dr. Wolfgang Panofsky discussed this point:

Senator SYMINGTON. Dr. Panofsky, I would ask this question: If we are successful in defending Minuteman bases in this way, and if they desire to maintain parity, would they not increase their ICBMs?

Dr. PANOFSKY. Only if they were genuinely interested in a first strike posture. If they were satisfied by a second strike posture, then, if we increased the defense of our Minuteman bases by ABMs, they would not have to increase their ICBM force. (Page 341, March 28, 1969)

Dr. Hans Bethe, professor of physics, Cornell University, then opposing the Sentinel ABM system, stated:

A completely different concept of ABM is to deploy it around Minuteman silos and command and control centers. This application has gone in and out of Defense Department planning. I am in favor of such a scheme at the appropriate time. My main reason for being in favor is that such a deployment would stabilize the strategic situation rather than the opposite. (Page 39)

Dr. Bethe's statement was made on March 6, 8 days before President Nixon announced the Safeguard system which would accomplish precisely what Dr. Bethe advocated.

I have been discussing Soviet strength and capability to wage war. Let me review Soviet past behavior.

Less than a year ago, in August 1968, the Soviet Union ruthlessly invaded the territory of an ally—Czechoslovakia. If the Soviet Union would do this to an ally, what would it do to a potential foe?

In 1962 the Soviet Union placed offensive nuclear missiles in Cuba, 90 miles from our shores.

In 1956 the Soviets brutally stamped out the freedom fighters of Hungary.

And for those who prefer long-range

history, who can forget that in 1940 the Soviet Union joined with Nazi Germany in a nonaggression pact?

In America today, our problem is to alert the people to the threat of the international Communist conspiracy. We have to reach the heartland of America. We have to avoid the siren calls of the disgruntled intellectuals. We must alert the people to the problems around us as President Eisenhower did in his farewell speech given on January 17, 1961. It is interesting that one sentence—no, really three words, "military-industrial complex"—is almost solely quoted from that speech. How many have read the speech in its entirety? President Eisenhower referred to the Communists in that speech when he said:

We face a hostile ideology—global in scope, atheistic in character, ruthless in purpose, and insidious in method. Unhappily the danger it poses promises to be of indefinite duration.

In another part of his excellent address, President Eisenhower said:

In holding scientific research and discovery in respect, as we should, we must also be alert to the equal and opposite danger that public policy could itself become the captive of a scientific-technological elite.

I have rarely seen these portions quoted in our news media and, therefore, I ask unanimous consent to have printed in the Record the entire speech by President Eisenhower to follow my statement.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. CURTIS. Mr. President, the choice today is ours. Communist nations are on the march. Our leaders, both Democrats and Republicans, urge us to defend ourselves. The last three Secretaries of Defense urged the development of an anti-ballistic-missile system. There is no partisanship in this cry for defense. I regret that some members of my own party may not see the dangers of taking first one step, then another, and still another toward peace at any price.

What is past is prologue. I only hope we will remember it was the Soviet Union that broke the informal atmospheric testing moratorium in 1961. During that test series, the Soviets detonated a 60-megaton terror weapon. They broke that informal moratorium while their representatives sat with ours in peaceful discussions in Geneva. If we do not learn from the past, we are doomed in the future.

I strongly urge that every Member of the Senate vote for the defensive Safeguard system. To do otherwise is an invitation to disaster.

EXHIBIT 1

FAREWELL RADIO AND TELEVISION ADDRESS TO THE AMERICAN PEOPLE, JANUARY 17, 1961

[Delivered from the President's Office at 8:30 p.m.]

My fellow Americans:

Three days from now, after half a century in the service of our country, I shall lay down the responsibilities of office as, in traditional and solemn ceremony, the authority of the Presidency is vested in my successor.

This evening I come to you with a message of leave-taking and farewell, and to share a few final thoughts with you, my countrymen.

July 15, 1969

Like every other citizen, I wish the new President, and all who will labor with him, Godspeed. I pray that the coming years will be blessed with peace and prosperity for all.

Our people expect their President and the Congress to find essential agreement on issues of great moment, the wise resolution of which will better shape the future of the Nation.

My own relations with the Congress, which began on a remote and tenuous basis when, long ago, a member of the Senate appointed me to West Point, have since ranged to the intimate during the war and immediate post-war period, and, finally, to the mutually interdependent during these past eight years.

In this final relationship, the Congress and the Administration have, on most vital issues, cooperated well, to serve the national good rather than mere partisanship, and so have assured that the business of the Nation should go forward. So, my official relationship with the Congress ends in a feeling, on my part, of gratitude that we have been able to do so much together.

II

We now stand ten years past the midpoint of a century that has witnessed four major wars among great nations. Three of these involved our own country. Despite these holocausts America is today the strongest, the most influential and most productive nation in the world. Understandably proud of this pre-eminence, we yet realize that America's leadership and prestige depend, not merely upon our unmatched material progress, riches and military strength, but on how we use our power in the interests of world peace and human betterment.

III

Throughout America's adventure in free government, our basic purposes have been to keep the peace; to foster progress in human achievement, and to enhance liberty, dignity and integrity among people and among nations. To strive for less would be unworthy of a free and religious people. Any failure traceable to arrogance, or our lack of comprehension or readiness to sacrifice would inflict upon us grievous hurt both at home and abroad.

Progress toward these noble goals is persistently threatened by the conflict now engulfing the world. It commands our whole attention, absorbs our very beings. We face a hostile ideology—global in scope, atheistic in character, ruthless in purpose, and insidious in method. Unhappily the danger it poses promises to be of indefinite duration. To meet it successfully, there is called for, not so much the emotional and transitory sacrifices of crisis, but rather those which enable us to carry forward steadily, surely, and without complaint the burdens of a prolonged and complex struggle—with liberty the stake. Only thus shall we remain, despite every provocation, on our charted course toward permanent peace and human betterment.

Crises there will continue to be. In meeting them, whether foreign or domestic, great or small, there is a recurring temptation to feel that some spectacular and costly action could become the miraculous solution to all current difficulties. A huge increase in newer elements of our defense; development of unrealistic programs to cure every ill in agriculture; a dramatic expansion in basic and applied research—these and many other possibilities, each possibly promising in itself, may be suggested as the only way to the road we wish to travel.

But each proposal must be weighed in the light of a broader consideration: the need to maintain balance in and among national programs—balance between the private and the public economy, balance between cost and hoped for advantage—balance between the clearly necessary and the comfortably desirable; balance between our essential re-

quirements as a nation and the duties imposed by the nation upon the individual; balance between actions of the moment and the national welfare of the future. Good judgment seeks balance and progress; lack of it eventually finds imbalance and frustration.

The record of many decades stands as proof that our people and their government have, in the main, understood these truths and have responded to them well, in the face of stress and threat. But threats, new in kind or degree, constantly arise. I mention two only.

IV

A vital element in keeping the peace is our military establishment. Our arms must be mighty, ready for instant action, so that no potential aggressor may be tempted to risk his own destruction.

Our military organization today bears little relation to that known by any of my predecessors in peacetime, or indeed by the fighting men of World War II or Korea.

Until the latest of our world conflicts, the United States had no armaments industry. American makers of plowshares could, with time and as required, make swords as well. But now we can no longer risk emergency improvisation of national defense; we have been compelled to create a permanent armaments industry of vast proportions. Added to this, three and a half million men and women are directly engaged in the defense establishment. We annually spend on military security more than the net income of all United States corporations.

This conjunction of an immense military establishment and a large arms industry is new in the American experience. The total influence—economic, political, even spiritual—is felt in every city, every State house, every office of the Federal government. We recognize the imperative need for this development. Yet we must not fail to comprehend its grave implications. Our toil, resources and livelihood are all involved; so is the very structure of our society.

In the councils of government, we must guard against the acquisition of unwarranted influence, whether sought or unsought, by the military-industrial complex. The potential for the disastrous rise of misplaced power exists and will persist.

We must never let the weight of this combination endanger our liberties or democratic processes. We should take nothing for granted. Only an alert and knowledgeable citizenry can compel the proper meshing of the huge industrial and military machinery of defense with our peaceful methods and goals, so that security and liberty may prosper together.

Akin to, and largely responsible for the sweeping changes in our industrial-military posture, has been the technological revolution during recent decades.

In this revolution, research has become central; it also becomes more formalized, complex, and costly. A steadily increasing share is conducted for, by, or at the direction of, the Federal government.

Today, the solitary inventor, tinkering in his shop, has been overshadowed by task forces of scientists in laboratories and testing fields. In the same fashion, the free university, historically the fountainhead of free ideas and scientific discovery, has experienced a revolution in the conduct of research. Partly because of the huge cost involved, a government contract becomes virtually a substitute for intellectual curiosity. For every old blackboard there are now hundreds of new electronic computers.

The prospect of domination of the nation's scholars by Federal employment, project allocations, and the power of money is ever present—and is gravely to be regarded.

Yet, in holding scientific research and discovery in respect, as we should, we must also be alert to the equal and opposite dan-

ger that public policy could itself become the captive of a scientific-technological elite.

It is the task of statesmanship to mold, to balance, and to integrate these and other forces, new and old, within the principles of our democratic system—ever aiming toward the supreme goals of our free society.

V

Another factor in maintaining balance involves the element of time. As we peer into society's future, we—you and I, and our government—must avoid the impulse to live only for today, plundering, for our own ease and convenience, the precious resources of tomorrow. We cannot mortgage the material assets of our grandchildren without risking the loss also of their political and spiritual heritage. We want democracy to survive for all generations to come, not to become the insolvent phantom of tomorrow.

VI

Down the long lane of the history yet to be written America knows that this world of ours, ever growing smaller, must avoid becoming a community of dreadful fear and hate, and be, instead, a proud confederation of mutual trust and respect.

Such a confederation must be one of equals. The weakest must come to the conference table with the same confidence as do we, protected as we are by our moral, economic, and military strength. That table, though scarred by many past frustrations, cannot be abandoned for the certain agony of the battlefield.

Disarmament, with mutual honor and confidence, is a continuing imperative. Together we must learn how to compose differences, not with arms, but with intellect and decent purpose. Because this need is so sharp and apparent I confess that I lay down my official responsibilities in this field with a definite sense of disappointment. As one who has witnessed the horror and the lingering sadness of war—as one who knows that another war could utterly destroy this civilization which has been so slowly and painfully built over thousands of years—I wish I could say tonight that a lasting peace is in sight.

Happily, I can say that war has been avoided. Steady progress toward our ultimate goal has been made. But, so much remains to be done. As a private citizen, I shall never cease to do what little I can to help the world advance along that road.

VII

So—in this my last good night to you as your President—I thank you for the many opportunities you have given me for public service in war and peace. I trust that in that service you find some things worthy; as for the rest of it, I know you will find ways to improve performance in the future.

You and I—my fellow citizens—need to be strong in our faith that all nations, under God, will reach the goal of peace with justice. May we be ever unswerving in devotion to principle, confident but humble with power, diligent in pursuit of the Nation's great goals.

To all the peoples of the world, I once more give expression to America's prayerful and continuing aspiration:

We pray that peoples of all faiths, all races, all nations, may have their great human needs satisfied; that those now denied opportunity shall come to enjoy it to the full; that all who yearn for freedom may experience its spiritual blessings; that those who have freedom will understand, also, its heavy responsibilities; that all who are insensitive to the needs of others will learn charity; that the scourges of poverty, disease and ignorance will be made to disappear from the earth, and that, in the goodness of time, all peoples will come to live together in a peace guaranteed by the binding force of mutual respect and love.

July 15, 1969

CONGRESSIONAL RECORD — SENATE

S 8105

Mr. CURTIS. Mr. President, I yield the floor, and I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DOMINICK obtained the floor.

Mr. MANSFIELD. Mr. President, will the Senator yield, without losing his right to the floor?

Mr. DOMINICK. I yield.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, will the Senator yield to me, briefly?

Mr. DOMINICK. I am happy to yield.

**ORDER FOR ADJOURNMENT FROM
WEDNESDAY, JULY 16, UNTIL
THURSDAY, JULY 17, 1969**

Mr. MANSFIELD. Mr. President, for the information of the Senate, I ask unanimous consent that when the Senate completes its business tomorrow, it stand in adjournment until 12 o'clock noon on Thursday next.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM

Mr. MANSFIELD. Mr. President, for the information of the Senate, after the prayer and possibly the reading of the Journal on Thursday next, it is the intention of the distinguished Senator from Missouri (Mr. SYMINGTON) to move that the Senate go into closed session. There will be no morning hour that day. There will be a live quorum call as soon as the request is made and granted, which is automatic; and all Senators should be on notice that this will take place on that day, and they should be prepared accordingly.

One more thing: It is my understanding that no attachés of the Senate will be permitted in the Chamber except those designated under rule XXXVI and those who the Presiding Officer thinks are necessary. In other words, it is my understanding that there will be no officials or staff members attached to Senators or to the committee itself.

Mr. STENNIS. Mr. President, will the Senator yield for one comment on the situation?

Mr. DOMINICK. I yield.

Mr. STENNIS. At a conference with the Senator from Kentucky, who is in opposition to the ABM, we were in agreement that we should try—and we thought we could—to finish that session in 1 day, and that we should go into it in that spirit.

Mr. MANSFIELD. Yes, indeed.

Mr. STENNIS. I expect to be fairly brief, and I think others will, and I hope we can conclude within that time.

Mr. MANSFIELD. I am wholeheartedly in accord with the statement just made by the Senator from Mississippi, the manager of the bill under consideration. Frankly, I see no reason why the closed session should not be completed in 1 day, and I devoutly hope it would be so that we could go on with the business and perhaps begin voting on amendments.

Mr. STENNIS. May I commend and also thank the majority leader for agreeing to cooperate to have this all done in 1 day, if possible, and to have no other business on that day, so that the session can move along.

Mr. MANSFIELD. That is correct.

I hope that Senators who are not present in the Chamber at this time will read the Record and will be aware of the fact that there will be no morning business on Thursday next; that the Senator from Missouri (Mr. SYMINGTON) will move for a closed session; that the motion will be seconded—its acceptance is automatic—and that there will be no staff members in the Chamber, either for individual Senators or for the Committee on Armed Services itself.

That is all I have to say, unless there are further questions.

Mr. MURPHY. Mr. President, will the Senator yield for a question?

Mr. DOMINICK. I yield.

Mr. MURPHY. I understand that the Senator from Missouri will ask for a closed session. How long will that last, or is there a limit, or what do the rules provide?

Mr. MANSFIELD. There is no limit that I know of, but I hope we would get through within 4, 5, or 6 hours at the most, and complete the closed session that day. I would say offhand that the chances are fairly good that such could be done.

Mr. MURPHY. Does the majority leader control the limitation on that, or does the Senator from Missouri control the limitation?

Mr. MANSFIELD. Any control, I would imagine, would have to be under unanimous agreement, in closed session, and that would be a matter for the Senators most interested—the Senator from Mississippi (Mr. STENNIS), the Senator from Missouri (Mr. SYMINGTON), the Senator from Kentucky (Mr. COOPER)—and others to discuss. Whatever they would desire to do, the leadership would be glad to comply with their request.

Mr. MURPHY. I thank the Senator.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. DOMINICK. I yield.

Mr. COOPER. Mr. President, as has already been said, we talked about the possibility of completing the closed session in this one meeting. I have consulted with the Senator from Missouri (Mr. SYMINGTON), who will move for a closed session, and I have spoken with other Senators who oppose the deployment of the anti-ballistic-missile system, and all have agreed to make a determined effort to conclude all the busi-

ness of the closed session on Thursday. However, of course, we cannot bind anyone who may later desire to move for a closed session from so doing. At least, it is our intention to move as quickly as we can on Thursday.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. DOMINICK. I yield.

Mr. DIRKSEN. Mr. President, it should be made clear that any Senator can move for a closed session, and if we get one second, it becomes automatic.

Mr. COOPER. The Senator is correct. If later on any Senator felt he needed more information or anything that was from classified information that we should have access to, it is not only his right but his duty to request a closed session.

Mr. MANSFIELD. Mr. President, will the Senator yield briefly?

Mr. DOMINICK. I yield.

Mr. MANSFIELD. Mr. President, as long as the Senator from Missouri is now present in the Chamber, I wish to say that the Senator from Missouri has informed me that it is his intention, after reading of the Journal on Thursday next, to move that the Senate go into executive session. I have informed the Senate that there will be no attachés on the floor of the Senate, either for individual Senators or for the Committee on Armed Services; and the Senator from Kentucky and the Senator from Mississippi, and a number of other Senators, along with the joint leadership, have expressed the hope that it may be possible to complete that closed session that day so that it will not go over to the next day, but we cannot guarantee it.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. DOMINICK. I yield to the Senator from Missouri.

Mr. SYMINGTON. It would not be my intention to take extended time when presenting matters in closed session on this particular issue. However, from what I understand, there may be other closed sessions on other weapons systems later. I do not know what the distinguished chairman, the Senator from Mississippi has in mind, but I do not intend to take much time.

Mr. MANSFIELD. Mr. President, I wish to thank the distinguished Senator from Colorado for his graciousness and courtesy in allowing us to proceed.

**MESSAGES FROM THE PRESIDENT—
APPROVAL OF BILLS**

Messages in writing from the President of the United States were communicated to the Senate by Mr. Geisler, one of his secretaries, and he announced that on July 11, 1969, the President had approved and signed the following acts:

S. 1010. An act for the relief of Mrs. Aill Kallio; and

S. 1011. An act to authorize appropriations for the saline water conversion program for fiscal year 1970, and for other purposes.

EXECUTIVE MESSAGES REFERRED

As in executive session the Presiding Officer laid before the Senate messages

S 8106

CONGRESSIONAL RECORD — SENATE

July 15, 1969

from the President of the United States submitting sundry nominations, which were referred to the Committee on Armed Services.

(For nominations this day received, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Bartlett, one of its reading clerks, announced that the House had passed, without amendment, the bill (S. 648) for the relief of Ernesto Alunday.

ENROLLED BILLS SIGNED

The message also announced that the Speaker had affixed his signature to the following enrolled bills:

H.R. 3168. An act for the relief of Aleksandar Zambelj;

H.R. 3172. An act for the relief of Yolanda Puigencio Hunter; and

H.R. 3376. An act for the relief of Maria da Conceicao Evaristo.

SAFEGUARD IN PERSPECTIVE

Mr. DOMINICK, Mr. President, on March 14, 1969, President Nixon announced that he had decided to proceed with the development, construction, and positioning of the Safeguard ballistic missile defense system in a carefully phased program. He stated his belief that we must act now to buy options to help counter the growing capability of potential adversaries of this country. A delay would mean a significant lag before such a defense could become operational. This delay could in turn expose the country to dangerous risks in the mid-1970's.

In the debate which has ensued over this system, four key questions appear to have been raised.

First. Why do we need such a system?

Second. What exactly is the system?

Third. What does it do to prospects for arms control?

Fourth. Will Safeguard work?

I would like to explore these four principal points in some depth.

WHY DO WE NEED SUCH A SYSTEM?

The President stated that the objectives of this program are:

First, protection of our land-based retaliatory forces against a direct attack by the Soviet Union.

Second, defense of the American people against any kind of primitive nuclear attack or nuclear blackmail which countries such as Communist China may threaten in the 1970's.

Third, protection against accidental ballistic launches from any source in the mid- to late-1970's.

The following facts underscore the committee's decision to proceed with a program to meet these objectives.

First, the Soviet Union is engaged in a buildup of its strategic forces significantly larger than was envisaged in 1967 when the previous administration decided to go ahead with the Sentinel. For example:

The Soviet Union is continuing the deployment of very large missiles. Whether these missiles are armed with 25-mega-

ton nuclear warheads or with multiple, independently targetable warheads, continued production and deployment of these missiles will give the Soviets the capability to destroy our own land-based missile force.

The Soviet Union has been substantially increasing the size of its submarine force. As noted on page 7 of the committee report, the Soviets now have a new submarine force of about 375, whereas we have 143—of which 61 are diesel submarines of World War II vintage. Thus the Soviets have a numerical advantage of about 230 submarines. Parenthetically, I might say this is extremely interesting when one considers that in World War II, when the Nazis almost cut off all commerce with European countries, they started that fight with 97 submarines. The Soviet Union now has about 230 submarines over our forces.

At least 65 of the Soviet subs are nuclear powered, and many are equipped with ballistic launched missiles. They are continuing to produce these and have the capability of striking with virtually no warning against our bomber bases or elsewhere.

The Soviets have been developing a semiorbital nuclear weapon system, known as FOBS, which poses a new and different threat to our people and to our bomber bases.

The Soviet Union has already deployed an ABM system designed to afford protection to its western industrialized area and is continuing its research and development in this field.

Second, the Red Chinese capability to launch a weak nuclear attack against the U.S. population in the middle 1970's formed the announced basis for President Johnson's decision to proceed with the Sentinel system, a far more costly and controversial system than the Safeguard. Red China's capability still remains a real threat.

Third, an accidental or unauthorized launch targeted on our country would leave any President in a horrible dilemma if we had no ABM with which to intercept it. In such a case would the President—any President—assume that it was accidental and watch the death of millions of Americans without retaliating, or should he push the command button to unleash our own nuclear forces? Should we not for that reason alone commence work to give us another alternative?

By going ahead with the Safeguard system, it is believed possible to: provide for local defense of selected Minuteman missile sites, provide an area defense to protect our bomber bases and our command and control authorities, defend the continental United States against an accidental or unauthorized attack, and reduce U.S. fatalities to a minimal level in the event of a Chinese nuclear attack in the 1970's.

We do not now know who will be President of the United States in 1970's. Regardless of whom he may be or to which party he may belong, it seems apparent that the administration then in power will be responsible for the lives and security of the American people. It seems equally apparent that steps must be

taken now to start the system which may be needed for this protection.

WHAT IS THE SAFEGUARD SYSTEM?

The second issue which has arisen is, what is the Safeguard system? A great number of people in this country are still unaware or misguided about it. I think it is worthwhile to point out that the components of the system consist of first, radars for long-range detection of any kind of nuclear attack and for accurate guidance of the defense missiles to the incoming weapons; second, Spartan missiles, for high-altitude interception of attacking weapons; and third, Sprint missiles, for lower altitude interception in the atmosphere to provide local protection. It will not be necessary to place missiles and radar sites close to our major cities. Total investment costs for initial deployment will be \$2.1 billion for phase I, and between \$6 and \$7 billion through phase II exclusive of R.D.T. & E. and AEC costs. However, budgetary requests for next year involve \$400.9 million for R.D.T. & E.; \$12.7 million for test facilities at Kwajalein; and \$345.5 million for procurement. These amounts are significantly less than the amounts granted by Congress and the previous administration for the Sentinel system. The only amount in controversy in this debate under the bill appears to be the \$345.5 million, as everyone on the other side appear to support continued research and testing in the ABM field.

The initial phase, as authorized in this bill, will involve the following steps:

First. Continuation of research and development.

Second. Beginning of construction for defense of two of our Minuteman fields: Malmstrom Air Force Base, Mont., and Grand Forks Air Force Base, N. Dak. At the present time, construction of radars and deployment of missiles at these sites is scheduled to be completed in 4 years.

Third. Acquisition of the remaining sites needed for subsequent phases of Safeguard, but no construction.

The exact expenditures authorized are shown on page 25 of the committee report, and it should be noted that no funds are presently authorized for production model missiles.

Each subsequent phase of the deployment will be reviewed to insure that we are doing as much as necessary but no more than is required at that time. The President announced his intention to review the program annually from the point of view of technical developments; the potential threat; the diplomatic context, including any talks on arms limitation with the Soviet Union. I think this is a point which has not been brought out. He has also asked his Foreign Intelligence Advisory Board—a nonpartisan group of distinguished private citizens—to make a yearly assessment of the threat to supplement regular intelligence assessments. Moreover, maximum advantage will be taken of the information gathered from the initial deployment in designing the later phases of the program.

The President noted:

Since our deployment is to be closely related to the threat, it is subject to modification as the threat changes, either through

July 15, 1969

negotiations or through unilateral actions by the Soviet Union or Communist China.

It would seem to me, therefore, that the system itself is explained, the amount we are dealing with is explained; yet the position of some opponents of this system is that it will cost hundreds of billions of dollars and go on forever. That is simply not factual in the light of debate in the Senate, in the light of the President's statement, and in the light of the purpose of the particular system.

WHAT IS THE RELATIONSHIP OF THE SAFEGUARD PROGRAM TO PROSPECTS FOR ARMS CONTROL?

The Safeguard program is the least provocative way to assist survival of a significant portion of our retaliatory forces. As an alternative, we could buy more Polaris type submarines and land-based missiles and bombers, or we could begin construction of new missile silos in hard rock. But, aside from providing only marginal improvements in our deterrent—if we should do any one of those things—such programs could be misinterpreted by the Soviets as an attempt to threaten their deterrent. This would be true because they are offensive weapons, or in the case of nuclear missile silos in hard rock, it would be an effort to show that we are going to prevent any kind of attack by them from doing us any damage at all.

Thus, they would stimulate further the costly competition in strategic armaments that we seek to restrain.

At the present time, as some opponents of the ABM have said—and I agree with them—we have enough deliverable nuclear weapons to decimate any country which attacks us. Neither I nor anyone else wants to increase this offensive capability unless absolutely necessary. We must, however, insure that the weapons which we do have can be delivered if we are to prevent a nuclear holocaust in the first place.

That is the purpose and design of the Safeguard system.

If the Soviet force buildup is designed to strengthen further their own deterrent, our Safeguard program is clearly not a threat to them. If, on the other hand, the Soviets have more aggressive purposes, the Safeguard program demonstrates our determination to maintain our powerful deterrent to nuclear attacks on the United States or its allies.

The careful phasing of the Safeguard deployment insures maximum flexibility to adjust the program if arms limitation talks or unilateral actions by the Soviet Union or China result in a reduced threat to our deterrent. If the Soviet Union slows down or stops its deployment of the large payload SS-9 missile, or if the likelihood that these missiles will be armed with accurate MIRV warheads is materially reduced, we can readily limit that part of the Safeguard program which is designed to defend our land-based missiles. Even more favorable reductions in the Soviet offensive and defensive threat could be matched by further restraints in our ABM deployment. However, those parts of the Safeguard program designed for defense against Communist China, small countries with a strategic delivery capability, or accidental or unauthorized attacks from any source, would not be

affected by arms control agreements with the Soviet Union, nor do we expect the Soviet Union to forgo deployment of offensive or defensive weapons designed for similar purposes.

WILL THE SAFEGUARD SYSTEM WORK?

The last question which has arisen is, Will the Safeguard system work? Reputable scientists are in disagreement on this, as they were on the A-bomb, the H-bomb, the Polaris submarine, the moon shot and many other phases of our scientific breakthroughs. However, almost all components of the Safeguard System have been tested individually, and the computer, which is the only non-tested component, is within current technological knowledge. Moreover, because of the measured pace of the deployment, later phases of the program can benefit from technical progress during the early phases.

Furthermore, as Senator Tower aptly pointed out, the deployment will complicate greatly any plan for an aggressive nuclear attack on this country.

It will do that because the opponents must assume that it will work, at least in part. Therefore, if they are going to plan an attack, they would have to concentrate on that area to try to get a knockout blow if they are really going to cripple our deterrent forces.

The President has summarized his position as follows:

The question of ABM involves a complex combination of many factors: numerous, highly technical, often conflicting judgments; the costs; the relationship to prospects for reaching an agreement on limiting nuclear arms; the moral implications which the deployment of a ballistic missile defense system has for many Americans; the impact of the decision on the security of the United States in this perilous age of nuclear arms.

I have weighed all these factors. I am deeply sympathetic to the concerns of private citizens and Members of Congress that we do only that which is necessary for national security. This is why I am recommending a minimum program essential for our security. It is my duty as President to make certain that we do no less.

I just want to ask the membership: Can we in Congress afford to do less? Can we in Congress afford to take the chance of putting the President—any President—in a position where he has to make a horrendous decision of letting an unauthorized or accidental launch, or even a deliberate one, hit our country without retaliation, murdering millions of American people, or push the button which would almost guarantee a worldwide nuclear holocaust? I do not think we in Congress should make a decision which would put any President under that kind of handicap.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. DOMINICK. I am happy to yield.

Mr. ALLOTT. The Senator has just referred, very adequately, to the words of the President. Is it not a fact that the duty of individual Members of the Senate with respect to our security is no less than that of the President himself?

Mr. DOMINICK. I would certainly agree with my distinguished colleague.

Mr. ALLOTT. I wish to compliment my colleague on his very plain and simple evaluation of the facts. They are put

forward in such a way that I think any reasonable person reading them can comprehend them and understand the very excellent reasons by which the Senator has arrived at his decision, reasons with which I must say I agree 100 percent.

I do not have a copy of the Senator's statement, but as I came on the floor he was speaking, in the forefront of it, about the development of Soviet capability. He mentioned, for example, the increase in submarines and naval capability. The report talks also in relation to our F-14 and Russia's great increases and advancements in fighters and bombers. I want to ask the distinguished Senator if, in his studies, as a distinguished member and a very understanding and knowledgeable member of the Armed Services Committee, he has seen any signs of diminishment of Soviet land-based ordinary forces in Western Europe and western Russia during this period.

Mr. DOMINICK. No; I would say to my distinguished colleague from Colorado that it is quite to the contrary. Although we have limited further production of our land-based missiles, the Soviets, quite to the contrary, have not followed our example. They have continued to produce, at a much higher level, both their intermediate range missiles and their SS-9 missiles.

If that production continues, it poses a threat not only to our country but also a very major one to our allies in the European theater. Of course, for their air force, the Russians have developed 13 new fighter aircraft in the last 8 years. We have not developed any. We are well behind.

Mr. ALLOTT. As a matter of fact, our most modern fighter really is 15 years old in its concept, is it not? I refer to the F-4.

Mr. DOMINICK. That is approximately correct. I think our first design of the F-4 was in 1956. I think it was first put into semiproduction in about 1959.

Mr. ALLOTT. Since we are talking about the Soviet Union going ahead with her ICBM's, ABM's, fighters, and submarines, I want to speak to the subject of conventional land forces. Within the realm of security, can the Senator tell me—and I know he can, because the newspapers are full of it—whether he has seen any diminishment in the conventional ground forces of the Russians and/or the satellite countries of Europe in the last year or 2 years?

Mr. DOMINICK. There has been no diminution to any considerable extent, but there has been, in part, some redeployment of her forces from the western portion of Russia to the eastern portion, because of the Chinese problem. But in terms of overall manpower, in terms of her conventional potential in Western Europe, she is just as strong in fighters, bombers, and medium-range missiles, and probably even more threatening in her capability than she was before because of her increased production in those categories.

Mr. ALLOTT. I thank the Senator.

One other question. There seems to be an assumption on the part of those who

July 15, 1969

are opposed to the Safeguard system that we can wait another year or 2 or 3 years. It has been repeatedly stated on the floor of that there is a possibility of a Chinese delivery capability in the middle 1970's. No one, of course, can tell exactly what date that will be, which would be about the time the Safeguard system would be implemented. My question to my distinguished colleague is this: We do not have much knowledge of the inscrutable Chinese mind, nor of China's intention under the present situation.

What else could protect this country against an accidental—let us be kind and call it accidental—pushing of the button in Red China in the mid-1970's except to let loose a significant portion of our ICBM system to destroy that portion of China which we thought to be of significance? What other choice would we have than the ABM in such a situation?

Mr. DOMINICK. I totally agree with the question the Senator poses. It is a problem. As a matter of fact, in order to give us any protection, we would have to strike first, because we would have to wipe out their potential of sending a missile in, unless we had an ABM. I do not think any President would ever do that. I would hope that he would not. Our country is not built that way. Our people do not want to do that. I know I do not want to see us do it.

That is another graphic example of the danger, it seems to me, of not deploying our system now. As the Senator so well points out, if we do not start now, we will not have a first phase deployed system in from 18 months to 3 years after the time for which it has been scheduled, which would be about 1974 for the first phase.

So in 1975—let us just pick a year at random—if the Chinese launched a missile against us, and if we did not have an ABM, the President would have to decide whether to let that missile, assuming it was accidentally launched, kill millions of people in this country, and do nothing, or he would have to retaliate, which still would not alter the fact that that missile would hit and kill us.

Mr. ALLOTT. If the President retaliated, it would result in the wholesale destruction of at least hundreds of thousands of lives. That would be inconsistent with our own philosophy of government and our humanitarian motives.

Mr. DOMINICK. The Senator is absolutely correct.

I said yesterday, and I think it is worthwhile repeating, that those who read the book "On the Beach," written by Nevil Shute, will recall that the plot of the novel was based on a Middle Eastern country having one nuclear weapon which was launched against the United States under false colors. The United States, in turn, attacked the country we thought had created the problem. That country, in turn, thought some other country had attacked. Before we knew it, the world was in a total holocaust.

An ABM system, if it had been in effect and had worked properly, would have been able to intercept that missile and knock it down. Then the whole plot

of the story would have fallen apart. We did not have an ABM technology then—at least in any kind of perfected form—and it is not perfected now. But it is certainly far better than it was in the days when that book was written. If that technology had been available in those days, I doubt very much whether Mr. Shute would have written a book based on that premise.

Mr. ALLOTT. I thank my distinguished colleague again. He has performed an outstanding service. His statement is a model of clarity, and I know it will have a great deal of influence and be listened to by a great many people.

Mr. DOMINICK. I thank my distinguished friend.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. DOMINICK. I am happy to yield to the Senator from Arizona.

Mr. GOLDWATER. I ask the Senator from Colorado what, in his opinion, is the alternative open to Congress and the American people, through Congress and the President, if the ABM is denied the Commander in Chief? Would I be right in assuming that the only alternative we would have would be the immediate building of many more ICBM's than we now have?

Mr. DOMINICK. The only alternative that has been proposed by the opponents of the Senator's position and mine is continuation with research and testing, but no deployment.

As I say, this would substantially delay eventual deployment. If we decided against and voted against any continuation of this system at all, which I do not think is the type of question that we will be presented with, but we might, then we would have no alternative except to start increasing our own offensive capacity, in the event the Russians continued theirs, and we would have an ever-escalating arms race.

Mr. GOLDWATER. If the Senate, by its vote, turns down the request of the Commander in Chief, is an escalation of the arms race, for certain?

Mr. DOMINICK. Well, it would seem to me that it is, because if we once turn down deployment, are we ever going to be able to get the missile? We are going to have some votes on it, I am sure, any time the question comes up, until we are finally convinced that there is no other way to handle it. I do not see any other alternative, I am frank to admit.

I would think that a large amount of money would be put into the development of larger missiles. I think we would have to have bigger nuclear warheads. I would think we would have to start developing an enormously expensive system on movable-type missile sites, whether on trucks or rails, underwater, or whatever it might be. All this would be enormously expensive.

I think this Safeguard system is the least provocative and least expensive way to proceed.

Mr. GOLDWATER. I thank the Senator.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. DOMINICK. I am happy to yield to the Senator from Kentucky.

Mr. COOPER. I was very glad that I have heard the Senator's speech. I do not intend to go over again questions we have already discussed several times on this floor. I was glad to hear the Senator say that he had no doubt about our retaliatory capacity at present.

Mr. DOMINICK. That is correct.

Mr. COOPER. And it is correct, is it not, that Secretary Laird and the administration now concede that our retaliatory capacity will be effective until the mid-1970's?

Mr. DOMINICK. I did not understand them to say that. I think what they said was that our retaliatory capability would be steadily declining in relation to that of the Soviets and our other potential adversaries.

Mr. COOPER. That is somewhat different from saying whether we would have a retaliatory capacity.

Mr. DOMINICK. Well, the retaliatory capacity, if I may say so, must be based on two things if it is to be an effective deterrent. Perhaps we are playing on words.

Mr. COOPER. I think not.

Mr. DOMINICK. "Retaliatory" means that you have weapons that you can strike them with. "Deterrent" means that they know you have the weapons, and they believe they can be fired.

Now, if they do not know this, or do not believe it, whether we have them or not, it is not a deterrent; and that is a major part of the psychological problem involved here.

If one looks at the situation from a potential enemy's point of view, let us say that potentially the Soviets are our enemies—but let us say potentially, because we have had a lot of discussion on that—let us say that they are increasing their missile production substantially; they have a very big submarine fleet; they have the FOBS system, which we do not have at all; they watch the Congress of the United States refuse to deploy an ABM system, while they have one for their industrialized area; and they are going ahead with research and deployment on new systems—when you put all this together, the question of whether or not we have a reliable deterrent is going to determine the credibility of this to the planners in the other country.

That, it seems to me, is a tremendous risk as far as our country is concerned.

Mr. COOPER. I raise the issue of retaliatory capability because of the differing positions which it seems to me the Secretary of Defense has taken during this debate; and I shall enumerate.

I was present in the committee, under the chairmanship of the Senator from Tennessee (Mr. GORE), when Secretary Laird first was a witness. While he did not say so explicitly, it was implied that the Soviets intended a first strike, and would have the capability of a first strike.

Mr. DOMINICK. Those are two different things.

Mr. COOPER. Let me proceed; I understand the difference.

Mr. DOMINICK. All right.

Mr. COOPER. They retreated from that position. He assures us that the United States has the capability of in-

July 15, 1969

flicting a retaliatory strike, defined as the ability to inflict upon the Soviet Union assured destruction, even though the United States were first the subject of a strike.

The Senator will agree, will he not?

Mr. DOMINICK. "Unacceptable damage," I think, is the word I remember, but that is all right.

Mr. COOPER. All right; some say "assured destruction," others "unacceptable damage."

Later, if I may call it to the Senator's attention, that he believes the Secretary has said we can maintain that capability until the mid-1970's.

To suggest that we cannot maintain the capability—the deterrent—is based upon the assumption that during the critical period from today until the mid-1970's the United States would do nothing to protect itself, if the threat should develop.

During the debate it has been said that those of us who oppose the ABM system offer, as an alternative, the development of more offensive weapons now. Of course, that is not correct, as I said a few days ago in an exchange with my friend. We have only said that is what we should do if the threat does develop as the Secretary of Defense projected. Our country would not leave itself defenseless. If the projected threat develops we would take every means we could to protect this country.

Mr. DOMINICK. Let me be the first to assure my friend from Kentucky that I know he has no intentions of advocating unilateral disarmament.

Mr. COOPER. Of course not.

Mr. DOMINICK. I know he has no intentions of 'poo-hooing' any possible threat there may be to us, and the Senator will note that I very carefully said that I know that the Senator from Kentucky, at least, and others who have opposed deployment, I am sure, have indicated that they want to go ahead with research and testing on the ABM system.

Mr. COOPER. I am talking about offensive capacity.

Mr. DOMINICK. The point I want to make, if I may make this last comment, is that I do not think that any of those things are contradictions.

What the Secretary of Defense has said is that the growing potential of the Soviet Union, if they are an adversary of ours, will be a threat to our country by the 1970's.

Mr. COOPER. That is correct.

Mr. DOMINICK. They have the potential of being a first strike force by that time and could annihilate our land-based missiles. They are at the same time developing the attack submarine which has the capability again of shadowing and following the limited number of submarines that we have, anywhere at any time.

It is not an easy task to do. But by the potential of their antisubmarine warfare, it is perfectly possible within their technology to get increasing ability to accomplish this.

So, if we are going to have a continued mixed force which will act as a credible deterrent—and I think those two words are all important—then it seems to me

we must take steps to make this more reliable within that time frame by putting in a defensive system around our ICBM.

Mr. COOPER. There is another point I want to raise. I do not think it has been brought out as yet in the debate.

Very little advice is given to the Senate in the report on the debate about the measures we are now taking to increase our offensive strength.

I would like to point to the report and the hearings for the facts.

There is an impression in some quarters that nothing is being done or should be done, in the field of offensive weapons to meet the projected threat.

Very little emphasis, if any, has been given to the measure, now being taken by the administration to meet the projected threat by the development of offensive weapons.

A few moments ago, my good friend from Arizona, Senator GOLDWATER, measured the ICBM in terms of numbers alone.

Mr. DOMINICK. Mr. President, is the Senator referring to me? I did not try to number the ICBM's.

Mr. COOPER. In the exchange between the Senator from Colorado and the Senator from Arizona, the number of ICBM's was argued upon the question of relative strength.

Mr. DOMINICK. That is correct.

Mr. COOPER. It cannot be measured only upon numbers—1,054 as against 1,000 or 1,100. We have to measure also ICBM's in terms of warheads.

It is correct, is it not, that the Department of Defense is now proceeding with its Minuteman III program which would be armed with several warheads—probably three MIRV warheads?

Mr. GOLDWATER. That is correct.

Mr. DOMINICK. We are proceeding with the research and development on it.

Mr. COOPER. On page 1783 of the hearings, Mr. Foster stated when, reporting on the program:

August 16, 1968, was a doubly significant day in the development of strategic missiles. The first flight tests of both the Poseidon and Minuteman III were held on that day, and both tests [deleted] were successful. Since then we have had [deleted] additional successful flight tests of each of these missiles. [Deleted.]

Our overall evaluation is that both Minuteman III and Poseidon have demonstrated feasibility adequately and we expect to meet our development goals. We have [deleted] more Minuteman III tests this fiscal year and [deleted] in fiscal year 1970. Poseidon has [deleted] more tests this fiscal year and [deleted] in fiscal year 1970. Both programs will deploy on schedule: [deleted] for Minuteman III and [deleted], for Poseidon.

The first submarine equipped with the modified Polaris A3T missile was deployed on schedule [deleted]. Approximately [deleted] percent of the Atlantic Fleet will have been modified by the end of this calendar year.

Is it not correct that the Defense Department and our administration is proceeding to improve offensive weapons—the Poseidon for the Polaris as well as the Minuteman III?

Mr. DOMINICK. Yes. It is correct to the point the Senator takes it. However, I think where the Senator and I agree in

disagreement can be put this plainly. We still have a limited number of ICBM's.

Mr. COOPER. My question is about the Polaris.

Mr. DOMINICK. Second, we have a limited number of Polaris and Poseidon, because the Poseidon goes on the same ship as the Polaris. It is not a new ship. So, if we have that limited number of positions and a first-strike capability of an adversary which will threaten any number, it does not make any difference what they are armed with. If they are knocked out, they are no longer credible.

Mr. COOPER. It is a gloomy picture presented of the Soviet threat. It surprises me that the Secretary will predict such great capabilities for the Soviet Union and derogate our own.

Is it not correct that a program has been authorized to refit 31 of our 41 Polaris submarines with the Poseidon?

Mr. DOMINICK. That is correct.

Mr. COOPER. Is it not correct that money is contained in the bill to proceed with the refitting?

Mr. DOMINICK. The Senator is correct.

Mr. COOPER. We are on the program and have begun to deploy.

Mr. DOMINICK. The Senator is correct. However, we still have a limited number of submarines.

Mr. COOPER. How many warheads will the 31 bear when the refitting is completed?

Mr. DOMINICK. I do not know whether that information is classified. However, it is a fairly large number.

Mr. COOPER. Much larger than the 656 they now carry.

Mr. DOMINICK. That is correct. However, they only have a limited number of those on station at any one time.

Mr. COOPER. That is correct. Would it not be safe to say without declassifying that when the Polaris is refitted and becomes armed with the Poseidon missiles, the warheads, which are now 656 on the Polaris, would be at least tripled and could be increased by a factor of 5 to 10?

Mr. DOMINICK. I would not think that the strength of the Polaris fleet would be tripled in terms of warheads. However, it would be just under that, I would think.

Let me say, if I may once again, that these arguments are all fine. We are trying to improve the capability of what we have. That is correct. However, if we have a finite number of submarines and those submarines get sunk, we do not have anything to shoot off. And in the same way, if we have a finite number of missiles and they can be hit with a pattern, they will be knocked out. It does not then make any difference what we have on them.

In the third place, even assuming that we have all of the offensive power—and I do not want to increase it much more than we have now—it does not do us a bit of good against an accidental or an unauthorized launch—not a bit.

Mr. COOPER. The Senator has affirmed my position that our country has now embarked upon programs which will increase greatly our offensive strength and the number of warheads that we could deliver upon the Soviet

July 15, 1969

Union, by means of our Polaris fleet and our land-based ICBM fleet. I know that it has been argued that the Polaris fleet could be rendered useless because the attack submarines of the Soviet Union might be able to hunt them down.

Mr. DOMINICK. I hope this will not be true.

Mr. COOPER. Is it not correct that in this bill the Senator's committee has authorized the construction of attack submarines?

Mr. DOMINICK. That is totally correct. Those are attack submarines. Those are not Polaris submarines.

Mr. COOPER. I am simply making the point that while the supporters of ABM give the grim picture, that in the next 4 or 5 years we will become increasingly subject to a first strike, we are in fact increasing our offensive capabilities through these programs to meet such a threat.

Mr. DOMINICK. I think this is a matter of the glasses one looks through to see what the picture is. One can look through pink glasses and everything seems rosy, but, if he does not look through pink glasses, it does not look so rosy.

Let me say once again what I was trying to point out before: We are trying to stay abreast of new technology so that our weaponry will not deteriorate. If you once lock on to a position and do not move from it at all, sooner or later you find yourself behind, both in terms of scientists and ability, to be able to defend the country with modern, up-to-date equipment. I do not think any of us wants that, including the Senator from Kentucky. So we are continuing these things.

But in terms of finite numbers, we are now spending on offensive and defensive strategic weapons, on a constant dollar basis, 50 percent of what we spent in 1952. This seems to me to be an example of the degree to which we have tried to cut back on strategic and offensive systems for this country. This particular one is one in which two Presidents, three Secretaries of Defense, and the Joint Chiefs of Staff have said we wanted an ABM system of one sort or another. The one they have is, to me, as recommended by President Nixon, far sounder than the Sentinel system. To me, it makes a lot more sense, because it preserves the credibility of our deterrent so that there will not be a nuclear attack, to begin with.

Mr. COOPER. One more point. The first strike, of course, implies a capability to strike and destroy all our retaliatory forces—synchronized and simultaneously to strike our ICBM's, to strike our bombers, to destroy our Polaris. This is an assumption, that from most of the expert testimony I have read, seems impossible to do.

Mr. DOMINICK. Let me just reply, and I will be brief in replying to that. This, again, is the question of how one looks at it. If they knock out our ICBM's, we have a limited number of Polaris or Poseidon around with refitted equipment. They are subject to attack by the attack submarines. About all we have left is our bomber attack, and Sec-

retary McNamara pretty well ruined that. We do not have much left of our bomber capability, or will not have by the 1970's, anyhow.

Mr. COOPER. I have found the following deficiencies in the presentation in support of the ABM. First the implication that we are in grave danger now, and that the danger could develop by the mid-1970's. There has been a failure to make clear to the country and to Congress that we are now making great efforts to meet such a threat with increased offensive capability. I have noted to the Senator from Colorado, and he has agreed, they include the arming of Minuteman III and Polaris with Poseidon, and attack submarines. If these programs go forward, in the next 3 or 4 years, instead of 4,200 warheads in our arsenal at present, we will have double that amount, and perhaps triple that number.

We are proceeding with the deployment of MIRV. I do not think anyone believes that we are behind the Soviets with MIRV.

Mr. DOMINICK. I do not want to interrupt the Senator, but I do want to comment on this.

Let us suppose that everything the Senator has said is correct, which I do not agree with, as he knows. Let us just suppose it. There is not a single thing in this country's hardware, now or proposed, which would defend this country against a ballistic missile coming in—not a single thing. Until we get something that can do it, we are wide open for any kind of attack, and the only alternative we have is to push a button and send some of our ICBM's, which neither the Senator from Kentucky nor I want to do.

Mr. COOPER. May I say, in response, this argument, made again and again in the last few days, illustrates the changes in position, supporting ABM.

Last year we were considering the Sentinel system, designed to protect the population as an area defense. The very arguments are being made today for the Safeguard system which were made last year for the Sentinel system.

Mr. DOMINICK. And the same argument is still valid.

Mr. COOPER. I do not agree.

Since that time, the Joint Chiefs of Staff, who last year were saying categorically we should build the Sentinel system, now support the Safeguard system.

Mr. DOMINICK. Let me correct that. The Joint Chiefs of Staff, for 3 years, and the heads of all the services have been recommending an ABM system. The method of deployment of it has been determined by either the Secretary of Defense or the President, depending upon who it might be at the particular time. Even some of the funds that Congress authorized in the earlier days—I am talking about 3 or 4 years ago—the then Secretary of Defense would not use.

Mr. COOPER. I do not think the Senator can say there is no distinction between the two systems. The Sentinel area system, is a population protector. The Safeguard, as the Senator has said, is for protection of the Minuteman missiles.

Then we have heard the argument that the decision to deploy the Safeguard is to strengthen the President's hand in negotiations. That has been a constant theme in the debate.

Then, I note in the last 2 days a chief argument has been made that we must have this system to protect against an accidental launch or a deliberate small attack. If this is correct—if this is the position—then I believe that the administration should come out strongly for an area defense, one which would cover the country and blanket it against an accidental launch.

Because Safeguard is not an effective enough system, the cities could not be protected by the area defense provided by Safeguard. But if this is the purpose, or one of the chief purposes, then the administration should ask for an adequate area defense, one that would give greater protection against accidental launching.

Mr. DOMINICK. Let me comment on that. I brought up the subject of an accidental launch or an unauthorized launch as long as 3 years ago. I made speeches last year on the floor about it, so it is not anything new, and it is not necessarily an administration argument. It is one that I think has deep validity, which is why I have been repeating it over and over again.

I certainly would not want the Senator from Kentucky or the Senator from Arizona or myself to be President of the United States and be faced with that kind of alternative in the middle 1970's. I think it is a totally untenable position to put any President in, regardless of who he may be.

Second, I think we have to say that if we go forward with the Safeguard system, in its 12-site selection, that system, when we have the long-range Spartans and Sprints installed, will give us pretty good protection on over-the-pole threats.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. DOMINICK. I yield.

Mr. GOLDWATER. Mr. President, I think in the colloquy that has just transpired we have seen some doubts raised, or some reasons raised to have doubts, particularly if we get into the numbers game.

Five years ago I said that the missile force was not reliable. I am not sure today how reliable it is. The manned bomber is much more reliable and it is a much more dependable system than a missile system. We have never tested one of our missiles with a warhead on it. The potential enemy of whom we are speaking has done this.

Therefore, when my good friend from Kentucky talks about the fact that this administration is increasing the number of warheads, is increasing the capability of the Minuteman, through Minuteman III, and talks about numbers, I do not think any one of us can say these numbers are adequate because we do not know with any degree of certainty the percentage of these missiles that will fly when the button has to be pushed or that can live through a nuclear environment. But the Russians, I must say, back in 1961 thoroughly tested all their weapons through. We are not sure, even

July 15, 1969

with navigation and guidance systems if these missiles can survive a nuclear environment. So I do not think anybody can say with any degree of certainty that 1,000 warheads are enough, that 2,000 warheads are enough or that 500 warheads are enough. This weapon is not a lot different in that respect than any other weapon we have used throughout history. Until we have actual combat experience we cannot say it will require x number of weapons, x number of tons, or x number of pounds to diminish a target.

I wanted to make that statement because as we consider the basic fact that this request for an ABM or Safeguard system has come from the one man in this country charged with the responsibility of making recommendations, I think we must also recognize—and I find no quarrel up to now with the opposition to the ABM—that the President was not wrong in going along with the improvement of Minuteman, in going along with MIRV, in going along with new advanced manned aircraft, or any of the other weapons in the bill. I think we must get back to the fact that while those who oppose the ABM will probably approve other parts of this bill, that this entire package is from the Commander in Chief, backed up by his military advisers.

I cannot conceive of any country, and particularly the United States, saying that we are not going to provide a defense against any weapon.

With respect to retaliatory capability, yes, there is truth to that and we have been able to maintain—not stability, but we have not had a World War III since we had the worldwide retaliatory concept of Foster Dulles, a theory which proved right. But what is going to happen if potential enemies see that the United States has no protection except a retaliatory strike? I shudder to think of the blackmail that will be heaped upon the United States if that day ever comes.

I am happy that the Senator from Kentucky, in his brilliant way, has gotten into this matter, because out of it we will have a better understanding.

I will say that there have been changes, but not from the standpoint of the administration. I observed the other day when this matter first came up that the opposition was totally against the ABM. Then, sensing that there might not be success in that area, they changed to opposition to MIRV.

Let us say the ABM section of the bill passes, and let us say that MIRV is denied, the very thing the Senator from Kentucky sees as hopeful, the growth of warheads, will be denied this country so we will be saying we have an ABM but we have no way to equal the strength of the other, or say we have no ABM and no MIRV, there is no possible way in the world of showing strength to a potential enemy.

Now, we see the struggle of the opposition in several amendments. One would do what this bill proposes to do, namely, not deploy. We could not deploy any of these until 1974, even if the Lord were down here running the show.

The change has been made in the opposition to the ABM. We see it fluctuating day after day as it totals the vote which now seems to favor those who are for the ABM. Frankly, I watch this debate with great interest to see what the next development on the part of the opponents will be because I think so far they are running around loosely—I will not say like sheep because they are not sheep—but there has been no pattern established that the proponents of this measure have not been able to stamp out.

Mr. DOMINICK. I thank the Senator from Arizona.

Mr. COOPER. Mr. President, will the Senator yield to me?

Mr. DOMINICK. I yield.

Mr. COOPER. I thank the Senator for his counseling. I want to make it clear to the Senator that there has been no change in our position. It was in April a year ago that I introduced an amendment to delay the deployment for two purposes: one purpose was to first determine whether it would be effective. A year has passed and we still do not know if it is effective. Integrated testing will not be done until 1973 or later.

But that was not the only reason. We have urged again and again and there is no change—that we use this year in an effort to stop the arms race or at least control it.

We know that additional nuclear weapons systems have not brought us security, and they may eventually lessen our security. We are trying to see, while there is an opportunity through talks, to determine if the arms race can be brought under control rather than to continue it, by new weapons systems.

Mr. DOMINICK. I hope we can control the arms race by putting in the ABM and not with more offensive weapons.

I yield to the Senator from Mississippi.

Mr. STENNIS. Mr. President, I asked the Senator to yield to me only briefly. I know there are other Senators who wish to speak. The Senator from Virginia asked for time yesterday afternoon.

I wish to commend the Senator highly for what I think is a solid and constructive analysis of this problem. I know personally how much dedication, time, and work he has given to this matter, particularly since January 1.

One point the Senator makes on the last page of the copy of his address which I have deals with the reputable scientists in disagreement. We found that all the way through, as the Senator pointed out. One thing they are not in disagreement about, as I understand it, is that this is the most advanced and best anti-ballistic-missile system by far that we have. When we assembled here in January there was talk about other systems that were involved and the rumor was that the Air Force had something to propose. But when we come right down to the testimony, the ABM was the one. As to the four scientists we had before the committee, as the Senator will recall, in open session, two opposed it and two were in favor of it. All four said that it

was the most advanced and the best system.

Mr. DOMINICK. That is absolutely correct.

Mr. STENNIS. Does the Senator remember that clearly?

Mr. DOMINICK. Very well.

Mr. STENNIS. So the question now is, if we are going to have an ABM, this is the one within present knowledge. The Senator thinks, too, does he not, that of all the research and development we have had, bringing this along slowly over the years, that we have now reached the point, as a practical matter, that if we are going to go on to the next stage, now is the time to do it?

Mr. DOMINICK. I certainly do. I completely agree. As a matter of fact, as the Senator may recall, I think it was in 1963 when the distinguished Senator from South Carolina called a closed session to discuss this question.

Mr. STENNIS. Yes.

Mr. DOMINICK. After that session, most of us, I might say, gained some knowledge. Many Senators had it already, but many did not. Thus, it was a constructive session. I voted against deployment at that time. I think the Senator from Mississippi did also.

Mr. STENNIS. I did, too. The Senator is correct.

Mr. DOMINICK. That was because it was not ready, so far as we could see. Now I think it is, and I think we should go ahead with it.

Mr. STENNIS. I thank the Senator from Colorado very much for his fine contribution.

Mr. DOMINICK. Mr. President, I yield the floor.

ORDER OF BUSINESS

Mr. KENNEDY obtained the floor.

Mr. STENNIS. Mr. President, will the Senator from Massachusetts yield for a unanimous-consent request?

Mr. KENNEDY. I am happy to yield to the Senator from Mississippi, provided that I do not lose my right to the floor.

Mr. STENNIS. Mr. President, yesterday afternoon, the Senator from Virginia (Mr. BYRD) saw me about, if possible, getting some time this afternoon to speak.

Today, the Senate was not in session when I had in mind asking for this request. Now we are back in session, and I therefore ask unanimous consent that after the Senator from Massachusetts has completed his remarks, the special order of business be that the Senator from Virginia—

Mr. THURMOND. Mr. President—

Mr. KENNEDY. Mr. President, I have the floor. I yielded to the Senator from Mississippi with the understanding that I would not lose my right to the floor. I think the Senator from Mississippi has propounded a unanimous-consent request.

Mr. THURMOND. Mr. President, reserving the right to object, I understood that I was scheduled to follow the Senator from Massachusetts. In fact, there

July 15, 1969

was some question as to who would come first.

The PRESIDING OFFICER. The Senator from South Carolina is correct.

Mr. THURMOND. I do not wish to relinquish any more of my time because I have another commitment to meet and I have already been waiting a long time to gain the floor.

Mr. STENNIS. Mr. President, I knew nothing about the time that the Senator from South Carolina would have to speak. I did not know that. I know the Senator mentioned yesterday afternoon that he might wish to speak today or the next day. However, I hope that something can be done to meet the situation so that the Senator from Virginia (Mr. BYRD) may speak, especially in view of the fact that I promised to see that he would be placed on the schedule. When I got in today, the Senate had recessed and I did not get back to it.

Mr. President, I withdraw my unanimous-consent request, since the Senator from South Carolina objects.

The PRESIDING OFFICER. The Senator from Massachusetts has the floor.

THE SURCHARGE AND THE NEED FOR TAX REFORM

Mr. KENNEDY. Mr. President, the extraordinary discussions that took place yesterday on the Senate floor, particularly the discussion between the distinguished majority leader and the distinguished chairman of the Senate Finance Committee, have set the stage for what will almost certainly become one of the most significant debates of the current session of the 91st Congress—the debate over the income tax surcharge and tax reform.

In part, of course, the debate will be important because the surcharge is a major tool of Federal fiscal policy for combating the strong inflationary pressures now gripping the economy. In addition, however, the debate will be important for another reason, a reason that has vast significance for all taxpayers in the Nation. For the first time in many years, Congress now has the opportunity to enact comprehensive tax reform. These two areas—the tax surcharge and tax reform—are closely tied to one another, and it is entirely appropriate that Congress should consider them together, as the resolution of the Senate majority policy committee has so clearly stated.

There can be no question that our first duty is to carry out a responsible fiscal policy that brings maximum feasible pressure to bear in our increasingly difficult battle against inflation. At the same time, however, I believe we must keep the strongest possible pressure on the administration and Congress to take the responsibility for seeking comprehensive tax reform.

At the present time, there is strong and rising pressure for tax reform in all parts of the country. Each of our Senate offices is being deluged with communications from outraged citizens demanding reform. One of the most important aspects of the national sentiment for

tax reform is the realization by millions of taxpayers that the income tax surcharge itself is unfair. It aggravates the serious inequities in our existing tax laws. It applies only to those who already pay taxes on their income, and it requires no contribution whatever from those who escape their fair share of taxes. At a time, therefore, when the administration is asking that the surcharge be extended, it is fair—indeed essential—to insist that the administration also demonstrate its commitment to prompt and meaningful tax reform.

At the present stage of the legislative debate on the surcharge and tax reform, I believe that the resolution of the policy committee fully achieves our twin goals of controlling inflation and accelerating the enactment of comprehensive tax reform. By extending the current withholding tax rates, we have taken the only step we need take at the present time to maintain a completely responsible fiscal policy in the fight against inflation. It is not necessary to extend the surcharge provisions themselves. All that is essential at this time is to continue the surcharge withholding rates, which by themselves are sufficient to preserve Government receipts for the summer months at the same level that would have existed had the surcharge itself been extended.

The length of the period of extension of the withholding rates will depend on our progress toward meaningful tax reform. Congress has already acted to extend the rates through July 31 of this year. I agree with the resolution of the policy committee that the rates should be extended through the end of the present quarter—that is until September 30. In light of the announcement last week by Chairman WILBUR MILLS of the House Ways and Means Committee, it is becoming increasingly likely that a significant tax reform bill may be passed by the House before Congress adjourns for the August recess. In light of the announcement last week by Chairman RUSSELL LONG, of the Finance Committee, it now seems likely that the Finance Committee will have completed a major portion of its own hearings on tax reform before the recess. As a result, the September 30 date for extension of the withholding rates would seem to offer both the Senate and the House a reasonable opportunity to enact a comprehensive tax reform bill in this session of the Congress. Of course, if action on tax reform is not completed by that time, the withholding rates could be extended for another appropriate period.

Thus, I believe that any action on the surcharge itself and the other provisions of the House-passed bill, as opposed to the mere extension of the withholding rates, should await the action by Congress on tax reform. If, as seems possible in light of recent developments, a downturn in the economy has begun, or major revenue-raising tax reforms are adopted, it would be wise to reconsider both the amount and the duration of the surcharge. Any excess amount withheld from taxpayers under the higher withholding rates during the extension period

could be returned to the taxpayers through the usual year-end refund procedure.

In sum, the policy committee resolution offers us the very real opportunity to carry out a thoroughly adequate fiscal policy. I do not accept the proposition that extension of the withholding rates contributes in some vague psychological way to the pressures of inflation. It is widely accepted among economists that take-home pay is the major determinant of consumer expenditures, and take-home pay is the same today as it would be if the surcharge had been extended. Those who argue otherwise are themselves contributing to the inflationary psychology.

The vital link between the surcharge and tax reform was recognized by Congress more than a year ago. On the floor of the Senate in June 1968, the surcharge legislation was amended to require President Johnson to submit proposals for comprehensive tax reform to Congress. The floor amendment was adopted in clear recognition of the feeling abroad in the Nation that when taxes increase, strong efforts should be made to eliminate the existing inequities and discriminations in our tax laws.

The case for tax reform has a dual basis. First, the genius and guiding principle of our Federal income tax system is that the tax a person bears is determined by his ability to pay. As Justice Oliver Wendell Holmes once said:

Taxes are the price we pay for civilization.

Those with the greatest ability to pay should contribute the most to meet the costs of Government. Those who are situated in similar economic circumstances should bear similar tax burdens. For the tax system to function properly, each citizen must have confidence that he is paying a fair portion of the price of our society.

Second, and equally important, the fair and effective operation of our tax system is vital to our entire competitive free enterprise system, and therefore to our democratic society itself. Under the proper working of the system, resources must be guided to their most efficient use by the free working of the marketplace. What the market rewards with high returns will and should attract an optimum level of financial and real resources. This is the hallmark of our competitive market system. If we permit unreasonable tax privileges to divert resources away from their best uses, away from the point of greatest natural profit to the point of greatest tax advantage, we distort our profit system and lose many of the benefits of the free market. As President Kennedy stated, the full benefits of the market system can only be felt when all of our people and all of our resources are used as wisely and effectively as possible.

Our present tax laws fall far short of these goals. Unfairness and discrimination abound. Privileges designed for another era linger on to distort the economy, long after the logic for their use has disappeared.

The most glaring defect of our tax laws is their inequity. Although our proce-

S 8165

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each reserve component of the Armed Forces, and for other purposes.

Mr. WILLIAMS of Delaware. Mr. President, for the past 2 weeks the Senate has been debating the issue of ABM.

Today I want to discuss the question of polls and how important a part they have either in influencing legislation or in molding public opinion and to point out why I think this practice if carried too far can be dangerous.

According to one poll conducted by the press the final vote on the Safeguard ABM system will be 50 Senators for and 49 against, with only 1 Senator—myself—listed as uncommitted. If it were true that 99 Senators have already taken a position then why do we not proceed to an immediate vote?

First let me point out that I respect and admire the press for trying to anticipate the results even before the votes are cast. This makes an interesting numbers game, but frankly ever since the 1948 election I have been somewhat dubious about the reliability of polls, and in this instance they may again be in error.

However, if these polls are to be accepted as accurate the question may well be asked why I have not taken a position.

Surely 99 Senators are not making speeches and conducting this debate just to influence the vote of one lone Senator. If that is the case I am ready to vote today.

On the other hand, why do I not answer the poll and then let the guessing game start all over as to who has changed his mind?

For 23 years I have made it a practice not to answer polls—public or private—because in my opinion while polls are interesting they are oftentimes dangerous.

For example, I am a member of the Senate Finance Committee which handles tax legislation. Advance knowledge obtained by a poll of the members of that committee as to a rate of tax or its effective date can be worth millions to someone who is in a position to make use of such information.

For this reason when the Finance Committee is ready to mark up a bill we try to act fast on the major decisions and then release to the press immediately the results of our vote. For instance, the day after the House voted on the surtax bill, June 30, our committee went into execu-

tive session and took a tentative vote on the effective date for the repeal of the 7-percent investment credit. Millions were involved on this question of the effective date, and an immediate announcement was made to the press as to the results of that vote.

Here today we have before us a bill, a decision on which is of major importance to our country, and while the money factor alone is not the determining point, nevertheless, Senators are aware that this question involves expenditures of several billion.

How many defense contractors and how many speculators are trying to outguess this vote and make plans as to how it will affect their interests?

This question is not asked to cast any reflection on industry, nor is it intended as a reflection on any Senator who has taken a position on the bill or who is taking part in this debate.

It is not only proper but it is a necessary part of our legislative process that Senators who have made a study of any important bill before the Senate should take part in the debate, and certainly their positions are made known.

For weeks I have been urging prompt action on the surtax bill, and as far back as last January I advocated the repeal of the 7-percent investment credit. My position is established on these points, and I have spoken out trying to sell my viewpoint to other Members of Congress. But I did not recommend, nor do I now recommend, a private poll of all other Senators as to how they will vote on that bill.

Besides, how can Senators make a decision on a bill before disposition has been made of various amendments either on a tax bill or on the bill now before us?

Who knows what effect the acceptance or rejection of some of the pending amendments will have on the final vote on the bill before us?

If the Senate ever approves a procedure wherein the press will be able to announce an accurate count of the vote weeks before the actual rollcall on a major bill, we will have ceased to function as a legislative body.

Certainly Senators have an idea as to how they intend to vote, but national or world developments at the last moment must be taken into consideration. For example, the Russian invasion of Czechoslovakia last year prompted a last-minute change in the plans of the Senate for consideration of the Nonproliferation Treaty.

How will I vote on this most important question now pending before the Senate? If at any time I think I can contribute anything toward the debate on any pending amendment or on the bill itself I shall speak out; otherwise I shall just wait until the debate ends, and then on each amendment and on the final passage of the bill I will cast my votes in what I consider to be in the best interests of our country.

Meanwhile, for the remainder of my term in office I will continue the practice of the past 23 years of not answering polls and of not trying to be an authority in every important bill that comes before the Senate.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. BYRD of West Virginia. Mr. President, I congratulate the Senator. I noted with considerable interest the account in the newspapers of a poll that had been taken of 100 Senators. To my knowledge, no question has been asked of my office, and no poll has been taken concerning my vote, and I certainly have not responded to any poll. I can not recall any contact by any newspaper of my office as to how I would vote on this issue.

I think the Senator has rendered a service today in making the statement he has made.

I was just a little nonplussed when I read the account of 100 Senators having been polled. I asked my staff if I had been polled, and I was told that I had not. I am sure that I have not made any statement to any newspaper during the past several months as to where I stand on this issue. I assumed that the press media—those who were doing the polling—probably went back to some previous vote and perhaps took a chance on my voting this way or that way based on some vote in the past, and they may be right or they may not be. I do not know whether they counted me as a supporter of the ABM or whether they counted me as being opposed to the ABM.

But I am going to follow the same procedure that the Senator states he has been following for 23 years. I am not going to answer any polls as to how I shall vote on such a controversial issue as the ABM. I think the time to cast one's vote is when the roll is called; and if I wish to indicate prior to that time what my position is by way of a speech on the floor of the Senate, by way of some announcement on the radio, or via television, or by issuance of a news release that is for me to determine. But I do not intend to answer any polls. Perhaps at some time in past years I may have responded to some polls on other issues, I do not recall; but, if so, I do not intend to do it again; and it has been my policy for quite some time not to do so.

Mr. WILLIAMS of Delaware. I thank the Senator.

I think this can be a dangerous practice. Again, I do not question the good intentions or the propriety of the members of the press in conducting these polls. If I were a reporter, I suppose I would do the same as they are doing, but it is our fault if we answer them. If we answer one poll, then why do we not answer this poll or the next poll? In the Finance Committee we act on proposed legislation which involves major changes in tax rates that can affect financial markets. I think it would be very dangerous to adopt a practice in which the members of that committee could be polled in advance of the votes.

I have served on this committee with the Senator from Virginia, Mr. Harry F. Byrd, Sr., and before that I served with the Senator from Georgia, Mr. George, and with the Senator from Colorado, Mr. Millikin, as chairmen. They emphasized to all the new members of that committee the importance of not letting the committee be used by those who would

S 8166

CONGRESSIONAL RECORD — SENATE

July 15, 1969

turn the information to their own advantage. I have tried to live up to that standard.

One person called our office this week in a private poll—not a member of the press—and told the gentleman in my office that it was very important. They were checking the poll on the votes for the ABM as it had been related in the press to see whether or not it was accurate. They were trying to get the position I would take on the ABM as well as the position of other Senators because he said their clients wanted more factual information as to what was going to happen on this bill.

This illustrates the danger we could get into if we, as Members of the Senate, adopted a procedure whereby we could be polled a week or two in advance as to how we were going to vote. If 99 or 100 percent of the Members of the Senate have actually made up their minds then let us vote.

That illustrates the ridiculousness of this polling process, and I thought I would make clear my reasons as to why I think the problem of polling should be checked.

Mr. BYRD of West Virginia. I thank the Senator.

So far as I am concerned, I think it is my responsibility to take a position on the issues that come before us for decision, but I do not think that I have a duty to respond to polls as to how I

intend to vote on any issue. I think it is demeaning to the Senate to do so. Naturally, if I take a position and make that position known in a speech, that vote can be counted as I so state. But as to answering polls per se, I am not going to do it; and I think it is wrong for the impression to be given out that 100 Senators have been polled on this issue or any other issue when, as a matter of fact, they have not been so polled. I, too, do not question the good intentions of any pollster. But 100 Senators have not been polled on the ABM. As far as I am aware, even the leadership on this side of the aisle has made no attempt to conduct a poll on this issue.

I can only speak for one Senator, but mine is one of the votes out of 100. Perhaps 99 other Senators were polled, and perhaps it was not considered necessary to poll the junior Senator from West Virginia. Nevertheless, I think it is wrong to state that all Senators have been polled when such is not the case. It might conceivably cause some Senator to change his position some day just for the heck of it, to show that the polls are not always right.

Mr. WILLIAMS of Delaware. I thank the Senator.

ADJOURNMENT

Mr. BYRD of West Virginia. Mr. President, if there be no further busi-

ness to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 12 o'clock noon tomorrow.

The motion was agreed to; and (at 6 o'clock and 7 minutes p.m.) the Senate adjourned until tomorrow, Wednesday, July 16, 1969, at 12 o'clock noon.

CONFIRMATIONS

Executive nominations confirmed by the Senate July 15, 1969:

DEPARTMENT OF JUSTICE

Bethel B. Larey, of Arkansas, to be U.S. attorney for the western district of Arkansas for the term of 4 years.

U.S. ASSAY OFFICE AT NEW YORK, N.Y.

Nicholas Costanzo, of New York, to be Superintendent of the U.S. assay office at New York, N.Y.

NOMINATIONS

Executive nominations received by the Senate July 15, 1969:

U.S. AIR FORCE ACADEMY

Col. William R. Jarrell, Jr., FR16821, for appointment as Registrar, U.S. Air Force Academy, under the provisions of section 9333(c), title 10, United States Code.

Richard H. White, cadet of the U.S. Air Force Academy, for appointment in the Regular Air Force, in the grade of second lieutenant, effective upon his graduation, under the provisions of section 8284, title 10, United States Code. Date of rank to be determined by the Secretary of the Air Force.

S 8032

CONGRESSIONAL RECORD — SENATE

July 14, 1969

FARM PRICE SUPPORT CEILING

Mr. BYRD of West Virginia. Mr. President, I voted against restricting maximum farm price support payments to \$200,000 for the following reasons:

Politically, a vote for a ceiling on farm price support payments would have been the popular vote, because it does not sound good to say that a farmer gets \$100,000 or \$200,000 or more in payments. However, it must not be forgotten that he surrendered that much acreage. It is not a one-way street.

The adoption of a limitation on farm price support payments would have triggered the snapback provision of the Agriculture Act of 1949 regarding cotton, which would require the Government to purchase all surplus cotton at not less than 65 percent, and up to 90 percent, of parity. Therefore, instead of saving the taxpayers money, as implied by your editorial, the price support payments limitation, according to the Secretary of Agriculture, Mr. Hardin, would cost the Government \$160 million more than the existing program and would rebuild the large surpluses in Government warehouses which, in recent years, have been diminishing. Moreover, there would be additional costs to the Government for transportation, handling, and storage of these large surplus inventories of cotton.

Furthermore, the imposition of a limitation without basic legislative changes would not only cost the Government more, but it would also wreck the existing farm program in that it would throw the production from the larger farms onto the open market and further depress the very farm prices we are attempting to stabilize. In short, I voted against the limitation in order to save the taxpayers of West Virginia and the other States a minimum of \$160 million and to protect the investment the U.S. Government already has made in its attempt to stabilize the prices which farmers receive for their products.

Even though I personally favor limiting these large payments, to vote for an amendment which would not accomplish the desired results and which would be vastly more expensive than the existing programs would be a serious mistake. I do not believe that the agriculture appropriations bill was the proper place for an amendment such as the payments limitation. This provision would have substantive ramifications and should properly be considered in connection with basic farm legislation which has received the thorough consideration of the Senate and House Committees on Agriculture. The proper time to accomplish this objective of limiting price support payments will be when the farm price support bill comes up for renewal in the next session of Congress. At that time, legislative changes can be written into the basic law to limit the large payments without destroying the remaining markets the farmer has for his products.

Secretary Hardin has assured Congress that he "believes it is possible to design a sound farm program that limits the number of dollars that can be paid to any one farmer for programs following the 1970 crop year." Incidentally, former Secretary of Agriculture Orville

Freeman was also opposed to the price support limitation.

Finally, Mr. President, the proposed \$20,000 ceiling on price support payments would not affect a single West Virginia farmer. I am advised that no farmer in my State receives even half this amount by way of support payments. But I am advised that such a ceiling would eventually in higher prices to the consumers. In this sense, the ceiling would hurt West Virginians, farmers included.

For all of these reasons, I voted against the effort to place a restriction on farm price support payments. Again I say, however, I do personally favor the execution of feasible and workable steps to place a limitation on these large payments, and I hope that such a limitation will be included by the administration and by the Senate and House Agriculture Committees for enactment next year when the farm price support program comes up for renewal.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The PRESIDING OFFICER. The hour of 2 o'clock having arrived, the Chair lays before the Senate the unfinished business, which will be stated by title.

The LEGISLATIVE CLERK. A bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each reserve component of the Armed Forces, and for other purposes.

The PRESIDING OFFICER. Under the order previously entered, the Chair recognizes the Senator from Vermont.

Mr. STENNIS. Mr. President, may we have order before the Senator commences? If those who are visiting in the Chamber would be seated and remain seated, it would be quite helpful.

The PRESIDING OFFICER. The Senate will be in order.

Mr. DIRKSEN. Mr. President, will the Senator from Vermont yield?

Mr. PROUTY. I yield.

Mr. DIRKSEN. Mr. President, I suggest the absence of a quorum. It will be a short quorum call.

The PRESIDING OFFICER. Does the Senator from Vermont yield for that purpose?

Mr. PROUTY. Yes; I yield.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. CRANSTON in the chair). Without objection, it is so ordered.

Mr. PROUTY. Mr. President, since

March 14, when President Nixon recommended the development and phased deployment of the Safeguard anti-ballistic-missile system, I have followed a course of quiet consultations and silent deliberations. Until recently, I remained undecided on this question. In avoiding an earlier commitment, my course, in the words of Vermont's immortal poet, Robert Frost, was "the one less traveled by." And it "has made all the difference" to me.

As this debate drew closer, various polls showed the ranks of my "undecided" colleagues to be ever diminishing and the prospects for a close vote to be increasing.

Consequently, the burden of my decision grew heavier. As I weighed evidence in support of and in opposition to Safeguard, I recalled an admonition—I believe President Eisenhower's—that "we can make of this world a barren desert or a flowering paradise."

President Eisenhower's alternatives became increasingly vivid as I deliberated in the macabre vocabulary of nuclear weaponry. Such terms as "assured destruction, acceptable losses, and megadeaths" conjure up the late President's vision of a barren desert, yet neither the vocabulary nor the realities can be wished away. Instead my decision must be made in the gruesome context of a "mutual deterrent."

Several weeks ago in Vermont, I remarked to some friends that if on that day I were to vote on the Safeguard authorization, I would vote against any funds for deploying the system. I reminded these friends of three votes last year in which I joined with a minority of Senators to defer deployment of the Sentinel system.

As this debate approached, I continued to avoid commitment and reviewed my position in the absence of any pressure other than that of my conscience. I conferred with Senators holding different opinions on Safeguard. I learned as much as I could of the views of scientists and defense experts and weighed the immense volumes of evidence gathered in extensive committee hearings.

POINTS CONSIDERED

In my deliberations and consultations, there were six major considerations.

First, in view of my votes on Sentinel, how does Safeguard differ from this earlier anti-ballistic-missile proposal?

Second, what range of options should be available to the President in the event of a nuclear ultimatum or an irrational or accidental missile attack?

Third, and perhaps most important, what effect would proceeding with Safeguard have on the prospects for strategic arms talks?

A fourth point I considered is: Would proceeding with Safeguard be interpreted as an escalation of the arms race?

As I am not a scientist, I found the fifth point of my deliberation extremely difficult. The point is: Will Safeguard work?

A corollary to point five is the sixth point: What are the estimated and potential costs of developing a workable Safeguard system?

1 Conoco's Federal income tax figure includes a reduction due to benefits arising from consolidation. Foreign and State taxes include Federal and State gasoline and oil excise taxes because the firm's financial statement gave no clear-cut breakdown.

2 Credit.

3 Marathon Oil's 10K filing with the SEC doesn't reveal how much Federal income tax Marathon paid in years prior to 1966.

4 Getty income for 1967 includes companies previously listed as Tidewater and Skelly.

5 State income tax.

S 8034

deterrent, while it could be misinterpreted by the Soviets as an attempt to threaten their deterrent. It would therefore stimulate an arms race.

Equally subject to miscalculation would be our failure to proceed with Safeguard. A potential enemy might interpret such a move as an unwillingness on our part to provide for an adequate defense. Such a misinterpretation of our motives might be highly provocative and lead to disaster.

WILL SAFEGUARD WORK?

Opponents of Safeguard have cast much doubt on the eventual effectiveness of this antimissile system. Of all the testimony offered by the scientific community in regard to Safeguard, I was most impressed by the candor of Dr. Edward Teller in his testimony before the Senate Subcommittee on International Organization and Disarmament Affairs.

As to a reliable estimate of Safeguard's effectiveness, Dr. Teller said this:

There is a group of people which probably has reliable estimates. They are the Russian experts, who have practiced the deployment of defense for many years. Our own experts have widely different opinions as to the effectiveness of the Russian ABM system, and as to whether it will be extended beyond Moscow.

Dr. Teller went on to say:

The important question is whether defense or offense is cheaper and more effective. At this present stage we must give the answer that we do not know. This state of ignorance must be ended. Some important answers will be forthcoming in the near future if we begin deployment as recommended by President Nixon.

In his testimony Dr. Teller contended that in the absence of U.S. expertise on defensive missile weaponry, our Nation might be at a disadvantage in arms limitation talks with the Soviets, who have gained much experience in ABM systems.

Dr. Teller's testimony reminded me of his essential role in the development of the hydrogen bomb and the division of scientific opinion preceding the bomb's development. Some scientists believed that the hydrogen atom could be split and that a hydrogen weapon could be produced. Other scientists insisted this was impossible.

In November 1952, we tested a thermonuclear device. Less than a year later the Russians announced—then tested—a fully developed hydrogen bomb. It was not until March 1954 that we produced a hydrogen bomb.

I remember there was a similar division of scientific opinion concerning the development of the Polaris missile delivery system. Fortunately in neither instance was the division of scientific opinion allowed to thwart our initiative.

In a way, I see history repeating itself as regards Safeguard, but with an added factor—the widespread disillusionment with our Defense Establishment.

There are those who wish to follow a course limited to research and development of Safeguard. These opponents of deployment rest their case on the legitimate differences of opinion which have

been raised about the system's ultimate effectiveness.

At this point, I am convinced that under the phased-deployment plan recommended by the President, phase I of this deployment is essentially a pilot or experimental step.

This phase is limited to the location of Safeguard components at two Minutemen wings. It should provide an opportunity to "shake down" the system to expose technical and operational flaws that might not appear in a research and development program without limited deployment.

My study of Safeguard convinces me that the system's ultimate effectiveness is based not on a single technological development but rather on the coordination of Safeguard's intricate components. This coordination is at present an unknown, which can be tested only in a deployed system. Consequently, I consider phase I of this deployment essentially an extension of our research and development efforts.

In the twisted logic of strategic warfare, there is also the ironic case to be made that if deployed, the Soviets must assume that Safeguard works and therefore the ABM system would act as a deterrent to a first strike.

WHAT WILL SAFEGUARD COST?

Senators are aware of my sense of priorities. I joined with a majority of Senators to continue the exemption of education programs from the budget ceiling. Subsequent to that successful vote, I joined a minority who favored extending this exemption to health programs. I have continually pressed for adequate funding in these and other fields responsive to our pressing domestic demands.

The cost overruns, waste, and miscalculations which have marred our Defense Establishment in recent years disturb me greatly. I have often thought aloud, what benefits could have been obtained if the funds spent in the C5-A cost overrun alone had been applied to education, health, housing, or economic development programs.

An intensification of congressional oversight has been a positive byproduct of these defense miscalculations. Congress has been further reminded of its budgetary and investigatory powers. To me this reassertion of congressional powers is long overdue.

I am well aware that Safeguard now contains many unknowns, which will be discovered as research, development, and initial deployment proceed. I cannot at this point discount the possibility that subsequent developments may lead to a markup of Safeguard's price tag. We may discover at some point in the future that offense is cheaper and more effective than defense.

But what is important to me is this: as we vote on this initial authorization we are only making a first step. The appropriations process follows and in each year of Safeguard's development, Congress will have the opportunity to review the program and the responsibility to authorize and appropriate or not to authorize and appropriate funds for the continuation of Safeguard. I believe that

whatever the outcome of this pending vote it will not signify an end to the ABM debate. The debate will continue. On March 14 the President said:

Each phase of the deployment will be reviewed to insure that we are doing as much as necessary but no more than that required by the threat existing at that time.

Similarly, Congress will follow Safeguard each step of the way utilizing our budgetary and investigatory powers to insure that we proceed in the best interests of the Nation and peace.

CONCLUSION

Mr. President, I have shared with other Senators the major considerations in my lengthy deliberations. By this time my conclusion should be apparent. I shall vote in favor of the fiscal year 1970 authorization for Safeguard.

However, I do not consider my support for Safeguard to be open ended. At some time in the future I may have sufficient doubts as to the effectiveness or potential costs of the system to oppose further expenditures for deployment of the system. But most important, there may come a time when I conclude that curtailment of Safeguard deployment might be in the best interest of pursuing meaningful arms limitations talks. I consider the reverse to be true at this point and time, but that may not remain so. If circumstances change and I consider a cessation of Safeguard deployment a requisite to meaningful arms talks, I would strongly urge the President to cease deployment of the ABM system.

As I do not consider my pending vote in favor of this authorization to "lock me in to Safeguard," neither do I consider my vote an endorsement of our military policy past or present. However, I consider this vote too important to use as a vehicle for displaying my wrath against certain inept defense policies and procedures.

It is in the interest of peace that I shall cast my vote in favor of this authorization for Safeguard. I believe that proceeding with this measured system will stimulate—not retard—moves toward strategic arms talks.

I hope and pray that these talks will soon begin and prove productive. If by some chance they drag on unproductively, are temporarily suspended, or ultimately fail, I want the President to have a sufficient flexibility in his response to a nuclear ultimatum, an irrational or accidental missile attack. I want the President to have a second button next to the one that might properly be labelled "holocaust."

Mr. President, in essence, I have reached this decision because I have concluded that this would not accelerate the arms race because it is a strictly defense oriented program. Certainly, it is much more likely to bring about meaningful arms control talks than exclusive concentration on the production of offensive weapons.

For if potential enemies know that we are capable of defending ourselves against attack and at the same time insure the survival of our own retaliatory forces, they may well reach the conclusion that little purpose would be served

July 14, 1969

CONGRESSIONAL RECORD — SENATE

S 8033

SAFEGUARD VERSUS SENTINEL

In comparing Safeguard with Sentinel, I found that President Nixon's proposal overcomes several of my objections to Sentinel. Unlike Sentinel, the Safeguard system in defending our deterrent can be considered only as a defensive system whereas Sentinel in defending cities could be seen as a U.S. bid for a first-strike capability. Safeguard makes it clear that the United States wishes to deter a general war, not start one or provoke one.

The doubts I had about the effectiveness of Sentinel remains to some extent with the Safeguard; however, in the defense of cities, anything less than a complete "intercept capability" appears nearly worthless, while in defending missile sites, less than a complete "intercept capability" is tolerable.

President Nixon clearly stated on March 14 what Safeguard cannot do. One of my principal objections to Sentinel was the possibility our Nation might somehow delude itself into thinking the system provided our cities an invulnerability against attack.

Comparing the two anti-ballistic-missile systems, I concluded that Safeguard, unlike Sentinel, is in keeping with our nuclear strategy, which was expressed by President Kennedy in his March 28, 1961, message to Congress:

Our strategic arms and defenses must be adequate to deter any deliberate nuclear attack on the United States or our allies. . . . Moreover we will not strike first in any conflict. But what we have and must continue to have is the ability to survive the first blow and respond with devastating power. This deterrent power depends not only on the number of our missiles and bombers, but on their state of readiness, their ability to survive attack and the flexibility and sureness with which we can control them to achieve our national purpose and strategic objectives.

OPTIONS AVAILABLE TO THE PRESIDENT

President Kennedy's use of the term "flexibility" reminds me of his phrase "the grim choice between humiliation and holocaust." In the instance of a nuclear ultimatum, an irrational or accidental missile attack, should the President have only one response—massive retaliation? Or are the interests of peace and survival better served if the Chief Executive has two buttons instead of one to push?

I pondered this question at great length. I envisioned a President faced with the knowledge that enemy missiles were heading toward the United States. I inquired as to what options are now available to him in response to such attack. I discovered there are now two grim alternatives—do nothing or push the button that unleashes our devastating nuclear fury.

If it were determined that the incoming missiles were part of an all-out nuclear attack on our Nation, the Chief Executive would probably be forced to push that one button.

However, these enemy missiles might be limited in number and their launching the result of an accident or the irrational design of a madman. What could the President do then? He is still caught with only two choices.

But if there was another button available, a button to trigger our missiles designed to intercept and destroy these incoming weapons, the President could push it and halt the attack without immense loss of lives at home or the catastrophic consequences of full retaliation.

I have concluded that it is in the interest of all mankind to increase the options available to the President. Safeguard provides an additional alternative, an extra button.

EFFECT OF SAFEGUARD ON ARMS TALKS

In March of this year prior to voting to ratify the Treaty on the Nonproliferation of Nuclear Weapons, I urged prompt adherence to the course set by article VI of the treaty, to negotiate in good faith to end the nuclear arms race and to effectuate nuclear and general disarmament. I renew these urgings today and stress that I could not with a clear conscience advocate any course that would be counterproductive to strategic arms talks.

On June 24, 1968, I, together with 33 other Senators, voted in favor of an amendment to defer funds for the deployment of Sentinel until July 1, 1969. This amendment, offered by the distinguished Senators from Kentucky (Mr. COOPER) and Michigan (Mr. HART), was rejected by a vote of 52 to 34.

Three days later, Soviet Foreign Minister Andrei Gromyko announced that the U.S.S.R. was "ready for an exchange of opinion" on "mutual restrictions and subsequent restriction of strategic vehicles for the delivery of nuclear weapons—offensive and defensive including antimissiles."

On February 9 of this year, Premier Kosygin was asked about ABM defenses at a press conference in London; he replied in part:

I believe that defensive systems, which prevent attack are not the cause of the arms race, but constitute a factor preventing the death of people. Some argue this: What is cheaper, to have offensive weapons which can destroy towns and whole states or to have defensive weapons which can prevent this destruction? At present the theory is current somewhere that the system which is cheaper should be developed. Such so-called theoreticians argue as to the cost of killing a man \$500,000 or \$100,000. Maybe an anti-missile system is more expensive than an offensive system, but it is designed not to kill people but to preserve human lives.

In view of the Soviet response to last June's authorization vote and the fact they insist their already deployed ABM system is purely defensive and not inimical to arms control negotiations, I contend that proceeding with the measured deployment of Safeguard should be considered as an incentive to meaningful arms limitation talks.

First, as I have previously stated, Safeguard clearly indicates that we want to deter general nuclear warfare, that we only want to protect our deterrent forces; and we do not seek to destroy the Soviet deterrent capability.

Second, it tells any potential enemy that we do not intend to have our deterrent forces downgraded through their continued production of offensive weapons.

In effect we are saying we will thwart enough even of a Soviet sneak attack to make their plans futile. The Soviet's only logical conclusion, then, will be not to waste time and money escalating their offensive missile arsenal, but rather to pursue serious arms limitation negotiations.

Last, the Safeguard system is a better incentive to meaningful arms limitation talks because it is a phased reactive-type system. The plans call for starting with two ABM sites—one in Montana and one in North Dakota—to protect enough of our deterrent force against attack. If the talks progress and guarantees are reached, the sites can be closed down. If the talks bog down or drag out and our best intelligence evaluation shows a Soviet first-strike threat, the sites can be maintained fully operational. An increased threat could lead to an expansion of Safeguard sites. What is important to me is that we will be taking our lead from the Soviets. If they seriously want arms limitations, Safeguard can be abandoned; if they want to keep the pressure on or increase the pressure, Safeguard can be maintained or expanded.

IS THE SAFEGUARD AN ESCALATION OF THE ARMS RACE

In discussing the implications of Safeguard on arms talks I made it clear that the measured deployment of Safeguard would allow us to take our lead from the Soviets. I think it is important to remember that it is not the United States which has in recent years been escalating the arms race. The Soviets acted first to test fire an ABM against an incoming nuclear-armed missile and they are the only nation to have done so; they are also the only nation to test and develop a bomb of the magnitude of 60 megatons. The Soviets have also acted first to develop and deploy a fractional orbital bombardment system—FOBS—and have already developed, deployed, and refined a partial ABM system. While they have taken the escalatory lead, the charge of escalation is raised against the United States when we seek to follow the Soviets in a measured-deployment of an ABM system. But who raises these charges? The Soviet Union cannot credibly attack our ABM system as provocative after insisting that their ABM system is non-provocative. The charges of escalation come from domestic opponents of the ABM. I do not question their motives or their sincerity, but considering the record of escalation, I do challenge their contention.

In the historical context of the arms race, I contend that Safeguard cannot be considered an escalation on our part, but rather a cautious, measured response to the Soviet deployment of an ABM system. I would consider the suggested alternatives to Safeguard to be more escalatory.

Many opponents of the ABM contend that our funds would be better spent by increasing the number of our sea- and land-based missiles and bombers. In this regard I concur with the President who said after weighing this alternative:

I have ruled out this course because it provides only marginal improvement of our

July 14, 1969

President Nixon's statement to the country when he said:

I have weighed all these factors. I am deeply sympathetic to the concerns of private citizens and Members of Congress that we do only that which is necessary for national security. This is why I am recommending a minimum program essentially for security. It is my duty as President to make certain we do not less.

The statement of the distinguished Senator from Vermont is thoroughly in keeping with those words, and it is only one more evidence of the fact that he is and always has been, in my opinion, a real statesman.

Mr. PROUTY. I am deeply grateful to the distinguished Senator from New Hampshire.

I yield to the Senator from Texas.

Mr. TOWER. Mr. President, I wish to express my profound thanks to the Senator from Vermont. I have always been proud of the fact that my great grandfather was born in Vermont, but never more proud than I am today. I think the distinguished Senator has reflected great credit upon himself and upon his State. I think this is absolutely the most closely reasoned and most rational argument that I have heard throughout the course of the debate of the doctrine for the authorization of the ABM. I think it is a tremendous contribution to the debate. As a matter of fact, I kept saying to myself during this course of the Senator's remarks, "Why didn't I think of that?"

This was really a splendid argument. So many good arguments were advanced by the Senator from Vermont that it is difficult to single out any single one to comment upon, but one important contribution which I think the Senator added to the debate of last Friday on deployment was when he said:

My study of Safeguard convinces me that the system's ultimate effectiveness is based not on a single technological development but rather on the coordination of Safeguard's intricate components. This coordination is at present an unknown, which can only be tested in a deployable system. Consequently, I consider Phase I of this deployment essentially an extension of our research and development efforts.

This is a point extremely well made. Again I thank the Senator for his monumental contribution.

Mr. PROUTY. I thank the Senator very much.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. PROUTY. I yield to the Senator from Nebraska.

Mr. CURTIS. I compliment the Senator on his very convincing and courageous statement.

I rise as one who claims no expertise, scientifically or from a military standpoint. However, I do feel that on these very important questions, we have to trust someone. Upon the President of the United States falls the awesome responsibility of guiding our foreign policy and acting as Commander in Chief of our Armed Forces. Any human being placed in that responsibility is going to get the best guidance he can. It will be conflicting. But once he has made his decision, I believe we can more safely rely upon the position of such a man, who carries

such a heavy responsibility, than on any other source; and I commend the distinguished Senator for the position he has taken and the clarity with which he has made it known.

Mr. PROUTY. I thank the Senator from Nebraska.

I yield to the Senator from Arizona. Mr. GOLDWATER. Mr. President, I merely wish to commend and comment briefly on my colleague's stand. I have served with him in the Senate for a number of years.

I was asked outside the Chamber a moment ago by two reporters if I was surprised by his remarks. I replied, "No, not surprised in the way that you think of surprise, because I have always known Senator PROUTY to be a man who made up his own mind after meticulous thinking."

I frankly am envious of patience in coming to the decisions that he reaches. On this one, of course, we are in agreement. I think the Senator from Vermont rightly recognized the point that I think too many of the Members of this body overlook, that this has been the recommendation of our Commander-in-Chief, not as the President of the United States, but as the man charged with the responsibility of protecting the freedom of America, the dignity of America, and the body of America.

I do not believe that you can bargain with the safety of 200 million Americans. I think the President's decision as Commander-in-Chief was one that he came by in a hard way; but we have to remember also that the last three Presidents believed in this, the last three Secretaries of Defense have believed in and advocated it, all the Joint Chiefs of Staff in the same period of time have believed in it—in other words, the people responsible for the defense of the United States have all been for the deployment of something like the Safeguard.

I thank my good friend from Vermont for his typical courage. It did not surprise me a bit. In fact, the only day I shall ever be surprised and shocked by anything my friend from Vermont says is the day when a statement by him might seem to have been pressured on him, or not to have come as a result of his thinking.

I am very proud to serve in a body that has Members like Senator PROUTY.

Mr. PROUTY. I am very grateful to my friend from Arizona. I yield to the Senator from California.

Mr. MURPHY. Mr. President, I, too, join with my colleagues in congratulating the Senator from Vermont for a most forthright, careful dissertation on a matter that has taken up most of the time of this body for the past week, and will take further time—a matter of such great complexity and importance that it once again proves the necessity for what seems to be, at times, the slow action of this body. Sometimes there are so many ramifications that need careful study and careful thought that decisions cannot be arrived at quickly or easily, or off the top of one's head.

I join in the remarks that have been made here in admiration of the careful analysis that the Senator has made of

this problem. I believe that he pointed out all the values that must be considered, and that he has made it clear that in this matter of decision in this body, if there are any doubts in the minds of any Senators, those doubts must be resolved in favor of the future security and welfare of the United States of America.

I think that the point that the Senator made that at the present time, without question, we need a system, everybody agrees we need a system, the testimony has shown that this is the only system at the present time; was well taken. Then he pointed out clearly the matter of constant review. It may be that 6 months from now, if the arms talks are successful, it can be canceled, or a year from now, if they are successful, it can be canceled. If they are not, there may be new systems, and the review will provide for an updating, so that there will be no unnecessary waste, but the protection and the well-being of this country will be the uppermost consideration at all times.

Another point of great importance, which has been touched on by my distinguished colleague from Arizona, is that the President of the United States has the obligation, by a vote of the people, to make these decisions. He, as the distinguished Senator from Arizona has pointed out, is the Commander in Chief. He is the man who must, in the final analysis, listen to all the discussion and react to all of the ideas and thoughts; that he, finally, is the one who must take the responsibility for the decision.

He has done that, and he has said to us most thoughtfully and sincerely that he needs his. Who is better to judge what condition he should be in when he goes to meet with the Russians, in the hope of finding some solution to the matter of final and lasting disarmament, who better than the President out of his experience from the long availability of information that has come day by day and is coming currently?

I am so pleased that I have had the privilege of serving with the distinguished junior Senator from Vermont for the 5 years that I have been a Member of the Senate. There is no other Senator for whom I have more respect. His judgment and determination and courage determines his votes, and his wisdom in matters of concern for the welfare of the country have been outstanding.

I feel sorry for only one thing—that the Chamber was not filled with all Members of the Senate to hear the fine analysis and careful dissertation and clear thinking of the final sound conclusion arrived at by the distinguished Senator from Vermont.

I congratulate him and consider it a great honor to serve in the Senate and on Senate committees with him.

Mr. President, I ask unanimous consent to have printed in the Record an editorial entitled "Senate Should Vote 'Yes' On ABM," which was published in the Los Angeles Times on July 10, 1969. The editorial deals with the matter of the ABM, and it asks two very important questions and makes two very important points with regard to the decision.

by increasing their stockpile of offensive weapons.

Though I believe at this point that proceeding with Safeguard enhances the prospects for peace, it does so only in the twisted logic of a "mutual deterrent." For truly neither Safeguard nor any weapons system will insure peace. The answer lies elsewhere and Adlai Stevenson pointed in the right direction toward the end of his first presidential campaign. He said:

If the pursuit of peace is both old and new it is also both complicated and simple. It is complicated, for it has to do with people and nothing in this universe baffles man as much as man himself.

In other words, the answer lies in understanding our fellow man; the final safeguard lies within each of us.

Mr. DIRKSEN. Mr. President, this statement by the distinguished junior Senator from Vermont is in the greatest tradition of the Senate. It is in the greatest tradition of a great original State.

The Senator from Vermont has done what absolutely all of us have done. We have wrestled with what we thought was something of a crisis in our history.

John Ruskin, great author, commentator, and philosopher that he was, experienced crises like that. Some of the finest things that were committed to paper were those that came from those moments of crisis.

The Senator from Vermont has somehow confessed his sense of crisis as he sought to go forward and seek the truth. Little by little he has worn away the friable stones of error and has finally come to the hard truth which has committed him, at this point in time, to a support of the Safeguard system.

I think one of the greatest statements in his whole text is the very last sentence, because he says:

In other words, the answer lies in understanding our fellow man; the final safeguard lies within each of us.

WIN PROUTY, that is a great speech. I congratulate you.

Mr. PROUTY. I thank the Senator.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. PROUTY. I yield.

Mr. STENNIS. Mr. President, to one who has been working on this subject and is familiar with many aspects of it, it is stimulating to have a fine, clean, clearcut, analytical discussion here, as the Senator has given us.

I want to point out three matters that I think are so helpful in the debate. One is that the entire Safeguard program is under continuous review by the President of the United States. Two, it is also, of necessity, under yearly review by the Congress of the United States, which is the only power, under our system, that can vote the money. This is not merely a casual survey, but an actual review, on which there will be a minimum of four rollcall votes on this subject each year, one on authorizations and one on appropriations in the Senate, and the like situation in the other body. That is the minimum expression from the legislative branch. There can be more.

Another factor pointed out, which is so clear to me, is that it is purely a defense

weapon, and clearly not an offensive weapon in anyways. It is unthinkable that any logical person who might be an adversary would look upon Safeguard as anything except a defensive weapon which is designed to protect our arsenal.

Last, Safeguard does stimulate a genuine approach to arms limitation. Arms limitation is what we are all hopeful for and what we all want to bring about. That is what the President of the United States has in mind as his special mission during the forthcoming months. The speech of the Senator has taken into consideration the conditions the President is faced with and the safety of the Nation.

I thank the Senator for his speech which was both worthy and eloquent, as well as sound from a practical viewpoint.

Mr. PROUTY. I thank the Senator from Illinois. I appreciate his comments.

Mr. SCOTT. Mr. President, will the Senator yield?

Mr. PROUTY. I yield.

Mr. SCOTT. I congratulate the distinguished Senator from Vermont for an excellent declaration of conscience and of conviction; for a statement which reasons a way to a conclusion which seems to him, and I may add to me, to be inescapable.

I am glad the Senator made reference to scientific judgments. I think all of us are aware that in every decision reached with regard to the defense of the United States, the scientists have been divided, and often down the middle.

The Senator will recall that at the time of the decision to "march" to the moon, the then scientific adviser to the President of the United States advised against it, on the ground that it could not possibly be done, and it would cost too much money, anyway.

Mr. PROUTY. I thank the Senator.

Mr. JACKSON. Mr. President, will the Senator yield?

Mr. PROUTY. I yield.

Mr. JACKSON. Mr. President, I congratulate and compliment the able Senator from Vermont for a well reasoned speech. I was particularly impressed with his delineation of the alternatives open to the President of the United States. We live on the knife edge of history. A false move can lead to total catastrophe. If there ever was a need for the President to have additional options, it is in connection with the management of our nuclear strategic forces.

The Senator from Vermont has forcefully pointed out the need for this third option, to make it possible for the President to take whatever action is appropriate to stop an incoming missile, if the situation were such that that was the right course. Certainly, we ought to give the President the tools to have the kind of flexibility which, in the event of an irrational, accidental or very limited missile attack, could avoid a total nuclear exchange.

Mr. President, I think another point is of immediate significance. It relates to negotiations. I do not think one needs to be an expert in the field of diplomacy or of strategic weapons to appreciate the problems that a country must face sitting down at a negotiating table with the

Soviets to work out a limitation or reduction of strategic offense and defense weapons. I can only put it this way: Does it make any sense that the Soviets would want to agree to dismantle or eliminate their ABM's already deployed when we do not have an ABM and have voted not to go ahead with one?

Mr. PROUTY. I could not agree more with the Senator.

Mr. JACKSON. I want to further point out, carrying out the thoughtful remarks of the able Senator from Vermont, that I think it is a definite possibility—as definite as anything can be—that the Soviets are going to be very reluctant at this point in history to dismantle their ABM's as long as they are confronted with the problem that they now face from Red China. I do think, however, Mr. President, as the reasoning of the able Senator from Vermont suggests, that we perhaps can get a mutual limitation on the number of ABM's on each side; if we, for our part, do not now unilaterally abandon deployment of our ABM system. I think such an agreement on a mutual limitation on ABM's would be in the mutual interests of the United States and the Soviet Union, in light of the situation which exists today.

I merely wanted to pay my highest compliments for the well thought out, well reasoned remarks of the Senator from Vermont in the presentation he has made today with reference to a decision on the ABM.

Mr. PROUTY. I thank the Senator.

Mr. COTTON. Mr. President, will the Senator yield?

Mr. PROUTY. I yield.

Mr. COTTON. Mr. President, I thank the Senator for yielding to me because as his friend and neighbor, I want to express my admiration for the stand he has taken and the speech he has delivered this day. I have lived all my life in sight of the State which he so ably represents. I knew WINSTON PROUTY before he ever came to Congress. I was a Member of the House of Representatives when he became a Member of that body and have had the privilege of serving with him there and for many years here in the Senate.

I have known Senator PROUTY over the years as one who is utterly fearless, utterly sincere, and as one who makes up his own mind and makes it up only after the most careful consideration and analysis. The speech he has just delivered is one of the most thoughtful and analytical speeches I have heard in many years in the Senate.

Last year when I voted for the Sentinel System—to which the Senator referred in his speech—I did so after wrestling with my conscience and with some doubts. I was reluctant to commit the Nation to such an extensive system—untested and untried. I have had no doubt about casting my vote for the carefully limited and revocable Safeguard System. And that is not because the President of one party advocated the Sentinel System and the President of another advocated the Safeguard.

As I listened to the words of the distinguished Senator from Vermont, I had constantly in mind the closing words of

problem."⁶ If this were true, the Soviet Union might have been approaching the point about which Dr. Long later was to warn, the point at which a first strike against the United States might be ordered because the Soviet BMD was judged strong enough to ward off the American counterblow.

Two days later, however, the Soviet Union's civil defense chief, Marshal Vasily I. Chulikov, indicated that no guarantee for Soviet cities' protection against nuclear missile attack was available. The Soviet armed forces had "first class military equipment and perfect rocket nuclear weapons able to destroy any aggressor," he said in a television address on the eve of the 49th anniversary of the Soviet Army and Navy. "But unfortunately there are no means yet which would guarantee the complete security of our cities and most important objects from the blows of enemy weapons of mass destruction."

"In practice it is impossible to intercept completely all modern planes and, even more so, rockets launched through space. A certain number of them may reach the target."⁸

On the same evening *Izvestia* carried an article by the then First Deputy Minister of Defense, Andrei A. Grechko, saying that "the modern means of anti-aircraft defense may be relied upon to hit any plane and many types of rockets."¹⁰ This carried the strong hint that Moscow defenses could not destroy all types of rockets.

An official Soviet commentary on the nature and effectiveness of Soviet civil defense measures appeared in the January, 1969, issue of *Science and Life*. Written by the same Marshal Chulikov, head of the Soviet civil defense establishment, the article said:

"In our country, everything possible is being done to build reliable means enabling us to protect lives in a possible war. It is well known that the task of defense of the population can be accomplished by two methods—by evacuation and dispersal of the population out of the regions which would probably be struck by the enemy, or by sheltering them in special defense installations. There are no other possibilities, but even these two give us a huge advantage over other countries, especially those of Western Europe. Our country has lots of space and a developed transportation network, our cities are surrounded by ample green belts. All this enables us, on short notice, to take people out of the cities and regions which are probable targets for the enemy into rural locations and thus sharply reduce possible losses.

"Take for example city 'A'. If today the average density of population in this city is 7,000 people per square kilometer, after the execution of dispersal and evacuation it would be lowered, on the average, to 700 to 800 people per square kilometer. In other words, the average would be lowered by eight to ten times. This means that after dispersal and evacuation, a nuclear explosion of the same magnitude would cause losses eight to ten times lower than before the implementation of these measures."

In his testimony before the Gore Subcommittee on May 21, 1969, Dr. Eugene Wigner, nuclear physicist at Princeton University, stressed the potential of city evacuation for nuclear blackmail in crisis situations. Here are some excerpts from his statement.

"The tactic I am most afraid of is not an actual attack. It is, rather, the threat of an attack, preceded by the evacuation of cities. If the USSR and U.S. armaments developed in the way the present trends indicate, I greatly fear that we would have to accede to whatever demands accompany the threat.

"If the civil defense plans of the USSR, in particular its evacuation program, are carried out—and I cannot see what might prevent this—our deterrent power will be gravely degraded and may become insufficient.

"The particular form of civil defense which plays a prime role in the USSR planning, the

evacuation of the cities, was found objectionable to those participating in a civil defense study. I am referring to the Little Harbor Study, the participants in which, including myself, expressed opposition to evacuation plans because they felt such plans are 'provocative.' The time needed for the actual evacuation is long, of the order of a day at least. Hence, evacuation can be carried out in time only if the time of the confrontation is known well ahead of time. Since this is the case only for the party which initiates the confrontation, evacuation is most useful as a measure supporting aggression.

"The evacuation of the cities could decrease the fatalities which an opponent can inflict by a very considerable factor. I calculated that, assuming evacuation of the cities of the USSR into circles with 50-mile radii, our present missile power, including that on submarines, could cause a fatality level of about 9½ million if (a) all our missiles were used against the population, none against the military targets, (b) if the ballistic missile defense of the USSR were completely ineffective, (c) if we suffer no losses whatever from a first strike and (d) if all our submarines are on station. Naturally, though only a fraction of the numbers often quoted, 9½ million is an extremely high level of fatalities. It is based, however, on extreme assumptions and, of course, we do not know the lives of how many people a possible bellicose leadership of an opponent may be willing to sacrifice in order to assure permanent freedom from 'imperialist war plotters'."

ORDER FOR RECOGNITION OF SENATOR PROXMIRE TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that at the conclusion of the speech by the distinguished senior Senator from California (Mr. MURPHY) tomorrow, the distinguished senior Senator from Wisconsin (Mr. PROXMIRE) be recognized for not to exceed 1 hour.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR CURTIS TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that tomorrow, following the speech of the distinguished Senator from Wisconsin (Mr. PROXMIRE), the Senator from Nebraska (Mr. CURTIS) be recognized for not to exceed 30 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR DOMINICK TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that, as close to the hour of 2 o'clock tomorrow as possible, the distinguished Senator from Colorado (Mr. DOMINICK) be recognized for not to exceed 20 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

GREAT LAKES-ST. LAWRENCE SEAWAY MILITARY CARGO TEST PROGRAM IS PROVING SUCCESSFUL

Mr. PROXMIRE. Mr. President, on July 8, 1969, a number of eastern Senators wrote to the Secretary of Defense protesting the continuance of a test program of shipping military cargo via the Great Lakes and the St. Lawrence Seaway.

The letter suggests that the test program is diverting cargo from more efficient routes and that the result is higher shipping costs. Nothing, Mr. President, could be further from the truth. The traditional method of routing military cargo, whereby products manufactured in the Midwest are carted to the east coast for shipment, has diverted cargo; the present program is designed to redress this situation.

Officials at the Defense Department estimate that \$100,000 in shipping costs will be saved this year. This estimate is based on the experimental quantity of 80,000 to 90,000 tons of cargo; as the program moves into normal operational status, with Midwest-manufactured military cargo carried via the St. Lawrence Seaway on a regular basis, this should result in savings of hundreds of thousands of dollars annually.

Before turning to the specifics of the letter written by my east coast colleagues, it will be useful to briefly review the history of our efforts to get this program underway. The Great Lakes have consistently received short shrift when it has come to military cargo. For years, cargo that was manufactured in the Midwest, and which could have been placed on ships in immediately adjacent Great Lakes ports for carriage out the seaway, has been transported across more than 1,000 miles of land by truck or rail to be placed on ocean-going vessels in east coast ports.

It does not take a Ph. D. in economics to see that using the rail-plus-ship routing instead of a single mode of transportation is bad business. But it has been done this way because the lines servicing the Great Lakes have been mostly foreign-flag carriers, and the Pentagon has not been able to place military cargo on foreign-flag vessels because of the Cargo Preference Act.

Why have not the American-flag carriers sought out military cargo business in the Great Lakes? Simply because it is easier and more convenient for them to pick up cargo at east coast ports. As long as the Pentagon has been willing to transport cargo cross country to the east coast, there has not been any incentive for American-flag lines to send ships into the Great Lakes to get the business.

tal—"Well, there is always Polaris." This seems to me a hazardous position. The whole point of the mix of strategic weapons systems—Minuteman, Polaris, Poseidon, B52 Bombers—is to have such diversification that our deterrent could never be totally negated. I am sure that if we are willing to write off Minuteman as a component of our deterrent forces, we would not have any difficulty inducing the Soviets then to focus their full counter-force genius against our submarine and bomber forces. In fact, I fully expect there has already been long established a Soviet group charged with developing specific means of countering such elements of our deterrent. To them, Polaris may not look like 600 missiles, or 6,000 warheads if given a ten-fold MIRV multiplication, but rather as only 41 boats to be neutralized. Certainly we know the Soviets are engaged in large-scale ASW developments. And our 600 B-52 bombers may be viewed as a much smaller number of airfields to be attacked—for which they may think their Fractional Orbital Bombardment System (FOBS) is well suited." 5

What first-strike force would be necessary to neutralize the United States' deterrent? The Chayes-Wiesner report released by Senator Kennedy in May claimed it would have to be substantially larger than the force the Pentagon estimated. The Chayes-Wiesner book said:

"With our Minutemen in hardened silos, it would take at least two attacking ICBM's to be reasonably sure of destroying one Minuteman."

Defense Department Research Chief John S. Foster, Jr., however, called on recent United States experience to reach the judgment that Moscow would need many fewer attacking missiles to succeed in a first strike:

"An ICBM with three independently aimed warheads can attack three silos. The U.S. has designed, but not deployed, a system which allows a missile to signal the launch-control point if it has launched its re-entry vehicle properly. With this system, the control point could reprogram another missile to make up for failures. For example, a missile system having a 20% failure rate and carrying 3 re-entry vehicles per missile, would require only 420 missiles to attack 1000 silos. If the yield of each re-entry vehicle was a reasonable 5 MT and the accuracy a reasonable 1/4 of a mile, about 95% of the silos could be destroyed. This would mean 50 of the 1000 Minutemen survive. It would be foolish to attack half of the silos twice as the book advised, rather than all of them at once."

Those who hold that the possibility of a planned Soviet first strike must not be lightly dismissed make the following arguments in support of their position:

1. The importance of surprise in nuclear warfare—that is, a first strike—figures repeatedly in Soviet doctrinal writings. One example frequently quoted is an article by Marshal A. A. Grechko, now the defense minister, published in *Red Star*, February 23, 1961. This article emphasized the following points:

"(a) Suddenness (or surprise) is crucial to success in modern war.

"(b) Technological surprise may be equally crucial.

"(c) The initial phase of the war will be of decisive importance.

"(d) Soviet forces will employ nuclear weapons as their main armament."

Several other quotations from Soviet military writings relating to the question of the first strike appear in the section on doctrine.

2. The SS-9 and fractional orbital missiles simply make no sense as retaliatory weapons. The suborbital missile is clearly structured for surprise attack. The SS-9 combines a much more powerful missile and more powerful warhead than is required for destroy-

ing even the largest cities. For purposes of simple retaliation, the SS-9 would be irrationally expensive. As counterforce weapons, however, directed against United States strategic air bases and ICBM complexes, they do make sense.

3. The Soviet Union places heavy emphasis on civil defense, including the evacuation of Soviet cities, which could be taken as a signal of expectation of a retaliatory nuclear blow.

Joanne Levey, a specialist in Soviet civil defense, wrote in the March-April, 1969, issue of *Survive*, an American journal of civil defense:

"Unclassified Soviet military literature abounds in articles on all areas of civil defense; thus, to read a fair amount of this material is one way of getting at least a layman's sense of the Soviet civil defense program—it's scope, its quality, and its emphasis. Such a reading, admittedly, does not reveal the exact number of Soviet shelters or their effectiveness. Yet even in areas such as these, certain clear-cut inferences may be drawn. For example, the abundance and extent of shelters is inferred when numerous articles instruct people to go to the nearest shelter on receipt of the "Air Alert" signal and indicate further that such shelters exist everywhere that people live and work so that when they hear the signal, they may take cover quickly.

"Civil defense training in the Soviet Union is compulsory and universal. Everyone is exposed to it—school children in grades five through nine, both in classrooms and in summer camps, pre-draft-age men in military-sport camps and in educational institutions, industrial workers at their places of employment, and members of collective farms. There is multiple exposure in that civil defense is publicized at movies, on radio and television, and in magazines, newspapers, and factory publications. Civil defense courses are tailored to the needs and ability of the trainees. Farm children, for instance, are taught how to protect cattle, forage, food and water supplies as well as themselves. Factory employees learn rescue and reclamation operations and ways of reducing the vulnerability of their shops. All Russians are trained to identify and make the appropriate response to the seven warning signals (Air Alert, All Clear from Air Alert, Threat of Radioactive Contamination, Radioactive Contamination, Chemical Attack, Bacteriological Contamination, and Threat of Flooding). They are also instructed on how to respond to surprise attack and to the preattack government order to evacuate their cities. Instructions are specific and concrete. For example, if at home when the "Air Alert" is given, citizens are told to get together individual protective equipment (gas mask or dust mask, raincoat, and rubber boots), close the windows, turn off heat, gas, stoves, and lights; take the previously prepared supply of food, water, and personal documents, and head quickly for the nearest shelter, warning their neighbors (who may not have heard the signal) on the way out.

"Soviet civil defense training for male youth and adults puts emphasis on going into disaster areas almost immediately after attack to perform rescue and reclamation operations. They are taught to use cranes, bulldozers, and other heavy equipment to dig people out of caved-in shelters, to extinguish fires, to administer first aid, and to evacuate the injured. Training exercises for these complicated operations are realistic with actual protective clothing and heavy equipment being used. Realism extends in other program areas to the simulation of chemical warfare agents from inexpensive materials available in any drugstore and to the practice evacuation of the mothers and newly delivered babies of a maternity home to a kindergarten 37 kilometers away.

"Preattack evacuation of large segments of the urban population to rural areas under certain conditions of crisis escalation is an important plank in the Soviet civil defense platform. Industrial workers in cities are to remain on the job and take refuge in special shelters at or near their place of work; but non essential workers, school and preschool children, and retired people are to be transported to the country. Upon arrival, the evacuees are to assist their rural hosts in constructing hasty fallout shelters on sites that have already been surveyed for this purpose. Plans for evacuation are detailed, including, for example, time schedules for departure to collecting points; the presence of a doctor or nurse on each evacuation train (or with every convoy of trucks); instructions on what each family should bring (depending on climate and season); and special evacuation passes with a stub and a detachable slip for each person."

4. Possession of a first-strike capability does not necessarily mean that the Soviet Union would engage in a first strike. The capability would put the Soviet Union in a position to play the game of political blackmail more effectively than it did at the time of the Berlin ultimatum or the Cuban missile crisis.

Several critics of the ABM, while holding that a first strike is highly improbable, have nevertheless conceded that under certain circumstances the Soviet Union might be tempted or impelled to launch a first strike.

Dr. George W. Rathjens suggests:

"It is conceivable that one of the superpowers with an ABM system might develop MIRVs to the point where it could use them to destroy the bulk of its adversary's ICBM force in a preemptive attack. Its air and ABM defenses would then have to deal with a much degraded retaliatory blow consisting of the sea-launched forces and any ICBMs and aircraft that might have survived the preemptive attack.

"The problems of defense in such a contingency would remain formidable. They would be significantly less difficult, however, than if the adversary's ICBM force had not been seriously depleted. In fact, the defense problem would be relatively simple if a large fraction of the adversary's retaliatory capability were, as is true for the United States and to a far greater degree for the U.S.S.R. in its land-based ICBM's, most of which would presumably have been destroyed.

"It may seem unlikely that either superpower would initiate such a preemptive attack in view of the great uncertainties in effectiveness (particularly with respect to defenses) and the disastrous consequences if even a comparatively small fraction of the adversary's retaliatory force should get through. With both MIRVs and an ABM system, however, such a preemptive attack would not seem as unlikely as it does now."

Dr. Franklin A. Long, former science adviser in the Arms Control and Disarmament Agency, has warned that an effective ABM might tempt its possessor to believe in his own invulnerability and thus might become an encouragement to adventurism:

"A different and more perturbing possible consequence is that a strong BMD system may lead its possessor to contemplate a first strike with his nuclear missile forces. (Against this is the argument that a conservative posture will lead a nation to derogate its own BMD capabilities and hence be very hesitant to carry out programs which, for success, postulate a fully effective BMD)."

Conflicting estimates of the effectiveness of anti-missile defense have sometimes appeared in the Soviet press.

Soviet General Pavel A. Kurochkin, head of the Frunze Military Academy, had electrified the Western defense community on Feb-20, 1967, when he announced at a Moscow press conference that "detecting missiles in time and destroying them in flight is no

Footnotes at end of article.

"One can talk of war occurring through escalation. But it still requires, at some stage, that one major power launch nuclear weapons against the other. This will be, and can be expected to be perceived as, a self-destructive act. For the foreseeable future, war calculations will not seem promising; moreover, leaders are unlikely to believe them if they do seem so. And there is ample evidence in the three decades since World II of great-power caution in treating events that might risk general nuclear war.

"For these reasons, among others, nuclear war between the United States and the Soviet Union has become a low-probability event—possible and well worth worrying about because of its enormous consequences, but still unlikely. Because it has this character, concern with 'getting through the next few years' has gradually been transmuted into concern with maintaining nuclear peace and national security over the next decades. In short, the world situation now warrants paying attention to the medium- and long-term problems attendant upon proposed policies relating to nuclear war."

"Senator Joseph Tydings: A Soviet missile attack on the United States would be 'irrational' because it would be suicidal. Regardless of the destruction wreaked on the United States, the U.S.S.R. would also be obliterated in the process. However, to assume that such a Soviet attack might also be 'irrational' enough to be less than 'all-out' defies reason. Why should any Soviet leader send only a few missiles over when he knows the United States will retaliate with its full second strike force? Even men as mad as Hitler were never guilty of such thoughtless accommodation to their enemies. If the Soviets did attack, it would certainly be with full force, which by the Pentagon's own reckoning would render the proposed Safeguard system useless.

"As for accidental attack, I assume it would consist of one or two missiles that unintentionally 'got away.' Since all missiles are programmed to specific destinations, it is clear that such a missile would either be directed toward a large city or toward a missile site.

"If the former were the case, the Safeguard system would only protect Minneapolis theoretically and might even prove inadequate here owing to the fact that this city is beyond the range of our Sprints. If this enemy missile were targeted at a missile site, at most we would simply lose a few of our 1000 ICBM's, and few lives would be lost. It is hardly worth the vast expense of an ABM system to insure against the loss of a few drastically less expensive ICBM's

"The final justification offered by the Pentagon in support of the Safeguard is the most serious. It is based on the claim that our second-strike capability is being threatened by the Soviets and that measures must be taken to protect portions of our second strike force.

"If in fact our retaliatory capability is in question, we must act immediately to restore it. The Soviets must never doubt our ability to inflict unacceptable damage to their society in response to a preemptive attack. This is the very substance of our deterrent strategy. If our retaliatory capability is in question, additions to our offensive forces, not dubious defensive missiles, ought to be our strategy.

"However, there is no evidence that our second-strike capability is being threatened or that Moscow doubts its effectiveness.

"Last month, before the Senate Foreign Relations subcommittee on Disarmament, Secretary of Defense Laird declared that the Russians 'are going for a first strike capability—there is no question about that.' This came as a shock to those of us in Con-

gress who are acutely interested in this Nation's defense posture. Only 2 months before, outgoing Defense Secretary, Clark Clifford, had announced: 'The U.S. shall continue to have, as far into the future as we can now discern, a very substantial qualitative lead and distinct superiority in numbers . . . and overall combat effectiveness of our strategic forces.'

"He added that the 'most pessimistic' military estimates credit the U.S. with the ability to destroy 40 percent of the Soviet population and 75 percent of their industry even after an all-out attack by the 'highest expected threat' the Soviets could launch in the future. And presumably by 'future,' he meant more than the 8 weeks between the time of his leaving and Mr. Laird's testimony before Congress.

"The National Intelligence Estimate—the consensus view of the Defense Intelligence Agency, the State Department, and the Central Intelligence Agency—denies the existence of any first-strike plans on the part of the Kremlin or any signs that such plans are in the making. In addition, the Secretary of State of this administration, Mr. Rogers, reconfirmed this view in a recent press conference, declaring that he was not aware of any Soviet intentions to develop a first-strike capability.

"The arithmetic of the situation casts further doubts on Mr. Laird's contention. Both we and the Soviets each have slightly in excess of 1,000 operational ICBM's. Let us suppose that Moscow initiated a preemptive strike against the United States and destroyed every one of our Minutemen in their hardened and dispersed sites—a virtual impossibility given what we know about the launch probabilities, megatonnage and accuracy of Soviet missiles. This hypothetical exercise also requires the further doubtful assumption that we chose not to launch our ICBM's in retaliation during the grace period after our radars detected this massive Soviet assault and before the enemy missiles actually struck.

"Our retaliatory forces would still contain 656 submarine-launched Polaris missiles that are invulnerable to enemy attack and 480 B-52 bombers each carrying four nuclear bombs and a nuclear-tipped Hound Dog missile with a range of 700 miles once it is launched from the parent plane. This is a total of more than 3,000 nuclear warheads. According to former Secretary of Defense McNamara's estimates, it would take no more than 400—not 3,000—nuclear warheads to damage the Soviet Union beyond recognition and repair.

"Mr. Laird bases his claims about Soviet intentions to develop a first-strike capability on the deployment of 200 Russian SS9 missiles. We have known about these missiles with large warheads for several years, and our intelligence evaluations have considered them part of the Soviet second-strike force designed to destroy our cities in a retaliatory attack. Suddenly, without explanation the Secretary of Defense has decreed that they are now first-strike weapons.

"Even accepting this questionable turn-about, the SS9 provides no reason for deploying an anti-ballistic-missile system in this country. Assuming these missiles possess the accuracy and launch probability estimated for our own Minutemen missiles, all 200 SS9's with huge multi-megaton warheads would destroy only 90 of our 1,000 land-based ICBM's. The Soviets would require more than 2,000 of these SS9's armed with 20 megaton warheads to destroy our entire Minutemen force—and this would still leave us with 656 submarine-launched missiles and our intercontinental bombers with their 2,400 nuclear warheads with which to retaliate.

"Finally, the credibility of Mr. Laird's contention that Moscow has first-strike designs is undermined by his recommended re-

sponse. He is calling for a limited ABM system that will not "provoke" the Soviets. If, in fact, the Soviets are intent on developing the capability to destroy us and our ability to retaliate, and if the ABM is a workable system, a workable defense, should we not proceed immediately with a "heavy system" to protect our people and all our missiles? Why are we worried about provoking a nation which supposedly already has decided to go all out to annihilate the United States? How can they be further provoked?

"In addition, spokesmen for the administration have indicated U.S. readiness to abandon the Safeguard if the Russians will give up their limited ABM deployment around Moscow. Secretary of State Rogers informed the Foreign Relations Committee only several weeks ago:

"Suppose we started our talks in a few months and the first thing that's said by the Soviet Union is, 'Let's do away with defensive missiles.' We'd have no problem. We'd be delighted."

"These are Secretary of State Rogers' words:

"If we truly believed the Soviets were forging ahead with the development of a first-strike capability, such a concession would be suicidal. We would be playing directly into Moscow's hands. One is forced to conclude that Mr. Laird does not take his own cries of 'wolf' as seriously as he would have us receive them."

"In summary, the Pentagon's claim that the Safeguard is necessary to preserve our second-strike capability is unconvincing."

Dr. William G. McMillan, a nuclear weapons expert at the University of California, Los Angeles, responded to some of these criticisms in his testimony before the Senate Preparedness Subcommittee:

"For some years I have followed closely the growth of the Soviet ABM systems. By my reckoning there have been three systems involved: the first, partially deployed around Leningrad and then apparently abandoned; the second, deployed around Moscow and now approaching operational status; and the third or Tallinn system, very extensively deployed throughout the Soviet Union, and which appears to me likely to have a considerable ABM potential.

"I find very unpersuasive the argument that the Soviets are building in the Tallinn development yet another SAM antiaircraft system to the neglect of a defensive system aimed at what they must surely regard as the more current threat of ICBM's and SLBM's.

"By the counterforce effort I refer to the current Soviet development of multiple warheads for their SS-9 missile. To me the evidence as I understand it points very strongly, if not unequivocally, towards a MIRV—i.e., a multiple independently targeted reentry vehicle-system designed against the U.S. land-based Minuteman system.

"To impart some feeling for the strength of my own conviction on these two intelligence issues, I would strongly support spending a substantial fraction of our Defense budget to assure that neither of these Soviet developments be allowed to degrade our strategic deterrent.

"Put differently, I am most certainly not willing to gamble the survival of our Minuteman force that such an interpretation is wrong.

"In addition to the question of capability, intelligence must concern itself with the question of intent. Here the writing of such high-level Soviet military planners as Marshal Sokolovsky abound with references to the need for a preemptive strategic first-strike capability. They tell themselves they must develop it, and now we see that development in progress. How much more notification do we need?

"In this focusing on the survivability of Minuteman one often encounters the rebut-

Footnotes at end of article.

American people, if not of the military-industrial complex, to call a recess in the nuclear arms race which for so many years has bled our economy and militarized our foreign policy. It would mark a historic turning point, a signal that the American people have decided to break the pattern of 20 years, during which everything the military establishment asked was freely granted with little debate and little question. It would tell the Soviets, and the world, that the military-industrial complex which has been able to escalate the arms race at will and plunge the nation into unsanctioned military adventures no longer exercises exclusive control over American policy.

For these reasons, and for the sake of a more sensible allocation of resources as between weaponry and social progress, the Senate should say "No" to Safeguard.

THE ABM—FIRST-STRIKE CAPABILITIES

Mr. TOWER. Mr. President, the American Enterprise Institute has, in my opinion, put out the best objective study concerning the merit and lack of merit of the proposed anti-ballistic-missile system. Entitled "The Safeguard ABM System," this special analysis is one of many reports issued by this nonpartisan research organization.

I, like all other Senators, have attempted to do as much research as possible on the ABM. Perhaps the most informative and controversial section of this analysis is the chapter dealing with first-strike capabilities. Whether or not the Soviet Union is gearing itself for a first-strike nuclear attack is a related question to the entire debate on the Safeguard system. If our information leads us to answer in the positive the deployment of the Safeguard system, protecting a portion of our ICBM and Minutemen forces is a mandatory step we must take to insure the safety of enough of our deterrent force so that we will be able to launch a second-strike retaliatory attack.

Particularly enlightening to me was the section within this chapter written by Department of Defense Research Chief John S. Foster, Jr. Mr. Foster stated that the Soviet SS-9 and the FOBS, the fractional orbital bombardment system, are offensive weapons not conducive to retaliatory attack. Furthermore, Mr. Foster and others writing in this same chapter take note of the complicated and advanced Soviet civil defense system, which is geared to evacuate city residents to rural areas. Such an evacuation procedure can only be taken as a Soviet belief and fear of a retaliatory attack.

These arguments and many others are discussed back and forth in this penetrating and informative analysis. As I stated before, the first-strike question has great relevance to the debate over the military procurement bill, as well as to the debate over the Safeguard ABM system. For these reasons I ask unanimous consent that the above-mentioned section of the American Enterprise Institute's analysis of the Safeguard system be printed in the RECORD.

There being no objection, the section was ordered to be printed in the RECORD, as follows:

THE SAFEGUARD ABM SYSTEM
FIRST STRIKE

Along with its traditional renunciation of aggression, the United States carries among

its prime articles of strategic doctrine a firm policy against employing a nuclear first strike against any adversary. First strike in the nuclear age has come to mean a surprise nuclear attack sufficient to destroy enough of the enemy's retaliatory force to render it virtually impotent.

As the May, 1969, study of the American Security Council pointed out in referring to the United States' nuclear forces:

"Not only do we have no objective which requires our initiating an attack against the Soviet Union, but we have carefully tailored our nuclear arsenal to exclude all weapons designed to initiate such an attack, or with which we could even credibly threaten such an attack. We have no hundreds of missiles with 25 megaton warheads. We have no orbital or fractional orbital nuclear bombardment systems whose utility is solely to deprive defensive forces of sufficient warning time to survive a surprise attack. We have neither the capability nor the intent of initiating nuclear war against the Soviets."

The Nixon decision on Safeguard, as the President has pointed out, was a further indication of no-first-strike intent. No preparations were made to protect major American cities even from a "broken-back" attack by Soviet forces that might be crippled in an American first strike.

Experts disagree about Soviet intentions to develop a first-strike capability.

Defense Secretary McNamara in his statement of September 19, 1967, generally discounted the possibility of a Soviet first strike:

"It would not be sensible for either side to launch a maximum effort to achieve a first-strike capability. It would not be sensible because the intelligence-gathering capability of each side being what it is, and the realities of lead-time from technological breakthrough to operational readiness being what they are, neither of us would be able to acquire a first-strike capability in secret."

Defense Secretary Laird, however, regarded the possibility that the Soviet Union was developing a first-strike capability as a real danger for the mid-1970s:

"I do not believe that the Soviet Union would be foolish enough, in this year 1969, or 1970, to go with the first strike, and I want to make that very clear. But, as Secretary of Defense, I must consider why they are going forward with the deployment of an SS-9 with such a large massive warhead. If they are developing a retaliatory strike, they don't need that kind of a warhead to hit our cities. They don't need that kind of missile system.

"It only leads me to believe that they are developing a capability to go after our missile bases and to knock out our deterrent force. It is important for us to have a credible deterrent. What I am interested in doing is preserving the peace and protecting our people and preventing nuclear war. We have been successful thus far. We have to keep our guard up, and this is what I have been talking about before the committees the last two days."

Senator Henry M. Jackson of Washington, in a speech on March 17, 1969, spoke in similar terms of the gravity of the Soviet first-strike threat:

"Moreover, the Soviets are moving fast toward parity with us in terms of nuclear missiles. By the end of this year Moscow will have deployed as many—or more—land-based ICBM's than we will have, and with a substantially greater megatonnage. The Soviets are deploying the Fractional Orbital Bombardment System (FOBS)—which is a first-strike oriented weapons system. The Soviets are producing Polaris-type nuclear submarines on a series, assembly-line basis, each with 16 ballistic missiles. Meanwhile, we are witnessing a far-ranging expansion

of other Soviet naval activity, and the Soviet navy is quite evidently in the Mediterranean to stay."

America's long-time disarmament chief, William C. Foster, acknowledged the possibility the Soviet Union might be seeking a first-strike capability in several of its weapons. In the April, 1969, *Foreign Affairs* he outlined steps that could lead to a first strike:

"Several of the weapons systems now being contemplated for deployment in the next few years could increase the risk of war by enhancing the temptation to strike first during a crisis situation.

"The Soviets, for example, have been testing a Fractional Orbital Bombardment System (FOBS). This weapon differs from a 'normal' ICBM chiefly in that it travels at a lower altitude and can take a longer and supposedly less detectable route to its target, via the Southern Hemisphere. . . . Its main purpose would appear to be for use in a surprise first strike against soft targets, such as strategic bomber airfields. Thus, a large-scale FOBS deployment would clearly be in violation of a fundamental 'rule,' which has been tacitly observed in recent years, against the development of weapons which might appear to increase directly the incentive to strike first.

"Another weapons system that would be inconsistent with that fundamental rule is a large-scale Ballistic Missile Defense system (BMD). A BMD system, if presumed to be effective by its possessor, might incline him to calculate that he could launch a massive counter-force strike against enemy land-based strategic forces and then defend himself against unacceptable losses from the enemy's retaliatory attack.

"Thus a large-scale BMD, by permitting its possessor to perceive an enhanced potential for a first strike, could increase his incentive to strike first in a crisis situation. At the same time a power confronting an adversary with a large-scale BMD might in a crisis situation feel impelled to strike first because a sudden, massive first strike with unimpaired offensive forces would have a better chance of penetrating missile defenses than would a retaliatory strike with a partially destroyed offensive force.

"The MIRV or Multiple Individually-Targeted Re-Entry Vehicle, which makes it possible for a missile to deliver separate warheads to several widely separated targets, is another complicating development in nuclear technology. If, in addition to possessing large-scale BMD systems, both sides also possessed large-scale MIRV systems—such as the United States and presumably the Soviets have been developing—there could be an additional incentive to strike first in a crisis situation. The rationale for this is simple enough. Suppose, for example, that a large portion of each side's ICBM force had, let us say, 5 MIRV warheads in each missile. Then the side which strikes first could hope, at least in theory, to destroy up to 25 enemy warheads (in 5 enemy missiles) with each of its attacking missiles. Clearly, this could be viewed as a reason for wishing to strike first."

Challenges to these interpretations of Soviet intentions and capabilities have been made by many critics of the ABM. Most of the arguments made against the first-strike hypotheses are incorporated in the following two excerpts:

"Jeremy J. Stone: A large-scale Soviet attack against American cities is plainly and simply not rational, since the American response is primed to destroy the Soviet Union in return. The Soviet leadership is aware of this. That nuclear war is mutual suicide has attained the status of a cliché with both super-powers. Wide-scale nuclear attacks on American forces are so unlikely to succeed, and so dangerous in any case, that it is very hard to imagine a Soviet leader, or Soviet committee, attempting them.

Footnotes at end of article.

S 8044

CONGRESSIONAL RECORD — SENATE

July 14, 1969

year means that the chance of having that full-scale nuclear war by 1990 is about one in three, and by 2000 it is about 50-50.

I think I know what is bothering the students. I think that what we are up against is a generation that is by no means sure that it has a future.

I am growing old, and my future so to speak is already behind me. But there are those students of mine who are in my mind always; and there are my children, two of them now 7 and 9, whose future is infinitely more precious to me than my own. So it isn't just their generation; it's mine too. We're all in it together.

Are we to have a chance to live? We don't ask for prosperity, or security; only for a reasonable chance to live, to work out our destiny in peace and decency. Not to go down in history as the apocalyptic generation.

And it isn't only nuclear war. Another overwhelming threat is the population explosion. That has not yet even begun to come under control. There is every indication that the world population will double before the year 2000; and there is a widespread expectation of famine on an unprecedented scale in many parts of the world. The experts tend to differ only in the estimates of when those famines will begin. Some think by 1980, others think they can be staved off until 1990, very few expect that they will not occur by the year 2000.

That is the problem. Unless we can be surer than we now are that this generation has a future, nothing else matters. It's not good enough to give it tender loving care, to supply it with breakfast foods, to buy it expensive educations. Those things don't mean anything unless this generation has a future. And we're not sure that it does.

I don't think that there are problems of youth, or student problems. All the real problems I know are grown-up problems.

Perhaps you will think me altogether absurd, or "academic," or hopelessly innocent—that is, until you think of the alternatives—if I say as I do to you now: we have to get rid of those nuclear weapons. There is nothing worth having that can be obtained by nuclear war: nothing material or ideological, no tradition that it can defend. It is utterly self-defeating. *Those atom bombs represent an unusable weapon. The only use for an atom bomb is to keep somebody else from using one. It can give us no protection, but only the doubtful satisfaction of retaliation.* Nuclear weapons offer us nothing but a balance of terror; and a balance of terror is still terror.

We have to get rid of those atomic weapons, here and everywhere. We cannot live with them.

I think we've reached a point of great decision, not just for our nation, not only for all humanity, but for life upon the Earth. I tell my students, with a feeling of pride that I hope they will share, that the carbon, nitrogen and oxygen that make up 99 percent of our living substance, were cooked in the deep interiors of earlier generations of dying stars. Gathered up from the ends of the universe, over billions of years, eventually they came to form in part the substance of our sun, its planets and ourselves. Three billion years ago life arose upon the Earth. It seems to be the only life in the solar system. Many a star has since been born and died.

About two million years ago, man appeared. He has become the dominant species on the Earth. All other living things, animal and plant, live by his sufferance. He is the custodian of life on Earth. It's a big responsibility.

The thought that we're in competition with Russians or with Chinese is all a mistake, and trivial. Only mutual destruction lies that way. We are one species, with a world to win. There's life all over this universe, but in all the universe we are the only men.

Our business is with life, not death. Our challenge is to give what account we can of what becomes of life in the solar system, this corner of the universe that is our home and, most of all, what becomes of men—all men of all nations, colors and creeds. It has become one world, a world for all men. It is only such a world that now can offer us life and the chance to go on.

Mr. HANSEN. Mr. President, I compliment the distinguished senior Senator from Arizona for the very informative and dispassionate and reasoned statement he has just made.

I know that a great many Senators have already made up their minds as to what their positions shall be. For those who may not have yet arrived at their position, I am sure they will find useful the remarks of the distinguished Senator, who has the capacity to take a cool and analytical approach to any problem and to weigh the merits and demerits of a proposal and then determine what will best serve this country.

The Senator has once again demonstrated his ability to apply logic, reason, and good judgment to a very difficult problem.

I compliment the Senator very sincerely.

Mr. FANNIN. Mr. President, I thank the Senator. I know that he has given a great deal of thought to the matter. I have heard him express his position on the subject eloquently.

I am pleased that the Senator has come to the conclusion, as I have, that we must support our President and that as the Commander in Chief of our Armed Forces he is entitled to this support. I am very proud that we have seen fit to get behind him on this issue as well as on other issues.

I expressed my deep thanks to the distinguished Senator from Wyoming.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. FANNIN. I yield.

Mr. STENNIS. Mr. President, undoubtedly the Senator from Arizona has made a contribution in this matter. He has pitched it not only a high plane, but also on the one solid foundation upon which all this question rests: What is necessary for the defense of our Nation? What is necessary to defend our people? That is what it really comes down to. This is merely a protection for our arsenal.

I recall seeing pictures in history books of Indians putting up their barricades, and the colonists would have their barricades. I do not think either blamed the other, or ever did, for putting up a barricade to protect themselves against attack. That is what the ABM boils down to, and it will be a successful barricade.

Mr. FANNIN. Mr. President, I am highly honored that the distinguished Senator from Mississippi has seen fit to make his remarks. He is widely recognized as one of the most informed men in our Nation on the subject of the protection of our country. As chairman of the Committee on Armed Services, the country owes him a debt of gratitude. I have had the privilege many times of discussing a number of these problems with him. I know well his knowledge, his

sincerity of purpose, and the tremendous amount of time he devotes to this subject.

I express my thanks to the distinguished Senator.

Mr. STENNIS. I thank the Senator.

SUMMING UP ON SAFEGUARD

Mr. SYMINGTON. Mr. President, with respect to the debate that is now going on incident to the Safeguard ABM, I ask unanimous consent that a thoughtful editorial published in the St. Louis Post-Dispatch of July 8 be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SUMMING UP ON SAFEGUARD

As Senate debate opens on deployment of the Safeguard antiballistic missile system, the country has before it a good summary of the argument in the majority and minority reports of the Armed Services Committee.

The majority calls ABM "essential for the nation's security." The minority, headed by Senator Symington of Missouri, believes the system would not contribute to our security "in any substantial fashion."

Without ABM, says the majority, Soviet weaponry may place in doubt the second-strike capability of "a large proportion" of our strategic deterrent forces. Pointing to the enormous surplus of nuclear power we already possess, the minority holds that even after an attack by Russia we would have enough forces left to "destroy the Soviet Union 50 times over."

The minority questions the technical feasibility of the ABM system, noting that the highly complex radar and computer components have not even been tested singly, and that in combination there is even greater doubt that they would function successfully under conditions of a nuclear attack. The majority rests its case on blind faith that technology can surmount any obstacles.

We think the minority has much the better of the argument. Perhaps its strongest point is one to which the majority offers no rebuttal at all—namely, that whatever protection might be afforded to our Minuteman missiles by the expenditure of billions of dollars on Safeguard could be completely overcome by just a few months' added production of Soviet offensive missiles. In other words, the "security" to be purchased with Safeguard is a costly illusion. It would not actually protect our land-based missiles if the Soviets were determined to knock them out; yet even if these were knocked out, we would still have far more than enough sea-based missiles, European-based missiles and bombers to deliver a crushing retaliatory blow.

The majority falls back on the contention that a decision to deploy Safeguard will strengthen our negotiating position in arms talks with the Soviets. But the tactics of escalation to gain negotiating leverage have never worked in 20 long years of arms talks, and there is no reason to suppose they would work now. The whole history of the arms race is one of escalation on one side inducing escalation on the other. The way to break the cycle is for one side to refrain from an act of escalation which can be forgone without impairing its strategic position.

Such is the case with ABM. When Senator Symington and his colleagues, all of whom have had the same access to secret information as the committee majority, tell us that our security would not be impaired by postponing deployment of the ABM, they deserve to be believed.

A Senate vote against deployment would in our opinion strengthen Mr. Nixon's hand in the arms talks. It would express in the strongest possible way the readiness of the

July 14, 1969

CONGRESSIONAL RECORD — SENATE

S 8043

Truman Doctrine, and all the rest of it—in 1950 we got down to 600,000 men.

Now we have 3.5 million men under arms: about 600,000 in Vietnam, about 300,000 more in "support areas" elsewhere in the Pacific, about 250,000 in Germany. And there are a lot at home. Some months ago we were told that 300,000 National Guardsmen and 200,000 reservists—so half a million men—had been specially trained for riot duty in the cities.

I say the Vietnam War is just an immediate incident, because so long as we keep that big an army, it will always find things to do. If the Vietnam War stopped tomorrow, with that big a military establishment, the chances are that we would be in another such adventure abroad or at home before you knew it.

As for the draft: Don't reform the draft—get rid of it.

A peacetime draft is the most un-American thing I know. All the time I was growing up I was told about oppressive Central European countries and Russia, where young men were forced into the army; and I was told what they did about it. They chopped off a finger, or shot off a couple of toes; or better still, if they could manage it, they came to this country. And we understood that, and sympathized, and were glad to welcome them.

Now by present estimates four to six thousand Americans of draft age have left this country for Canada, another two or three thousand have gone to Europe, and it looks as though many more are preparing to emigrate.

A few months ago I received a letter from the Harvard Alumni Bulletin posing a series of questions that students might ask a professor involving what to do about the draft. I was asked to write what I would tell those students. All I had to say to those students was this: if any of them had decided to evade the draft and asked my help, I would help in any way I could. I would feel as I suppose members of the underground railway felt in pre-Civil War days, helping runaway slaves to get to Canada. It wasn't altogether a popular position then; but what do you think of it now?

A bill to stop the draft was recently introduced in the Senate (S. 503), sponsored by a group of senators that ran the gamut from McGovern and Hatfield to Barry Goldwater. I hope it goes through; but any time I find that Barry Goldwater and I are in agreement, that makes me take another look.

And indeed there are choices in getting rid of the draft. I think that when we get rid of the draft, we must also cut back the size of the armed forces. It seems to me that in peacetime a total of one million men is surely enough. If there is an argument for American military forces of more than one million men in peacetime, I should like to hear that argument debated.

There is another thing being said closely connected with this: that to keep an adequate volunteer army, one would have to raise the pay considerably. That's said so positively and often that people believe it. I don't think it is true.

The great bulk of our present armed forces are genuine volunteers. Among first-term enlistments, 49 percent are true volunteers. Another 30 percent are so-called "reluctant volunteers," persons who volunteer under pressure of the draft. Only 21 percent are draftees. All re-enlistments, of course are true volunteers.

So the great majority of our present armed forces are true volunteers. Whole services are composed entirely of volunteers: the Air Force for example, the Navy, almost all the Marines. That seems like proof to me that present pay rates are adequate. One must add that an Act of Congress in 1967 raised the base pay throughout the services in three installments, the third installment still to come, on April 1, 1969. So it is hard to un-

derstand why we are being told that to maintain adequate armed services on a volunteer basis will require large increases in pay; that they will cost an extra \$17 billion per year. It seems plain to me that we can get all the armed forces we need as volunteers, and at present rates of pay.

But there is something ever so much bigger and more important than the draft. That bigger thing, of course, is the militarization of our country. Ex-President Eisenhower warned us of what he called the military-industrial complex. I am sad to say that we must begin to think of it now as the military-industrial-labor union complex. What happened under the plea of the Cold War was not alone that we built up the first big peace time army in our history, but we institutionalized it. We built, I suppose, the biggest government building in our history to run it, and we institutionalized it.

I don't think we can live with the present military establishment and its \$80-\$100 billion a year budget, and keep America anything like we have known it in the past. It is corrupting the life of the whole country. It is buying up everything in sight; industries, banks, investors, universities; and lately it seems also to have bought up the labor unions.

The Defense Department is always broke; but some of the things they do with that \$80 billion a year would make Buck Rogers envious. For example: the Rocky Mountain Arsenal on the outskirts of Denver was manufacturing a deadly nerve poison on such a scale that there was a problem of waste disposal. Nothing daunted, they dug a tunnel two miles deep under Denver, into which they have injected so much poisoned water that beginning a couple of years ago Denver began to experience a series of earth tremors of increasing severity. Now there is a grave feat of a major earthquake. An interesting debate is in progress as to whether Denver will be safer if that lake of poisoned water is removed or left in place. (N.Y. Times, July 4, 1968; Science, Sept. 27, 1968).

Perhaps you have read also of those 6000 sheep that suddenly died in Skull Valley, Utah, killed by another nerve poison—a strange and, I believe, still unexplained accident, since the nearest testing seems to have been 30 miles away.

As for Vietnam, the expenditure of fire power has been frightening. Some of you may still remember Khe Sanh, a hamlet just south of the Demilitarized zone, where a force of U.S. Marines was beleaguered for a time. During that period we dropped on the perimeter of Khe Sanh more explosives than fell on Japan throughout World War II, and more than fell on the whole of Europe during the years 1942 and 1943.

One of the officers there was quoted as having said afterward, "It looks like the world caught smallpox and died." (N.Y. Times, Mar. 28, 1968.)

The only point of government is to safeguard and foster life. Our government has become preoccupied with death, with the business of killing and being killed. So-called Defense now absorbs 60 percent of the national budget, and about 12 percent of the Gross National Product.

A lively debate is beginning again on whether or not we should deploy antiballistic missiles, the ABM. I don't have to talk about them, everyone else here is doing that. But I should like to mention a curious circumstance. In September, 1967, or about 1½ years ago, we had a meeting of M.I.T. and Harvard people, including experts on these matters, to talk about whether anything could be done to block the Sentinel system, the deployment of ABM's. Everyone present thought them undesirable; but a few of the most knowledgeable persons took what seemed to be the practical view, "Why fight about a dead issue? It has been decided, the funds have been appropriated. Let's go on from there."

Well, fortunately, it's not a dead issue.

An ABM is a nuclear weapon. It takes a nuclear weapon to stop a nuclear weapon. And our concern must be with the whole issue of nuclear weapons.

There is an entire semantics ready to deal with the sort of thing I am about to say. It involves such phrases as "those are the facts of life." No—they are the facts of death. I don't accept them, and I advise you not to accept them. We are under repeated pressure to accept things that are presented to us as settled—decisions that have been made. Always there is the thought: let's go on from there! But this time we don't see how to go on. We will have to stick with those issues.

We are told that the United States and Russia between them have by now stockpiled in nuclear weapons approximately the explosive power of 15 tons of TNT for every man, woman and child on earth. And now it is suggested that we must make more. All very regrettable, of course; but those are "the facts of life." We really would like to disarm; but our new Secretary of Defense has made the ingenious proposal that now is the time to greatly increase our nuclear armaments so that we can disarm from a position of strength.

I think all of you know there is no adequate defense against massive nuclear attack. It is both easier and cheaper to circumvent any known nuclear defense system than to provide it. It's all pretty crazy. At the very moment we talk of deploying ABM's, we are also building the MIRV, the weapon to circumvent ABM's.

So far as I know, the most conservative estimates of Americans killed in a major nuclear attack, with everything working as well as can be hoped and all foreseeable precautions taken, run to about 50 millions. We have become callous to gruesome statistics, and this seems at first to be only another gruesome statistic. You think, Bang!—and next morning, if you're still there, you read in the newspapers that 50 million people were killed.

But that isn't the way it happens. When we killed close to 200,000 people with those first little, old-fashioned uranium bombs that we dropped on Hiroshima and Nagasaki, about the same number of persons was maimed, blinded, burned, poisoned and otherwise doomed. A lot of them took a long time to die.

That's the way it would be. Not a bang, and a certain number of corpses to bury; but a nation filled with millions of helpless, maimed, tortured and doomed persons, and the survivors of a nuclear holocaust will be huddled with their families in shelters, with guns ready to fight off their neighbors, trying to get some uncontaminated food and water.

A few months ago Sen. Richard Russell of Georgia ended a speech in the Senate with the words: "If we have to start over again with another Adam and Eve, I want them to be Americans; and I want them on this continent and not in Europe." That was a United States senator holding a patriotic speech. Well, here is a Nobel Laureate who thinks that those words are criminally insane. (Prolonged applause.)

How real is the threat of full scale nuclear war? I have my own very inept idea, but realizing how little I know and fearful that I may be a little paranoid on this subject, I take every opportunity to ask reputed experts. I asked that question of a very distinguished professor of government at Harvard about a month ago. I asked him what sort of odds he would lay on the possibility of full-scale nuclear war within the foreseeable future. "Oh," he said comfortably, "I think I can give you a pretty good answer to that question. I estimate the probability of full-scale nuclear war, provided that the situation remains about as it is now, at 2 percent per year." Anybody can do the simple calculation that shows that 2 percent per

S 8042

CONGRESSIONAL RECORD — SENATE

July 14, 1969

would have us experience? A balance of terror is a balance of terror, but it is not destruction or enslavement. I admit to being unable to follow the doctor's argument.

So there will be no chance of my misquoting Dr. Wald, I ask unanimous consent to have his speech printed in the RECORD at the end of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. FANNIN. Mr. President, the next nonthink example comes from a former Vice President and one of our colleagues here in the Senate. I refer to a prolog to "The ABM: Yes or No?" written by Hubert H. Humphrey and published by the Center for the Study of Democratic Institutions in Santa Barbara, Calif.

I have referred to this organization before in connection with Supreme Court Justice William O. Douglas, who serves as chairman of the board of the parent organization for this group and has also written an epilog to this book.

Former Vice President Humphrey, who wrote the prolog from Waverly, Minn., in January of this year said this about our missile defenses:

The only proof of effectiveness that can be offered in defense of the missile standoff is that we have survived the 20 years of international tensions without precipitating world war III.

Mr. President, it seems to me that Mr. Humphrey makes precisely the point that so many of us who support the President have been trying so long and hard to make. Since we have managed to survive the last 20 years by a missile standoff, shall we not try to continue to refrain from precipitating world war III by making ourselves so weak as to invite attack?

The third and last example of the ABM-nonthink, Mr. President, which I shall cite at this time, occurred in this Chamber last Wednesday, July 9.

A Senator professed amazement at the alleged shifting position of the Senator from Washington (Mr. JACKSON) and the Senator from Mississippi (Mr. STENNIS). Quoting from the RECORD of July 9 at page S7784:

Right now I can classify such logic, most respectfully, as pure hogwash.

Mr. President, the Senators from Washington and Mississippi took the floor immediately in their own behalf and ably defended their positions—so that is neither necessary now nor is it my present purpose. I question how it is possible to be very respectful about "hogwash." It may be the Senator has more experience in that field, and so I will defer to him.

What I do think is noteworthy, Mr. President, is a remark which is on the immediately following page, S7785, by the same Senator in which he states:

We are going to settle this issue with reason, not emotion.

Putting these two remarks together, Mr. President, I can only conclude that the Senator deals in respectful but unemotional "hogwash."

This is a serious question, Mr. President. The fate of the Nation does hang

in the balance. Perhaps, as that Senator has suggested, "the Nation is watching us." I would not attempt to be humorous or facetious at a time like this, Mr. President, except if by calling attention to these continuing examples of "nonthink," we may all stop worrying about our posture before the watching Nation and look at this problem with a clear eye and with minds open to reason and perspective. If we do, I am sure the Nation will be far better served.

EXHIBIT 1

"I THINK I'VE JUST LISTENED TO THE MOST IMPORTANT SPEECH OF MY LIFETIME"—IT MAY WELL BE JUST THAT

The crowd of 1200 at M.I.T.'s Kresge Auditorium March 4th was shifting and restless when Harvard biologist George Wald rose to speak.

Students and professors there as a part of the "March 4 movement" protesting the misuse of science were disturbed at the lack of focus in the day's numerous panel discussions and speeches.

The 1967 Nobel prize winner in physiology and medicine provided a focus.

As in his popular lectures at Harvard, Wald talked extemporaneously, his head back, his eyes almost closed. His words had an electric effect.

A hush fell over the audience, broken just once by sustained applause midway in the speech, and climaxed by a prolonged standing ovation at its conclusion.

Two Boston Globe staffers, reporter Crocker Snow Jr. and editorial writer James G. Crowley, covered the M.I.T. meeting, returned to the office independently of each other and each told an editor, "I think I've just listened to the most important speech of my lifetime."

All of you know that in the last couple of years there has been student unrest breaking at times into violence in many parts of the world: in England, Germany, Italy, Spain, Mexico and needless to say, in many parts of this country. There as been a great deal of discussion as to what it all means. Perfectly clearly it means something different in Mexico from what it does in France, and something different in France from what it does in Tokyo, and something different in Tokyo from what it does in this country. Yet unless we are to assume that students have gone crazy all over the world, or that they have just decided that it's the thing to do, there must be some common meaning.

I don't need to go so far afield to look for that meaning. I am a teacher, and at Harvard, I have a class of about 350 students—men and women—most of them freshmen and sophomores. Over these past few years I have felt increasingly that something is terribly wrong—and this year ever so much more than last. Something has gone sour, in teaching and in learning. It's almost as though there were a widespread feeling that education has become irrelevant.

A lecture is much more of a dialogue than many of you probably appreciate. As you lecture, you keep watching the faces; and information keeps coming back to you all the time. I began to feel, particularly this year, that I was missing much of what was coming back. I tried asking the students, but they didn't or couldn't help me very much.

But I think I know what's the matter, even a little better than they do. I think that this whole generation of students is beset with a profound uneasiness. I don't think that they have yet quite defined its source. I think I understand the reasons for their uneasiness even better than they do. What is more, I share their uneasiness.

What's bothering those students? Some of them tell you it's the Vietnam War. I think the Vietnam War is the most shameful episode in the whole of American history. The

concept of War Crimes is an American invention. We've committed many War Crimes in Vietnam; but I'll tell you something interesting about that. We were committing War Crimes in World War II, even before the Nuremberg trials were held and the principle of war crimes stated. The saturation bombing of German cities was a War Crime. Dropping atom bombs on Hiroshima and Nagasaki was a War Crime. If we had lost the war, some of our leaders might have had to answer for those actions.

I've gone through all of that history lately, and I find that there's a gimmick in it. It isn't written out, but I think we established it by precedent. That gimmick is that if one can allege that one is repelling or retaliating for an aggression—after that everything goes. And you see we are living in a world in which all wars are wars of defense. All War Departments are now Defense Departments. This is all part of the doubt talk of our time. The aggressor is always on the other side. And I suppose this is why our ex-Secretary of State, Dean Rusk—a man in whom repetition takes the place of reason, and stubbornness takes the place of character—went to such pains to insist, as he still insists, that in Vietnam we are repelling an aggression. And if that's what we are doing—so runs the doctrine—anything goes. If the concept of war crimes is ever to mean anything, they will have to be defined as categories of acts, regardless of alleged provocation. But that isn't so now.

I think we've lost that war, as a lot of other people think, too. The Vietnamese have a secret weapon. It's their willingness to die, beyond our willness to kill. In effect they've been saying, you can kill us, but you'll have to kill a lot of us, you may have to kill all of us. And thank heavens, we are not yet ready to do that.

Yet we have come a long way—far enough to sicken many Americans, far enough even to sicken our fighting men. Far enough so that our national symbols have gone sour. How many of you can sing about "the rockets' red glare, bombs bursting in air" without thinking, those are *our* bombs and *our* rockets bursting over South Vietnamese villages? When those words were written, we were a people struggling for freedom against oppression. Now we are supporting real or thinly disguised military dictatorships all over the world, helping them to control and repress peoples struggling for their freedom.

But that Vietnam War, shameful and terrible as it is, seems to me only an immediate incident in a much larger and more stubborn situation.

Part of my trouble with students is that almost all the students I teach were born since World War II. Just after World War II, a series of new and abnormal procedures came into American life. We regarded them at the time as temporary aberrations. We thought we would get back to normal American life some day. But those procedures have stayed with us now for more than 20 years, and those students of mine have never known anything else. They think those things are normal. Students think we've always had a Pentagon, that we have always had a big army, and that we always had a draft. But those are all new things in American life; and I think that they are incompatible with what America meant before.

How many of you realize that just before World War II the entire American army including the Air Force numbered 139,000 men? Then World War II started, but we weren't yet in it; and seeing that there was great trouble in the world, we doubled this army to 268,000 men. Then in World War II it got to be 8 million. And then World War II came to an end, and we prepared to go back to a peacetime army somewhat as the American army had always been before. And indeed in 1950—you think about 1950, our international commitments, the Cold War, the

July 14, 1969

"Seward's folly," and that figure of \$7.2 million was arrived at to repay the Russian Government for the expense incurred in sending its two war fleets overseas to our shores to demonstrate its support of the Union and as a warning that any armed intervention by France and Great Britain would lead to a conflict with Russia.

Until recent years the Russian leaders have always demonstrated friendship to the United States. Historically, over hundreds of years Russia has not been an aggressor nation. Now the opportunity seems at hand to achieve an understanding with the leaders of the Kremlin for a nuclear arms limitation. We should grasp it.

A defeat of the ABM proposal by the Senate will be helpful to attain the end and advance the hope of a treaty to limit deployment of nuclear weapons. Despite what we have heard earlier today, I predict we in the Senate will defeat President Nixon's ABM proposal. However, if he should win by a margin of one, two, or even five, which is improbable, it would be a pyrrhic "victory" for the administration, and would not be helpful.

Pending achievement of an agreement for talks which might lead to a nuclear limitation treaty it should be unthinkable for us to even consider deployment of a safeguard system at bases in Montana and North Dakota.

If, however, such deployment is undertaken for any reason let it be at Kwajalein Island instead of within the borders of the United States close to Canada.

I am confident that if there should be a vote this week or next week or 4 weeks from now on the ABM proposal, the Senate would demonstrate its wisdom by defeating the proposal.

Mr. President, I yield the floor.

ABM-NONTHINK

Mr. FANNIN. Mr. President, I have listened and participated in the debate that has gone on sporadically for some time now concerning the deployment of the antiballistic-missile system.

This issue, as I have said before, transcends party loyalties and pivots on the more basic issue of the necessity to defend the Nation. Obviously good men can have honest differences of opinion over the best way to accomplish the goal. My difficulty comes when there is either deliberate or unconscious obscuring of the goals.

We have heard it parroted over and over that the money we save on the ABM we can then put to use in the cities, or put to work solving more pressing domestic needs.

One side says that if we do not defend the country there is little need to worry about the cities for they will not then be worth spending money to preserve.

The other side says if we do not solve the problems of the cities there will be little need to defend the country.

I find myself more sympathetic to the first viewpoint, because of the better chance for survival in that direction. The President himself has pointed out that if we make a mistake in favor of the ABM we lose some money; if we make a mistake against the ABM we lose the country.

This argument, I realize, is apparently not a very persuasive one in the eyes of ABM opponents. I understand their opposition to the ABM centers around the idea that we are safer by negotiating an arms freeze, and presumably an arms freeze would, in their estimation, be more difficult to negotiate if we had an effective ABM. The principal weakness of this reasoning is that it speculates on the possibility of Russian willingness to negotiate and abide by agreements in good faith, and ignores the evidence that the Soviets abide by agreements only when it continues to suit their national purpose to do so. I am aware that some members of the Foreign Relations Committee do not agree with my assessment of their probable behavior. Several colleagues on that committee seem to regard foreign relations as some kind of mystical realm into which the privileged few may tread. A noted Senator has been most generous in his criticism of the Vice President whom he considers to have neither the "background nor experience" to speak on foreign policy.

It is my intention as the debate goes along within a day or two to inject some material regarding the Soviets that indicates their present intentions along the foreign policy line, and perhaps then the Senator from Arkansas can give us his highly valued opinion.

For today, however, I would like to examine recurring phenomena which I call the ABM-nonthink.

This affliction is not limited to politicians or scientists or jurists. It seems to strike each profession with equanimity. I first noted it when I received three copies of the same anti-ABM speech from different sources.

The speech to which I refer is one delivered, apparently extemporaneously, to a group of scientists and students at the Massachusetts Institute of Technology by Dr. George Wald, on March 4, 1969.

In one instance the speech was entitled "A Generation in Search of A Future." In another reprint is was called, with rather understated modesty, "the most important speech of my lifetime." That remark was reportedly uttered by two staffers of the Boston Globe who returned to the office after covering the meeting, and independently each told an editor, "I think I've just listened to the most important speech of my lifetime."

Certainly this is an amazing instance of clairvoyance and worthy of further investigation in its own right.

So what was pronounced in this amazingly important speech? I believe it, along with a couple other examples which I shall cite, is one of the prime instances of the ABM-nonthink—a condition brought on by approaching the subject with a completely closed mind, which causes the person afflicted to seize upon the opposition's key argument and use it upon himself.

First, note Dr. Wald's restrained and dispassionate style as he talks of one of the most esteemed Members of the Senate:

A few months ago Senator Richard Russell of Georgia ended a speech in the Senate with the words: "If we have to start over again

with another Adam and Eve, I want them to be Americans; and I want them on this continent and not in Europe."

Continuing to quote Dr. Wald—

Now that was a United States Senator holding a patriotic speech. Well, here is a Nobel Laureate who thinks that those words are criminally insane.

The reprint notes there was prolonged applause at this point.

I should like to point out that the distinguished Senator from Georgia, who served the Nation outstandingly as chairman of the Armed Services Committee and continues to serve as chairman of the Appropriations Committee, has differed greatly from Dr. Wald in that he has always been a model of restraint. Far from questioning the Senator's sanity, I am sure the great majority of Americans would be absolutely appalled at Dr. Wald's unbecoming immodesty.

Another point from this "most important speech" in these Boston Globe writers' lifetime concerns the statistical probability of a nuclear war. Dr. Wald, it should be noted, is a doctor of biology. That becomes rather abundantly clear when he ventures into the field of statistics.

The doctor quotes another nonstatistician friend of his—a professor of government at Harvard—on the probability of a nuclear war. His friend is reported to have replied that given the present situation the odds for an all-out nuclear war are around 2 percent per year.

The good biological doctor seizes upon this and says:

Anybody can do the simple calculation that shows that 2 percent per year means that the chance of having that full-scale nuclear war by 1990 is about one in three, and by 2000 it is about 50-50.

Perhaps anybody can do the simple calculation, which I presume is multiplying 2 percent by the number of years, but that does not give Dr. Wald a probability figure. It seems to escape the academician that the nuclear odds, under a given fixed assumed situation, remain at 2 percent per year, just as the odds on any given flip of the coin are always 50-50 heads or tails.

But the real nonthink comes near the end of this work in which the doctor contradicts himself in the space of exactly two sentences. He opines that all nuclear weapons everywhere must be got rid of and says:

The only use for an atom bomb is to keep somebody else from using one.

And immediately following that statement says:

It can give us no protection . . .

Mr. President, I admit to being unable to understand all the labyrinthine ways of academics, but I do think I am able to understand plain English. It seems to me that "keeping somebody else from using one"—a nuclear weapon—is some degree of "protection."

The doctor goes on to state that—

Nuclear weapons offer us nothing but a balance of terror; and a balance of terror is still terror.

That is all quite true, I suppose, but what is the alternative that Dr. Wald

S 8040

CONGRESSIONAL RECORD — SENATE

July 14, 1969

would leave both sides with no more real security than each has now.

After both sides have anti-ballistic-missile systems, we may rest assured that the race will then start all over again to produce new, more expensive, and more sophisticated missiles than can penetrate the antimissile systems. After another costly race is over, there is then every reason to believe that the balance of power will settle at the same point where it now rests.

Mr. President, the appropriation provided for in the bill under consideration would be the first step in a boondoggle that would cost the taxpayers at least \$12 billion and perhaps as much as \$100 billion or more. The Pentagon estimates the cost of the Safeguard ABM at \$7 billion. This, just to protect two ICBM sites near Malmstrom, Mont., and Grand Forks, N. Dak. Experience of the past 20 years has taught us that weapons systems consistently cost 300 to 700 percent more than their original estimates. Once we permit this outrageous expenditure, we may rest assured that in short order Pentagon officials will be asking for money for a so-called thick system.

It is unconscionable to squander taxpayers' money on this enormous boondoggle. The days of unquestioning approval of money for pet projects of the Pentagon are behind us.

Have the generals of the Joint Chiefs of Staff and other proponents of the ABM never heard of the cost-effectiveness ratio of the Maginot Line or the Great Wall of China? Giving the generals whatever they want is a luxury we simply can no longer afford. The deployment of an ABM system, like our involvement in the ugly civil war in South Vietnam, will lead to ever-increasing expenditures that will further distort our priorities, cause more inflation, higher taxes, and deterioration of our economy.

There are extremely heavy demands on our limited resources. Problems which have been set aside for too many years require immediate solutions—poverty, health, education, food for hungry children, law enforcement, and protection of our environment, to name a few.

It is clear that deployment of the ABM will result in a squandering of national resources and treasure and will actually subtract from our national security rather than strengthen it.

The appropriation of billions of dollars for deployment of ABM missiles, first termed "Sentinel" and then renamed "Safeguard" when there was an outcry against deployment of ABM in Hawaii, Seattle, Los Angeles, Boston, and elsewhere, would be a decision that would haunt the Nation for decades to come.

Mr. President, it was more than a coincidence that Washington, D.C., which has no Senators and Representatives in Congress to voice strong protests, as was done by every Representative in the Congress from areas previously selected, was chosen as the one city in the east for ABM deployment.

That public relations pipsqueak who conceived the name Safeguard to replace Sentinel did not refer to Washington, D.C., by name. His Pentagonese phrase is

"National Command Authority," a new euphemism for the District of Columbia.

As the city selected for the ABM, it was contemplated that 250 acres of land would be purchased in Washington, D.C., for its deployment. When the Sentinel was proposed, there was talk of about 250 acres of land close to Los Angeles. It was ascertained that the cheapest land there would cost from \$100,000 to \$250,000 an acre.

This proposal contemplates a reckless expenditure of public funds to spend billions of dollars in construction and deployment of the ABM in various places in our country. We should first seek to negotiate a treaty with leaders of the Soviet Union limiting or banning altogether the deployment of ABM's. It is very evident that our tremendous and superior offensive power is our best defense against any aggression from the Soviet Union. Leaders of the Kremlin are well aware of our superiority. They certainly know that as matters stand, no matter how powerful or unexpected an attempted nuclear Pearl Harbor might be, we have the capacity with our Polaris submarines, to say nothing of our Strategic Air Force and Minuteman missiles, to obliterate every military base and every city in the Soviet Union in a matter of but a few hours.

Very definitely, I maintain that the leaders of the Kremlin know it is to their advantage to negotiate with us at this time to either freeze or reduce ABM deployment.

We should give top priority to seeking nuclear arms control and reduction by mutual agreement.

To those few rightwing extremists in our country, members of splinter groups, lunatic rightwing groups, such as the John Birch Society and the so-called Liberty Lobby, who claim that the Communists have never kept their agreements, we present the fact that the Limited Nuclear Test Ban Treaty achieved by Ambassador Averell Harriman and the late, great President John F. Kennedy has been scrupulously complied with by both the Soviet Union and our Nation. In fact, since that treaty was entered into, only a small number of underground tests have been undertaken by both parties. Very definitely an arms control agreement should be sought by us and it is the best means of achieving meaningful security at this time. Furthermore, we do know that if any threat to our Nation should become more serious a few years from now, we can readily give top priority to increasing offensive weapons to meet such threat.

We should be considering arms cutbacks, not increases; encouraging disarmament negotiations, not a new and accelerated arms race. The authorization of the Safeguard system would be a tragedy of enormous proportions.

It is of the utmost importance that the President give topmost priority to seeking and achieving a nuclear missile limitation agreement with the leaders of the Soviet Union.

The Foreign Minister of the Soviet Union, Andrei Gromyko, late last week made a strong bid for closer and more

friendly relations between his nation and the United States. He stated that his government was ready for strategic arms limitations negotiations with Washington and he even suggested the desirability of a summit meeting with President Nixon seeking to achieve a treaty limiting nuclear missiles.

President Nixon should withdraw his ABM proposal to deploy Safeguard missiles and seek talks relating to limiting nuclear missiles. Foreign Minister Gromyko stated:

We have noticed President Nixon's statement that after a period of confrontation, the era of negotiations has arrived.

In view of the fact he explicitly stated:

We favor the good development of relations with the United States.

Our official and immediate response should be to seek a meeting between representatives of our two countries, the only two great nuclear powers, to confer together on the details of a treaty regarding nuclear missile limitation.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. YOUNG of Ohio. I ask unanimous consent to proceed for 10 additional minutes.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. YOUNG of Ohio. If the ABM proposal of President Nixon is not withdrawn then, very definitely, it should be defeated by a vote in the Senate. I am opposed to any compromise. It is fearful to contemplate what the situation may be a year hence if we proceed with the deployment of the so-called Safeguard missile as proposed despite the opportunity now before us for friendly talks with leaders of the Soviet Union who were our wartime allies in World War II.

We know that historically Russians have always been our friends. We know that more than a hundred years ago—in 1862 to be exact—when our Nation was torn by the Civil War, and when in the darkest period for the Union in 1862 at a time France and Great Britain were about to recognize the Confederacy that the Government of Russia sent two of its naval squadrons on the long voyage to our shores as a gesture of friendship to the Union, and a squadron of Russian warships entered San Francisco Bay, and a second squadron came up the Potomac to Washington. Great Britain and France backed down, largely and probably entirely because of this gesture of friendship from the Russians at that time, and the talk of recognizing the Confederacy no longer existed.

In a few years, fortunately, that terrible War Between the States was over, and at that time, in 1867, Secretary Seward proposed the purchase of Alaska. It was considered that Alaska was an ice house, of no use nor value whatever to the United States. The czarist Russian Government had spent \$7.2 million during the Civil War in sending their fleet here, and to reimburse the Russians for that expenditure, students of American history know that Secretary Seward entered into what at that time was termed

July 14, 1969

CONGRESSIONAL RECORD — SENATE

S 8039

the end of which is not in sight. This could well compromise the future security and well-being of the Nation, indeed of world peace.

I was one of seven Senators to vote against this proposed boondoggle in the Armed Services Committee. I am proud to have joined with my colleagues, the distinguished senior Senator from Missouri (Mr. SYMINGTON) and the distinguished junior Senator from Hawaii (Mr. INOUYE), in the minority report on the Safeguard ABM system.

Throughout the committee hearings, witnesses who testified for deployment of the system devoted most of their time to emphasizing their fears of the Soviet Union. Secretary of Defense Laird at first tried to frighten the country into believing that the Soviets "are going for a first-strike capability." He was compelled to revise his remarks in subsequent testimony.

"First-strike capability" in any language means the ability of one nation to destroy another's offensive missiles so completely that the second nation would be unable to retaliate. Secretary Laird's implication was that without the Safeguard system our ability to retaliate could be wiped out in a first strike.

This argument always was and still is unsupportable. It is incredible to assert that the Soviet Union or any other nuclear power could with one blow destroy all our Minuteman missiles, all our SAC bombers, all our Polaris and Poseidon submarines, all our intermediate missiles based in Europe. That is unthinkable, unsupportable, and impossible.

Furthermore, for years Defense Department officials have assured Americans that if the Russians should strike first we possess a second-strike capability with our Minuteman missiles in underground sites that would inflict unacceptable damage upon the Soviet Union. We were assured that the hardened sites were adequate and that we would not need additional protection for our intercontinental ballistic missiles.

Were we being misled then, or now? The argument that we need more protection of our land-based ICBM's completely ignores the fact that we have at this time 41 Polaris submarines with more than 656 ICBM's which cannot be destroyed by a first strike because they are underwater and moving all the time. These missiles have a maximum range of 2,875 miles and no area in the vast land mass of the Soviet Union or Communist China is safe from devastation from missiles fired from these submarines.

Secretary Laird hinted that the Polaris fleet might be neutralized in the future, but he was unable to support that veiled assertion with evidence. Furthermore, our own intelligence apparatus declines to support his scary talk of all our nuclear power being simultaneously in jeopardy at some future date.

The Poseidon program will soon increase our offensive power to 4,000 nuclear warheads capable of being fired from mobile bases under the oceans and seas of the world, as well as on the surface. If such a second-strike capacity will not deter an attack, nothing will. Placing the Safeguard ABM around a

small share of our land-based missiles will certainly not add one iota of credibility to our deterrent capacity.

During the past decade we have built up the strength of our strategic forces so that each individual component alone—our ICBM's, SAC bombers, and the Polaris and Poseidon fleets—could deliver on target more than the minimum retaliatory destruction required for deterrence. Our combined strategic bombers and land-based missile forces by themselves assure survival of one or the other from attack, not to mention our missiles on submarines throughout the oceans and seas of the world.

Our only real defense against the threat of a nuclear attack is the deterrence of our overwhelming offensive forces. Our tremendous potential offense is our best defense and has been all along. We must keep our offensive power so far ahead of the Russian and Chinese defenses that it will remain perfectly clear and obvious to the Soviet and Chinese leadership that a first strike against us will trigger an unbearable response.

At the present time, we have an overwhelming offensive capacity, superior to that of the Soviet Union. For its part, Communist China has only the crudest capacity and is not able to deliver any missiles on target in this country at this time, nor will it be able to do so before 1976 or 1978 at the earliest.

Now, Secretary Laird is saying that by first-strike capability he means only the power to attack our Minuteman missiles, and Safeguard, he says, is necessary to prevent that. As the minority report points out, Dr. Wolfgang Panofsky, one of the universally respected experts in this field, in an address last month stated:

If the threat to Minuteman grows at the rate projected by the Defense Department, and if Minuteman became vulnerable at a certain time several years hence, then if the Safeguard system were installed and if it functioned perfectly, then the Minuteman would be just as vulnerable as before only a few months later.

In other words, the Soviets could offset any protection offered by Safeguard simply with a few additional months' production of offensive missiles.

Mr. President, there is also the serious question as to the actual capability of the proposed ABM. In his testimony before the Armed Services Committee, Dr. Herbert F. York, whom Senators will recall was Director of Defense Research and Engineering in the Office of the Secretary of Defense from 1958 to 1961, and one of the Nation's foremost experts on defense weaponry stated:

I continue to have the gravest doubts as to the capability of any ABM system I have heard of, whether or not the problem has been defined into being 'easy' and whether or not it 'works' on a test range. I stress that I am not just talking about some percentage failure inherent in the mathematical distribution of miss distances, nor statistically predictable failures in system components, but rather about possible catastrophic failure in which at the moment of truth either the system doesn't fire at all, or all interceptions fail for some unforeseen reason.

The fact is that more than \$23 billion of taxpayers' money has been spent since

World War II on missile systems that either were never finished or were out of service on completion because of obsolescence. More than \$5 billion was spent on the Nike-Ajax missile system, the Nike-Zeus, and following that the Nike X. This was taxpayers' money down the drain, utterly wasted. There are missile sites around my home city of Cleveland, and elsewhere in this country, which are utterly useless. The men servicing them are merely sitting around waiting for the bomb to drop. Experience keeps a dear school, but, as Benjamin Franklin said, "Fools learn no other way." It is high time we profit by our mistakes of the past and not perpetrate further boondoggles such as proceeding with the Safeguard ABM system. Patrick Henry on an historic occasion said:

There is but one lamp by which my feet are guided, and that is the lamp of experience. I know of no way to judge the future but by the past.

Furthermore, Safeguard was originally designed for the "thin" defense of cities against Red China. It was originally called Sentinel. However, an outcry followed President Nixon's proposal of the Sentinel, an outcry that came not only from Illinois and California, but also from the two Senators from Hawaii, the two Senators from the State of Washington, and, of course, an outcry from Massachusetts. Thus, the name Sentinel was changed. Some clever public relations man in the Pentagon changed the name to Safeguard. Its components are basically the same. The anti-Chinese rationale has been abandoned by no less an authority in the administration than the President himself. The argument that Safeguard ABM's around two of our ICBM sites would protect us from a Soviet nuclear attack is only slightly less ridiculous. The fact is—and the Russians know it—that if we were attacked by the Soviet Union, we could destroy the Soviet Union some 50 times over.

Our ICBM's can hit their targets. I remember hearing the distinguished Senator from Arizona (Mr. GOLDWATER) state the if the target of one of our ICBM's was the men's room in the Kremlin—whoosh, and there would be no more men's room. That illustrates the power and the accuracy of our offensive capability. No one can take that away from this great Nation.

Mr. President, perhaps the worst implication of the ABM is the fact that it will help to continue the deception that there is a technical solution to the dilemma of the nuclear age. This false hope could be extremely dangerous if it diverted us from efforts to find a solution in the only place where it may be found—in a political and diplomatic search for peace combined with arms limitation and disarmament measures.

Should we proceed to build this ABM system, the leaders of the Soviet Union are almost certain to respond with increases in offensive strength which would negate any advantage from ABM deployment. By plunging ahead with an ABM system, we Americans run the risk of escalating the arms race to a fantastically high and unbelievably costly plateau. This upward spiral of the arms race

July 14, 1969

The moral aspect of the matter is important. I believe it is significant and significant far beyond the costs or comparative costs of any weapons system.

I associate myself with the very fine presentation made by the Senator from Vermont and commend him for the manner in which it was done.

Mr. HANSEN. Mr. President, will the Senator yield?

Mr. PROUTY. I yield.

Mr. HANSEN. Mr. President, I am sure I am not the first to observe that during the days we have been debating the Safeguard system, we have certainly heard some very learned and knowledgeable people explore all the facets and ramifications of this very complicated issue.

I have no further knowledge to bring to the Chamber. However, I must say that as I reflect upon the role of our country in the context of all the nations of the world, it seems to me that we have a twofold objective—one, to assure the continuation of freedom in this country, and the other to do all we possibly can do to insure greater world peace.

I think the distinguished Senator from Vermont this afternoon has made a very worthwhile contribution in analyzing the statistics that have been before us and in exploring further in the context of those statistics the motives of not only this country, but the other nations of the world as well. These are difficult assignments. It is hard to say what someone else may do if we do something. We know that the distinguished Senator from Washington gave a very erudite presentation insofar as the motives of the Soviet Union are concerned. These are difficult problems to mull over. How does one determine what another man or another nation may think? It takes a great deal of thoughtful, sober consideration and reflection.

I am certain that the distinguished Senator from Vermont has made a very worthwhile contribution in helping all of us, analyze these complex and difficult problems and in trying to arrive at a reasoned, sustainable position and conclusion. It seems to me that the dispassionate manner in which the distinguished Senator from Vermont has gone about this task will serve us all well. I suspect that the decision at which he has arrived will serve as a useful guide to many who yet may not have fully made up their minds in seeing how we may best serve the purposes of America, in protecting the freedom we have and assuring that there shall be reasonable expectation on the part of other peoples in other nations of the world to anticipate sometimes a fuller sense of freedom than they now have; and, secondly, to look to the security of America, because today more than ever I believe all nations of the world look to America for guidance on how they may implement a national course of action which will result in achievement nationally of the goals that we have insofar as their own countries are concerned.

With that in mind, I pay my respects to the very worthwhile contribution that has been made by the distinguished Senator from Vermont.

Mr. PROUTY. I am very grateful to the Senator.

Mr. HRUSKA. Mr. President, will the Senator yield?

Mr. PROUTY. I yield.

Mr. HRUSKA. Mr. President, today's presentation of the junior Senator from Vermont was not necessary to bring to the Members of this body the awareness that the Senator is a man of independence in his thought, of thoroughness in his analysis, and of great courage to speak out at proper and strategic times. Certainly, on many other occasions we have had the benefit of the sensible thoughts of the Senator. Today's presentation is simply a reaffirmation of what we have come to expect.

The presentation is very thorough. It is dispassionate, and it is logical. It certainly is in keeping with the proposition that President Nixon has often emphasized, and I quote: "I believe it is essential for the national security and it is essential to avoid putting an American President, either this President or the next President, in the position where the United States would be second rather than first or at least equal to any potential enemy."

Certainly, the decision to deploy a limited ABM system was made advisedly and deliberately by the Commander in Chief of our military forces.

While the Senator has carefully covered several reasons for supporting the President, there is one of particular good sense and appeal that has not been stressed enough. That is his statement that his vote on the immediate issue will not be considered by him, and should not be considered by anyone else, to lock him irrevocably in a position of support for the ABM and its continued deployment. He wants to keep his options open. That is the position of many of us. I believe it is a sound position.

As was pointed out by the Senator from Texas in debate last week, those who would follow the "no" scientists on this issue would be locked in their position because there would be nothing upon which future options could be based. Those of us who would follow the "yes" scientists, those that say Safeguard can be made to do the job, would be holding our options open. If there were problems in the development of this weapons system or if there were favorable results in negotiating armament limitations or restrictions, then the decision that we make on this issue can be modified accordingly.

This is not the first time that this body or the United States has been called upon to make a choice between "no" scientists and the "yes" scientists. That choice was debated very thoroughly in regard to development and production of the A-bomb. At that time, thank goodness, America had the good commonsense to follow those who said: "Yes; let's develop it, and let's hold it as an additional deterrent to those who would do us irreparable damage."

So I commend the Senator for so constructively adding to this debate. It is my hope that the position he so ably advocated will prevail, when the votes on this issue are recorded.

Mr. PROUTY. I thank the Senator.

Mr. THURMOND. Mr. President, will the Senator yield?

Mr. PROUTY. I yield.

Mr. THURMOND. Mr. President, I commend the able Senator for the magnificent address he has delivered today in favor of the Safeguard ABM system.

I wish to read one sentence from "Military Strategy," by V. D. Sokolovsky, Marshal of the Soviet Union. This is the third edition, for 1968:

In our country the problem of eliminating rockets in flight has been successfully solved by Soviet science and technology. Thus the task of warding off strikes of enemy missiles has become quite possible.

It is clear, Mr. President, that the Russians feel they have solved the ABM system. They have built a system. They built one in 1962. They have been working on it since; they have improved it. They now have two systems in their country. We have one. They are at least 5 years ahead of us.

I shall probably speak more in detail about General Sokolovsky's book tomorrow. But it is clear from this book that the Russians have plans now for a first strike. They also expect to have the capability soon. So it is urgent that we go forward and build the ABM and not delay a single day.

Again, I compliment the distinguished Senator from Vermont.

Mr. PROUTY. I thank the Senator.

Mr. ALLOTT. Mr. President, will the Senator yield to me for just a moment? I know he is under the press of time.

Mr. PROUTY. I yield to the Senator from Colorado.

Mr. ALLOTT. I join my colleagues in praising the remarks of the Senator from Vermont today in support of the Safeguard system. Of course, I think it is characteristic that the distinguished Senator from Vermont would take his time and deliberate and listen to all the arguments, both for and against before taking a position on as important a matter as this.

Although I was not able to be present, I have read his speech. I feel that the points he has made and the reasoned logic he has used to support these points in his speech constitute one of the high marks of this debate. It is a speech which appeals to my own sense of reason in this matter, and one which I believe will appeal to many Members of the Senate. I think the Senator is to be complimented very greatly.

Mr. PROUTY. I am grateful to the Senator from Colorado.

I yield the floor.

The PRESIDING OFFICER (Mr. DOLE in the chair). Under the previous order, the Senator from Ohio (Mr. YOUNG) is recognized.

THE SAFEGUARD ABM SYSTEM
Mr. YOUNG of Ohio. Mr. President, the administration's decision to proceed with the deployment of an ABM system is one of the most crucial matters with the most far-reaching implications to come before Congress in this decade. The Safeguard ABM supposedly to protect our offensive missile silos will start the Nation down a multibillion-dollar road,

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATE SHOULD VOTE "Yes" ON ABM

Issue: Now that the ABM debate has finally begun in the U.S. Senate, what are the basic questions confronting our lawmakers?

Millions of words have already been uttered in the long and tiresome debate over the proposed Safeguard ABM system and thousands more will be uttered before the U.S. Senate gets around to voting "yes" or "no" later this month.

Strip away all the verbiage, however, and it turns out that the senators fundamentally are facing two related questions:

Are they will or unwilling to give the President of the United States the bargaining strength which he believes that he needs in order to negotiate an arms limitation agreement with the Soviet Union?

Keeping in mind that the arms control talks may fail, do they or do they not think it is worth investing less than 1% of our total defense budget to keep open the option of building a system of defense against the kind of missile threat which the Soviet Union may pose during the 1970s?

Members of the Senate should think very carefully before giving negative answers to these questions.

Although the fact has tended to become obscured in the heat and complexity of the propaganda battle over the ABM, Congress is not being asked to commit itself now to the entire \$10.8 billion Safeguard system. It is being asked to approve a \$750 million first installment for construction of two prototype installations.

Additional congressional approval will be necessary for work to proceed beyond these first two installations. And, as the Nixon Administration has made quite clear, the entire system need never be built if Washington and Moscow can agree to freeze or limit deployment of offensive and defensive missiles.

If the polls are any indication, a majority of those Americans who have made up their minds on the ABM are in favor of it.

Critics of Safeguard have mounted a massive, well-financed campaign to create the impression that the scientific community is overwhelmingly against the ABM.

The fact is that disagreement among scientists is as widespread as it is among laymen. Those who favor Safeguard include Dr. Lee DuBridge, former president of Caltech, and Dr. Frederick Seitz, president of the National Academy of Sciences. Equally prominent scientists are to be found among the opponents.

The Times suggests that members of Congress should resolve any doubts in their own minds in favor of the national security and a strong American negotiating posture.

Mr. PROUTY. Mr. President, I thank the Senator from California.

Mr. President, I yield now to the Senator from Colorado.

The PRESIDING OFFICER. The Senator from Colorado is recognized.

Mr. DOMINICK. Mr. President, I have had the honor of serving with the distinguished junior Senator from Vermont on three committees since I have been a Member of the Senate. Invariably, the Senator makes a very careful and detailed analysis of the problem, whether it be on the Committee on Labor and Public Welfare, the Committee on Commerce, or the Committee on the District of Columbia.

The Senator has done a very fine job here today.

One of the things that I believe cannot be overemphasized is the other button

concept which he produced in his speech. It is a matter which I have spoken on both in speeches and on the radio and television.

That concerns the awful, awesome dilemma that any President would be in in the event of an unauthorized, accidental launching of a nuclear missile targeted on our country, where the President, whomever he may be, did not have an antinuclear capability.

The President would be in an impossible situation, a situation in which we should never put any President, in my opinion, the situation in which he must determine in his own mind whether he was going to let the thing hit and explode and annihilate millions of Americans without doing a single thing, or whether he was going to automatically empty our silo in the general area from which the missiles had come.

We remember in reading Neville Shute's "On The Beach," that the accidental launching was done in one of the Middle Eastern countries. We had no other alternative but to fire at the Soviet Union. They started, and then the Chinese got going. The result was a holocaust before we got through.

This is the type situation in which we could put a President of the United States unless we give him another alternative in the decision he would have to make.

It is my hope that we can start taking steps to give him the other button, as the distinguished Senator from Vermont so wisely and aptly put it in his speech.

I congratulate the Senator. I am delighted that he came to this conclusion. I hope that his conclusion gets the maximum exposure as stated in his speech.

Mr. DOLE. Mr. President, will the Senator yield?

Mr. PROUTY. I yield.

Mr. DOLE. Mr. President, as a junior Member of the Senate, I commend the Senator from Vermont.

I have wrestled with this complex problem this year as a Senator and last year as a Member of the other body. I supported President Johnson's Sentinel system then because I felt he made the right decision considering all the circumstances.

The importance of the Senator's momentous speech today is not that his decision may tip the scales in favor of any point of view in the Senate, or for any President of the United States, but that his decision could well mean added security in the very highest and proper sense for all free people of the world.

The speech today by the Senator from Vermont, and the speech last week by the Senator from Washington (Mr. JACKSON), have been two of the highlights of this interesting, informative, and controversial debate.

After all the rhetoric, however, the issue is relatively simple. Either the President gets the tools he feels necessary to defend this Nation or he does not. Either this Nation will proceed to build a Safeguard system of missile defense or it will not. Either this Nation, ourselves included, has confidence in the judgment of the President of the United States or it does not.

There are arguments for and argu-

ments against. No argument, no matter how noble in motive, no matter how inspiring, nor how impassioned the delivery may have been, means much when compared with the paramount question involved. This question is, again, whether or not we have confidence in the judgment of the President of the United States. The Senator from Vermont has expressed this confidence and again, I express my appreciation for his outstanding statement of position.

Mr. BAKER. Mr. President, will the Senator yield?

Mr. PROUTY. I yield.

Mr. BAKER. Mr. President, I express my gratitude to the Senator from Vermont for an exquisitely constructed and excellent speech on what is obviously one of the most important subjects that has confronted the Senate for some years.

Most, if not all, of the points made by the distinguished Senator have been touched directly or obliquely in debates so far. Obviously, I believe no other Senator has pulled together all the pieces as rationally, as fully, or as logically as has the Senator.

I commend him.

There is an inference I draw from the remarks of the Senator, one that I believe has not been touched upon frequently in the debate, but is inevitably present in his remarks today. That is the moral role the United States of America with respect to its overall defense posture.

The United States prides itself on being the most moral and most concerned nation on earth. I think it is. We have concern for the future destiny of mankind.

It falls our lot on occasion to put ourselves in the place of the Russian and to think of how we might react to an attack by the United States. In that respect, I grew concerned when I heard debate to the effect that there is no need for a defensive system such as the Safeguard because the sufficient and extravagant deployment of intercontinental missiles such as the Minuteman and of the Polaris gives us such a degree of overkill than any other system is ill-advised and unnecessary and an economic waste.

It is not fitting that the moral nation on earth should assume an ICBM mentality and put all of its eggs in one offensive basket to assure its own capacity to annihilate Moscow and Russia and all of its citizenry.

If I were a citizen of the U.S.S.R. and of the city of Moscow and saw the United States reject the defensive button in favor of continuing to depend entirely on an offensive capability, I would be pretty upset about it, too.

I believe that putting ourselves in the Moscowite position and seeing a determination by the United States to assume a defense of its own continental facilities, a defense of its own credible deterrent, we can feel far surer of the prospects for intimate offensive arms limitation and the postponing or elimination of the prospect of nuclear holocaust than we can by rejecting Safeguard and relying on offensive capability pointed directly at the heartland of the Soviet Union.

July 14, 1969

mediate relative status of the child adopted by citizens of the United States.

PFC. JOSEPH ANTHONY SNITKO

The bill (H.R. 1948) to confer U.S. citizenship posthumously upon Pfc. Joseph Anthony Snitko was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-312), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to confer U.S. citizenship posthumously upon Pfc. Joseph Anthony Snitko.

ALEKSANDAR ZAMBELLI

The bill (H.R. 3166) for the relief of Aleksandar Zambelli was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-313), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to enable Aleksandar Zambelli to file a petition for naturalization notwithstanding the provisions of section 313 of the Immigration and Nationality Act relating to one who was formerly a member of a proscribed organization.

RYSZARD STANISLAW OBACZ

The bill (H.R. 3167) for the relief of Ryszard Stanislaw Obacz was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-314), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to enable Ryszard Stanislaw Obacz to file a petition for naturalization notwithstanding the provisions of section 313 of the Immigration and Nationality Act relating to one who was formerly a member of a proscribed organization.

YOLANDA FULGENCIO HUNTER

The bill (H.R. 3172) for the relief of Yolanda Fulgencio Hunter was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-315), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to facilitate the entry into the United States in an immediate relative status of the alien child adopted by a U.S. citizen.

MARIA DA CONCEICAO EVARISTO

The bill (H.R. 3376) for the relief of Maria da Conceicao Evaristo was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-316), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to waive the excluding provisions of existing law relating to one who is illiterate in behalf of Maria da Conceicao Evaristo. The bill provides for the posting of a bond as surety that the beneficiary will not become a public charge.

L. CPL. PETER M. NEE

The bill (H.R. 10060) for the relief of L. Cpl. Peter M. Nee (2465662) was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-317), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to confer U.S. citizenship posthumously upon Lance Cpl. Peter M. Nee.

NIKOLAS GEORGE POLIZOS

The Senate proceeded to consider the bill (S. 1110) for the relief of Nikolas George Polizos, which had been reported from the Committee on the Judiciary, with an amendment, on page 1, line 6, after "June 16," strike out "1957, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper officer to deduct one number from the total number of immigrant visas and conditional entries which are made available to natives of the country of the alien's birth under paragraph (1) through (8) of section 203(a) of the Immigration and Nationality Act," and insert "1957.;" so as to make the bill read:

S. 1110

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Nikolas George Polizos shall be held and considered to have been lawfully admitted to the United States for permanent residence as of June 16, 1957.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-318), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill, as amended, is to enable the beneficiary to file a petition for naturalization.

ORDER FOR RECOGNITION OF SENATOR YOUNG OF OHIO

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the distinguished senior Senator from Ohio (Mr. YOUNG) may proceed for not to exceed 30 minutes at the conclusion of the remarks of the distinguished junior Senator from Vermont (Mr. PROUTY).

The VICE PRESIDENT. Without objection, it is so ordered.

THE DEATH OF HERBERT HOOVER, JR.

Mr. MANSFIELD. Mr. President, it was with sorrow and regret that I noted in the newspaper last week the passing of Herbert Hoover, Jr.

Mr. Hoover served as an Under Secretary of State during the Eisenhower administration. I found him to be a very kind, a very gentle, and a very understanding man. I had many contacts with him, and my relations with him were exceedingly good. He was never one to flash his own light. He was a man of extreme modesty and performed his duties with efficiency and with deflection.

I express my deep regret on the Nation's loss of this outstanding American and extend to his wife my condolences.

Mr. DIRKSEN. Mr. President, will the majority leader yield?

Mr. MANSFIELD. I yield.

Mr. DIRKSEN. Mr. President, I do not know how I missed the news with respect to Herbert Hoover, Jr. I came to know him quite well and had high esteem and great affection for him. He contributed much to the country and was indeed one of our solid citizens.

Together with others, I share the message of condolence to the family.

THE SAFEGUARD ABM SYSTEM—THE NEED FOR A CLOSED SESSION

Mr. SYMINGTON. Mr. President, for reasons that have never been clear, and even though the House has not yet started on its Army and Navy authorization hearings, it was apparently considered necessary to rush through the authorization and markup for the deployment of this Safeguard ABM system without any check at the Kwajalein Testing Range by the Senate as to whether the system was ready for deployment; and statements made on this floor in the debate last Friday demonstrated conclusively how unfortunate was all this haste from the standpoint of our future security and well-being.

Week", and inviting the Governors and mayors of State and local governments of the United States to issue similar proclamations.

DR. DIEGO AGUILAR ARANDA

The bill (S. 571) for the relief of Dr. Diego Aguilar Aranda was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 571

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Doctor Diego Aguilar Aranda shall be held and considered to have been lawfully admitted to the United States for permanent residence as of August 12, 1957.

JAMES F. WEGENER

The bill (H.R. 1828) to confer U.S. citizenship posthumously upon James F. Wegener was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-303), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to confer U.S. citizenship posthumously upon James F. Wegener.

DUG FOO WONG

The bill (S. 2019) for the relief of Dug Foo Wong was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 2019

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 203(a) (1) and 204 of the Immigration and Nationality Act, Dug Foo Wong shall be held and considered to be the natural-born alien son of Mr. and Mrs. Chun P. Chin, citizens of the United States: Provided, That the parents, brothers, or sisters of the said Dug Foo Wong shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

WU HIP

The bill (S. 1963) for the relief of Wu Hip was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, section 204(c), relating to the number of petitions which may be approved in behalf of orphans, shall be inapplicable in the case of petition filed in behalf of Wu Hip by Mr. and Mrs. Ralph A. Kelley, citizens of the United States.

DR. YAVUZ AYKENT

The bill (S. 1798) for the relief of Dr. Yavuz Aykent was considered, ordered

to be engrossed for a third reading, read the third time, and passed, as follows:

S. 1798

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Doctor Yavuz Aykent shall be held and considered to have been lawfully admitted to the United States for permanent residence as of June 26, 1957, and the periods of time he has resided in the United States since that date shall be held and considered to meet the residence and physical presence requirements of section 316 of the Immigration and Nationality Act.

ANDREW CHU YANG

The bill (S. 1645) for the relief of Andrew Chu Yang was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 1645

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Andrew Chu Yang may be classified as a child within the meaning of section 101(b) (1) (F) of such Act, upon approval of a petition filed in his behalf by Mr. and Mrs. Shiang Ping Yang, citizens of the United States, pursuant to section 204 of such Act: Provided, That no brothers or sisters of the said Andrew Chu Yang shall hereafter, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

DR. YILMAZ BILSEL

The bill (S. 1527) for the relief of Dr. Yilmaz Bilsel was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 1527

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Doctor Yilmaz Bilsel shall be held and considered to have been lawfully admitted to the United States for permanent residence as of June 24, 1958, and the periods of time he has resided in the United States since that date shall be held and considered to meet the residence and physical presence requirements of section 316 of the Immigration and Nationality Act.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-307), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to enable the beneficiary to file a petition for naturalization.

DR. ZILIIHA BILSEL

The bill (S. 1526) for the relief of Dr. Ziliha Bilsel was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 1526

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for

the purposes of the Immigration and Nationality Act, Doctor Zeliha Bilsel shall be held and considered to have been lawfully admitted to the United States for permanent residence as of June 27, 1957, and the periods of time she has resided in the United States since that date shall be held and considered to meet the residence and physical presence requirements of section 316 of the Immigration and Nationality Act.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-308), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to enable the beneficiary to file a petition for naturalization.

RUEBEN ROSEN

The bill (H.R. 2890) for the relief of Rueben Rosen was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-309), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to grant the status of permanent residence in the United States to Rueben Rosen. The bill does not provide for a quota deduction, inasmuch as the beneficiary is entitled to immediate relative status.

FRANCESCA ADRIANA MILLONZI

The bill (H.R. 2536) for the relief of Francesca Adriana Millonzi was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-310), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to facilitate the entry into the United States in an immediate relative status of the minor child adopted by citizens of the United States.

FRANKLIN JACINTO ANTONIO

The bill (H.R. 2224) for the relief of Franklin Jacinto Antonio was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-311), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to facilitate the entry into the United States in an im-

July 14, 1969

One never buys a house or a car without first looking, and that is especially true if some people one respects assert that the house or car in question is not right for purchase; and it was with that in mind that I had planned to visit the Kwajalein Atoll week before last. Kwajalein is where one can obtain by far the most solid information as to the degree of completion and testing of four of the five major components of the Safeguard system; and also much information with respect to the status of the fifth.

When we were told, however, that the markup of the overall Defense authorization, including Safeguard, could not be held up for even a few days, it became necessary for me to cancel this Kwajalein trip; but I did send a staff assistant. He has now returned, and his classified report on the results of his trip, checked against some of the sweeping and at times inaccurate assertions made in the debate last Friday, once again nails down the absurdity of the Senate proceeding to approve what all agree is the most complicated system conceived to date by man without adequate investigation.

One could well ask, why are some in the Senate so casual about spending billions of dollars of other people's money without giving the matter even a semblance of the attention they would give to a personal transaction.

For these reasons, plus one other, I would hope that we would postpone approval of this deployment until we had more facts. The other is my belief that a good many statements made in debate last Friday by those opposing the Cooper-Hart amendment were either inaccurate in implication or inaccurate in fact.

This proposed ABM system is a difficult matter to discuss in open session; but that does not mean, prior to decision, we should refrain from doing everything possible to obtain the facts.

Accordingly, Mr. President, in effort to that end, I am requesting the leadership that after the morning hour on Thursday, July 17, the Senate go into closed session.

THE PROPOSED EXTENSION OF THE SURTAX

Mr. CURTIS. Mr. President, it is my firm belief that the tax bill which extends the surtax and repeals the investment credit should be passed and passed very quickly.

There is no reason why the taxpayers of the country should be misled. The bill is a necessity. The issue should be settled now so that our economy can make its appropriate adjustment. To delay this bill with weeks of speeches would produce nothing but an unsettling effect on our economy.

I do not like taxes. I do not like high taxes. I am supporting this bill because it is necessary. I firmly believe that the best political course is always that course which is honest and sound and improves the fiscal position of our Government. The American people are intelligent and it is a mistake to underestimate them.

There should be another bill dealing with tax reform. We need to direct our

attention to tax reform constantly. The object of tax reform is to promote justice and fairness as between all individuals and all segments of our economy. Those provisions of our tax law needing reform have been in the tax program for one or two or three score of years. None of them are of recent making. They pose difficult problems. Some of them are controversial. Adequate hearings and a skillful approach will bring about needed reforms. Oratory that jeopardizes our fiscal position and fires the flames of inflation are not in the public interest.

A vote for the bill which was sent to us by the House of Representatives is a vote for a course of action that will make tax reform a reality. It is a vote for fiscal responsibility. To oppose or delay this bill will bring neither reform nor fiscal responsibility.

Mr. MANSFIELD. Mr. President, I have listened with interest to what the distinguished Senator from Nebraska has just said. I would point out to him that the course which he advocates could well bring about unconsidered, ill considered, and poorly considered tax reforms if we take up the surtax extension at this time.

The fact that we have agreed to an extension of the withholding levels in no way undermines the efficacy of the situation as it exists. If another extension is needed it will be forthcoming. If we were to bring out the surtax measure at this time, however, without the assurance of a tax reform bill following some time in the immediate future, in my opinion it would mean that the surtax bill, as such, would itself be jeopardized. It would be amended by tax reforms on the floor of the Senate to such an extent, I would think, that it would become what has been called, slightly, in previous times, a Christmas tree bill.

I am interested in the passage of a surtax bill somewhat on the order of the bill reported by the House committee and passed by the House of Representatives. But I would call the attention of the Senate to the fact that the distinguished chairman of the Ways and Means Committee, Mr. MILLS, did promise that there would be a tax reform bill reported by his committee about the first part of next month. During the debate on the surtax the President sent a letter to Chairman MILLS advocating tax reform.

Furthermore, I would point out that the distinguished chairman of the Committee on Finance has indicated that beginning on a date certain he would be prepared to hear proponents in this body on various matters of tax reform.

It would be my hope that on the basis of these hearings there would be reported a surtax bill in just about the same form as the bill passed by the House of Representatives, where the vote was 210 to 205, as I recall, and that the reforms in which all of us are interested to some degree would be placed on a tax reform bill which would be reported shortly after the surtax bill. In that way, I think a procedure would be provided that would assure the Senate, fairly and reasonably, that the surtax bill would be considered and passed, hope-

fully, without any added tax reforms. Those in this Chamber who, in my opinion, if the surtax bill came out by itself, would try to add tax reforms to it, could be told we have the bill on which hearings have been held justifying it, and it is on the second bill that these major reforms could be attached.

In my opinion, this procedure which has been outlined is in the interest of the economy and in the interest of the administration because in this way hopefully we can keep major tax reforms from being placed on the surtax bill and keep them for reforms in the later bill which will be reported.

The VICE PRESIDENT. The time of the Senator has expired.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that we may proceed for 2 additional minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. CURTIS. Do I understand that the distinguished majority leader, then, favors a bill extending the surtax and dealing with investment credit which will be considered separately when it is considered on the floor of the Senate?

Mr. MANSFIELD. Yes, indeed.

Mr. CURTIS. Does the distinguished majority leader have any reservations or feeling that the able chairman of the Committee on Ways and Means of the House of Representatives will be unable to reach his announced objective in sending us a tax reform bill?

Mr. MANSFIELD. I would hope not. I would hope that the chairman of the Committee on Finance and the membership, both Republican and Democrat, would put their shoulders to the wheel to do what they can to bring out a major tax reform bill—the country is crying for one—and to begin the initiation of such a procedure next week or later this week when hearings on tax reform will start. It would then be my hope that when the tax reform bill from the House arrives in the Senate, tax reforms agreed to in the committee could be put on the bill as it is prepared for Senate consideration. A commitment has been made by the chairman of the Committee on Ways and Means that such a bill will be sent over some time around the first of August.

Mr. CURTIS. I commend the distinguished majority leader. I understand he believes that the surtax bill should be voted upon as a separate measure by the Senate and not merged with the tax reform bill.

Mr. MANSFIELD. Yes, indeed. I would hope that when the surtax bill is taken up and disposed of, the next order of business, or one shortly thereafter, would be the tax reform bill.

Mr. METCALF. Mr. President, I concur completely with my colleague from Montana. Extension of the surtax and the bill that came from the House should be considered separately and apart from Federal tax reform, but there should be some assurance in Congress this year, that there will be some tax reform before we pass a 10 percent, or a 5 percent surtax, thereby compounding and magnifying the inequities in our present tax system.

Mr. President, I served on the Ways and Means Committee of the House and I know of my own knowledge that the very distinguished chairman of that committee is dedicated to tax reform. However, I believe that we should follow the procedure outlined by the policy committee and go forward with extensions of the surtax, maybe from time to time, and then pass a tax reform bill and extensions of the surtax at the same time.

It was with a great deal of misgiving that I read in the newspaper yesterday that the distinguished Senator from Louisiana (Mr. Long), chairman of the Finance Committee, who is now in the Chamber, stated that no one had come forward with a tax proposal.

I introduced S. 500, and it was referred to the Finance Committee. I realize that such legislation must first clear the House, but I introduced it because I wanted it before the Finance Committee. I thought that, as the policy committee had made a statement that the bills would be considered together, I would not have to do anything further to get the Senator from Louisiana to give me a hearing and have consideration of this legislation.

After reading the statement yesterday in the newspaper, I find that in order not to default in this situation, I will have to introduce a bill to the surtax amendment. I regretfully do this because I feel that the bills should be brought up separately and apart, that my amendment for tax reform should be considered with other amendments for tax reform; but, nevertheless, in order to protect my interests, I have had to introduce this bill today.

Mr. President, S. 500 is cosponsored by 26 Senators. It is an important and vital part of tax reform. I testified before the Ways and Means Committee on it. The administration has sent down a similar proposal on this legislation. I do not intend to default. I do not intend, if this bill is going to be brought up as part of the surtax, to be considered in default. Thus, today, I am introducing an amendment to the surtax bill.

Mr. LONG. Mr. President, will the Senator from Montana yield?

Mr. METCALF. If I have any time remaining, I am glad to yield to the Senator from Louisiana.

The PRESIDING OFFICER. How much additional time does the Senator from Montana request?

Mr. METCALF. One minute.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LONG. Mr. President, if the Senator from Montana would be so kind as to remain in the Chamber until such time as I have been able to gain recognition, I think I can satisfy him about this matter. If not, why I would be glad to discuss it with him now.

Mr. METCALF. Of course. I shall be delighted to remain here.

DR. BENJAMIN SPOCK

Mr. YOUNG of Ohio. Mr. President, liberty-loving Americans have every reason to rejoice. The First U.S. Court of

Appeals reversed the verdict and judgment of guilty rendered in the court of U.S. District Judge Francis J. W. Ford, and this higher court in a landmark decision unanimously acquitted Dr. Benjamin Spock, who had previously been convicted by a hand-picked, all-male jury. Then on top of that, the cards had been stacked against him in that the trial was assigned to U.S. District Judge Francis J. W. Ford. I suspect this was arranged by the assignment commissioner at the behest of the district attorney. Judge Francis J. W. Ford, 86 years of age, who was, I understand, nominated by President Herbert Hoover to be U.S. district judge.

Mr. President, at the same time I express my delight over the fact that Dr. Benjamin Spock has been judged not guilty. I denounce the merciless severity of the actions throughout the trial of Judge Ford.

Mr. President, I know something personally about the facts. I spent a day in Boston, testifying as a character witness on behalf of Dr. Spock and Judge Ford tried to give me a hard time as a witness. He did give me a hard time, but I did not crawl under the witness chair.

What I observed, brought to mind what I have read in English history of the judicial misconduct of Justice George Jeffreys in the latter part of the 17th century. As Chief Justice in the reign of King James II at the Winchester "assizes" in his so-called Star Chamber sessions, history narrates that he condemned hundreds of defendants to death in alleged trials which were a mockery of justice.

It happens that Dr. Benjamin Spock is my good friend. I have known him over the years. He was a most highly respected resident of the community where I live. I knew Dr. Spock personally during the years when he lived in Cleveland Heights. I knew that he had served as a lieutenant commander in the U.S. Navy in World War II. I knew him as a member of the American Legion. I knew him as one of the most famous and highly respected pediatricians in our entire country. I was happy to testify before Judge Ford and this so-called blue ribbon jury of 12 stern-faced men that Dr. Spock was and is a man of the highest moral character; that his reputation in the community where he and I lived is excellent; that he is a peaceable law-abiding and peace-loving citizen.

Mr. President, in the past I served for some years as chief criminal prosecuting attorney of Cuyahoga County. I believe that certain punishment like a shadow should follow the commission of crime. I knew that Dr. Benjamin Spock had not committed any crime; had not conspired to commit any crime; that he was a man of such noble character he could not possibly engage in any conspiracy to commit a crime. As a prosecuting attorney and as a trial lawyer, I have met up with and had the misfortune to appear before tyrannical judges but Federal Judge Ford in his actions, words, and attitude which I had observed, and the hard time he tried to give me as a witness in his court, takes a rating in my considered judgment as a tyrannical

judge determined he would supplement the prosecution of the district attorney that the jury find the defendant guilty. In a landmark decision, the judges of the First U.S. Circuit Court of Appeals not only determined and judged that Dr. Benjamin Spock was not guilty but also determined that Trial Judge Ford went far beyond the routine conspiracy instruction to a jury and arbitrarily called for special findings by the all-male jury panel which were highly prejudicial to Dr. Spock.

Mr. President, it makes me happy to observe that sanity has returned; that this good man has been vindicated and acquitted; that the judges of the First Circuit Court of Appeals have spoken out loud and clear; that the very first amendment of the Constitution of the United States is as meaningful today as it was in 1791. It should be remembered by all of us that when the Constitution as drafted was first announced, there was an uproar from every liberty loving patriot, who had fought and won the war for independence. The conservatives of that time were compelled to accept those first 10 amendments which we affectionately term the Bill of Rights, else the Constitution as drafted would not have been ratified by the Thirteen Original States.

This landmark decision reaffirms and breathes renewed breath of life into the first amendment to our Constitution, which provides:

Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.

PRIVATE INDUSTRY AND NUTRITION

Mr. MCGOVERN. Mr. President, the Select Committee on Nutrition and Human Needs, of which I am chairman, has been devoting itself these past 6 months to documenting the extent of hunger and malnutrition among the poorest of our citizens across this country. Our field hearings—held in Florida, Washington, D.C., California, and East St. Louis—as well as our hearings here in the Capitol, have investigated in detail the unhappy relationship between the conditions of hunger and the ineffectiveness of our federally funded food assistance programs such as food stamps, commodity distribution, school lunch, school breakfast, and supplemental food plans. We have found these programs failing because of inadequate funding and haphazard or deliberately restrictive administration. These findings have aroused a sense of outrage among the American people that the administration and congressional committees have responded to by recommending increased funding and administrative reforms in these programs. As I have said before, I do not believe that these efforts had gone far enough, and I shall continue to fight for more money and more reforms; but I commend the administration, and my colleagues in both Houses, for their recognition of hunger and malnutrition as

division in which she was presently working. The monitoring was through use of the "snooper button." It was done by order of her superior. Finally, and most important and despicable, it was done without the knowledge of those whose phones were being monitored.

The next day, June 4, 1969, Mr. X received even more disturbing information. Another secretary formerly employed in the office of his superior informed him that at that superior's instruction she monitored every telephone call that came into his office.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The PRESIDING OFFICER. The hour of 1 o'clock having arrived, the Chair lays before the Senate the unfinished business, which will be stated.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each reserve component of the Armed Forces, and for other purposes.

ILLEGAL ELECTRONIC EAVESDROPPING IN THE FEDERAL GOVERNMENT

The PRESIDING OFFICER. The Senator from Nebraska may resume.

Mr. CURTIS. I thank the distinguished Presiding Officer, and I ask unanimous consent that I may proceed until I have finished my prepared remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CURTIS. Mr. President, the point to keep in mind is that this secretary operated a telephone which served all of the lines of all of the employees in that office. All calls coming in and going out of the office, regardless of by whom or to whom they were made, were wired through telephone equipment located on and near her desk.

Thereafter, on the same day, Mr. X discovered that in his office "snooper buttons" remained operable. Mr. X tested them personally for effectiveness, and took photographs of these installations.

For the information of Senators, I have pictures of these infamous snooping devices, in operation as of June 4, 1969.

Since then, Mr. X has talked with several employees in GSA and the Department of the Interior, who confirm the widespread, deliberate, systematic use of "snooper" devices over the past 2 years. In each case, employees were instructed by their superiors to monitor all calls, to take notes, and to make no disclosure

of any kind that might make either party to the telephone conversation aware of such eavesdropping.

One more fact: I am sure it will be of interest to Senators to learn that this monitoring included calls from Members of Congress. In fact, one person charged with responsibility for taking notes on such telephone calls said she was specifically instructed to monitor calls from Representatives, Senators, Government officials, and others.

Again, let me point out to Senators that these telephone calls were being monitored without at least one participant, and in many cases both participants, knowing about it, and certainly without their permission.

As to the mechanics of setting up such snooper systems, the telephone company installed these devices at the request of GSA officials. I hope to find out who these officials were, whether they are still with GSA, and if not, what they are presently doing.

The General Services Administration is, after all, a quarter of a billion dollar agency, with almost 40,000 employees.

It lets annual contracts amounting to millions of dollars for the provision of supplies to the Government, and for 1970 alone, the General Services Administration will spend on the order of \$100 million for the acquisition of new facilities.

Thus, there could well be an economic motive for this high level eavesdropping.

The only other possible motive is political at best, and since the facts point to intraagency use, it seems more likely to be of the cheap, bureaucratic, gutter-fighting variety.

Equally obnoxious is the use of such "snoopers" simply to spy on subordinates, to deny them the privacy to which they are entitled. We have had too many examples of how Federal employee rights are invaded by peeping tom superiors.

It seems to me that both the Senate Government Operations Committee and the Senate Judiciary Committee should find this information of great interest and worth pursuing further.

There is a collateral issue that must be faced. As I have said, the telephone company installs such snooper devices, technically styled "transmitter cutoffs," although it does not advertise the service in its available promotional brochures. The general justification of such devices is that they allow a secretary on a third phone to take notes of a phone conversation between two parties, without the office noise intruding through her phone mouthpiece into the conversation between the principals. I could accept this, I suppose, if I had definite assurance that such devices would be used only in such a situation and, of course, with the full knowledge and consent of the two principals.

Instead, here we have a clear example of how ridiculously easy it is to convert these devices into eavesdroppers, little spies for crooks or paranoids who hope to profit one way or another by denying the honorable right of privacy to others.

I am coming rapidly to the conclusion that such "transmitter cutoffs," as they are euphemistically called, are far too tempting to the crook or the paranoid.

Mr. President, this type of eavesdropping and electronic snooping—where there is not the slightest pretext that the national security is involved—must stop. It must stop now, without equivocation or exception. I am convinced that the new administration wishes to reverse this proliferation of illegal eavesdropping devices throughout Government. I compliment Administrator Kunzig for making this a first order of business within the GSA. I commend his action to other Government agency heads. I could only wish that Mr. Kunzig's subordinates—many of them holdovers from a previous administration—had taken his orders to heart and halted this nefarious practice.

It seems to me, however, that the telephone company should take a long, hard, and careful look at its practice of installing such devices, in light of the misuse that can be made of them. They offer too easy a temptation for the users to turn them into electronic eavesdroppers with unlimited scope. I sincerely request the cooperation of the telephone company in changing this practice.

In closing, Mr. President, let me restate my case.

We know that there has been and apparently still is large-scale electronic snooping going on in one major U.S. agency, the General Services Administration. This is happening not only here in Washington but apparently in regional offices across the country as well.

There is evidence that it is going on in a major Government department—the Interior Department.

I ask, Mr. President, and I think all my colleagues are justified in asking the same question, how much further has this practice permeated our Government?

How many agencies and departments in which no national security is involved are in the habit of listening in on their employees' most private conversations?

I submit that this is a matter which the Justice Department should investigate—and at once. I submit further that our own Committees on Government Operations and the Judiciary should oversee such an inquiry by the Justice Department, to determine that this evil is brought to a complete and total halt.

Mr. President, to be specific, the General Services Administration let contracts, many of which, by the nature of them, cannot be competitive; they are negotiated. The individuals in places of power have been monitoring the conversations of their subordinates to find out what their subordinates know. Is that not an open invitation to corruption? It is a practice that should end.

Mr. President, I yield the floor.

AGM

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles,

July 11, 1969

CONGRESSIONAL RECORD—SENATE

elderly for community projects, massive funds are not necessarily needed. For example, the House Education and Labor Committee adopted the Retired Senior Volunteer Program (called RSVP) which requires only \$5 million—money that will be returned many times over in services rendered by the elderly.

The Senate Labor and Public Welfare Committee will shortly consider new amendments to the Older Americans Act, and will likely see the need for an authorization figure equal to the House's \$62 million. It is not too late for the Administration to go beyond its \$28.3 million sum and begin recognizing that 19 million older Americans have not just rights and needs to be met, but contributions of talent and wisdom to be made.

TV STATEMENT BY SENATOR BYRD OF WEST VIRGINIA ON THE BUREAU OF MINES BUDGET

Mr. BYRD of West Virginia. Mr. President, on June 9, 1969, I made a statement for television regarding the Bureau of Mines budget.

I ask unanimous consent that the transcript of that statement be printed in the RECORD.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

BUREAU OF MINES BUDGET

Through the Appropriations Subcommittee, of which I am Chairman, I have been able to add three quarters of a million dollars to the Bureau of Mines budget for three items of utmost importance to West Virginia. One of these is a mine health and safety institute which could provide highly-specialized, long term training for mine inspectors, engineers, and laboratory research technicians. National attention has been focused on mine health and safety problems and I believe that the need for such an institute is very evident. The other two items which I have been able to place in the Bureau of Mines budget were money for the immediate hiring of additional federal mine inspectors, and money for a research program to develop effective methods for suppression and control of mine dust. I intend to do my utmost to see that these programs become a reality.

ORDER OF BUSINESS

The PRESIDING OFFICER. Before the Senator from Nebraska is recognized, the Chair informs the Senate that at the hour of 1 o'clock the unfinished business will be laid before the Senate. The Senator from Nebraska will then be recognized again, after which the Chair will recognize the Senator from Texas.

The Senator from Nebraska is recognized.

ILLEGAL ELECTRONIC EAVESDROPPING IN THE FEDERAL GOVERNMENT

Mr. CURTIS. Mr. President, today I am going to disclose, with proof, the existence of illegal electronic eavesdropping in at least one large Government agency. There is added evidence that this same electronic snooping is going on in other agencies of the Federal Government.

This malodorous practice started under the previous administration and was

so widespread that it has been impossible to root out in the 6 months that the Nixon administration has been in office. I hope my disclosures today will speed the process.

I think it is a fair statement that a Federal agency cannot, without notifying either employee or caller, listen in on telephone conversations where national security is not involved. To do so, I believe, is a violation of law.

Seven States—California, Illinois, Maryland, Massachusetts, Nevada, New York and Oregon—prohibit surreptitious eavesdropping by mechanical or electronic device.

Thirty-six States prohibit the specific type of eavesdropping known as wiretapping.

And Congress itself, in the enactment of title III of the Omnibus Crime Control and Safe Streets Act of 1968, outlawed all wiretapping and electronic eavesdropping other than that occurring within certain tightly drawn instances involving suspected organized criminal activity or the national security. In cases involving suspected syndicate crime, listening devices can be used only with court permission. Even in emergencies, court permission must be obtained within 48 hours or the listening device and its use are illegal.

Yet, I have here such a device, taken within the past few weeks from a telephone at a major Government agency. It was brought to my attention by a Government official whose own telephone was being monitored illegally. I have sworn affidavits from him recounting the whole story. But for his honest courage we would know nothing of this illegal activity.

The agency in question is the General Services Administration. I have already discussed this case with Administrator Robert Kunzig of GSA. He is entirely in agreement with me as to the illegality and impropriety of such electronic eavesdropping.

In fact, Mr. Kunzig, when he heard about the use of "snooper button" telephones and monitoring systems within GSA, was shocked. This was shortly after he became Administrator. He at once—on May 6—issued orders forbidding this practice which is both questionable as to ethics and illegal by law.

Someone in GSA apparently did not feel compelled to abide by the Administrator's orders.

I call attention to the fact that the actual discovery of the device I have here was made over a month after Mr. Kunzig's order prohibiting the use of what he termed "telephone monitoring." I further call attention to the fact that these devices were installed and in use prior to Mr. Kunzig's appointment as Administrator.

What I intend to do today is recount for you the shameful story in a straightforward and factual a manner as possible.

This Federal employee, a well-educated, responsible, professional person and, incidentally, highly knowledgeable in the field of electronics, states that many months ago—long before Mr. Kunzig took over under the Nixon ad-

ministration—he became aware of "excessive electronic noise and a very slight decrease in power" on his telephone line.

Mr. President, I have no personal knowledge of what this sort of thing means.

However, I have consulted experts, and they tell me these are characteristics of a telephone where the distribution of sound and current serves more than two outlets being used by more than two parties in a telephone conversation.

In other words, these are the conditions that exist when a telephone conversation is being monitored by a third party.

On May 5, 1969, our Mr. X was informed by a fellow employee that there was "a listening post" on Mr. X's phone, and that it was then in operation. Another employee present at the time has sworn in an affidavit as to the truth of this conversation as reported.

The next day, May 6, 1969, a memorandum from Mr. X's superior was issued. It stated that the new Administrator, Mr. Kunzig, at a staff meeting on May 6, 1969, announced there was to be no more monitoring of phone calls.

This new policy, according to Mr. X, was transmitted to all offices in the agency. As Mr. X puts it:

To my knowledge, the request to cease telephone monitoring constituted an attempt to stop the day-to-day practice of using the so-called "snooper button."

When asked to describe this "snooper button" system, a representative of the C. & R. Telephone Co. supplied, in writing, this summary:

TRANSMITTER CUT-OFF

As a key telephone system arrangement, the transmitter cut-off is a feature that enables the telephone user to cease transmission of sound into the telephone without losing the capability of listening to the other person's conversation. Because of its monitoring nature, the installation and use of it has been highly discouraged by the General Services Administration.

According to Mr. X, these snooper buttons have been used in his office to monitor calls of employees to other persons in Government as well as persons outside the Government, without the knowledge of participants in the telephone calls.

Mr. X took no action in May about the information concerning a "listening post" on his phone, since the policy announced by Mr. Kunzig could be expected to end such snooping.

One month later, despite the Administrator's order, there was evidence that in certain offices telephone snooping was continuing. And there was no evidence that such devices had been removed from various telephones.

At this point, Mr. X decided to collect information on the extent of these illegal eavesdropping operations within GSA.

His determination to do so was reinforced by information given him on June 3, 1969, by a secretary to a high official in GSA.

She informed him that she had monitored telephone conversations in Mr. X's division during 1968, and in the

July 11, 1969

Approved For Release 2004/11/30 : CIA-RDP71B00364R000300100001-3 S 7935

naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

The PRESIDING OFFICER (Mr. GRAVEL in the chair). Under the previous order, the Chair recognizes the Senator from Texas (Mr. TOWER).

Mr. TOWER. Mr. President, I am going to make some remarks on the compromise proposals or amendments that have been offered to the procurement bill, and I ask unanimous consent that those remarks appear at the conclusion of my main address on the military procurement bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMPROMISING THE SAFEGUARD ABM SYSTEM

Mr. TOWER. Mr. President, there has been considerable discussion in these last few days of debate about the possibility or advisability of compromising the Safeguard ABM system. To that end, two amendments have been offered for consideration by the Members of the Senate.

While I have the greatest respect for the authors of the amendments, I must oppose them because I am convinced that acceptance of either amendment would materially weaken our defense posture.

Let me discuss first the amendment offered by the distinguished Senator from Kentucky (Mr. COOPER) and the able Senator from Michigan (Mr. HART).

This amendment would prevent the use of funds appropriated with this year's act and earlier acts for other than research, development, testing, evaluation, and normal procurement incident thereto. It would specifically prevent their use for deployment or for acquisition of any site for deployment without further action by Congress. To all intents and purposes, then, the very large effort already underway in preparation for deployment would cease. The program would revert to a purely R. & D. status. The results of such an action would be profound. Let me mention a few of them.

If this amendment is accepted, the effort already underway would be almost a complete waste. Furthermore, it would cause a substantial delay in deployment, should we decide, at some future time, that deployment was in fact necessary. In fact, if we decided as early as the next session of Congress to proceed with deployment, it would not be possible to have the first site ready until some 2 years after the date presently planned. A first site then could not be available until early 1976, and a full deployment, such as that called for in phase II of the program would not be ready until 1978. This delay would result from the problems of personnel dislocation. If we destroy the reason for the existence of the present talented and trained personnel base, which is necessary for production, site engineering, construction, and the like, we cannot expect to be able to re-

build it overnight. I wonder whether the highly talented individuals involved in the program would return at all if once separated from the program.

There are serious implications to this kind of delay. It is within the U.S.S.R.'s capability to build an ICBM force which would seriously threaten our Minuteman by 1975 and, as well, pose a serious threat to our alert bombers. The United States could be left with a period of years in which we had no counter other than to increase greatly our offensive retaliatory forces. Additionally, the Chinese Communists could have an operational ICBM capability by the mid-1970's. And there would be no way of regaining that lost time in the installation of defensive deployment.

Second, of course, a very great loss of funds would be involved. As you know, Congress has already appropriated for deployment \$1.744 billion. An estimated \$500 million of these funds would be lost effort if we decided to cease deployment. Even if we again decided to deploy in the next Congress, the cost of a 12-site deployment would be over \$250 million and possibly \$500 million higher than if we continue our current effort. This cost includes the effect that comes about naturally from the discharge of some 5,000 trained personnel which we now have on preproduction and construction engineering efforts and the necessity to replace them later. The greater cost also comes through the termination of contracts with subcontractors throughout the country who have made commitments for undertaking parts of the program. It comes about from the necessity to build up and train again, to reestablish production lines and build a new construction engineering base.

A third point of great significance is the possible impact of such unilateral action by the United States on the strategic arms limitation negotiation. It has been our position that any such negotiation should apply to both offensive and defensive missiles—that the negotiation should effect overall strategic potential, not just consider separate parts in isolation. With such unilateral action, what can we expect in the way of bargaining power with the U.S.S.R. in the defensive weapon area? We would then be dealing with a U.S.S.R. which has already initiated deployment of a defensive system, has some sites operational, and is presently carrying on a most active test program on an advanced ballistic missile defense system. In brief, we will enter the negotiation having not only lost—but having publicly denied—a very great bargaining factor.

There are those who argue that delay in deployment will give time to determine whether the U.S.S.R. will undertake logical agreement. I would remind all of my colleagues that the whole history of negotiations with the U.S.S.R.—even on simple matters—has been one of long and careful debate and negotiation. It would seem questionable that any meaningful and effective agreement could be reached in a 1-year period. I hope that this will change, but there is little reason to believe that it will. In the meantime, however, I cannot advise that

we adopt a policy which will delay deployment of Safeguard 2 or 3 years.

Part of the argument for delaying Safeguard lies in the assertions that if the Soviet threat develops we can always deploy additional Minuteman, and that this can be done in a very short time—say 1½ to 2 years. This does not say that from decision to deploy to operational status is 1½ to 2 years. To go through the entire budgetary, appropriation, procurement, and construction cycle would normally take 4 to 5 years, and even on an expedited basis 3 to 4 years. Consequently, if we heed those who favor delay, we may well face a much earlier decision to deploy offensive missiles than we now anticipate.

Even more importantly, those who are favoring delay are advocating—perhaps unknowingly a decision now that if the Soviet threat develops we will meet it by proliferation and not by defense. The option for defense might be lost, and, with it, the chance for stabilizing the relative postures of the two countries at a lower level of offensive weapons.

The proposed deployment is a phased one. It takes an initial limited step to minimize the time for deployment and to prove out the system. It does so at limited cost. It does so without committing us to the full phase II deployment while preserving the ability to respond flexibly to the threat as it evolves and to the possible results of the arms control negotiations.

For these reasons, then, I oppose the amendment offered by Senators COOPER and HART. It simply eliminates any possibility that Safeguard will be a viable defense weapons system.

Mr. COOPER. Mr. President, will the Senator yield.

Mr. TOWER. I would be happy to yield to the Senator. I would prefer to finish my remarks which will require only 1 more minute. Then I shall yield to the Senator.

My colleague on the Armed Services Committee (Mr. MCINTYRE) has also offered an amendment to the bill before us. Another member of the committee, the distinguished Senator from Colorado (Mr. DOMINICK), effectively raised several significant objections to the amendment. Since they are preserved in yesterday's RECORD, I shall not repeat them. I do not think a more able rebuttal could be presented.

I would like to comment on the philosophy of the amendment, however. The amendment has been referred to as a "compromise." I respect the sincerity of those who so view it, but I must in good conscience point out that it is really no such thing. Any proposal which eliminates deployment from the Safeguard plan is not a compromise. The Safeguard plan is itself a compromise. It recognizes that there is considerable disagreement among intelligent, sincere men over the advisability of developing a significant anti-ballistic-missile system.

But, Mr. President, it is the minimum acceptable alternative. I cannot emphasize that point too much. I firmly believe, like President Nixon, that the Safeguard system represents the most limited defensive missile system that is consistent

with the national defense of this country.

In light of a lot of rumor that seems to be flying around about possible compromise and a favorable climate at the White House for compromise by the administration, may I say emphatically that the administration is not now disposed to compromise. The administration opposes the two amendments offered; it believes it made a minimal proposal and it wants to see this provision passed intact. There is currently no intention on the part of the administration to participate in such compromise effort.

I am delighted to yield to the Senator from Kentucky.

Mr. COOPER. I wish to ask the Senator, since he spoke of delay in deployment, at what date, if the present plan is approved, could an integrated deployment of the first stage be completed?

Mr. TOWER. About 1975—1974.

Mr. COOPER. In 1974. If we should proceed on the deployment of the entire system, as I believe the testimony of Secretary Laird shows an intention to do, when would the full system be deployed?

Mr. TOWER. Around 1976 or 1977, I believe.

Mr. COOPER. Is there any component of this system that could be placed on one or two missile sites of phase I in the coming fiscal year?

Mr. TOWER. I am not sure I understand the Senator's question.

Mr. COOPER. What we are talking about primarily is whether or not the Senate should vote to deploy Safeguard, phase I. As I understand the word "deployed," it means the physical emplacement of the system on the two proposed sites at Grand Forks and Malmstrom.

Mr. TOWER. There is no provision for deployment in this fiscal year but we will face substantial delay in deployment if we proceed on the R. & D. route.

Mr. COOPER. Is it correct then that there is nothing in the bill which provides that any part of this system would be placed on these two sites in the coming fiscal year?

Mr. TOWER. It was. There is nothing to prevent it, but there is no provision for it. I do not think we would be ready to deploy by the end of this fiscal year, anyway.

Mr. COOPER. Is not the basic reason for the decision not to deploy in fiscal year 1970, the fact that none of the elements have been fully tested, approved for deployment?

Mr. TOWER. All the components have been tested, which lead us to believe that the system will work.

Mr. COOPER. Has PAR been tested?

Mr. TOWER. I will yield to the distinguished Senator from Arizona to answer that.

Mr. COOPER. Is it not correct that PAR has not even been built?

Mr. GOLDWATER. Will the Senator from Texas yield?

Mr. TOWER. I yield.

Mr. GOLDWATER. Both radars have been built in model form. The theory has been tested. There is no question about the radars. The MSR is merely a greatly enlarged radar with 5,000-some-odd sensing units, instead of the one we

usually associate with the radars we see around the field.

One important thing, if I may interject here, concerning the delay, is that we are now talking about acquisition money for missiles. If this is delayed, what happens will be to put people out of employment in the plants building the components. I am not arguing for or against unemployment, but merely state that should we decide in another year or two to go ahead with it, we will have lost the expertise needed to make the missiles, and the factories will have been shut down, so that we cannot proceed even with testing. All the components of the system, with the exception of the actual radar, not only have been tested, but are being tested right now. They work.

In fact, the results with Sentinel are fantastic. I know that some opponents will say, "Yes, but it is something else to shoot at a target, whose position is known, than to shoot at a target whose position is not known."

However, I think I can say this, without violating confidential matters, that it does not take a great deal of genius to figure out where a missile from Russia will be coming from to hit any city in this country, that it would not be more than two or three degrees. So that the success we have achieved with Sentinel, and are now beginning to achieve with Sprint, so far as I am concerned, indicates that the system could be made operable as soon as the large radars are finished. They are being constructed now.

Mr. COOPER. What I am trying to elicit is the status of the components. I will take each component in turn. The testimony of Secretary Laird before the House Appropriations Subcommittee on May 22, testimony which he described as the latest situation analysis, was that PAR had not been constructed. Is that correct?

Mr. GOLDWATER. That is correct, but models have been constructed, and the models have worked.

Mr. COOPER. Where is the model?

Mr. GOLDWATER. At Bell Laboratories. They have charge of that.

Mr. COOPER. Just a model?

Mr. GOLDWATER. Well, it is just a model but it is a pretty good model. When we get through with the PAR, it will have an antenna with a diameter of 116 feet, which is a tremendous antenna.

Mr. COOPER. Yes; a tremendous antenna. What about the MSR? Is it not correct that it must be redesigned?

Mr. GOLDWATER. No; I do not think so—

Mr. COOPER. It must be redesigned to provide more faces and must be hardened, is it not correct?

Mr. GOLDWATER. There is discussion of redesigning it. It now has four faces, but the antenna diameter will be 13.5 feet, which is still a pretty large antenna. The redesigning they are interested in is more for hardening, to be able to have it withstand any close hits or direct hits. However, that is not really of great concern, because the detection ability of radars will take place, we hope, long before the missiles come close to the target. If they do not, then it does not do any good to have them, anyway.

Mr. COOPER. The point I am making—which my questions and the answers indicate—is that Safeguard is still in the research and development stage. PAR has never been built. MSR is being redesigned, according to the testimony of Secretary Laird, to provide more faces. Also, as the Senator from Arizona has said correctly, it is a soft component. Unless it is redesigned—hardened—it cannot withstand missile attack.

Mr. TOWER. The components of PAR are currently being used for space tracking. All we have to do is put them together and integrate the package. It works. All the components now work.

Mr. COOPER. At the space center it is used for its tracking purposes. Secretary Laird stated, using the base of that design, an appropriate PAR for missile-site defense could be designed and built; but the point I am making is that this has not been done and cannot be done in fiscal year 1970. It is correct, also, that to have an effective MSR it must have more faces, and if it is to be able to withstand an attack from incoming missiles, it must be hardened.

Mr. TOWER. We can put them together. The fact that we do not have it all put together now I do not believe is an argument against proceeding to do it.

Mr. COOPER. My purpose is to show that we can have nothing ready in the coming year and for some time after that. Sprint and Spartan, again according to the testimony of Secretary Laird—I want to give his testimony the best possible construction—the interceptor missiles have not been tested as to intercepts. They have been tested for firing.

Mr. GOLDWATER. No, that is not correct. I have seen motion pictures of them being used off Kwajalein—interceptor missiles sent from Vandenberg—and they have been used successfully. I think the correct interpretation of Mr. Laird's remarks would be that Sprint, at that time, had not actually been tested against a target, but that it has been tested as to firing. Sentinel had been fired, at that time, and I think they made some 10 shots and achieved about 70 percent, as a rough guess, success with it. Success, of course, is the diameter of the CEP. I would not want to talk about that here.

One point, though, that the Senator has not mentioned, where I think we will have more trouble, although it will be solved, is in the computers.

Mr. COOPER. I am coming to that. There were some intercepts under the Nike-Zeus system, but I cite the testimony of authority—that if Secretary Laird—that no actual intercepts had been made by Sprint or Spartan. They have only been flight-tested.

Mr. GOLDWATER. Well, we were shown motion pictures of Sentinel being fired. We saw no pictures of any hit, because, of course, that would be impossible; but Sprint, at that time, had only been tested in firing.

Mr. COOPER. It is correct, is it not, that Spartan is being modified?

Mr. GOLDWATER. It is being modified. As I have said very often, it would not surprise me to know that when we

finally conclude that we have an ABM system, what we are talking about could well not be the weapon that we will use. I say that because just like Minuteman, we started out with Titans and then we got to the Minuteman and we are now up to a fourth stage of the Minuteman. We never quit developing weapons. We cannot do that.

Mr. COOPER. I understand. It is an evolutionary process. The Senator is absolutely correct. Has this system, as yet, been tested as an integrated unit?

Mr. GOLDWATER. No.

Mr. TOWER. No. It has not been.

Mr. COOPER. Is it finished?

Mr. TOWER. They do have it tested in the area of Kwajalein.

Mr. GOLDWATER. Yes.

Mr. COOPER. Suppose phase I of Safeguard were deployed in the United States as the administration wants, with the PAR designed and constructed, as well as the MSR, Sprints, and Spartans, and computer systems, could it be tested in the United States?

Mr. GOLDWATER. I do not think it would have to be tested in the United States. I think the testing would be confined to ranges we already have such as in Kwajalein and possibly on Johnson Island.

Mr. TOWER. In Eniwetok.

Mr. GOLDWATER. Yes. Eniwetok. I would say frankly, there is no feasible way of testing it in the present suggested sites because all of our in-continent, down range sites are down into the White Sands region of New Mexico.

I think it would be ridiculously expensive to erect a test site there, to have something fired from Wyoming into New Mexico; so I would assume it would not be tested, any more than they tested the Minuteman in our country.

Mr. COOPER. Could the Spartans and Sprints be fired in the United States for tests, as they do in Arizona?

Mr. GOLDWATER. The landing area would certainly have to be somewhere where people did not live, because we would not use nuclear heads. We could not use them. We prohibited ourselves from using them under the Test Ban Treaty. So all we could do would be to see how close we could come to intercepting.

Mr. COOPER. Could a nonnuclear interceptor be used in the United States?

Mr. GOLDWATER. The Senator probably knows that a nonnuclear interceptor is in the process of research. In fact, there are two of them.

Mr. COOPER. But the Defense Department is preparing to test at Kwajalein. It has MSR. As I read the testimony, a radar to simulate PAR would be used. Missiles could be firing from the United States and the system could be tested in Kwajalein. Is that correct?

Mr. TOWER. A missile could be fired from the United States toward the Kwajalein range, yes; but we could not do anything that would require using the United States as a recovery area.

Mr. COOPER. I think the Senator has answered my inquiries. My questions were to establish that what is contemplated by the Department of Defense is a continuation of research and development in fiscal year 1970.

Mr. TOWER. That is it essentially, and preproduction procurement. This whole matter is going to be geared to deployment, of course. There will be some pre-deployment procurement.

Mr. COOPER. The amendment that the Senator from Michigan (Mr. Hart) and I have offered, for ourselves and other Senators, provides the Defense Department with all the money it needs. It does confine the use of the funds to research and development, test and evaluation, and to procure all the elements necessary for the testing. If all that is going to be done in this coming year is to continue the testing, without physical deployment, why would not our proposal provide all the money needed, and without a time lag?

Mr. TOWER. Because they are already underway for deployment. Thousands of personnel are already engaged in that activity. Skilled technicians are employed. If we cut them off, we may never get them back.

Mr. COOPER. Where are they employed? What are they doing?

Mr. TOWER. They have been employed in connection with the Sentinel program. They are employed at present at existing sites. The fact of the matter is that there are nearly 5,000 persons involved in this program who would probably have to be discharged. It is something like what many people do not understand in the oil business. They say we do not have to encourage oil exploration in this country because we have all the oil we need in Arabia and all we have to do is turn the faucet on when we need it. But the people would not be there at the time we needed it.

If we cut off this program, the approximately 5,000 people who will be thrown out of jobs will be absorbed by industry or other elements of the Defense Establishment. So to that extent we would not have them there when we needed them. By disturbing this pipeline now, it would cost an additional half billion dollars in the future, plus about 2 years' delay.

Mr. COOPER. All the department is, in fact, doing now is testing elements for later production of an ABM system. If this has hardly started yet, why would those people be discharged? I do not think the labor cost element is essential to this discussion. But what would be lost in time? What are they doing?

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. TOWER. I yield.

Mr. GOLDWATER. Actually, I may say to the Senator from Kentucky, what will be going on for the next 4 or 5 years is essentially what the Senator is suggesting in his amendment. That is what has me rather puzzled. We are not ready to deploy these ABM's yet. I am interested, for example, in how the Senator's amendment would affect the \$345.5 million that is new obligational authority in this budget.

Mr. COOPER. It does not remove it. It does not strike any funds. Questions have been asked, why it does not strike funds asked for deployment. All that will be done during the year—as the Senator's answers have shown—is research and development. In fact, or someone in

the administration, has described next year's work as a research and development program. If the money is available to carry on the program and these people are working on the program, I cannot see any time lag. One purpose in providing the money was to assure there would be no time lag if at some later date—next year or before—the threat as projected by the amendments became a reality and deployment became necessary.

Mr. GOLDWATER. Let me explore a little what the Senator's amendment really does. For example, by the Senator's amendment, he is not going to deny any money.

Mr. COOPER. That is correct.

Mr. GOLDWATER. Under the fiscal year 1970 procurement program, we do some other things. For example, we plan to procure a missile site radar at Grand Forks; a missile site radar data processor at Grand Forks; training equipment; advance procurement for a perimeter acquisition radar and a missile site radar and another missile site radar at Malmstrom; leadtime missile parts requiring \$600,000.

We already have acquired some sites. The items to be procured with the fiscal 1968 and 1969 funds are one perimeter acquisition radar at Grand Forks; one perimeter acquisition radar data processor at Grand Forks; one of the same at Malmstrom; a data processor at BTL at Whippany, N.J.

Again, I know what the intent of the Senator's amendment is—it is to try to convince the Soviets that we are not going to install these weapons—

Mr. COOPER. Not at this time.

Mr. GOLDWATER. Not at this time; but, at the same time, I cannot understand the psychology, or the double shuffle, an old river term, if one wants to call it that, of fooling the Soviets. If we are going to buy radar sites and sites for radar data processors and leadtime for missile parts, the Soviets know we cannot develop the system until 1974, no matter how hard we work on it. So I do not see how the Senator's amendment is going to convince the Soviets that we have no intention of deploying an ABM system.

Mr. COOPER. Because the political decision will not have been made by the Congress to proceed with deployment of the ABM. The desire of the administration is this: Although the full system cannot be put on the ground until 1974, and could not put in components on the site in the coming year, yet, upon the basis of the projected threat—and extrapolations made by Secretary Laird—the administration and proponents of the system want Congress to decide this year to deploy the ABM system.

I believe the Senator knows of the doubts that have been raised about the reliability of the system. Does the Senator have any doubts about it?

Mr. GOLDWATER. I have no doubts about it. I may say to the Senator that I can remember, just before the onset of World War II, an electronic marvel called radar. People did not even know what it was. They called it a direction finder, which came into being in England. We doubted seriously that they

July 11, 1969

would be practical devices, because they would require people with at least a doctor's degree to be able to operate them.

Yet we have progressed in radar until today a man who owns a small boat or a small airplane can, by spending \$5,000 or \$6,000, have a radar and operate it himself, even though he has never even seen the inside of his home television set.

I cannot think of a single weapon we have ever developed that was not approached with this same thought, that it could not work.

I remember, in the days of World War II, when, to fly a new fighter plane, for example the P-40, the P-31, or the P-38, you had to have a thousand hours of flying time behind you. This was the amount of experience they thought was required. Today we put kids in airplanes that you would not have been allowed to fly in the forties unless you had 10,000 hours.

So the argument by some of the scientists that it will not work is, to me, to use a popular term used yesterday by my friend from Illinois, "hogwash." Because it is working. We have radar that we know will work. The computer is not working now, but I cannot believe that the Bell Laboratories, plus all the scientific know-how in this country, cannot make a computer that will work under these situations.

We always approach these things with the idea they will not work. I am a little surprised that the scientific community would, for the first time in my memory, say they did not have the ability to make it work.

Mr. COOPER. Mr. President, I have never said we cannot build a system that will work. I believe, too, that the scientific and engineering people in this country can build one that will work. But the question is, How effective it will be?

Another purpose of our amendment opposing a decision to deploy is to keep open for the Department of Defense the opportunity to design a better system, before it is locked in with the modified Sentinel.

The Senator from Missouri (Mr. SYNINGTON), at some point in the debate, I hope next week, or whenever he wants to, will call for a closed session. I do not know whether I should be speaking for him, since he is in the Chamber. But he will show that though you may assemble the Safeguard system, with all its elements, it will still not provide a defense against an attack by the SS-9.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. COOPER. I yield.

Mr. TOWER. Probably an essential difference between us is that the Senator from Kentucky appears to believe that we should always wait and see what the Soviets do, and just react to what they do, rather than proceed on our own. The Soviets do not do that, as far as we are concerned. They have programed certain weapons systems for the future, and they are going to go ahead and build them, regardless of what we do, if history and experience are any guide.

If we are going to just sit down and react to the Soviets, wait and see what they do, see if they develop something sophisticated and then say we will de-

velop something sophisticated, we are not going to find ourselves in a position of military parity with the Soviet Union in the mid-1970's; we are shortly going to find ourselves in a position of military inferiority.

I yield to the Senator from Arizona.

Mr. COOPER. Mr. President, the Senator from Texas is not drawing a correct distinction between those who support and those who oppose an ABM system at this point.

Mr. TOWER. The Senator keeps saying he wants to wait and see what the Russians do.

Mr. COOPER. With respect to negotiations—not because of any fear that the Soviets can overcome us. It amazes me that those who want to produce new systems of nuclear weapons, who know that today we have full retaliatory power—we can destroy the Soviet Union 48 times over—are so glum and think the Soviet Union can overcome us.

Mr. TOWER. It occurs to me that our deterrent would be far more credible if we have a better ability to defend it, than if we cannot defend it against a first strike.

We do not have a first-strike policy; the Soviets do. If the first blow is struck, the Soviets will strike it. We do not intend to initiate a war. We do not choose war as an instrument of national policy. We are not going to war unless somebody else starts one. We do not have a first-strike mentality.

Thus it seems more logically that we ought to be in a state of preparedness to defend ourselves against a first-strike mentality.

I yield to the Senator from Arizona.

Mr. COOPER. Let me make a short statement; then I think we will understand each other better.

Those who oppose deployment this year have great confidence in the retaliatory power of the United States, as I believe the Senator from Texas has. The President has said. The Secretary of Defense has said. The testimony is that our ability to inflict upon the Soviet Union full retaliation and assured destruction would not be threatened until at least the middle 1970's.

The United States has something like 4,200 warheads, capable of delivery upon the Soviet Union when only 200 or 300 are needed for its destruction. The Soviet Union has some 2,000 deliverable warheads when only 200 or 300 would destroy this country. Year after year we keep adding to this armament. I do not know whether the figure is accurate or not, but I have heard it stated that the nuclear weapons of the United States and the Soviet Union are equal in destructive power to something like 15 tons of TNT on every person on the earth.

The continuation of the arms race will choke the world with nuclear weapons, far beyond the number needed to destroy our two countries and without ultimate and true security.

We differ, and I must be clear in saying so, in our conception of security. It may be a false hope that the arms race can be halted. It may not be possible to come to any formal agreement with the Soviet Union in a year—and frankly, I

do not think we could—but in the course of talks, each side knowing that it can destroy the other, that ABM and MIRV are in the offing and that each has the capacity to build up and match destructive power, this mutual danger and power might lead to an agreement, formal or tacit, that our countries will not go ahead with the nuclear arms race, and civilization may be saved. This is a year when negotiations are possible, and we should not deploy weapons we seek to control. This, I think, is the essential difference between those who oppose deployment of ABM and those who support it.

Mr. MANSFIELD. Mr. President, will the Senator yield to me?

Mr. TOWER. I promised to yield to the Senator from Arizona next.

I should like to respond by saying that to argue we have more bombs or more warheads than are required to destroy the enemy is like saying, in effect, that if there are a hundred enemy soldiers, you ought to make only a hundred rounds of ammunition; whereas sometimes you are going to use up a hundred rounds of ammunition on one enemy soldier.

The fact of the matter is that this is a long leadtime item. The President of the United States has determined that it is essential to the security of the United States. The fact of the matter is that negotiations with the Soviet Union traditionally drag out for a long time, so we could hamstring ourselves by being good guys, going to the bargaining table and negotiating with the Soviets, while all the time they are getting ahead of us, technically, because they are not observing that kind of restraint.

So they are getting ahead of us. Furthermore, as long as they think that we will hold back on technological development as long as they negotiate with us, they might negotiate for a long, long time, until they have the biggest arsenal in the world, until they have more weapons than they will ever need to assure their superiority over the United States.

I yield to the Senator from Arizona.

Mr. GOLDWATER. Mr. President, I want to assure the Senator from Kentucky that our basic desires in this matter are exactly the same. I would be the first to stand up and agree to disarmament talks, if they are multilateral. If we can be convinced that the Russians will do what they say, I think we should engage in these talks.

I will agree that they certainly have a first-strike capability. I disagree with the statement that we do. We do not. I think we have a retaliatory ability. However, the thing that bothers me relative to the amendment of the Senator is that we are doing precisely what he is seeking to do. So why have the amendment? An amendment to a bill this year providing that we may go ahead and do what we are doing can be changed in the next Congress.

Also, what disturbs me to some extent about the attitude of those people who oppose the ABM is that they see in this gesture a real possibility of getting together with the Russians.

I remind the Senate that we have been disarming in this country for about 8

years. The percentage of money we spend—and that includes \$2.6 billion a month for the South Vietnamese war—is about the same percentage of the gross national product as we spent in the forties during World War II.

When the South Vietnamese war ends and we are able to bring men home, every 100,000 men we bring home out of the service will mean that we will save \$1 billion. However, if we do not buy new weapons, we will be in a very disarmed position.

Having been through this, the Russians are not saying, "We like what you are doing. You are not building up your armament. Let us talk."

We were supposed to have 1,800 Minuteman. That figure was cut off at 1,000. Our submersive force is limited. The Russians are making eight "Y" class submarines a year and 15 attack submarines a year.

I cannot see any indication on the Russian's part that they want to disarm.

As I said earlier this morning, they have opportunities all over the world to show the world that they want peace and disarmament.

They ship 85 percent of the merchandise of war to our enemies in Vietnam. If they have any power in the Communist world—and I do not believe communism is a monolithic structure—and if they have any respect for themselves, certainly they can have some effect on the peace talks. We have been waddling around over there for a year or so and have gotten nowhere.

I am not even partially filled with a sense that we can reach a detente with the Russians if we are not building an ABM system or if we delay it.

I say this with all respect. I know exactly what the Senator has in his mind. His amendment would do precisely what we are doing.

Mr. COOPER. I think the Senator should vote for it.

Mr. GOLDWATER. No. I do not think you should vote for it. If the Senator votes for the bill, he will have his amendment included therein.

Mr. COOPER. Mr. President, I made the point awhile ago that in one way the amendment will do exactly what they are doing in that it will continue research and development, which the Senator has admitted is all they are doing now. The answer to the question is the time lag.

The Senator says—and this is from a majority of the Armed Services Committee—that it would delay—and I speak honestly—the political decision to deploy until we determine whether the Soviets will actually go ahead with the threat which has been projected by Secretary Laird, or if it will be possible in this year to see if we can reach some agreement.

Would the Senator agree that if we could control the arms race or if it could be stopped, we would be better off than if we were to go ahead with the nuclear race?

Mr. GOLDWATER. I would not argue that for 5 seconds.

Mr. TOWER. Mr. President, we are the only ones who have acted with restraint, as the Senator from Arizona has pointed out. We have leveled off, and they have gone up. Since 1950 we have

developed one superiority aircraft. How many have they developed?

Mr. THURMOND. Eighteen.
Mr. COOPER. Perhaps we do not care for them and they do not care for us. However, we might have a mutual interest. Both might want to save themselves from retaliatory destruction. To say that we have not armed ourselves is incorrect.

In 1959 or 1960, it was said a missile gap left the United States behind the Soviet Union. I have not served on the Armed Services Committee for some time, but I have tried to keep up with the State of our defenses and security.

The missile gap fiction came after the Soviets had launched sputnik. The Soviets had a launcher of great thrust and power and we did not have one.

Mr. GOLDWATER. Mr. President, I believe that was more of a political phrase than an actual phrase.

Mr. COOPER. We had bombers.
Mr. GOLDWATER. But we will not have them much beyond 1974, and we have no new bombers coming.

Mr. COOPER. In 1960 we had superiority. Neither force had strategic intercontinental missiles. However, we had more bombers. We were ahead.

After the missile gap scare came along, I might say that in 1961, after we had heard about the missile gap scare, I was going home to my State. I knew that I would be asked by people in my State about the missile gap.

I did not know about it myself. However, I knew that I could not talk to them honestly and say there was no missile gap if, in fact, there were.

I went to the Defense Department to see Mr. McNamara. I told him that I was going to my State and that I knew people would be asking about this question and that I had to speak to them honestly.

I said, "Is there a missile gap?"

He brought out a book—I will never forget the scene—about 12 inches long and about 6 inches wide. He opened up the book and showed me in that book every missile, bomber, everything we had that we could use against the Soviets. He showed me his understanding of what the Soviets had. Even then, we had superiority of at least 2 to 1.

He said, "You cannot use these numbers, but you can tell these people that there is no missile gap."

I said to him, "If this is correct, why do you not make a statement disclosing these figures to the people of the United States and to our enemies?"

I do not know whether I caused him to do it, but a month or two later he and Mr. Gilpatrick made speeches and told the world that we had superiority over the Soviets.

There never has been a day when we did not have it.

After that, we began to build intercontinental missiles. We built up to 1,054. At one point the Soviets had about 200 or 300.

Then we began to add another element to our retaliatory force—the Polaris. We built 41 with 656 nuclear missiles. We, of course, have over 7,000 tactical nuclear weapons in Europe and others elsewhere in the globe.

The Senator now says we are disarming and that the Soviets have been just

moving up to us. They have not gotten close to us yet.

Then we began to develop the MIRV. Am I correct?

Mr. GOLDWATER. The Senator is a little mistaken on some of his figures.

Mr. COOPER. I might be mistaken on a figure or two, but I am not mistaken on our overall superiority.

Mr. GOLDWATER. I have heard it stated on the floor quite a few times that we hold a 5-to-1 superiority over the Soviets in nuclear strength. That is not so.

Our nuclear strength does not include the warhead we have buried some place. Placing a warhead on a missile is not done in 10 or 15 seconds, 10 or 15 minutes, or 10 or 15 hours.

We have now approximately the same number of ICBM's as the Russians. I think they have 1,078. And, if we count the Titans, we have about 1,054.

We are not building any more sites or doing anything but modernizing the Minuteman force.

They are able with their SS-9 to deliver 25 megatons if they want to do so. I think that is rather a large load with which to do any targeting job that is needed. However, they have developed, the footprint in the Pacific shows, a MIRV. We are testing a MIRV also.

However, one of the figures Secretary McNamara was always careful to leave out was—and I tried to have it shown to the public—the 1,100 intermediate-range missiles that the Russians have aimed at us and our allies in Europe.

If we have to go to war in Europe, we will have to depend upon the use of their strategic destructive force. And the transportation capability and the missiles could deny us that.

So it is just as important to the Russians to have Europe targeted as it is to have our country targeted.

We are heavy in submersible missiles, but they are building nuclear submarines, 80 of the conventional type and six attack submarines.

I do not want to get into a technical discussion of what an increased Soviet submarine force and Soviet Navy means. I will discuss that in a speech I shall give next week. But the point I am bringing out is that we are now behind the Soviet Union in deliverable weapons for a retaliatory attack. We are not up with them—unless we want to count what we can carry in the bomb bays of our B-52's. But we have modified most of those bomb bays, but not as to the Mark bomber—I will not quote the number—which is a gigantic thing, but is now laid up, designed for 500-pound bombs. We are using them in Vietnam. It would take quite a modification program to replenish the force. So we can depend on the B-52, and we would probably have the same percentage of them get through as got through in World War II. But even in spite of the size of the bombs, we could not do the damage we would have to do. We have not kept pace with the Russians. I doubt whether we would have, had not Vietnam come along.

Vietnam forced Secretary McNamara to do something in the weapons field. He had lagged. I think this debate, if it shows one thing, is showing that for 8

years we had a Secretary of Defense who did not do anything for the U.S. military forces. I hate, as an American, to admit that with this country's great technological ability and great academic ability we have not produced a modern fighter plane since 1955 or 1956. I think we built 13 of one model, and they are now in storage on a desert in sunny California. It is the mach 3 type. But that is beside the point.

I hope, when my time comes to speak on this subject, to show the Senate that we have gone through a period of almost disaster, so far as our military goes; and that had it not been for the unfortunate war in South Vietnam, which pointed up immediately our deficiencies, we would still be suffering.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD, a table showing the national defense purchases as a percentage of gross national product from 1958 to 1970.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

NATIONAL DEFENSE PURCHASES AS PERCENT OF GNP, 1958-70¹

Year	Calendar year	Fiscal year
1958	10.3	10.2
1959	9.5	9.9
1960	8.9	8.9
1961	9.2	9.1
1962	9.2	9.2
1963	8.6	8.9
1964	7.9	8.3
1965	7.3	7.5
1966	8.1	7.5
1967	9.2	8.8
1968	9.2	9.2
1969	8.9	8.9
1970	8.5	8.8
		8.6

¹ Federal Government purchases of goods and services for defense on national income accounts basis in current dollars as percent of GNP in current dollars.

² Assumes GNP growth of 6 percent over calendar year 1968 and Defense purchases of goods and services of \$81,000,000,000.

³ Uses BOB estimate of fiscal year 1969 GNP and of Defense purchases of goods and services on national income basis of \$79,900,000,000.

⁴ Assumes GNP growth of 5 percent over calendar year 1969 and Defense purchases of goods and services of \$81,000,000,000.

⁵ Assumes GNP growth of 5 percent over fiscal year 1969 and Defense purchases of goods and services on national income basis of \$82,200,000,000 (Johnson budget).

⁶ Assumes GNP growth of 5 percent over fiscal year 1969 and Defense purchases of goods and services of \$81,100,000,000 (Laird budget).

Mr. GOLDWATER. Mr. President, I invite the attention of the Senator from Kentucky to the fact that in 1960 the percentage was 8.9; in 1970, it will be 8.8, and that includes the \$2.6 billion a month that is spent for the war in South Vietnam.

To get back for a moment or two to the amendment, I cannot see any psychological advantage, in dealing with the Russians, merely to tell them we are going to do what we will have to do anyway. We cannot develop these weapons fast enough to complete them by 1971 or 1972, 1974 is the earliest date. They know that.

One night the Senate had a secret session, the only one I ever attended. Of course, it was about as secret as Sunday's funny paper. But it was secret, and the distinguished Senator from South Carolina (Mr. THURMOND) told us about the Russian ABM.

Mr. COOPER. I was present.

Mr. GOLDWATER. That was several years ago.

Mr. COOPER. It was 1963.

Mr. GOLDWATER. Only today the Russians seem to feel that they have a system they can deploy. This is their third phase.

If we are going to say to the Russians, "We are never going to deploy this missile," I do not think we will entice them to the bargaining table. I think that if we do what the President has asked us to do—and he is the Commander in Chief; we are not—we are going to show them that we are no longer going to lag.

We do not want an arms race. I would like to see disarmament just as much as the Senator from Kentucky or anyone else. But I do not think we can bargain the safety of the 200 million people of this country.

Mr. COOPER. Mr. President, will the Senator from Texas yield 1 minute to me?

Mr. TOWER. Mr. President, I have a speech that I have been waiting 1 hour to deliver.

Mr. GOLDWATER. I thought the Senator had delivered his speech.

Mr. TOWER. I want to address myself to the amendment, so as to try to clear up some doubts that have been flying around, concerning the administration's position. I reiterate that the administration does not support either of the amendments and is not disposed to compromise its minimal proposal.

At this moment, I think it would be better if I presented my speech, because it covers many matters that we have already discussed, and others. Then I shall be glad to engage in a colloquy, and we can "colloquize" all night, if we wish.

Mr. GOLDWATER. I would not want to have this item go too far beyond the colloquy with the Senator from Kentucky, because it deals with PAR. It refers to the statement of Secretary Laird.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD a paragraph, which I have marked, concerning the principal functions of PAR.

There being no objection, the paragraph was ordered to be printed in the RECORD, as follows:

The principles, functions, power level, and frequency of the PAR are quite similar to existing operational space and air defense radars. Hence, there is no need to build a complete R. & D. PAR, and the first PAR can be assembled directly at an operational site. The status of the work on this radar is as follows: The equipment configuration has been chosen, the design and performance specifications have been prepared, a partial prototype test model has been started and is now 40 percent complete, the design for the PAR structure has been finished, and the PAR computer is 25 percent complete. In short, work on the PAR is well along and no major problems are anticipated.

The PRESIDING OFFICER. The Senator from Texas has the floor.

Mr. COOPER. Mr. President, in view of the last statement, would the Senator from Texas be kind enough to yield me 30 seconds?

Mr. TOWER. I yield 30 seconds to the distinguished Senator from Kentucky.

Mr. COOPER. I thank the Senator. He has been very generous.

I ask unanimous consent to have printed in the RECORD a statement concerning the PAR radar, of which no prototype has yet been built, furnished me by Mr. Foster, of the Department of Defense. It is from the unclassified portion of a letter written to me by Dr. Foster which supplies answers to various questions I asked about Safeguard.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

There will be no prototype of the PAR constructed because the technology is well known. The PAR is similar to the FPS-S5 which is now in full operation at Eglin Air Force Base. The first PAR will be the tactical radar constructed on site and it will be ready for testing in mid-1972.

Mr. TOWER. Mr. President, I hope that we can keep the audience in the Chamber. A number of Senators have left, and I intend to cover quite a number of items. I hope that Senators will remain in the Chamber.

First, I wish to commend the distinguished Senator from Mississippi on the excellent job he has done in explaining the military procurement bill. It would be superfluous for me to expound on the material he has so ably presented.

I also wish to commend the ranking minority member of the committee, the distinguished Senator from Maine (Mrs. SMITH), for her able presentation of this important subject and for the work she did when the committee considered the bill. My objective today is to give my general views on the bill and to ask the support of the Senate for it.

Our committee's examination of the military requirements under the directions of our able chairman (Mr. STENNIS) has been most critical and exhaustive. Wherever we have found room for reductions without exposing this Nation and its military forces to undue risks, we have trimmed the requests. In areas where there appeared to be unnecessary duplication of effort among the services—as in the case of air-to-surface missiles, for example—we have made reductions. Projects which we felt, however reluctantly, could safely be postponed have been deferred—such as fast deployment logistics ship, for example. Overall, the Committee on Armed Services reduced the military request for equipment by over \$860 million. We reduced the request for research and development—an area in which I have always supported a strong effort—by even more: by \$1,042 million. But however much we may have wished to make even greater reductions in military expenditures, it became very apparent during our deliberations that to do so without some concomitant reduction in our worldwide commitments would be folly.

Until our involvement in Vietnam ends, we must provide our fighting men there with the most effective weapons we can produce. As long as we maintain forces in Europe to deter and repel Communist aggression, we have an obligation to man and equip them properly. We cannot ask our military men to be first-rate soldiers, sailors, and airmen around the world if

July 11, 1969

we give them second-rate support here in Washington.

I sense among Members of Congress and the public a temptation to try to alter our military commitments by manipulating the military budget. We must not succumb to this temptation. There are valid questions concerning our national goals and priorities which ought to be debated, but we cannot resolve these problems simply by the indiscriminate withholding of funds. It is the responsibility of this Congress to support adequately and properly those forces which are required—even while this country's role in international affairs is being decided.

To do this, a certain amount of modernization of equipment is essential. The bill before the Senate provides for only very modest progress in that. The same is true for research and development. We must not be lulled into a state of insecurity either by reassurances of good intentions from the Communist world or by the vocal dissent here at home. We cannot afford to err on the side of unacceptably lowered security under the guise of savings; any indiscriminate reductions could cost us dearly in the long run.

Furthermore, we must recognize that the expenditures which are authorized by the bill before the Senate fall generally into two categories. First, we have those expenditures needed to insure that our Armed Forces are capable, up to a decade or more from now, to meet those requirements arising from threats to our national security. I see nothing in the world situation to make me believe that we can safely disregard these threats. Thus I see no justification for further cuts in our long-range programs.

The second major category of expenditures in this bill is to support our men in Vietnam. I will not predict what the judgment of history on our involvement in Vietnam will be. On the other hand, I will predict that no Senator wants to have on his conscience a single American death in Vietnam which results from an unwise reduction of funds to support them. There are some signs of relief from our heavy military commitments, however. Skeptics notwithstanding, we are making progress toward disengagement in Vietnam. The South Vietnamese forces are improving slowly but surely.

We are beginning an ever-increasing measure of stability to Vietnam, and loosening the hold of the North Vietnamese and Vietcong on the country. We must have the patience and resolve to see the struggle through to a satisfactory conclusion while at the same time, keeping our guard up elsewhere around the world. That is what the major portion of this year's authorization bill is designed to do.

While the funds allocated for the continued development and initial deployment on the Safeguard anti-ballistic missile system do not represent a high percentage of the money authorized in the military procurement bill, they have been the subject of greater discussion and debate than any other appropriation authorization in the bill. Many of my able colleagues on both sides of the aisle have spoken out on the issue, and I suspect

that all will voice an opinion before the debate is through.

This is all well and good for the importance of the issue at hand justifies considerable discussion.

It has been interesting to note the various ways in which the issue before us has been phrased. Some seem to see it as a test of our determination to establish national priorities. Others see it as a measure of our determination to seek peace through disarmament. Still others say that the issue is to what extent this body will exert direct control over expenditures and recommended expenditures made by the Department of Defense. Indeed, it has been suggested that the ABM itself was not so very important, but that it was merely a vehicle to provide the Senate with an opportunity to demonstrate a "get-tough" policy with the Department of Defense and, presumably, the military-industrial complex—whatever that term may encompass.

While all of these issues, or all of these manners of stating the issue before us are important—and deserving of comment and analysis by this body—they do not go to the heart of the matter. What is before us for discussion is the authorization of funds for the Safeguard anti-ballistic-missile plan—a plan proposed by the President and approved by a majority of the full Senate Committee on Armed Services. Therefore, we should concentrate our efforts upon determining the merits and demerits of the Safeguard weapons system—and not get completely entangled in an attempt to correct all of our previous shortcomings in disarmament, legislative independence, and establishment of priorities. Granted, it is important that these issues be discussed in order to place the Safeguard ABM system in the proper context of past, present, and future events. However, we must not lose sight of the subject under discussion—we cannot allow the ABM to become a mere vehicle to be used to raise other issues. To do so, I fear, would open the doors of this Chamber to emotionalism at a time when reason is essential.

As I have said, what is before us is the military procurement bill, a part of which authorizes funds for the Safeguard ABM system. We must decide then, whether to authorize those funds as part of our overall defense plan. Therefore, the issue is this: Will the Safeguard ABM system make a great enough contribution to our national security to justify the expenditure of the \$759.1 million authorized in the bill before us?

Because I am deeply committed to the approval of the Safeguard plan, my answer to this question is "yes"—and I shall share my reasons for favoring approval with Senators, who, in the final analysis, will resolve this issue.

It seems to me that there are two main considerations directly relevant to the issue as I have stated it. I do not mean to suggest that all other commentary is irrelevant. I simply wish to avoid all but the essential points. Those main considerations can be phrased best in the form of simple questions: Are the costs of the Safeguard ABM system acceptable? How

well will the Safeguard system work? I think the answers to these simple questions demonstrate the need for approval of the initial implementation of the Safeguard system.

So many cost figures have been bandied about as authoritative that it is very difficult to separate fact from fictional estimates. I think it is absolutely essential that we remember the exact amount which we are talking about in this bill today. That amount is \$759.1 million. We are not here to accept or reject a \$20 or \$100 billion weapons system as some would have us believe.

Those who claim that the costs of the system will reach the latter amount should remember that not one penny more than \$759.1 million will be spent without further approval of this body. I, for one, will feel no obligation to approve a \$100 billion request for a missile system next year simply because I voted "aye" to spend \$759.1 million for it this year. To Senators who are concerned about cost overruns as I am, I say this: If the next request for the funding of this missile system is so great as to indicate that we are not getting a dollar's worth of national defense for each dollar spent, we can simply refuse to further fund the program.

For the present I would like to present reasons for accepting the initial phase costs of the Safeguard ABM system. The continued research and development, when coupled with minimal deployment, will do much to provide us with accurate estimates of the cost of missile defense. Probably the major reason for the proliferation of cost estimates on the ABM is that no actual construction and deployment of missile defense weaponry has been done. Instead, we have always concentrated on retaliatory missiles because we assumed that the "cost exchange ratio" between defense and offense was in the nature of 100 to 1. This meant that \$1 spent on offensive weaponry would develop equipment sufficient to overcome \$100 worth of defensive missile weaponry. There is reason to believe, however, that the cost exchange ratio is actually much lower. Our own difficulty in developing penetration aids designed to insure that our missiles pierce Russian defenses has shown that penetration is an expensive thing to insure. On the other hand, as we become knowledgeable about defensive weaponry, we are able to reduce the costs of developing it. Consequently, there is reason to believe that the cost exchange ratio may be approaching 1 to 1.

The initial phase of the Safeguard ABM system will greatly increase our ability to understand the cost exchange ratio. After minimal deployment we will have an actual example of defensive missile weaponry to serve as a basis from which to more accurately estimate the costs of defense vis-a-vis offense. If it turns out that the cost exchange ratio is still very high, we can opt for retaliatory weaponry. But, if it is 1 to 1 or less we can concentrate our efforts on defensive weaponry. Bear in mind that we do not have a first-strike mentality; that the only reason for this kind of weaponry is to defer offensive weaponry.

July 11, 1969

The point is this. Without some actual deployment, we will know no more about the cost exchange ratio than we do now. If we do not deploy, we will have abandoned the entire concept of defensive missile systems without ever realistically examining the cost of such weaponry. We will have said, "Because we are not sure that the system has an acceptable cost, we will not spend even a small amount to find out if it is acceptable." We will have made a decision on the basis of ignorance rather than on the basis of knowledge. This, I suggest, is not sound.

Before I leave the question of cost, I would again like to point out that a "yea" vote on the military procurement bill as it stands now would obligate us to spend only \$759.1 million on the Safeguard ABM system. The expenditure of that money will greatly increase our ability to judge whether to proceed with defensive missile weaponry in the future. We will have the opportunity to make that judgment in the next military procurement bill in the next Congress.

EFFECTIVENESS OF THE SAFEGUARD

A great debate has raged over whether the Safeguard ABM System is technically effective. Scientists of every pedigree imaginable have come forward with statements, position papers, and books to show why the Safeguard system will or will not work. I am not a great scientist and can add little to the technical expertise which has been made available to all of us. I barely passed the minimum requirements in physics as a freshman in college.

However, I think it is important to stand back from the battle a moment and view the overall situation. The situation is this. On one side, we have a group of distinguished scientific minds who say that the Safeguard cannot work because it is too easily overpowered by the offense, which has many options for deception. In addition, they believe that Safeguard can never be brought up to and maintained at the peak of perfection required.

On the other side, we have an equally eminent group of scientists who say that the Safeguard system will work well enough to do the job. They argue that protection of missile sites does not require the great degree of freedom from technical breakdowns that a city defense would need to have.

In my opinion, we do not, at this time, have to irrevocably commit ourselves to one side or the other. Refusing to approve deployment of the Safeguard system would be equivalent to accepting the views of the "no" scientists and rejecting those of the "yes" scientists. Approving the Safeguard plan, however, would not amount to an acceptance of the "yes" scientists. It would simply be a decision to proceed to find out who is correct. It appears, then, that we have a choice between a course of action which stops the scientific search and one which continues it. When faced with a decision to close options or keep them open, I suggest that it is militarily sound to retain options.

Finally, I would like to say that I am impressed by the distinction between technical effectiveness and military ef-

fectiveness. The mere existence of the deployed ABM forces the enemy to re-evaluate his military stance. Unless there is "assured destruction capability," an attacker cannot attack a target. The retaliatory risk is too great. Consequently, the mere existence of Safeguard would force a potential enemy to concentrate more missiles on the protected targets. This means that for other targets there will be fewer missiles. Perhaps there will be no missiles for some targets. So far as those targets are concerned, then, the Safeguard system has been militarily effective. They have not been destroyed because they have not been attacked. They have not been attacked because of the Safeguard.

In addition, inability to be sure of "assured destructive capability" might very well deter a potential attacker from becoming an actual one. This, of course, means that the Safeguard system, which will have created this doubt, will have been 100 percent effective.

Mr. President, I have studied this proposal as thoroughly as time has allowed. I know that the question is complex. But I believe that an analysis of the two factors, cost and effectiveness, which directly relate to the issue, dictate the conclusion that the Safeguard ABM plan should be approved.

The cost of the system is acceptable. Let me repeat: we are not being asked to commit ourselves to the expenditure of \$10, \$20, or \$100 billion for a weapons system. If we will simply concentrate on the actual dollar amount requested in this bill, we find that we are talking about \$759.1 million. That is all that is in the bill.

For this money, we get the initial phase of Safeguard. We get a knowledge of the effectiveness of defensive missile systems, and we get the groundwork for actual deployment of the missiles. This alone represents a satisfactory return on our investment. But, Mr. President, we may never know what else we have gotten. It may well be that the Safeguard ABM system will contribute to the prevention of a disastrous nuclear holocaust. It may then have saved the lives of countless American citizens and people around the world. But we will never know this. I will not be able to come into this Chamber and definitively prove that Safeguard contributed to the existence of peace. Neither I nor anyone else can show a war that did not happen.

On the other hand, we may find, a year from now, that missile defense systems do not represent the most effective deterrent to nuclear attack. We may find that we should abandon the ABM. But, let us not do so now. Not now, when there is every bit as much reason to believe that the Safeguard system will work as there is to indicate that it will not work. So, let us proceed. If we err, let us err by acquiring too much knowledge rather than by acting out of ignorance. If we err, let us err by having too much national defense. We certainly owe that much to the citizens of our country and to the people of the free world.

Mr. President, 2 days ago the distinguished Senator from Maine (Mrs. SMITH) delivered an extremely impor-

tant message to the Senate. She expressed her great concern over the disparagement of our men in uniform for what some see as past mistakes. I, too, feel that such disparagement is completely unwarranted. We have a grand tradition in this Nation of civilian control of the military. Our military men wholeheartedly support this tradition. They have done what their civilian leaders have told them to do. They have done what they were told to do with the tools that their civilian leaders have made available to them. And, in some instances, they have done what they were told to do in the specific manner directed by their civilian leaders, although the military mind would have advised otherwise. To assign them the blame when events turn out not as all would desire is manifestly inconsistent and unfair. Our soldiers, sailors, marines, and airmen should be granted, instead, the Nation's praise. After viewing their efforts around the world, after seeing them in combat conditions, I can affirm the fact that they are the finest generation of fighting men this country has ever produced. I am proud of them and their accomplishments.

Mr. President, I am confident that the Senators here today will base their decisions on this authorization bill on a sober and rational evaluation of the facts, as our committee has done. Only in this way can we keep our country strong as we search for solutions to the many problems which face us. I urge the Senate to approve this bill. In my judgment, we cannot afford to do less.

Mr. PEARSON. Mr. President, will the Senator from Texas yield?

Mr. TOWER. I yield.

Mr. PEARSON. Mr. President, I want to commend the Senator from Texas for his most careful and excellent analysis of the position supporting his views. It has been my very great honor for 2 years to sit in the chair next to his as a member of the Armed Services Committee.

Earlier, the Senator from Texas made reference to the fact that if the so-called Cooper-Hart amendment were to be adopted, there may very well not only be a lapse of time but also a loss in the technical and scientific team which we have put together. Am I correct on that point?

Mr. TOWER. That is correct.

Mr. PEARSON. I do not have the opportunity to sit in the hearings as the Senator does, but I recall the excellent presentation made by Under Secretary of Defense Packard before the Republican Senate group, when he made a pretty good point in reference to those people who were opposed to the system on the basis of its cost. He said that in relation to phase I, if we go back merely to research and development, we will spend as much money as we will if we proceed with phase I deployment.

That, as I understand it, is the thrust of the amendment offered by the Senator from Kentucky and the Senator from Michigan. They do provide the full amount.

I also recall—and the Senator may correct my memory if it is faulty—that at the time of our discussion, he indicated

July 11, 1969

S 7943

we would be able to hold together the scientific and technical team to date, without deployment in view; also—if I am correct in my memory—that we could do so in the future without proceeding to deployment.

Does the Senator recall those conversations with Under Secretary of Defense Packard?

Mr. TOWER. I am not sure that I remember what it is the Senator is referring to.

Mr. PEARSON. In the question-and-answer period, I thought he made the statement that even if we continued with research and development, we would be able to maintain our scientific and technical team.

Mr. TOWER. I would say that we could, even though we made no plans for deployment; but I do not recall that.

Mr. MURPHY. Mr. President, will the Senator from Texas yield?

Mr. TOWER. I yield.

Mr. MURPHY. I think that I recall the conversation. I think the word "deployment" may be one that is creating a hangup here, because I think in the discussion his intention was as to construction. Deployment is a word which envisions many spreadings out of this thing, which is not in the present plan. The present appropriation bill calls for construction. Until there is a construction, we do not have the unit. I think he was talking about the figure, as the figure breaks down as to the cost of research and development.

I believe that pure research, without possible development, amounts to about \$400 million. I think the construction asked for in the bill adds less than \$400 million. It comes to about \$380 million. So that the figures which we have been hearing, of \$700-odd million, includes research, development, and construction as envisioned and requested by the President under the present bill. I think that is the thrust of what the Senator said.

Mr. PEARSON. I am grateful to the Senator from California. I merely wanted to clarify the point that the full amount is made available under this amendment for research and development and make reference to what I understood the Under Secretary of Defense to say in relation to maintaining this very excellent scientific and technical team.

On another point, I thought the Senator from Texas made reference to the fact that the ABM, as authorized under this proposal, was essential as a bargaining point for the President and for those who represent this Nation.

Mr. TOWER. I believe it is, and the President thinks it is.

Mr. PEARSON. I have some trouble in accepting that belief. Let me indicate to the Senator why I feel that way. We have a lot of figures offered here in the Senate, but with reference to the ABM, the Minuteman II, and the Titan, is it agreed that we can use the figure 1,054?

Mr. TOWER. It is 1,054.

Mr. PEARSON. The Senator said we had 1,078 ICBM's.

Mr. TOWER. The figure is 1,078.

Mr. PEARSON. So if we add our ICBM's and the Polaris together, and add their ICBM's and their Polaris-type

missiles together, we really come, in round figures, to about 1,700 for the United States to 1,100 for the Soviet Union. Is that correct?

Mr. TOWER. The Soviet Union has missiles that can be launched from ships. I am not sure what the figures are. They do not have submersible missiles. They do not have any Polaris- or Poseidon-type missiles.

Mr. PEARSON. What is the Senator's recollection of their ICBM's?

Mr. TOWER. I am sorry; I cannot give that figure. I do not have it now.

Mr. PEARSON. In relation to bombers, the estimate is that we have about 650 to their 150. Is that correct?

Mr. TOWER. That is correct. To be sure, they have some other bombers, but those bombers do not have a long range.

Mr. PEARSON. I am talking about strategic bombers.

Mr. TOWER. About 150. There are others they could use in Europe.

Mr. PEARSON. I understand; but we are talking about strategic forces.

Mr. TOWER. I would say they would be strategic forces for use in Europe.

Mr. PEARSON. I am talking about strategic forces as they relate to an ABM defense. There are many measurements for strategic force, but when we move to the ICBM's, the Polaris, the intercontinental bombers, and the number of warheads on each side, it is my understanding we have about 4,300 warheads on our side—

Mr. TOWER. I agree with all this. I see the Senator's point. We are currently superior to the Soviet Union in terms of strategic power. I think we are superior in most areas. However, I think in some areas they have superiority to us. But, overall, we do currently possess superiority.

Mr. PEARSON. Now I come to my point. I think terms like "superiority" and "parity" in relation to thermonuclear warfare are useless terms. I think the President's use of the term "sufficiency" is the correct one. But if we are superior in numbers of ICBM's, superior in numbers of bombers, superior in numbers of warheads—

Mr. TOWER. Superior overall.

Mr. PEARSON. Then I fail to see why we have to have an ABM as a bargaining point to go to the bargaining table, when we are superior in all these other fields.

Mr. TOWER. We are superior this year. At the present rate of military development in this country and the Soviet Union, we will be in a position of inferiority by the mid-1970's.

Mr. PEARSON. The Senator assumes, then—

Mr. TOWER. I assume that they are going to keep on doing what they are doing, and I think it is dangerous to proceed on any other assumption.

Mr. PEARSON. Will the Senator also assume that, having reached the level of 1,000 ICBM's—and that was the figure that was determined almost one decade ago—we are going to maintain that level in strategic weapons?

Mr. TOWER. Our present situation is good. The Russian's R. & D. is much better than ours. From the standpoint of submarine technology, they are very

good. As a matter of fact, they are building at a greater rate than we are, and we cannot hope to think that one day they will not have Poseidon or Polaris type submarines. As far as air superiority is concerned, they are superior to us now.

Mr. PEARSON. In swept-wing aircraft and in numbers of submarines?

Mr. TOWER. They are superior in numbers of submarines. I do not think they are superior in quality right now, but they may be some day. The Senator from Maine (Mrs. SMITH) has some interest in that subject. I think she can enlighten the Senator at much length and has far more expertise in that subject than I have. But the fact is that we have lagged in development or in the level of research and development. We have not developed a superior research and development program. We have stabilized it, and the Russians keep going up and up. They keep devoting more and more of their resources to development. We cannot proceed on the assumption that they are going to have a sudden change of heart and do differently than they are now proceeding to do.

Mr. ERVIN. Mr. President, will the Senator yield?

Mr. TOWER. I yield to the Senator from North Carolina.

Mr. ERVIN. Is it not a fact that the United States has not been building big bombers capable of carrying a nuclear load to Russia during the last few years?

Mr. TOWER. We have not. The B-52 is an old weapon.

Mr. ERVIN. Is it not a fact that the Russians have in their bomber the finest bomber of any nation on the face of the earth?

Mr. TOWER. I do not know the relative performance figures. It does seem to be very good. They do not have it in the numbers we have, but they have a good one, and it is much newer than our B-52.

Mr. ERVIN. According to information by General Twining, he says it is the most dependable bomber in existence.

Has the Senator read a copy of the letter which Admiral Rickover wrote to the Senator from Rhode Island (Mr. PASTORE)?

Mr. TOWER. I do not recall it.

Mr. ERVIN. It was inserted in the CONGRESSIONAL RECORD. Admiral Rickover says that, with the exception of the Polaris submarine, Russia has a vast superiority in submarines over the United States. He also states in that letter that the Russians now have the capability of building Polaris submarines at such a rate that at present rates they will equal or overtake us in Polaris submarines by 1974.

Mr. TOWER. I was aware of that information.

Mr. PEARSON. Mr. President, will the Senator yield?

Mr. TOWER. I yield to the Senator from Kansas.

Mr. PEARSON. Mr. President, I am grateful for the contribution made by the distinguished Senator from North Carolina, because he brings me to my next concern, and that is in relation to the cost of the ABM. I understood that the ABM, as first announced, was a system that would cost about \$6.5 billion.

July 11, 1969

Then research and development were added to it. Then the cost of warheads was added. Then the cost of possible sites in Alaska and in the Hawaiian Islands was added. So it is now, as I understand it, about a \$10.4 billion system.

I make reference to the cost, not because I have so much concern with it; I have a concern, but it is not a commanding concern that this money should be pulled out and put into so many social welfare programs that many of us would like to promote. But the point was made, and made very well, that we are behind in submarines, we are behind in adequate manned bomber aircraft, and in conventional systems that we usually associate with the kind of warfare which is going to be essential if we are not going to be children of the concept of massive retaliation, which was so massive that it was useless.

We have great expenditures to make in relation to our naval fleet, in which some authorities say we are 20 years behind the Soviet Union. I did not see the letter written by Admiral Rickover, though I have the highest regard for him. For example, a Navy fighter to come after the F-111, with which we have not had very good luck—

Mr. TOWER. Mr. President, if the Senator will yield—

Mr. PEARSON. One can go on down the list. There are also other limitations.

Mr. TOWER. Those are in the bill. We have the F-15 and the F-14, the Air Force and Navy patrol planes. They are in the bill. If the Senator wishes to offer an amendment providing for additional submarines, additional shipbuilding, and additional airplanes, I will support him, provided he supports me on the ABM.

Mr. PEARSON. I do not think we can make that deal, Mr. President. But if the Senator will indulge me, I think the point I was trying to make is valid. Perhaps there are within this procurement bill adequate funds to build up our conventional forces. I accept the judgment of the committee on that. I simply wish to make the point and express the concern that as the cost noses upward, as the \$6.5 billion becomes \$10.3 billion in the space of 2 months, in the years ahead, when the cost of this program jumps more drastically, we may very well feel the pinch on some very necessary, conventional warfare items, a pinch similar to that felt in connection with the Vietnam war.

Mr. TOWER. Mr. President, I shall stand warmly at my friend's side any time the question comes up about development of weaponry. I think we need a full spectrum of tactical weapons, everything from improved rifles to the most sophisticated nuclear weapons. I believe, too, in a full spectrum of deterrents. You can deter nuclear war if you have nuclear weaponry to do it with.

I think basically the argument in behalf of this amendment is that we should not make a political decision to deploy the ABM now, because apparently it might rupture the good and wonderful relations we have with the Soviet Union, and the immediate prospect for negotiations for disarmament. They say we are basing our arguments on assumptions;

but this is the most dangerous assumption I can think of to base an argument upon.

Mr. ERVIN. Mr. President, will the Senator yield, so that I may lay down a premise and then ask a question?

Mr. TOWER. I am happy to yield.

Mr. ERVIN. I saw former Secretary of State Dean Acheson testifying before what I call the Proxmire committee with respect to the cost of national defense, and he said, in reference to the cost of national defense, that we could overspend for national defense, or we could make the determination to underspend for national defense; and he said the difference between the mistake one way or the other would be this: If we overspend for national defense, and deploy some weapons the future shows are not needed, all we have done is lost some money, but if we underspend for national defense, we might run the risk of losing everything, including our liberty. Does not the Senator think that was a sound observation?

Mr. TOWER. I certainly concur with that statement; and I have always said we cannot have a great society, or an affluent society, or a free society, unless we first have a secure society. That is all we are trying to achieve here.

I would love to see the day when we can beat our swords into plowshares and our spears into pruning hooks. I detest war as much as anyone. But while there are nations in this world that choose war as an instrument of national policy, nations with aggressive designs on the rest of the world, we cannot afford to be ill prepared.

Mr. ERVIN. I should like to ask the Senator if it is not a teaching of Marxism, as adapted for Russia by Lenin, that there is an irreconcilable conflict between a nation with a free enterprise system of government, such as ours, and a nation with a Communist system of government, such as Russia; and if it has not been stated on many occasions by leaders and officials of the Communists that there will be a fight to the finish, either economically, politically, or militarily, between these two irreconcilable systems, until communism triumphs.

Mr. TOWER. This, of course, is part of the Marxian historical analogy, that ultimately this will come about, that ultimately we will have a Communist world; and, indeed, for communism to succeed at all, the whole world has to be Communist. Then, when that happy day occurs—happy in Marxian eyes, of course—all the trappings of government will be done away with, and we will live in an anarcho-syndicalist society. I do not believe the Russians believe that is ever going to happen, but the fact of the matter is that they do have imperialistic designs on the rest of the world, and that is a certainty.

Mr. ERVIN. They have a combination of Russian imperialism and communism as modified to adapt it to Russia by such Communists as Lenin.

Mr. TOWER. Right.

Mr. ERVIN. Does the Senator from Texas understand, as does the Senator from North Carolina, that virtually ever since the end of the Second World War,

the United States has been attempting to negotiate at lower than summit levels with the Russians to obtain an enforceable arms limitation agreement?

Mr. TOWER. We have certainly tried.

Mr. ERVIN. And does the Senator think that after all these years, from the end of the Second World War down to the present date, that we now have any additional reason for thinking that Russia is any more susceptible to being persuaded to enter into any such agreement than it was in years past?

Mr. TOWER. They do not seem to be any more susceptible, though some of my friends seem to think that if we cut the ABM out of this bill, the Russians will immediately become so friendly that they will want to sit down and negotiate with us at once.

Mr. ERVIN. Does the Senator from Texas recall, during the Eisenhower administration, that there was an agreement, not embodied in a treaty, between Russia and the United States, for a moratorium on testing nuclear weapons; that the United States kept that agreement and did not make any preparations to test nuclear weapons, and then Russia put an end to the agreement, and immediately thereafter exploded the biggest nuclear weapon ever exploded in the history of the world up to that time?

Mr. TOWER. That is correct.

Mr. ERVIN. Does the Senator feel that we can have any confidence in the benevolence of the politburo, as long as Russia maintains imprisoned behind the Iron Curtain the people of Poland, the people of Czechoslovakia, the people of East Germany, the people of Rumania, and the people of Bulgaria?

Mr. TOWER. I certainly am less than sanguine about them. I trust the Senator was here the other day, and heard the Senator from Washington (Mr. Jackson) present his very fine paper, just going through the traits and personalities of the present Soviet hierarchy. They are Stalinist to the core.

Mr. ERVIN. Will the Senator from Texas accept my assurance that I have just finished reading a book by a French journalist who was for many years in Moscow, whose name was Michel Tatu, in which he states that the only reason Khrushchev took the missiles out of Cuba was because the United States possessed overwhelming superiority in intercontinental ballistic missiles?

Mr. TOWER. Yes, I accept the Senator's assurance.

Mr. ERVIN. I ask the Senator further if he will accept the assurance of the Senator from North Carolina that the Senator from North Carolina has just read a book dealing with Russia by a man with a Russian name, in which he says that the men who control Russia at this time are so secure in possession of the power of rule over that nation that there is no reasonable hope that Russia's attitude will be susceptible of being changed at any time in the foreseeable future, by either evolution or revolution within Russia.

Mr. TOWER. I do accept that assurance, and I concur.

Mr. ERVIN. I thank the Senator.

Mr. STENNIS. Mr. President, will the Senator yield to me?

July 11, 1969

Mr. TOWER. I yield to the Senator from Mississippi.

Mr. STENNIS. Mr. President, I very definitely thank the Senator. I know the Senator has made an outstanding contribution to this subject, which is quite involved.

The Senator made an outstanding contribution. I commend highly the reading of his speech, no matter which side of the subject a Senator may be.

It is a difficult matter, but the Senator has handled it splendidly, as he always does in a matter that he sets himself to give special attention to.

I shall wish later to make a few brief remarks about the provision and use of this money and how it might be applied to the amendment of the Senator from Kentucky, who has been called from the floor temporarily. I would rather bring the matter up when the Senator from Kentucky is present. However, for the time being, I refer Senators to page 25 of the committee report, where the money part of the ABM is set forth in great particularity. The supporting information came to the committee from the Department of the Army. And they are bound by it in a double way, because it is what they were justifying it on and what we included it in the bill on.

We have in round figures \$400 million particularly for research and development. However, referring now to page 25, the committal for the \$345.5 million is for one missile site radar at Grand Forks; one missile site radar data processor at Grand Forks; training equipment; advance procurement for one other perimeter acquisition radar and one other missile site radar at Malmstrom; and the relatively small sum of \$600,000 for leadtime missile parts.

For the actual hardware, the actual missile, only \$600,000 is included in the bill, and that is for a long leadtime item for the guidance system. That requires an unusual time.

I refer this now to the Senate for decision on the money. I will make some remarks later.

Again, I commend the distinguished Senator from Texas for a fine presentation.

Mrs. SMITH. Mr. President, will the Senator yield?

Mr. TOWER. I yield.

Mrs. SMITH. Mr. President, first I take this opportunity to thank the distinguished Senator from Texas for his very kind words to me as a member of the Armed Services Committee. The Senator has made a great contribution during the hearings in helping the committee bring to the Senate what I consider to be a good bill.

Mr. President, the Soviet Navy has in late years assumed new responsibilities far beyond its traditional ones of defending the seaward approaches to the U.S.S.R. and supporting the land forces. It has made great strides in developing forces to carry out these new missions. The impact of new roles and growing capabilities is demonstrated by the striking increase in naval operations beyond home waters and by the current expansion of the Russian submarine forces.

Past Soviet efforts to develop effective long-range seapower were deterred or deferred by economic conditions, purges, leadership changes, war and technological lag. In recent years, however, Soviet naval expansion has been relatively unencumbered by such problems. Today's Soviet naval programs bear witness to the capability and determination to create a significant sea-launched ballistic missile force and a formidable fleet to counter the U.S. Navy in peace and war anywhere in the world. Beyond this, the Soviets are building a modern navy with which to project a naval presence overseas in support of Soviet political objectives.

The Soviet submarine force consists of some 375 units, of which 65 are nuclear powered. The entire force, unlike that of the United States, is of post-World War II construction. It poses a triple-dimension threat, consisting of a rapidly expanding force of ballistic missile submarines, numerous torpedo attack boats, and significant numbers of submarines uniquely equipped with surface-to-surface cruise missiles. In the last 2 years a new class of ballistic missile submarine and several classes of attack submarines have become operational. The former is roughly comparable to our Polaris submarines, the latter represent improved general purpose designs.

Today, the Soviet surface navy consists of some 195 major combatants including a helicopter ship, nine guided missile cruisers, and 30 guided missile destroyers. The great majority of these ships are less than 15 years old.

Soviet warships are of excellent design and well armed. The highly publicized helicopter ship *Moskva* carries an imposing array of surface-to-air missiles, antisubmarine weapons, and new and sophisticated electronics, in addition to her ASW helicopters. A sister ship to the *Moskva*, the *Leningrad*, is expected to be operational soon. The new guided missile cruisers of the *Kresta* class carry an equally impressive combination of surface-to-surface and surface-to-air missiles as well as guns and antisubmarine weapons. A third example of advancing technology is the *Kashin*-class frigate. It boasts strong air defense and antisubmarine armament, and is the largest type of warship in the world powered solely by gas turbines, giving it a maximum speed of 35 knots.

The Soviet Navy is operating out of its home waters for longer periods, in greater numbers, and at greater distance than ever before. It is showing the flag in the Mediterranean, off both coasts of Africa, and elsewhere along the entire Indian Ocean littoral.

These developments are making the Soviet Navy a force of growing importance in our strategic calculations. Apart from the challenge it would pose in wartime, its growing capability to project Soviet power into distant areas is likely, if left uncountered, to have a profound effect on political developments in the emerging nations and uncommitted world.

Mr. President, during the hearings

there was an exchange of letters between the Senator from Washington (Mr. JACKSON) and Admiral Rickover which helped to a better understanding of what happened with respect to the nuclear submarines.

I ask unanimous consent that these two letters be printed in the RECORD at this point.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

U.S. SENATE,
COMMITTEE ON ARMED SERVICES,
Washington, D.C., June 5, 1969.

Vice Admiral H. G. RICKOVER,
Naval Ships Command, Department of the
Navy, Washington, D.C.

DEAR ADMIRAL RICKOVER: I have read your April 25, 1969 letter to Senator Pastore with great interest. As usual, you have reduced a complicated issue to a few basic questions.

There is one subject vital to this issue in which I know the American people will respect your judgment—nuclear submarines, and in particular, our Polaris submarines.

I would appreciate your assessment of the effectiveness of our Polaris forces after 1972 in light of the remarkable advances recently made by the Soviet Union in their submarine and anti-submarine capability. I am particularly interested in your views concerning the ability of our deployed Polaris submarines to survive a planned attack by Soviet anti-submarine forces in the mid-70's time frame.

I would hope your response can be written in such a way that the American people can have the benefit of your views.

Sincerely yours,
HENRY M. JACKSON,
U.S. Senator.

U.S. ATOMIC ENERGY COMMISSION,
Washington, D.C., June 12, 1969.

HON. HENRY M. JACKSON,
U.S. Senate
Washington, D.C.

DEAR SENATOR JACKSON: This is in response to your letter of June 5, 1969, asking for my views concerning the ability of our Polaris submarines to survive a planned attack by Soviet antisubmarine forces in the mid-1970's time frame.

Let me first say that based on the best evidence available, I believe that today our Polaris submarines are safe from a massive, neutralizing blow. Further, I am not aware of any valid information indicating that the Soviets possess a means to track and destroy our Polaris submarines while they are on station. However, there is no assurance that this situation will prevail for long.

There is, in fact, evidence that the Soviets are actively engaged in a determined effort to acquire the capability to neutralize or destroy our Polaris force. They have developed and they continue to develop faster and quieter submarines. They are experimenting in all phases of submarine and anti-submarine warfare—we are not. In fact, during the past year alone they have developed several new types of nuclear submarines; we have developed only one new type in ten years. It is clear that a major objective of their naval programs is to invalidate our own Polaris system.

Given the recent Soviet progress in undersea warfare and the sheer magnitude of their nuclear submarine program, the conclusion is inevitable that, unless we are willing to match their effort, they will surpass us in this field during the 1970's.

Of course, in the present era of rapid technological change accurate prediction of future military developments is difficult, if not impossible even for such a relatively short period as five to ten years. It is equally difficult to predict the outcome of future military

July 11, 1969

engagements, since these are dependent on successful exploitation of the latest technological advancements. All we can do is learn what we can of the progress being made by other nations in the areas related to submarine and antisubmarine warfare and then to compare this with our own progress.

The Soviets now have by far the largest submarine force in the world—about 375 submarines, all built since World War II. We have 143, including 61 diesel submarines most of which are of World War II vintage. Thus, they have a net advantage of about 230 submarines. It is estimated that by the end of 1970 they will have a numerical lead even in nuclear submarines.

In the single year 1968, the Soviets put to sea a new type ballistic missile nuclear-powered submarine as well as several new types of nuclear attack submarines—a feat far exceeding anything we have ever done. It is estimated that by 1974 they will have added about 70 nuclear-powered submarines to their fleet, whereas we will add but 26—thus further increasing their numerical superiority. As for ballistic missile submarines, the Soviets have undertaken a vigorous building program to equal or surpass our Polaris fleet of 41. At least seven of their new Polaris-type submarines have been completed, and they now have the capability of turning out one a month. We have no Polaris submarines under construction or planned. We must assume that by the 1973-1974 time period they will be up to us.

To achieve this, the Soviets have greatly expanded and modernized their submarine building and repair facilities. Just one of their numerous submarine building yards has several times the area and facilities of all U.S. submarine yards combined. They use modern assembly line techniques under covered ways, permitting large-scale production, regardless of weather conditions.

The progress made by the Soviets over the past few years in nuclear submarine design, construction, and operation could only have been accomplished through the efforts of a large group of highly competent technical personnel. We must assume the talents and efforts of this group will continue to provide the Soviets with additional advances in nuclear submarines.

The superiority of a given weapon system is never static. The history of warfare is an ever-changing contest between weapon and counterweapon. Whenever man invents a new weapon, two things happen immediately. First, his potential adversaries start to develop a counterweapon. Second, improvements are made in the original weapon to make it even more effective. This was the case with the bow and arrow, gunpowder, battleships, airplanes, rockets, etc.

The battleship is a good example. In 1907 when the British *Dreadnought*, the world's first modern battleship put to sea it was hailed as "Invincible." It had armor plate thick enough to stop any naval shell then in existence. Soon afterwards other countries built their own battleships with large guns and heavy armor. The British then developed the destroyer to protect the battleship by firing torpedoes against opposing battleships. The other side, of course, soon had its own destroyers. The battleship then was given the capability of carrying airplanes to increase its range of visibility; this added the new element of air power to the battleship.

Although it became evident during World War I to farsighted officers like General Billy Mitchell that aircraft constituted a new and formidable weapon against the battleship, it nevertheless took a long time for those who had faith in the battleship to accept this and prepare against the danger. Even as in 1907 it was impossible to predict how long the battleship would remain "Invincible," so is it today impossible to predict how long the Polaris submarine will remain invulnerable.

As in the case of the battleship, the competition between the submarine and its foes has seasawed since the former proved its worth in World War I. As advances have been made in submarine design since World War I, progress has also been made in developing antisubmarine warfare.

Submarines have the protection of the ocean depths. When submerged they cannot be seen by the human eye or by radar. The only way we know at present to detect a submerged submarine is by the sound it makes. For years, groups of scientists and engineers have tried to make submarines quieter, while other groups have worked just as hard to develop more sensitive listening devices. This technological battle continues.

With the advent of nuclear propulsion, the submarine has been able to operate submerged at high speeds for long periods of time; this gave the nuclear submarine the edge. However, great strides are being made in the mobility of antisubmarine forces and in their capability to detect and destroy submarines. In fact, the nuclear attack submarine itself is now being used as an anti-submarine weapon.

We do not know, of course, how these developments will work under actual war conditions; nor do we know how effective our Polaris submarines would be in an encounter with an enemy antisubmarine force—be it air, surface, or subsurface—or how effective our own antisubmarine forces would be against the latest Soviet nuclear submarines.

The answer to your question concerning the survivability of our Polaris submarines in the mid-1970's depends on whether we can regain the advantage we had in the past. Will our progress in undersea warfare during the 1970's match that of the Soviet Union? Can we assume that our Polaris system will be the first weapon in history to remain invulnerable? The developments I have cited should caution us against making such an assumption.

As I pointed out in my April 25, 1969, letter to Senator Pastore (Page S4226 of the Congressional Record, April 29, 1969), the Soviet Union is embarked on a program which reveals a singular awareness of the importance of sea power and an unmistakable resolve to become the most powerful maritime force in the world. As a result of the Cuban missile crisis, the Soviet leadership resolved never again to be placed in a position where they would have to negotiate from weakness—in that case lack of strategic and naval superiority. They have publicly avowed their goal to become preeminent in sea power, and all evidence indicates they are proceeding with competent speed. This is especially true in their undersea warfare forces. They have openly stated that these are to be the major arm of their fleet.

To recapitulate: I believe that while today our Polaris fleet is safe from a planned attack by the Soviets, there is sufficient evidence concerning their progress in this field to cause doubt by the mid-1970's. We must increase our own efforts if we expect our Polaris fleet to remain the deterrent it now is.

Respectfully,

H. G. RICKOVER.

Mrs. SMITH. Mr. President, I also ask unanimous consent to have printed at this point in the RECORD a letter from Admiral Rickover to Senator PASTORE under date of April 25, 1969.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

APRIL 25, 1969.

DEAR SENATOR PASTORE: In your letter of April 15th, you asked me to give an estimate and an opinion as to where we are and where we are going and what needs to be done in a military way in these times of turmoil and

peril. There is, as you point out, a division of opinion among the American people regarding the necessity of reinforcing our military strength.

The first point I would like to make is that in judging between conflicting views on this matter, the deciding factor must be their relevance to the world as it is, not as we would wish it to be. Granted the hideousness of modern war, can we deduce therefrom that mankind is now wise enough to forgo recourse to arms? A look at history should put us on guard against those who claim that humanity has now reached a state where the possibility of armed aggression can be safely disregarded in formulating national policy.

I am reminded of the intense opposition to the Navy's 15-cruiser bill in 1929. It was argued by many that with the signing of the Kellogg Peace Pact the year before, it was no longer necessary to build new warships. And this in light of the lessons of World War I which erupted despite the various Hague Peace Treaties! These ships were of inestimable value in helping us win World War II. The war itself was prolonged because Congress—heeding the "merchants of death" argument—in 1939 prohibited shipment of war materials to Britain and France.

Then, too, weight must be given to the credentials of those propounding opposite views. Are they public servants charged with the awesome responsibility to secure our country against foreign conquest, or are they private individuals not accountable for the consequences of their opinions, who feel free to express their personal abhorrence of war and to agitate for a reduction of the financial burden military preparedness imposes on the taxpayer? Would the majority of the electorate accept their arguments that given our unmet domestic needs, we cannot afford an effective defense position vis-a-vis our potential adversaries? Or that war is so horrible that it is better to suffer defeat than to fight?

As for the high cost of preparedness, it is in fact no greater proportional to total U.S. output than 10 years ago—8.8% of total U.S. goods and services. Omitting the costs of the Vietnam War and allowing for inflation, our armed forces have less buying power today than a decade ago. In the Soviet Union, on the other hand—according to the Annual Report of the Congressional Subcommittee on Foreign Economic Policy issued last June—resources have been diverted from the farm sector to defense, where outlays rose dramatically in 1966-67, after remaining static since 1962. The Report talks about their new preoccupation with national security. And you must bear in mind that actual war costs absorb but a small portion of their expenditures while we are spending some two and a half billion dollars a month in Vietnam.

If history teaches anything it is surely that weakness invites attack; that it takes but one aggressor to plunge the world into war against the wishes of dozens of peace-loving nations if the former is militarily strong and the latter are not. Yet there are those who deprecate the need to maintain military supremacy or at least parity with the communist empires, on the grounds that other nations have accepted a decline from first to second or third rank and that we ourselves for most of our history were militarily a second-rate power yet secure enough within our borders. They forget that we then profited from the *Pax Britannica*, even as the former great powers of Europe who have lost their defense capability enjoy political freedom today only because we are strong enough to defend them and ready to do so. What it means to be weak and without American protection should be evident to all as we observe the tragic drama of Czechoslovakia "negotiating" with Russia the continuing subjugation of her people.

As a lawyer, you are familiar with Blackstone's statement that security of the person is the first, and liberty of the individual the second "absolute right inherent in every Englishman." Just so, the first right of every American is to be protected against foreign attack, and the first duty of government is to keep our nation alive. Given the world situation, this calls for maintenance of a defense capability which is adequate to discourage potential aggressors. Said President Nixon, in discussing the Cuban missile crisis, "It is essential to avoid putting an American President, either this President or the next President, in the position where the United States would be second rather than first or at least equal to any potential enemy. . . . I do not want to see an American President in the future, in the event of any crisis, have his diplomatic credibility be so impaired because the United States was in a second-class or inferior position. We saw what it meant to the Soviets when they were second. I don't want that position to be the United States' in the event of a future diplomatic crisis."

There can surely be no doubt that the overwhelming majority of the American people are opposed to relinquishment of our deterrent capability, recognizing full well that there will then be no one left to prevent the takeover by communist power. Whether one takes the optimistic view that a permanent East-West detente can be negotiated, or the pessimistic view that ultimately we shall have to fight for our liberties, this nation has no future if it allows itself to be out-matched militarily.

To turn now to specific matters currently in dispute. There is the ABM system which is under heavy fire on grounds that it (a) will escalate the arms race and (b) will not work. It should be stressed that the Soviets have had their own version of the ABM to several years without inducing us to expand our military power. Just as the Soviet ABM version has not added to the Soviet threat, so our own ABM would not add to ours. The Russians have been singularly silent in this respect; the outcry has come mostly from those in this country who habitually apply a double standard when adjudging military developments in the U.S. and the U.S.S.R. One must ask how can our defensive capability be considered provocative, while theirs is not? Is there not something deeply disturbing when one observes scientists, formerly holding responsible positions in government, advocate policies directly contrary to those they supported when in office? It must not be forgotten that many of our most prestigious scientists were bitterly opposed to development of the H-bomb. Where would we be today had not the Congressional Joint Committee on Atomic Energy and President Truman—who had the responsibility for the safety of the U.S.—disregarded their advice?

As for the assertion that the ABM cannot be made to work, I must disagree. If there is one lesson I have learned in the many years I have devoted to the development of nuclear propulsion plants, it is that, given the soundness of a theoretical concept, it can, with drive and imaginative engineering be made to work.

Contrariwise, for a theoretical concept to be translated into reality, it must be worked on Research alone—no matter how prolonged—will not do it. The very act of developing the concept through detailed engineering work produces improvements in the original concept—improvements which would have been neither obvious nor possible without such actual engineering work.

The Soviets are just as adept in research and development as we are. They have amply proved this by their progress in space, in missiles, in aviation, in military equipment, in nuclear submarines. They know full well from their own experience that with research alone—without development engineering—

our ABM system or any other system would not be meaningful and could be discounted. For this reason we must guard against those claiming that we can limit ourselves to research—that research alone will suffice.

You also ask me to comment on what needs to be done in these times of turmoil and peril. As I am more familiar with the threat posed by the Soviets to our naval power, I would like to confine myself to this area, and specifically to submarines. But what I say here is valid for our land, sea, and air power as well.

The Soviet Union is embarked on a program which reveals a singular awareness of the importance of sea power and an unmistakable resolve to become the most powerful maritime force in the world. They demonstrate a thorough understanding of the basic elements of sea power: knowledge of the seas, a strong modern merchant marine, and a powerful new Navy. They are surging forward with a naval and maritime program that is a technological marvel.

At the end of World War II, the Soviet Union had a fleet of 200 diesel-powered submarines. They then embarked on a massive building program, producing over 550 new submarines through 1968, at least 65 of which are nuclear-powered. During the same period, the United States built 99 submarines, 82 of them nuclear-powered. The Soviets have scrapped or given away all their World War II submarines as well as some built since. They now have a new submarine force of about 375; we have 143, which includes 61 diesel submarines most of which are of World War II vintage. Thus the Soviets have a net advantage of about 230 submarines. It is estimated that by the end of 1970 they will have a numerical lead in nuclear submarines.

To achieve this the Soviets greatly expanded and modernized their submarine building facilities. Just one of their numerous submarine building yards has several times the area and facilities of all U.S. submarine yards. They use modern assembly-line techniques under covered ways, permitting large-scale production regardless of weather conditions.

In the single year 1968, the Soviets put to sea a new type ballistic missile submarine as well as several new types of nuclear attack submarines—a feat far exceeding anything we have ever done. In looking to the future, it is estimated that by 1974 they will add about 70 nuclear-powered submarines to their fleet, whereas we will add but 26—further increasing their numerical superiority. In the case of the ballistic missile submarine the Soviets have undertaken a vigorous building program to surpass our Polaris fleet of 41. They have completed seven of the new Polaris-type submarines, and have the capability to turn out one a month. We have no Polaris submarines under construction or planned. We must assume that by the 1973-74 time period they will be up to us.

Numerical superiority, however, does not tell the whole story. Weapon systems, speed, depth, detection devices, quietness of operation, and crew performance all make a significant contribution to the effectiveness of a submarine force. From what we have been able to learn during the past year, the Soviets have attained equality in a number of these characteristics and a superiority in some.

In order to achieve the results so far attained in all areas of modern technology the Soviets had to develop their most important resource—technical and scientific personnel. The Soviet educational program enjoys highest national priority. The statistics on the total numbers of Soviet degree graduates are extremely impressive. The U.S. National Science Foundation data indicates that in 1966 alone, 168,000 engineers were graduated; the U.S., on the other hand, produced but 36,000. With specific application to the Navy, the

Leningrad Shipbuilding Institute, just one naval institute of several, had over 7,000 students in 1966 studying naval architecture and marine engineering. I doubt we had over 400 enrolled in these subjects in all U.S. colleges.

While we cannot specifically count the number of Soviet scientists and engineers devoted to naval work, it is apparent that they have created a broad technological base. They have committed extensive resources to support development of their naval forces. The steady build-up of the Soviet submarine Navy from an ineffective coastal defense force at the end of World War II to the world's largest undersea navy today deserves admiration; also it should deeply worry every American. By the end of this year we face the prospect of losing the superiority in nuclear submarines we have held for many years. The threat posed by their submarine force—with their new ballistic and cruise missile launchers and new attack types, is formidable. If more sophisticated types are added in the near future, as is likely considering their large number of designers and their extensive facilities, the threat will rapidly increase.

The Soviets have frequently announced their intent to be the pre-eminent world power. Why do we not believe them? Hitler in Mein Kampf plainly announced his intent to dominate the world. We did not believe him either—until it was nearly too late. Admiral Gorshkov, Commander in Chief of the Soviet Navy, said recently: "The flag of the Soviet Navy now flies proudly over the oceans of the world. Sooner or later, the U.S. will have to understand that it no longer has mastery of the seas." And just a few days ago the Russians announced a projected 50% increase in the size of their merchant fleet. These facts should be weighed when assessing the judgment of those who argue for a reduction of American military power while the Soviet military power is rapidly expanding.

The bearer of bad news is always punished. In ancient times, he might be put to death. Today he becomes "controversial" and unpopular. But if there is one subject on which the American people must know the truth, however unpalatable, it is our military position vis-a-vis the Soviets. I believe no one can better inform them than members of the Congress—who have such close ties to their constituents.

I suggest that by keeping secret our knowledge of Soviet strength at this time we may lose more than by confiding the truth of the danger we face to the American people.

Respectfully,

H. G. RICKOVER.

Mrs. SMITH. Mr. President, whether one likes Admiral Rickover or not, in his assessment of our Navy during the years, he has never been found wrong.

Mr. TOWER. There is some information that has been prepared by the staff of the Armed Services Committee relevant to the deployment sites. I think it should go into the RECORD at this point.

Two sites do provide a more realistic test bed than we plan to provide at Kwajalein. Two major test objectives can be accomplished.

First, we can test the Phase 1 complex under realistic conditions of military operators and 24-hour per day operation. This will provide experience with the problems of installation and early operation that cannot be obtained in a research environment.

Second, we will be able to check the operation of a two-site, four-radar network with its inter-computer communications and its command and control ties to higher headquarters. We can verify proper operation of such important system features as control of PAR tracking load (one missile, or satel-

lite, will usually be seen by more than one PAR), the ability of one PAR to look behind a simulated black-out region to assist an adjacent PAR, and the transfer of targets from a PAR at one site to an MSR at another site.

Phase 1 operation will provide invaluable experience and knowledge.

Mr. President, I think the arguments against the amendment offered by the Senator from Kentucky are overwhelming. As I see it, the only real argument is that we should delay a political decision to deploy. But this is not solely a political decision; it is a military decision, as well. It is said that we should delay in the hope that to do so might produce the right kind of climate in which we could sit down and have successful disarmament negotiations with the Soviets; in the hope that perhaps their attitude has changed.

Again, I think this is a dangerous assumption on which to base an argument. We have been accused of basing our argument on assumption—the assumption that the Soviets will develop and deploy an SS-9; that they are expanding their ABM system. But we assume these things on the basis of valid experience and the continuing intensification of technology, both military and strategic, by the Soviet Union. Therefore, I think they are on much more solid ground.

Mr. JAVITS. Mr. President, before the Senator yields the floor, will he yield to me?

Mr. TOWER. I yield to the Senator from New York.

Mr. JAVITS. I heard with great interest—to interrupt him—the Senator's statement about "unilateral disarmament" and good faith, or at least some moral argument concerning the Russians. Does the Senator think that the result of any negotiations is necessarily limited to what the United States and the Russian negotiators may come in with, once they start with prepared briefs? Does he feel that that is what we have to be limited to? Or does the Senator feel that it may very well be possible to negotiate either much broader or perhaps much more limited agreements, depending on the practical situation in the world and how the negotiations develop?

May I give the Senator this example? Suppose we really had a completely effective ABM that could knock out as many Russian missiles as they sent over here. Would the Senator feel that there was any hope of any negotiations at all? Or would he think the U.S.S.R. would believe it must first catch up with us before they could negotiate?

Mr. TOWER. The Russians are already catching up with us and, I think, will eventually surpass us. As a matter of fact, they are ahead of us in many fields. I do not think that the Soviets arming themselves is a matter of a reaction to what the United States does. Remember that we demobilized after World War II, but the Soviet Union did not. I think the Russians know that we have no imperialistic designs on them; that we are not going to initiate a war against them.

After all, we could have fought a preemptive war against them and could

have destroyed them in the late forties—and they know that—and we were sorely provoked at that time, but failed to do it.

So far as negotiations are concerned, I hope we can begin to negotiate, and negotiate in good faith. But I do not think we are going to be in a position to negotiate if they get into a position of military superiority. The President thinks this, and he has had as many confrontations with the Soviets as has anyone else.

I think it would be well to talk about a wide range of things, and the discussions would not have to be bilateral. Other countries might be brought in, countries which have nuclear potential or which actually have nuclear weapons.

I do not oppose the idea of negotiations.

Mr. JAVITS. We are not talking about opposition to negotiations. The Senator was talking about unilateral disarmament, a label which I find is used to throw up a big smokescreen in connection with this issue. Can the Senator tell me if he believes anyone speaking in support of the Cooper-Hart amendment, has indicated in his argument that he wants unilateral disarmament?

Mr. TOWER. I do not think any Member of the Senate believes there will be unilateral disarmament. The Senator from Colorado (Mr. DOMINICK) referred to his mail. I said:

Yes, unfortunately there are people in this country who think we should disarm unilaterally, and that the rest of the world will bring moral suasion on the Soviet Union to do likewise.

But I do not think that any Member of the Senate, anyone who has the sophistication of a U.S. Senator, believes that. However, there are many people who do, and they write letters.

Mr. JAVITS. I have one other question. If we pursue the doctrine that the only time the United States can safely negotiate is when we have the edge—when we have nuclear "superiority," as he calls it—is it not logical to suppose that they think the same way about their security and that we simply cannot then come to an agreement? Both sides cannot enjoy "superiority." But, both sides can have nuclear "sufficiency," as President Nixon has so wisely suggested. Most objective strategic experts believe that both the United States and the U.S.S.R. do have a "sufficiency" of nuclear power to insure their security under present conditions. That is why the prevailing situation is such a logically compelling stopping point in the nuclear arms race.

Mr. TOWER. I am not prepared to think that the Soviets think the same about us that we think about them. I think they are a little smarter than that.

Mr. JAVITS. I respectfully submit that we certainly cannot assume in negotiations with the Russians that they have a fine, high-minded view of our motives, while our view of their motives is that they are trying to subvert the world, and prepare for a preemptive war attack capability on us.

Mr. TOWER. I do not believe the United States constitutes an obvious military threat to the Soviet Union. I believe

that the Soviet Union believes the United States constitutes a threat to their expansionist opportunities or goals.

Mr. JAVITS. If that is the illusion under which our negotiators go to negotiate, believing that the Russians are going to accept a freezing into permanence of a U.S. military advantage or "superiority," because they trust our motives, and they know they should realize that we distrust theirs—I do not think that we are going to get anywhere.

Mr. TOWER. Maybe we would not get anywhere. I do not think we will get anywhere as long as the Soviets are bent on expanding their influence in the world. They are moving into the Mediterranean. Does the Senator believe we should take our 6th Fleet out of the Mediterranean?

Mr. JAVITS. I certainly do not. At the same time, I certainly must contemplate that if their system is better than ours, their people more productive, their handling more competitive, they will get more influence in the world.

Mr. TOWER. They are not better than us. They are a dictatorship, and they channel their resources into armaments, and more cheaply, too.

Mr. JAVITS. The more than 3 billion in the world are not going to take the word of the Senator from Texas on that. Maybe the 200 million Americans will, but the more than 2 billion people in the world will not. That is what we are engaged in—competitive demonstration of whose system works better. It is something which must be demonstrated and not just claimed.

Mr. TOWER. I do not think that is relevant to this discussion.

Mr. JAVITS. I think it is very relevant because people like me feel we are under some real compulsion to do things to produce a nuclear arms agreement without endangering our security.

I think people who are arguing the case as the Senator has—and he is a gifted and able man or I would not be discussing the matter with him—are laboring under the assumption that this really cannot happen; that really and basically we cannot come to any agreement with the Soviet Union at all. This is really at the nub of the argument and that is why I rose when the Senator brought me to my feet with his remarks about world trade and unilateral disarmament.

I think the essence of the consideration the Senator gives us is that we must always have a built-in military advantage or we might get taken. This means we can never make a deal since the Russians are not going to make a deal. They are not going to trust their security to some one else's high motives and good intentions—just as we would not accept that approach.

The most we can hope for is that there will be a time when we are roughly in balance so we can reach some kind of agreement. At this point we are roughly in balance; we both enjoy sufficiency and there is no sense in both sides spending billions to try to reach an emperal weapons advantage over the other—which neither side will accept.

Mr. TOWER. I argue for superiority because I believe we should have it. The

Senator thinks we are more likely to have a settlement. One of the things I am concerned about is how we know when we have reached parity; or do we wake up some morning and find ourselves in an inferior position?

Mr. JAVITS. Mr. President, will the Senator yield for one further point?

Mr. TOWER. I yield.

Mr. JAVITS. I would like to have our argument presented. That is why we argue only for a delay in deployment. That is why we are not arguing for junking the ABM system, because we are aware of that uncertainty. But we believe, based on the case introduced at this moment, that given a little opportunity to use it in the negotiating process, in the eyes of the Russians and in our eyes we are reasonably in balance with respect to second-strike, assured-destruction capability. What we are arguing against is moving to the next plateau until we have exhausted the opportunity now presented to negotiate a limitations agreement.

Mr. TOWER. The view of the experts is that we would lose valuable leadtime if we faced any delay toward deployment at this moment. Beyond that, it is a slap or would be interpreted as a slap at the administration, which asked for this authority. It is, in a way, trying to gut the ABM provision. I do not see why this is necessary to achieve the full R. & D. and testing and evaluation of this thing. According to the experts, we can do it better if we have these things deployed at the site.

Really, the basic argument is: Should we make the political decision to deploy? I do not entertain the same views that the Senator from New York does, and he does not entertain the same views that I do.

Mr. JAVITS. Mr. President, will the Senator yield to me briefly?

Mr. TOWER. I yield.

Mr. JAVITS. Speaking about the administration, is it not fair to say those of us who are on my side of the issue, if we are right and the administration can achieve an armaments limitation breakthrough, would have had a far more monumental success, a great historic success, unbelievable in its size, for President Nixon, than if he succeeds in getting Safeguard by two or three votes, as the Senator from Vermont said yesterday. Therefore, I ask, Who is really trying to make this administration successful? Should we not test that before we say that the people on my side would harm the administration if we were successful. I respectfully submit that if I can be here in the Senate under a Republican President when he achieves an agreement which will freeze nuclear armaments where it is, that alone would make his place in history infinitely more hallowed than if he succeeds to get through this provision to deploy the Safeguard system in the two places mentioned.

Mr. TOWER. If that occurs, I will be the first one to congratulate the Senator and call him a prophet.

Mr. JAVITS. I thank the Senator.

Mr. TOWER. But I do not think it will happen.

Mr. JAVITS. We do not know until we try.

Mr. YOUNG of North Dakota. Mr. President, I commend the Senator from Texas for the excellent speech he has made on the ABM. There is a lot of good food for thought in his speech.

I note that the Senator mentioned that only \$759 million of the amount contained in the bill is for the ABM program.

Only a year ago this same body approved more than twice as much money for an ABM program.

The world situation has worsened, I think, during this year's time. Certainly Russia has gained tremendously in military strength over what they were a year ago. On a parity basis, we have lost ground militarily to the Russians during the last year.

Mr. President, I am somewhat reluctant to speak in behalf of the ABM system as North Dakota would be one of the two States where the first ABM's would be deployed. I hesitate because some may think that I am speaking only because of some benefits that would accrue to North Dakota.

We do have some opposition to the deployment of an ABM installation in North Dakota, but I believe the vast majority of the people support President Nixon on this issue. There is practically no opposition among the people where this site would be located in North Dakota. Most of them are farmers and smalltown businessmen.

They are accepting the decision to locate the ABM site in North Dakota just as they did in the case of the Minuteman. North Dakota has 300 Minuteman missiles with their nuclear warheads—along with two SAC bases with their B-52's and their nuclear bombs.

Not all communities would accept such a huge number of powerful nuclear bombs and warheads to be located in their midst. Our people do feel now that they are entitled to some protection from a possible enemy attack against these Minuteman missiles and SAC airbases. They believe the ABM would give them at least some protection.

Most of our newspapers support the ABM. Mr. President, I ask unanimous consent to have editorials from our three largest newspapers on this subject printed in the RECORD as a part of my remarks—the Fargo Forum, the Minot Daily News, and the Grand Forks Herald. I concur in the position they take.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Minot (N. Dak.) Daily News,
Mar. 31, 1969]

MISSILE DEFENSE IS NEEDED

A lot of dust is being kicked in the air in the nation about establishment of an anti-ballistic missile system, now known as Safeguard.

The Minot and Grand Forks areas have good reason to be interested in what is going on.

While the current proposal is to establish the missiles in the Grand Forks area, assurance is given they would provide protection for the Minot territory.

It has been of concern to us for a long time that the military complex in the Minot vicin-

ity—Minot Air Force Base and the 150 Minuteman missiles—is without adequate missile defense.

It would seem to us that an enemy would think in terms of trying to knock out such retaliatory forces as now exist here.

Outside of fighter aircraft based at Minot Air Force Base, which would be effective against a bombing raid, we now are virtually armless so far as defense is concerned.

Everything in the book is being thrown by opponents at the ABM proposal. Scientists in large numbers, as well as shallow thinking do-gooders, have gotten into the act. Who are they to decide whether we're going to be clobbered?

Those of us old enough to remember can recall without great difficulty we had blabbermouths hopping around the country, prior to World War II, screaming against preparedness. The trouble with some people is they think they are experts on everything except what counts—treachery.

Until and unless, in good faith and demonstration, any potential enemy of this nation proves itself to be willing to slow down the arms race, it is good sense to protect ourselves.

[From the Fargo (N. Dak.) Forum, June 27,
1969]

NORTH DAKOTA HAS GOOD REASON TO BACK
ABM SYSTEM

(By John D. Paulson)

Trying to pass judgment on whether the United States should proceed with the construction and deployment of an anti-ballistic missile system is no easy matter for an editor, a member of Congress, or an average citizen. This is particularly true in North Dakota, which has been selected as one of the states in which an ABM installation will be deployed in the first phase of President Richard M. Nixon's proposed Safeguard ABM system.

With 350 underground silos holding Minuteman Intercontinental Missiles tipped with nuclear warheads already located here, North Dakota wasn't particularly concerned when President Nixon proposed that one of the ABM installations go into this state. But since then the residents have been the target of an intensive propaganda campaign both pro and con. If a person tries to figure out his personal attitude on some basis other than whether he is for or against President Nixon, the answer doesn't come easily.

Shortly after President Nixon outlined his proposed Safeguard system, North Dakota gained nationwide notoriety. On a trip to Washington, to a gathering of newspaper editors, I was almost invariably asked what I thought or what North Dakotans thought about President Nixon trying to install a battery of nuclear-tipped missiles in our state to knock down enemy missiles from somewhere overseas.

When I replied that the state already had a full arsenal of nuclear-tipped ICBM's, and probably most residents were not averse to the fact that the nation was now going to try to put out of action any ICBM's aimed in our direction, the inquisitive all of a sudden stopped their joshing and started to ask questions about our familiarity with the nation's nuclear retaliatory armament.

Those who were opposed to the ABM system apparently started out with the idea that they were using scare tactics on the residents of a state slated for ABM installations, but they had nowhere to go when they realized that North Dakota had already accepted its role as the location of a large portion of the nation's nuclear armament.

Of course, probably a good many North Dakotans didn't and still don't realize the huge amount of explosive power that is kept under wraps in the 350 underground silos stretched across the northern half of the state from Minnesota to Montana.

July 11, 1969

At a banquet at the same newspaper convention, I had the opportunity of sitting at the same table with James Webb, who resigned early this year as director of the National Aeronautics and Space Administration. Most of his conversation, of course, was about the forthcoming Apollo trips to the moon, and the moon landing. He was most enthusiastic about America's capability and performance in space exploration, and the unlimited challenges that lie ahead of us after the moon landing. I had a chance to ask him his views about President Nixon's ABM decision.

He declared he most certainly approved the construction and deployment of an ABM system, but not for the reasons the President stressed. This construction phase is simply a continuation of the research and development on what the nation has already spent \$5 billion, not necessarily a needed defense against Russia. We would never be reaching for the moon if we hadn't started our space explorations one step at a time, with the Mercury and Gemini space flights, he explained. Completed research indicates, he said, that we have the potential to knock down an incoming ICBM, but "you won't know whether you can really do it in time of need until you put all the components together."

In considering the pros and cons of the ABM issue, you mentally have to put yourself into a world you can hardly believe exists. But the plain facts are that we are already in one of the strangest—and most dangerous—worlds ever conceived.

In Europe, U.S. travelers are surprised and shocked when they come to the border of an Iron Curtain country, such as Czechoslovakia, and are met by soldiers with drawn guns and bayonets, instead of a welcoming customs and immigration official.

We in America think we are far removed from such a military gunpoint at our heads every time we move from one state to another. Unfortunately, almost every American citizen goes about his every day tasks under the "gunpoint" of a Russian intercontinental missile. According to United States intelligence, Russia has—or will have—1,000 ICBMs aimed at every population center, every industrial center and every major military target in the United States. Now President Nixon suggests that instead of being aimed at the centers, they are being aimed at the ICBM retaliatory missiles planted in their silos in North Dakota, Montana and other areas which are within range of Russian territory. In return, the U.S. has a thousand missiles aimed at Russia in Minuteman silos and another 500-600 missiles at sea being carried by Polaris submarines ready to retaliate against any nuclear attack.

So the nuclear threat is with us each and every day, and the assumption is that neither nation would dare to push the button which would send an ICBM on its way for fear of the retaliation that the target nation could inflict by answering with its own ICBM forces.

The ABM, if it worked 100 per cent perfectly, presumably would stop any Russian missiles launched at us, whether a few or many. If the ABMs stopped a Russian attack, at least it would give this nation a choice of responses instead of the only single response now available—instant retaliation. And if the ABMs fail to work, then there would still be time to send off our Minuteman missiles on their message of total destruction.

Here is where the mind bogs down: No one can foresee the circumstances under which either nation will press the button that would start nuclear warfare. Certainly, it seems, Russians would be smart enough not to send missiles on a destructive mission towards the U.S. if they were readily identifiable as coming from Russia. We would be in a position to retaliate before being knocked to our knees.

But the day of ready availability of nuclear weapons is not far away. There could be the day when the Russians or Red China or North Vietnam or some dissident Arab nation would become convinced that the United States needed a lesson. Then it might find a way to launch a few ICBMs from a ship at sea, from an uninhabited island, from the direction of Cuba or South America. How would the United States use its ICBMs then? They are all aimed at Russia. If Washington or New York were hit by a missile coming from a ship at sea just the other side of Cuba, would we answer with an automatic reflex by pushing the button which sends a fleet of destructive missiles at Russia?

Would we be better off if we had an ABM system which would have a good chance of knocking these missiles out of the air, no matter which direction they came from?

We in North Dakota and nearby Minnesota have reason to believe that we are even more of a target than other areas in the United States. It seems that once we take a realistic look at the type of world in which we live, we would be much better off to proceed with the development of a system which could detect and stop an incoming nuclear-tipped missile.

When we can send Apollo spaceships to the moon and back, when we can contemplate landing men on the moon within the next month, and bringing about their safe return, there is no reason to doubt but what our scientists can devise a system which would provide protection against incoming ICBMs.

Until the time comes that we can convince Russia and any other nation which might have ICBMs that all such missiles should be scrapped, then it seems that we would be unwise not to proceed with the development of a defense that could protect us against accidental or intentional firing.

We all hope that the nuclear warfare never develops, but until there is a guarantee that no nation will launch such a missile, then the development of an ABM system seems a reasonable course for America to follow.

It is not an issue on which a member of Congress can vote "maybe." He has to say yes or no on the appropriations and the authority asked by President Nixon. We can't have continued research without deployment. If we are on the bullseye of a Russian ICBM target, that is all the more reason for North Dakotans to support the Safeguard system.

[From the Grand Forks (N. Dak.) Herald, June 28, 1969]

ABM HELD NEEDED

The Fargo Forum, which early in the Safeguard controversy seemed to be leaning toward a position against the deployment of an anti-ballistic missile system, now has come to the conclusion a start is needed on ABM deployment.

The Forum Friday devoted its entire editorial page to the subject. It gave space to the arguments of both proponents and opponents of Safeguard, including Sen. Milton R. Young and Rep. Mark Andrews who favor the Safeguard program and Sen. Quentin N. Burdick and Gov. William L. Guy who oppose it.

It concludes, however, that "After a thorough study into the claims and counter-claims about the anti-ballistic missile system, The Forum regretfully comes to the conclusion that work on the anti-ballistic missile system should continue, but always with a proviso that it will stop whenever an effective arms control treaty with other nuclear power nations—Russia, China, France or any new member of the power elite—becomes the law of the world, backed up by international inspection and control."

In this position, the Grand Forks Herald agrees. It has said repeatedly that conditions

in the world today require that the United States provide whatever defensive weapons are available for the protection of this country. It would rather use defense than be in the constant position of having to rely on the threat of destroying the world to keep the peace.

As the Forum says, the question now before the Congress is simply this: "Shall the United States spend \$800 million to \$900 million in 1969-70 to continue development and start deployment of an anti-ballistic missile system intended to give us whatever protection is possible against the 1,000 missiles already in place in Russia and aimed at this nation, or shall we sit naked to an aggressive nuclear attack to which our only reply would be complete destruction of the offending nation with our own ICBMs?"

Mr. YOUNG of North Dakota. Mr. President, I concur in the position taken by these editorials.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. TOWER. I yield.

Mr. DOMINICK. Mr. President, the Senator from Texas has done a very fine job in trying further to delineate what we are trying to do in the committee report on the ABM.

In connection with what the distinguished Senator from North Dakota just finished saying, I think it might be of some interest to note that my State has recently conducted a poll among the people, an independent poll, in which three questions were asked.

The first question was:

Do you think it is possible to build a defensive system against enemy missiles?

The answer was:

55 percent, yes; 29.5 percent, no; and 15 percent, do not know.

The next question was:

Do you think the U.S. should have some sort of ABM defense?

The answer was:

Yes, 80.8 percent; no, 10.6 percent; and no opinion, 8.5 percent.

That is pretty low in view of the complexity of the issue, it seems to me. Nevertheless, this is the way it came out in an in-depth survey.

The third question was:

President Nixon has come out for a limited system called the Safeguard System, which is supposed to protect our ability to strike back at an attacker. Do you think Congress should approve this system?

The answer was:

Yes, 72; no, 12.5 percent; depends, 6.5 percent; and no opinion, 9 percent.

I bring out these figures because I think they are of interest in view of the fact that, in my State at least, of the letters coming to me, 10 to 1 are opposed to the ABM system. It would indicate to me that a relatively small group of people, compared to our population, are really pushing the anti-ABM idea.

I think, therefore, that the colloquy on this particular policy is of interest, indicating that perhaps there is far more popular support for the ABM system than anyone has any idea of.

I thank the Senator.

Mr. TOWER. Mr. President, a number of people in this country feel that if the United States will unilaterally disarm, the rest of the world will bring

moral pressure on the Soviets to do likewise. I cannot recall any time in history when the Soviet Union has responded to moral pressure from anywhere.

I do not expect them to change their ways in the future.

Mr. President, I yield the floor.

THE SAFEGUARD SYSTEM

Mr. MANSFIELD. Mr. President, one of the country's finest newspapers, the Denver Post, wrote a very detailed analysis on June 15, 1969, of the Safeguard ABM system, listing the arguments both for and against. On the same day that this article presenting the case for and against appeared, there appeared a very penetrating editorial concluding that the Safeguard should be delayed and that we should press for arms control talks.

I ask unanimous consent that the article concerning the Safeguard ABM as well as the editorial that appeared in the Denver Post on June 15, 1969, be inserted in the RECORD at this point.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

GREAT DEBATE: IS "SAFEGUARD" ABM SYSTEM REQUIRED FOR UNITED STATES?

(By Leverett Chapin)

The big Antibalistic Missile debate of 1969 is nearing a climax. The Nixon administration, through such spokesmen as Secretary of Defense Melvin R. Laird, has jarred the country by contending that Russia for the first time is building a missile arsenal powerful enough to devastate the United States without fear of reprisal.

Laird and others believe the Russian buildup is intended to give that country a "first strike capability," meaning so much missile power that the Russians would no longer be deterred from making an attack on us for fear of the damage we could do them in return, even after being hit first.

This interpretation of Russian intentions, if correct, would mark a new dangerous period in Soviet-United States relations.

The administration sees this new threat as requiring a start by this country on a multibillion-dollar Antibalistic Missile (ABM) system, called "Safeguard," to protect our Minuteman missiles in silos and our big bomber bases from a Russian first strike.

It argues that to be sure that Russia doesn't decide some time in the future to try to destroy us it is necessary to preserve our deterrent—our "second strike" ability—by deploying an ABM system capable of knocking out incoming missiles before they reached their targets.

The administration sees the mid-1970s as the time when this new danger will develop and it wants to make a start on the ABM system now with an appropriation by the present Congress of approximately \$800 million. It says that if we start now the first two Safeguard installations won't be completed until 1973.

With the debate near fever heat, the Defense Department just last Wednesday sought to clinch its case by releasing a "white paper" on the Russian nuclear building. It disclosed some previously classified information such as that the Soviets are testing an ABM missile which could loiter in the atmosphere where it would be in position to destroy an incoming missile.

It also disclosed that an effort to give greater protection to our own missiles by putting them in hard rock silos has encountered difficulties and is in an early stage of consideration.

OPPOSITION LINEUP

Arrayed against the administration are many senators—more than 40, according to most counts, most of them Democrats—and an impressive array of scientists and other "intellectual leaders."

They contend that:

Our nuclear missile force is superior to that of Russia now.

It will continue to be superior to that of the Russians in the mid-1970s or, at least, will be strong enough to provide an effective deterrent, even if we do not start an ABM system now.

Even without Safeguard we are not in danger of losing our deterrent unless Russia gains a 2 to 1 superiority in missiles over us, enough to be able to target two of their missiles for each one of our missile sites. Russia cannot gain such superiority within the foreseeable future.

An ABM system probably wouldn't work effectively.

To deploy an ABM system would escalate the arms race, further militarize a world already bristling with weapons, add to international tensions, use up money more urgently needed for domestic programs in our strife-torn country.

A start on an ABM system would hurt the chances for an arms limitation agreement with the Russians because the Soviets would not negotiate if they thought they were any weaker in any phase of nuclear warfare than we are.

A golden opportunity for arms limitation talks now exists because the United States and Russia possess effective deterrents but an ABM system would upset the delicate balance of nuclear stability.

These are the main pros and cons of the big debate.

Adding heat to the controversy are the disillusionments many senators and others feel with efforts to reach military solutions for international problems—as in Vietnam.

With military expenditures in this country already at the \$80 billion level, there is a widespread feeling that defense costs are out-of-hand, that the "military-industrial" complex really runs the country, that Congress has lost control of the budget because every time science devises a new weapon, no matter how expensive, an irresistible urge to go ahead and build it develops.

ISSUE OF WASTE

The disclosure of vast waste in defense expenditures has added to resistance to the launching of the ABM program.

Opponents of ABM see the present controversy as a crucial test of whether the country—and the world—will continue to build up vast armaments or whether a new era of negotiation between countries is possible.

Usually when the Defense Department asks for a new weapon, Congress grants the request with little question. ABM, however, has stirred the first full-scale debate on a new weapon in many years.

Tempers are short. When President Nixon, speaking at the U.S. Air Force Academy at Colorado Springs recently, warned about "new isolationists" who would have this country disarm unilaterally, many of the Senate opponents of ABM construed his remarks as referring to them and reacted strongly.

Senator J. W. Fulbright, D-Ark., who has been critical not only of the Vietnam war but of military expenditures in general, has accused the Defense Department of using "fear tactics" to "sell" the ABM to Congress.

He and others have said the claim that Russia will out-gun us by the mid-1970s is like the phony fears of a "bomber gap" in the 1950s and a "missile gap" in the early 1960s.

Secretary Laird sees a new Russian missile, the SS9, which, he says, is capable of carrying warheads of 25 megaton yields (equiva-

lent to 25 million tons of TNT), as the tipoff to the intention of the Russians to develop an offensive force which could devastate this country without fear that we could retaliate effectively.

STRENGTH COMPARED

Experts on both sides are pretty well agreed that at this time the United States has 1,000 Minuteman missiles and about 50 Titan II missiles, all in hardened silos, while the Russians have 600 SS-11 missiles (similar to the Minuteman), about 230 of the new powerful and accurate SS9 missiles and a few earlier model missiles.

However, Laird claims the Russians are increasing their SS9 force so rapidly that by the end of this year the Russians will for the first time have more Intercontinental Ballistic Missiles (IBMs), either in place or being built, than the United States has.

In addition the United States has 656 missiles on 41 submarines although perhaps not more than 30 of the submarines would be in service at any one time, the others being in port for maintenance.

By contrast, Russia, according to testimony given before the Senate subcommittee on disarmament, may have about half a dozen nuclear submarines and has the capacity to build more at the rate of seven a year.

As far as intercontinental bombers are concerned, the United States has approximately 650, capable of carrying four nuclear weapons each, while Russia has about 150.

In the light of these comparable strengths, where does the new threat to our security arise?

Secretary Laird has declared that the great accuracy of the new Russian SS9, plus the fact that it can carry a large warhead, has forced him to conclude that the SS9 is intended primarily to destroy our ICBM missiles in their silos, thus making it impossible for us to reply with a devastating attack if the Russians should strike first.

PROTECTION ISSUE

Therefore, he wants the Safeguard ABM system, primarily for the protection of our missiles, or as he puts it, our "deterrent."

If our ICBMs were destroyed in their silos, our nuclear submarine fleet by itself would not constitute an adequate deterrent, Laird says.

His testimony on this point has been accompanied by vague hints that the Russians are working on antisubmarine warfare tactics which might render our missile fleet of little effective value.

Laird has refused to say, except in closed committee sessions, what these tactics involve although newspapers have reported the threat, or supposed threat, to our nuclear submarines is a so-called Russian SSN attack submarine, said to be very speedy.

Laird's hints have irritated a number of senators, including Sen. Stuart Symington, D-Mo., former secretary of the Air Force.

He and others claim that Laird's downgrading of our submarine deterrent is without foundation in solid evidence, that our nuclear submarines are the greatest potential weapons ever devised and that Laird has revealed such hitherto secret information, about the SSN and the Soviet loiter ABM missile, as would help the case for the Safeguard ABM system while continuing to keep under classification information which would show ABMs are unnecessary.

Senator Symington and others have suggested that a simple way to save our land-based missiles from destruction, without Safeguard, would be to fire them as soon as an enemy missile attack is detected by warning radar.

The Defense Department's answer is that a plan to make such an automatic response to an incoming missile sighting would resemble a "doomsday machine" defense sys-

July 11, 1969

tem and would leave the President with no alternative to try to ride out a first attack by relying on Safeguard if it appeared best to him to do so.

RUSSIAN EXPERIMENT

Our nuclear bomber force, according to Laird and others, is threatened by the fact that Russia is experimenting with a Fractional Orbit Bombardment System (FOBS).

FOBS missiles would come in on low trajectories which would make it impossible to detect them until they were near their targets. Also, FOBS missiles could be sent around the world over the South Pole, a direction from which we have no warning system as yet.

The Safeguard ABM system, if fully developed as the Defense Department has conceived it, would provide some protection for seven U.S. bomber bases and for U.S. command headquarters in Washington as well as protection for our Minuteman and Titan II missiles.

Arguments over classified information have enlivened the debate from the first. Some senators have hinted that the Central Intelligence Agency (CIA) does not wholly agree with the appraisal of the Russian threat that Laird has made.

In one committee meeting, for example, there was a remark that the CIA does not believe the SS9 warhead is nearly as large as the 25 megaton figure provided by Laird. There have been hints of other disagreements on intelligence appraisals.

To Sen. Albert Gore, D-Tenn., it is inconceivable that Russia by the mid-1970s could hope to knock out our entire deterrent of ICBMs, submarine missiles and heavy bombers, mainly the B52s, in a single coordinated attack which would render this country helpless to retaliate effectively.

GORE CRITICAL

Gore was particularly critical because the early Laird-Defense Department estimates of future U.S. and Russian missile power did not take into account the fact that both countries might soon have multiple independently targetable reentry vehicles (MIRVs).

MIRV is a scheme to fit each nuclear missile, whether fired from land or under the sea, with several warheads, each of which could be aimed at a different target. Apparently in response to Gore's criticism, the new Defense Department white paper says Russia now has the capability to put MIRVs on its missiles.

The Tennessee senator figures that by using MIRVs this country can have 8,766 warheads by 1974—5,120 of them on submarines, 3,000 on ICBMs and 646 on bombers—as compared with 5,150 MIRV warheads for Russia—500 of them on submarines, 4,500 on ICBMs and 150 on bombers.

Since only 250 warheads would have to be delivered by either side to devastate the 50 largest cities of the other side, Senate Gore sees no possibility that we will lose our deterrent even if the Safeguard ABM system is not built.

Of course, if the Defense Department is right and our submarines could be rendered helpless, Russia, even using Gore's figures, would have more warheads than the United States in the 1970s.

Whether it would have enough more to knock out all U.S. forces before this country could reply to a first strike by the Russians is the big issue upon which judgments differ.

"OVERKILL" CLAIM

Senator Gore contends we now have enough warheads to fire 48 at each of Russia's 50 largest cities, a vast "overkill" potential since even one missile would be enough to devastate a large population. He says Russia could now fire 22 missiles at each of the 50 largest U.S. cities, also an overkill potential.

What is Safeguard, how would it work and how did it come about?

Fourteen years ago, back in 1955, the Army let a contract to the Bell Telephone Laboratories to determine if it would be feasible to develop a missile system which would destroy enemy missiles before they reached their targets.

This first effort, known as Nike-Zeus, was likened to an effort to hit a bullet with a bullet to render it harmless.

Nike-Zeus developed into the Nike-X and research and development work continued year-by-year until the total cost of such work has now reached \$4 billion.

Presidents Eisenhower and Kennedy both decided against the installation of an ABM system although some promising progress had been made. In 1966 Congress voted \$167.9 million to begin acquiring an ABM system although the money had not been requested and was not spent by the administration of President Johnson, who was hopeful of getting an arms limitation agreement with the Russians.

In September 1967, Defense Secretary Robert S. McNamara announced a decision to install a "thin" ABM system, primarily to protect U.S. cities from the kind of light missile attack Red China might be able to make in the 1970s.

ADVANTAGES CITED

It would be hopeless to try to protect cities from the kind of massive attack the Soviet Union could make, McNamara said, but the thin ABM would provide some protection for our Minuteman missiles, even from a Russian assault.

Another advantage of the system, he said, was that it would provide protection from an accidental firing of one or a few missiles from the Russians.

McNamara expressed confidence that our ability to strike back would be the best protection against Russian action to start a nuclear war but he thought the Chinese might not act rationally and might, for the sake of making a first strike against this country, risk the kind of devastating retaliation we could throw back at them.

The kind of system McNamara wanted became known as "Sentinel."

Many persons were never convinced that the primary mission of Sentinel was to guard against a Chinese attack. They thought its main purpose was to give cities some protection, however light, from a possible Russian assault, and thus reduce casualties.

They believed the talk about a Chinese threat was intended to allay any fears that Russia might have that we could so protect our cities that we could, if we wished to do so, make a first strike against the Soviet Union at some time in the future.

Difficulties for Sentinel arose when residents of Boston, Seattle and other cities protested that the presence of the system would make them prime targets in the event of a nuclear war.

HURRIED REAPPRAISAL

When the Nixon administration came in, Secretary Laird, Deputy Secretary of Defense David Packard and others made a hurried reappraisal of the Sentinel system.

They changed its name to Safeguard. They decided the possible threat from China had not developed as rapidly as expected so protection of cities from a light attack was no longer the main need.

The primary need, they decided, was to protect our land based ICBMs from the new threat of the highly accurate Russian SS9, hence the ABM missiles themselves could be grouped around Minuteman silos and bomber bases, rather than around cities.

Such a configuration would still provide some protection for cities from a light Chinese attack, if necessary, and it could still protect against any accidental missile firings from either Russia or China.

Administration spokesmen said the Safeguard system would be less likely than the Johnson administration's Sentinel system to provoke the Russians into an effort to escalate the arms race.

They argued that a system designed to protect our missiles—our deterrent—would constitute no new threat to which the Russians would feel they should react. On the other hand, they insist, a Sentinel system, designed to give thin protection to cities from a small nuclear attack, would make the Kremlin think we intended to thicken the system later so that we could make a first strike against Russia without fear that our cities would be ravaged in retaliation.

Here the arguments get somewhat abstruse. Critics of Safeguard say it would provide some of the thin protection for cities that Sentinel was designed to provide so Safeguard would be just as likely as Sentinel to provoke the Russians to greater arms efforts.

SHIFT IN EMPHASIS

The shift in emphasis from protecting the cities to protecting missile sites looks to some critics of Safeguard like an effort to find some possible justification for installing an ABM system which is not needed.

They characterize the whole scheme as "an ABM system in search of a mission."

Secretary Laird insists, however, that the change in mission—from protecting cities to protecting missile sites—is fully justified by new developments, the failure of the Chinese to develop weapons as rapidly as expected and the speedup in the Russian deployment of SS9 missiles.

Safeguard and Sentinel, before it, have been described by scientists as the most complex weapons system ever undertaken any place.

Because of the complexity, the Nixon administration proposes to go ahead with Safeguard on a piecemeal basis, testing and possibly making changes as circumstances dictate.

As a starter, the administration wants to install Safeguard at only two sites, one at Malmstrom Air Force Base, Great Falls, Mont., and one at Grand Forks, N. Dak.

These two would be designed to protect about 300 of the 1,000 Minuteman missiles in the U.S. arsenal. The \$800 million being sought from Congress in the new budget for Safeguard includes money to start on these two installations and also money to acquire sites for 10 additional installations in other parts of the country, including one at Warren Air Force Base, Wyo.

Each Safeguard installation would have two radar systems, two missile systems and a computer.

RADAR DETECTION

One of the radars, known as perimeter acquisition radar (PAR), would be able to detect high-flying incoming missiles at a distance of 1,000 miles or about 10 minutes before they reached their targets.

The components of PAR are now being tested and, according to Deputy Defense Secretary Packard, should have good ability to distinguish between missiles and other objects in space, although it could not distinguish between a dummy missile and one carrying a live warhead.

Information from PAR would be fed into a computer and also into a smaller radar, known as a missile site radar (MSR). The PAR installation would be large, requiring a building 200 feet square and 130 feet high.

The MSR would be smaller, requiring a building 100 feet square and 40 feet above ground, thus the MSR could be "hardened" for protection more readily than the PAR.

If it was decided to respond to a PAR warning that a missile was on the way, the MSR would guide a Spartan missile to intercept the incoming missile. Spartan would

have a nuclear warhead which could destroy the enemy missile with Xrays if it exploded in the near vicinity of its target.

The interception would be made in space, outside the earth's atmosphere.

Spartan, according to Packard, would have a range of 300 or 400 miles so it could protect a wide area. Efforts to develop an even better Spartan are under way.

If Spartan failed to stop an incoming missile, Sprint missiles would be guided by computers and the MSR to destroy it in the atmosphere, nearer to earth.

SPRINT SPEEDY

Sprint has been described as a "very fast" weapon with a range of 20 to 30 miles. Its destructive force would consist of neutralization radiation rather than Xrays.

Steven Weinberg, professor of physics at Massachusetts Institute of Technology and one of the scientists opposed to installing an ABM system at this time, estimates the average incoming missile from space would be within range of Sprint for only 6 seconds so half-trigger response and highly accurate guidance would be necessary.

Under the Safeguard concept, Spartan would provide an area defense over most of the country against a light missile attack if all 12 installations are deployed.

The present administration agrees with previous estimates that an effective defense against a massive missile attack on cities is impossible.

Sprint would provide only what is known as a "terminal" defense for the missile sites or air bases where they would be located.

The number of Spartan and Sprint missiles planned for each site is classified information but experts outside of government have guessed each site might have 70 Spartan and 300 Sprints.

The radars, missiles and computers used for Safeguard would be generally the same as those planned by the Johnson administration for the Sentinel system, but the radars would be provided with more "faces" so they could detect missiles coming in from directions not covered by the earlier plan.

Secretary Laird has expressed confidence that Safeguard will perform the task assigned to it—the protection of enough missiles to leave this country with an adequate deterrent force even if we were attacked first by Russia.

CLASSIFIED ESTIMATES

The Defense Department earlier this year furnished senators classified estimates on how many of our missiles would survive such an attack if Safeguard were fully deployed.

Senator Symington claimed that the difference between the number of our missiles which would survive with and without Safeguard was so small that Safeguard would be voted down in Congress if the Defense Department estimates could be made public.

It may have been in response to Symington that the new Defense Department white paper includes a hitherto classified statement by Laird that if the Russians expand their SS-9 force to 420 missiles, each equipped with MIRV's, they could under optimum conditions destroy 95 per cent of our Minuteman missiles, leaving us with only 50.

Jerome B. Wiesner, provost of Massachusetts Institute of Technology and a member of the President's Science Advisory Committee, has made an estimate of his own on missile survival.

He believes that if the Russians attain an SS-9 force of 500 missiles (more than double their present force), each equipped with three warheads, and if they would fire them all at U.S. missiles and control centers, 270 of our missiles, a respectable retaliatory force, would survive even without a Safeguard system.

Under the same conditions, if we had Safe-

guard at two sites, one in Montana and the other in North Dakota, he estimates 350 missiles would survive, only 80 more than if we had no Safeguard.

He concludes Safeguard would accomplish little for the money spent.

Deputy Defense Secretary Packard has said the first two Safeguard installations would cost \$2.1 billion, exclusive of the research cost that has already gone into ABM, exclusive of the cost of warheads for the Spartan and Sprint missiles, and exclusive of cost of manning and operating the two systems once they are installed.

COST FIGURES

If Safeguard is installed at 12 sites, the cost, exclusive of the items already mentioned, would be \$6.6 billion and if extra installations were made in Hawaii and Alaska, bringing the total number to 14, the cost would be \$7 billion, Packard testified in March.

The debate has been full of claims that weapons always cost far more than the Defense Department estimates and that once started Safeguard could run into many billions, perhaps \$60 billion if it were decided later to thicken the system with more missiles and other equipment.

In its white paper, the Defense Department was more explicit on expected costs than it had been earlier. It said the cost of a full system, 12 sites in the continental United States and sites in Alaska and Hawaii, would be \$11.8 billion, including warheads, research and testing.

Both Laird and Packard contend that while our defense expenditures are high we are spending only about one-fourth as much as Russia is spending when the relative wealth of the two countries is considered.

They point out that Russia has an ABM system.

Several years ago Russia began installing what appeared to be a warning system, called Tallinn, across the northern part of the country. It now is believed that Tallinn has no ABM capabilities but an ABM system, known as Galosh, has been partially deployed around Moscow.

It was expected in Washington that Galosh eventually would have some 120 missiles but estimates now say work on Galosh has slowed with about 70 missiles in place. Some experts believe the slowdown may have resulted from a realization that Galosh would be obsolete in a short time.

The Defense Department white paper discloses that Russia is testing a loiter ABM missile could explain why work on Galosh has slowed pending the outcome of these tests.

A battle of books has developed during the ABM debate.

Sen. Edward M. Kennedy, D-Mass., one of the leading foes of deployment of Safeguard, although he would continue with ABM research to try to develop a better system, asked one group of scientific experts to prepare a book, just published, showing faults of the proposed system.

SCIENTISTS DIVIDED

Another publication, urging the approval of Safeguard, has appeared under the sponsorship of the American Security Council, which includes such noted scientists as Dr. Willard F. Libby, Nobel laureate of the University of California at Los Angeles; Dr. William J. Thaler of Georgetown University, and Dr. Edward Teller, "father" of the H-bomb.

Anti-Safeguard scientists have hit hard at its reliability. Among their claims are these:

Safeguard would be vulnerable because its radars would be "soft" targets, difficult to harden and protect.

The Russians are capable of developing sophisticated penetration aids which would render Safeguard ineffective.

These aids would include radar jamming, the use of "chaff" (multitudes of fine wires released in space) which would confuse defensive radars and enable live warheads to get through, the use of nuclear explosions to black out radar reception for as long as 10 minutes at a time and the use of a large number of other devices.

By adding more missiles with multiple warheads, the Russians could exhaust all our Spartans and Sprints and then launch their main attack, the cost of such tactics being less to them than the cost of Safeguard to us.

All the components of Safeguard cannot be tested under actual combat conditions until it will be too late to correct any "bugs" which may develop.

Each Safeguard computer would have to be very large—equivalent to 100 ordinary business-size computers—so the possibility of computer malfunctions would be considerable.

While the PAR radar system is supposed to be able to keep track of 100 incoming objects at a time, it would not be difficult for the Soviets to send in far more MIRVs than that.

For these and other reasons, Senator Kennedy has said Safeguard "may never work at all."

CHEAPER?

Some opponents of Safeguard contend it would be cheaper to add more missiles of our own, so more of them would survive in the event of a Soviet first strike, than it would be to install Safeguard.

Some take the position that any real defense against a nuclear attack is impossible because a country determined to do us great damage could sneak portable nuclear time bombs into our cities or could set off nuclear explosions near our shores to cause tidal waves which would wreck port cities.

The big hope of most anti-Safeguard senators is that refusal to vote the \$800 million to make a start on the ABM system would prod the administration into seeking an arms limitation agreement with Russia.

President Johnson sought such negotiations with Moscow and the Kremlin reacted favorably. Immediately after that, however, Russian troops marched into Czechoslovakia and Johnson thought it would be inappropriate to open new talks just as the Russians were acting more aggressively.

In his Senate testimony, Secretary Laird indicated that because of Czechoslovakia we still cannot get into arms limitation negotiations at this time.

Senators who want arms limitations point out that Russia now seems more willing to get into such talks than at any time in the past.

They fear that if this opportunity is lost and Safeguard is launched the arms race will be off again on a new lap and the danger of a worldwide nuclear holocaust will be increased.

To which the Nixon administration replies: Safeguard would be purely defensive. In spite of what critics say it would give a good measure of protection.

It would constitute no offensive danger to the Soviet Union and, therefore, would not provoke an extension of the arms race.

It is necessary to guard our missile deterrent from the new danger of the SS9 Soviet missile. Failure to provide Safeguard would constitute a gamble with national security.

Unless we provide such protection Russia for the first time will have a first strike capability against the United States by the mid-1970s. Russia is advancing more rapidly than previously supposed to attain such capability.

We can afford it because it would cost only about \$1 1/2 billion a year until completed.

So go the arguments. The nation listens and hopes Washington will have the wisdom to choose the right course.

OUR BEST JUDGMENT: DELAY SAFEGUARD, PRESS ARMS AGREEMENT EFFORTS

(Issue: There are too many unanswered questions to warrant a quick start on proposed ABM system.)

After considering pro and con arguments over the proposed Safeguard antiballistic missile system which the Nixon administration has asked Congress to approve, this newspaper has revised its thinking somewhat and now believes there should be a delay for more study and research.

(The arguments are explored by Associate Editor Leverett Chapin elsewhere in today's Perspective section.)

We keep recalling that less than two years ago the nation was told by the Johnson administration that we had to have a similar ABM system to protect our cities from the kind of "light" nuclear attack that Red China would be capable of making within a very few years.

Now we are told the danger from Red China is not developing as rapidly as previously expected—but that we still need an ABM system, not primarily to protect our cities but to protect our own missile sites because Russia is suddenly developing new and frightening potentials for nuclear warfare.

Secretary of Defense Laird has been busy spreading the word on Capitol Hill that Russia is becoming a nuclear colossus; that by the end of the year it will have more missiles in place or being built than we have; that Russia must be intending to develop a force so powerful that it could attack this country first without fear of retaliation because our missiles would be knocked out; that a new, highly accurate Russian weapon, the SS9 missile, is particularly dangerous; that Russia is testing an advanced ABM missile of its own, and that new developments in antisubmarine warfare may wipe out the big advantage this country now has in nuclear submarines.

All this is reminiscent of the "bomber gap" which we were told existed in the 1950s but later proved to be a myth and the "missile gap" which frightened the country in the early 1960s, unnecessarily.

It is the business of the Defense Department to take a gloomy view of our military strength as compared with that of the Soviet Union.

Past experience, however, has made us gun-shy of the kind of dire predictions and projections that Secretary Laird has been using.

If the need for ABM protection against the Red Chinese can fade into mist in less than two years, can we have any assurance that the awful prospects seen by Secretary Laird are any more substantial?

Must the country react with new defense projects costing billions of dollars every time intelligence estimates in the Department of Defense raise visions of new dangers?

The new administration had been in office only about seven weeks when President Nixon announced it had discovered the need for the Safeguard system to protect our missiles from the new Soviet menace.

That was fast work. Whether the need is real or imagined depends to some extent on the interpretation of data available to military intelligence of what Russia is doing.

The administration has interpreted the data one way just as the previous administration interpreted data on Red China to show the need for an ABM system.

Should billions be spent on the basis of quick judgments?

The Russians started an ABM system around Moscow, called Galosh, some time ago but now appear to have stopped, supposedly because it might be obsolete when finished in the light of new Russian ABM tests.

The administration wants to start deploying the Safeguard system even before tests on the component parts of the system have been completed to determine if they will work.

One part of the system would be a Spartan missile which could hopefully destroy an incoming missile with X rays above our atmosphere. The administration admits research is being carried forward on a "better" Spartan. In other words, it is not satisfied with a major part of the Safeguard system yet it wants to go ahead deploying the system.

After some prodding the administration has admitted Safeguard, as now contemplated, would cost about \$11 billion. If past experiences on defense cost estimates show anything, they show the total bill could run much higher.

The system is described as a thin area defense system because all experts now agree there can be no really effective defense against a massive nuclear assault.

But we can foresee the probability that if a thin system is deployed there will be pressures to thicken it, at the cost of more billions, as time goes on. The arms race would be escalated, we anticipate.

At this time there are too many unanswered questions to warrant a quick start on Safeguard. For example:

Would Safeguard really protect our missiles? Is the system too complex to function? Could it be rendered ineffective by the use by the enemy of "chaff" and other penetration devices on their missiles?

Could Safeguard be overwhelmed if the enemy sent more missiles than Safeguard's radar could spot and track? Will the use of multiple warheads on enemy missiles, a likely development for the near future, make it relatively easy to thwart Safeguard? Will it be possible to protect our missiles by placing them in hard rock silos, a subject just now being explored?

Would Safeguard merely spur the Russians to greater efforts to develop new nuclear threats? Would the development of fractional orbital missiles—missiles coming in on low trajectories—render Safeguard helpless? Will the supposed threat to our nuclear submarines actually develop or will we find countermeasures to assure our under-sea weapons from destruction?

The answers to these and many more questions are not known. More answers are necessary before a new multibillion-dollar commitment for a Safeguard system is made.

Perhaps the President should submit the matter of nuclear defense to a "neutral" board of experts for re-evaluation while additional research is carried on to find out if Safeguard is feasible.

Secretary Laird has said that if we do not have Safeguard we will have to increase the number of our missiles to assure that more of them would survive if Russia should attack this country first and unexpectedly.

Some opponents of Safeguard claim it would be cheaper and better to have more missiles. That is a fitting subject for study.

Secretary Laird has said Safeguard must be approved now because it will be 1973 before we can install the first two Safeguard bases and the middle of the 1970s before the entire system could be deployed.

We doubt that the need for a quick start is as pressing as the secretary says. We now have 1,000 Minuteman missiles, 50 Titan II missiles, more than 600 missiles on submarines and we have a force of 500 B52 bombers capable of delivering nuclear weapons.

That is enough force to wipe out Russia several times over and it is inconceivable that it can be rendered harmless by any new devices the Soviets may be able to perfect and deploy in less than 10 years.

A delay in the authorization of Safeguard, we believe, would spur the administration to try to make an arms limitation agreement with Russia. In the long run the only hope for ending the arms race must lie in such negotiations.

If the nuclear arms race continues the world will be in increasing danger of incineration. That is why we believe a delay in the deployment of Safeguard—another nuclear weapon—is advisable and that all-out efforts be made to reach arms agreements, before it is too late.

SENATORS LIVE ALMOST 6 YEARS LESS THAN AVERAGE AMERICAN MALE

Mr. PELL. Mr. President, recently I read a study of the longevity of U.S. Senators and found it depressing, in that it showed our life expectancy as of the date we took office is 5.9 years less than that of the average American male of the same age.

There are other nuggets of information which I thought might be of interest to my colleagues and, accordingly, ask unanimous consent to have printed in the RECORD at this point, "Longevity of U.S. Senators" from the Statistical Bulletin, May 1969.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LONGEVITY OF U.S. SENATORS

Senate: literally a council of elders, from the Latin *senex*: elder. In this century United States Senators have indeed been more of a council of elders than those who served in the first 56 Congresses, but the life expectancy of those in office since 1930 has fallen significantly short of that for white males in the general population. During the 69 years that elapsed between the outbreak of the Civil War and 1930, the longevity of United States Senators closely approximated that of white males in the general population.

This conclusion is drawn from a study of the longevity of 1,619 men elected or appointed to the United States Senate from the time of the First Congress of the United States in 1789 through the First Session of the Ninetieth Congress to the end of 1966. During this 178-year period, 1,416 Senators died, 223 of them (about 16 percent) reportedly passed on while in office; four deaths were due to assassination, three resulted from duels, and one occurred in a Civil War battle. The nine women Senators who served during this period are not included in the study.

Expectations of life for the deceased Senators at the time of their first taking office were calculated on the basis of special cohort mortality tables for the white male population of the United States. Such tables, prepared in the Statistical Bureau of the Metropolitan Life Insurance Company, trace the changing longevity over the calendar years following each Senator's accession to office. For white men born prior to 1840, it was assumed that mortality rates in the United States conformed substantially to those shown in the Wigglesworth Table and English Life Table No. 2. From 1840 on the mortality rates assumed were those developed by P. H. Jacobson in his paper "Cohort Survival for Generations Since 1840" (*Milbank Memorial Fund Quarterly*, July 1964) but with modifications designed to reflect the fact that since about 1955 the death rates of white males in the United States have shown virtually no change.

ABM July 10, 1969

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The PRESIDING OFFICER (Mr. HUGHES in the chair). The hour of 1 o'clock having arrived, the Chair lays before the Senate the unfinished business, which will be stated.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each reserve component of the Armed Forces, and for other purposes.

The Senate proceeded to consider the bill.

The PRESIDING OFFICER. Pursuant to the previous order, the Chair recognizes the Senator from Nevada.

Mr. CANNON. Mr. President, I ask unanimous consent that I be permitted to suggest the absence of a quorum, without losing my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The assignment legislative clerk proceeded to call the roll.

Mr. CANNON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CANNON. Mr. President, Senator STENNIS on February 28, 1969, appointed me chairman of a special ad hoc Subcommittee on Tactical Air Power of the Armed Services Committee.

Other Members appointed to serve on this subcommittee were Senators SYMINGTON, YOUNG, THURMOND, TOWER, and GOLDWATER.

Senator STENNIS requested that we conduct as searching an inquiry as possible into the request of the military for billions of dollars pertaining to the tactical aircraft of all three services. Specifically, Senator STENNIS requested that we examine the new fighter programs—namely, the Air Force F-15 and the Navy F-14. In addition, he requested that we examine the F-111 program and the many types of tactical air-to-ground missiles that are an important part of our tactical aircraft.

I was pleased and honored to serve as chairman of the Tactical Air Power Subcommittee. We spent many days in receiving extensive briefings from the military. The purpose of these briefings, of course, was to become thoroughly familiar with the intended operational mission of the weapons systems involved their performance characteristics; whether they are on schedule; the magnitude of the costs involved; and other related matters. In particular, it was our purpose to determine the justifica-

tion for initiating or continuing the many programs that fall within the sphere of tactical aviation.

I want to say at the outset that tactical aircraft and the related missiles associated with such aircraft is a very broad area and encompasses many types of individual aircraft and missiles.

I believe it would be well to dwell briefly on an explanation of what is meant by tactical aircraft so that the Senators may have an appreciation of the type of military equipment that I am talking about.

The primary objective of tactical air forces is to assist our ground forces in fighting nonnuclear wars. They achieve this objective by performing three essential missions:

First. Air superiority: The most important mission for tactical air forces is to defend our land forces from attack by enemy air forces. This is done by possessing a superior air-to-air capability over any enemy air force. It is oftentimes referred to as a "dogfight" capability.

Second. Close air support: Tactical aircraft provide firepower in support of our land forces by inflicting casualties and damage on enemy troops and equipment immediately adjacent to our ground forces.

Third. Interdiction missions: Tactical aircraft are used to restrict and impede the enemy's movement of men and materiel. This is done by striking road and rail networks behind the lines, transportation points, supply depots, air bases, and so forth.

It is important to be aware of the fact that the design requirement for an air superiority aircraft are largely dissimilar from aircraft performing the latter two missions, which are air-to-ground missions. The requirement for air-to-air combat dictates that the aircraft be light, fast, highly maneuverable, and so forth. The requirement for carrying a large number of bombs over long distances on air-to-ground missions generally dictates that these aircraft are heavier, slower, and less maneuverable. As a consequence, these aircraft cannot compete in successful air-to-air combat with enemy dogfighters. To survive, they must operate in what is known as a "permissive air environment."

I will discuss later in my speech the vital need for a new fighter. Before doing so, I would like to mention the specific weapons systems that the Tactical Air Power Subcommittee reviewed; some of the pertinent facts concerning these weapons systems; the recommendations that we made to the full Armed Services Committee; and the final action taken by the Armed Services Committee in respect to our recommendations.

The programs reviewed by the Tactical Air Power subcommittee were: The RF-111, a reconnaissance version of the F-111 aircraft; the light intratheater transport—LIT; the AGM X-3 air-to-ground missile; the Cheyenne helicopter; the F-111 aircraft programs; the AX tactical aircraft; the A-7 tactical aircraft; the A-37 tactical aircraft; the Harrier, a new V/STOL aircraft; the Tow antitank missile; the Condor air-to-ground tactical missile; the Maverick air-to-ground

tactical missile; the F-15 new Air Force fighter; the F-14 new Navy fighter; and the A-6 tactical aircraft.

I would now like to discuss very briefly each of these programs for which the services requested very substantial funds in the fiscal year 1970 authorization bill, and the actions taken by the Tactical Air Power Subcommittee.

First. The RF-111: The RF-111 is a reconnaissance version of the F-111 currently being produced for the Air Force. The Air Force requested \$15 million to initiate R. & D. However, our investigation revealed that the total cost for the program would amount to \$821 million. The purpose of the RF-111 was to perform the reconnaissance role for tactical Air Force.

We determined that the Air Force already has purchased 481 RF-4C's; a substantial quantity of RF-101's; the very effective SR-71's, and also has available other reconnaissance equipment. Therefore, it was our recommendation that the justification for this program lacked sufficient merit in that the value to be realized for this large expenditure was not justified.

It was the feeling of the Tactical Air Power Subcommittee, Mr. President, that this was one of the better illustrations of the proper role that the Congress can play with reference to military programs. Although the request for this year was relatively small, namely, \$15 million, and therefore not nearly as substantial as many other on-going programs, we felt that one of the vital roles we could play was to "nip in the bud" programs of questionable justification before our investment became large. After programs have been underway for several years and the investment in Government funds is high, it is extremely difficult to cancel them. After all, to do so would result in the almost complete loss of our previous investment, with no visible return to our defense establishment through increased readiness. This type of decision is all the more difficult where the remaining funds needed to complete are relatively small when compared with large prior expenditures. That is why the Tactical Air Power Subcommittee concentrated particularly had on those programs that the military desired to initiate this year but whose ultimate expenditure over future years would amount to billions of dollars.

The full Armed Services Committee agreed with our recommendation to delete the \$15 million requested to initiate R. & D. for the F-111. Denying the initiation of this program will result in a total savings to the Government of at least \$821 million.

Second. LIT—Light intratheater transport—was a proposed by the Air Force to develop a new tactical airlift aircraft to replace the C-123 and the C-130 aircraft in the mid 1970's. It was to be a tilt-wing, turbo-prop aircraft. The request by the Air Force was small, namely only \$1 million for R. & D.

The Tactical Air Power Subcommittee recommended that funds for this aircraft be denied, and the full committee agreed with our recommendation. The reason for our action was twofold:

S 7860

CONGRESSIONAL RECORD — SENATE

July 10, 1969

First, the C-130 has done an excellent job in meeting this mission requirement in Vietnam and the Department of Defense indicated that, if necessary, it could continue to rely on this aircraft in the 1970's.

Second, the tilt-wing concept of aircraft appeared to our committee to be questionable technologically. Well over \$100 million was spent to build five XC-142 tilt-wing aircraft. Four of the five crashed. Further, Air Force testimony indicated that the fate of nearly every V/STOL aircraft we have built has been the same—they have crashed. Therefore, although the funds request was small, we denied the request. It is extremely important to note that the total cost of this program would have been \$437 million as a minimum for R. & D. alone. No production costs were available, but it is thoroughly reasonable to conclude that the total cost for this program would have exceeded \$1 billion once production costs were included.

Third. The AGM X-3 is a new tactical air-to-ground, standoff missile. The Air Force requested \$3 million to initiate R. & D. The committee denied the request for \$3 million, and the full Armed Services Committee supported our recommendation.

The primary reason for our denial of the fund request was the fact that all three services currently have a large family of air-to-ground missiles either in being or in R. & D., including the Tow, Walleye, Bullup, Maverick, Condor, Shrike, Standard Arm, and so forth.

The Tactical Air Power Subcommittee felt that before any new additional air-to-ground missile development work should be undertaken, that the Department of Defense should study thoroughly the entire family of air-to-ground tactical missiles for all three services. In addition, we felt that the Department of Defense should analyze all existing programs to determine if the requirements for each type is still valid and to insure the elimination of any duplication of military effort.

We did recognize that the AGMX-3 had some proposed performance characteristics that were different from our existing family of weapons. However, we were not persuaded that these few characteristics were sufficient to justify starting out on a program that would cost at least \$200 million for R. & D. alone. The Air Force had no cost information on how much it would cost to produce these missiles. The ultimate cost of this program unquestionably would exceed \$500 million, and therefore we felt that the ramifications of cancelling a \$3 million request for this item in fiscal year 1970 was significant indeed.

Fourth. The Cheyenne: The Cheyenne is a rigid rotor helicopter being developed by the Army for the close air support of its ground forces. They intended to buy 375 Cheyennes. As a matter of fact, 10 test aircraft have been produced, and one of them recently crashed. The program encountered serious technical difficulties. As a result, the Army recently decided to cancel the production contract with the Lockheed Aircraft Corp.

The Tactical Air Power Subcommittee took note of the Army's decision to cancel the contract, and subsequently the full Armed Services Committee eliminated the entire \$429 million contained in the Army's request for the Cheyenne program.

The Army desires to continue R. & D. on the Cheyenne aircraft. However, its request to continue R. & D. came after the Tactical Air Power Subcommittee had completed its deliberations. Therefore, all funds with respect to this aircraft had been eliminated.

I think it would be fair to say, however, that the Tactical Air Power Subcommittee would favor continuing the R. & D. at some reasonable level, because this aircraft represents a quantum jump in the state of the art. Also, it would not seem reasonable to merely junk the nine existing aircraft which we already have paid for. However, as I stated, the Army's revised request for funds was received too late to take action thereon, and all money for the Cheyenne was removed from the bill.

Fifth. The F-111: The F-111 aircraft is the Air Force version of the TFX. The original design mission for this aircraft was the low level delivery of nuclear bombs. In 1964 it was given an additional interdiction mission to deliver general purpose bombs. It is the only Air Force tactical aircraft fully capable of operating at night and in all weather conditions. The present program calls for the purchase of 550 operational aircraft. These aircraft will cost \$6.667 billion—\$1.569 billion for R. & D. and \$5.089 billion for production. The average unit cost is \$12.5 million each, including R. & D., compared with the original estimated cost of \$3.4 million each, made in November 1963.

The subcommittee of course examined in some detail the reasons for the substantial increase in costs. They are as follows: A reduction in the overall program from 1,388 to 550 aircraft; a reduced production rate; many configuration changes to the aircraft; the purchase of different models; drastic inflation during the past 4 years; and contractual under-estimation of cost.

The subcommittee deliberated at considerable length relative to this program. It concluded that the request of the Air Force for \$800.2 million, including \$73 million for R. & D., \$71.4 million for overruns, and \$655.8 million for 68 aircraft, was justified. We were persuaded by the fact that it is the only aircraft that can perform tactical missions at night and in all weather, and has the longest range of any other tactical aircraft. This is an extremely important role for tactical aircraft to perform.

Quite obviously we cannot dictate visual or good weather during periods of conflict with an enemy. We must have an aircraft that can perform at night and in bad weather. No one regrets the cost increases more than I do.

There is one special area relative to the F-111 that the subcommittee also analyzed in detail. That is the rather well publicized Mark II avionics for the F-111D model. The F-111A is equipped

with the Mark I avionics, costing about \$400,000 each.

Mr. GORE. Mr. President, will the Senator from Nevada yield at that point?

Mr. CANNON. I would prefer, if the Senator would not mind, to go through my entire statement and then I will submit to questions on all parts of it.

Mr. GORE. I do not quite understand the term "avionics." I wonder would the Senator explain that to me?

Mr. CANNON. Avionics consist of the sophisticated electronic gear in the aircraft which permits it to carry out its navigational mission, its bombing mission, and so forth. It makes it possible to go to a preselected point and to get there with pinpoint accuracy in the performance of the mission and to return. That is generally referred to in the term of "avionics."

Mr. GORE. I thank the Senator.

Mr. CANNON. Mr. President, it was decided by the Department of Defense to purchase a new Mark II avionics for the F-111D in order to give it the accuracy required to drop conventional bombs. It was estimated to cost \$750,000 per aircraft. The present cost is about \$2 million per aircraft. We registered our vital concern relative to the cost of the Mark II system with the Air Force. Subsequently, the Air Force stated that it intended only to buy those Mark II's which already are under contract and for which funds already have been previously appropriated. Therefore, it was our feeling that approximately \$85 million could be removed from the fiscal year 1970 authorization request for this aircraft, or that additional F-111's could be purchased with this money. The Air Force felt that only about \$60 million could be saved by not purchasing new additional Mark II avionics sets.

The final action taken by the Armed Services Committee was to direct the Air Force to not purchase any additional Mark II sets with fiscal year 1970 funds and to take this money and purchase additional F-111 aircraft therewith.

The Air Force presently is determining the amount of money that can be applied to additional F-111 aircraft procurement and also what type of modified avionics system will subsequently be installed on the remaining F-111D aircraft.

I would like to add that the cost figures that I have mentioned previously refer only to the F-111 A/E/D. We did not analyze the FB-111 program, which is a strategic bomber version of the F-111 and which involves an additional \$1 billion.

I also should point out that the spare parts cost for the F-111 tactical fighter aircraft is now estimated at \$52.7 million. The total estimated cost of the 550 F-111 tactical fighter, including spare parts, will be \$7.2 billion.

Sixth. AX: The AX is a new tactical aircraft proposed by the Air Force to supply close air support for Army ground forces. The Air Force requests \$12 million to initiate research and development this year. The Tactical Air Power Subcommittee recommended, and the Armed Services Committee approved, this request.

July 10, 1969

CONGRESSIONAL RECORD — SENATE

S 7861

During our briefings it was apparent that the Cheyenne helicopter and the AX aircraft were clearly competitive for the same mission. It was clear to the members that we definitely would not support both of these programs because we felt that both of them were not justified. However, when the Army cancelled the Cheyenne helicopter program and after independently reviewing the proposed AX program, we recommended that funds for it be authorized.

It is quite clear that today and in the near future there is a distinct requirement for aircraft specifically designed for the close air support mission. Today in Vietnam we are using multipurpose aircraft such as the A-6, A-7, A-37, F-100, and even the F-4 to perform this role in addition to Army helicopter gun ships. The Air Force states that it will use existing technology and anticipates that the aircraft can be developed quickly and without substantial difficulty. The total research and development costs are estimated at \$137 million which appears high. The total estimated production costs, including spare parts and support equipment, will be \$1.33 billion. Therefore, the total program cost estimate is \$1.467 billion. This is a substantial sum as the members know and, if the program is pursued to completion, will buy slightly less than 1,000 aircraft.

The Air Force estimates that this aircraft can be purchased for approximately \$1.2 to \$1.3 million each.

We have today no specialized aircraft to perform this role. It was the opinion of the subcommittee that we should have such an aircraft for the 1970's. We felt that during the past few years we have concentrated too much on the "multipurpose" aircraft which has degraded our aircraft in the performance of their primary mission. It is just not possible to build one aircraft to perform several missions. Too many compromises are built into the aircraft and, furthermore, numerous additional costs are involved.

Seventh. A-7: The A-7 is a single-seat, single-engine tactical aircraft developed by the Navy for both close air support and interdiction missions. Both the Navy and the Air Force are purchasing this aircraft. The Air Force requested \$348.2 million to purchase 128 aircraft, and \$26.5 million for long-lead items. The Navy requested 27 aircraft to cost \$99.6 million, and \$4.4 million for long-lead items.

It was clear from Air Force testimony that they are not enthusiastic about the A-7 aircraft. It was clear, further, that former civilian officials in the Department of Defense had been very enthusiastic about this aircraft because it was supposed to be economical. Originally, it was to cost slightly over \$1.2 million. Its present cost approximates \$3 million which is comparable to the present cost of the F-4 fighter aircraft. It is clear that the F-4 is our only air superiority-type aircraft. The Chief of Staff of the Air Force testified that the F-4 could perform the close air support and interdiction missions almost as well, if not as well, as the A-7. Therefore, in view of the Air Force's complete lack of enthusiasm for this aircraft, the subcommittee

removed all A-7 funds from the Air Force fiscal year 1970 request, amounting to \$374.7 million. We authorized the Air Force to buy 120 F-4 aircraft for the \$348.2 million and to use the \$26.5 million for long-lead items for the F-4.

The Air Force has already received funds for 74 A-7 aircraft. However, very few of them have been delivered. Most of them are in the very early stages of production. As a result, we denied the Navy's request for 27 aircraft, costing \$99.6 million and the \$4.4 million for long-lead items. We requested the Department of Defense to make the necessary budgetary and other arrangements to permit the Navy to receive out of the previously funded Air Force money the equivalent number of A-7's which would have been procured under the Navy's request in this bill.

The committee, of course, had nothing against the A-7 aircraft. However, its prime mission is to deliver heavy bomb loads over long distances. It does require a permissive air environment in which to operate because it cannot conduct an effective air battle with an enemy fighter. We therefore agreed with the Air Force position that our national defense would be better served by purchasing the F-4 rather than the A-7. Also most importantly we believe that additional costs incurred, if any, would be nominal indeed.

Subsequent to the testimony by the Chief of Staff of the Air Force the committee eliminated all A-7 procurement and recommended purchase of F-4 aircraft instead. I should add that the Chief of Staff of the Air Force called on me yesterday to furnish information recently developed by the Air Force.

The information indicates that after a new reappraisal, for various reasons, including financial, the Air Force prefers to continue purchasing A-7's. I have not had time to completely evaluate this most recent Air Force information nor to discuss it with other members of the subcommittee and am not prepared to make any other recommendation. I firmly support the committee's position.

Eight. A-37: The A-37 is a tactical aircraft being purchased by the Air Force for the close air support role. It is a modified T-37-B which is a twin jet trainer aircraft. The Congress has already authorized funds for several squadrons which are to be turned over to the Vietnamese Air Force. The \$38.5 million that the Air Force requested in fiscal year 1970 for 96 A-37-B's were for active Air Force units. However, deliveries of these aircraft would not commence until late 1970. More important, their use in the active Air Force is planned to be confined to Southeast Asia because of their relatively limited capabilities. Upon termination of the war in South Vietnam they are to be turned over to the Air National Guard. The Tactical Air Power Subcommittee, with the subsequent concurrence of the full Armed Services Committee, reduced the request of the Air Force from 96 to 36 A-37's. We felt that introducing large numbers of these limited capable aircraft into the inventory was not justified. Therefore, the Air Force request was reduced by \$22.5 million from \$38.5 million to \$16 million.

Ninth. Harrier: The Harrier is a V/STOL aircraft developed by Hawker-Siddeley in England which the Marine Corps desires to purchase. It requested \$57.6 million for 12 aircraft. The Tactical Air Power Subcommittee reviewed this program in considerable detail. One of the very attractive features of this program is the fact that it will require no research and development funds. The aircraft has already been developed. The Marine Corps will conduct extensive operational tests with the 12 aircraft. They persuaded us of the merit of this program because of the aircraft's ability to operate from small helicopter-type landing pads whether these pads are on land or on board ship.

Another persuasive factor relative to this request is that the Marine Corps gave up the purchase of 17 F-4's for a comparable amount of money. Therefore, additional Government funds were not involved.

The Tactical Air Power Subcommittee felt that, inasmuch as the military has never had any V/STOL operational aircraft, this program should be pursued to determine once and for all the military advantages of this type of aircraft. All previous V/STOL aircraft were R. & D. prototypes.

We were concerned about the balance-of-payments aspects. The Marine Corps assured us that it had studied this aspect thoroughly and made the necessary arrangements so the balance-of-payments impact would be negligible, if any.

Tenth. Tow: The Tow is a wire-guided antitank missile. It also has capability against hard targets. The Army requested \$2.1 million for research and development and \$156 million for procurement. The subcommittee was impressed with the capabilities of this missile, which can be used on the ground and was also planned to be installed on the ill-fated Cheyenne helicopter.

The subcommittee did feel that the Army was building up too rapidly the quantities of these missiles to be purchased. Therefore, we recommended, and the Armed Services Committee concurred, a reduction of \$14 million from the procurement request; namely, from \$156 to \$142 million.

This is another in the large family of tactical missiles launched both from the air and from the ground which we felt the military might well be buying excessive types and quantities. Therefore, I am herewith requesting that the military completely review this family of weapons.

Eleventh. Condor: The Condor is an air-to-ground tactical missile being developed by the Navy. The Navy requested \$12.9 million to continue research and development. This program is over 1 year behind schedule because of technical difficulties. We were extremely concerned about this schedule slippage and whether or not this missile will be a successful addition to our military arsenal. We did not feel it wise to deny the \$12.9 million which would in effect cancel the program, inasmuch as we have already invested over \$100 million. The current estimate is that total research and development will cost \$15 million.

S 7862

CONGRESSIONAL RECORD — SENATE

July 10, 1969

If significant progress is not made this year on this program then I would certainly recommend a searching reappraisal next year, and specifically before we authorize any production funds for this missile.

Twelfth. **Maverick:** The Maverick is the new air-to-ground tactical missile being developed by the Air Force to kill enemy tanks and small fixed targets. The Air Force requested \$39.6 million to continue research and development in fiscal year 1970. The Tactical Air Power Subcommittee and the full Armed Services Committee approved continuation of this program. Three primary reasons for the Maverick are that, first, it can attack at lower altitudes and has a better range-speed capability; second, being a smaller weapon, more missiles per aircraft can be carried, and third, being a smaller weapon, it is less expensive.

The total research and development program is estimated at \$142.8 million, of which \$70 million has been authorized in prior years. The total production cost is estimated at \$306 million. Our concern is not with the Maverick but the principle that the services purchase fewer types of air-to-ground missiles. This is an additional missile in the family of air-to-ground missiles. I am herewith requesting the Department of Defense to analyze it thoroughly to see if there is any duplication with other programs. This program is on schedule and therefore we authorized funds for it to continue in research and development.

Thirteenth. **A-6:** The A-6 is a tactical aircraft developed for the Navy. It is the Navy's only night, all-weather capable aircraft. They requested \$62.5 million for 12 aircraft. It has proven itself in many combat sorties over North Vietnam. The Navy requested 12 aircraft for attrition; namely, to replace forecast losses. We were impressed with its combat performance and authorized the aircraft.

Mr. President, because of their importance, I left the following programs until last: The Air Force's F-15 and the Navy's F-14. The F-15 is a new air-to-air superiority fighter to be developed for the Air Force. It is to be operational by 1975 and will replace the F-4. The Air Force's request was for \$175 million to initiate research and development in fiscal year 1970. The total program will cost an estimated \$5.14 billion, including \$1.080 billion for research and development and \$4.060 billion for production, spares, and ground support equipment. The estimated unit cost is \$10 million per aircraft.

The F-14 is a new air superiority fighter being developed for the Navy. It also must perform the Fleet Air Defense mission, that was intended to be performed by the F-111B. The F-14A will use the P-12 engine and the Phoenix missile developed for the F-111B. The F-14B will incorporate a new advanced technology engine which will also be the same basic engine to be used on the Air Force F-15. The F-14C will have new avionics. It is to be a variable sweep-wing aircraft with a two-man crew. The Navy requested \$464 million; namely,

\$225 million for research and development, and \$239 million for procurement, including six aircraft. The total estimated cost for the F-14 program including all three models will be \$6.4 billion, including \$1.3 billion for research and development and \$5.1 billion for production cost to purchase 463 aircraft. The cost per aircraft including research and development is estimated at \$15 million.

Mr. President, I would now like to discuss why, in my opinion, it is so critical that the United States pursue the development of these two aircraft and why we need to commence these programs this year when economic considerations are so important. To be able to fight a successful conventional war it is essential that we have an air superiority aircraft that can dominate the battlefield. This requires an aircraft that can meet and defeat any enemy aircraft in air-to-air battle. This in turn permits our other tactical aircraft to support our ground forces by bombing enemy troops, supply lines, etc. Without an air superiority fighter capable of protecting all of our other tactical aircraft which require a "permissive" air environment we would be faced with a very dangerous situation.

The only aircraft in our inventory today with an acceptable air-to-air combat capability is the F-4. This aircraft has proven to be an excellent weapon system. However, it is critically important to recognize that its technology dates back to 1955. In an age of rapidly advancing technological achievements, it is not only questionable but doubtful that it could cope successfully with potential adversary aircraft in the mid-1970's.

The most likely enemy air superiority aircraft threat today is the MIG-21. Extensive testimony by the Preparedness Investigating Subcommittee last year established that the F-4 was at least equal in performance to the MIG-21 at normal fighting altitudes. Our best military experts state that today, therefore, there is relative equality between the F-4 and the MIG-21.

We are then faced with several important issues: What has the Soviet Union done recently and what will it do in the future with respect to fighter aircraft development? Most importantly, what air-to-air fighter capability will the Soviets possess by the mid-1970's? Can the United States continue to rely upon the F-4 in the mid-1970's? The answer provided by all recognized experts is that the F-4 will be technologically outmoded by the mid-1970's and, therefore, we cannot rely upon the F-4 to achieve or maintain supremacy in air-to-air combat with a potential enemy.

The informed experts agree that an aircraft designed on a technology of the 1955 time frame will be totally inadequate to cope with the highly sophisticated aircraft of potential enemies in the mid-1970's. As the Preparedness Investigating Subcommittee's report unanimously concluded in October 1968:

We have grave concern over the ability of the United States to establish and maintain control of the air during the 1970's.

It is well recognized that if the air space is controlled, then the battle area

and surrounding terrain is controlled. If the air space is not controlled, especially against a first-class air power, then tactical aircraft designed for air-to-ground roles will be relatively ineffective in the performance of their missions. Even modern aircraft designed for air-to-ground roles require a "permissive" air environment, that is, no heavy enemy fighter opposition, if they are to carry out their mission with success.

The committee is compelled to point out that for the last few years the United States has concentrated on the development of "multipurpose" missions, including air-to-air combat and air-to-ground missions. The requirements for an aircraft to be capable of performing "multipurpose" missions unquestionably compromises an aircraft in the performance of its primary mission, irrespective of the nature of its primary mission. It is the committee's judgment that we now concentrate on the development of the fighter aircraft specially configured and confined to the "air superiority" role. We have long neglected undertaking a new program in this area, relying exclusively on the capability of the F-4.

Now let us examine in unclassified form the development by the Soviet Union to improve on the MIG-21 which we already stated is equal in fighting performance to our F-4.

The Soviets since 1955 have flown 18 new models of modern-type aircraft. Obviously, not all of these different models will go into production or become operational. However, it does afford the Soviets with a wide selection of high performance flying prototypes from which it can select the very best for production.

Seven of the 18 new models were seen for the first time by the free world at the July 1967 Moscow airshow. It was at this show that we first saw the Foxbat, the present holder of the world's speed record. Intelligence sources estimated that at least three of the new fighters seen for the first time at that airshow are currently in or will go to production.

It is a well established fact that during the past decade the Soviet Union has introduced at least one new type operational fighter every 2 years. A total of six, with 11 models; namely, five models of the Mig-21 Fishbed; two models of the Fishpot, one model each of the Fitter, Firebar, Fiddler, and the Flagon.

It is also well established that the Soviet Union has concentrated its development and production efforts on tactical aircraft specifically oriented for the air superiority role. In general, this means it concentrates on aircraft that are light, fast, and highly maneuverable.

In contrast, with Soviet emphasis on producing many types of aircraft devoted to control of the air, the United States has developed and is relying completely on only one air superiority weapon system—the F-4.

It is fundamental to conclude that the new Soviet aircraft flown in 1967 by the Soviets are and will be superior to the Mig-21. Further, when they become operational they will be superior to the F-4. After all, a nation with its eyes on the future and on what potential adversaries

July 10, 1969

may do will not develop new weapon systems that are inferior to existing models.

It is important to note that all seven types of tactical aircraft flown by the Soviet Union at its July 1967 airshow were designed before 1964. It is extremely reasonable to assume that the Soviets since the airshow have continued its design efforts to improve upon the impressive aircraft flown at the 1967 airshow. It is also reasonable to assume that new and improved types are now being flown or are in advanced stages of development. The U.S.S.R. does not make frequent announcements of its progress in aircraft or other military fields of endeavor.

I earnestly believe that the high level of effort being undertaken by the Soviets during the past few years and a conservative assessment of its future activities dictates that the United States must, of necessity, seriously concern itself today with the development of new air superiority fighter aircraft.

A modern fighter takes several years to develop and produce. This is an inevitable and inescapable fact. Therefore, even though it is decided to approve and fund a new fighter today, it will be 1975 before it is operational. There is one exception to this rule: The F-14A will be operational at a substantially earlier date because it will use the existing engine and avionics technology developed for the F-111B program.

Mr. FULBRIGHT. Mr. President, will the Senator yield for a brief question at that point?

Mr. CANNON. I would prefer not to yield until I have completed my statement. Then I shall be happy to yield for questions on anything I have pointed out.

Mr. FULBRIGHT. Very well. I did not know which the Senator preferred.

Mr. CANNON. It is important to point out that the United States and its free world allies have approximate numerical parity in tactical aircraft with the Soviet Union and other Communist aligned nations.

People also will ask the logical question: Why do we need both the F-14 and the F-15?

I would like to state that the F-15 will be developed by the Air Force for the sole mission of achieving a maximum air-to-air capability. As such it will be light, fast, and highly maneuverable. Most importantly, it would not be able to operate from an aircraft carrier. If it were given this assignment, it would of necessity have to be structurally substantially heavier and it would be compromised in other respects in order to have the necessary operating characteristics required by the Navy. The F-15 will also have only a single pilot and will have the minimum avionics necessary to perform its mission.

The F-14 Navy fighter of necessity must be designed structurally to operate from a carrier. Anyone who has witnessed carrier landings and catapult launchings will recognize the structural integrity requirements for such an aircraft. Also, most importantly, the operating environment of carrier task forces requires that the F-14 must perform the fleet air defense mission. This requires

that it be able to fly long distances and to loiter for substantial periods to protect the carrier against incoming enemy bombers, fighter aircraft, missiles, and so forth. It also requires a more sophisticated avionics system to detect incoming enemy aircraft.

The F-14 will fill the role of the canceled F-111B in performing the fleet air defense mission and the F-14B will replace the F-4 fighter aircraft in the air superiority role in the mid-1970's. The Navy has limited space aboard its carriers. Therefore, it must design its fighter aircraft to perform multiple missions. The threat it faces includes not only attacks from bombers and missiles but from highly maneuverable fighters as well. The Navy must defend against this multiple threat with limited numbers of fighters. Therefore, this forces their design to accommodate the multiple capabilities required. As a result, the Navy F-14 will be a larger aircraft with two crew members. It is unnecessary and would be very unwise to install these various requirements into the Air Force's F-15.

An important factor in developing both aircraft is that we will have two air superiority aircraft in case either program should run into unforeseen difficulties during research and development. Perhaps the most important factor is that each service will have an aircraft optimized for its own operational environment without compromise to the other. The F-111 is a classic example of compromise—neither the Navy nor the Air Force realized the performance goals which were originally envisioned for that aircraft.

It is also significant that the advanced technology engine presently under competitive development will be basically the same for both the F-14B and the F-15. A common engine makes sense but a common air frame does not.

In conclusion, Mr. President, with respect to the actions of the Tactical Airpower Subcommittee and the Armed Services Committee, I feel it is imperative to point out to the Members precisely what our national policy is. It is that our military forces are charged with the responsibility of being able to fight a war of indefinite duration in Asia—as we are currently doing in South Vietnam—and at the same time have the capability to wage a large-scale conventional NATO war for a stipulated period of time. The exact duration is classified. The responsibility of the Military Establishment is to insure that we have on hand sufficient military forces and hardware at all times to successfully carry out this very important responsibility. If we do not provide our military leaders with sufficient forces to meet our stated national policy objectives then I feel it essential that, first, our stated national policy objectives should be changed or, second, we should recognize that national policy objectives may exist which the military is incapable of carrying out. I feel, Mr. President, this is a most important principle which must be understood by all the Members of Congress. Reducing the Military Establishment in funds is a desirable objective but we must know what risk we will

run when we do so. I am not stating that the funds requested by the military are sacrosanct or justified, but I do feel they should be scrutinized most carefully before reductions are made. It was with this guiding principle in mind that the Tactical Airpower Subcommittee acted under the mandate from Senator STENNIS and did its very best to conduct a conscientious review of the military programs presented to it.

In summary, Mr. President, we reviewed 15 major programs in detail. We reduced the authorization request in the tactical area by \$588.5 million. I would like to emphasize that three of the programs that we refused the military permission to initiate R. & D.; namely, the RF-111, the Light Intratheater Transport, and the AGM X-3, that although only \$18 million was requested and denied for these three programs in fiscal year 1970, that the total cost of these three programs if they had been permitted to proceed to completion would have cost the Government over \$2.3 billion.

STATEMENT ON ADVANCED MANNED STRATEGIC AIRCRAFT

Mr. President, at this point I would like to make a short statement relative to the action taken by the Armed Services Committee on the AMSA—Advanced Manned Strategic Aircraft.

The budget, as revised by Secretary Laird and as approved by the committee, contains \$95.2 million in research and development funds for AMSA. If this is approved by the Congress, the fiscal year 1970 AMSA program will be \$100.2 million since an additional \$5 million is available from fiscal year 1969 funds.

The AMSA development which Secretary Laird approved in March 1969 would lead to an operational capability in the latter half of the 1970 decade. AMSA, in the opinion of the committee, will be badly needed at that time as a replacement for the aging B-52G and H models.

I should want to emphasize, however, that the approval of fiscal year 1970 budget request does not commit the United States either to full scale development or to production and deployment of AMSA. It does accelerate the engineering and development process. It does not provide funds for a full scale development contract.

I assure the Senate that the planned AMSA program includes a number of milestones at which the progress of the program can be assessed and decisions made as to whether the program should continue as planned. The Defense Department plans to use these reviews to take advantage of all technological advances up to that point and to reconsider our approach in the light of the updated information on the likely threat.

The basic reason for commencing the AMSA program is to maintain a flexible overall strategic force, taking account of any possible vulnerability of any part of our missile force, and thereby complicate Soviet defense plans by our progress toward a new bomber with improved penetration capability.

AMSA will contribute to the attainment of U.S. military and political objectives by the controlled application of

July 10, 1969

offensive air power over the complete range of possible conflict situations, either conventional or nuclear.

Studies have shown that the most cost effective approach to maintaining our general war assured destruction and damage limiting capabilities in the face of Soviet advanced defenses is a mixed force of bombers and missiles. A mixed force insures against unexpected Soviet developments or tactics that might reduce the deterrent or war-fighting value of either bombers or missiles alone. A mixed force minimizes any relative Soviet advantage in a protracted but limited nuclear exchange.

In addition, a requirement for selective response and precision delivery may exist in either a nuclear or a nonnuclear conflict where constraints preclude the commitment of U.S. missile forces. Studies, including our experience in Vietnam, have demonstrated that large, high performance bombers can provide cost effective augmentation of our general purpose forces in nonnuclear conflicts.

Since AMSA is a completely new design, its physical characteristics can be tailored to assist in penetration. It is difficult now to determine just what will be done in this area, and how the actions will contribute to penetrability. However, the problem will be thoroughly investigated before the final design of AMSA is frozen for the purpose of insuring that the best trade-offs of survivability and penetration are made.

The committee has recommended that the entire amount in fiscal year 1970 for AMSA be approved and we hope that this will be sustained by the Senate.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. CANNON. I yield.

Mr. STENNIS. Mr. President, I commend not only the distinguished Senator from Nevada, but also the full committee for the splendid work he and the members of the committee have done since they started on the mission in about the middle of February. The Senator from Nevada has taken the lead in it, but every other committee member has made a very substantial contribution.

We have in this analysis of the work of the Senator one of the fine presentations of the year in the military field, a fine analysis, a fine summary, and, I think, sufficiently sound conclusions.

I wish there had been time—but the Senator did not have time—to have copies of the speech available in advance so that it could have been studied and followed by Senators as it was delivered. I will point out quite briefly a few of the items the Senator did go into.

First, on page 6 of the copy I have, the Senator analyzes the problem that goes with AGM X-3. The Senator makes recommendations in connection with that. Even though only \$3 million is involved now, it was a very fine piece of work the Senator did.

I refer now to page 25 of my copy, near the end of the speech, where the Senator points out that the actual operations of the committee on the bill reduced it by \$588 million. The potential costs of the programs would have been \$2.3 billion.

As a Member of the U.S. Senate, that is my idea of the way to get at a number of these expensive programs and nip them in the bud if they are not needed, if they are duplicative, or if they do not show prospect.

I want to have our feelings about the entire bill reflected here and show what has been done by all the committee members who have worked on the matter.

I not what the Senator said about the AMSA, and I know he made a contribution there, even though that was not a subject that the subcommittee had a chance to get into fully.

The Senator is, of course, eminently qualified to speak on that item, but the funds in the bill do not commit Congress to that bomber program beyond the research and development.

That is what the Senator has spelled out here as I understand it. Am I correct?

Mr. CANNON. The Senator is correct. Previously a letter from Secretary Foster to the Senator from Wisconsin (Mr. PROXMIER) was printed in the CONGRESSIONAL RECORD. That letter made the situation absolutely clear that this was no production program, that this did not authorize production and did not authorize contract definition.

Mr. STENNIS. I thank the Senator again and point out that the ranking minority member of the committee, the Senator from South Carolina (Mr. THURMOND), who served on the subcommittee, is going to seek the floor shortly.

Mr. President, the printed record released today of hearings on Intelligence and the ABM before the Senate Foreign Relations Committee has been cited by the chairman of the Senate Foreign Relations Committee as evidence there is disagreement between Secretary of Defense Laird and Director of the Central Intelligence Agency, Mr. Helms, in their assessment of the strategic threat which makes the ABM necessary.

The distinguished chairman of the Foreign Relations Committee maintains that the testimony now of record tends to establish a disagreement between the intelligence estimates of the Department of Defense and the CIA. I have not seen the testimony and therefore do not comment on it. However, after several press reports on the alleged disagreements appeared at the time I was preparing, as chairman of the Senate Armed Services Committee, for debate of the Defense authorization bill, it became clear to me that the Members of the Senate should have available for their consideration the assessment of the strategic threat and that we should know the extent of agreement or disagreement on the threat between the Department of Defense and the CIA.

For that reason, I wrote to Secretary Laird, asking him to state his definition of the threat and whether his definition and evaluation is concurred in by the CIA, particularly Mr. Helms. At the same time, I wrote to Director Helms, asking him to respond appropriately indicating his agreement or disagreement with Mr. Laird's response.

Both Secretary Laird and Mr. Helms have replied and both have made it clear there is no disagreement between them as to the strategic threat.

This makes it very clear to me and I hope to other Senators that there is no disagreement on this intelligence issue. I ask unanimous consent that my letters to Secretary Laird and Mr. Helms and their replies to me be placed in the RECORD at this point.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

JULY 3, 1969.

Hon. MELVIN R. LAIRD,
Secretary of Defense, The Pentagon, Washington, D.C.

DEAR MR. SECRETARY: In preparation for Senate debate on the Defense Department Authorization bill which will include authorization of funds for the Anti-ballistic Missile System, it is important that I know the assessment of the Intercontinental ballistic missile threat and the degree of agreement, or disagreement within the intelligence community.

Therefore, I would appreciate your immediately providing me with the following:

(a) Your definition and evaluation of the ICBM threat facing the United States from any and all nations.

(b) Whether your definition and evaluation is concurred in by the Central Intelligence Agency, particularly Mr. Richard Helms, Director, and if there is disagreement, to what extent and in what regard.

With best wishes, I am.

Sincerely yours,

JOHN STENNIS,
Chairman, Senate Armed Services Committee.

JULY 3, 1969.

Mr. RICHARD HELMS,
Director,
Central Intelligence Agency,
Washington, D.C.

DEAR MR. HELMS: The enclosed letter to Secretary of Defense Melvin Laird is self-explanatory.

I emphasize the necessity of having for the debate on the Defense Authorization Bill the assessment of the Intercontinental Ballistic Missile threat and whether or not there is disagreement within the intelligence community, particularly, as between the Department of Defense and the CIA.

Therefore, I would greatly appreciate if you would respond appropriately after consultation with Secretary Laird indicating your agreement or disagreement with any aspects of his response.

With every good wish, I am

Sincerely yours,

JOHN STENNIS,
Chairman,
Senate Armed Services Committee.

THE SECRETARY OF DEFENSE,
Washington, D.C., July 8, 1969.

Hon. JOHN C. STENNIS,
Chairman, Committee on Armed Service, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: I am pleased to have this opportunity to respond to your letters of July 2nd and July 3rd. In your letter of the 2nd, you refer to certain newspaper accounts quoting members of the Foreign Relations Committee to the effect that I had changed my position concerning a potential first strike threat from the Soviet Union during the period of the mid-1970s. Let me first state categorically that my position on this matter has not changed. As a matter of fact my concern about the Soviet threat to our deterrent has been stated and restated before your Committee and every Committee of the Con-

July 10, 1969

gress before which I have addressed this issue since assuming office on January 20th. In a letter to the Chairman of the Senate Foreign Relations Committee dated July 1, I addressed this question and restated once again the essentials of my position concerning this matter. I enclose a copy of my letter to the Chairman of the Foreign Relations Committee for your information.

In your letter of July 3rd, you asked for my definition and evaluation of the Intercontinental Ballistic Missile Threat facing the United States from any and all nations.

Since January 1969, there have been several new developments in the Soviet Strategic Forces, all tending to confirm the statements I made in my first appearance before your Committee concerning the threat to the national security of the U.S. in the mid-1970s. In summary, these developments are: continued deployment of the SS-9, SS-11 and SS-13; testing of the SS-9 with multiple re-entry vehicles; continued deployment of the Polaris-type submarine; continued efforts to improve anti-submarine warfare capabilities; and continued testing of the improved ABM.

During 1969, the deployment of the SS-9 has continued at about the same rate as in 1967 and 1968. If this rate of deployment is continued, the USSR could have about 400 SS-9 operational launchers deployed by the mid-1970s.

The Soviets now have well over 1200 ICBM launchers completed or under construction. This includes the older SS-7s and SS-8s as well as the SS-13s, SS-11s, and SS-9s. All of these will be operational before mid-1971.

Three tests of the SS-9 with multiple re-entry vehicles have taken place since March. These three tests were to the mid-Pacific covering a distance of 5,100 nautical miles. There is some difference of opinion in the intelligence community concerning the precise nature of these tests but all are agreed that the USSR has the capability to deploy hard target multiple independently-targeted re-entry vehicles by the mid-1970s.

At least eight or nine new Y-class Polaris-type 16 tube ballistic missile submarines have already been launched and several are believed to be operational. Continued deployment at the current rate will allow the USSR to match the U.S. Polaris fleet by the mid-1970s.

Testing of the improved Soviet ABM intercept continues.

In short, we believe the USSR has the capability of acquiring, by the mid-1970s; some 400 SS-9 ICBMs, multiple independently-targeted re-entry vehicles, SLBMs matching the U.S. Polaris fleet, ICBM re-targeting capability.

This capability would constitute a very grave threat to our Minuteman forces and our bomber forces in the mid-1970s. As a consequence, the deterrent to nuclear warfare would be eroded seriously.

Although the potential Chinese ICBM threat has slipped somewhat, it is estimated that a first generation ICBM could reach Initial Operational Capability by 1972. By 1975 operational ICBM launchers might fall somewhere between 10 and 25. During the 1970s, China could develop a significant production program in thermonuclear weapons and associated delivery systems and, consequently, would represent a considerable threat to U.S. bases and allies in Asia, and a growing threat to the continental United States.

If I may, Mr. Chairman, I would like to sum up for you my position with regard to the Soviet threat as it relates to the urgent need for approval of the Safeguard ABM proposal.

As a Defense planner, as well as a Cabinet officer and a member of the National Security Council, I have a special role in the use of intelligence provided by the intelligence community. It is my responsibility to propose policies and plans which will fulfill the

mission assigned to the Department of Defense, one aspect of which is to deter the Soviet Union from starting a nuclear war.

As a part of this responsibility, I must apply my own best judgment to the available intelligence to ensure that the President's policies and the mission of the Department of Defense are fulfilled. Consequently, I must consider not only what are the probabilities of future development and the state of current activities as expressed in the assessments of the intelligence community, but also the possibilities of future developments based on available current information.

That is why in my testimony before the Congress and in my public comments I have stressed the possible capabilities of the Soviet Union for the future in terms of relative strategic power. My discussion of Soviet capabilities has been derived by projecting to future years their demonstrated capabilities for production and deployment of strategic weapons and by making allowances for the rate of technological achievement.

It is my carefully considered judgment, in which all of my principal military and civilian advisors agree, that the Soviet Union could achieve, or reach a position where they believe they have achieved, a capability to gravely weaken our deterrent by the mid-1970s—if we do nothing now to offset it. This judgment is based upon the following conclusions:

1. The Soviet Union could acquire a capability to destroy virtually all of our Minuteman missiles. To be able to do so, in the present context they would need: (a) at least 420 SS-9s with three independently-targeted re-entry vehicles which have a capability of separating from one another by some relatively small number of miles; (b) each of these re-entry vehicles would have to have a warhead of approximately 5 megatons and a reasonably good accuracy; (c) the SS-9s would have to be retargetable; and (d) the range would have to be sufficient to reach all of the Minuteman silos.

2. The Soviet Union could acquire a capability to threaten severely the survival of our alert bombers. To do so in the present context they would need: (a) a force of about 15 Y-class (Polaris-type) submarines on station off our shores; and (b) the ability to launch the missiles on a depressed trajectory.

3. Although we confidently expect our Polaris/Poseidon submarines to remain highly survivable through the early to mid-1970s, we cannot preclude the possibility that the Soviet Union in the next few years may devise some weapon, techniques or tactic which could critically increase the vulnerability of those submarines. Nor can we preclude the possibility that the Soviet Union might deploy a more extensive and effective ABM defense which could intercept a significant portion of the residual warheads. In any event, I believe it would be far too risky to rely upon only one of the three major elements of our strategic retaliatory forces for our deterrent.

In summary, Mr. Chairman, it is entirely possible that the Soviet Union could achieve by the mid-1970s a capability to reduce, in a surprise attack, our surviving strategic offensive forces below the minimum level required for "Assured Destruction," and thus gravely weaken our deterrent. In my judgment, the overall strategic balance between the United States and the Soviet Union is much too close to run that risk. Therefore, something more must be done now to ensure a favorable strategic balance in the mid-1970s and beyond.

Short of achieving a workable agreement with the Soviet Union on the limitation of strategic armaments, which will take some time, we are convinced that the approval of Phase I of Safeguard would be the most prudent and economical course we could

pursue at this particular juncture. This action would place us in a position to move forward promptly not only with the defense of our Minuteman and bomber forces should the Soviet threat develop as I have described, but also with the defense of our population against the Chinese ICBM threat should that emerge during the next few years.

In your letter of July 3rd, you also asked whether the Director of Central Intelligence, Richard Helms, concurs in my formulation of the threat. I have furnished a copy of this letter to Director Helms and he assures me that he has no disagreement with the statements concerning the potential Soviet and Chinese Communist strategic capabilities, as seen from the intelligence point of view.

Sincerely,

MEL LAIRD.

CENTRAL INTELLIGENCE AGENCY,
Washington, D.C., July 8, 1969.

HON. JOHN STENNIS,
Chairman, Committee on Armed Services,
U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: In your letter of 3 July 1969 to Mr. Helms, you requested that he consult with Secretary Laird on Secretary Laird's response to your inquiry concerning the strategic threat to the United States.

Although Mr. Helms is presently out of town, he has read the text of Secretary Laird's reply. Mr. Helms wishes to assure you that he has no disagreement with the statements in Secretary Laird's letter to you of 8 July concerning the potential Soviet and Chinese Communist strategic capabilities, as seen from the intelligence point of view.

Sincerely,

R. E. CUSHMAN, Jr.,
Lieutenant General, USMC, Acting
Director.

Mr. TOWER. Mr. President will the Senator yield?

Mr. CANNON. Mr. President, the Senator from Tennessee previously asked me to yield.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. GORE. Mr. President, I yield to the Senator from Arkansas.

The PRESIDING OFFICER. The Senator from Arkansas is recognized.

Mr. FULBRIGHT. Mr. President, I thank the Senator for yielding.

The Senator has made a very excellent speech. I congratulate him for it. I should like to ask him one or two questions for my own information.

What the Senator had to say about the long leadtime being necessary reminded me of an article which was published in the paper about a recent air show in Paris. It noted that the Swedes had a fighter called the "Begar." I think in English it means a thunderbolt.

It surprised me that this small country of 7½ million people had produced this particular aircraft which was perhaps the most modern, best, and newest model fighter in the air show. Did the Senator know about that?

Mr. CANNON. I did not happen to attend the air show this past year.

Mr. FULBRIGHT. The article was in the paper.

Mr. CANNON. However, I must say that the last time I did attend the air show, the Swedes exhibited what appeared to be a fine model. So I am satisfied that they are doing some work along that line.

Mr. FULBRIGHT. I was surprised that such a small country would be able

July 10, 1969

to do this. These are rather expensive programs.

Mr. CANNON. They are. The Senator recalls that in my talk I covered the Harrier aircraft, which is produced by the British. The Marines are trying to get that aircraft.

I saw the aircraft perform in Washington a while ago. It was quite impressive. The Marines are anxious to purchase 12 of those aircraft so that they can experiment and find out if there is a use for that plane.

Mr. FULBRIGHT. I would think that would be an efficient way to do it, if I might offer a layman's point of view.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. CANNON. I yield.

Mr. GOLDWATER. Is it not true that the United States has some money in the development of the Harrier?

Mr. CANNON. Yes; the United States has. I will supply the exact figures a little later. It is either \$50 or \$100 million in the development of the Harrier, in the predecessor to the Harrier.

Mr. FULBRIGHT. It is sort of a joint venture.

Mr. CANNON. It was a model different from the Harrier itself, and it went principally into the engines. It was in a 1127 model. I will supply the details in a moment.

It was \$50 million. That was in the predecessor to the Harrier, which was being developed by the British. It was called the B-1127. Most of the \$50 million in this joint effort went into the research and development for engines that could be used for this type of program.

Mr. FULBRIGHT. Near the end of his speech, the Senator referred to something which interested me very much. I know that I do not know as much about it as I should. The first time it was called to my attention, it was part of the so-called posture statement of the former Secretary of Defense, Mr. McNamara.

If I understood the Senator correctly, he referred to what I supposed would be called the "mission" or the responsibility of the Military Establishment to fight a war, a full-fledged war, in Asia, and to be prepared to fight one in Europe and, if I recall correctly, to be prepared also to fight at least a smaller war or to take care of an uprising or insurgency in Latin America.

What I wish to ask the Senator is this: Does the Committee on Armed Services participate in making that kind of estimate of what our posture should be, or is that done strictly by the Secretary of Defense?

Mr. CANNON. That is a matter of national policy.

Mr. FULBRIGHT. Who determines it?

Mr. CANNON. Our committee does not participate in the determination of that national policy. It is presented to us as being a matter of national policy, and, therefore we try to implement the services requirements so that they can carry out their mission.

Mr. FULBRIGHT. I can understand that, if that is the policy and it is presented to the committee. Of course, I think the Senator is quite right. What

I was inquiring about was the origin of the policy. It seems to me that this is quite an ambitious policy to take upon our shoulders alone—this extensive commitment.

I am reminded of the refrain that the Senator from Missouri has made rather prominent in talking about over-commitment, with which I completely agree.

It strikes me that if this is the policy of the Government, it may be that we have commitments beyond a reasonable expectation of our capacity in view of our needs at home. I do not say this in any critical way, because I do not know who produces this policy, who starts this, whether it starts with the Secretary of Defense, whether it is a product of the National Security Agency, or just who formulates these contingencies we are expected to meet.

The way it was described to me—and I tried to understand it as best I could from this posture statement—is that, having adopted this policy, then we must assume, in order to plan, the worst possible contingency that could arise out of these three areas. That seems to present an almost unlimited demand.

Mr. CANNON. That is why I said we have either to change our national policy objectives, if we are not going to try to support them, or to proceed on the assumption that national policy objectives may exist which the military is incapable of carrying out.

Mr. FULBRIGHT. I agree with the Senator completely on what he has said. I raised this matter because he mentioned it, not because I am prepared to go into it too far. I raise the question to ask if this is perhaps one of the sources of the difficulty that confronts some of us. This national policy is very closely related to foreign policy. I understand that a discussion occurred in the Chamber yesterday, of which I was not aware until I read the RECORD, about the proper lines between foreign policy and armed services policy. This is an example, it seems to me, of how difficult it is to disentangle them.

If it is going to be our policy to defend the whole world or to be prepared to fight all over the world, or the three major areas, we are taking on a tremendous responsibility which I question whether we are quite capable of fulfilling. I would not want to put a requirement up to the military that is beyond its reasonable capacity to fulfill. When I say "reasonable," I mean in view of all the needs of the country at home.

I congratulate the Senator for bringing up that point. I think it is a very important point—it has never been expressed sufficiently in the past—as to what is the objective or what is the policy of the Government with regard to our military requirements.

Mr. GORE. Mr. President, will the Senator yield?

Mr. CANNON. I yield.

Mr. GORE. Mr. President, first, I should like to express satisfaction and gratitude to the chairman of the committee, the senior Senator from Mississippi, for his leadership in promoting subcommittee consideration and responsibility.

We have heard now two major efforts, informative speeches, as a result. Today I have listened intently to a very able and distinguished Senator speak on the aircraft program. I am impressed with the inadequacy of my knowledge, but I must acknowledge that I know far more than I did before the Senator from Nevada began, and I thank him. It was an able, informative address, of great service to the Senate and to many, many people who will read the RECORD.

Now, if the Senator will yield further, there are two matters of quandary on my part. I am sure he can be of assistance. I have heard with some concern the length of time during which our country has not developed a fighter plane. The Senator has referred to the F-4 as being equal to the Mig, but I seemed to detect some apprehension on his part when he said that its technology dated to 1955. Did I correctly understand the Senator?

Mr. CANNON. The Senator's understanding is correct.

Mr. GORE. The Senator did not state when the F-4 was first operational. Would he have that in mind?

Mr. CANNON. I think it was really 1959 when it first became operational.

Mr. GORE. So it has been 10 years in operation.

Mr. CANNON. The Senator is correct.

Mr. GORE. Do I correctly understand the Senator now to say that even 10 years later, we do not yet have on the drawing board what he would regard as a competent, competitive, air-to-air fighter?

Mr. CANNON. The Senator's understanding is correct. As an air superiority fighter, we have nothing on the drawing board insofar as, let us say, a contract definition or anything of this sort. We do have a number of contractors who, of course, are thinking along these lines, and some who perhaps have proposals ready to present. But we have not a real fighter on the drawing board and ready to go into production at this time.

Mr. GORE. I congratulate the Senator upon recommending that we undertake such an achievement.

As chairman of the subcommittee that is generally referred to as the Disarmament Subcommittee, I would like to suggest that disarmament, as such, seems to be a very distant goal. The goal, which may be within the grasp of Americans today and people of the world today, is a limitation of armaments. Even a limitation must flow, it seems to me, from a relative standoff position, a balanced position of strength—not necessarily a superiority of strength. I believe President Nixon expressed it differently later as a sufficiency of strength.

So with the long leadtime necessary, with the very unusual extended period in which we have not attempted to develop a superior air-to-air fighter, I am led to the conclusion to support wholeheartedly the conclusion of the committee. With that—

Mr. CANNON. Mr. President, if the Senator would permit me, I may have made one statement which would have misled him. When I said "air superiority

July 10, 1969

fighters," I was talking about the Air Force. With respect to the F-14, the Navy version I mentioned, there is some procurement money in here for six models they want to go ahead.

The reason this airplane can come at an earlier date is for the reason that they would use on the first model of the F-14 the engines developed for the F-111B program, and the Phoenix missile which was developed for the F-111B.

The F-14A would come in at an earlier time than if it was starting from scratch now, but the F-14B later would incorporate a new engine to be developed and new avionics to give it capability.

Mr. GORE. I thank the Senator for that addendum and I appreciate it.

Now, the question I wish to propose is not one relating particularly to this matter, but one that I ask out of curiosity, searching for knowledge. I ask a question which has been asked of me many times by the people I have the honor in part to represent. I ask it of the Senator because I recognize him as one of the students and authorities on aviation in the Senate and in the country.

The question is: With all the tonnage which is reported to have been dropped by the Air Force on Vietnam, how can we explain the seemingly inadequate, if not minimal, results achieved? I do not wish to promote any argument about the war. I ask the question for information.

Mr. CANNON. I thank the Senator for his kind remarks.

Mr. STENNIS. Mr. President, may we have order in the Chamber? It is impossible to hear the Senator. He has a good voice and we are only 10 feet or 15 feet from him.

The PRESIDING OFFICER. The Senate will be in order.

Mr. CANNON. I would like to summarize briefly and say that when a service is shackled in trying to perform a job, and restrictions are placed on them, one can add bombs to bombs ad infinitum, and it will not get the job done unless they are permitted to do the job assigned to them.

That is an oversimplification, but, Mr. President, you can continue dropping bombs all over North Vietnam and South Vietnam from here to kingdom come, and it never will solve the problem if you are not going to permit them to attack the root of the problem.

Several Senators addressed the Chair.

Mr. CANNON. The Senator from Arizona had asked me to yield to him.

Mr. GOLDWATER. Mr. President, I congratulate the chairman of the subcommittee for having done an excellent job in presenting a subject not too well known by too many Members of this body.

Because the distinguished chairman of the Committee on Foreign Relations is in the Chamber and because he raised what I think is a question that is very much at the nub of this entire argument developing on the floor of the Senate—the argument about the ABM, MIRV, and the cost of military equipment—I would like, if I can, to have some answers or even proposed thoughts that might be of help to all of us.

When we talk about national policy I think I am correct in saying that our obligations around the world have some bearing. When we talk about the views of the military, I think these treaties and arrangements also have a bearing. Looking over a list of commitments we have under collective defense agreements I see we have the North Atlantic Treaty Organization with 15 different countries, the Rio Treaty with 22 countries, the CENTO Treaty, the SEATO Treaty with eight countries, the treaty with the Republic of Korea involving two countries, a treaty with the Republic of China involving two countries, the Philippine Treaty involving two countries, and the Japanese Treaty involving two countries.

The language in some of these treaties or agreements seems to me to be rather specific about our use of arms in going to the fulfillment of the arrangement or treaty. Others are rather ambiguous and limit us to a constitutional interpretation of what the need might be. I do not know whether this can be done or not but if it could be, I think it would be of great help to this body, the administration, and certainly the American people, in understanding just what we are talking about when we talk about our global commitments. I can recognize the policy we are operating under as an international policeman role, but we must remember we have some rather specific treaties which I interpret as calling upon us to do what we are doing in South Vietnam, even though that was not by treaty.

I am asking if it would be possible for the Committee on Foreign Relations to possibly reopen hearings—not hearings, but perhaps a study on these treaties, so that we might have some idea from the Committee on Foreign Relations on how far they think we have to go. I think if we could ever get that determination of how permanently we are committed to use arms, let us say, in country "X," then go through all of them, I think it would be a lot easier for us to stand on the floor of the Senate to argue.

Does the Senator from Arkansas have anything to report along that line?

Mr. SYMINGTON. Mr. President, who has the floor?

Mr. CANNON. I have the floor. I yield to the Senator from Arkansas.

Mr. FULBRIGHT. One of the first things we did in the beginning of this session was to review, along the line of the comment of the Senator from Arizona, all of our commitments. We have had some discussion of that. The Senator read the list of treaties and agreements accurately. There are varying degrees of responsibility under those treaties. I would rank NATO No. 1 in the sense that it is a flat declaration that an attack on one nation is regarded as an attack on all. That is not common. We go all the way down to some that are statements of good will which state in effect, "If you get into difficulty, we will consider it."

I do not wish to argue what SEATO means. It is ambiguous in that it has two classifications, one involves overt aggression and the other subversion. That

is another matter that comes up in another way.

But the Senator is quite correct. That is one reason I raised the question with the Senator from Nevada. This gets to the nub of the matter of our responsibilities. It is the responsibility of the Committee on Foreign Relations to review these commitments.

The Senator from Missouri is the chairman of a special subcommittee which will go into a study of some of the physical aspects of these commitments. His committee dealt with these Spanish bases which was a kind of extracurricular obligation, in my view, and I believe, of the Senator from Missouri's. We think there is a similar one in another country, which we will be studying. Our purpose is to do what the Senator from Arizona suggests—that we review all of our commitments, consider them, understand them, and at least try to make recommendations as to what limits might be applicable to them, because this open-ended approach we have had grew out of the war. I do not disavow my own responsibility for not having done it earlier. The Senate should have, including myself. But in any case better late than never for us to try to do that. I think that after we have had sufficient time to consider the report of the Senator from Missouri's subcommittee, the committee as a whole will consider and make recommendations along that line.

Mr. GOLDWATER. I am glad to hear the chairman say that. As I have studied this more and more, I am convinced that the size of our military outlays depends and will depend on just what we interpret our commitments to be. In other words, if we are called upon tomorrow to go to Europe to defend a country with whom we have a clear obligation to defend, it means one thing. If we have a way of renegotiating a treaty so that we can get other language, that would be something different. Then we can really go to work on this military budget. But until we have a really clearly defined, fenced-in idea of what our responsibilities are, I cannot see much hope of reducing military expenditures outside the end of the Vietnamese war.

I congratulate the Senator for having started these studies and hope that they can be finished and in readable form in the near future. It is something that the American people should know about.

I have found, in the years since I came here and traveled around the country, that when I mentioned mutual security agreements, the ears of my audience popped up because they had not heard of them, probably because we did not give them much publicity in the years that we were passing them. It will be good for the American people to know what our specific obligations are, and just what we as a body, and eventually the administration, feel about these commitments.

Mr. CANNON. Mr. President, before I yield to the distinguished Senator from Missouri, the Senator from Tennessee asked me when the F-4 became operational. I said that I thought it became operational in 1959. It actually flew first

July 10, 1969

in 1958 and then became operational, with the Navy, in 1961.

Mr. GOLDWATER. If I may interject there, I remember when the Senator from Nevada and I went to Langley Field to fly the F-4 in 1959.

Mr. CANNON. The Senator is correct. Now, Mr. President, I am glad to yield to the Senator from Missouri.

Mr. SYMINGTON. Mr. President, as the ranking majority member of the distinguished Senator from Nevada's Subcommittee on Tactical Air Power, it has been my privilege to work with and for him on this report.

In the years since I came to the Senate I have never seen a more thorough and constructive job done in analyzing these various programs.

I am sure the people of his State are as proud of him as are those of us who worked with him during the long and careful hours of the subcommittee's preparation, work, and actual hearings that he has engaged in.

I do not agree with every conclusion, but especially because of the outstanding accomplishment, it is my privilege to support the report.

It is always a pleasure to congratulate one on a job well done. I did my best to be a regular attendant, and believe the information presented to the Senate on this subject today is the best analysis of tactical air power we have had to date.

I am impressed with the method and manner in which the able Senator developed the importance or unimportance of various proposed models, and was impressed also with the question asked by the Senator from Tennessee, in which he wondered why so much had been done in the way of airpower effort with so relatively little results.

Many know why that is. Shortly after we got into this war a great number of rules were laid down, and weapons systems were used in a manner for which they had never been designed.

I might make a contribution to this discussion by pointing out that, on good authority, it would appear, during the past 4 years, to the Vietnam theater, we have shipped more tonnage of materials than we did to Europe during the entire World War II, even though we have one-eighth of the number of troops in Vietnam that we had in Europe during that war.

Accordingly, I would hope that no one would judge the efficacy, or lack of efficacy, of airpower on the basis of the way air power has been handled under directions from higher authority to the Air Force and Navy.

I was also impressed with the questions asked by the distinguished Senator from Arkansas with respect to the Swedish plane. It is ironic that an American manufacturer now loses some planes in this recommended budget, because we have no V/STOL airplane, no STOL airplane, and no VTOL plane.

It is a fact, as the Senator from Arizona commented—and he is one of the true authorities in this body on air power—that the Soviets have three types of V/STOL airplanes, all above mach 2; that the French have a STOL airplane; that the British have a V/STOL air-

plane, that the Swedish have a V/STOL airplane; and that despite the fact we have spent many billions of dollars a year, all we have to show for that money are discussions and arguments. We get the arguments. These other countries, including Soviet Russia, get the hardware.

Commercially, we have arranged to put a STOL airstrip at LaGuardia Airport, so that we can accommodate foreign planes which come to this country, or foreign airplanes purchased by the military and civilians in this country for use in this country.

I am glad this point has been brought out.

In closing, let me again congratulate the Senator from Nevada. He has made a real contribution from the standpoint of how to spend, and how not to spend our defense appropriations.

Mr. CANNON. Mr. President, I want to thank the distinguished Senator from Missouri for his very complimentary remarks. Let me say again that all on the committee did a great job in working on this project and its problems. I appreciate it very much. We had a very able staff that did a tremendous amount of work and were responsible to a great extent for the very fine report we are able to present to the Senate. I want to thank them for their support.

Mr. STENNIS. Mr. President, if the Senator from Nevada will yield briefly—

Mr. CANNON. I yield.

Mr. STENNIS. I should like to comment on the matter of commitments. The question was raised here about what are our commitments and what is the Armed Services Committee trying to meet.

Certainly that is a timely question, a question well expressed by the Senator from Arizona. But that is an old subject. Whatever our policy, or whatever our

commitments are, they were not originated in the Armed Services Committee. Since I came to the Senate, various treaties and commitments have come before us but they came out of the Committee on Foreign Relations. That is where they should be sent. We have been concerned about this in the Armed Services Committee, as many Senators know, for several years.

We started into this matter of commitment and our ability to meet them—I think it was 2 years ago—but the war in Vietnam got worse, shortages there existed; so we turned to the problems of the war.

On pages 2200 and 2201 of the hearings is found a letter to me in response to my letter, with a list of all the nations with which we have defense treaties and other defense arrangements. I ask unanimous consent that those two pages be inserted in the Record at this point in my remarks, for the information of the Senate.

There being no objection, the letter was ordered to be printed in the Record, as follows:

HON. JOHN STENNIS,
Chairman, Committee on Armed Services,
U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: In response to your letter of April 14 requesting a simplified compilation of treaty commitments and other defense arrangements of the United States, the two enclosures to this letter have been prepared for your use.

The first enclosure is a tabular listing of the countries with whom the United States has entered into defense commitments pursuant to multilateral or bilateral treaties. The table also indicates, in addition, those countries with whom the United States has entered into Executive agreements or a general treaty containing defense assurances.

The second enclosure extracts the pertinent provisions of the treaties and Executive agreements relating to consultation and action in the event of armed attack.

Sincerely,

L. NIEDERLEHNER,
Acting General Counsel.

¹ Cuba was excluded from participation in the Inter-American System by Resolution VII, 8th meeting of Foreign Ministers, Punta del Este, 1962.

Mr. STENNIS. Mr. President, I raised the point in my opening remarks on the bill, saying we had some kind of commitments, or defense agreements, with 46 nations, and so long as we had those we had to make some kind of attempt to be prepared to directly defend ourselves and to live up to our commitments. I said, further, as one Senator, that I would be perfectly willing to open the issue of our national commitments and debate it; I further said I would favor a review and a renegotiation of these commitments, if we could. I think we have learned a lot since the commitments were made. And I sincerely hope we have.

I know the Senator from Missouri (Mr. SYMINGTON) will do a good job in whatever he undertakes, but a great deal of the talk—not from him, but a great deal of the talk—is that there should be an investigation of our military. I am glad to get clear that we should really investigate the commitments, and try to bring that out, so that not just our committee or the Senate, but the whole Nation, will learn of it. The Senator from Missouri and I are in pretty much accord as to our being overcommitted as I see it.

I pointed out the other day that we have to do something, as I see it, when the shooting stops in Vietnam, with reference to the size of our military personnel. Personnel cost run into real money.

Up to now, we have been trying to prepare for two conventional wars. We already have one going on. Everybody knows where that is. The other war we are thinking about primarily would be in Western Europe. It seems to me we also have a policy to go where there is trouble in a little country wherever it may be. In view of all this, the committee has tried to arrive at a sound, effective minimum military program. This is the purpose of the items in the bill.

I do not want to frighten anyone as a result of what I said about preparing for two conventional wars, but that is what we are doing. It would take a higher power to know the possibilities of a nuclear war but that is, of course, a possibility.

I thank the Senator for yielding.

Mr. CANNON. I yield now to the Senator from Texas.

Mr. TOWER. I thank the Senator. I know the Senator has been on his feet

for a long time. I want to commend the Senator for the fine presentation he has made to the Senate and note that, in my opinion, it is the most thoroughgoing analysis of our tactical air power needs that I have heard in this body. I thank the Senator for making such a full presentation. I think it is extremely fortunate that the subcommittee was chaired by a man who has had long experience in the Air Force.

I have spent a great deal of time with combat pilots over the last few years. I spent time with them in Southeast Asia. I think they will be grateful to the Senator for recognizing what their problems are and what machines and weapons they need to do the job required of them.

I think the Senator has very accurately and completely reflected the mood and desire of the men who have to fight with those machines. That, I think, alone deserves a commendation.

The Senator from Tennessee made the point about our bombing not being very effective. I think it should be pointed out that we have had to operate under severe restrictions there. To begin with, we developed the system of bombing one section at a time, so the enemy knew what we were going to bomb next, and brought in the most sophisticated air defense equipment known.

The port of Haiphong was not interdicted. Ordinarily you hit the enemy where the biggest amount of his supplies are being brought, through whatever bottleneck there is. As a matter of fact, before the bombing moratorium, we were bombing the railroad from Kwangsi Province, China, into Hanoi, which brings in about 18,000 metric tons a month. You have to keep pounding something like that to keep it out of operation, because it is fairly easy to repair. But at the same time, Haiphong, where 150 or 160 metric tons a month were coming in, was off limits. So is it any wonder that we have not been as effective in the role of interdiction, as we could have been if these restrictions had not been put into effect? I think the Senator has done a good job of bringing that matter up. I think it should be re-emphasized.

When we talk about tactical aircraft, we are talking about five or six different kinds of aircraft. I think we made a mistake in supporting the concept of commonality in trying to develop the TFX, now the F-111. It was wrong. It could

not be done. So now we are alert to the damage that was done. The Russians are ahead of us in terms of air-to-air interceptors. We tried to put into the TFX an airplane that would be able to serve as close support for ground troops, one that would be an attack bomber, an air-to-air interceptor, one that could operate in two different roles off carrier decks. It just has not been done.

The Senator from Arkansas noted that the Swedes have developed a better interceptor than we have. What we have to understand is that the Swedes devote their entire resources to the development of defensive weapons.

They do not devote any of their resources to the development of strategic weapons. They can think purely in terms of defense of the homeland.

When you put all your eggs in one basket, you can do anything. If we decided to channel all of our research and development efforts into one area, we could develop the best of any one thing we wanted to in the world. We have the engineering and technological know-how, in this country, for doing everything from developing a better detergent to developing a better strategic weapon. Now is the time that we have to think in terms of priorities. I think the distinguished Senator from Nevada has underscored what the priorities in terms of tactical air support are, and I offer him my thanks.

Mr. THURMOND. Mr. President, I happen to have been the ranking member of the Cannon subcommittee on tactical air power, and I should like to join with other Senators in commending the distinguished Senator on the leadership he gave the subcommittee.

I feel that the report of this subcommittee will be of great value in years to come, and I feel that our Nation will benefit because the study was made.

Mr. CANNON. I thank the Senator from South Carolina.

Mr. President, I yield the floor.

The PRESIDING OFFICER. Pursuant to the previous order, the Senator from South Carolina (Mr. THURMOND) is recognized for 30 minutes.

Mr. THURMOND. Mr. President, I ask unanimous consent that I may yield to the distinguished Senator from Maine, without it being counted against my time.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mrs. SMITH. Mr. President, I wish to commend the Senator from Nevada and his subcommittee members for the outstanding work they have performed. I commend them most highly.

I would also like to make a short statement on a matter related to this bill.

Mr. President, in connection with the debate on the military authorization bill now before us, I want to read into the Record an appeal delivered to my office yesterday indicating some of the activity of interns with a group that calls itself "PEACE."

Of particular interest in the appeal is the statement:

Weekly meetings to coordinate research and recruit intern help will also serve to foster those bourgeois needs of love, affection, human warmth and contact.

S 7870

CONGRESSIONAL RECORD — SENATE

July 10, 1969

I ask unanimous consent that the entire paper be placed in the body of the RECORD at this point.

There being no objection, the appeal was ordered to be printed in the RECORD, as follows:

PEOPLE ENGAGED IN AUGMENTING CONSTRUCTIVE EFFORTS

(1135 Bellview Road, McLean, Va., Telephone 759-2811)

Attention: INTERNS: United States cities burn. Vietnamese cities burn. Appalachian children die of malnutrition, and India is threatened with mass starvation. The U.S. national purpose appears confused: its human and material resources being wasted. Men and women of conscience ask, "Is there not an alternative?"

The DOD appropriation commits much national energy, skill and resources. It is therefore good sense that this expenditure be scrutinized and evaluated. Interns are invited, with the permission of their member, to learn about and contribute to the several inquiries into defense spending presently in progress. PEACE is intended to be voluntary and done on the intern's own time, unless the intern's member approves of the activity full time. Weekly meetings to coordinate research and recruit intern help will also serve to foster those bourgeois needs of love, affection, and human warmth and contact.

The first meeting will be Friday, July 11, 1969. Beer will be served. Dress informally. (Coed volleyball and softball will begin at 7:30). After the games, about 9:30, speakers will give short talks concerning the different areas which need more attention.

As an introduction to the project the following articles are suggested and people are encouraged to have read them by Friday:

(1) "The Economics of Military Procurement," *Report of the Subcommittee on Economy in Government of the Joint Economic Committee of Congress, May 1969*, (printing Number 29-493 O).

(2) Galbraith, John Kenneth, "How to control the Military" *Harper's, June 1969*. Reprint in *Cong. Rec. May 23, 1969*, p. S5477-S5483.

(3) Benson, Robert S., "How the Pentagon Can Save \$9 Billion," *Washington Monthly, March 1969*. Reprint *Cong. Rec. May 12, 1969*, p. S4886-S4889. (Ed. no: long and boring, but documents inefficiency outside of new weapons systems).

(4) Shoup, General, "The New American Militarism," *Atlantic, reprint Cong. Rec., March 26, 1969*, p. H2252.

(5) Newman, Barbara, "Can Budget Bureau Put Lid on Pentagon Spending," *Washingtonian, July 1969*.

Directions to 1135 Bellview Road, McLean, Va.:

1. Memorial Bridge to George Washington Pkwy.
 2. to Rt. 495 (G. Wash. Parkway splits, take left fork towards S. Va. and Dulles Airport)
 3. Take Exit 13 off of Rt. 495, to Rt. 193, Great Falls 1st Exit
 4. Turn right at stop sign at end of exit ramp onto 193 (also called Georgetown Pike)
 5. Go 2.3 miles to sign "Greenway", turn left onto Bellview
 6. Go to 1st intersection (Old Dominion Dr. and Bellview) continue on Bellview for exactly 1 mile, turn left onto drive (mailbox has name "White" on it, before left turn there is old dilapidated barn on the right.)
- Don't panic—traveling time from Washington: a mere 20 minutes.

Mr. THURMOND. Mr. President, it is long past time for dedicated Americans to speak up for our military. I know of no better time than now to challenge the critics who have been carrying on continuous and unjustified condemnation of

our military. Passage of the authorization bill as it has been submitted would reassure our military that our Nation stands behind them.

Mr. President, this bill has received a penetrating review by the Senate Armed Services Committee, under the outstanding leadership of our distinguished Committee Chairman, Senator STENNIS. The Committee has been fully cognizant of the costs for defense and the other needs of our country. We have already made substantial cuts in the bill. In fact some cuts, especially in research and development, were too severe, and I question the soundness of some reductions. Any further cuts in the authorization bill would be an unacceptable risk to our security.

Mr. President, the procurement of these major items and the maintenance of our reserve components represent the minimum essential for our Armed Forces. I speak in favor of this bill, and for our Defense Establishment. In my support, I think the time is propitious for answering the critics of our military who would slash the deterrence that has prevented nuclear war.

Our Armed Forces must have the united support of our Nation. Critics in Congress, the press and other elements of our society have been generally unjust in their charges. Condemnation of our so-called "military-industrial" complex will not solve our problems. Objective dialog, constructive criticism and peaceful dissent are healthy for our country. But continuous condemnation not founded on facts is a disservice to our military and harmful to our country.

Many critics blame our Defense Establishment for our social ills, a prolonged war, the Soviet buildup, and the conflicts throughout the world. It is time the critics recognize that the Communists, and not our military, are responsible for the confrontation we live in today. Even the liberal-minded Washington Post recently concluded a series of articles showing the present Soviet leadership was reaffirming the Stalinist line.

Many among the antimilitary and the militant left ignore the Communists' longstanding design for world domination. Let them forget, this is what caused the United States to rearm after practically disbanding the world's most powerful military force in 1946.

If the military and industry did not have team unity, including competent personnel with military experience in industry, then we could well be in World War III already. Those who would weaken this power of deterrence and undermine our military widen the unity gap.

Mr. President, in the face of the growing Soviet threat and their continuous provocative actions throughout the world, it is inconceivable that our Nation will not respond with the unity which has always marked our history in time of peril. Our national security depends on unity more than ever before. Those leaders and others who attack our Armed Forces and second-guess our commanders in the field are doing as much damage to the morale and discipline of our forces as the radical

groups who are mounting deliberate assaults on our military services.

No wonder our military commanders are beset by cases of mutiny, disobedience, racial strife, and desertion. Even a Federal judge ruled that an individual as a matter of "honest belief" can determine for himself when a limited war is "unjust" and refuse to serve. Such irrational judgment by a member of the Judiciary makes it difficult to define sedition.

The recent decision of the Supreme Court to have civilian courts instead of military courts prosecute servicemen for crimes not service-connected is questionable. It will jeopardize the control of discipline and downgrade military authority which is essential for our Armed Forces. Justice William O. Douglas' vicious attack on our military lawyers is not warranted. He characterized military courts as "singularly inept in dealing with nice subtleties of constitutional law in spirit and in practice." Military lawyers are well trained, and more familiar with the military implications than civilian lawyers.

This is another example of Justice Douglas undermining the military. His recent article entitled, "The Public Be Damned," in which he made a blistering attack on the Army Corps of Engineers, demonstrated his lack of propriety. After reading his article, one can make his own assessment as to whether or not Justice Douglas would be objective in any case before the Supreme Court involving the Corps of Engineers. These outside activities downgrade the dignity of the Supreme Court and demonstrate his susceptibility to prejudiced views and conflicts of interest.

Mr. President, the antiwar emotionalism is causing many people to lose their perspective. This continued onslaught on the military, which is fed fuel by many leaders, could seriously jeopardize discipline in our Armed Forces.

President Nixon responded to those who attack our Military Establishment. I support the views expressed in his recent commencement address at the Air Force Academy. His credo of nine points for the defenders of our Nation placed our Defense Establishment in the proper perspective.

I would like to quote the essence of President Nixon's nine points in his military creed. He said:

1. I believe that we must balance our need for survival as a nation with our need for survival as a people.
2. I believe that our defense establishment will remain the servant of our national policy of bringing about peace in this world, and that those in any way connected with the military must scrupulously avoid even the appearance of becoming the master of that policy.
3. I believe that every man in uniform is a citizen first and a serviceman second, and that we must resist any attempt to isolate or separate the defenders from the defended.
4. I believe that the basis for decisions on defense spending must be "what we need for our security" and not "what will this mean for business and employment."
5. I believe that moderation has a moral significance only in those who have another choice.
6. I believe that defense decisions must be made on the hard realities of the offensive

July 10, 1969

CONGRESSIONAL RECORD — SENATE

S 7871

capabilities of our adversaries and not on our fervent hopes about their intentions.

7. I believe we must take risks for peace—but calculated risks, not foolish risks.

8. I believe that America is not about to become a Garrison State, or a Welfare State, or a Police State—

9. And I believe this above all: That this Nation shall continue to be a source of world leadership and a source of freedom's strength, in creating a just world order that will bring an end to war.

I was also glad to note that President Nixon clarified what President Eisenhower really said about the military-industrial complex. President Eisenhower has been quoted out of context. When one reads the Eisenhower farewell address, I suggest that he gave a balanced assessment appropriate to the time, that placed the emphasis on the need for this complex in the face of the Soviet threat. I believe President Nixon's citation of General Eisenhower pointed out this balance when he said:

Our arms must be mighty, ready for instant action, so that no potential aggressor may be tempted to risk his own destruction.

Mr. President, it appears to be a popular pastime today to quote great Americans out of context in order to frighten the public or make political gain. Some critics rejoice in such exercises.

Some have already used President Nixon's Air Force Academy address out of context in a game of semantics. It has been alleged that President Nixon is trying to ignore the Senate in making a judgment on defense appropriations. This accusation is based on the President's statement that "the President of the United States is the man charged with making that judgment." His next sentence stated that "after a complete review of our foreign and defense policies, I have submitted requests to the Congress for military appropriations." His critics refused to note the latter sentence. It is this kind of political footwork that creates distrust and agitation in the American people.

Mr. President, while the Communists seek to move closer and closer to their objective of the annihilation of the capitalist system, many of our misguided and the New Left promote neo-isolationism, unilateral disarmament and dissolution of collective security alliances. If we had failed to stand firm in Berlin, Korea, Vietnam, and other areas, the Communists would have engulfed the rest of the world by now. America's presence overseas must be maintained in the face of the Soviet threat. However, I do agree that our scale of assistance to our allies should be reappraised and there should be more contribution from them. History refutes the view that weakness and unilateral disarmament is the road to peace.

Our Nation suffers because of those who have lost their patience and spirit. Some are willing to reduce our strength and would negotiate from fear in disregard of the catastrophes of history under such an appeasement approach. Now is not the time to grow weary and retreat in the face of minority dissension. It is time to reassert our firmness and national interests.

Mr. President, deeds, not words, are the only indicators of Soviet intentions.

I am not aware of any peaceful deeds of the Communists. On the contrary, they have never before been stronger, nor committed more aggressive acts than they have in the last 10 years. Yet, the stronger the United States has become, the more restraint and weakness we demonstrate to show our good faith. The Communists do not respect weakness. Nevertheless, we again have demonstrated our good faith and desire for peace by taking calculated risks in the bombing halt and troop withdrawal.

Mr. President, the antagonists of our Military Establishment in our country allege that our Nation is addicted to military intervention and chronic warfare. One only has to review the conflicts in the world to show the shallowness of this allegation. We have not been the world's policeman in the troubled areas of the Middle East, Czechoslovakia, Hungary, Africa, Malaysia, Indonesia, India, Pakistan, Laos, Algeria, and other areas. Yet, the Communists have been busy interventionists or aggressors in these areas. Critics rarely condemn the enormous amount of money, weapons, and military supplies that the Soviet Union and Red China pour into North Vietnam.

If we show weakness now, the Communists will certainly continue their aggression in Asia and Europe. This is not the time to renege on our military commitment overseas. Some politicians would have one believe that military strength or an arms race breeds war.

Mr. President, our military are accused of being too influential in foreign policy. They are accused of being responsible for stationing our forces in many foreign countries. They are accused of formulating national policy. These criticisms are totally unfounded and an injustice to our men and women in uniform.

The military have never been under greater civilian control than in recent years. Civilians formulate foreign policy, not the military.

Civilians, with congressional approval—not the military—determine our force structures, personnel strengths and procurement of weapons systems. Unfortunately, civilians have exercised too much control of the selection of weapons systems which were both wasteful and injurious to our security. The military do not choose the commitments around the world, but they execute the policies at the direction of the President. They execute them with courage, sacrifice, and at great risk and hardship.

Civilian mismanagement of the military has prolonged the war in Vietnam. Gradualism violates all military principles for victory. A no-win policy is disastrous and unknown in American history. I am confident we could have won the Vietnam war a long time ago if our effort had not been throttled by civilians. It is ridiculous that this war has been allowed to go on for over 7 years. In the early stages, it could have been resolved by our airpower and seapower within 60 days.

Mr. President, the role of the Armed Forces is service to our people and for their security. It is true that this security is costly, but the Kremlin has not been willing to accept any alternative. They have yet to accept serious arms

control proposals with on-site inspection which we have been earnestly and sincerely pursuing for many years. Consequently, the American people have recognized the growing Communist threat and demanded continued security. I hope that recent overtures for arms talks are in good faith.

I also agree with President Nixon that "the American Defense Establishment should never be a sacred cow, nor should the American military be anybody's scapegoat." Inefficiency and waste cannot be tolerated. I am confident also that there were some areas of the defense budget that could have been reduced, and this has been done.

Our Armed Services and Appropriations Committees have given the defense budget a comprehensive study with a view toward the elimination of low priority and nonessential weapons. There are always ways to improve efficiency, especially when managing the vast resources the size of the Defense Department with 4.8 million people and a \$77 billion budget. Excessive overcosts and contractual procedures are receiving a thorough examination. Our distinguished chairman of the Senate Armed Services Committee recently implemented new controls and procedures to insure that weapons and contracts receive continuous penetrating review.

It appears that there is an attempt to make Americans believe that the military are deliberately making short estimates and causing overruns for weapons systems. They are being unjustly blamed for inflation.

As Dean Acheson said:

I can't imagine anyone taking seriously the thought that military officers could be engaged in a conspiracy to waste funds of the United States.

General Wheeler said, he "has yet to meet his fellow conspirators."

Mr. President, the avalanche of criticism of our military today ignores the fact that this administration inherited some ineffective procedures and policies. The inefficiency, cost overruns, and waste that are being exposed by this administration can be credited to the previous administration and civilians in defense systems analysis who have been tagged as "computerized whiz kids." The Defense Department is already taking steps to eliminate waste and the procurement of unsatisfactory or low-priority weapons, such as the Cheyenne helicopter, the Manned Orbiting Laboratory, and phasing out of the FB-111 program.

In the past, weapons were put into production before they were fully developed. The Secretary of Defense is taking measures to eliminate such waste. I suspect, also, that a lot of the waste of the previous administration was the result of the civilian leadership being a "captive of a scientific-technological elite" which President Eisenhower also warned against. Billions of dollars worth of weapons and sophisticated electronic gadgetry have been produced in the past 10 years, but we have not produced a single supersonic air superiority tactical fighter aircraft to counter those already being produced by the Soviets.

Mr. President, the threat to this country is in the Kremlin—not the Pen-

tagon. The overwhelming assault on the military, the generals, the weapons systems, the Pentagon, the military-industrial complex, the draft, the conduct of the war, and the ROTC is primarily emotional hysteria. Distress over the tragic Vietnam war should not disillusion thoughtful Americans.

The verbal assault is aimed at our total military capability. Here is our security. Yet, many supposedly loyal American leaders place themselves in the same category with the violent demonstrators on the campus and elsewhere who protest these same security assets. It has been said by some philosophers that haters ultimately hate themselves and that protestors of violence ultimately become violent. I hope that this trend reverses in the face of the Soviet threat.

The free world has faced and must continue to face the hard reality of our times—that is, the growing economic and military power of the Soviets and that we shall continue to face it until the U.S.S.R. is convinced that the only recourse to prevent their own destruction is arms control and eventual disarmament.

The Kremlin is making an exhaustive effort to surpass America's strength.

The Soviets are seeking to dominate the oceans with expanding global sea power. They now have 375 submarines to our 142, and all their subs have been built since World War II, while 50 percent of ours are of World War II vintage.

Their capacity to produce nuclear subs of high speed and to produce subs of the U.S. *Polaris* type has been greatly increased. In fact, they have one submarine yard capable of building more submarines than all of the U.S. submarine yards put together.

The Soviets have also surpassed the United States in ICBM's. They have over 1,200 compared with our 1,054. The Russians have also developed a huge missile called the SS-9 capable of carrying heavy megatonnage, while the United States has no missiles of this type. Added to this picture is the fact the Soviets have around 700 intermediate range ballistic missiles to none for the United States. This entire situation becomes even more foreboding when we consider that they are continuing to build ICBM's and we have stopped our production.

In deliverable megatonnage the Soviets have a decided advantage over the United States, and here again our plans call for a decline in this area, while intelligence shows the Russians are increasing in this capability.

On comparative bomber strength, the Russians have 900, including some 200 heavy bombers, while the U.S. strength is only 549. Furthermore, they have developed and are flying a supersonic transport capable of bomber conversion, while we have none.

In the tactical air power area, the Soviets have flown 18 new air superiority aircraft since 1955, while we developed the F-4, which remains today as our only air-to-air plane. We are clearly behind in this critical area of maintaining control of the skies over our fighting men. While they were developing the Foxbat and Floger, we were struggling with the F-111, which is not a true air superiority fighter.

The Soviets are also testing a fractional orbital bombardment system and antispace weapons, while we have taken no action in these critical areas. Further, they deployed their ABM in 1962, 7 years ago.

We can be assured that they will bleed us as long as they can in Vietnam, and they will propose arms control talks so long as they might gain an advantage.

The Soviets are experts in the art of planned misinformation. While engaged in disarmament talks in 1957, the Kremlin announced the successful firing of an ICBM. So, why should we be trapped as some would have us do, by delaying the ABM and stopping our tests of MIRV? Military technology must not be stifled on the basis of hopeful diplomacy.

Mr. President, costs for security and waste on some weapons are one thing, but the other allegations tagged on for "overkill" of our military are something else again. This is unfair to the men and women in uniform. Such unjust accusations shatter esprit de corps and incentive. It disillusion the military. How can we expect loyalty and dedication when we fellow Americans ridicule our military?

We should never lose sight of the fact that the Soviets' increasing threat to the free world is the real cause. The Communists rejoice at our attacks on our military. It encourages their goal of world domination.

Some of our people seem to be seized by a fear psychosis. Assaults on the military now remind me of the early sixties in reverse. Then, rather than face the facts of life—the real threat—it was commonplace, beginning in 1961, to muzzle and censor the military. Now, as the facts of the real threat of Soviet military and economic power are spread before us, there are those who want to tuck tail and run.

It reminds me of what Rudyard Kipling said:

This is the time to fear . . . When he shows as seeking quarter, with paws like hands in prayer, that is the time of peril—the time of the Truce of the Bear.

As President Kennedy indicated:

We must never be lulled into believing that the Communist powers have yielded their ambition for world domination.

There are too many indulging in wishful thinking. When faced with realities or danger, too many are filled with nostalgia. Their answer is conciliatory accommodation. If we are that scared of the Soviets, then there is not much to stop them taking over the rest of the free world by the piecemeal method.

Mr. President, what has happened to dedication, determination, spirit, unity, duty, and country? This is the code by which the military lives. It would be good for our country if the irresponsible critics and violent protestors would take heed of this code. Ill-informed condemnation by the politically ambitious and others is not a substitute for intelligent and constructive criticism. It does serious damage to the foundations of our great institutions, organizations, and our security.

The military leaders have long since been denied the spirit for any decisive action. If the demoralization continues,

the spirit for victory may not be there when it is needed most for our survival.

Mr. President, so long as diplomacy continues to fail, our military is our only security. To continue to shatter the morale and spirit of our Armed Forces, especially when diplomacy fails, will guarantee that the free world will not survive.

Mr. President, in closing, I urge the Senate to pass this authorization bill without further reductions in order to protect the security of our country and our people.

Mrs. SMITH. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. CRANSTON in the chair). Does the Senator from South Carolina yield?

Mr. THURMOND. I yield.

Mrs. SMITH. Mr. President, I wish to express my personal appreciation for the defense of the military made by the distinguished senior Senator from South Carolina. He has rendered a great service by setting the Record straight.

Mr. THURMOND. Mr. President, I wish to thank the able and distinguished Senator from Maine, who is the ranking member on the minority side and who has done such a magnificent job in this position.

Mr. BROOKE. Mr. President, in my brief remarks yesterday at the conclusion of the very able speech by the ranking minority member of the Committee on Armed Services, the Senator from Maine (Mrs. SMITH), I expressed my gratitude, as a new member of that committee, for the remarkable openness and impartiality shown by the chairman and the other senior members of the committee. I wish to reiterate my appreciation at this point, and to express at the same time my very special gratitude to the able Senator from New Hampshire (Mr. MCINTYRE), chairman of the Subcommittee on Research and Development, on which I was privileged to serve. As a friend and fellow New Englander, Senator MCINTYRE has shown the greatest kindness and fullest cooperation to me and to my staff. For his aid and consideration I will always be thankful. Let me also say it was a great privilege for me to work with my other colleagues on that subcommittee—Senators YOUNG of Ohio, BYRD of Virginia, and MURPHY.

Ours was a most demanding and challenging task, Mr. President. None of us on the subcommittee are scientists, yet we had the responsibility for examining the proposed research, development, test and evaluation budget of more than \$8 billion. We heard testimony and attended briefings involving 20 major weapons systems, many of which are still little more than visions in the eyes of their creators. We spent many hours, in and out of committee, examining detailed reports, hypotheses, and predictions. We knew, as we proceeded with our difficult task, that our determinations could have a decisive effect upon our country's security and technological capability for many years to come.

Obviously a subcommittee which was formed on February 28 and submitted its report to the full committee only 4 months later could not investigate in great detail all the hundreds of items which the military is presently develop-

July 10, 1969

CONGRESSIONAL RECORD — SENATE

ing. We had to draw a line, and draw it early. Consequently, as the chairman has observed, we looked for "soft spots"; or, more specifically, for duplication, overlap, or excessive cost overruns in the research and development stage. We also considered priorities, asking the basic questions: What kind of wars are we likely to be fighting 5 or 10 years from now when these weapons are actually operational? And what type of weapon is the enemy likely to rely on at that particular stage in our development?

Projections of this nature can never be perfect, but I believe the subcommittee was on solid ground in its efforts to delete overlapping systems development and to insist that the services not only work together in the research and development stage but plan for systems which will also work in conjunction once they are actually deployed.

Mr. President, I have no intention of going over again the ground covered by the distinguished chairman of the subcommittee in his statement delivered yesterday. The reductions in the various systems, the deletions which were made, the recommendations which accompany our report—all speak clearly for themselves. After the most careful deliberation we have concluded, and the full committee has upheld our view, that a total of \$1,042,000, or 12.7 percent, can reasonably be cut from the research and development budget without endangering—in the least—our national security or our progress on the technological advances necessary to sustain our defense. The savings in future years, resulting from consolidation of system research and reordering of our priorities, will run to many billions of dollars more.

I shall comment briefly, however, on a few of the major systems considered by the subcommittee.

Major reductions were made by the subcommittee in continental air defense. This is essentially an antibomber defense, and intelligence estimates played a heavy role in our deliberations. For one thing, the chances of a bomber attack upon the United States are remote, and become more so as we and our adversaries proceed with increasingly complex and reliable missile development. Second, it is significant that the Soviet Union has four times fewer bombers than the United States, and is not now building more.

For these reasons, it was decided that continental air defense would have low priority in terms of procurement in the years ahead, and, therefore, maximum consolidation and savings could be instituted at this stage. Thus, funds for the Navy E2A/C aircraft, a sea-based duplicate of the Air Force AWACS system, were deleted from the budget. Reductions were also made in the CONUS air defense interceptor, and funds for the Army's Sam-D missile were deleted in full from the budget.

In other areas, the subcommittee has recommended a deletion of \$8 million for chemical and biological weapons research, thus supporting an overall committee reduction of \$16 million for this extremely controversial program. The subcommittee, recognizing the problems

which have occurred and the heavy cost overrun which has been encountered in the development of the main battle tank, has reduced research and development funds for that program by \$14.9 million, and has ordered a reorientation of the program as well.

The subcommittee also recommended that funds for the Army heavy-lift helicopter be deleted from the budget. This is an example of the application of our judgment that there was no need for both the Army and the Navy to be working on the same type of aircraft. Since the Navy is likely to have more use for such a vehicle in the future, it was decided that a considerable amount could be saved if the Navy alone were assigned responsibility for this program.

Deletion of funds for the Manned Orbiting Laboratory represents another considerable saving, both in the present budget and in years to come. Testimony collected by the subcommittee led us to the conclusion that most, if not all, of the functions planned for the MOL could be performed as effectively, and certainly at far less cost, by an unmanned satellite.

Finally, I should like to mention a number of recommendations made by the subcommittee with regard to research by the Department of Defense in the social and behavioral sciences. I believe that the military has a clear and definite reason for authorizing studies of the physical and psychological capabilities of the men in the military, their training needs, and the optimum designs for weapons systems so that they may be operated with a minimum of stress.

But I have long believed that such areas as foreign environments and policy planning studies should fall more within the purview of other branches of our Government. It caused me great distress, for example, to learn that the Department of State has an annual budget of only \$100,000 for contingency policy planning, while the budget for comparable work in the Department of Defense totals \$36 million. For this reason, I was pleased to see the subcommittee impose a 12-percent reduction in funds for research in these areas and recommend in its report that more of these efforts be turned over to the Department of State, the Arms Control and Disarmament Agency, and the National Science Foundation. I commend this step, and urge Senators who have responsibility for the budgets of these other agencies to take note of this recommendation.

I conclude, Mr. President, by pointing out that the work of the Research and Development Subcommittee does not stop with the passage of this authorization of individual proposed weapons must broaden and deepen our investigation of individual proposed weapons systems, and remain as current as humanly possible on technological problems and advances. We must work to insure that the recommendations contained in this report are carried out, that "comparability" in weapons development is enforced wherever possible, that clear priorities are established and carefully observed.

Again, let me say that it has been a

great privilege and a great learning experience for me to be able to work with the members of the Committee on Armed Services and its informed and competent staff. I thank my colleagues, especially the chairman, and look forward to many more years of this association.

Mr. RUSSELL. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. RUSSELL. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR TOWER TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that, at the conclusion of the period for the transaction of routine morning business tomorrow, the distinguished Senator from Texas (Mr. Tower) be recognized.

The PRESIDING OFFICER. Without objection, it is so ordered.

ABM

 AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

AMENDMENT NO. 69

Mr. McINTYRE. Mr. President, I send to the desk an amendment to S. 2546 which would insert a new title dealing with the Safeguard-ABM system and ask that it be printed.

Mr. President, in order that this amendment will be readily available to Senators, I also ask unanimous consent that it be printed in full at this point in the RECORD.

The PRESIDING OFFICER. The amendment will be received and printed, and will lie on the table; and, without objection, the amendment will be printed in the RECORD.

The amendment (No. 69) is as follows:

AMENDMENT No. 69

On page 5, at the end of line 6 insert the following new title:

"TITLE IV—SAFEGUARD ANTIBALLISTIC MISSILE SYSTEM

"Sec. 401. (a) In the case of funds authorized under this Act for the Safeguard

S 7874

CONGRESSIONAL RECORD — SENATE

July 10, 1969

Antiballistic Missile System, such funds may be used only for—

"(1) Research, development, testing, and evaluation of the System's radars, computers, and related electronic equipment.

"(2) Pre-production expenses of the Sprint and Spartan missiles and the production of such missiles for research, development, evaluation, and testing.

"(b) The equipment described in clause (1) of subsection (a) may not be installed at any proposed ABM site, except at or near Grand Forks Air Force Base, North Dakota, and Malmstrom Air Force Base, Montana.

"(c) None of the funds appropriated pursuant to this or any other Act may be expended for the acquisition of land, not now owned by the United States, or the use of land owned by the United States, for the construction or installation of any ABM facilities at any proposed ABM site, except at or near Grand Forks Air Force Base, North Dakota, and Malmstrom Air Force Base, Montana.

"(d) None of the funds appropriated pursuant to this or any other Act may be expended for the procurement, installation, or deployment of any operational missile as a part of any antiballistic missile system, nor for the construction of any silos or other launch facilities for any operational missile as a part of any antiballistic missile system."

On page 5, line 7, strike out "Title IV" and insert in lieu thereof "Title V."

On page 5, line 8, strike out "Sec. 401" and insert in lieu thereof "Sec. 501."

Mr. MCINTYRE. Mr. President, I ask unanimous consent that my supplemental views appearing on pages 66 and 67 of the report of the Committee on Armed Services be printed in the RECORD.

There being no objection, the supplemental views were ordered to be printed in the RECORD, as follows:

SUPPLEMENTAL VIEWS OF MR. MCINTYRE

I did not vote in the committee when it considered Safeguard-ABM. I do not believe that a "yea" or "nay" answer for or against Safeguard-ABM is adequate. I believe that an alternative to Safeguard-ABM is the proper answer.

I had the chance to discuss my alternative during the committee action on Safeguard-ABM but I did not call for formal consideration and a vote at that time. Rather, I prefer that this proposal be considered on the floor of the Senate when the authorization bill is being voted upon.

The alternative proposal which I am offering to Safeguard-ABM would—

(1) Authorize a concentrated developmental testing program of the radar, computer, and related electronic components of the Safeguard system at the North Dakota and Montana locations suggested by the President.

(2) Authorize production engineering and continued developmental testing of the system's missiles.

(3) Preclude the deployment or production of operational Sprints or Spartans, the construction of missile launch facilities, and the acquisition of land at other than the two locations.

(4) Require full congressional review and approval before any such deployment or production of weapons, silo construction, or further land acquisition.

A concentrated developmental testing program with a clear expression of congressional desire to withhold the deployment of more nuclear weapons would lose nothing and gain much.

This alternative will retain the option to deploy substantially on the President's schedule if Congress decides next year to authorize full deployment.

There would be a delay of only 4 to 5 months in the completion of the Grand Forks

site, none at Malmstrom site, and only 1½ months in the testing of the integration of the two systems.

There would be a gain of another year's intelligence information to try to clarify the current projections about the possible threat of a Soviet first strike.

The current disagreement between the CIA and DOD underlines how difficult it is to make long-range intelligence projections with confidence and precision.

As Secretary Laird has pointed out: "Our intelligence projections over the next 2 or 3 years are reasonably firm. But when we project 5 or 6 years ahead we are getting into an area of considerable uncertainty. * * * Our national intelligence projections for the mid-1970's involve a large measure of judgment rather than hard evidence."

The alternative I am proposing would give us another year's "hard evidence" to inform our final decision about full deployment. If the Soviets are not trying to develop a first strike, their buildup should begin to level off. If they are, it will persist, perhaps even accelerate.

If future intelligence information clearly demonstrates the Soviet intention and ability to develop a first strike capability, the concentrated testing program I am proposing would have retained our option of meeting a threat to our Minuteman with Safeguard. If the Soviet threat of a first strike does not materialize, we can decide with confidence and a sense of security not to deploy Safeguard.

By withholding the decision to deploy more nuclear weapons, and by meeting the long leadtime problem of Safeguard, a concentrated testing program, neither gives the Soviets reason to increase their arms nor lets our own guard down.

The alternative I am proposing would concentrate on the most difficult technical problems in the system. Dr. John Foster, head of DOD Research and Development, as well as most informed and responsible critics, have emphasized the difficulty in developing a reliable computer program, integrating this complex system of radars and computers, and relying on uniformed personnel. This testing program would enable us to concentrate on these problems, work out the bugs, make any necessary improvements, and raise our confidence in the system.

The alternative I am proposing would also help strategic arms limitations talks.

A decision now to deploy more nuclear weapons—even if defensive—would complicate strategic arms limitation talks. If there is a beginning of the construction of missile silos, as requested in the Safeguard proposal, the Soviets could misinterpret this activity as the beginning of a dramatic expansion of offensive weapons. Even if they accept statements that the silos would be filled with purely defensive missiles, they could use the intent to deploy more nuclear weapons as an excuse to deploy more of theirs.

On the other hand a concentrated developmental testing program which retains the option to deploy Safeguard substantially on schedule gives the Soviets a realistic incentive to enter into effective SALT talks. The knowledge on their part that to overcome Safeguard, if deployed, would require an expensive addition to their strategic arms, should help to dissuade them from trying to develop a first strike capability and should motivate them to proceed with SALT talks. It was this kind of realism that enabled us to negotiate a nuclear nonproliferation treaty and a test ban agreement.

Finally, the alternative I am proposing would symbolize our Nation's desire to turn the corner on the arms race and to affirm a fresh set of national priorities. In fiscal year 1970 there would be a saving of at least \$15 million in construction funds for missile silos alone. But the long-range savings due to improvements in the system or an even-

tual decision not to deploy could well be dramatic.

In sum, the alternative I am proposing would not intensify the arms race; it would help us secure an effective arms limitation agreement; it would seek to answer the hardest questions about the system's workability; it would symbolize our turning the corner on defense spending; and it would preserve the ability to meet in time any clear Soviet threat to the strategic balance in the 1970's.

And above all it strikes a balance in the consideration of the twin problems of achieving national safety and a secure peace.

THOMAS J. MCINTYRE.

Mr. AIKEN. Mr. President, I wish to commend the Senator from New Hampshire (Mr. MCINTYRE) for offering his amendment to the legislation which is now pending.

I also wish to commend the Senator from Kentucky (Mr. COOPER) and the Senator from Michigan (Mr. HART) for proposing their amendment yesterday.

While these two amendments differ in some degree, they represent a determination on the part of their sponsors for a workable modification of the ABM proposal.

It has been obvious for sometime that authority for the Defense Department to proceed with the development of an unlimited ABM system could not be approved by this Senate.

In fact, without modification I would have had to vote "No" on this proposal.

It is, however, imperative that in the world as it is today the security of the United States be firmly maintained and that our defenses, including our deterrent and retaliatory powers, be kept up to date.

The issue before us is not whether we should agree with those who contend that the United States should set an example to the world through unilateral disarmament or those who apparently hold that the solution to international differences can best be solved by the dropping of bombs.

While the Polaris submarine has undoubtedly been our greatest deterrent to a widespread war, yet we should not regard the matter before us as an issue between the Polaris and other branches of our Defense Department.

Above all else, the situation with which we are confronted calls for the exercise of common sense, fairness, and clarity.

As I have indicated, we should not grant authority for the deployment or permanent installation of ABM missiles at this session of Congress, but neither should we retard the research which would be essential to the ultimate installation of ABM missiles should circumstances prove such a course to be advisable.

I am particularly interested in research as it pertains to the improvement of our presently inadequate radar systems—and, I might add, our sonar systems as well.

A special reason for perfecting our radar system is the fact that within the next decade or so, supersonic air transportation between the continents will become an accomplished fact and the same radar which would be used to detect oncoming enemy missiles would also be

July 10, 1969

CONGRESSIONAL RECORD — SENATE

used for the civilian economic requirements of the future.

The moon flight shot scheduled for July 16 is another reason for the need to develop more sophisticated tracking devices which can be used for civilian purposes as well as military, not that our present tracking system to the moon is not excellent but it must be perfect before outerspace travel can be extended to greater distances.

It is rather ironic that much of the civilian economic progress of mankind has come about as a result of war or preparation for possible war.

We have paid an exceptionally high and unnecessary price for this progress, but until mankind learns to govern itself and keep its passions under control, it is unlikely that we will be able to digress from this course which has persisted over the centuries.

Therefore, it is essential that the legislation now before us be modified to prohibit the permanent installation or deployment of ABM missiles but not to such an extent that it impairs the security of the Nation or impedes the economic progress upon which our future depends.

It has been said repeatedly that legislation authorizing an ABM program is needed to strengthen the hands of the President at the upcoming meeting with Russia.

May I point out, however, that if the United States enters into a conference with Russia looking to control of armament and aimed at developing a less tense relationship between the two countries, that even though the legislation as written could be approved by as many as 51 or 52 votes in the Senate, which I doubt, we would be in an extremely weak bargaining position.

I believe it is absolutely necessary for President Nixon to have a much larger number of votes of the Senate supporting him when we enter into such a conference.

The pending legislation relating to the ABM must be modified to the extent that strong approval of the Senate will be obtained.

Again I wish to commend the Senator from New Hampshire and the Senator from Kentucky for recognizing this situation, and I express the hope and belief that before this debate is ended, a mutual and satisfactory common ground will be reached.

Mr. MANSFIELD. Mr. President, will the Senator from Vermont yield?

Mr. AIKEN. I yield.

Mr. MANSFIELD. Mr. President, I commend the distinguished senior Senator from Vermont, the ranking Republican in this body, for the thoughtful speech which he has just made.

As I stated to the distinguished Senator from Maine (Mrs. SMITH) yesterday, those of our colleagues who come from New England do not waste words. They get to the point quickly. The Senator has indicated that the amendment offered by the distinguished Senator from New Hampshire, as well as the amendment offered on yesterday by the distinguished Senator from Kentucky (Mr. COOPER) and the Senator from Michigan

(Mr. HART) are steps in the right direction, if not necessarily the right answer.

The Senator also has indicated that authority for the Defense Department to proceed with the development of an unlimited ABM system could not be approved by the Senate.

This is an indication of the closeness of the vote, under present circumstances, which may well accrue if the matter is faced up to without a sizable change in the proposal.

The Senator indicates:

In fact, without modification I would have had to vote no on the proposal.

That, in relation to his approval, in a sense, of the offer of the two amendments referred to, indicates that the Senator has an open mind and is not prepared, even as yet, to commit himself. As a matter of fact, it might well be that the determination of this issue could be decided by the distinguished Senator from Vermont, who now has the floor.

As the Senator has said:

It is, however, imperative that in the world as it is today the security of the United States be firmly maintained and that our defenses, including our deterrent and retaliatory powers, be kept up to date.

With that statement, I agree.

Then the Senator goes on to say:

The issue before us is not whether we should agree with those who contend that the United States should set an example to the world through unilateral disarmament or those who apparently hold that the solution to international differences can best be solved by the dropping of bombs.

I agree wholeheartedly because both of these positions, in my opinion, represent not logic and reason, but, rather, emotion farfetched.

That is the only part of this debate which has disturbed me, when those of us who have raised questions about the ABM—some of us, at least—have been charged with advocating unilateral disarmament.

Fortunately, I know of no Senator who has advocated that this matter of international differences can be solved by the dropping of bombs.

The Senator from Vermont also said:

Above all else, the situation with which we are confronted calls for the exercise of common sense, fairness, and clarity.

That is absolutely correct. That is what the Senator from Vermont is trying to inject into this debate. He said further:

As I have indicated, we should not grant authority for the deployment or permanent installation of ABM missiles at this session of Congress, but neither should we retard the research which would be essential to the ultimate installation of ABM missiles should circumstances prove such a course to be advisable.

That is correct. Then the Senator said:

I am particularly interested in research as it pertains to the improvement of our presently inadequate radar systems.

I am, too. But there is a grave question about the softness or vulnerability of the radar system which is proposed to be installed at missile sites, especially in Montana and North Dakota. I should

think, as a suggestion, that perhaps it would be possible to achieve the same results if testing were to be carried on at such missile sites as Kwajalein, which has been in operation for some time, if my information is correct, and at Eniwetok, which I understand, is 500 or 600 miles from Kwajalein—in other words, approximately the same distance as between Grand Forks, N. Dak., and Malmstrom, Mont.

Furthermore, there would be no indication that something was being attempted which might prove to be a steppingstone, a nose under the tent, or a foot in the door to the building of a complete ABM system, not only at those two sites, and not only as to computerized Sprints and Spartans, but the same being applied to the other 10 missile sites that are underway.

What the Senator from Vermont has said indicates, of course, that he has given this subject a great deal of thought. Different views may exist among us, but I do not question the integrity or the patriotism of any Member of this body, whether he be for or against the system. Whether or not one is against it is, of course, a matter of judgment, which all of us must face up to. The President has faced up to his responsibility and has rendered a judgment. We have to face up to our responsibility and render a judgment, as well.

The Senator from Vermont also said—and I am getting close to the end of this interpolation:

It has been said repeatedly that legislation authorizing an ABM program is needed to strengthen the hands of the President at the upcoming meeting with Russia.

That is a doubtful thesis. No one can read the minds of the Russians. No one really knows what the effect will be of a system of this kind being built. It might be beneficial; it might be harmful. It is a doubtful thesis.

The Senator from Vermont also said:

May I point out, however, that if the United States enters into a conference with Russia looking to the control of armament and aimed at developing a less tense relationship between the two countries, even though the legislation as written could be approved by as many as 51 or 52 votes in the Senate—

Which I doubt—we would be in an extremely weak bargaining position.

The Senator is correct. I join him in his remarks because the situation is one which cannot be avoided now. It must be faced up to in some manner or in some form.

When the Senator, in his last paragraph, after commending the Senator from New Hampshire and the Senator from Kentucky, expresses "the hope and belief that before this debate has ended, a mutual and satisfactory common ground will be reached," I join him, but I emphasize the importance of achieving an objective of this sort.

As has happened so often in my years in the Senate, the distinguished Senator from Vermont has rendered a service to all of us, regardless of our position. I hope that in the light of his remarks, we will do a little reevaluating and rethinking. I congratulate him for a fine speech.

S 7876

CONGRESSIONAL RECORD—SENATE

July 10, 1969

Mr. AIKEN. Let me thank the Senator from Montana for his analysis of the remarks which I have just made. I am willing to confess that the remarks pertaining to the radar installations were put in there for the purpose of pointing out what is possibly the only issue which will require a better understanding among Members of the Senate. This is one thing which will have to be worked out and reconciled before we can get a large vote for the bill, or for the ABM part of the Defense authorization bill, in the Senate.

I believe it is essential, not perhaps so much for the purpose of trading the ABM with the Russians, but indicating to the Russians that the Congress, or at least the Senate, is behind the President in his efforts to achieve a limitation of armaments as well as better relations between the two countries. I think the size of the vote on the amendment which will finally be produced—and I do not think any of the sponsors or introducers of the two amendments already before the Senate can claim perfection—will carry great weight in the disarmament conferences when they take place, which we understand will probably be sometime next month.

I yield now to the Senator from New Hampshire (Mr. McINTYRE). I commend the Senator again for presenting the amendment he has submitted.

Mr. McINTYRE. Mr. President, I thank the Senator for yielding to me. I also want to thank him for the kind and judicious remarks he had made about the amendment I have just offered. It is rewarding indeed to one who has participated in the Armed Services Committee hearings and who has studied this subject, as I am sure every Member of this body has, to have those remarks from the distinguished and great Senator from New England—if I may put him in that category right now. I thank the Senator.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. AIKEN. I yield.

Mr. FULBRIGHT. Mr. President, I want to join the Senator from Montana in commending the Senator from Vermont for his statement. I think he has analyzed the question extremely well. I think it is very beneficial to this debate and will put it in a perspective which makes it much more understandable to the public at large. I congratulate the Senator for rendering a real service to this debate.

Mr. AIKEN. I thank the Senator.

Mr. GORE. Mr. President, will the Senator yield?

Mr. AIKEN. I yield.

Mr. GORE. The able senior Senator from Vermont has on today, as on many other occasions, rendered a notable service. The spirit of accommodation which he says is needed in the national interest, prevails, in my view, in the Senate.

Perhaps I can be permitted to say that, as chairman of the Disarmament Subcommittee which held extensive hearings on the subject of the ABM, hearing witnesses both pro and con, some 6 weeks ago I called an unpublicized executive session of the subcommittee. So far as I know, there has been no publicity about it. For 3 hours members of the commit-

tee, in an absolutely nonpartisan, bipartisan spirit, discussed the responsibility of Senators in this context.

We came to the conclusion, rightly or wrongly, that deployment of the antiballistic missile system could be every detrimental—might be even disastrous—to the coming conference. In any event, whether we were right or wrong, we reached the conclusion that we could not compromise on deployment; but with the coming of the conference, at which time, we had been assured then, the administration was nearing the end of its negotiating position and would soon indicate a readiness to go to conference, we considered, as I said, the responsibility of Senators in this regard.

Around the table, a spirit of accommodation was unanimously expressed. So with the approval of the group then present—again unanimously—I designated two members to convey to President Nixon the attitude of the members of the subcommittee.

I think that spirit of accommodation still prevails. I think it prevailed when, late last Monday afternoon, the pending bill was made the business of the Senate and debate began. But, because this spirit of accommodation had not met with reciprocity, it became necessary to join issue for a showdown battle, if necessary.

I say, in all sincerity, I doubt if that a showdown battle on this issue would be in the President's interest, would be in the national interest, or that it would be in the interest of the Senate. But, as the Senator from Montana has said, reciprocity, accommodation, and compromise is a two-way street. The able senior Senator from Vermont has now stepped right into the middle of the street and is beckoning in both directions.

I join the Senator from Montana in again expressing appreciation to him and in expressing a willingness to cooperate with him to the extent of full research and development.

Mr. AIKEN. I hope the Senator from Tennessee realizes there is an island in the middle of that street.

Mr. GORE. If we need to build some traffic protection for the Senator, I am willing to do that, too.

Mr. AIKEN. Otherwise, it might be a precarious position.

Mr. President, I yield to the Senator from Missouri.

Mr. SYMINGTON. Mr. President, it has been my privilege to know the distinguished Senator from Vermont for a good many years, and I have served with him on two committees over a period of years.

The more you know the Senator, the more you respect him. It would not be possible not to like him. This afternoon, once again he has shown that he is a great Senator, a wise and able statesman.

Because of the nature of this debate, and its import with respect to the future of these United States, I hope with all my heart that my colleagues on both sides of the aisle will give full respect to the thoughts this wise man has presented us today.

Mr. AIKEN. Mr. President, I would not be human if I did not appreciate the re-

marks of the Senator from Missouri. But let me say, finally, that my fondest hope is that the Members of the Senate will agree upon a modification of the ABM for research and development work as well as enable us to get a very large percentage of the Members of the Senate to vote in favor of it, because the President must have that backing for the upcoming arms talks.

I would not interpret our vote this year to be in support of an ABM deployment next year, the year after, or the year after that, or whenever it might come about, as much as I would an indication that we are behind the President in his efforts to secure better relationships with other countries of the world. I am particularly thinking of Russia with whom continuous competition and arms rivalry is turning out to be a very expensive affair for all of us.

Mr. DOMINICK. Mr. President, I have reviewed the speech, or the "release when given" comments of the Senator from Vermont. I am sorry I was not here when he presented them. I should like to make just a few comments on those, and then comment upon the amendment of the Senator from New Hampshire (Mr. McINTYRE), which I think is particularly important.

The Senator from Vermont, for whom I have great admiration and respect, has said, on his opening page:

It has been obvious for some time that authority for the Defense Department to proceed with the development of an unlimited ABM system could not be approved by this Senate.

Then he goes on to say:

In fact, without modification I would have had to vote no on the proposal.

Mr. President, it is not my understanding that either the committee or the President have advocated the development of an unlimited ABM system. As a matter of fact, it is quite limited, and the President, in his speech endorsing this proposal, very carefully stated that he was reserving the option, during the process of negotiations, to be able to halt whatever was going on at any time that he felt so inclined, and that by going forward now with procurement of certain items, we still retained our option to stop deployment while at the same time we were perfecting the ability of all the components to work together, in the event that they were needed.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. DOMINICK. I am happy to yield to the Senator from Vermont.

Mr. AIKEN. I simply wanted to observe that I would interpret any authorization for deployment of the missiles to be the ultimate objective, so far as unlimited development went, because once we started deploying them, there would be no end to the procedure. Some of the witnesses have testified that the ABM proposal as written into the bill was a good start, indicating that they expected to go on from there, and on and on, until nobody knows what the end would be.

It might be limited, but from the witnesses I heard, it sounded very much as if they viewed it as a start toward an unlimited program.

July 10, 1969

CONGRESSIONAL RECORD — SENATE

Mr. DOMINICK. With all due respect to the Senator from Vermont, I think he is probably reading more into this than the committee is, at least more than they intended to authorize, and certainly more, I believe, than the President indicated in his speech in support of the proposal.

I shall leave the matter there, because I believe Senators can read the report of the committee on this matter, and read the President's statement, and see that this is a very careful limitation, in order to preserve our option to put an ABM, eventually, in 1974, in two places, and be able to observe the credibility of our deterrent force.

I was certainly happy to see the statement of the distinguished Senator from Vermont that:

Our defenses including our deterrent and retaliatory powers (should) be kept up to date.

I think this is part of the process of doing it, and on that process perhaps we disagree to a certain extent.

Mr. President, I also wish to comment on the amendment offered by the Senator from New Hampshire (Mr. McINTYRE), for whom I also have high regard.

As I said the other day, I think the Senator from New Hampshire and the other members of the Subcommittee on R.D.T. & E. did a very fine job of analysis of the proposed budget. By virtue of the work which he and other members of the committee did, we were able to cut off almost \$1 billion from the proposed budget. Undoubtedly, as we continue in this effort, we can do some more.

I know his reservations about the ABM, and have now reviewed his proposed amendment, and would like to indicate some of the problems that I see in this if—and I say "if" because I hope there will not be any withdrawal from the position we are in—but if we have to take anything at all, there are problems with this amendment which are inherent in the total program of research and development, and on deployment as well.

Mr. MURPHY. Mr. President, will the Senator yield?

Mr. DOMINICK. I yield.

Mr. MURPHY. I should like to request information as to how other Senators could obtain copies of the amendment, so we could more closely follow the colloquy. Have they been printed?

Mr. DOMINICK. I happen to have a copy here, which I assume comes from Senator McINTYRE's office. I will be happy to let the Senator look at it and return it.

Mr. MURPHY. I thank the Senator very much. I now have one here.

Mr. DOMINICK. The problem with the amendment is that it casts a cloud of doubt over the entire Safeguard developmental effort, as I see it, because the body of the authorization bill, as it came from the committee, authorizes certain expenditures for the Safeguard system in general terms; the proposed amendment purports to redefine and limit this authority by an enumeration of activities for which funds may be used. By implication, at least, expenditure for

anything that does not appear on the list of enumerated activities is unauthorized. The list contained and the language used in the amendment appear, on examination, to be so incomplete and ambiguous as to raise serious difficulties with implementation if it were put into effect, and to cast doubt on the authority to conduct certain necessary developmental and preproduction activities.

The following are examples of some of the practical problems of interpretation and ambiguity that would arise under the amendment:

First, S. 2546 in its title states that the authorization of test facilities at Kwajalein is a specific purpose of the bill and this is implemented by section 203. Yet the absence of language in subsection (a) of the amendment specifically authorizing funds to be spent for such facilities and R.D.T. & E. effort on radar and missiles at Kwajalein, coupled with the further limitation in subsection (b) forbidding the installation of "equipment described" in subsection (a) (1)—that is, radars, computers, and related electronic equipment—at "any proposed anti-ballistic-missile site" other than Grand Forks and Malmstrom, could lead to the conclusion that construction and installation of facilities at Kwajalein is unauthorized. These additional facilities at Kwajalein are required for essential system tests with radars and missiles.

Second, likewise, the provision in subsection (b) limiting the installation of "equipment described" to two specified sites may preclude the establishment of essential modifications to training facilities; it may also prohibit the modification of existing command and control facilities and the production and installation of the tactical software control site at Whippany, N.J., which is essential to the developmental testing program.

Third, subsection (a) (2) raises even more serious ambiguities. This is the only portion of the amendment dealing with what is permitted in the way of preproduction and production type activity. It permits "preproduction expenses"—an ambiguous term—but only for missiles. Considering that subsection (a) (1) permits funds to be used only for research, development, testing and evaluation of system components such as radars, computers, and related electronic equipment, but not for production of these items, it is unclear how funds—particularly PEMA funds—can be used to procure these items for the Grand Forks and Malmstrom tactical sites. The amendment is silent with respect to production engineering and preparation for manufacture of nonmissile items such as radars and computers. Absence of such authority would have a serious impact on timely future deployability of the system.

Fourth, there is no specific authorization for funds to be used for development or procurement of necessary and ancillary supporting facilities that are not "related electronic equipment."

Fifth, this amendment could be interpreted as preventing the accomplishment in fiscal year 1970 of survey, advanced engineering, and site selection for phase 2 sites. If this site selection

activity is not carried out in fiscal year 1970 on several of the phase 2 sites, there will be several months of delay in proceeding with these sites if their later deployment is approved.

So the problem, as I see it in general—and I am not trying to be critical of it because as I say it is trying to accomplish some kind of compromise—if we go forward with this type of amendment, we have ambiguities in what we can or cannot do that will no doubt cause a very great delay in future deployment in the event we need it next year. That is the main problem with the Cooper amendment and with the McIntyre amendment.

Mr. McINTYRE. Mr. President, will the Senator yield?

Mr. DOMINICK. I yield.

Mr. McINTYRE. Mr. President, I have listened to the critique of the language of my amendment.

I have had numerous sources of advice as to how to draw this—from legislative counsel, from members of our own staff, members of the Committee on Armed Services.

I assure the Senator that his critical comments made here will be looked at carefully. In the event we find some merit in them, we will try to make the appropriate modifications in the amendment now at the desk.

There should be no doubt concerning my amendment, as it is very clearly spelled out in the supplemental views in the committee report. However, I appreciate—and I am sure the Senator does—how difficult it sometimes is to put down in exact, legal language in an amendment to a bill the very thoughts that we expressly have in mind.

There is always the question of some ambiguity creeping in.

We will take recognition of the Senator's remarks.

Mr. DOMINICK. I fully understand that. That is the reason why I spoke up. I thought that if the Senator wanted to perfect his amendment, it would give him a chance to do so. Second, in all fairness, regardless of the amendment, the Senator is trying to prevent the deployment in fiscal year 1970 of deployable items. I must in all conscience oppose the amendment, since it will do that.

Mr. AIKEN. Mr. President, may I ask the Senator if he has discussed this matter with the White House?

Mr. DOMINICK. I have not been in touch with the White House. However, I have been in touch with other representatives, and I am sure they agree with that.

Mr. COOPER. Mr. President. There is no need to add to the tributes that have been paid to the senior Senator from Vermont. He was asked by us to approach the question before the Senate with commonsense, fairness, and clarity. These are qualities which have always marked the distinguished Senator from Vermont.

I hope that we will follow his suggestion.

I know there was no intention on the part of any of us who opposed last year the deployment of ABM, to confront the then President of the United States—and now with a new President and one

S 7878

CONGRESSIONAL RECORD — SENATE

July 10, 1969

of my party, there is no desire or pleasure on our part for a confrontation.

We have offered an amendment which would provide to the administration all the money it has asked, but to be used for research, development, testing and evaluation of all the components of the system so there would be no timelag if in the future—next year, before, or even later—it should become evident that the threat which the Secretary of Defense has projected had become a reality.

As the distinguished Senator from Colorado has called attention to the amendment which the Senator from Michigan (Mr. HART) and I offered for ourselves and on behalf of many others who hold the same position, I point out that the amendment is not ambiguous.

Its sponsors decided as a group to provide to the administration all of the money it asked so that it would be enabled in fiscal year 1970 to proceed with research, development, testing, and evaluation and do so in ways that it thought best, but with the option of developing a more effective system than the Safeguard, if one became needed.

We provide, incident to research and development, that the administration could make such procurement as it believed necessary for such testing. As the Secretary of Defense himself stated in his testimony before the House Subcommittee on Appropriations that no part of the system could be deployed as an integrated unit until 1974, or as separate component parts during the coming year, we have not deprived the administration of anything if the amendment should be agreed to, except the political decision of actual deployment at this time.

Our reasoning is, as many have stated, that, approaching the arms talk, it would be better for the administration to go to the talks without commencing the deployment of the weapons, offensive and defensive, which the very negotiations seek to control. It is to determine if the nuclear arms race can be brought under control.

Our amendment is clear. It will be elaborated in view of the statement of my friend, the Senator from Colorado, I again make this explanation for the purpose of our amendment.

Mr. FULBRIGHT. Mr. President, a few moments ago, the distinguished Senator from Mississippi (Mr. STENNIS), the chairman of the Armed Services Committee, made a brief statement. The first paragraph reads as follows:

The printed record released today of the hearings on Intelligence and the ABM before the Senate Foreign Relations Committee has been cited by the Chairman of the Senate Foreign Relations Committee as evidence of the disagreement between Secretary of Defense Laird and Director of the Central Intelligence Agency, Mr. Helms in their assessment of the strategic threat which makes the ABM necessary.

Then later, in the next to the last sentence, it states:

Both Secretary Laird and Mr. Helms have replied and made it clear that there is no disagreement between them as to the strategic threat.

I thought it was necessary to clear up the record, because the transcript of the

hearing held with Mr. Helms and Secretary Laird, which was released today, does not allege that there was any difference with regard to the strategic threat. I want to read the paragraph. There are differences, but not of that character, because I do not think the CIA has made an assessment of that particular matter. I read from page 6 of the hearings which were released today. This is in a letter which I addressed to Mr. Laird based upon his letter and the hearings:

In fact, as the record now stands it leaves the impression that there have been no disagreements within the intelligence community as far as certain recent developments in Soviet weaponry are concerned. I felt that I had no choice but to agree to the deletions requested by the executive branch on the grounds of national security. But the fact of the matter is that there have been disagreements within the intelligence community on such recent developments, although all the testimony given at our June 23 meeting indicating such disagreements has been deleted from the public record.

Now, those disagreements did not relate to the strategic threat. I wish to make it clear that they do relate, however, to other aspects of the matter which were deleted. They were deleted because all of the testimony of Mr. Helms was deleted on the usual grounds of national security. But I have the hearings before me. I would be very pleased to show them to the chairman of the Committee on Armed Services, to illustrate what I mean. There were distinctly differences of view as to certain weapons systems and their characteristics, and this is what was referred to in my letter to Mr. Laird.

I only wanted to make this statement in order to clarify the record. To say that there were no differences on the strategic threat is, in a sense—I am not sure what the right characterization is, whether it is a red herring or not. In any case, that is not what was at issue at all. I assure the Senator that I hold in my hand the document which clearly shows there were differences between the two agencies—that is, between the intelligence community and the Secretary of Defense—with regard to certain weapons systems and things of that nature in arriving at a judgment as to what the intentions are and also what the necessity of the ABM is at this time—such differences, I may say, relating to the ABM and the Russians, and so on. These are differences with which the Senator is familiar. Those are the differences I was discussing.

Mr. STENNIS. Mr. President, I should like to respond to the Senator's comment, if he will yield to me.

The PRESIDING OFFICER. Does the Senator from Arkansas yield to the Senator from Mississippi?

Mr. FULBRIGHT. I yield to the Senator.

Mr. STENNIS. I thank the Senator. In the first place, the opening sentence of the statement I made uses the term "which makes the ABM necessary." It was not my purpose to imply that Mr. Helms testified that the ABM was necessary. The words should have been "which gives rise to the question of whether or not the ABM is necessary." That is a

refinement of language that makes clear what I said—which gave rise to the question of whether or not the ABM is necessary. I was talking about the strategic threat.

Mr. President, it is hardly possible to describe how many things have been said and written about this conflict in the testimony given by Mr. Laird and Mr. Helms. It has been mentioned to me on the Senate floor by Senators who are interested from one point of view and the other.

Finally, in the rush of all these other matters, I made some effort to look at the testimony of both men. It was not convenient to get it, although I was not denied access to it. It was not convenient for me to see it. But the release of the testimony of Mr. Laird and Mr. Helms, with the deletions, gives rise to the question again: Well, what is the conflict between these men?

I anticipated that the best I could by writing each of them a letter and pointing out that the alleged conflicts had been called to my attention many times and that in preparation for this debate I wanted to know the facts. They are responsible men, in responsible positions.

I attached to my brief statement a copy of the letter to Mr. Helms. I will not burden the Senate by reading both of them, except to read the last paragraph:

I would greatly appreciate if you would respond appropriately after consultation with Secretary Laird indicating your agreement or disagreement with any aspects of his response.

I said to Mr. Laird that I wanted to be provided with a statement and—

Whether your definition and evaluation is concurred in by the Central Intelligence Agency, particularly Mr. Richard Helms, Director, and if there is disagreement, to what extent and in what regard.

Those are very pointed questions.

An answer was received from Mr. Laird. Mr. Helms happened to be out of the country, but this matter was communicated to him. It was read to him, and he has sent a reply through General Cushman, and I will put that in the RECORD. General Cushman was Acting Director in the absence of Mr. Helms from the city. He said:

Although Mr. Helms is presently out of town, he has read the text of Secretary Laird's reply. Mr. Helms wishes to assure you that he has no disagreement with the statements in Secretary Laird's letter to you of 8 July concerning the potential Soviet and Chinese Communist strategic capabilities, as seen from the intelligence point of view.

I should like to dwell on that for a moment—strategic capability. That is the capacity and the possibility of what appears to be the course of events and evaluation of what indications arise as to what the plans are for the future; that is, the capability of our adversary as to the strategic threat. That is as far as Mr. Helms' duties go, as the Senator knows. Mr. Helms does not advise whether we need an ABM—never; nor whether we need an F-14 or F-15 or any other weapons. He works, as the Senator well knows, upon the intelligence, the capabilities.

CONGRESSIONAL RECORD — SENATE

July 10, 1969

Mr. Helms is not going any further than that in his duty; and they certify here that there is no disagreement on these matters so far as Mr. Helms' duty goes; and I think that clarifies the situation a great deal.

Now, we can go back and pick up fragments here, there, and yonder about what Mr. Helms thinks about the indications from—we cannot discuss these things too much—but fragments of matters he may know about, or what Mr. Laird thinks about that. I do not think that is so relevant. But Mr. Laird has the duty of enunciating a policy the best he can.

He and the President and others passed on this intelligence. There is where the matter about the ABM comes in.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I wish to make one comment, and then I shall yield to the Senator from Missouri unless he wishes me to yield to him right now.

Mr. SYMINGTON. No, but I would appreciate it if the Senator would yield to me later.

Mr. FULBRIGHT. I shall.

Mr. SYMINGTON. I thank the Senator.

Mr. FULBRIGHT. First, I wish to emphasize what is said in that last letter in case those who do not read it carefully should miss it. I refer to the letter to Senator STENNIS from General Cushing. I reiterate that the letter says:

Mr. Helms wishes to assure you that he has no disagreement with the statements in Secretary Laird's letter to you of 8 July concerning the potential Soviet and Chinese Communist strategic capabilities.

And I wish to emphasize, "as seen from the intelligence point of view."

Now, coming to the letter of Mr. Laird, he said:

In short, we believe the USSR has the capability of acquiring, by the mid-1970's: some 400 SS-9 ICBMs, multiple independently-targeted re-entry vehicles, SLBMs matching the U.S. POLARIS fleet, ICBM retargeting capability.

This illustrates a point that has been very slippery in this entire matter. I wish to show to the Senator from Mississippi that the committee of which I am a member did not seek this controversy. We were not trying to nitpick. The whole matter of difference arose out of the statement made by the Secretary of Defense in open session before the subcommittee headed by the Senator from Tennessee to the effect that the Soviet Union was going for a first strike capability. Then, he added, for emphasis:

There is no question about that.

This is a very significant statement. This is where the matter started. This did not start with any little meeting in secret between our committee and the Secretary of Defense or the CIA. We were trying to clarify a statement which was extremely provocative, a statement that, if true, and based upon a finding of the intelligence community, should be taken most seriously.

That statement was generally interpreted to mean that the Soviet Union

was preparing for a first strike, which means utter destruction of the United States beyond the possibility for retaliation. I will read his statement. This is from that hearing. This is the Secretary of Defense speaking:

The Chairman has quoted your statement before the committee which was carried on television. But for the sake of my question I would like to repeat it:

"With the large tonnage the Soviets have, they are going for our missiles and they are going for a first strike capability. There is no question about that."

Secretary Laird did it for emphasis. This is what started the whole matter. This raises extremely serious questions about our whole relations with the Soviet Union. If that statement by the Secretary could be taken literally and fully, my goodness, an ABM would be mighty small potatoes compared to that kind of threat. This is what we have been trying to clarify. And that is why we had this meeting; in order to determine what the Secretary meant.

Immediately after Secretary Laird said what I quoted about a first strike, I inquired of the intelligence division of the State Department, and later of the CIA and the Chairman of the U.S. Intelligence Board to this effect. I asked if that Board ever found that the U.S.S.R. was going for a first strike capability. In other words, were they producing weapons or doing anything else which led the intelligence community to make such a finding? They make that annual finding in the fall and then they meet once a week to update whatever their newest intelligence may bring to their attention.

I was assured they had never made such a finding. In other words, this statement of the Secretary of Defense had been made on his own authority without being based on findings of the intelligence community. That is what started this matter. I think it is important that it be clarified.

I believe that in this last hearing, the Senator should read carefully the committee hearing, and especially the questioning of the Senator from Tennessee who pursued this matter at great length. He was chairman of the subcommittee in which this statement was made. I believe the Senator from Mississippi will find there quite a qualification by the Secretary of Defense himself as to what he intended. I do not believe he intended to give the impression that he did give by that statement. I think he has drawn back from that.

That is the only point I wanted to make with respect to the strategic threat or capability. I am not saying and I do not think anybody is saying that given an all-out effort the Russians could not make lots of weapons and we could not make lots of weapons. This proposition is centered around the thought that by having a meeting with them, and the President has committed himself to having a meeting with them, we can control or stop at least this vast acceleration of the arms race. I think we can, and if we understand the situation better and if each side is convinced that the other side is not going to destroy the deterrents,

then I think a negotiated settlement is possible.

I yield to the Senator from Missouri, who wishes to respond.

Mr. STENNIS. Mr. President, if I may, I would like to make a few remarks in response.

Mr. FULBRIGHT. I yield.

Mr. STENNIS. I appreciate the Senator's statement. I am sure he appreciates what I was doing with these letters. I do not know if we have a qualified statement, but I wanted to get something by both of them to put side by side in this debate.

Now, we know, as far as these letters go, there is no difference between them.

Mr. FULBRIGHT. I do not accept the statement that there is no difference between them. There is no difference on that point. I would not want to let it pass that there is no difference.

Let me say to the Senator that I did not wish to have Mr. Helms come and be confronted by the Secretary of Defense. The Secretary of Defense is a powerful political figure on his own. For a long time, he was an influential Member of the House of Representatives. This puts him with a man who can be dismissed tomorrow morning by the President if he does not suit him. I did not want to have the two men together. It was not done at the insistence of the Director of the CIA. I do not like to ask him, "Do you disagree with the Secretary of Defense?" That puts him in the intolerable position of standing up and disagreeing with a man who, in our political system, is far more secure. I did not want to do that in the first place. I think the letter in which he replied is couched very carefully. I certainly hope beyond all things that as a result of these exchanges, the Director of the CIA is not dismissed. I have been afraid of that, or even to mention him in public after I saw what happened to Mr. FitzGerald and others in the bureaucracy when they disagreed. I have been concerned about that and I did not want to expose Mr. Helms to anything of that kind unnecessarily because he should not be.

Mr. STENNIS. On the question of the first strike capability, that rests more in the minds of our adversaries than anywhere else, I think we can talk about it a long time and no one could put his hand on the answer.

I thank the Senator for yielding.

Mr. FULBRIGHT. The Senator inspired me to make a comment.

I asked a great psychiatrist, 2 weeks ago, about the principle of projection, that it is entirely in the mind. What occurred to me was that when one makes a public statement to the effect that someone else is about to do something, it is a common psychological phenomenon that one really is speaking what is in his own mind. Is the Senator familiar with that principle? [Laughter.]

Mr. STENNIS. The Senator is far beyond me in many things, including psychiatry.

Mr. FULBRIGHT. That was Dr. Carl Menninger who said that, not I.

Mr. SYMINGTON. Mr. President, perhaps it is unfortunate that I am the only Senator who listens to the testimony of

S 7880

CONGRESSIONAL RECORD — SENATE

July 10, 1969

the Secretary of Defense and the Director of the CIA before the Committee on Foreign Relations, the Armed Services Committee, the Subcommittee on Central Intelligence, and the Appropriations Committee. I have listened carefully to all said testimony.

As a result of the appropriations testimony of the distinguished Secretary of Defense, prior to his latest appearance before the Foreign Relations Committee, I came to the conclusion that there was a difference between these two gentlemen, and that the difference was chronological.

Therefore, as the chairman of the Foreign Relations Committee will remember, I called up and stated, in my opinion, both of these gentlemen were sincere, and the difference was a chronological difference.

To make my point, I went over the appropriations testimony of the distinguished Secretary of Defense with the chairman of the Foreign Relations Committee.

We later had that last hearing, and I must say I felt at that time that over 90 percent of any difference was cleared up to the satisfaction of all concerned.

Mr. President, I take this opportunity not only to observe that I have great respect for the integrity and ability of the Secretary of Defense, but also have the same convictions about the Director of the CIA. It has been my experience during the some quarter of a century that I have been in Government, that every time we draw the Central Intelligence Agency into public discussion or debate—and I must say that this time no Member of the Senate was involved—we get ourselves into a situation which is not in the best interests of the security of the United States.

I would hope, above everything else, that this debate does not in anyway hinder the fine work that Mr. Helms is doing. In my opinion, he is the best Director of the CIA ever had.

Mr. FULBRIGHT. I would say that I feel as the Senator does. He is an excellent man. I have always felt that we got the most objective information from him that could be had in our Government.

Mr. GORE. Mr. President, will the Senator from Arkansas yield?

Mr. FULBRIGHT. I yield.

Mr. GORE. Mr. President, one of the crucial points in this whole debate, not only in this debate but in the justification advanced for deployment of the ABM, is the question of Soviet intent to seek to achieve a first-strike capability.

The able chairman will recall that when President Nixon announced to the American people his decision to recommend deployment of the ABM, he placed great emphasis upon the necessity of ABM deployment to preserve the credibility of this country's deterrents.

Mr. FULBRIGHT. That is right.

Mr. GORE. Then when Secretary Laird went before the Armed Services Committee, he made the same point. In fact, it was the principal point. It was the principal reason advanced for the deployment of the ABM weapon system.

Then, when he came before the subcommittee of which I have the honor to be chairman, before an audience of the American people of many millions via television he said, as the chairman has now quoted him:

With their great tonnage, they are going for our missiles, and they are going for a first strike capability.

Then, for emphasis, he added:

There is no question about that.

Does not the Senator recall that the next day the newspapers of the Nation headlined that the Secretary of Defense had said that the Russians were going for a first-strike capability, and, therefore, that ABM's must be deployed?

Mr. FULBRIGHT. That is correct.

Mr. GORE. So, Mr. President, with the American people involved in this issue, this became crucial, crucial in debate, and crucial in the decision. If in fact the National Intelligence Board had reached a conclusion that the Soviets were going for a first-strike capability, which means, in the terminology of the military, the ability to render against this country such a blow that we could not retaliate with unacceptable risks for them, then, Mr. President, ABM's would not be sufficient.

Oh, no. ABM's would not be sufficient, because then we would be facing the threat, if not the intent, of annihilation of this country should the Soviets achieve a first-strike capability, the United States would not then have the power to deter a nuclear war.

Mr. President, as I tried to say time after time on the floor of the Senate, our whole strategy to avoid nuclear war has been postulated on deterrence.

Mr. FULBRIGHT. That is right.

Mr. GORE. We realize that in a nuclear exchange between the United States and Russia, there would be no winners. In fact, Dr. Kistiakowsky expressed the opinion to us that an all-out nuclear exchange would render at least the Northern Hemisphere uninhabitable.

Thus, we are not only talking about a nonvictor as between the United States and Russia, but the world would also lose. All would be lost.

Not only have we postulated our position on deterrence to prevent a nuclear war, so have the Soviets. Now we have reached this balance of terror, when both countries have a second-strike capability and thus the power of deterrence.

I doubt whether many Americans are frightened by the Russian ABM's. Is the Senator from Arkansas? They are not aimed at Little Rock. [Laughter.] In fact, they go only a short distance.

By the same token, I doubt whether the Russians would be very apprehensive about some of our ABM's in Montana and North Dakota which have a range of not more than 500 miles.

I dare say they would be concerned, were they contemplating an attack upon the United States, about the Poseidon missiles in our nuclear submarine fleet; about our intercontinental ballistic missiles; about our missiles on the surface of naval vessels; about the missiles in certain foreign countries near them;

about our tactical missiles in Western Europe under our command, some of which can reach the Soviet Union; or about our intercontinental bombers.

I think they would be concerned about that with which we could retaliate upon their country, and not about an ABM "shoot-'em-down-maybe" short-range defensive capability.

Mr. President, here we are talking about the central issue in this battle. The Secretary of Defense arrogated to himself, it seemed to me, some special responsibility that Senators do not have for the security of their country. He does have a responsibility, but so do we. Before millions of the American people and a Senate committee he said, and I repeat:

They are going for a first strike capability. There is no question about that.

We promptly set about to examine it and found, I say unequivocally—and if there is a secret session, we will show the record—that there has been no finding of the National Intelligence Board to support that conclusion.

The Secretary of Defense has a right to reach any conclusion which he feels justified. I do not question that. But so do Senators.

We found no evidence that the Soviets were going for a first-strike capability; and that was the principal justification given for deploying ABM's.

Mr. President, they have retreated from that. The Secretary of Defense has retreated from that. It is no longer advanced. Now the principal reason given in support of ABM deployment is that the President needs it in order to go to the conference.

In other words, we arm to parley. That has failed many a time in history. But now, fortunately, this afternoon, it seems to me the senior Senator from Vermont has pointed a signal for accommodations. I stand ready, in the hope that such an accommodation can be reached in the national interest, and I say in the interest of the President, and in the interest of the Senate. He advocates continuation of research and development but no deployment. I agree, but it must be only research and test.

Mr. FULBRIGHT. Mr. President, I appreciate very much what the Senator from Montana has said. He said it extremely well, as he always does. He made a great contribution to the hearings and to the clarification of this very point, which I think is now understood.

I agree with what the Senator said about the Senator from Vermont. I think he has pointed a way to a settlement of this question which I hope can be brought about. I hope it will be brought about.

I agree with the Senator that the best way to strengthen the hand of the President in the forthcoming trip—or in the negotiations with the Russians would be a good, solid vote on this matter, which, if you would like, can be called an accommodation. I am not quite sure of the terms in this—an accommodation in the sense I believe the Senator from Ver-

July 10, 1969

CONGRESSIONAL RECORD — SENATE

S 7881

mont used that phrase. I hope that can be worked out.

Mr. STENNIS. Mr. President—

Mr. FULBRIGHT. Does the Senator want me to yield to him?

Mr. STENNIS. On this one point.

Mr. FULBRIGHT. I yield.

Mr. STENNIS. I think these letters from the men referred to speak for themselves. One word about Mr. Helms. I certainly want to point out, with great force, that, as it seems to me, he is outstanding in his work. I do not have the slightest indication that there is any other sentiment than that toward him or Mr. Laird or anyone else. I have not talked to Mr. Laird about Mr. Helms except in a general way, and I know he has a very high regard for him.

I did not want to leave this discussion in a way that might cause disagreement if something came up.

Mr. FULBRIGHT. I really said what I did as a preventive. If something happened, it would be too late. I wanted to take the opportunity to say in advance that I, certainly, and I believe the Senator from Mississippi shares my view, felt Mr. Helms speaks very forthrightly. I refer not only to this event, but I go back 3 or 4 years, when he used to report his findings. It seemed to me that subsequent events justified his estimates of affairs and supported his findings, particularly in the Vietnam area and others, a great deal more than they did some of the optimistic findings of some members of the Department of Defense. So I already had a considerable prejudice in his favor in the reliability of his estimates.

Mr. STENNIS. I thank the Senator.

Mr. FULBRIGHT. Mr. President, I yield the floor.

Mr. STENNIS. Mr. President, to the extent that I am the floor manager, I do not know of any other Senator who desires to address the Senate this afternoon on the pending measure. There will be debate tomorrow. We have already set the speech of the Senator from Texas (Mr. TOWER), by a special order, for tomorrow, following the morning hour, I believe.

Mr. HART. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. HART. Mr. President, I rise to comment on the remarks made a few minutes ago by the Senator from Vermont (Mr. AIKEN). I regret that he is not on the floor, but I am delighted that the Senator from Kentucky (Mr. COOPER) is.

First, may I explain the reason for my absence at the time the Senator from Vermont was speaking. Unfortunately, I was chairing a subcommittee meeting.

The Senator from Vermont was gracious enough, before he made his remarks, to see that I had a copy of them. I have read them. I rise now simply to express delight that the Senator from Vermont counseled the Senate that we are not yet ready to deploy an anti-ballistic-missile system; that we need to move forward in research and testing. What Senator AIKEN counsels us is, I think, the counsel of wisdom, as we hear so often from that magnificent Senator from Vermont.

I would hope that we would recognize the desirability that the testing be of maximum value and utility. You do not get that kind of testing in the middle of the continent of the United States. You get that testing out in the reaches of the Pacific.

Additionally, when you put equipment that relates to an anti-ballistic-missile system in the Pacific and you say you are testing it, there is credibility to it, because that is its only real virtue out there. There you get the opportunity to lob missiles at it, and you can readily identify its weaknesses and react accordingly.

However, I think it would be a mistake for us to assume that we could get that kind of effective test or believability if we placed these devices, and labeled them "test only," at the ABM missile sites themselves in either Montana or the Dakotas.

I understand that our able majority leader, in reacting to the suggestion of the Senator from Vermont, made the point that Kwajalein and Eniwetok will be appropriate and suitable for fully effective tests. We really want to find out where the "bugs" are. We really want to fix that machine up for the day, if it ever comes, when we have to deploy it in fact. That is the test area in which to find out.

We all recognize that the stakes are very high, and we are all devoted to insuring the security of this country. We disagree on occasions as to the means, and indeed as to the definition of security. But I am delighted that Senator AIKEN has spoken as he has against the deployment of an antiballistic-missile system as recommended by the committee and the administration.

Mr. GORE. Mr. President, will the Senator yield?

Mr. HART. I am delighted to yield to the Senator from Tennessee.

Mr. GORE. Is it the view of the Senator from Michigan that the leadtime involved in the emplacement of radar and computer components, as well as other components, is greater than would be the case for missiles which have already been tested, which can be moved into place in a relatively short period?

Mr. HART. It is my understanding that the leadtime is greater.

Mr. GORE. So we could not, in good faith, undertake in the name of research and development the essential and most difficult parts of an ABM system and, with credibility and good conscience, say that this is merely research and development?

Mr. HART. I could not.

I thank the Senator from Mississippi.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Bartlett, one of its reading clerks, returned to the Senate, in compliance with its request, the bill (S. 1583) to provide that appointments and promotions in the Post Office Department, including the postal field service, be made on the basis of merit and fitness.

ENROLLED BILL SIGNED

The message announced that the Speaker had affixed his signature to the enrolled bill (H.R. 4153) to authorize appropriations for procurement of vessels and aircraft and construction of shore and offshore establishments for the Coast Guard.

PROPOSAL THAT JULY 21 BE PROCLAIMED AS A NATIONAL DAY OF PRAYER AND THANKSGIVING

Mr. MATHIAS. Mr. President, the spirit of America will be committed on July 21, as our resources have been for 10 years, to the concept of liberating man from a single planet. On that day we shall abolish horizons as the limit of vision and open the opportunity for a future that is literally without limits.

It should be a time to celebrate the personal achievement of the two men who walk the Moon that day and of their brother astronauts and 200 million fellow Americans who walk with them in spirit. It should be a day of prayer that this achievement, which draws upon the knowledge and wisdom and experience of all men everywhere, will bring peace by showing the fruits of man's peaceful labors.

On July 21 we can pray that as man is released from Earth's bonds, he may be relieved of Earth's ancient scourge of war; that as man turns his eyes to the stars, he shall no longer live in the shadow of Cain, who was his brother's killer; that through peace the marvels of God's universe should be unfolded before us.

I am, therefore, by resolution, which I shall propose in the Senate, and by a letter, which I shall send to the President of the United States, suggesting that the 21st of July be proclaimed as a national day of prayer and thanksgiving.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADJOURNMENT UNTIL 11 A.M.

Mr. KENNEDY. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 11 o'clock tomorrow morning.

The motion was agreed to; and (at 4 o'clock and 45 minutes p.m.) the Senate adjourned until tomorrow, Friday, July 11, 1969, at 11 a.m.

NOMINATIONS

Executive nominations received by the Senate July 10, 1969:

DIPLOMATIC AND FOREIGN SERVICE

Leonard C. Meeker, of New Jersey, to be Ambassador Extraordinary and Plenipoten-

John H. Hicks, of Missouri.

Philip P. Holts, of Maryland.

John W. Isaminger, of West Virginia.

Gerald L. Jacoby, of Virginia.

Wesley D. Johnson, of Minnesota.

Serge Karpovich, of the District of Columbia.

Milton Kovner, of Maryland.

Arthur T. Ladenburg, of Nebraska.

William D. Lieser, of Virginia.

Kent W. Long, of Virginia.

Richard F. Long, of Maryland.

Kenneth Longmyer, of California.

July 10, 1969

It is not enough to appropriate more money—though more money is required. Money without motive insures failure. More money without new direction, after consultation with the Indian people, will only bring about failure on a larger scale.

It is not enough to promise Indians self-determination and self-help—though that must be the cornerstone of our Indian policy. That raises the hopes and aspirations of the Indian people. A failure of commitment and the means to carry through on that commitment will only crush those hopes and aspirations more cruelly.

In short, our understanding of the problem must be thorough, our commitment to the solution of the problem must be unwavering, and our promises must be given genuine substance.

Enactment of this resolution is not an end in itself. It will not, of itself, solve the demanding problems of the Indian people. It will not, by itself, insure success in meeting age-old responsibilities and in solving longstanding problems.

But it will create an atmosphere for success.

Among the Indian people, it will create an atmosphere of confidence and trust in Federal programs and in the sincerity of our commitment to the common good. It will erase old fears and suspicions engendered by the termination policies of House Concurrent Resolution 108.

It will create an atmosphere in which dignity and self-respect can be reclaimed by the Indians, with the sure knowledge that they have a major role in determining their own destiny.

It will create an atmosphere in which administrators of Indian affairs can, in close cooperation and consultation with the Indian tribes and people, be flexible and innovative in their approach to the problems.

INDIAN SUPPORT

The resolution has already given hope to the Indian people and encouragement to their aspirations. The hearings which I held on the resolution on March 5 of last year brought forth a unanimous expression of Indian support for the resolution. Domingo Montoya, president of the All-Pueblo Council representing the 19 Pueblo tribes, stated at that time:

When the day comes that this policy—rather than the manual under which it currently functions—becomes the "bible" of the Bureau of Indian Affairs, then I believe the crossroads will have been reached, and the turning point will be here in Indian affairs . . .

Mr. President, I am introducing this resolution and asking for the favorable consideration of the Congress so that we can reach that crossroad. I ask that it be appropriately referred.

The concurrent resolution (S. Con. Res. 34), which reads as follows, was referred to the Committee on Interior and Insular Affairs:

S. CON. RES. 34

Whereas it is recognized by Congress that American Indians and Alaska natives (Esquimos, Indians, and Aleuts) suffer from adverse economic, health, education, and social conditions which prevent them from sharing equally in the great social economic advancements achieved by our Nation; and

Whereas it is the understanding of Congress that periodic reversals in our Govern-

ment's Indian policy throughout the years have ruled against full development of human and economic potential of Indian communities, thus prolonging the aforementioned deplorable conditions; and

Whereas improved and expanded services in Indian communities in recent years through direct Federal Indian service programs and a wide variety of other services have begun accomplishing encouraging breakthroughs; Now, therefore, be it

Resolved by the Senate (the House of Representatives concurring), That it is the sense of the Congress that—

(1) the deplorable conditions of American Indians and Alaska natives can only be alleviated through a sustained, positive, and dynamic Indian policy with the necessary constructive programs and services directed to the governing bodies of these groups for application in their respective communities, offering self-determination and self-help features for the people involved; and that our Government's concern for its Indian citizens be formalized in a new national policy so that the beneficial effects may be continued until the day when the Nation's moral and legal obligations to its first citizens—the American Indian—are fulfilled.

(2) modern day needs of Indian people are no longer responsive to the programs and services of the two major Federal Indian service agencies alone (the Bureau of Indian Affairs and the Division of Indian Health), but the complete solution of Indian problems will require new and innovative services for the full development of Indian and Alaska native people and their communities, and that the National Council on Indian Opportunity created by Executive Order numbered 11399, because of the representation on the Council of the Secretary of the several Departments concerned with the welfare of the Indian people and of the representation of the Indian leaders and because of the responsibility of the Council, under the chairmanship of the Vice President of the United States, for coordination of efforts of the Executive branch in Indian affairs, should be charged with the important responsibility of coordinating the wide range of Federal, State, and local resources.

(3) Indian and Alaska native governing bodies should be recognized as having the full authority to determine the extent and manner of utilizing all available resources for their communities.

(4) American Indian and Alaska native property will be protected; that Indian culture and identity will be respected; that the necessary technical guidance and assistance will be given to insure future economic independence; that continued efforts will be directed to maximum development of natural resources; that inadequate and substandard housing and sanitation will be corrected; that a comprehensive health program incorporating and assuring curative and preventive physical and mental health will be further developed for Indian and Alaska natives; and that a long-term general, vocational, technical, and professional education program will be encouraged and developed for both old and young American Indians and Alaska natives so that they may share fully in our society;

(5) that the National Council on Indian Opportunity should periodically review all the activities of the Bureau of Indian Affairs and all other agencies of the Federal Government concerned with Indian welfare to assure Congress of maximum utilization of Federal, State, and local resources for Indian and Alaska native well-being; and that the National Council on Indian Opportunity should submit an annual report with necessary legislative recommendations to Congress to indicate the manner in which the intent of this resolution is being carried out; and

(6) American Indian and Alaska native communities should be given the freedom and encouragement to develop their maximum potential; and that Congress will sup-

port a policy of developing the necessary programs and services to bring Indians and Alaska natives to a desirable social and economic level of full participating citizens.

The resolution, presented by Mr. McGovern, is as follows:

RESOLUTION

Whereas, the current alleged policy of our government enunciated in House Concurrent Resolution 108 is a policy for the eventual termination of Indian tribes and reservations and serves as an obstacle to the development of our tribes and reservations; and

Whereas, Senate Concurrent Resolution 11 in the 90th Congress, if enacted, would encourage the development of tribal reservations and assist the various tribes in achieving greater parity with the rest of the people of the United States.

Whereas, this Resolution died in the last session of the 90th Congress and is due for re-introduction again.

Now, therefore, be it resolved, that the National Congress of American Indians in Convention assembled September 24-27, 1968, hereby strongly supports Senate Concurrent Resolution 11, and urges that it be enacted at the earliest possible time.

Now, therefore, be it further resolved, that the Executive Council of the National Congress of American Indians, assembled in Session at Washington, D.C., on January 21-23, 1969, support the said Senate Concurrent Resolution 11 and urges that it be enacted at the earliest possible time.

Adopted by the Executive Council of the National Congress of American Indians, assembled in Session at Washington, D.C., on January 21-23, 1969.

REV. WENDELL CHINO,

President, National Congress of American Indians,

MR. ROBERT JIM,

Chairman, Resolutions Committee, NCAI.

Attest:

MR. BENNY ATENCIO,

Recording Secretary, National Congress of American Indians.

ADDITIONAL COSPONSOR OF A CONCURRENT RESOLUTION

S. CON. RES. 24

Mr. MURPHY. Mr. President, I ask unanimous consent that, at its next printing, the name of the Senator from Alaska (Mr. STEVENS) be added as a cosponsor of the resolution (S. Con. Res. 24) to establish a gerontology center in California.

The PRESIDING OFFICER. Without objection, it is so ordered.

ENROLLED BILL PRESENTED

The Secretary of the Senate reported that on today, July 10, 1969, he presented to the President of the United States the enrolled bill (S. 1647) to authorize the release of 100,000 short tons of lead from the national stockpile and the supplemental stockpile.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH—AMENDMENTS

AMENDMENT NO. 69

Mr. MCINTYRE submitted amendments, intended to be proposed by him,

July 10, 1969

to the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for the procurement of aircraft, missiles, vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes, which were ordered to lie on the table and to be printed.

(The remarks of Mr. McINTYRE when he submitted the amendments appear later in the RECORD under the appropriate heading.)

NOTICE OF HEARINGS ON TRENDS IN LONG-TERM CARE

Mr. MOSS. Mr. President, as chairman of the Subcommittee on Long-Term Care, Special Committee on Aging, I wish to announce that the subcommittee will begin hearings on July 30 dealing with the subject of Trends in Long-Term Care. Testimony will begin in room 3110, New Senate Office Building, at 10 a.m.

Our overall objective is to explore many subjects related to quality and availability of care in nursing homes and other long-term care facilities. The subcommittee will also seek information and opinions related to a new set of Department of Health, Education, and Welfare standards promulgated for skilled nursing homes under medicare.

I ask unanimous consent to have inserted at this point a recent statement I made to discuss the Health, Education, and Welfare standards and other matters to be discussed at the hearing.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The basic fault in the regulations recently approved by Secretary Robert H. Finch for skilled nursing homes is that, in the vital area of nursing services, they fail to be responsive to the statute they purport to implement. The regulations on nursing service contain nothing that was not required by HEW policy before the new law was enacted.

A part of the Moss amendment to the Social Security Amendments of 1967 calls for "adequate and properly supervised nursing services . . . all hours of each day and all days of each week." The Department's obligation was to set out in regulations what constitutes "adequate nursing services" and what is required for them to be "properly supervised," and to do so in terms that State agencies could apply in surveying and approving nursing homes.

In fact, they put off for a full year the need to maintain standards which are in effect now.

The new regulations provide that, by July 1, 1970, licensed practical nurses in charge of nursing activities on all shifts must be qualified by graduation from a state-approved school of practical nursing or have background equivalent to such training.

But until then, nurses in charge on other than the day-shift may be licensed practical nurses "waivered" by a state licensing agency.

Recognizing the significance of this relaxa-

tion of standards for a year, HEW's announcement emphasizes that "any state that is not meeting this standard by December 31, 1969, must inform the Secretary of Health, Education, and Welfare of its plans for doing so."

The Department also notes that the newly published standards match those in the handbook of public assistance administration that regulated services until January 1 of this year, with the exception of the waiver granted for the employment of nurses who are not qualified by formal training.

We are left, therefore, with regulations that say, in effect, that a single, untrained practical nurse on duty in a home with 200 or 300 patients or more constitutes "properly supervised nursing services" on the afternoon and night shifts.

It is also questionable whether the provision for what HEW calls "background equivalent to such training," will in fact provide properly trained supervisory personnel. This language permits a state licensing authority to determine that an individual has "background considered to be equivalent" to graduation from a state-approved school of practical nursing. I fear this may mean serious state-to-state differences in supervisory quality.

Much is said about the necessity to hold down standards because of shortages of skilled nursing homes and of nurses. This is known as being "realistic." Granted there are areas in which there are no facilities meeting acceptable standards.

But the problem is not solved but only obscured by calling facilities skilled nursing homes when they are not.

We will be realistic when we stop labeling facilities as skilled nursing homes when we know they are not, stop paying public funds for services which are not being delivered but we tell ourselves they are, stop telling ourselves we are serving patients by placing them in institutions that may not be appropriate for their needs.

Until we begin to be "realistic in these terms, patients will suffer and public money will be wasted. With more than \$1 billion every year of Federal tax collections being spent on nursing homes, it is the duty of Congress and of HEW to see to it that the patients who must use nursing homes receive the quality of care being purchased.

Because of the importance of the issues raised by the regulations, I am going to begin hearings on July 30 on the subject of "Trends on Long-Term Care." I had expected to begin those hearings later in the year, but it has become obvious that the Subcommittee on Long-Term Care of the U.S. Senate Special Committee on Aging cannot very well ignore a current crisis while it considers future trends.

Accordingly, I will ask witnesses on July 30 to comment on the regulations. I believe their testimony will provide useful information that should be considered before the final decision is made on the regulations. I will be especially interested in comments from the American Nursing Home Association.

For the overall Subcommittee study—which will take several months to complete, I will also seek testimony on such matters as: new techniques to improve care and to emphasize rehabilitation, advanced building methods to reduce costs and provide more attractive and functional surroundings, the place of the long-term care institution in the development of comprehensive health care facilities for communities and regions, the need for trained professional and other staff, the effects of the development of "chain" facilities, methods of keeping costs to a minimum, and improvements in Federal programs related to nursing home construction or operation.

ADDRESS BY SENATOR TYDINGS BEFORE WASHINGTON COLLEGE ALUMNI BREAKFAST MEETING

Mr. KENNEDY. Mr. President, the Senator from Maryland (Mr. TYDINGS) made an excellent speech on student unrest before the Washington College alumni breakfast meeting last May 31. The Senator showed deep insight and sensitivity in his discussion of the frustration which is leading many moderate young people into the camp of confrontation politics. Senator TYDINGS warns us that it will be our generation and not that of our children which will be to blame if students bent on reform have no alternative to violence. I ask unanimous consent that the speech be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR TYDINGS

Student unrest is a subject which increasingly has bewildered and distressed the American people. Our brightest and best educated youth profoundly trouble us.

They express a disenchantment with the values and quality of American life; despair over the operation of many of our traditional institutions; futility about the prospects for change.

A few succumb to the blandishment to "turn on, tune in, and drop out," and disappear into the drug subcultures of San Francisco and New York.

However, a much larger number carry their grievances to the universities and colleges. Campuses across the country are astir with protest and demonstrations—demonstrations which in the past year have erupted into violent confrontations with civil authorities.

Many have responded simply by condemning and castigating these students. Few have taken the time to seek out the causes of their alienation and discontent, the reasons for their protest and dissent.

It is this latter course that I wish to explore with you this morning. For I am convinced that unless we—as the parents of these students and as the present custodians of this society—acquire the understanding to bridge the generation gap, our future and that of our children is imperiled.

Our efforts to understand the current restiveness on our campuses must begin with a fundamental distinction: We must not confuse the small minority who would employ anti-democratic means to achieve societal change with the great majority of students who seek reform within a democratic framework.

For the former labor under the dangerous misconception that totalitarian means can successfully hasten the realization of democratic objectives. They fail to recognize the bitterly learned lesson of the twentieth century: That democracy is a process. Violate it as a means and you lose it—whatever your objectives.

Therefore, those who denounce freedom of speech, the will of the majority, and non-violent negotiation as outmoded obstacles to change must be stopped. On this there can be no question: those who hold themselves above the law must be dealt with firmly and fairly under the law.

Violence and coercion cannot be tolerated. The survival of democracy permits no alternatives.

However, there remains the other group—the overwhelming majority of students who accept the democratic process but reject much of what they see in America. More often than not the best informed and most

about sixty members, half representing public agencies and half from the private sector. The work that it is doing is innovative and action oriented and in just eighteen months we have made radical improvements in the criminal justice system. I mention it today only to let you know that we have knowledge and experience in New York City that has been developed, not in a laboratory but rather in a city that is perhaps more heavily involved in all kinds of crime than any other. I know that we have already shared this information with some cities. Mayor Lindsay has asked me to tell you that when and if your city is ready to move ahead in this area our city will make whatever knowledge we have available to you.

Today our country is grievously afflicted by a problem which daily grows larger. This affects our businesses. But far more important, it affects the quality of life in America. It engenders fear, distrust, lack of faith in government. It is not a good climate for business; it is not a good climate for living.

If we are to change this situation, all of us will have to get involved. You, as business leaders are in the vanguard of every important social effort in the country; you will have to take leadership roles in this field, too.

Our nation has grown great and strong, not because we relied solely on government, but because of the determination, the skill, and the courage of our private citizens. Now we must use the same qualities and apply them in safeguarding what we have built. This is why I urge you to get involved in responsible efforts to control crime—to make this a peaceful and safe and just society.

RECESS

Mr. KENNEDY. Mr. President, I ask unanimous consent that the Senate stand in recess subject to call of the Chair, but not later than 1 p.m.

The PRESIDING OFFICER. Without objection, it is so ordered.

Thereupon, (at 12 o'clock and 12 minutes p.m.) the Senate took a recess subject to the call of the Chair.

At 1 o'clock p.m., the Senate reassembled, when called to order by the Presiding Officer (Mr. GOLDWATER in the chair).

AUTHORIZATION OF APPROPRIATION FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The PRESIDING OFFICER. The Chair lays before the Senate the unfinished business, which will be stated by title.

The LEGISLATIVE CLERK. A bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each reserve component of the Armed Forces, and for other purposes.

The Senate resumed the consideration of the bill.

The PRESIDING OFFICER. Under the previous order, the Chair recognizes the Senator from Maine.

Mr. MANSFIELD. Mr. President, will the Senator yield, without losing her right to the floor?

Mrs. SMITH. I yield.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. EAGLETON in the chair). Without objection, it is so ordered.

Mrs. SMITH. Mr. President, I speak in favor of this bill and I commend the distinguished chairman of the Armed Services Committee for his able and comprehensive presentation. Senator STENNIS has stated well the actions of the Armed Services Committee which devoted so many weeks to the consideration of this important legislation.

The authorization for the procurement of major weapons, research and development, and reserve strength is a matter of significant importance this year and I urge Senate passage.

In speaking in favor of this legislation I speak in the interests of our national security. At a time when it has become fashionable to question, challenge, and defy defense spending I urge a word of caution to those who would emasculate our Nation's defense posture.

In pressing for passage of this bill I am not unmindful of the many ills that plague the Nation. I am keenly aware of our economic and fiscal problems and the need to match the Federal budget against a selective list of national priorities.

There are no instant solutions to our perplexing domestic problems and by the same token there are no instant solutions to countering the threat in a troubled world. I ask the Members to consider my remarks in the light of those realities in which we live, the actual world we are experiencing today and not the utopia that we would all like to see.

I recommend that in the deliberation of this bill extreme care and thought be given to the complexities of modern arms production. Also I ask that the members examine well the need to provide the time necessary for development of modern weaponry.

The provisioning of adequate aircraft, missiles, ships and other major items is far more complicated than authorizing and appropriating. The modern arsenal of today and more particularly that of the next decade require extensive and painstaking investigation. The lead time for deployment of these modern arms has multiplied many fold. The range of uncertainties in fabrication to insure reliability will not be lessened by postponement and incremental funding.

The high defense costs are repugnant to many Americans just as they are to me. But this is another fact of life that is no less real and I prefer to pay the price and avoid gambling with our security.

In my 29 years of congressional service I have strongly supported our nation-

al research and development programs and I will continue to do so. I did not favor cuts in research which were made in the Armed Services Committee.

The strategic advantage long held by the United States begins to disappear in 1969. Certainly on the rapid rate to achieve parity by the Soviets the balance may dip in the early 1970's. Until now we have maintained a viable military deterrent. I attribute this considerable achievement to our research and development effort.

In urging passage of this measure I caution those who would cut or curtail our strategic offensive capability. There has been much criticism of what was done wrong. I do not condone misfeasance, nonfeasance or malfeasance. But lest they lose sight of our destination, those desperate-minded critics should stop and pause for a reassessment. Heaping scorn on the Pentagon and making our uniformed personnel the scapegoats for our national and international ills represents the cynicism of those very elements that threaten our property, our institutions, and our lives. This critical chorus does little to enhance public confidence and does much to obscure the realities of 1969.

Mr. President, for the foreseeable future a strong military posture remains absolutely essential to our national survival. The recommendations of the Armed Services Committee on the offensive weapons of the future were decided upon only after a most searching examination of the threat and the alternatives. To delay or delete the aircraft and naval vessels contained in the bill is to settle for obsolescence. Cuts or deferrals in these areas is tantamount to acceptance of mediocrity.

Everyone must know the avowed goal of the Kremlin and Peking masters and we all know that the United States is the only nation that has denied them the attainment of their objective. Since we have accepted the challenge of leadership in this conflict of ideologies I, for one, will not support a policy of diminishing returns. I cannot in good conscience support a reduction of our offensive capability and a relinquishment of our technical superiority.

Mr. President, most assuredly it is a costly process but our cherished freedoms were not purchased at the bargain counter. Those who oppose us have always had a very high esteem for our offensive strategic forces. I strongly urge that we meet these needs now if we are to fulfill our national aspirations. I think America is equal to the task. Mr. President, I urge passage of this legislation.

In closing, I want to say a few words in defense of the muchly maligned military officers of our Nation. They are currently the favorite whipping boy of critics who have shared neither their responsibilities, experiences, sacrifices, nor risks.

Today they are the No. 1 targets just as the State Departments careerists were in the early 1950's when varying numbers of State Department personnel were accused of being card-carrying Communists.

In 1950 I spoke in defense of the State Department personnel who were being

July 9, 1969

CONGRESSIONAL RECORD — SENATE

S 7753

in our streets" are overworked phrases in our present-day vocabulary. Americans are bombarded daily with news articles and speeches warning and alerting them, but little is offered in the way of constructive solutions.

Mr. Richard L. Gelb, president of Bristol-Myers Co., in a speech April 28, 1969, before the annual meeting of the U.S. Chamber of Commerce, took a positive and constructive stance on the facts of crime. He outlined an approach needed from businessmen of this country to meet the challenge of reducing crime.

Industry as a whole should heed Mr. Gelb's call for support and, more important, involvement, in responsible crime control and correction. Their degree of participation will determine the quality of our society.

I ask unanimous consent that the text of Mr. Gelb's remarks be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

CRIME: A BUSINESSMAN'S CHALLENGE
(By Richard L. Gelb)

I have very mixed feelings as I stand here before you today. On the one hand, I am rather overwhelmed at the honor of your invitation; on the other, I am saddened by the fact that this first luncheon meeting should have to be devoted to the problem of crime in our nation. Five years ago most of us were basically unaware of the impact of crime. Today you are not only aware of it but you want to do something about it. Across the country the amber light has finally changed—the signal is now green—we are ready to move against crime and against the breakdown of law and order. President Nixon signalled his continuing concern on April 28 in his message to Congress. The people through the ballot box and through the polls have already signalled their concern, and I am quite sure that the Attorney General will give you some very clear signals shortly.

How we may help is a more difficult question and before attempting any answer, I would like to make several brief observations concerning the special interest of business in the crime picture of our nation.

Today, for perhaps the first time, American business is facing up to the reality that crime is not just something in the movies or on TV, but rather, it is a fact of life which vitally affects American business in several ways.

Take costs—high crime costs in high taxes—our crime control system now costs more than four billion dollars a year. That figure is equal to roughly 5 per cent of all American business profits in 1968. High crime rates cost people higher prices—all of you are aware of the impact organized crime has on any business which it controls. For the first time the public is becoming equally aware of the problem. Crime reduces our market. Fear of crime causes people to stay at home. One study in the Crime Commission Report indicated that 43 per cent of the people in some areas of this country stay off the streets after dark. Crime inhibits business expansion. A company moves out of a city not because it wants to but because its women employees are afraid to walk the streets at night. Crime can mean the difference between a profit or a loss. The Firemen's Fund Insurance Company stated that 30 per cent of all business failures was due to theft by the employees of those companies. Finally and most important, the businessman personally, as a citizen, deplores crime. He often lives and usually works

in the city. What does it avail him—or anyone in fact—to build a career and an income if he must live in fear of becoming a crime victim. Money is no good if you live in a jungle.

Less than two years ago, I was grateful for the opportunity to present a businessman's view of crime and law enforcement to our nation's top police officials.

I urged these leaders to call upon their counterparts in business, to adopt their techniques and practices where needed and invoke the might, power and influence of business in this common effort.

Today I say to you that the time has come for us as citizens and particularly as businessmen, to take measures to defend against crime. What we must do is take part in an effective organized control strategy against crime. This is the only way to create an impact. It is not just a case of new devices, or more policing, or larger jails. The entire criminal justice system needs a strengthening which it cannot achieve without our full support and participation.

As with any new endeavor it is difficult to know how to begin and specifically what to do. In this regard I would like to draw on my experience as a Trustee of the National Council on Crime and Delinquency in presenting what I believe are effective action suggestions—things that you can actually do and thereby know that the results of your actions will be felt—particularly with the desirable multiplier effect resulting from action in almost every community in America which is represented in this room. Each such community must invoke an additional multiplier by using the leverage of the organizations in which you are active in order to spread the word. You are the men and women who will motivate the activities of your Chambers of Commerce, Church Groups, Rotary, School Boards, Planning Boards and other civic organizations.

1. The businessman can begin this effort right at home in his plant or place of business. Most of us never think of the possible consequences of having a seemingly innocuous employee taking bets at work. Many of us would be shocked to think it exists. Some of us are apt to be permissive about what seems to be just a little gambling. But "on premises" gambling can lead to trouble and those who are familiar with even the rudiments of organized crime will be able to prophesize the probable results of such activities.

Organized crime is not limited to gambling. Next comes loan sharking. Some employees who bet go broke and inevitably seek to borrow money. The mob knows this and has a ready lender who not only has been waiting to lend the money but is also waiting to exert the pressure that follows non-payment. What happens next is limited only by the imagination.

Good inside information can lead to hijacking, extortion or successful payroll stick-ups. It is difficult to defend yourself against crime's fifth column—the enemy within your own ranks—and you are inviting him in when you have criminal activity, especially gambling, taking place on your premises.

2. As businessmen and respected members of the community you can exert political power. Help prevent the election of politicians who look the other way when it comes to illegal gambling or other criminal activities.

If we are going to do this job of fighting crime, we must get rid of corruption in government at all levels as a starter.

3. The businessman can use his financial strength as a lever to fight crime. For example, a large corporation was planning to move into a California City. So was organized crime. The corporation had warned city officials and business leaders "if the mob comes in, we stay out." The community kept the mob out.

Before going into a city determine if it is

in the clutches of organized crime. Is the criminal justice system a good one? You will have a big stake in that community and these questions are every bit as important as whether or not there is a good school system, good transportation or an adequate labor supply.

4. As businessmen, we can make our weight felt when local governmental budgets are drawn up to make sure that the criminal justice system gets its share. Alone, but more effectively through the Chamber or other business groups, we can press for appropriations to do something about poorly paid police, understaffed criminal courts and ineffective correctional programs. A sound criminal justice system is as important to your city as any other governmental service.

5. Businessmen can help gear their trade associations to become a stronger anti-crime force. Although trade associations and the Chamber cannot and should not get into the crime business, they can encourage and stimulate programs and seminars to educate and draw the blueprints for action with regard to the other points about which we are speaking.

6. The businessman can become a valuable resource for law enforcement agencies. Such help is offered to almost every other branch of government. The knowledge we have, and which we have so often given to other branches of government, of sound management and administrative principles should be made available to our own local law enforcement agencies.

7. You can shape crime control legislation. Your influence with legislators at each level can make a difference. A lack of such interest and contact by you shows that you really don't care.

8. As businessmen we can help provide opportunities for offenders so they are not forced on to the treadmill of crime. On his own, a businessman can employ released offenders. He can permit work-release programs to operate in his plant. He can urge others to endorse and adopt such programs.

9. The businessman can encourage his friends and associates to undertake crime control projects.

In your fight against crime, not only must you get involved, but you must get others involved. The National Council on Crime and Delinquency has compiled a list of fifty citizen action projects which show individual citizens how to effectively engage in combating crime and delinquency in their communities.

Let's sum up the nine ways you can actively fight crime:

1. Clean house.
2. Use your political power.
3. Use your financial strength.
4. Support a better criminal justice system.
5. Get your business and civic organizations involved.
6. Make yourself available to law enforcement agencies.
7. Support anti-crime legislation.
8. Support new ideas.
9. Get your associates, your employees, your friends and your family involved.

One final word on what you and your community can do and should do. It stems from this recommendation of the President's Crime Commission dated March, 1967 and I quote, "... all of the city's activities against crime should be planned together, by a single body. The police, the courts, the correctional system and the non-criminal agencies of the community must plan their actions against crime jointly if they are to make real headway."

In response to that suggestion in New York City that same month Mayor Lindsay created the Criminal Justice Coordinating Council to act as a single planning body for crime control measures and for the reform of the administration of criminal justice in New York City. The Council has

smeared from this immunity-cloaked Senate Chamber with tactics of half-truths, guilt-by-association, trial by accusation, and other techniques against which those smeared had no adequate way in which to defend themselves and prove their innocence.

Recently I have read some commentaries concluding that our country was returning to those days of the smears. I think we have already returned and just as I defended the smeared State Department personnel nearly two decades ago, now I want to defend the castigated military personnel of today.

Why are they being attacked? The answer to this question is very simple. Many want to find a scapegoat for the long, drawn-out, and unpopular Vietnam war. They have selected the military to be the scapegoat. They seek to blame the Vietnam war on the military. They seek to place the military in the role of the devil and of evil men who have no concern for the very critical, urgent and desperate domestic problems here at home.

How quickly we forget the military after they have successfully defended our Nation. But in this case, the most amazing aspect of the vitriolic attacks on the military stemming from weariness and concern about the Vietnam war is the failure to do the honest thing and recognize that this has not been a war of their choosing nor of their direction.

They did not make the decisions to intervene in Vietnam. Those decisions were made by their civilian bosses. They did not make the decisions to expand, intensify and escalate the war. Those decisions were made by their civilian bosses.

They did not make the decisions to observe sanctuaries from which the enemy could regroup and resupply to attack again—and even from which the enemy could shoot. Their civilian bosses made those decisions.

It was not the military who misled the public with such irresponsible optimistic statements that the boys would be back home from Vietnam by Christmas 3 or 4 years ago. It was not the military that was so tragically wrong in such estimates about ending the war. It was their civilian bosses who were so tragically wrong in evaluation and estimates of the enemy. It was their civilian bosses who made the unjustified optimistic predictions that ultimately undermined public confidence in the credibility of our Government.

Make no mistake about it, the military not only did not make the decisions, but their advice was repeatedly rejected and scorned and deprecated. Make no mistake about it, the military was derogated by their civilian bosses and subjected to open contempt by the decisionmaking "whiz kids."

Now, attempts are being made to make the military the scapegoats for the disastrous decisions made by their civilian bosses through the elite, but woefully inexperienced "whiz kids."

Make no mistake about it, the military has only been following the orders of the civilian bosses. Make no mistake about it, the military has not been formulating strategy and tactics as in past wars. In-

stead the strategy, and even the battlefield tactics, have been devised by their civilian bosses.

Make no mistake about it, the mistakes that have been made are the mistakes of the civilian bosses rather than the military.

Yet, the pattern has been always to credit the civilian bosses with any successes and to blame the military for any failures. This has even extended to the most recent withdrawal proposal advocated by former Secretary of Defense Clifford.

For actually the proposal advanced by Mr. Clifford is really a basic plan that General Westmoreland proposed some time ago but for which he has been given no credit.

Mr. President, we are all weary and tired and frustrated with the Vietnam war. But in that weariness, discouragement, and frustration, I plead that all of us strive for greater perspective. I plead that instead of making the military a whipping boy for decisions, policies, and actions of its civilian bosses that we all take a good hard look at ourselves and ask if we have any responsibility for what has happened.

I see no more justification for the intense campaign against the military now than for the intense campaign against the State Department personnel back in the early 1950's.

Mr. STENNIS. Mr. President, will the distinguished Senator from Maine yield?

Mrs. SMITH. I am happy to yield to the Senator from Mississippi.

Mr. STENNIS. I want especially to thank the Senator from Maine for her long contribution to the problems and work of our committee and particularly with reference to the bill. We began working on it in January, giving it a great deal of time from then until now. The Senator from Maine is always constructive in her approaches and in her remarks, and is always frank in her counsel and is always well informed. That means a great deal. She deserves special credit. The committee is indebted to her. I am even more indebted to her as the committee chairman.

I commend the Senator from Maine for a very fine, pointed speech which sums up the needs for our security and the proper approach, I think, toward reaching sound decisions on the items to which she refers.

I am pleased, too, that she made the remarks she did about our professional military men. I hold no special brief for them. I am not connected with them in any personal way. I admire them greatly for the hard decisions they make and the heavy responsibilities they often carry. I am proud to be a part of a country that can afford such men.

I include in these remarks the fine young men who have been fighting in Vietnam. This country has never been represented on the battlefield by a finer group of young Americans.

I shall have something more to say about personnel later, but at this time I want especially to commend the distinguished Senator from Maine once more, and thank her for her very fine, unselfish work.

Mrs. SMITH. Mr. President, I want to express my deep appreciation to the distinguished chairman and our able colleague. It has been a very great privilege to work with him. I have a good teacher in him.

Mr. HOLLAND. Mr. President, will the distinguished Senator from Maine yield?

Mrs. SMITH. I am happy to yield to the Senator from Florida.

Mr. HOLLAND. I should like to say to the distinguished Senator from Maine that I, too, am happy to have heard that portion of her speech which I was able to be present to hear. Her speech was fine, inspiring, and uplifting.

It should remind us of some of the things we need to recall. One of them is with respect to the limitation of our objective in the Vietnam war, that the military certainly did not make that decision. To them it was an almost unknown thing to have their objective so limited. It was our own national policy in foreign matters, the decision of our leaders in the field of foreign affairs from the President right on down who were responsible for that decision. I think we should always remember that.

We here in the Senate have a particular reason to remember that the passage—almost unanimously—of the Gulf of Tonkin resolution was an assumption of our responsibility in the matter, which we should never forget. It certainly was not the act of the Armed Forces.

I appreciate so much the speech of the distinguished Senator from Maine. As always, we find in her expressions of conscience—the conscience of a gentle but firm New Englander—an uplifting experience for all of us.

Mrs. SMITH. Mr. President, I deeply appreciate the very generous words of my able colleague and friend from Florida.

Mr. MURPHY. Mr. President, will the distinguished Senator from Maine yield?

Mrs. SMITH. I am happy to yield to the Senator from California.

Mr. MURPHY. Mr. President, I should like to congratulate the distinguished ranking minority member of the committee for having carefully and clearly delineated a condition that all of us should be conscious of at all times but which, unfortunately, in the complexities of our society today, we sometimes tend to forget.

Sometimes, when things happen which we like, the honor goes to the wrong place.

Sometimes, in matters with which we are not too well pleased, the blame is put in the wrong place.

I can think of no one more capable of explaining this complex problem in clearer terms than the distinguished Senator from Maine has just done.

I think her speech is timely. It is important, and I should like again to congratulate most heartily my distinguished colleague.

Let me say one other thing, that as a new member of the committee involved in this particular bill, it has been one of the most gratifying experiences of my life to serve under the distinguished chairman, and under the distinguished

ranking minority member. It has been the finest exhibition of the committee system in action. I give most of the credit to the two leaders, the Senator from Mississippi (Mr. STENNIS) and the Senator from Maine (Mrs. SMITH).

Again, I thank her very much for her fine presentation and associate myself with her remarks.

Mrs. SMITH. Mr. President, I want to thank my good friend and able colleague from California for his kind words. It has been a very great privilege to have had seven colleagues on my side of the table present most of the time, and always present at the hearings that were held. The senior Senator from California has made an invaluable contribution to the work of the committee.

Mr. BROOKE. Mr. President, will the distinguished Senator from Maine yield?

Mrs. SMITH. I am happy to yield to the Senator from Massachusetts.

Mr. BROOKE. Mr. President, I take this opportunity, on the occasion of the speech of our distinguished ranking minority member on the Armed Services Committee, to commend the distinguished Senator from Mississippi, the Honorable JOHN STENNIS, our chairman, and Senator MARGARET CHASE SMITH, from Maine, our distinguished ranking minority member on the Armed Services Committee.

They have conducted the hearings in a most fair and impartial manner at all times. They have given every member of the committee an opportunity to voice his opinion. They have given every member an opportunity to serve on important subcommittees at great sacrifice, particularly to the distinguished ranking minority member of the Armed Services Committee, Mrs. SMITH.

I certainly want to commend them and to say at this time, that as a new member of that committee, it has been a great privilege to work with them. At all times, they have displayed the best kind of leadership qualities of any chairman or ranking member, I am sure, of any committee in the Senate. And they have done this in spite of the voluminous work they have had put before that committee.

I certainly want to associate myself with the words spoken by Senator SMITH so far as the armed services are concerned. I think what she said needed to be said. I think the Nation should know those are the facts. If there is criticism, the criticism should not be directed to the professional members of the armed services, because in our form of government it is the civilian branch of the Government which makes the ultimate policymaking decisions. We want to keep it that way. We certainly do not want at any time to use the military as a scapegoat for our mistakes or as a target for our mistakes.

So I associate myself with those statements, and I commend the Senator from Maine for bringing them before the Senate and the Nation. I commend her for the entire statement. I say to her and to the Senator from Mississippi (Mr. STENNIS) that I am honored to have the opportunity to serve with them on this important committee.

Mrs. SMITH. I am grateful to my able colleague from the State of Massachusetts. It has been a pleasure to have had him on the committee and to have had the benefit of his wise and respected opinions. I am grateful to him.

Mr. GORE. Mr. President, will the Senator yield?

Mrs. SMITH. I yield.

Mr. GORE. Mr. President, the fine compliments that I have just heard rendered in favor of the distinguished senior Senator from Maine recall the occasions when I had the pleasure of hearing the distinguished Senator from Maine when she was then an honorable Congresswoman from Maine. To my colleagues who have been making these eloquent statements let me say that they have had a privilege which I have enjoyed since the time when the senior Senator from Maine and I were Members of the other body. I share in the fine sentiments expressed with respect to her speech and her service.

I rose to ask the distinguished and charming Senator from Maine to yield for the purpose of addressing some thoughts with respect to a sentiment or view she has expressed in her speech, which I have followed word by word in its entirety. The Senator expressed support and interest in the necessity of preserving and having a viable deterrent. I wish to endorse fully her views in that regard and to associate myself with those views.

In this nuclear age, in this era in which great nations have the power to obliterate each other, and to destroy civilization in the Northern Hemisphere, there can be no victor in a nuclear war. In an all-out exchange between the United States and Russia, they would lose, we would lose, the world would lose, all would be lost. So in such a tragic and dangerous situation, the only practical and viable defense strategy—peace strategy—is, as the Senator, in my view, has said, to preserve a viable deterrent, a deterrent which will prevent the Soviets, or any other nuclear power that might sometime achieve such a power of destruction, from initiating a nuclear war against us.

I think the able senior Senator from Maine will agree with the senior Senator from Tennessee that the United States has no intention of initiating a nuclear attack against the Soviet Union. So the way to prevent a nuclear war, and thus preserve peace and freedom and life for all the American people, is to prevent a nuclear war by deterrence. Deterrence, in my view, as I expressed in the Senate late one evening this week, is of two parts: First, the power to retaliate with the destruction of a nation that might level a nuclear attack upon us; and, second, the will to use that power in retaliation if we should be so attacked.

That being the case, I go then to another part of the Senator's speech, if she will be so kind and tolerant as to yield to me a moment further. That is to preserve the offensive power necessary for such a viable deterrence.

Mr. President, though I do not now wish to draw the able Senator into a discussion of the ABM issue, just let me say

that the proposed ABM weapons system does not fit into this strategy. The ABM would be purely a defensive mechanism, designed to shoot down—maybe—some incoming nuclear missiles. This is not something that, in my opinion, would deter the Soviets from initiating a war. It would seem reasonable to conclude that the Soviets would not be likely to be any more apprehensive about U.S. ABM weapons than we are now apprehensive of Soviet ABM's. What they fear, or would fear in event an attack upon us should be under consideration, is the power of retaliation against them. This, then, makes very pertinent the remarks of the very able Senator, in the opinion of the senior Senator from Tennessee, of the necessity of preserving a viable deterrence.

In this age of danger and technology and capability of total destruction, it is necessary, in my view, as the Senator from Maine has said, to keep a viable deterrent. I think we have it. I think the Soviets know we have the power to retaliate with their destruction. We want to be sure also that they believe we have the will to do so.

I thank the able Senator for yielding to me.

Mrs. SMITH. I want to thank the distinguished Senator from Tennessee for his observations. I especially appreciate such generous words from one with whom I have worked for so many years, in both the House and the Senate and for whom I have such high regard.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mrs. SMITH. I yield.

Mr. GOLDWATER. Mr. President, we who live in the West have always been charmed by the people from New England. They go away back into our early history. We often wonder what it is about these people from the Northeast part of our country that makes them so acceptable to all of us. It is something past their charm, attractiveness, and gentleness. Today we have an example of what I have been trying to ascertain, which for a long time I have suspected was true. It is the honesty of these people, as expressed and exemplified by the distinguished senior Senator from Maine (Mrs. SMITH), their ability to say what they want to say, and say it quickly. I think to have such a speech as this made in such a short time is a fine example of that quality.

I compliment the Senator from Maine, who is my leader on the minority side of the committee, for what she has said here today, and for the very persuasive and precise way in which she has said it. I associate myself particularly with that portion of her remarks which pertains to the protection of the men in uniform.

It has been my pleasure to have served with the Senator from Maine on this committee in the years before I took a little leave, and it is my pleasure to serve with her once again. I look forward to enjoying that pleasure for years to come; and I thank the Senator for her very able and honest remarks.

Mrs. SMITH. Mr. President, I wish to express my deep appreciation to my able and distinguished colleague from Ari-

zona. Words such as his, coming from one who knows people well, mean a great deal to me. We are very pleased to have him back on the committee. He has been of tremendous help to us.

Mr. MANSFIELD. Mr President, will the Senator yield?

Mrs. SMITH. I am happy to yield.

Mr. MANSFIELD. Mr. President, I wish to join my colleagues in what they have said about the speech just made by the distinguished Senator from Maine. I noted that she recalled, indirectly, her declaration of conscience made almost two decades ago, and tied it in with an attempt which is seemingly being made by some elements in this country today against the military.

One thing about the Senator from Maine is that she has always been candid. She wastes few words, which I think is a New England characteristic, and always comes to the point. I want her to know that, as one who served as a seaman second class in the Navy, a private in the Army, and a private first class in the Marine Corps, I agree with her remarks about the attacks being made against the military at this time.

I do think that the military has made plenty of mistakes; but I believe, as the Senator has indicated she believes, that what they have been doing is carrying out policy and assignments laid down, in large part, by their civilian superiors, not only in the executive branch, but also in the Senate and the House of Representatives because we, in the Congress, did not exercise enough supervision, authority, and responsibility. Because of that, I believe that Members of this body should not find too much fault with what the military has done on the basis of what their superiors in the civilian areas of this Government have suggested, requested, or ordered.

When a man puts on a uniform, he undertakes a most serious obligation; and to the best of my knowledge, our men, regardless of their rank, have done a good job in looking after the interests of this Nation, in carrying out their responsibilities and obligations as good citizens; and if they have made mistakes in the awarding of contracts and in carrying out various kinds of assignments, that is to be expected, as mistakes will be made by all elements in our population.

I join the Senator in emphasizing the fact that the mistakes made by the military, policywise and otherwise, have in many instances been the fault of the executive branch and of Congress; and if we are going to lay around the blame, it is my very strong belief that we should look first at the mote in our own eye, look at the policies laid down by the executive branch, and share the blame as equitably as possible, and not place upon the military the blame for all the ills which beset this country.

Vietnam is bad enough. It is worse than bad enough; it is a tragedy. We should never have become involved there. But the military did not get us involved except incidentally, because the responsibility and the authority did not lie with them.

I would hope that this mania which seems to be affecting some portions of

our population as far as the military is concerned would realine itself, stabilize itself, and look at the facts for what they are, not seeking scapegoats, but rather cures for illnesses which may exist, and which may be cured or may in the future be prevented.

I again thank the distinguished author of the declaration of conscience for the fine speech she has made today, and for giving all of us the benefit of her remarks and recommendations.

Mrs. SMITH. Mr. President, it has been a very great privilege to have served with the majority leader in both the House of Representatives and the Senate. As always, he is most understanding and most kind; and even though we are on opposite sides of the aisle, I have always found we are much in agreement on very many issues. I thank the Senator very kindly.

Mr. THURMOND. Mr. President, it is a pleasure for me to commend Senator MARGARET CHASE SMITH for her fine statement today in defense of the military. I endorse her views, and I congratulate the distinguished Senator from Maine for speaking up for our men and women in uniform.

Mr. President, I plan to make a substantial statement at the first opportunity in support of our Armed Forces. My colleagues and I are as concerned as other Americans about our defense costs. We are equally concerned about our military who are responsible for our Nation's security. It is time to put the blame where it belongs, and I intend to do so in my address in the very near future.

Mr. McINTYRE. Mr. President, it was my privilege to chair the special Subcommittee on Research and Development appointed to help the full Armed Services Committee in its consideration of the Department of Defense authorization bill.

I want to compliment the chairman of the Armed Services Committee, the Senator from Mississippi (Mr. STENNIS). He has, as we all know, assumed the chairmanship of this great committee after the years of distinguished leadership given it by the senior Senator from Georgia (Mr. RUSSELL).

The Senator from Mississippi quickly proved his capacity for carrying out this difficult task by vigorously moving ahead to deal with the problems presented by the authorization bill we are now considering. He made great strides in opening up sources of information to Members which were not available to them in other than highly classified form in previous years. He appointed subcommittees to probe the key parts of this proposed legislation. He conducted a long series of hearings, including those on ABM, so that the members of the committee, and, where possible, the public, could be educated in the important facts and figures concerning our defense posture. And he was able to bring to the Senate an authorization bill that insures the security and defense of the Nation while still effecting needed economies.

I want to say a word of praise, too, for the distinguished Senator from Maine (Mrs. SMITH), who is the ranking Republican on the committee. Her knowledge and understanding have always

been of enormous assistance to all who serve on the committee.

It was my pleasure to work with the Senator from Ohio (Mr. YOUNG); the Senator from Virginia (Mr. BYRD); the Senator from California (Mr. MURPHY); the Senator from Massachusetts (Mr. BROOKE); and Everette L. Harper, of the Armed Services Committee staff, in carrying out this assignment.

The subcommittee was asked to study the research, development, testing, and evaluation budget and to make judgments on funding levels for research and exploratory projects, social and behavioral sciences research, and systems calling for sharp increases in research and evaluation funding for fiscal year 1970 and R. & D. and developmental increases in the future.

The committee found here, Mr. President, a great deal of work that needs to be done in the future. But I wish to stress right here that the subcommittee took a long, strong, and hard look at these various aspects.

To be completely fair, time was working against us. We took a look, as I state later on in my remarks, at about 20 projects of significance. We spent about 40 hours in briefings in depth, questioning the governmental witnesses, Government scientists and experts; and I do not deny the fact that at many times it was a labyrinth that caused at least this Senator to find many stairs and avenues leading into passages where it was difficult to discern the light. But we did look, and we looked hard.

Specifically, the subcommittee was called upon to examine the request for authority to obligate about \$8 billion for defense R.D.T. & E.

This figure represented more than a third of the authorization bill as originally submitted by Secretary Laird.

Needless to say, Mr. President, this budget presented the subcommittee with a most demanding challenge.

It is difficult enough to make judgments on the procurement program, but in that category, programs are reasonably well defined, costs can be estimated with some degree of hopeful certainty, and the military requirement for the weapon system under consideration has been validated. Detailed studies have been completed on available alternatives, and the Defense Department has recommended specific courses of action.

This is not the case with research and development, for research and development operates at the very frontiers of technological uncertainty.

I want the Senate to know that it was thoroughly impressed upon the committee as we started work that the one great advantage our country has in our competition with the Soviet Union is that we have a strong technological base. Nothing we are doing here or recommending undermines that, in my opinion.

The burden of responsibility borne by this subcommittee is attested to by the fact that, operating in the absence of firm decision factors, judgments had to be made on today's research and development efforts which would determine the limits of our deployment options 8, 10, or 12 years from now.

July 9, 1969

The budget for R.D.T. & E. covers a spectrum of responsibility ranging from the maintenance of a technological base to the deployment of weapon systems, and beyond that to the updating and modernization of existing weapons systems.

To make valid judgments on those considerations, the subcommittee attempted to follow the guidelines set down by the Director of Defense Research and Engineering—but within the broader framework of simultaneously considering other national priorities.

Dr. Foster's guidelines were:

Consider the total range of uncertainties and make decisions on programs to provide all reasonable hedges against possible new needs or changes in threat. We continuously make a series of calculations starting with intelligence to compare our own estimated leadtime with the worst case for the deployment leadtime of a potential enemy. We carry out R. & D. to provide all reasonable options. We deploy either when there is a clear, actual or imminent threat or when we cannot insure against our uncertainty with only a R. & D. program.

Dr. Foster admits that this is a low-risk policy. By low-risk policy, I mean low risk to the people and the peace and security of the American people. Dr. Foster explains it in these words:

Where threat information is adequate, we invest in amounts sufficient to meet the threat. Where information is inadequate and uncertainty high, we run some risks of overinvestment to insure that our capability will be adequate, that it is sure to fulfill our strategic objectives.

Now the low-risk policy is a logical policy if viewed from the traditional disposition to err on the side of strength when it comes to matters of national security. It is also a very expensive policy.

But all of us in this distinguished body are aware of the tremendous drain on our national resources made by today's truly staggering defense requirements, and none of us is unaware of the crying domestic needs unmet because of defense demands.

The matter of national priorities had to be considered, and it was the subcommittee's consensus that the low-risk policy afforded some cushion for realistic budget cuts that would not jeopardize security.

Still another factor helped determine the operating procedures of the subcommittee. That factor was time.

The subcommittee was created on February 28, 1969. At the outset it was determined that it would be impractical, because of time limitations, to make a detailed examination of the thousands of line items in the budget.

Instead, the subcommittee elected to test the integrity of the decisionmaking process. We looked for soft spots in the R.D.T. & E. program. We looked for interservice duplication or parallel developments leading toward the same or similar weapon systems as an end product. We examined the operational requirements for which some costly systems were being developed with a view toward measuring the ultimate cost against the priority. We found that a number of systems proposed for development did not

stand up to a searching analysis in these terms.

It was the conclusion of our subcommittee that in a number of cases—even if a system were successfully developed at a cost of hundreds of millions of dollars—it would not enjoy a high enough priority for development to compete for funds with other costly and vitally needed operational systems.

Where the subcommittee was able clearly to identify such doubtful programs we recommended reduction, stretchout, or outright cancellation of the project.

In the course of its considerations, the subcommittee devoted more than 40 hours to 19 briefings from the committee staff, the Director of Defense Research and Engineering and members of his staff, the CIA, and military departments. Subcommittee members also heard testimony before the full committee by officials of the Department of Defense and the military departments and closely examined the witnesses on research and development activities.

I am sure the other members of the subcommittee share my appreciation of the generous allocation of time for such questioning that was afforded us by the chairman of the full committee.

The Senate knows what it means when the chairman of a committee gives a generous allocation of time for presentation. The chairman of the full committee, the distinguished Senator from Mississippi (Mr. STENNIS) afforded us a generous time allocation.

The material the subcommittee obtained from its briefings, from the full committee hearings, and from reports provided by the Defense Department and other sources led to certain conclusions.

First, it was apparent that there were a number of programs where R.D.T. & E. efforts in one service did indeed parallel those under development in another service. In these areas the subcommittee determined that stretchout or an outright elimination of R. & D. would not seriously hamper the defense mission.

Examples would be the Army and Navy heavy-lift helicopter programs and the radar programs of the Air Force AWACS and Navy E2C projects. The subcommittee recommended that the Army heavy-lift helicopter program, \$15 million, and the Navy E2C radar program, \$66 million, be deleted, a total reduction of \$81 million.

Let me give you the essence of our reasoning for these cancellations:

We did not believe the Army heavy-lift helicopter development was justified, because of the enormous estimated cost per copy—\$15 million each—of this machine we felt it was extremely doubtful that it could compete with other high priority deployments for the heavy funding required in the mid-1970's.

The HLH appears to be designed to operate on a permissive battlefield, yet it is not at all clear that this would be the environment the Army would face in the mid-1970's.

This is one of the things I want to stress. As defense scientists and military planners see these threats coming over

the horizon, they develop a counter, and at first the budget just creeps along a million or two; and then suddenly the decisional process is at work, and we find the \$1, \$2, or \$3 million suddenly escalating to \$15 or \$20 million. Then, if you look down the road far enough and say, "Well, when the time comes that you want to deploy this weapon, what is it going to cost?" sometimes those figures are staggering. This is one of the things the subcommittee learned.

While only \$15 million is required for R. & D. funding for the HLH in fiscal year 1970, the funding requirements would escalate sharply within the next few years. This year appeared to be the decision point at which maximum savings could be achieved.

Moreover, it was felt that a large portion of the Army's requirements for heavy-lift helicopters can be met by its existing flying crane, or if necessary, by procurement of Navy heavy-lift helicopter equipment.

On the other hand, it was felt that the Navy/Marine requirement for battlefield recovery of disabled helicopters in Vietnam was necessary and could be met by a much less ambitious Navy heavy-lift helicopter program that could be completed and deployed on a much more timely schedule.

The Navy was requesting this year \$5 million in R.D.T. & E. for its heavy-lift helicopter. The Army was requesting \$15 million. Even though the word "commonality" is sort of out of place right now, the subcommittee said, "Why isn't there a common design here?" We necessarily found, as we talked to the Navy and Army experts, that there were different specifications, different areas of accomplishment, in which they were interested. But the Navy helicopter was within the state of the art. The Army heavy-lift helicopter was beyond the state of the art. It looked toward a deployment date of the mid-1970's. So the subcommittee, as I have said, canceled the Army heavy-lift helicopter, but recommended going forward with the Navy heavy-lift helicopter. This can be accomplished with a total R. & D. effort of \$60 million, and initial operational capability could be achieved much earlier than the Army development.

Let me say a word about the heavy-lift helicopter, the crane, in Vietnam today. This helicopter has a remarkable record of recovery of downed helicopters. It has done outstanding work. It does not have such a good record when you talk about recovery of downed airplanes, but the subcommittee had no difficulty in going along with the Navy's request. But, after a great deal of thought, we did decide that the Army heavy-lift helicopter should be canceled.

In selecting a vehicle for its airborne warning and control system, the Air Force evaluated the Navy's E2C aircraft as a possible candidate. But this aircraft fell short on the three crucial counts: It is a short range aircraft having an endurance of something over 4 hours. It is too small to mount the radar which can give automated discrimination capability of low-flying targets over land. And even if its range were extended by refueling,

it could not carry a large enough crew to provide extended time on station.

So the subcommittee was looking at another situation where we felt that we had found a parallel development. This was the case of the radars in the airborne warning system and the E2C Navy system.

The subcommittee felt that a more productive way of looking at consolidation of the Air Force and Navy requirements would follow this line:

In almost any future operation involving the employment of tactical air strikes, it would be feasible to employ a long-range Air Force AWACS. It is difficult to conceive of any extensive operation of this kind that would not employ both Navy aircraft and the strike aircraft of the Tactical Air Command. Therefore, it should be both feasible and desirable to have these strikes controlled by a single control authority.

Granted the validity of this premise, then it might be possible to reduce the Navy requirement for carrier-based AWACS to the single mission of controlling interceptors protecting the fleet against aircraft attack. If relieved of the strike control mission, the remaining mission could be performed with fewer E2A's per carrier and the 52 aircraft in the inventory probably could handle this situation so far as the Navy is concerned.

What we said, in essence, was this: Here is the Navy trying to develop a sophisticated radar. Here is the Air Force working along the same line. It is the conclusion of the subcommittee that the Air Force should go ahead, AWACS should go ahead. The Navy's attempt to develop control for tactical air strikes, flying off the carrier, could in almost every situation be handled by the Air Force project, rather than two—Navy and Air Force—thus eliminating the need for \$66 million additional with the E-2C program.

The second conclusion reached by the subcommittee involved a number of programs of doubtful operational priority.

Some of these programs would have taken only a small share of the R. & D. budget in fiscal year 1970, but would have amounted to hundreds of millions or billions of dollars in ultimate R. & D., procurement, and deployment costs.

The subcommittee felt that such programs would have little probability of deployment when competing with other urgently needed weapon systems in the late 1970's.

In this category, examples would include the undersea long-range missile system, surface-to-air missile, sea-based ballistic missile intercept system—the Navy's concept of ABM—and the manned orbiting laboratory program. The last named program was on the subcommittee's list for recommended deletion before the administration's announcement that it had been dropped.

The subcommittee recommended that each of these programs be deleted for a total net reduction of \$373 million.

The subcommittee's reasoning concerning the Sam-D, surface-to-air missile development, should be of interest to the Senate.

Sam-D is a followon surface-to-air missile program to replace the Nike-

Hercules and Hawk systems and give the Army a capability for defending against high performance aircraft and short-range ballistic missiles. It is a battlefield system. It is designed as a mobile system for deployment with field armies, as well as for deployment in the United States as a replacement for Hercules missiles in the bomber defense system.

Fiscal year 1969 development costs on Sam-D were \$60 million, and the fiscal year 1970 budget is \$75 million. Total estimated R. & D. cost for the system is \$682 million. The total deployment cost of Sam-D is estimated in 1969 at nearly \$2½ billion for deployment in the mid-1970's.

There is little doubt that surface-to-air missile are an effective complement to other forms of air defense, and little doubt that the Sam-D would represent a substantial improvement over either the Hawk or Hercules systems. It would permit the engagement of short-range ballistic missiles as well as high performance aircraft and would make possible the simultaneous intercept of a number of targets.

But in considering the \$75 million item in the fiscal year 1970 budget, the subcommittee was impressed with the tremendous cost of providing what is really a rather limited defensive capability. And this raised the question of whether Sam-D has a sufficient standing in the Army's priority system to give it a reasonable chance for deployment even if it is successfully developed.

Do I make myself clear? As things go down the pipeline of R. & D. suddenly decisions are made. Suddenly the question arises: Should we go into deployment? Should we install 49 batteries of the Sam-D missile system? At that time, it has to compete with other items under consideration in the budget. So this was a controlling factor with the subcommittee. We did not think it had a reasonable chance for deployment if successfully developed.

It will be competing for procurement funding in the mid-1970's with a number of high cost systems, several of which are designed to provide protection against air attack. It is fairly obvious that we will not be able to deploy all of these systems against the single facet of the threat.

The subcommittee questioned the need for substituting Sam-D for Hercules in the bomber defense of the United States. This year a number of operational Hercules batteries were phased out on the grounds that the current bomber threat does not justify continued expenditures of O. & M. funds for their operation.

The subcommittee also questioned the threat for which Sam-D is designed. Is a tactical Sam system needed, to defend against high performance aircraft? The Vietnam war has demonstrated that even high performance aircraft deliver their strikes at subsonic speeds. Assuming the threat of short-range surface-to-surface missiles, is it feasible to deploy Sam systems in sufficient numbers effectively to defend against short-range ballistic missiles? Such missiles presumably would be fairly cheap and could be launched in quantities sufficient to saturate Sam defenses.

The subcommittee thus concluded that in the present climate of austerity it would be unrealistic to expect to allocate sufficient resources to the Sam-D requirement to develop and produce this weapon system.

The third major conclusion by the subcommittee involved a number of programs of such highly charged emotional content in the eyes of many as to call for particularly diligent scrutiny.

In instances where such programs were deemed to have low priority and, as symbols of controversy, threatened more needed R. & D. programs, the subcommittee recommended their reduction.

Such programs included chemical and biological warfare, behavioral, and social sciences, and Federal contract research centers or "think tanks."

These, then, are some of the highlights, but in sum the subcommittee recommended R.D.T. & E. budget cuts totaling about \$1.3 billion. The full committee, after considering these recommendations, ordered reductions totaling \$1,042,900,000.

The full committee, and its other subcommittees, recommended the deletion of the following additional R. & D., line items: AH-56A Cheyenne helicopter, RF-111 aircraft, light intra-theater transport, tactical AGMC-3 missile, a 75-percent reduction in the airborne warning and control system, and a cut of \$14.9 million in the Maine battle tank program.

Other items relating to the development of chemical and biological weapons were recommended for deletion, and activities relating to military science, aircraft, ordnance and combat vehicles, and missile programs were recommended for substantial reductions.

The R. & D. budget request for the three services and the Defense agencies was thus reduced by 12.7 percent.

This \$1,042,900,000 reduction from the \$8.227 billion asked by Secretary of Defense Laird is the largest reduction in an R.D.T. & E. budget made by the Armed Services Committee in recent years. I am hopeful this will indicate to all of my colleagues in the Senate that a conscientious, sincere, and diligent effort to effect judicious cost reduction has been made by the subcommittee and the full committee.

I would like to take this opportunity to compliment Chairman STENNIS on his decision to appoint three subcommittees to screen the authorization budget, to thank the chairman and the members of the Subcommittee on Bomber Defense and the Subcommittee on Tactical Air for their help in scrutinizing the R.D.T. & E. items in their respective categories, and to express my personal appreciation for the work done by the members of the subcommittee and their staff members, and the full committee staff, with particular reference to Colonel Harper.

The future work of the Subcommittee on Research and Development would be greatly facilitated by additional staff help, for it is the subcommittee's intention to broaden and deepen its examination of the authorization budget next year in order to make even more detailed recommendations to the full committee.

July 9, 1969

One major effort by the subcommittee will be to encourage greater comparability among the various budget presentations brought to the Congress by the Department of Defense.

Elimination of confusing differences between sets of figures relating to individual programs will do much to help Members better identify the exact amounts of expenditures being requested.

This is not to imply that the various figures are incorrect or deliberately confusing. In most instances, the differences are attributable to variations in computing objectives. Nevertheless, comparability for clarity of understanding must be a primary goal in next year's authorization consideration.

In a time when the proper ordering of national priorities is of such importance, it is crucial that cost and potential impact of every program under consideration be clearly understood and carefully weighed.

It was very difficult at times to follow some of these items through the labyrinth of the budget lines.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. McINTYRE. I am nearly finished with my remarks and then I will be glad to yield to the Senator.

Within the limits of time and available staff, the Subcommittee on Research and Development tried to do that this year, Mr. President.

In conclusion, let me emphasize that the reductions in the authorization recommended by the subcommittee and the full Armed Services Committee should not imply lack of faith in the research and development activities of the Department of Defense.

Our Defense leaders, our scientists and other experts, through R. & D. efforts over the years have developed world leadership in technology. All Americans can take pride in the contributions made by these dedicated men. We are continuing to maintain that technological advantage. In these uncertain times we cannot afford to lose it.

It is my view, shared by those who have studied these reductions along with me, that we have not recommended reductions which would reduce our technological advantage. We believe that these reductions can be absorbed while retaining our leadership base in technology.

Mr. STENNIS. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. GRAVEL in the chair). Does the Senator yield?

Mr. McINTYRE. I yield.

Mr. STENNIS. I wish to highly commend this subcommittee for the very fine job they did and to commend especially the chairman for his unrelenting efforts and very effective leadership in this vast field. It is a large undertaking to have \$8 billion worth of a multitude of research projects thrown into one's lap with a very few weeks before the hearings are to start on the major bill. One can hardly imagine the variety of problems that are involved in connection with research and development. The subcommittee has done an amazing amount of work and they have accom-

plished a great deal in their work. I thank them especially. I think this is the forerunner of even greater work that they will be able to do in future assignments in this field.

I commend the Senator as well as thank him. I believe his work there will prove to be sound, solid, and lasting.

Mr. McINTYRE. I thank the Senator. I yield to the Senator from Arkansas.

Mr. FULBRIGHT. Just before the Senator concluded, I thought he mentioned petroleum.

Mr. McINTYRE. Petroleum? No.

Mr. FULBRIGHT. I so understood him.

Mr. McINTYRE. I did not mention petroleum.

Mr. FULBRIGHT. I am prompted to ask a question about a recent story about petroleum that appeared in the newspapers. Apparently the armed services were unable to account for some \$21 million worth of petroleum supply in Thailand.

Recently I was discussing this matter with a man who is the head of one of the largest petroleum gathering organizations in this country. By that I mean he operates oil pipelines and trucklines and gathers production of a great many small producers. That is why he has expertise in this area.

He told me he could not understand how it was possible for the armed services to lose track of any substantial amount of petroleum in view of the modern measuring techniques which have been developed and which are in daily use by industry.

Can the Senator enlighten us as to what happened to the \$21 million worth of petroleum that disappeared?

Mr. McINTYRE. I wish I could. The Senator is referring to headlines that appeared in newspapers recently?

Mr. FULBRIGHT. Yes.

Mr. McINTYRE. I do not have the answer. My subcommittee's jurisdiction was in a different area. I would be glad to find out what the Department of Defense has to say about it.

Mr. FULBRIGHT. Is the committee concerned with the disappearance of \$21 million worth of petroleum or not?

Mr. McINTYRE. Yes.

Mr. FULBRIGHT. Have they looked into it at all, or inquired about it?

Mr. McINTYRE. I think the Senator will have to direct his question to the chairman of the full committee. I have been busy with the behavioral sciences.

Mr. FULBRIGHT. That was the next question I was coming to.

Mr. McINTYRE. I will get the Senator off petroleum.

Mr. FULBRIGHT. I thought the Senator mentioned petroleum but am prompted now to ask about the social sciences. This is a matter we talked about a little bit last year, I believe. Can the Senator refresh my memory as to how many foreign universities are going to be included in the coming year's program for research?

Mr. McINTYRE. I do not know the precise number offhand, but we have taken a hard look at it. I want to assure the Senator that in his statement of May 1, most of the time when he talks about research in foreign universities,

he puts it under the heading of social and behavioral sciences, when it is really hard science. If we take a look at what the projects are about, they are hard, physical sciences.

I can tell the Senator that out of \$630 million under military sciences—and that is a big figure, I want to assure the Senator from Arkansas—in the short time allotted, we did not get the opportunity to take an item-by-item look. We did start to look and quickly learned that out of the \$630 million, only about \$6 million will embrace what the Senator is talking about. Under universities, only about \$6 million will be spent in foreign countries. A good share of that will go to American personnel.

As to how many universities, I could count them.

Mr. FULBRIGHT. Was this reported to the committee?

Mr. McINTYRE. Yes. I have very adequate information on it this year.

Mr. FULBRIGHT. Last year, when I inquired about it, the Senator did not have any information about it.

Mr. McINTYRE. Last year, when the Senator inquired about it, the Research and Development Subcommittee had not yet been established; the Senator was inquiring about a \$5 or \$6 million item in a budget of about \$22 or \$23 billion.

Mr. FULBRIGHT. I agree with the Senator that that is a big figure. That is the reason why the Senate has not been informed to any reasonable degree as to what is spent, because we are always being confronted with such enormous sums of money that we give up in utter hopelessness and frustration.

To me, \$6 million is quite a lot of money. For 4 years I have been trying to get less than that for a project on the Little Red River in Arkansas and I cannot begin to get it off the ground yet. The Senator speaks of \$6 million as if it were just a drop in the bucket and he could not be bothered with it. I am not so much interested in that amount of money—although, of course, I am interested in it—but I am interested in the Department of Defense going abroad and injecting itself into foreign countries either in its universities or in projects such as Camelot and things of that kind, because it is this kind of activity that brings us into disrepute among the countries of the world and does a great damage to our foreign relations. Our foreign relations are already bad enough without the Department of Defense adding to it. I would like to know, how many countries will the Senator let out contracts to? Surely the Senator should know that.

Mr. McINTYRE. Let me give the Senator some idea—

Mr. FULBRIGHT. I raised that question last year.

Mr. McINTYRE. Let me answer the Senator's question in broad terms—he is asking the question in narrow terms. The bulk of the money spent in foreign countries by the Department of Defense is for the gathering of information. Let me give the Senator a classic example. If we are studying the effects of high altitude on men, the place to go is Peru. There is where one gets high altitude and he can

find out what happens to men under certain stresses of heavy work. That is where we would go to find out something about that.

Mr. FULBRIGHT. They do not go nearly so high as Apollo will go, do they? Why is that so necessary?

Mr. McINTYRE. I have not finished. Mr. FULBRIGHT. I am sorry.

Mr. McINTYRE. If we want to take a look at some other problems, such as one having to do with the hardening of silos and the effects of bursting bombs on weapons, one of the places to go is to examine the crust of the earth in areas around Greece where many volcanic eruptions and earthquakes have taken place in the past. The Department of Defense, if it knows of an expert in Vienna, or in Liege, Belgium, or of any top man who knows something about aerodynamics, or on another project of that kind which is important to our Nation, the Department of Defense does not hesitate to hire such men and to contract with universities for a 2- or 3-year program. That is where the bulk of the money the Senator was complaining about last year was spent overseas. It is not always possible to find what we need to know to solve some of the gigantic problems we have in the United States. It is not always possible to find in this country the man we need who is most informed.

Mr. FULBRIGHT. The Senator mentioned Peru. Is the Senator saying that it is necessary, because the mountains in Peru are so much higher than they are in the United States, to go down there, that their altitudes are greater than they are in this country?

Mr. McINTYRE. Their altitudes are higher than here.

Mr. FULBRIGHT. Their mountains are higher than our mountains?

Mr. McINTYRE. I am not an expert on topography, but I have been to Peru, and it is one place where there is going to be a project to study how much a man can endure in a very high altitude.

Mr. FULBRIGHT. I thought the Himalayas were higher than the Andes. But if we want high altitudes, those mountains are not nearly so high as the Apollo mission can go, are they? Why would they want to know how much a man can endure? What relation does that have to the military defense of our country?

Mr. McINTYRE. I would imagine in some future military effort. We never can tell.

Mr. FULBRIGHT. What kind?

Mr. McINTYRE. I would not know. That would be a behavioral or a physical need of tomorrow.

Mr. FULBRIGHT. A need tomorrow. That is why I said last year, and now, that there are many projects in this bill that should be disassociated from the Department of Defense. They cannot possibly be justified as matters of defense. By that I mean the approach of persons like Mr. Teller on the subject of nuclear weapons. He says that nothing should stand in the way of research—no matter what it is. He was against the Test Ban Treaty, for example, because, he says we need to know, and nothing should stand in the way of knowledge. I do not agree

with that. I do not agree with the Department of Defense that because something needs to be known by someone, if it has any relation to a function or a mission of the Department of Defense, the Department should be producing it. I think that the social sciences and research projects, no matter how valid they are in themselves and no matter how suitable for the New School for Social Research in New York City, nevertheless should not be sponsored by the Department of Defense which takes the taxpayers' money and spends it in that fashion.

The chairman, as chairman of the subcommittee, should be able to give to the Senate an itemized list of the kind of projects that this money is being spent on, in how many countries, and in which institutions. I personally object to these projects unless absolutely essential for the Department of Defense itself. I object to going abroad to other countries—some of which used to be quite friendly—and injecting ourselves into their activities, just as in the same way the Department did in Chile on the project called Camelot. I know this kind of thing has been done in some other countries, too. Before this debate is over, the Senator should be able to supply that information for the benefit of the Senate and the public.

Mr. McINTYRE. What is it the Senator wants to know about? Is the Senator talking about social sciences, or physical sciences? I have got to know what the Senator is talking about before I can answer.

Mr. FULBRIGHT. The social sciences. Let us start with that.

Mr. McINTYRE. Let me read from the social sciences the Senator is talking about, where we are spending money overseas. That is in his speech of May 1 this year.

Mr. FULBRIGHT. I was inquiring. I was not telling the Senator. On May 1, I was asking for information.

Mr. McINTYRE. The Senator starts out in his talk complaining about money being spent for social and behavioral sciences by the Department of Defense, and then the Senator proceeds to list—oh, my goodness, I do not know—there are 30 or 40 countries he lists, in which I cannot find one on social and behavioral sciences. Here, for instance, is one of the subject matters—in Argentina—X-ray spectrometry and galactic studies from the Southern Hemisphere.

Incidentally, where would the Senator suggest that the Department of Defense go if it wants to study the effects of the aurora borealis on satellite communications?

Mr. FULBRIGHT. Let me make it clear that I obtained the list I put in the Record from the Department of Defense. I would not pretend to understand many of those titles. Most of them are gobbledegook to me. I have not the faintest idea what they mean. I put them in the Record because I got the whole list from the Department of Defense. I put them in the Record for the information of the Senate. I did not have the means nor the understanding to analyze studies like the Senator has just referred to. I did not say that every one of them had

no relation to the Department of Defense. I say a great many of them have. I believe they have. I thought the committee was going to come prepared this time to justify each of these projects and show they have some relationship to the mission of the Department of Defense.

Mr. McINTYRE. I will be happy to appear before the Senate and justify it. I tried, before the Senator arrived on the floor, to give a brief analysis of the recommendations of the full committee. We can talk about the social behavioral sciences and the physical sciences for the rest of the day, but I will be glad to come here and give a defense of them, because they can be defended. As a matter of fact, the committee looked into most of the social, behavioral science projects. We are in complete accord with them. Those are not the ones the Senator complains of.

Mr. FULBRIGHT. Can the Senator give me an example of a behavioral science project that the Senator thinks is justified?

Mr. McINTYRE. To give the Senator an idea, I think a behavioral science project relating to men working on our air carriers in Vietnam, who suddenly develop a hearing difficulty, is justified. By behavioral studies, we learned it was wise to keep these men on the deck of an aircraft carrier only a limited amount of time, and then have them go below. We tested them to see if their hearing was affected as a result of the loud jet noises on aircraft carriers.

We also went into the question of a pilot's possibly losing his sight from flash blindness because of bombing.

A behavioral science project could justifiably go into the question of why we have a 29 percent turnover in our Armed Forces today. I think any study can be justified that indicates a group of men can be tested in order to eliminate the 10 percent or 15 percent of the men who would not have a good chance of passing a radar operator course. If we could eliminate that 10 or 15 percent of the men who are going to fail beforehand, we would save ourselves money.

With reference to the justification of these behavioral science studies, it should be pointed out that we use some complicated instruments, radars, and sensors that require men to sit in a rather uncomfortable position, watching radar, for example, for hour upon hour. We want to know when those men begin to lose their efficiency and when they should be taken off that duty. A man must sit there for 4 or 5 hours, watching some lines.

Social behavioral science studies as applied to the Department of Defense have saved millions of dollars.

When we get down to the areas the Senator from Arkansas is talking about, he has something to complain about. They are hard to justify. When we go to the science studies in Europe, for example, which are 99 percent physical sciences, to find a man there in a certain area, that is something else. We need a study of how the aurora borealis affects people so it can be helpful in the space program. The committee has recommended reductions in some of these areas.

Mr. FULBRIGHT. I may have used the wrong language. I would have thought that a study of the effect of the exhaust of an airplane on a man's hearing would have been more in the field of medical science. I would not think it was in the field of social sciences.

Mr. McINTYRE. It would be biomedical.

Mr. FULBRIGHT. I read in the paper the other day that there were 50,000 desertions from our Army during the past year. This would clearly be more in the field of social sciences. Has the committee made a study of why so many of our soldiers have deserted? Has the committee studied that question? Has the committee given any attention to it? Is there a project on it?

Mr. McINTYRE. Excuse me. My attention was distracted.

Mr. FULBRIGHT. Has the committee a project studying the question of why so many of our soldiers have deserted our Army? I think I read in the paper that this past year the number was over 50,000.

Mr. McINTYRE. There again we get into the question of definitions. Does the Senator know the difference between AWOL and desertion?

Mr. FULBRIGHT. Well, a desertion is an absence of more than 30 days.

Mr. McINTYRE. As a former military lawyer in World War II, I defended many who were away 60 days, and they were not charged with desertion.

Mr. FULBRIGHT. Well, it is a fact that there has been a substantial increase in desertions in the past year over 5 years ago or 3 years ago. Is that not correct? Has the committee made any study as to the number of AWOL's, whether it involves a week, 3 weeks, or 30 days?

Mr. McINTYRE. Yes, we have.

Mr. FULBRIGHT. Can the Senator give us that information?

Mr. McINTYRE. The Senator from Hawaii (Mr. INOUYE) was chairman of a subcommittee that went into the question of AWOL's and desertions. We were particularly interested because of the State Department's putting its big nose into some of these situations, which resulted in an uneven pattern of punishment, to the extent that someone who had gone AWOL in Tampa, Fla., had the book thrown at him, while some member of the Armed Forces who had gone to Norway was taken home and given a free ride and 10 days off. There is a report on that matter which speaks very strongly on it. The Senator from Hawaii (Mr. INOUYE) was chairman of that subcommittee.

Of course there is an increase in AWOL's. Of course there is an increase even in desertions. We had them in World War II. Why should there not be with this unpopular conflict in Vietnam?

Mr. FULBRIGHT. Has the committee made a study of that question? Is that increase in desertions due to the character of the war in Vietnam?

Mr. McINTYRE. I have not made the study. The subcommittee has.

Mr. FULBRIGHT. The Senator mentioned behavioral sciences and some of these studies.

Mr. McINTYRE. Is the Senator acquainted with the subcommittee's report, by the Senator from Hawaii, on the question of AWOLs and desertions?

Mr. FULBRIGHT. No.

Mr. McINTYRE. Is the Senator acquainted with the work of the committee to upgrade the charge of being AWOL?

Mr. FULBRIGHT. No. I saw in the papers that there was a very large increase. I think the article said there were over 50,000 last year. I cannot remember whether it was 1,500 or 15,000, but I think there were 1,500 prosecutions in the courts. This was an article within the last 2 or 3 weeks. I may be able to look it up. I thought it was a very interesting subject. I thought it might be one on which there was a research project. It would seem to me to be pertinent to the activities of the Defense Department. A number of those studies have no relation, I think, to the Defense Department.

Mr. McINTYRE. Of course, the distinguished Senator from Arkansas realizes when he talks in generalities of desertions and AWOLs, that a man who fails to get on a morning report is considered to be AWOL. We have statistics that show AWOL increases. The number has been increasing. The subcommittee of which the Senator from Hawaii (Mr. INOUYE) is chairman did go into that question. That information can be obtained for the Senator.

Mr. FULBRIGHT. The Senator is a member of the committee. I thought he was undertaking to give to the Senate and to the public statistics about it. I am not a member of the Armed Services Committee. If I have misstated it or given the wrong impression, I ask the Senator to straighten me out. How many desertions have there been? Define what a desertion is. What is an AWOL? I am only looking for light and understanding on the subject.

Mr. McINTYRE. What is it that the Senator is hoping to find? That the AWOL's and desertions are very high because of the unpopularity of the war?

Mr. FULBRIGHT. If the Senator knows, I would expect that information from him.

Mr. McINTYRE. The Senator expects quite a bit if he expects me to tell him how many desertions and how many AWOL's there are, and how much we are spending on universities on projects, and so forth. I am here today discussing research and development. All this other information is easily available.

Mr. FULBRIGHT. It is not for me. I have great difficulty obtaining any information from the Defense Department.

Mr. McINTYRE. Has the Senator asked for information on desertions?

Mr. FULBRIGHT. No. I thought the Senator would give it today. There are other members of the committee here, if they care to give it. I do not care which member of the committee furnishes it.

Mr. McINTYRE. We are here on an authorization bill. The Senator wants to ascertain how many desertions there are. We will have that information for the Senator tomorrow. Is that satisfactory?

Mr. FULBRIGHT. Well, that is all right, too. Any time, I apologize if the Senator does not like the question.

Mr. McINTYRE. May I say to the Senator from Arkansas that we are talking today about a \$20 billion budget, and I thought the Senator wanted to know how many universities we are spending the money in.

Mr. FULBRIGHT. It is an \$80 billion budget.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. McINTYRE. Certainly.

Mr. STENNIS. Mr. President, last year there was a special subcommittee of the Committee on Armed Services, chaired by the Senator from Hawaii (Mr. INOUYE), which made a special study of these AWOL's, absences, and alleged desertions, and filed a very fine report thereon. I have asked someone to telephone for him, and have not received any response as yet. Apparently he has some other duties to take care of.

But the matter has been fully covered, and strong recommendations were made to the Department of Defense about the first part of this year.

My recollection is that the statistics are not nearly as alarming as the Senator from Arkansas might have been advised, in comparison, say, with World War II. But I do not have that report broken down. I have not seen it in several months, and I do not know that that is the subject of any special research by the Department of Defense; but I know it is a subject of concern, and that they are digging deeply into it.

My strong recommendation, personally, was that they were going to have to deal out more punishment in the proper cases, and that disparity of punishment was one of the factors. I will obtain a copy of that report for the Senator.

Mr. FULBRIGHT. Mr. President, will the Senator from New Hampshire yield further?

Mr. McINTYRE. I yield.

Mr. FULBRIGHT. I do not wish to press the Senator on anything that is not within his area of responsibility. All the Senator needs to say is that it is not. I would agree with the Senator from Mississippi that it seems to me this is a subject which is a little more appropriate for research for the Department of Defense than is the effect of heights on a man in the Peruvian Andes, or some other place, which does not quite seem to me to be as interesting to the Defense Department or to the people of this country as why we have so many desertions.

I have been trying to make the point, as I did last year, that a number of these research projects struck me as being irrelevant to the function of the Defense Department.

I wish to cite another case which embarrassed me very much. I happen to be a member of the Board of Regents of the Smithsonian Institution. They were engaged as a kind of subcontractor—I do not know what the exact legal relationship was—for research, in the Pacific islands on the subject of bird migration. Then it was alleged the project had to do with germ warfare. I wish to state that of my own knowledge I do not know whether it had to do with germ warfare or not, but the contract turned out

to be embarrassing to the Smithsonian Institution. Is the Senator familiar with that particular incident? If not, it is all right; but there was something in the newspapers about it, which was drawn to my attention.

I later received a letter from the Smithsonian, asking my advice as to whether the Smithsonian should have any further dealings with the Department of Defense, because of this embarrassment. I was, of course, put on the spot to give my recommendation, since I was a Regent of the Institution.

Is the Senator familiar with the incident I am talking about? If not, we will drop the subject and I can look it up somewhere else.

Mr. MCINTYRE. I may have read something on that question.

Mr. FULBRIGHT. The contract was alleged to have been a part of the biological warfare activities of the Defense Department. Does that have anything to do with the Senator's responsibilities on the committee?

Mr. MCINTYRE. Yes.

Mr. FULBRIGHT. Does he have jurisdiction over research in biological warfare?

Mr. MCINTYRE. Just a moment. The Senator's complaint is as to the work done by the Smithsonian?

Mr. FULBRIGHT. I am not complaining; I am asking. I am not complaining about anything at the moment. I am trying to find information.

Mr. MCINTYRE. If the Senator will give me a moment, and bring the subject up again later, I have something here on the Smithsonian's involvement, but I cannot seem to put my finger on it at the moment. I have information here on some 200,000 projects.

I suggest that if the Senator will give me a few minutes here, and will bring the subject up again, I will try to give him the answer he seeks.

Mr. FULBRIGHT. All right. I do not wish to press the Senator. Let me close by saying this: I wonder whether at a later time in the debate we could discuss the justification for a number of the research projects that the committee is recommending in this bill. I should like to do that as an illustration of the point that I am making. I reiterate, just for future reference, that I am not saying that these subjects are not in themselves worthy of someone's attention. I raise the question whether they should be funded and supported by the Defense Department, because they are not really properly related to the Department. We will raise the question again at a later time; I do not wish to pursue it now.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. MCINTYRE. I yield.

Mr. GOLDWATER. While the distinguished chairman of the subcommittee is looking up his answer, I might call to the attention of the distinguished Senator that on page 1609 through page 1613, and including a part of page 1614, of the Senate report, is a complete list of the countries involved, numbering some eight or nine, and the subjects covered by these research programs.

I might say to the Senator from Arkansas that I feel this to be a lucrative field where we can do some cutting; and the subcommittee has already recommended close to a 13-percent cut in these particular figures. I join the Senator from Arkansas in believing that there are a lot of these items that are not needed.

I do not know how, though, we can discuss them on the floor of the Senate, to determine which are needed and which are not. I simply wanted to refer the Senator to those countries, and to the lists of projects under them.

Mr. FULBRIGHT. That is at page 1609?

Mr. GOLDWATER. Yes.

Mr. STENNIS. Yes, they begin there.

Mr. CRANSTON. Mr. President, will the Senator yield?

Mr. MCINTYRE. I am happy to yield.

Mr. CRANSTON. In connection with behavioral science projects, have there been or are there now, or are there authorized, studies of men under stress and in grave danger? Have there been studies of the effect of grave danger on their ability to make wise decisions, their ability to think clearly, and their ability to carry out difficult and complicated orders under certain conditions?

Mr. MCINTYRE. Under the branch of social and behavioral sciences, there are two areas called human performance and human factor engineering. Both of these fields have brought to light a great deal of information about the human being.

It has been discovered, for example, that something like 40 percent of all our weapons failures and aircraft and other problems occur, not because the machine gives out, but because the man makes a mistake under great stress such as the Senator has indicated. Particularly with the sophisticated weaponry we have today, to which I have already alluded, like radar operations, the sensors, and everything else we have, when men are required to work long periods of time under difficult circumstances, these studies have been of great benefit.

Mr. CRANSTON. Do those studies in depth go into circumstances such as might involve the commander of a Poseidon submarine, who presumably has the ability, if he wishes, to make a decision whether to launch? Do the studies explore the factors of stress and danger, and the effect upon a man of having the grave responsibility, virtually in his own hands, of deciding whether to launch a missile under certain circumstances?

Mr. MCINTYRE. I do not know whether the stresses involved in the exact situation of which the Senator is speaking have been studied or not. The Senator is assuming, of course, that a Polaris or Poseidon commander would have the authority to press the button. I imagine studies they have conducted involving command decisions under great stress would be part and parcel of the overall picture.

Mr. CRANSTON. And have studies been made not only of stress, but of stress under grave danger, danger to life, and its effect upon the ability of a man to

judge and to make delicate and vastly important decisions?

Mr. MCINTYRE. I would be guessing if I were to try to answer that. I think the subject of stress has been studied, yes, but as to stress under grave danger, I do not know.

Mr. JACKSON. Mr. President, will the Senator yield?

Mr. MCINTYRE. I yield.

Mr. JACKSON. It is my understanding that the officers in charge of strategic weapons have all been given detailed psychiatric tests in connection with their regular medical examinations.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. MCINTYRE. I yield.

Mr. STENNIS. Mr. President, to complete the record, I point out to the Senator from Arkansas that the committee report on page 47 gives some exact figures about the reductions.

One is foreign military security environments. There is a recommendation there for an actual reduction of \$800,000. That is almost 10 percent on that item. The next one has to do with policy planning studies. It is recommended that the reduction in that item be \$700,000.

In the last paragraph, at the bottom, the committee is recommending that a number of these efforts be transferred to other agencies—some to the Department of State, some to Arms Control and Disarmament, and some to the National Science Foundation and to others.

It takes a great deal of weeding out to be specific with reference to many of these categories.

I call that part of the report to the attention of the Senator. I appreciate the earnestness of his inquiry.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. MCINTYRE. I yield.

Mr. FULBRIGHT. Mr. President, I am very glad that the chairman of the committee has called that to the attention of the Senate. I am especially glad to see the last part which recommends the transfer of a number of these programs to other agencies. For example, the Senator mentions the National Science Foundation, which is one that, it would seem to me, would be appropriate.

I assume that one reason they were not there to begin with is that they did not have the money for the programs. Will the Senator transfer them the money to fund them?

Mr. STENNIS. We will transfer the appropriation bill, if the Senator's committee has its way, over to his committee and others.

Mr. FULBRIGHT. Mr. President, I want to pursue the matter a moment. I want to give the Senator an illustration so that he will not think I am being too nit-picking about the matter.

Mr. President, I have in my hand a document that is a research project. I will read the specific name. This is from the University of Massachusetts. It is entitled "The Atatürk Revolution in Turkey. Religion and Revolution. A Study of Comparative Politics and Religion."

This is funded by funds for research projects from the Department of De-

July 9, 1969

fense. This is an aspect of what this is about.

It states:

Beginning with a brief discussion of the decline and fall of the Ottoman empire, the report analyzes the interplay between Ataturk and the forces of religious traditionalism in the Turkish revolution. Special attention is given to the role of religion in the struggle for national sovereignty that ended in 1923. The report concludes with a brief discussion of the position of Islam in contemporary Turkish society.

That is an example of what I was raising a question about, as to the appropriateness for the Department of Defense to have funds authorized, and for us to appropriate money, that is spent for matters of that kind.

I do not see why this is a matter that the Defense Department should undertake.

I do not urge the Senator to answer now. I would let him have a look at the matter first. However, I am giving it as an illustration of what I have in mind.

Mr. McINTYRE. Would the Senator tell me what fiscal year this is planned for?

Mr. FULBRIGHT. This is a completed one. This was 1968.

Mr. McINTYRE. You are now talking about fiscal year 1969.

Mr. FULBRIGHT. That was an illustration of what I meant.

Mr. McINTYRE. Is the item in the budget for the fiscal year 1970?

Mr. FULBRIGHT. No. That is something that has gone by. It is an illustration of the type of activities I have reference to that are not related to military affairs. There are a number of these.

I do not have the ones that are in process as yet. I got all the information I could. However, for the Department of the Army, for example, in the hearings beginning on page 2209, many pages and many items are listed.

I assume they are still underway on plans for fiscal year 1970.

We notice some of them are on the right. These are some that I got from the Department of Defense. They indicate the type of things that have been done.

Mr. McINTYRE. What page is the Senator referring to?

Mr. FULBRIGHT. This is from the hearings of the Committee on Armed Services. It is the one that was on my desk.

Mr. McINTYRE. What page?

Mr. FULBRIGHT. Page 2209.

Take the first item there. This is in fiscal year 1970. It says:

Beliefs and habits of certain foreign populations of significance for psychological operations.

I suppose that in some areas psychological understanding is necessary or helpful. If we had had any understanding of the psychology of the Vietnamese, I do not think we would have gotten into that war. There was a complete lack of understanding of what the Vietnamese people were like. I cannot say it would not have been helpful.

I do not think that particular one has any relation to the military responsibility. I doubt that the military is the

proper one to handle it, simply because they are not familiar with that type activity.

I have two others here. I do not wish to burden the Senator at the moment. I hope that at a little later time the Senator will be prepared to discuss some of these projects which I have discussed and possibly I will offer an amendment to strike them out, if that is an appropriate way to pursue the matter on the ground, that they have no place in the authorization.

Mr. McINTYRE. I think that is a perfectly appropriate way to handle the matter.

This gives a little idea of the difficulty the Research and Development Subcommittee had.

In calling attention to page 2209, the Senator is now talking about funds that are spent in Washington, at George Washington University. Even the item mentioned there is coded. I do not know if it is terminated now or if it is being continued.

If the Senator will supply us in advance with the 10 or 20 items he picks out of what amounts to 200,000 or 300,000 items, we will not have to spend all night figuring the matter out. If the Senator gives us advance notice of what he is criticizing, we will be here to either defend the matter or criticize it.

If the Senator is talking about the gamma gamma goat which turns out to be a six-wheeled track vehicle used in Thailand—

Mr. FULBRIGHT. If a sophisticated member of the Armed Services Committee thought it was a goat, I do not think he should blame me.

Mr. McINTYRE. I think everyone thought it was a goat. However, it is a six-wheeled track vehicle.

Mr. FULBRIGHT. I do not even know of a goat that has six wheels.

Mr. McINTYRE. Let us agree on the areas the Senator wants to complain about. Then if the Senator gives us advance notice, we will be prepared to defend or concede.

Mr. FULBRIGHT. That is fair enough. We brought this matter up tentatively last year. We had a little debate. I know that the chairman anticipated that I would bring the matter up again.

What I am really trying to do is to tighten up the whole operation. I think a lot of the civilian activities in our country are suffering from an overexpansion of the Military Establishment into fields which are really unrelated.

Mr. McINTYRE. The Senator has expressed my own sentiments. I think the Senator is justified in calling the attention of the committee to this work.

Because of our scrutiny of this area, action has been taken by the Department of Defense to tighten up the organization. The programs have been cut. We are asking the Senate to cut them even further. The subcommittee cut a billion dollars. There has been action. It is extremely difficult because of the multitudinous items to discuss one that the Senator suddenly picks up from nowhere.

Mr. HART. Mr. President, will the Senator yield?

Mr. McINTYRE. I yield.

Mr. HART. Mr. President, whatever develops as we go down the road on this research and development matter, as the Senator from New Hampshire has indicated, perhaps on an item-by-item review there will be further limitation.

I rise to thank the Senator from New Hampshire, the Senator from Mississippi, and the committee for digging into this area and coming in here with a recommendation that trims R. & D. by in excess of a billion dollars.

A year ago last April I offered an amendment that sought to maintain the research and development figure for the fiscal year 1969 at the level of the 1968 fiscal year. At that time the Committee on Armed Services recommended an increase in research and development of approximately \$508 million, even though we were all going through a great deal of discussion about the need to economize. My amendment—on which we voted on April 18, 1968, failed by just two votes.

I cite that experience to make the point that all of us, in the passage of 12 months, have developed a much greater and a much clearer understanding of the responsibility that the entire Senate carries with respect to what heretofore had been rather esoteric, box-car-type figure problems.

So I thank the Senator from New Hampshire and the committee. I wish that a year ago we had been able to keep the \$500 million from being added on.

I am sure that in part we reflect the mood of the country. But more than that, I think there was some leadership from the Senate to persuade the country to this move. Today we find ourselves receiving from the Committee on Armed Services a report which reduces by more than a billion dollars the research and development figure which a year ago we fell short of trying to keep from being increased a half billion dollars, and that, in anybody's book, is progress.

Mr. McINTYRE. I thank the distinguished Senator from Michigan. It was his good work of leadership that propelled us into taking a hard look, and we should continue taking a hard look, and look even harder.

Mr. CRANSTON. Mr. President, will the Senator yield?

Mr. McINTYRE. I yield.

Mr. CRANSTON. I should like to refer to the behavioral science area we were discussing. It is an area in which I believe there may be need for more research in the interest of national security.

I wonder whether the Senate from New Hampshire could advise Senators, before consideration of this measure is complete, a bit more about the area of studies of men under danger—not stress so much as personal danger. There are behavioral scientists who believe that under conditions of grave danger to one's life, the ability to think wisely and carefully and to judge soundly is adversely affected.

The Senator from Washington (Mr. JACKSON) has advised me that men in positions of grave responsibility, such as commanding Poseidon submarines, are

given psychiatric tests, and those likely to crack up generally are weeded out.

But the fact may be that the human being generally, by normal human practices or characteristics, tends to lose his ability to judge wisely when in grave danger. He is suddenly filled with adrenalin, his muscles swell, and he desires to smash whoever may be threatening him. The question of how this would affect the judgment of men who do have grave responsibilities at times of grave danger to themselves and to loved ones at home is one about which we should be fully knowledgeable. This could be the weakest link in and the gravest threat to the whole security performance of the United States, in the opinion of scientists.

Mr. McINTYRE. The Senator from California would like the chairman of the committee to find out what studies have been conducted or are planned that concern men under great physical danger who are in a decisionmaking capacity?

Mr. CRANSTON. Exactly that.

Mr. McINTYRE. We will try to find that out.

Mr. GORE. Mr. President, will the Senator yield?

Mr. McINTYRE. I yield.

Mr. GORE. I wish to express my very deep personal gratitude for the eloquent and informative speech of the able Senator from New Hampshire. It gives to the entire Senate a better understanding of the delicate and intense problems with which his committee has been coping. There are but few Senators who could command the audience of Senators and hold their attention as he has done today. He is favored, too, with the presence in the gallery of a charming lady, Mrs. McIntyre, during this long debate.

I thank the Senator both for his speech and for her presence.

Mr. McINTYRE. I thank the distinguished Senator from Tennessee. He is always so generous.

Mrs. SMITH. Mr. President, will the Senator yield?

Mr. McINTYRE. I yield.

Mrs. SMITH. Mr. President, earlier this afternoon, the chairman of the Committee on Armed Services, the Senator from Mississippi (Mr. STENNIS), commended the chairman of the subcommittee and the members of that subcommittee for the job they had done.

While there were areas in the recommendations with which I was not in full agreement, I do want to commend Senator McINTYRE, the chairman of that subcommittee, and the members of the subcommittee for the tremendous job they have done. They have put in a great deal of time. While this is the first year they have gone into this matter in such great depth, I think that out of it will come some good.

Mr. TYDINGS. Mr. President, will the Senator yield?

Mr. CRANSTON. I yield.

Mr. TYDINGS. I ask the Senator from New Hampshire whether as a result of a colloquy he had with the Senator from Arkansas, he is going to provide the Senate with the name of each foreign educational institution which receives funds from the Pentagon, and also

whether he is going to provide us with the purpose of the grant and the amount of the grant.

Mr. McINTYRE. The Senator from Maryland asks easy questions compared with those asked by the distinguished Senator from Arkansas.

I believe we can place the information in the RECORD, subject to the security question, which is always bothersome. We have here the names of universities, other centers of intelligence for the countries where DOD is planning to spend money for fiscal year 1970. I think we can make it available, if not place it in the RECORD. This appears to have been in the RECORD, so it can be put in the RECORD again.

Mr. TYDINGS. I have another question. On Monday evening there was a colloquy on the floor between the Senator from Massachusetts (Mr. KENNEDY) and the Senator from Montana (Mr. MANSFIELD). I refer to page S7643 of the RECORD. In his statement, the distinguished majority leader mentioned some figures, and I will now quote from his statement. He is referring to Pentagon expenditures which found their way to the Hudson Institute:

In going back only 3 years, including this year, the figures show that in 1967, this organization received from the Department of Defense \$713,000. In 1968 it received \$444,000, under a Democratic administration, I might say. So far in 1969, under both a Democratic and Republican administration, I would assume, it received \$873,000. That comes to about \$2 million covering 3 years, and the third year has not been completed.

In his concluding sentences, the majority leader said:

I wonder how much of the research money, which comes to \$8 billion last year for the Department of Defense alone, has been siphoned to the Hudson Institute, the Rand Corp., colleges and universities, and other institutes in this country.

My question now to the Senator from New Hampshire is this: How much did the Hudson Institute receive, directly or indirectly, from the Department of Defense or the Pentagon in 1967, in 1968, in 1969, and how much is it going to receive in 1970? I think it might be helpful if the Senator could provide any information with relation to the amount of the cost of the book "Why ABM?" authored largely by members of the Hudson Institute, of Croton-on-Hudson, N.Y., and the relationship between that book and the funds received by the Hudson Institute from the Pentagon.

Mr. McINTYRE. In answer to the Senator's question I can only say I have before me a sheet of paper which has been forwarded to me by the Department of Defense entitled "Funding Summary for Federal Contract Research Centers." This is a table which reflects that the Hudson Institute under actual fiscal year 1966 received \$827,000. The table shows that for fiscal years 1967, 1968, 1969, and planned fiscal year 1970 the Hudson Institute received none or none is now planned to be turned over by the Department of Defense to the Hudson Institute as a Federal contract research center.

We will have to inquire if this was a grant or if it is involved in this matter. We will try to find the information for the Senate.

Mr. TYDINGS. Forgetting that question if we could, I would like to go back to how much money the Hudson Institute received directly or indirectly from the Pentagon in 1967, 1968, 1969, and 1970, and if we could have the total budget of the Hudson Institute and the percentage of their budget which is financed or carried by the Pentagon, I think it would be helpful. Could the Senator provide those figures?

Mr. McINTYRE. The only answer I can give the Senator is that it is listed here as a Federal contract research center in 1966. For all other years, 1967 through 1970, the Hudson Institute shows no appropriation whatever. Directly, or indirectly, we will provide the information. I will place this table in the RECORD.

Mr. TYDINGS. The Senator will provide the information. I thank the Senator.

(At this point, Mr. GURNEY assumed the chair.)

Several Senators addressed the Chair.

Mr. McINTYRE. I yield to the Senator from Washington.

Mr. JACKSON. At the same time will the Senator supply for the RECORD the amount of money supplied the Massachusetts Institute of Technology by the Department of Defense?

Mr. GOLDWATER. Would the Senator yield so that I may amend that request?

Mr. McINTYRE. Just a moment. Does the Senator want an answer?

Mr. JACKSON. Does the Senator have the information now? It runs into the millions.

Mr. McINTYRE. As a Federal contract research center the figure is about \$65 million. I do not believe that is all.

I wish to say this in explanation of what seems to be the difficulty in providing these figures. The subcommittee, in going into this matter, found a baffling series of line items and areas where one could make these figures jell and coincide. We are trying to get them, particularly for the Hudson Institute and MIT.

The Massachusetts Institute of Technology, as a Federal contract research center, looks like \$65 million.

Mr. JACKSON. Is it not a fact that MIT receives more Federal money in the national defense and national security area than any other educational center in the United States?

Mr. McINTYRE. I believe that is correct.

Mr. GORE. Mr. President, will the Senator yield?

Mr. McINTYRE. I yield.

Mr. GORE. I do not know whether the funds under contract with the Massachusetts Institute of Technology or the Lincoln Laboratory or the Hudson Institute are justified. What I rise to suggest is that it is not realistic to put into juxtaposition a great institute of learning like the Massachusetts Institute of Technology with a so-called think-tank like the Hudson Institute. It seems to me that whether either expenditure is justified or unjustified is one matter, but to compare these two institutes or organizations is quite unrealistic.

Mr. JACKSON. Mr. President, will the Senator yield?

Mr. McINTYRE. I yield.

Mr. JACKSON. Mr. President, to complete the subtle questioning here, if it is subtle, I think it is well known that there are certain people at MIT who have strong anti-ABM feelings. I had the impression by reason of the question asked by the distinguished, able, and very fine Senator from Maryland, that the two were being linked.

I did not raise the question but as long as we go down that road it would be interesting to follow through with other institutions.

Mr. TYDINGS. I think the pertinent point would be that percentage of the money of the Hudson Institute which comes directly from the Pentagon. If the Institute or a group of scientists are dependent primarily from one source for their whole sustenance and livelihood, they are more likely than a great institutions that has been in operation for years to produce the type answers that the source of their funding would suggest.

I would think that the link would be the percentage of their budget which comes from the source which may influence them.

Mr. JACKSON. Freedom of speech has not been interfered with in this regard. MIT, which receives more money than any other educational institution in the country, has a lot of spokesmen speaking against Department of Defense programs. In fact, they have a most active anti-ABM group, some of whom have testified before Senate and House committees recently.

Mr. TYDINGS. Does the Senator know whether the percentage of the budget of the Hudson Institute which comes from the Pentagon is more than 50 percent?

Mr. JACKSON. I do not know, but since this matter has been brought up I thought it pertinent to point out that at MIT, which receives the most money, they have more people opposing the ABM. I wonder what influence DOD money had on those people.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. McINTYRE. I yield to the Senator from Arizona.

Mr. GOLDWATER. We are not talking about MIT. We are talking about Lincoln Laboratory. I think Lincoln Laboratory last year received something like \$31 million. Dr. Wiesner is one of the top deans of MIT and opposes the ABM. Mr. Kahn of Hudson Institute happens to favor the ABM. I hope we would not get into innuendos where we suggest that Hudson might be dealing off the bottom of the deck, and we have to doubt the veracity of learned people at Lincoln. I was sorry to see this whole matter injected into the discussion the other evening. I thought it was completely out of place in the record.

Mr. McINTYRE. I thank the Senator.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point a table entitled "Funding Summary for Federal Contract Research Centers" for the fiscal year 1966 through planned fiscal year 1970.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE II.—FUNDING SUMMARY FOR FEDERAL CONTRACT RESEARCH CENTERS

[Dollars in thousands, all appropriations]

FCRC's ¹	Actual fiscal year 1966	Actual fiscal year 1967	Actual fiscal year 1968	Estimated fiscal year 1969	Planned fiscal year 1970

³ Grand total less subcontracts over \$1,000,000.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. McINTYRE. I yield.

Mr. FULBRIGHT. Mr. President, to answer the question propounded by the Senator from Maryland, just a few weeks ago I had Dr. Brennan appear before the Committee on Foreign Relations. I shall now read from page 371 of the committee hearings, where I asked Dr. Brennan these questions:

Senator FULBRIGHT. What percentage of the support of the Hudson Institute is attributable to Government sources?

Dr. BRENNAN. I cannot give you an accurate number over any particular period of time, but I think if I said something like 80 percent over the past 2 years it would probably be roughly correct.

Senator FULBRIGHT. What was it when you were president? Was it about that when you were president?

Dr. BRENNAN. No, sir, it was higher.

Senator FULBRIGHT. How high was it?

Dr. BRENNAN. Probably around 90 percent.

That was the testimony of Dr. Brennan, who is still the head of that organization, and partly had to do with this book. He is on the staff and was president in March.

I think the point of the Senator from Maryland is quite correct. This is a relatively small institute. As he said, 80 to 90 percent of his funds come from this area.

The Senator from Arizona said the lab at MIT is a semiautonomous. I had a

delegation of students before me about a month ago. I think there were a few faculty members from MIT. They raised this question. They were primarily students who were concerned with the reputation of MIT. They sought counsel on whether or not they should urge their administration at MIT to completely disassociate itself from the Lincoln Lab because of the dissatisfaction that has arisen in many student bodies because of the association with the Department of Defense. It is a very active problem. But MIT, as such, is a great institution aside from the laboratories.

Mr. McINTYRE. Mr. President, I yield the floor.

Mr. JACKSON. Mr. President, first, I want to associate myself with the remarks made today and yesterday by the able chairman of the committee, the distinguished Senator from Mississippi (Mr. STENNIS). His approach to the budget this year has been excellent. He proceeded to appoint subcommittees to go into the key areas of concern at the outset of the year.

The able and distinguished Senator from New Hampshire (Mr. McINTYRE) has done a very fine job as chairman of the Subcommittee on Research and Development, and I want to compliment him.

The same applies to the chairmanship of the Subcommittee on Tactical Air, as handled by the able and distinguished Senator from Nevada (Mr. CANNON).

July 9, 1969

S 7767

The Senator from Mississippi, as chairman of the full committee, undertook chairmanship of the Bomber Subcommittee, an all-important one. In my judgment, the bill now before the Senate reflects the kind of thorough review, investigation, and study made of this most important area of our national security.

All members of the committee were most diligent in pursuing the problems with which they were faced.

I want to single out once again the distinguished lady from Maine (Mrs. SMITH) who, as always, in a very conscientious way, made a great contribution to the committee.

The Senator from Tennessee (Mr. GORE) mentioned earlier today her association in the House of Representatives. I had the privilege of serving with her in the House, where she was an able and distinguished member of the House Naval Affairs Committee, now a part of the House Armed Services Committee. Thus, Mr. President, we have been fortunate in having that kind of support in the committee in bringing this bill to the floor of the Senate.

Mr. President, in considering the fiscal year 1970 Department of Defense authorization bill, which is now before the Senate, I can think of nothing more essential for the Congress than clear thinking about the Soviet Union.

How can we reach sound judgments on the national defense budget if we do not understand the nature of the Soviet adversary?

Can you think of a top American business leader who would make decisions determining the survival of his company before he had carefully studied his chief competitors and what they were up to? Yet many in Congress seem willing to make decisions that could determine the safety and survival of this Nation and the future of individual liberty without facing up to what the Soviet Union is up to.

Recently, we have heard a great deal about "national commitments," disarmament, and threats to "cut and cut and cut and cut" the defense budget. But we have heard precious little discerning comment from those same sources about the nature of Soviet leadership and what is really going on in the Soviet Union.

Who are the Kremlin rulers today? What sort of people determine the foreign and defense policy of the Soviet Union?

Briefly, these are the members of the 11-man Politburo, in alphabetical order:

Leonid Brezhnev, age 62, General Secretary of CPSU Central Committee. Russian by birth, he began his career during the Stalin purge of 1936-38 in the Ukraine where there were three survivors of the 102-man local central committee. This is one of the men who denounced others on innumerable occasions. Orthodox in outlook, built his career on the political platform of return to doctrinal rigidity, partial rehabilitation of Stalinism, and crackdown on liberal writers. His political priorities are protection of the supremacy of the party, tightening the ties of the Socialist camp under Soviet dominance,

protection of defense goals through allocations to heavy industry, with agricultural allocations ranking second.

Andrey Kirilenko, age 62, Secretary of CPSU Central Committee. Russian by birth. Rose from a career of bloody and petty intrigue in the provincial Ukrainian party committees. Thus far one of Brezhnev's most loyal political supporters. Alternates with Suslov in deputizing for Brezhnev when the latter is out of town. Has been increasingly prominent in the past year and may now have edged Suslov out as the No. 2 man in the party. Kirilenko displayed a strong pro-consumer bias during the Khrushchev years and in the period immediately after his ouster. These views have been muted since 1966 when ideological orthodoxy and preoccupation with the needs of defense began increasingly to dominate the thinking of the leadership.

Aleksey Kosygin, age 65, Chairman of U.S.S.R. Council of Ministers. Russian, born in Leningrad. Took the first moves in his career in the great purge of 1936-38. He played an active role in party life at a time when the main "activity" was the denunciation and purge of the previous secretaries and bureaus, and when the Leningrad Communists were being slaughtered on a very large scale. During that time he advanced rapidly—moving up in four steps, from shop manager in a Leningrad factory to a post in the Soviet Government in about 2 years. Pragmatic with a strong interest in a balanced economy, especially interested in increased attention to consumer goods and "rationalization" of economic planning methods. His age, desire to preserve his privileged position, and orthodox Marxist training, however, limit his receptivity to new ideas and methods.

Kirill Mazurov, age 55, First Deputy Chairman of U.S.S.R. Council of Ministers. Byelorussian by birth. Started his career in the party at the time of the 1936-38 purge. He has served some years in KGB operations. Pragmatic in outlook, responsible for light industry, but also interested in agriculture. Is behind a grandiose plan for the "urbanization" of the countryside being strongly pushed by the Byelorussian party organization, but currently hard up for funds. In foreign policy, Mazurov seems to favor an aggressive stance against the West. Alternates with Polyansky in deputizing for Kosygin.

Arvid Pelshe, age 70, Chairman of Party Control Commission. Latvian by birth and career, began his rise in the Latvian party during Suslov's pro-consulship of that area, and is reported to owe his present high position to Suslov's patronage. A colorless party functionary, orthodox in outlook, he has spent important years in KGB operations.

Nikolay Podgorny, age 66, Chairman of Presidium U.S.S.R. Supreme Soviet. Ukrainian by birth and career. Under Khrushchev, identified with relatively liberal views, but since early 1966 has moved steadily toward orthodoxy in support of Brezhnev.

Dmitry Polyansky, age 51, First Deputy Chairman of U.S.S.R. Council of Ministers. Ukrainian by birth, career ties to the Crimea, and thus far a loyal member

of the Ukrainian group in the Politburo. Has served in both party and state positions. As First Deputy Premier is responsible for agricultural production and is a zealous champion of investment in the agricultural production base. As a result has been increasingly in direct competition with the military for scarce resources. He is interested in doing business with the West and acquiring advanced Western technology, but otherwise seems to be ideologically orthodox in his foreign policy views.

Aleksandr Shelepin, age 50, Chairman of All-Union Central Council of Trade Unions. Russian, made his career in the Komsomol, then as head of the KGB. One of the most powerful figures in the leadership at the time of Khrushchev's ouster. Since 1966 his political position has steadily weakened. Interested in administrative efficiency and modern methods of control. Was behind move to rehabilitate Stalin in early 1966 and seemed to favor a tough, chauvanistic foreign policy. There are now indications that he is in search of a new platform to "run" on. Is said to have opposed Politburo handling of Czech crisis, but was an advocate of the aggressive line in the 1967 Middle East war.

Petr Shelest, age 61, Ukrainian by birth and career, still based in Kiev. First Secretary of Ukrainian Central Committee. Conservative on most domestic issues though something of a Ukrainian nationalist and champion of the "rights" of the republics, which however does not prevent him from applying harsh measures against his independently minded Ukrainian countrymen. A hard-liner on military matters. His remarks on foreign policy issues have been consistently tough, and he is reported to have pushed hard for a military intervention in the Czech crisis, fearful of the spread of the freedom-virus to the bordering areas of the Ukraine.

Mikhail Suslov, age 66, Secretary of CPSU Central Committee with informal ranking of second-in-command. As the 1936-38 purge struck, Suslov began his spectacular rise, becoming one of the Rostov provincial secretaries. In 1939 he was appointed First Secretary of the Stavropol Regional Committee, where in 1944 he became involved in the deportation of the Karachai people. Proving successful in this, he was made Chairman of the Bureau of the Central Committee for newly occupied Lithuania, in 1944 and reimposed Soviet rule against a bitter resistance. High priest in doctrinal matters with special interest in the cohesion of international communism. Orthodox in outlook and long opposed to "revisionism" in any field.

Gennady Voronov, age 58, Russian by birth. Grew up in the Soviet Far East and for many years party boss of one of the large districts bordering on Communist China. Chairman of RSFSR Council of Ministers. Ambiguous figure with no apparent political ties with other members of the Politburo. Has been outspoken defender of the technocracy and favors establishing Western-style management training schools.

The often neglected truth about this group of men who are now on top in Rus-

sia is that they are the first generation of rulers who are actually the products of the Stalin system. Those who rose with Brezhnev, Kosygin, Suslov, Kirilenko, and the others in the purge of 1936-38 were qualified for promotion by the denunciations of their colleagues. To have moved ahead in those days is a certain sign of complicity in Stalin's terror.

Now, in power, these men have shown themselves unable and apparently unwilling to make the reforms, small or large, required to meet the needs of an increasingly more complex, sophisticated Russian society. As one Russian observer put it:

There are not liberals at the top. Not in the Politburo. No Soviet Dubceks in sight, and no viable faction within the Party that would support one. That's the worst of it all.

Indeed, the repressive measures employed today to intimidate, frighten, and stifle expression of dissent approach those of the 1930's and 1940's in their intent and in the dogged intensity with which the Politburo executes them. There are more intellectuals now incarcerated in jails, committed to mental hospitals, or exiled to Siberia than at any time since Stalin's terror—Aleksandr Ginzburg, Yuri Galanskov, Pavel Litvinov, Larissa Daniel, and all the others. In addition, Soviet official organs employ countless other methods of repression. Liberals are slandered in the official press. Travel abroad is denied dissenters. Writers are denied the right to publish their works in their own country.

The lack of qualifications of most of the Politburo in dealing with foreign affairs is obvious. Careerists in the provincial or Central Party apparatus, they are generally narrow-minded, nationalistically oriented, basically hard-boiled Communists, limited men, concerned for their own positions and privileges, and knowing little of foreign reality.

After World War II, Maxim Litvinov used to take foreign diplomats and newspapermen aside and warn them that Stalin and his colleagues were thoroughly ignorant of the outside world, and that this constituted a very great danger. It seems that most of the present Politburo are no better off in knowledge of the outside world, some of them probably worse off. Clearly, we cannot discount the danger that these men, who are showing themselves unequal to the need for reforms at home, may make serious errors of judgment in their conduct of affairs abroad.

This is the group that chose to use armed force to strangle the evolutionary democratization of its own friend and ally, Czechoslovakia, which under Dubcek's leadership was indicating to the Soviet Union itself a way out of the vicious circle of repression, fear, repression. This is the group that then concocted the ominous Brezhnev doctrine of limited sovereignty which asserts the right of the Soviet Union to intervene unilaterally in all Communist-run countries.

It is difficult to see how one could have thought up a more clumsy and self-defeating rationalization of the Czech invasion. All the talk about the sub-

ordination of international law to the "laws of the class struggle" and the double-talk about defending sovereignty by denying sovereignty gives no comfort to any other Communist ally, and shows a crude and deliberate disregard for the political interests of other Communist parties, particularly many in Western Europe, who, to retain the credibility of their effort to gain power by parliamentary means and of their willingness to support "bourgeois liberties," feel they must repudiate the theory of imperialist communism and Soviet Party predominance.

If anyone had any doubt about the capacity of the Politburo to blunder, its performance in the case of Czechoslovakia should dispel the doubt. The similarities between Moscow's forcible methods and Nazi methods are now fully visible to the peoples of all the Warsaw Pact countries, beginning with Rumania, and to communist comrades around the world whose interests the Soviet leadership brazenly ignored.

Meanwhile, there is little doubt that a struggle for power and influence goes on within the Politburo, and that the outcome is uncertain.

In the Soviet Union a few leaders, conspiring when they choose, can make and unmake a man's power without his knowledge or that of the public. That is what happened to Khrushchev in 1964.

Will change, when it comes, bring merely a reshuffle of the same old party apparatus—Suslov or Kirilenko in place of Brezhnev; Voronov or Podgorny in place of Kosygin? Or will it bring a change of generations of party apparatus—Shelepin, Mazurov, Polyansky?

Will the change continue to restrict Soviet politics to the self-perpetuating Kremlin circles? Even now, the police appear to be gaining ground. As Michel Tatu, one of the most astute analysts of the Soviet scene has said, it is no accident that Yuri Andropov, the KGB chief, has been promoted to be an alternate member of the Politburo, for the first time since the notorious Lavrenti Beria was in the top group. Andropov has presided over the crackdown by the KGB on liberal Soviet intellectuals and signs of him in action during the Czechoslovak crisis have not indicated any doubts on his part concerning the intervention.

Also now, the influence of the Stalinist-type political commissars appears to be on the rise. General Shtemenko, Stalin's former chief of staff, downgraded two ranks on his master's death, has not only been reappointed to high position in the Soviet military hierarchy but is now Chief of Staff of the Joint Armed Forces of the Warsaw Pact states, and is campaigning to refurbish Stalin's image as a military leader. General Yepishev, a particularly sinister figure, who was Stalin's assistant minister of state security in the horrible doctors' plot period, was made chief political commissar of the Soviet Armed Forces in 1962, and promoted to full membership of the Central Committee following the fall of Khrushchev. He is noted for his continual attacks on the liberal writers and on the so-called foreign imperialists. And one gets no comfort from Yepishev's chilling

article, widely circulated this year in *Kommunist*, the official Communist Party journal. In that article he says that "classical Leninist teaching" on the inevitability of "a series of frightful clashes" between capitalism and communism still applies in the nuclear age, and that World War III would "guarantee the construction of socialism and communism."

The resurgence of Soviet thinking in terms of the class struggle, reflected in military doctrine as well as in the Soviet approach to international law, must cause apprehension about the road ahead.

Now, the fact of the matter is that an increasing number of the informed Western analysts of Soviet developments assess the Soviet Union as a dangerous, unpredictable opponent—on the verge of a leadership crisis, the outcome of which cannot be forecast.

In this perspective, the fast-growing military capabilities of the Soviet Union take on added significance.

No one is sure of the future and one has to be prepared for surprises.

I am reminded of the lively discussion of the Czech crisis on August 7, 1968, at a high-powered workshop. The discussion produced a show of hands on the probability of Soviet military occupation of Czechoslovakia. Twenty present believed such an eventuality unlikely; two thought it probable.

One participant later suggested as a possible subtitle for the workshop, "Or Why We Were So Wrong."

We do not know who will have the finger on the Soviet trigger in the months and years ahead. The enormous Russian arsenal will be at the disposal of whatever "strong man" or ascendent faction of tough, ambitious figures come to the fore in the Soviet power struggle.

Hence, there is everything to be said for the United States to maintain a solid and prudent stance.

Mr. President, the essence of a solid and prudent stance is a protected U.S. second-strike capacity which gives us the capability to retaliate against a strategic nuclear attack, and therefore to discourage such an attack. This is the first essential of national security and individual liberty, and of the survival of us and our allies in freedom.

In recent years recognition has grown decisively among officials and scientists that we want to maintain the second-strike capacity—not of just one, but of all major vehicle types of our strategic force: Minuteman, bombers, and Polaris-Poseidon.

As our Armed Services Committee report states:

Each system has different limitations, is subject to varied uncertainties and requires distinct modes of attack. Each type must be protected, so as to insure no easy defeat of our system by an enemy. It must be of serious concern therefore if any part of our deterrent mixture is adversely affected by changing adverse forces and technologies.

The Senate Armed Services Committee has voted to cut about \$2 billion from the proposed 1970 Defense Department authorization bill. I joined in those votes. We can do without some of the less

urgent military programs. But in the face of the likely dangers ahead, tampering with the strategic offense and defense core of the Defense budget is a very risky business.

Of real concern is the continuing Soviet development of their gigantic SS-9 missile, on which they have already begun to test multiple reentry vehicles, and not without success. The evidence is firm that the Soviets have more than 230 SS-9's operational or under construction. If the Soviets continue to deploy additional missiles at the same rate as in the past few years, by the mid-1970's the survivability of most of our Minuteman forces, as presently deployed, would be in question.

Also of special concern is the threat to our bombers from the growing number of Soviet Polaris-type missile submarines, and the danger to our Polaris system from Soviet efforts in nuclear attack submarine construction and in anti-submarine warfare. As the report of the Armed Services Committee puts it:

We cannot assume that our Polaris system will be the first weapon in history to remain invulnerable.

Also of concern is the hard work which the Soviets have put into their ABM for many years. The Soviets are completing the deployment of some 60 Galosh ABM missiles on launchers around Moscow. And, very important, we now have hard evidence that the Soviets are testing an improved long-range ABM, which apparently has a "loiter" capability, so that, after the initial firing, the missiles can coast or "loiter" for a period of time, until a specific target is selected, at which point it can then be restarted and maneuvered to the target. The Tallinn defense system, very extensively deployed throughout the Soviet Union, is believed by many in the intelligence community to be subject to upgrading so as to give it an ABM capability.

Faced with these problems, President Nixon has recommended a phased program to deploy an ABM defense. The functions of the Safeguard ABM program are to help protect, first, the Minuteman silos; second, our manned bomber force; and third, the command and other facilities necessary in a crisis to assure national political control of both our land and sea-based strategic forces. It is intended also to, fourth, provide a partial but useful protection of our people against an accidental, irrational or reckless small missile attack.

The opponents of the Safeguard program initially seemed to deny the fact that we confront increased threats to our deterrent forces in the mid and late 1970's. They now appear to have retreated from that position and are trying to make a case for alternatives to deploying an ABM system which in their view would be better.

Several Senators and scientists have suggested that, rather than defend our offensive forces, we should expand our offensive forces—our Minuteman or our Poseidon, or both. Yet buying more Minutemen without protection is certainly more destabilizing than an active defense of Minuteman silos, since it increases the capacity to strike first. And

buying more MIRVed Poseidon forces would surely be viewed from the Russian side as more threatening than a limited ABM defense of our forces.

Moreover, any significant expansion of our offensive nuclear weapons is more costly than the Safeguard program.

The President and the proponents of the Safeguard system are in my judgment the real moderates on this issue.

Some opponents of ABM advocate delay in deployment—of what they call "an inadequately tested, unproven missile defense system." In fact, the Safeguard system is the result of a very comprehensive research and development effort. The components are more fully advanced and better tested than were the components of the Polaris missile system, when a comparable go-ahead was given.

Mr. President, how can we now prove this system, except through a prototype-like deployment? Phase I of Safeguard is, in effect, a prototype installation that will enable the Defense Department to complete engineering, installation, and shakedown and tests and to have the two stations fully operative by 1974. If we delay the decision for about a year, as some propose, the soonest these two sites could be ready for complete check-out would be in 1976. This would leave us with no option to provide active defense for the essential portion of our Minuteman force on the schedule that may be necessary if we do not reach agreement with the Soviets on limiting or reducing strategic forces. There is obviously no substitute for time. And, what is more, the delay would cost us an extra expenditure of several billion dollars.

We can expect, as in the case of every other offense and defense system, that we can improve its effectiveness over the years. But we urgently need the experience of a deployed working prototype. The idea that we should not be getting this experience in this very important defense area of nuclear weaponry, while the potential opponent was not dormant and has had the opportunity to obtain some of this experience for many years, is to me the height of imprudence.

The statement to our committee by Freeman J. Dyson, of the Institute of Advanced Study, at Princeton, includes this perceptive comment:

In the long run the battle between offensive and defensive technology is a battle of information. If the defense knows where the offensive warheads are, it is not too difficult to destroy them. For the last 20 years the offensive has had an overwhelming advantage, but this advantage is being reduced as defensive information-handling capability improves. In the long run, I believe the defense will prevail because the defense will have more accurate and timely information than the offense. Defensive batteries within a hundred miles of the battle should ultimately be able to out-maneuver incoming offensive vehicles controlled from a command center 5000 miles away on land or in a submarine off-shore. The offensive command will be fighting the battle blind, without any possibility of quick reaction to defensive moves. I consider that it is only a question of time, perhaps ten or twenty years, before these inherent advantages of the defense become actual. The time that it will take to overturn the doctrine of the supremacy of

the offensive will of course depend on political decisions as well as on technological developments.

Some of the campaigners against ABM deployment argue that before deciding to proceed with deployment we should negotiate with the Russians.

Why either one or the other?

Why not both?

If we do not have our ABM system moving along, what inducement is there for the Soviets to negotiate with us on a freeze or a reduction in their ABM deployment? Can anyone seriously maintain that Moscow will agree to limit its ABM's if we now, and unilaterally, abandon deployment of our ABM's? Nothing in the record of negotiations on the control of arms suggests that this would be the way to have a successful negotiation with the Soviets.

I do not think that we can realistically expect the Politburo to sign an arms agreement that rules out a limited Soviet ABM defense and leaves their country vulnerable to nuclear coercion and attack from Communist China and other secondary nuclear powers. And I also very strongly doubt that the American Congress and people would accept an agreement under which the Soviets are permitted to have their ABM system while we have no comparable ABM protection well underway here.

Thus I believe the chance is promising that we could come to an agreement with the Soviet Union for a limited ABM defense on both sides—an agreed ceiling on the number of ABM's, for example—provided that we do not foolishly throw that chance away by now scuttling our own program.

In my judgment, anyone who wants a successful negotiation with the Soviets to halt the further evolution of dangerous strategic armaments should be a strong proponent of the Safeguard ABM.

President Nixon has asked us to give him the funds to proceed with the Safeguard ABM as a matter "essential for national security."

After thorough consideration, a majority of the Senate Armed Services Committee has supported the President's request.

President Nixon believes that he would be in a much stronger position in the forthcoming negotiations with the Soviets on limitation of offensive and defensive nuclear systems if he had the backing of Congress on his Safeguard program. I agree with that analysis. Indeed, in my opinion, nothing would be more detrimental to our diplomatic effort—and more shortsighted—than to deny the President the strong hand he needs just as his negotiators are about to sit down at the conference table.

I have no doubt that the Senate will evidence its commonsense and vote to go forward with the ABM program as part of the 1970 Department of Defense authorization bill.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. JACKSON. I am glad to yield to the distinguished Senator from Texas.

Mr. TOWER. I express my appreciation to the distinguished Senator from Washington for one of the best speeches

on defense research that I have heard in a long time. It is information that everyone should heed. I think, certainly, that it makes the strongest possible case for the acceptance of research and deployment of the ABM.

Now that we are witnessing the resurgence of Stalinism, does not the Senator believe that the time remaining for a detente is less, probably, than in previous years?

Mr. JACKSON. I think the Senator is correct. If anyone has doubts about the nature of the present regime, I suggest that he read some of the quotations from the writings of that long-time Communist, Marshal Tito. Marshal Tito was a member of the Communist Party before many of the present members of the Politburo were even eligible to join the Young Communist League. Marshal Tito is so much concerned that he is now arming his peasants for guerrilla warfare.

If anyone has further doubts, he should listen to the words of the Communist leaders in Romania.

If we want to leave that area and move to Western countries, we can read what Luigi Longo, the head of the Communist Party of Italy, has said about the present regime. Can any Senator imagine how embarrassed the head of a Communist Party must be in a Western country, where free and open elections are held, to have to admit on the platform that if his party comes to power, according to the Brezhnev doctrine, that country, will then come under the discipline of the Soviet Union, and be subject to unilateral occupation by the Soviets.

No wonder the leaders of so many of the Communist Parties in the Western World have denounced the leadership in the Politburo as dangerous and, indeed, a threat to the peace of the world. Yet I am amazed to hear it said in the United States and elsewhere that the Soviet Union is no problem, and this at a time when the top ranking leaders of the Communist world outside the Soviet Union are warning, over and over again, about Soviet imperialism. In fact, the major foreign policy problem which confronts us is Russian imperialism.

Mr. President, the Brezhnev doctrine cannot be explained in the doctrinal terms of Marxist-Leninist philosophy. This doctrine is a most fantastic proposition. It can be explained, however, in terms of Russian history, in terms of Russian imperialism.

I submit that with all the discussion that has been going on about defensive systems and offensive systems, we have spent altogether too much time talking about the military hardware and we have not been debating the central issue. The central issue which you have to decide first before you can decide what kind of military budget you should have or what kind of foreign policy you should have, is: What kind of adversary do you face, and what is he up to?

I submit that even if we just listen to the representatives of the Communist world outside of the Soviet Union, we get a pretty good measure of the threat as they witness it.

Mr. TOWER. Mr. President, will the Senator yield for a question?

Mr. JACKSON. I yield.

Mr. TOWER. The Senator is obviously knowledgeable on this matter. Does he discern any genuine desire on the part of the present hierarchy of the Soviet Union to reduce the current pace of arms technology, development, and deployment?

Mr. JACKSON. Mr. President, there is a direct relationship to the coming of power of the present group in the Politburo and the increase in Soviet strategic arms. They are directly related. There is a direct relationship, of course, to the use of force to subjugate Czechoslovakia and the enunciation of the now-infamous Brezhnev doctrine. I do not think there is any doubt that the men who are running the Politburo today are unsure of themselves. They are not very competent. I think they present to the western world—and to the Communist world outside of the Soviet Union—a real, and unpredictable threat.

Mr. TOWER. Further, does it appear that historically Soviet arms development and Soviet stockpiling of arms, the expansion of Soviet military capacity, is directly related to what we have done in the way of arms development? In other words, have they simply reacted to the things we have done?

Mr. JACKSON. This is not, of course, the case. The Soviets, in my judgment, have decided on what they feel they might need if they ever got into a nuclear war, in order to be in a better position than the opponent if such a war does come. Obviously, there is some interaction between their programs and ours, but it is not the simple action-reaction pattern that some people call it.

In my statement I referred to General Yepishev, who made some rather startling comments about the fact that war was still inevitable, even in a nuclear age. The Senator will recall that Mr. Khrushchev walked away from that position. He said that obviously Mr. Lenin, when he laid down the idea of the inevitability of war, did not have in mind the possibility of catastrophic thermonuclear weapons, and therefore thermonuclear war was unthinkable.

But now we have a high functionary, and influential official in the Soviet Union, writing in an official organ, the Kommunist, saying, in effect, that we might have nuclear war and that indeed the possibility of it was inevitable and that if we did it would "guarantee the construction of socialism and communism."

I think this presents some measure of the preparations that they are making.

Mr. TOWER. Then the Senator would reject the somewhat fragile contention and the historically unprovable contention that if we develop and deploy an ABM, we are simply fueling the arms race for the Soviet Union, that they will react by something greater.

Mr. JACKSON. I do not have the direct quotation before me, but in 1967 this very question was asked of Mr. Kosygin at a press conference in London. They asked Mr. Kosygin, in effect, "Are you not fueling the arms race by deploying an ABM system?" He, in effect, said, "There are two systems—offensive and defensive—and a defensive system is merely in de-

fense of the country, and it does not add to or fuel the arms race." This is Mr. Kosygin's position.

I will point out that the Soviet Union was the first to develop an ICBM, the first to deploy an ABM—which we have not yet done, the first to set off a 60 megaton bomb—something we have never done. They were the first to deploy a fractional orbital bombardment system.

I should observe at this point that from 1945 until the fall of 1949, we in effect unilaterally disarmed so far as the hydrogen bomb was concerned. We had the understanding, the talent, and the know-how from the days at Los Alamos to go ahead with what was then called the super project. We made no move in this regard until Klaus Fuchs was apprehended and we had the conclusive evidence that the Russians knew a lot about it. Klaus Fuchs, of course, turned out to be the greatest traitor in this century, especially in the field of technology and science. He had given this information to the Soviets. But for 4 years we did nothing about developing a hydrogen bomb, because we did not want to fuel the arms race.

We need not go into detail about what the Soviets did in the postwar period when we had an absolute monopoly of nuclear weapons. There are too many people in Central Europe in chains today who testify to what they did. There were the continuing harassments of Berlin, and so on. But there were limits as to how far Moscow would go when it was in a totally inferior nuclear position. But if they get into a position where they feel they could move, from a strategic point of view, with relative impunity, I wonder what they would do in this troubled world in trying to extend their influence. I think they would be tempted to take great risks and this could lead to the most dangerous kind of confrontations with us, and with other powers.

Mr. TOWER. Then, would it not be valid to say that even if we should unilaterally initiate a cessation of development, production, and deployment of strategic weapons in this country, we could not expect the Soviets to do the same?

Mr. JACKSON. There is evidence to completely corroborate the Senator's statement.

The Senator will recall that President Johnson invited Mr. Khrushchev not to go ahead with the production of any more fissionable material with the new plants that were underway. There was a unilateral move on our part. We ourselves announced a shutdown. Mr. Khrushchev indicated he was going to do likewise, but instead they added to their capacity. The Russians went right ahead and added to their production of fissionable material.

Mr. TOWER. I thank the Senator for his remarks, and I should like to associate myself with those remarks.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. JACKSON. I yield.

Mr. DOMINICK. I should like to congratulate the Senator for what I think is one of the best speeches I have heard in a long time.

Dammick
July 9, 1966

I think one of the problems we have been facing—and I have said this over and over, to the extent of walking out in anger from one of the Armed Services Committee meetings—is the fact that when we are given data, it is always marked "secret" with respect to what the enemy is doing, but by and large it is not with respect to what we are doing. So the whole security picture has been turned around, and the people of this country have not been permitted to know what the Soviet Union in fact has been doing.

All the information I have—and I would ask the Senator whether this is correct—is that when we leveled off on our Minuteman production and deployment, it is our hope at that time that this would bring down, as I understand it, or would create an atmosphere in which the Soviets themselves would stop their production of offensive weaponry. Am I correct?

Mr. JACKSON. The Senator is correct.

Mr. DOMINICK. What happened?

Mr. JACKSON. The Soviets went right ahead and proceeded to harden their strategic missile sites. They did this at a time when they knew we did not have a first-strike capability.

In fact, today the Soviets are the only one building toward a first-strike capability. We do not have that capability and we do not want it. We made that decision in 1961 when we decided to go ahead with Minuteman. We told the whole world we were going for a second-strike capability and none other than that.

Mr. DOMINICK. In the meantime, did they not produce and deploy the SS-9 and the SS-11 and a good number of their other missiles which are in evidence, and have they not accelerated production, no matter whom they may be targeted on?

Mr. JACKSON. The nature of our position in this matter is well known. The Senator will recall that we entered into a nuclear test ban moratorium with the Soviets. The way in which they announced the termination of the agreement was to set off a 60-megaton bomb. We were acting in good faith and we were not prepared to resume testing. The result was that they were able to test strategic nuclear weapons that were invaluable to them, including ABM weapons, in which 2 years work was involved.

As a result of their action in this regard they were able to obtain data and information in the strategic weapons field that we have not been able to get because we went along with the nuclear test ban treaty. I supported that agreement. But I point out we had this agreement and without warning they abrogated it. They knew very well their intentions in that regard because from what they were able to do it was apparent they had made the decision months and months previous to the time they broke the moratorium in September 1961.

Mr. DOMINICK. The Senator emphasized the leadership of the Soviet Union in the context of what it might be like 5 years, 6 years, or 7 years from now. I would hope that before we are through

we would also get the same type of information with respect to the leadership of the Red Chinese.

Mr. JACKSON. I think the Russians would like to get that information also.

Mr. DOMINICK. I think they would, and I would be happy to have the Senator do the same type of research he has done on this matter and get that information out if he could.

It seems to me that I recall President Johnson urged that we deploy the Sentinel system against a possible Chinese attack in the middle 1970's. I remember reading myself the words of Mr. Mao, who is in charge of that country, saying they would not mind a nuclear world war because they could survive it out of sheer numbers, which would leave no speculation with respect to what might happen if they had more nuclear power than they now possess.

I hope we can get some background analysis of the upcoming leadership in that area and put that information in the Record with respect to the forces we are facing.

I congratulate the Senator.

Mr. JACKSON. I thank the Senator. I wish to comment on the remarks of the able Senator.

I think that the Soviets during these tense days with the Chinese Communists are counting heavily, on having in the period ahead, among other things, an ABM system that can deal with nuclear blackmail efforts or an irrational act on the part of the Chinese. We know that very substantial Soviet conventional and strategic forces have been moved into the Sino-Soviet border area. We do not know what might happen. Anything could happen out there. It is a most explosive situation.

I feel quite strongly that, if there is a chance to reach an agreement involving strategic weapons, it is primarily in this area of the antiballistic missile system, because I believe the Russians are going to insist on a minimum number of ABM's, especially in order to deal with the Chinese problem as it is now, and as they may find it in the period ahead. But to get the Soviets to limit the number of their ABM's, I think we need to have our own ABM system really underway—to bargain with. That is the point I developed in my earlier remarks.

Mr. DOMINICK. Mr. President, will the Senator yield further?

Mr. JACKSON. I yield.

Mr. DOMINICK. One of the things that has been of increasing concern to me is the semantic somersaults made in some areas of the country where people who say we have an overkill say we should not deploy the ABM because that would be provocative; and they say build more offensive weapons. That does not make sense to me. It seems to me that if we have an overkill, we should maintain the ability of that overkill to be used as needed.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. JACKSON. I yield to the Senator from Kentucky.

Mr. COOPER. Mr. President, I heard the statement of the able Senator from Colorado, regarding the support by oppo-

nents of ABM of offensive weapons as an alternative. The distinguished Senator from Washington has made the same statement. In the testimony of Secretary Laird before the House committee, he made a similar statement.

It is said that those who oppose deployment of the anti-ballistic-missile system this year, a defensive system, favor additions of missiles to our offensive systems.

I must say that is incorrect. The framework in which such a statement has been made is—that if a year from now the Soviets are proceeding with the deployment of the SS-9, perhaps armed with MRV or MIRV, at that time, if necessary to protect our deterrent, we could protect our assured deterrent by building additional Minuteman missiles and additional Polaris of Poseidon-type submarines. That is the context in which such statements have been made.

Mr. JACKSON. The Senator is correct regarding his own position certainly.

Mr. COOPER. Yes, but the implication, and I say this with all courtesy as the Senator knows my regard for him, of the statement made here today, and made by Secretary Laird in his testimony before the House Appropriations Committee, is that opponents of the anti-ballistic-missile system are arguing for an alternative; that is, additional ICBM's and the Polaris should be deployed. This is not correct.

Mr. JACKSON. I say in response to the statement of my good friend that it is far less provocative to try to defend our deterrent; then later if that is not adequate, the decision can be made about going ahead with an addition to the offensive system.

We did have some testimony before our committee, the Committee on Armed Services, to the effect that if the situation reaches the point where the Minuteman is really threatened, so that it no longer has a credible position in the deterrent system, then it would be preferable to go the offensive route, rather than try an ABM defense. I think I stated it correctly.

Mr. COOPER. My position is that arms control is the best means of security. But if talks fail—if the threat to this country becomes as serious as the Secretary of Defense says—we can increase offensive weapons to meet the threat. He conjures up a bleak picture for the United States—but one based on several assumptions: First, that the Soviet Union will proceed with the deployment of the SS-9 and construction of Polaris-type submarines. The second assumption, if the Soviet Union takes that course, is that the United States would then protect itself both by the deployment of a better and effective ABM system and by the construction of more intercontinental ballistic missiles, and by Poseidon. These measures would be available to the United States to protect and defend its nuclear deterrent. The assumptions to my mind, are not correct. But they are argued to make the case upon which the ABM is based. The fact is—the Soviets may not proceed as assumed—but if they do—we can protect our security without timelag.

Mr. JACKSON. Let me say in response to my good friend that the Secretary of Defense, of course, must make certain assumptions because prudence tells him that there is a leadtime factor involved. In other words, what we are really talking about, as the Senator knows, is what the Soviets may have in the way of strategic arms in the 1974-76 and beyond time frame. We look at what they are doing and try to make certain extrapolations from that as to what they may have during that period. Unless we allow for the leadtime, we will not have the means to protect our deterrent in that period. The big debate turns on that.

Mr. COOPER. We shall get into those points later, during debate. But on the question of leadtime, if it should become necessary to build additional offensive weapons I believe the Senator will agree that there would be time to do so.

Mr. JACKSON. Well no. This involves cranking up production of Minutemen and Poseidon missiles, producing and deploying them which takes time. Polaris submarines take time. We have had various estimates of the leadtime required, and they can be supplied to the Senate. What we are really talking about is what the capability will be during the mid-seventies and beyond.

Mr. COOPER. We shall be prepared on these points.

Mr. DOMINICK. Will the Senator from Washington yield so that I may make one more comment?

Mr. JACKSON. I yield.

Mr. DOMINICK. In my comment, I did not mean to impugn anything about one of my most beloved friends in the Senate, my friend from Kentucky (Mr. COOPER). I had not meant it personally. What I have said is that from all over the country, and from many scientists, they have said that we are capable of building a defensive weapons system that will be provocative, but if we build an offensive system it will be nonprovocative. That seems to me to be a question of a semantic somersault. I can understand it in the context of putting it in what the Senator is talking about, but this is not the context in which many people are putting it, including the previous Secretary of Defense.

Mr. COOPER. I have heard the testimony of the scientists before the Armed Services Committee, and the subcommittee of the Foreign Relations Committee chaired by the Senator from Tennessee (Mr. GORE); except when I was ill. I have read the testimony. I do not know any scientist—I may be wrong, but I have not so read or heard—who said that, as an alternative to ABM, offensive weapons should be deployed.

Mr. JACKSON. On that one point, the Senator has read the testimony of many experts from each side of the ABM. I do not have that at my fingertips, but in the next few days I will place in the Record a number of statements. It was my understanding that if the threat reached the point that it was, indeed, a grave threat to the Minuteman deterrent, they would advocate going forward with a buildup of the offensive forces. I shall place that in the RECORD. I believe that was the testimony, for example, of Dr.

Rathjens and Dr. Chayer, and possibly others such as Dr. Wiesner.

Mr. COOPER. I think that is correct. That is the statement I have made.

Mr. JACKSON. I thought the Senator said they did not say it.

Mr. COOPER. In the event of a threat that materialized—

Mr. JACKSON. Let us put in the Record what it is.

Mr. COOPER. We would have the option, if necessary, of deploying additional offensive weapons.

Mr. JACKSON. But, as I recall, they said it was in preference to the ABM. It seems to me, from the Russian point of view, that going ahead with an offensive system would be far more provocative and destabilizing than providing for a defensive system. That was my point. But, in any case, the record will speak for itself as to what they and others have said.

Mr. COOPER. We will place in the Record their statements—

Mr. JACKSON. May I just add this other thing, since the colloquy referring to the leadtime necessary to crank-up Minuteman production and deploy a substantial number, I am advised that the leadtime is a number of years—some estimates run as high as 4 to 5 years.

Mr. COOPER. I do not think so. Perhaps the Senator can produce the facts for the Record during debate.

Mr. JACKSON. I will supply data on this matter.

Mr. COOPER. I have listened to the speech of the Senator from Washington very carefully. He always makes a very effective and informative speech. I am not going to question the judgment of the Senator from Washington regarding characteristics of the Politburo. I do not contradict the Senator's statement about the new doctrine which the Soviet Union declared—

Mr. JACKSON. The Brezhnev doctrine.

Mr. COOPER. In connection with Communist countries. It is an unusual innovation in any system of law and international relations. Czechoslovakia was a brutal example.

I would argue that if the Soviet leaders are as unpredictable as it is said they are—and they may be—and if the threat which the Senator has pictured so grimly, as has Secretary of Defense Laird, is a true threat, and knowing that both countries are armed to the teeth, that the United States has more men under arms around the world than the Soviet Union and that though the United States possesses three times as many nuclear warheads as the Soviet Union, that both countries have the capability of destroying the other, even if first struck by a nuclear attack—then the Senator's speech supports the argument that we are making. Let our great and humane country try in negotiations, to determine whether it is possible to reach an agreement to control both offensive and defensive weapons rather than deploying new weapons systems such as ABM or MIRV. If not an agreement in formal terms, a tacit agreement proved by a halt in their deployment by the Soviet Union and the United States.

This course of action, of effort, offers at

least some ray of hope for the people of our country and the rest of the world. It is better to make the effort, even if it fails, than to vote to pile up these weapons, particularly at a time when we are preparing for negotiations to urge their control.

Mr. JACKSON. Let me respond to my good friend from Kentucky by saying that I have the highest regard for his sincerity in presenting his point of view. No one that I know of, on the committee or in the Senate, has stated that we do not have this awesome strategic nuclear capability at the present time. I have been trying to emphasize that we are not talking about that now. We are talking about 1974-76. I do think that the Senate should know what is happening in the strategic arms field. The Soviet Union, as the Senator knows, now has deployed or has under construction, more land-based, long-range missiles, not to mention their medium-range missiles, targeted on Western Europe, than the United States. Also, as the Senator knows, the Soviets have a greater megatonnage deliverability capability right now than we have.

Speaking of nuclear arms, we should remember, when we are talking about nuclear strategic capability, that it is not just the number of warheads that matters; it is warhead numbers, times yield, times deliverability, that spells out the nuclear posture.

I want to add that I share the Senator's desire to negotiate with the Soviets. I have supported all moves in that regard. But now I want to ask a simple question:

Why would the Russians negotiate to give up or limit an ABM system if they have one and we do not have one? Where is our bargaining power in that situation?

Mr. COOPER. They may not. The Senator has answered the question in his own speech. He said it may well be, as a result of these negotiations, that the Soviets and the United States may decide they want an ABM system. But this would be the result of agreement.

Mr. JACKSON. I think it is desirable to have a limited number of ABM weapons. I do think, in light of the condition that exists between the Soviet Union and Communist China—and the Senator is fully aware of what has happened there in recent weeks—there is a good chance that, while the Soviets would not want to eliminate the ABM system, they might agree to limit the ABM's they would deploy—that is, if we do not scuttle our own ABM program before the talks even begin.

Mr. COOPER. That is the issue the Senator raised—that the Soviets would not abandon their ABM system. The argument that we should make a decision now on deploying ABM to help in negotiations does not hold water. I do not believe that a decision now to start deployment of an ineffective ABM system, which cannot be deployed or tested as an integrated system until 1974, is going to have any weight with the Soviet Union. Either Dr. Foster or Secretary Laird testified before the House committee that we could destroy their partially deployed ABM system around Moscow. We would

just overcome it with missiles. I would consider that the Soviets believe they could similarly overcome our ABM system.

Mr. JACKSON. Did he mean now?

Mr. COOPER. Of course, we have the MIRV. They have MRV, we believe.

Mr. JACKSON. We are not so sure they do not have MIRV.

Mr. COOPER. We know what we have. If we are to have control and limitation of arms, I believe the factor that either country has the power to destroy the other will be the deciding factor, rather than an ABM system which may be physically deployed 4 to 6 years from now, and not an effective one, even then.

Mr. JACKSON. Again, on the negotiation question, the Senator will recall that the debate on the ABM grew out of the military construction bill. We discussed foreign and defense policy in connection with the military construction bill for over a week.

The Senator will recall that the argument was made that if we went ahead and first deployed the ABM system, the Russians would not talk. It is all in the record. I do not need to go into detail. The argument was that they would not talk. I took the position that if we went forward with the ABM, we would increase the Soviet incentive to come to the conference table. The Senator will recall that on a Monday we voted to go ahead with the ABM, and on a Thursday Mr. Gromyko asked for talks. This is the significant point. I did not assert at the time that by going ahead we would force the Russians to talk, but I did point out that the constant argument being made that the Russians would not talk if we went ahead did not make sense. The record speaks for itself.

Mr. COOPER. I remember that. I was one of those who argued—

Mr. JACKSON. I do not recall that the Senator took that position, but other Senators did.

Mr. COOPER. I want to be honest—

Mr. JACKSON. I was trying to protect the Senator.

Mr. COOPER. I doubt that the Soviets are so loosely organized that they would make such a decision in 3 days, upon a vote by the U.S. Senate to deploy the Sentinel system. I am almost ashamed to make the debating point that last year the argument was made that construction of the Sentinel system would bring the Soviets to talks. This year, we have abandoned the Sentinel system as ineffective. We should not vote to deploy ABM before we commence negotiations. The objective is to stop the arms race—not accelerate it.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. JACKSON. I yield.

Mr. FULBRIGHT. The Senator has made a very interesting speech characterizing the leadership of the Russian Government. I am not sure his speech will promote talks, or very friendly talks, but that is beside the point.

Mr. JACKSON. Has the Senator read the series of articles by Anatole Shub recently published in the Washington Post?

Mr. FULBRIGHT. I did. I read another article following that which is contradictory to it. But that is neither here nor there. It does not matter what Mr. Shub said. The Senator is a distinguished Senator from Washington and a leading Senator, who would have been Secretary of Defense, according to all reports, if he had wanted to be. It is quite a different thing to read what the Senator from Washington said and to read what Mr. Shub said. Mr. Shub is a fine newspaperman who was in Russia but was asked to leave by the Soviet Union. I imagine he was not pleased by that development. I do not wish to make any point of that.

I understood the Senator to refer a moment ago to "first-strike capability." I am wondering in what way he uses the term "first-strike capability." What does that term mean to the Senator from Washington?

Mr. JACKSON. It means to the Senator from Washington an ability to destroy their nuclear strike force to the point where they would not be able to provide a credible strike force against us.

Mr. FULBRIGHT. A retaliatory one?

Mr. JACKSON. Yes. I am not saying what the Soviets intend to do with the capability they are building. I do not know what they intend. I am talking only about capability.

Mr. FULBRIGHT. A moment ago I understood the Senator from Washington to say—not in this colloquy, but just before—that the Soviets today have the only first-strike capability in the world; we do not have a first-strike capability.

Mr. JACKSON. I believe the Soviets are building toward a first-strike capability. We are not seeking a first-strike capability.

Mr. FULBRIGHT. I would like the Senator to elucidate that a little.

Mr. JACKSON. Yes; I shall be happy to. As the senior Senator from Tennessee (Mr. GORE), who is a member of the Joint Atomic Energy Committee, will recall, we were advised several years ago that the decision had been made not to go ahead with big nuclear bombs.

Mr. FULBRIGHT. That is right. They are big, but not as big as theirs. I would say one megaton is pretty big.

Mr. JACKSON. I am talking about nuclear weapons that are capable of destroying hardened silos in the Soviet Union. Mr. McNamara made the decision in 1961, when we moved rapidly with the deployment of the Minuteman force, that we had bombers that could deliver nuclear weapons of many megatons greater than the Minuteman or the Polaris or the Poseidon, when it is deployed; but—and this is the point—we could not use manned bombers to knock out the hardened silos in the Soviet Union, for the simple reason that by the time the bombers got there, with the warning the Soviets would have, the silos would be empty.

Does that answer the question of the Senator?

Mr. FULBRIGHT. No. I asked the question, or perhaps the Senator from Missouri (Mr. SYMINGTON) did, of the present Secretary of Defense, Mr. Laird, if he considered that the Russians had

the capacity now to knock our retaliatory capacity. In other words, did they have a first-strike capability? If I recall, he said they did not. So we have a direct conflict between the Senator's testimony and that of the present Secretary of Defense, which strikes me as rather odd, inasmuch as the Senator from Washington could have been Secretary of Defense, had he chosen to be. I am sure that is correct.

Mr. JACKSON. No.

Mr. FULBRIGHT. I mean correct about the difference, not about the Secretaryship.

Mr. JACKSON. Let us stick to the present question the Senator poses. The Soviet Union does not now have a capability of destroying our retaliatory force.

Mr. FULBRIGHT. The Senator said a few minutes ago they did.

Mr. JACKSON. I made a very clear distinction in the colloquy with the Senator from Kentucky. I said we are not talking about our current capability. We are talking about what it will be in 1974 or 1976. I am sorry if there was any misunderstanding.

Mr. FULBRIGHT. This is what I am trying to clarify: I think the Senator said prior to that, because I made a note of it, that the Soviets today have the only first-strike capability in the world, that we do not have a first-strike capability.

Mr. JACKSON. No; that is not correct.

Mr. FULBRIGHT. I was simply going to ask the Senator to clear it up now, because I thought he just now said they did not have a first-strike capability; but he says they do have it now?

Mr. JACKSON. What I am saying is that a first-strike capability, of course, is not achieved, in a technical sense, until you can destroy a sufficient number of the hardened or, shall we say, submerged submarines of the adversary, as well as a sufficient number of the ICBM's to the point that he cannot make a credible retaliatory response.

But I am pointing out to the Senator that I do not know why the Soviets would want to have a 25-megaton capability in their missile, if it is only for a second strike? I would like to obtain a response to that question. I think with a 25-megaton warhead, if you get enough of them, you have a first-strike capability, and you can have a second strike, third strike, fourth strike, many different strikes. But when they get enough of that kind of megatonnage in the warhead of a missile, and enough missiles, if there are no other steps taken to protect our missiles, with the number of Minutemen that we have now deployed, the Soviets could destroy a large enough number to make our land-based retaliatory force ineffective.

Mr. FULBRIGHT. We spent 3 hours, I believe—the Senator from Tennessee was there—in executive session the other day with the present Secretary of Defense and the Director of the CIA, much of it on this point. The Secretary finally agreed that all he was talking about, as to capability, was that these SS-9's were capable of destroying a Minuteman silo. He did not mean to

imply that this would be a first strike capability, because they had no feasible way to deal with either our bombers or the Poseidon, and so on.

In other words, he retracted in my view, what he publicly had said in the first meeting with our committee, when he said:

They are going for a first strike capability, let there be no doubt about it.

All I am trying to do is clarify the record. I do not wish to precipitate a big argument on the merits, although I will have to say, in view of what the Senator has said, that there was a deliberate decision on the part of our Government not to go for these big ones, because they are a less efficient use of our fissionable capacity.

After all, a megaton in a Minuteman is a terrific weapon; it is 50 times the force that destroyed Nagasaki. It was felt that there was no point in developing one that big, and I assume that the Senator from Washington agreed with that decision.

Mr. JACKSON. That was correct.

Mr. FULBRIGHT. This was a deliberate decision, because it was the most efficient way to use our fissionable material.

Mr. JACKSON. I cannot agree with the Senator on that at all. The decision was not based on the efficient use of nuclear material. The decision was made that we would not go for a first strike capability against the Soviets. Bear in mind, we had a wide lead then. The decision was made that we would have a second-strike force that would be usable only against soft sites—cities airfields, and so on—I want to make it clear that the decision was not made on the basis of efficient use of fissionable material.

Mr. FULBRIGHT. You get much more out of a number of small ones than one big one; I think that should be obvious. When you consider the capacity for destruction of a megaton, it is a terrific weapon. You can destroy a city like Washington with one of them.

Mr. JACKSON. The Senator is correct; but he has to make the point, however, when he argues in that direction, that it requires only a minimum megatonnage to knock out a city.

Mr. FULBRIGHT. But we have plenty for a retaliatory strike, if they knocked them all out. That is one point I am making.

Mr. JACKSON. We are talking about what the situation is going to be in 1974, or 1976. I emphasize that, because that is the issue.

Mr. FULBRIGHT. Yes; and that is based upon a lot of assumptions. It is assuming that the Russians will continue to develop theirs, and we will stand still and will not make any more, and that has been argued at great length.

I wish to ask a few other questions. I also understood the Senator to say, and I want to see if I am correct—I believe the Record will show—that the Senator said the Russians have deployed a fractional orbital bombardment system. Did he say that, or not?

Mr. JACKSON. That is correct.

Mr. FULBRIGHT. They have deployed it?

Mr. JACKSON. Yes.

Mr. FULBRIGHT. And it is workable, and in operation?

Mr. JACKSON. I might say to the Senator, he can find the statement in open literature. A top-ranking Soviet officer, in one of their official publications, so announced it. And we know that they have deployed some.

Mr. FULBRIGHT. Some. But I mean, is it an operating weapons system?

Mr. JACKSON. They have an operational system. It is limited in numbers at this time. One of the problems in this regard is that they use, as a booster, the SS-9.

Mr. FULBRIGHT. But did the Senator say it? I am not arguing with the Senator; I just want to be sure I heard the Senator correctly.

Mr. JACKSON. The Senator heard me correctly.

Mr. FULBRIGHT. That it is an operational FOBS system?

Mr. JACKSON. That is right. They have available for use an operational fractional orbital bombardment system.

Mr. FULBRIGHT. Deployed?

Mr. JACKSON. Deployed.

Mr. FULBRIGHT. Very well. I just wanted to be sure.

The Senator mentioned a time when we offered to freeze testing fissionable material, and the Russians, in return, tested a large bomb?

Mr. JACKSON. No, I did not say that.

Mr. FULBRIGHT. What did the Senator say?

Mr. JACKSON. What I said was that in 1961, in September, I believe, the Soviets, without warning, broke the nuclear test moratorium and set off a 60-megaton bomb. I think it was on the same day.

Mr. FULBRIGHT. Was that a formal moratorium, or a tacit one?

Mr. JACKSON. It was an understanding. I ask the able Senator from Tennessee, who is present in the Chamber, and who, I think, attended some of the meetings at Geneva.

It was an understanding, in any event. Whether it was reduced to writing, I do not know for sure. I will come to the other question.

Mr. FULBRIGHT. That we offered to freeze the further manufacturing of fissionable material. Did the Senator say that?

Mr. JACKSON. No, I did not say that. I will answer the question.

Mr. FULBRIGHT. I do not want to put words in the Senator's mouth. I am asking whether he said something to that effect.

Mr. JACKSON. No, I did not. I said that President Johnson announced that we were closing some of our nuclear reactors. He had taken this up earlier with Mr. Khrushchev, and Mr. Khrushchev agreed to close, or not go ahead with, some of the new reactors that the Soviets were building. What happened, though, was that we closed ours, and the Soviets went ahead and finished theirs, and they are in operation. I believe the chairman of the Joint Committee on Atomic Energy at that time, the distin-

guished Senator from New Mexico, Senator ANDERSON, can corroborate what I have just said.

Mr. FULBRIGHT. Then I misunderstood. We did not, either then or at any other time, offer to freeze the development of fissionable material?

Mr. JACKSON. No. This point came up, as the Senator may recall, in a question raised by the able Senator from Texas (Mr. TOWER) about unilateral disarmament proposals. I stated that this was a proposal that we had made and I mentioned what had happened as a result of it.

Mr. FULBRIGHT. I, of course, am not prepared, and do not wish to try to question any of the Senator's characterizations of the members of the Politburo. I do not know them personally. I have read some of the descriptions of them, as the Senator mentioned, particularly those by Mr. Shub and also others. I would agree that the members of the Politburo have not shown, in my opinion, very good judgment, particularly with regard to Czechoslovakia. As the Senator from Washington said, it was a great mistake. I believe he said that. I forget how he characterized it.

Mr. JACKSON. It was a terrible tragedy for the people of Czechoslovakia.

Mr. FULBRIGHT. That is correct.

Mr. JACKSON. But, as the Senator knows, Moscow did not stop with the invasion; the Politburo laid the groundwork for further invasions with the Brezhnev doctrine, which they announced, after the assault on Czechoslovakia, and as an attempt to justify it.

Mr. FULBRIGHT. I think the Senator is correct. But I am not so sure that there is a great difference between the attitude of what they call the Brezhnev doctrine and the recent doctrine of our former Secretary of State, who made statements to the effect that we do not have to have treaties in order to preserve peace around the world; that we were prepared to—I forget the exact language, but the purport was that we were prepared to intervene at almost any time or anywhere that we thought that it was in our interest to prevent the spread of communism.

Mr. JACKSON. I do not think the Secretary said that. May I comment on that point?

Mr. FULBRIGHT. Yes; certainly.

Mr. JACKSON. My understanding was that Secretary of State Rusk had indicated the number of treaty obligations we had throughout the world. Then, after going through that long list, he said there might be situations in the world where it would be in the national interest of the United States to come to the aid of a country, even though we did not have a formal treaty. I think that was what he said.

Mr. FULBRIGHT. I do not see much difference between what I said and what the Senator from Washington said.

Mr. JACKSON. The Senator from Arkansas said "intervene."

Mr. FULBRIGHT. Well, "come to the aid," if the Senator wishes. The Russians are saying that they came to the aid of the sound and God-fearing Communists in Czechoslovakia.

They were coming there to the followers of Novotny who had been put out. Every big country always takes the position that they are coming to the aid of their friends and of those who believe in the same gods they believe in. This is characteristic of all big countries.

It is very unpopular ever to equate one's own country with another country with whom one disagrees or a country that has a different point of view.

The belief that the big countries are characterized by some common faults is not much accepted. The belief is: "It is very good to take the position we are taking." That was the position more or less of the late John Foster Dulles who took the position that we are good people and all other people are suspect, and particularly the Russians.

The Russians are very shortsighted people, in my opinion, in many respects. However, I cannot say on the other hand that everything we have done has been above suspicion and motivated by the common good.

I think we have our national interest at heart. As the Senator has said, wherever our national interests are affected, we act. In the Dominican Republic, in the face of specific treaties that said specifically that we would not under any circumstances intervene in Latin American countries, we did intervene. And we did it without even notifying the OAS until after we had done it.

I am not trying here to argue about the particular merits of the matter. I say that action was very similar to action taken by any big country whenever it feels that its interests are involved. I think if we are ever to go along the road that the Senator from Kentucky mentioned a moment ago and if we are ever to make any progress away from the constantly increasing arms race and the piling up of more and more armaments, we have to have some kind of political agreements.

To make statements condemning the leaders of another country, and one of them in particular, saying that he engaged in bloody intrigue is not a very good way to have talks.

Mr. JACKSON. Mr. President, let me observe that I would think that the first question that any logical person would want to resolve in deciding how to vote on a defense appropriation bill would be: What kind of an adversary do we face? This is what I have done. I have tried. And I spent a lot of time on this matter. I must say that I think we face a very rough adversary, a very dangerous adversary, and an unpredictable one.

I think this is a logical and sensible approach. Let me get to the other two points the Senator raised before I yield to the Senator.

The Senator mentioned Czechoslovakia and said that maybe the Russians were intervening at the request of the Czechs.

If the Senator will recall, early on the night of the invasion or the next morning, the Russians got out a statement saying that they were intervening at the request of the Czech leadership. Of course, the whole handling of the Czech affair by the Russians was so clumsy that it turned out the request had not

been made. They were so crude that they did not even go through the usual Communist ritual of setting up some kind of pro forma request. When they got into Czechoslovakia they could not find a "quisling" to work with and they had to get Dubcek out of jail, where they had put him, and deal with him again.

The Senator has mentioned the Dominican Republic and apparently tried to compare this with Czechoslovakia. What we did there resulted in a free and open election. What kind of election is being held in Czechoslovakia?

Mr. FULBRIGHT. I did not say anything about an election. I did not say the Russians were invited by Dubcek. They were not. But they said they were.

I am not saying they did not lie about it. I think they did. All I am saying is that they put it on the ground of protecting Communists. We originally put our action in the Dominican Republic on the ground, as the President said, of protecting American lives.

I was at the White House when the President told us that 500 Americans were threatened and that we were going to take them out. He never alleged that the Dominican Government asked us to intervene. However, later on different reasons developed.

Mr. JACKSON. However, there was a free and open election there.

Mr. FULBRIGHT. That is another matter.

Mr. JACKSON. That is a very important matter, Mr. President.

Mr. FULBRIGHT. That is not the point I am making. I am not trying to make the point that they are a democracy and we are not. We are a democracy, and we have a Constitution, thank God. And we have a Senate that functions. We are trying to make it function now.

The real point of the debate is not the ABM as such.

The whole point of the debate is an effort on the part of some Members of the Senate to reassert some control over the military department. The Senate is the only agency of the Government that can do it. I do not exclude the President. The Senate is the only agency that can bring about any degree of control over the military department because of the peculiar situation in our Government. That is what the debate is about.

The point that is being argued happens to be the ABM. It could have been any other of a number of things that might develop. However, the ABM developed out of variety of circumstances.

That is what it is all about. I do not deny that we are a democracy. I am glad that we are, but we should not be so self-righteous about it as to say that we do everything because of some fine motives. That is not right. We do it to protect our interests.

I do not deny that in every case. We do it when our interests are involved, and not through some misunderstanding of a situation.

That is the point I am making. It is the same thing with weapons. We have been told we have enough weapons to kill them 10 times over. The Senator from Kentucky said that a moment ago. And I agree with him. The Senator from Mis-

souri (Mr. SYMINGTON) was here. It was said that we have three times as many lethal strategic weapons.

I believe he said that a moment ago. He said deliverable strategic weapons. We are not talking about IRBM's, the short-range vehicle. We are talking about the Minuteman, the Poseidon's, and those that are deliverable by airplanes and so forth.

Mr. JACKSON. If the statement is limited to the long-range manned bombers, we do not have that figure.

Mr. FULBRIGHT. Of course, we have got some manned bombers that are not so long range, too. The Senator knows that. They can deliver them. The reference was to deliverable strategic weapons.

I do not wish to engage in a numbers game. We have enough to destroy them. The Senator from Tennessee discussed it in the hearings and said that we had far more than enough to destroy the 50 largest cities in Russia, to hit each one of those 50 largest cities with 48 missiles.

The point is that, it seems to me, the whole thread of the Senator's argument is, first, that the Senate should not intervene. We should not intervene to put our decision or our judgment in the place of the President's on the ABM, which means the Defense Department.

Mr. JACKSON. Before the Senator goes on to that point, one thing I wanted to get clear is his position. Do I correctly understand that the Senator feels that it is wrong for the Senator from Washington to discuss the nature of the adversary? He said it is going to hurt Soviet relations.

Mr. FULBRIGHT. I do not think it is wrong.

Mr. JACKSON. What was the point, then?

Mr. FULBRIGHT. It is not wrong for the Senator to take the position which I think he does. The thrust of his argument is that there is no point in having talks or trying to make agreements with the Russians. They are so bad that they are beyond the pale.

Mr. JACKSON. I have never said that.

Mr. FULBRIGHT. I said that is the thrust of his argument.

Mr. JACKSON. No, that is not so at all.

Mr. FULBRIGHT. And the effect of what he says about the leadership is that he has not the slightest hope that the Russian leaders will make an agreement.

Mr. JACKSON. You obviously did not listen carefully to what I said, because I argued for serious arms control negotiations with the Soviets.

What concerns me is that many Senators say there is not enough information available about weapons systems, so we are going into executive session—

Mr. FULBRIGHT. I did not ask to go into executive session.

Mr. JACKSON. I did not say that. I said Senators have made this point. Surely we also need as much information as we can get about the Soviets. I was really surprised when the Senator raised the question that somehow it was out of order to discuss the nature of the adversary.

Mr. FULBRIGHT. I did not say it was out of order. The Senator is never out

of order. He says what he pleases. That is why we have the Senate. That is the only place it can be done.

Mr. JACKSON. I would think that the No. 1 order of business in the Committee on Foreign Relations would be to hold hearings on current developments in the Soviet Union—in short, on the nature of the adversary.

Mr. FULBRIGHT. This is interesting. The press did not pay much attention to it, but the Committee on Foreign Relations has held three hearings this year and we had one last year on this point. We made inquiry as to whether there were any competent people in the field of psychology or psychiatry studying the Russians. No such research is going on. We have all kinds of research sponsored by the Defense Department, but, according to the best authorities we could get, such as Dr. Karl Menninger, who is acknowledged to be one of the greatest psychiatrists in the world, and certainly in this country, and Dr. Hall—nobody is really trying to understand the Russians. The Committee on Foreign Relations has tried to foster studies to understand what the Russians are motivated by and what they are like.

Mr. JACKSON. Before the committee called the psychiatrists, I would think it would have called in experts on the Soviet Union.

Mr. FULBRIGHT. We had anthropologists.

Mr. JACKSON. Before the committee called the anthropologists, I would think it would have called the Kremlinologists.

Mr. FULBRIGHT. What is an expert on the Soviet Union, in the Senator's opinion?

Mr. JACKSON. I think there are a lot of scholars in this field who have devoted their life to the study of the Soviet Union and who know a lot about it.

Mr. FULBRIGHT. Would the Senator give me some information about that?

Mr. JACKSON. Yes, I would call that an outstanding witness, Dr. Phillip Moseley, of Columbia, one of the great scholars in this field; also Dr. Fainsod, of Harvard; also Dr. George Taylor, of the University of Washington. There are men like Ambassador Tommie Thompson. There are distinguished authorities like Ambassador Chip Bohlen, who has been in the Foreign Service and served in Russia a long time. I would think it would be a matter of concern to find out what is really going on in the Soviet Union.

Mr. FULBRIGHT. We have had all those at different times in the past. The Senator misunderstands.

Mr. JACKSON. Has the committee made a study of the Politburo? Has the committee gone into it in detail? Who were the witnesses.

Mr. FULBRIGHT. We have had before our committee, both formally and informally, Thompson and Bohlen, in the usual course of events.

Mr. JACKSON. I assume they were there as Ambassadors. They had to come up to be confirmed. What I was talking about was hearings on current developments in the Soviet Union, including the present Soviet leadership.

AN ALTERNATIVE TO SAFEGUARD

Mr. HART. Mr. President, I bring to the attention of the Senate a study by a group of able University of Michigan scientists who support additional defense of Minuteman missiles but reject the Safeguard system on technical and cost grounds.

These scientists conclude that Safeguard, because of radar and computer problems and because of inadequate testing opportunities, is unlikely to provide a credible defense.

They claim that even if technical problems were solved satisfactorily, the proposed Safeguard system would have to be expanded to more than 1,200 Sprint missiles to provide an effective defense for Minuteman.

The study puts the cost of Safeguard, including projected overruns, at \$28 billion; of the expanded system, at \$40 billion.

Noting their support for defending our Minuteman deterrent, the scientists estimate that for \$5 billion we could further harden our silos to the point which would require Russia to launch 6,000 missiles to insure destruction of our retaliatory force.

The Secretary of Defense justifies the need for Safeguard on the grounds that Russia may have 500 missiles by 1975.

The study makes clear that, if indeed it is important to increase protection of our Minuteman missiles there is at least one alternative which is cheaper and more effective than Safeguard.

The study also notes that Moscow could interpret installation of Safeguard as an effort to develop a first-strike capability, thereby stimulating the arms race.

I ask unanimous consent that the report be printed at this point in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

A REPORT OF THE COST OF THE SAFEGUARD ABM AND ALTERNATIVE PROPOSALS SUMMARY

We present assessments of the Safeguard ABM, and of an alternative to ABM that we believe provides better defense of the U.S. ICBM force at significantly less cost.

In developing our cost estimates of the Safeguard system, we have taken cognizance of the radar vulnerability and the small number of Sprint missiles destined for defense of our ICBM's. We conclude that critical reviews of Safeguard would call for much more extensive deployment of radars and Sprints than proposed and for abandonment of most sites not involved in ICBM defense. We estimate the final cost of the currently proposed Safeguard at 28 billion dollars, while 40 billion dollars is our estimate for the revised ABM. This estimate takes into account technical problems such as the short time available from target detection to Sprint ignition and the outstanding computer programming difficulties involved in target recognition under realistic conditions, and the overruns characteristic of deployments requiring solution of such technical problems. On technical grounds it is likely that neither system would provide a credible defense.

The alternative defense of our ICBM force, which we strongly support, is a superhardening of Minuteman silos. The military has

made a proposal for greatly strengthening and isolating the silos which can now withstand some 200 pounds per square inch blast overpressure. This hardening would significantly reduce the distance at which a nuclear weapon could render the Minuteman inoperative. We make several analyses dependent on a range of realistic values for Soviet missile accuracy and payload, and find, for example, that the Soviet Union would have to launch some 6000 missiles of the S-9 category against our superhardened sites, in order to assure 95% destruction of our Minuteman installations, which destruction level is usually taken as one requirement for a "successful first strike." This result applies equally to attacking missiles with 25 megaton warheads and to use of multiple warheads. (The first strike would also have to be similarly effective against all other U.S. deterrents.) It is estimated that this hardening program will cost 5 billion dollars and will not require substantial advances in technology. We submit that it is likely to be a credible defense and that beyond its technical feasibility and much lower cost, it offers the special advantages over ABM of its completely passive nature and its ever-ready standby status.

I. SAFEGUARD AND A REVISED ABM

Introduction

The Safeguard Anti-Ballistic Missile system proposed by the Nixon administration has two goals: The "area" defense of a large portion of the United States, and a "point" defense of portions of several Minuteman ICBM bases. The "area" defense, relying primarily on Spartan missiles with a range of several hundred miles, is proposed in order to counter a "light" attack by a small number of ICBM's against centers of population. President Nixon stated this purpose in his news conference of April 18, 1969: "The other reason (for Safeguard) is that . . . by 1973 (the Chinese communists) would have a significant nuclear capability which would make our diplomacy not credible in the Pacific unless we could protect our country against a Chinese attack aimed at our cities." The "point" defense utilizes Sprint missiles with a range about twenty five miles and is supposed to protect our Minuteman missiles in order that they will be available to retaliate after a nuclear attack. We will deal only briefly with the area defense proposal. There are many reasons to believe that this portion of Safeguard should be omitted, and the suggested phased deployment for Safeguard would permit just that.

Unlike the area defense, a point defense of some of our ICBM's may be feasible in terms of present technology, although it could be overcome by a variety of Russian countermeasures.

Because of this possible feasibility and because of the extreme importance of effective protection of our nuclear deterrent, we feel this to be the essential part of the Safeguard proposal. In Section I of this report we will review the Safeguard proposal and introduce a Revised ABM proposal designed to remove incapacitating weaknesses in Safeguard as protector of our ICBM deterrent. We argue that such revisions would be made in the course of review if it were decided to continue with the ABM program. In Section II of this report we assume that we will use Safeguard or the Revised ABM to try to protect our Minuteman retaliatory force and we assume that the Soviet Union will not develop sophisticated countermeasures. We discuss technical difficulties and costs facing ABM. The cost we estimate is substantially more than the administration estimate, largely because of predictable cost overruns. The Revised ABM is even more costly because

Footnotes at end of article.

it contains added components in spite of our omission of the Spartans and many Safeguard sites. Finally, in Section III, we discuss other strategic deterrents and alternate defenses for our ICBMs. In particular, there are persuasive reasons for supporting the "Hard-Rock superhardening program for the Minuteman silos.

Critique of the safeguard area defense against light attack

Sufficient arguments have been developed over the past year to convince almost every scientist who has studied the problem of area defense against ICBM's that it would be unwise and wasteful to deploy an ABM system for that purpose at the present time.² We are unaware of any detailed attempt to justify this scheme against these arguments. Briefly, the arguments are: (1) The proposed Spartan missiles can be, at most, only marginally effective against incoming ICBM's which employ merely elementary radar-confusing devices, i.e., simple decoys, chaff, and previous nuclear explosions appropriately placed. (2) An important claim for Spartan is that it might disable an ICBM through x-rays at a distance of, say, fifty miles. This possibility would depend, however, on a number of unknown factors, and there would be no choice but to also try to kill the enemy ICBM with Sprints unless the Spartan was known to have detonated only a few miles from the ICBM. (3) If the area to be protected is near the coast, there is no effective defense against either short-range missiles launched from off our coasts or cruise missiles which fly at very low altitude and can maneuver in flight. Because these missiles can be fired from immediately off shore, areas near the coast may have little or no warning. It is inconceivable that any protective systems should have the "hair-trigger" necessary for a defense against such a short-range light surprise attack. (4) It is most unlikely that any nation would be so irrational as to launch a light attack with ICBM's because the damage inflicted upon us would be much less than the destruction we would inflict upon them. Only the ICBM, of the several means available for a light attack, can be definitely traced back to the nation ordering the attack. But the ICBM light attack is the only form for which the Spartan missile has any capability.³

Nevertheless, it may be claimed that, although the Safeguard area defense is neither technically nor theoretically sound, we have nothing to lose by deploying the system as a full-scale experiment.⁴ The danger in this delusion is that if the Soviet Union believes, or if certain elements in the Soviet Union could effectively argue, that this useless system might work its deployment would severely escalate the arms race. In the mad logic of nuclear deterrence this consequence follows from the fact that the Safeguard area defense is an offensive threat because we could use it to protect the United States after we had launched a first-strike attack. The effectiveness of ABM area defense would be greater under these circumstances because: (1) This complex system is more likely to work as planned if given advance warning (2) The attack might be uncoordinated and weak after the U.S. first strike. Thus an area defense is both ineffective and at the same time stimulates the arms race.

Given that the deployment of an area defense system seems unwarranted at present, we assume for our Revised ABM that it will not be deployed and we deduct that part of the cost. We do so because it seems likely that the promised yearly reviews of the AMB situation will conclude that area defense should not be deployed without considerable additional research and successful innovation. Twelve sites in the continental

United States are proposed for deployment in Safeguard. Seven of these are area defense sites, four are ICBM defense sites, and the last is a Washington, D.C., site proposed to defend hardened control centers. We will drop the seven area defense sites in our revised ABM. We think it is realistic to assume that the Washington site will remain in the program. We drop the Spartans at the five remaining sites, although this is not a major cost item. It seems reasonable to retain the long-range radar capability.

McGraw Hill's Defense Marketing Survey has investigated costs of the proposed Safeguard system allowing for no cost overruns.⁵ Their estimate is that a system completed by 1975 will cost \$11 billion. This includes \$8.0 billion, corresponding to the somewhat lower administration figure of \$6.6 billion plus warhead procurement, plus some \$3 billion for research and development and operation and maintenance. Defense Secretary Laird has since confirmed the \$11 billion figure.⁶ Since the portion for the area defense system, not counting long-range radars PAR's would in their estimate cost close to \$4 billion, the net cost for research and development and for deployment of a point defense system at four Minutemen bases (and for a protected headquarters in Washington, D.C.) would be about \$7 billion. In the following section we discuss the sources of added costs if a minimal first-generation ABM system is to be deployed by 1975 or shortly thereafter.

Protection of more Minutemen with more Sprints

Dr. John S. Foster, Jr., Director of Defense Research and Engineering, DOD, has stated that 300 of our Minutemen should survive a first-strike attack in order that our deterrent be credible. This estimate coincides with statements of Robert McNamara. The Safeguard proposal involves protection initially of the Grand Forks, N.D., and Malstrom, Montana, Minuteman farms, which are stated to hold a total of 350 Minutemen. However, although proposed numbers of Sprints have not been revealed, it is apparently proposed to have one cluster of about 75 Sprints at each farm.⁷ Each cluster could cover a region some 40 miles in diameter which would contain some 50 Minutemen (The Minutemen are about 5 miles apart).⁸

When this same program is extended as proposed in Safeguard to two additional Sprint bases at Warren AFB, Wyo., and Whitman AFB, Mo., a total of 200 Minutemen would have some protection, i.e. about 300 Sprints worth. This proposal is not adequate. (Cost considerations lead us to believe that we have not grossly underestimated the proposal.) If 300 Minutemen are to survive an attack it would appear that a minimum of 400 should be protected and that each Sprint base protecting 50 Minutemen should have at least 150 Sprints. We conclude for our Revised ABM proposal that four other Sprint bases must be added to the program, giving a total of 1200 Sprints to protect 400 Minutemen. A reasonable probability estimate shows that if twice as many attacking ICBM's are used against the 400 Minutemen as against undefended Minutemen, i.e., if two perfect reentry vehicles with warheads, RV's, are used against each silo (and none against the radars) then about three-fourths of the replaced ICBM's, or a total of 300, would not be harmed.⁹ Actually many Sprints should be used to defend radar so that the number of Sprints should be even greater than 1200.

Reduction of radar vulnerability

A possibly crippling weak-link of the defense system we are discussing is the vulnerability of the radars. They cannot be hardened so great accuracy is not needed to disable them. A very small number of missile site radars, MSR's, is proposed, in fact only one for each site. A rapid sequence of ICBM's

could be employed as a relatively cheap way to knockout the MSR. Prof. S. Weinberg has shown that Safeguard could be very cheaply exhausted in this manner, because if the defense does not use up its Sprints defending the radar, the radar will surely be destroyed leaving the remaining Sprints useless.¹⁰ In one of his examples, a battery of 75 Sprints is used up against 33 RV's, with the MSR having only a 10% chance of surviving this attack in spite of the defense. In the overall picture, Weinberg finds that a roughly one percent increase in total enemy ICBM's, at a cost to them of roughly \$100 million, would negate two Sprint bases of 75 Sprints each if the extra weapons were used against the radars. It has also been pointed out that the Soviet Union could employ SS-11's, which are inadequate for attacking silos, to attack the radars.

We suggest that a change in Safeguard, with good reason, will soon be recommended as essential to the viability of the ABM system: Rather than one MSR installation per site there should be several, spaced, say, 15 miles apart.

We will add the cost of three backup MSR for each proposed MSR (i.e., 36 at nine sites; five, sites retained from Safeguard and four added) for our Revised ABM proposal.

II. TECHNICAL PROBLEMS AND THE COST OF ABM
Technical problems with radar, data analysis, and control

The missile site radar (MSR), the data-processor, and command and control face a severe problem in the expected conditions of a first strike accompanied by simple countermeasures, i.e., a massive attack with initial explosions leading to radar blackout and with simple decoys, at the top of the atmosphere. We calculate that if a Sprint is to cover a 20 mile horizontal range, it must be fired when the incoming RV (reentry vehicle with warhead) is about 30 miles up (see figure). This is approximately at the top of the atmosphere where the blackout and decoys are still effective.

These numbers are derived from the statement that it is possible to unmask, or distinguish, simple decoys by acceleration and other measurements (from the actual RV) at 20 to 30 miles altitude and below, and that radar blackout will be effective for a significant time (several minutes) over an appropriately large area (about twenty miles diameter) at altitudes of about 30 miles and higher.¹¹ In principle, then, the detection-control system could start a Sprint toward an incoming RV when the latter is some 20 to 30 miles high (see figure). According to information about the velocities of the vehicles, if the impact point is 20 miles off, the Sprint will take about seven seconds from ignition to arrival. The RV will impact from 30 miles up in about 7 to 8 seconds or from 20 miles in about 5 seconds.¹²

To summarize, the time before impact when the RV becomes possibly discernible and the time for the Sprint to reach it before impact are essentially the same—*about 7 seconds!*¹³ This is an astonishing demand upon the detection and control system. The time pressure is relieved up to several seconds if the Sprint is installed close to the point of impact. This means that, to protect, Sprints must be assigned an area much smaller than their range. This substantially increases duplication and costs, and places a premium on very fast data analysis. The analysis of this section and the section "More Sprints to Defend More Minutemen" suggest that the Sprint is not ideal for Minuteman protection. A smaller shorter range missile deployed in greater numbers would be more effective.

This severe time squeeze is, however, only a part of the most crucial problem. Scientists and engineers among our readers are asked to consider the information taken in by the

Footnotes at end of article.

July 9, 1969

MSR scanning well over 1000 square miles in the event of a massive attack with many RV's and many hundreds of simple decoys (any one of which is indeed unmaskable after careful analysis if it is below, say 30 miles) and with previous explosions (at, say 30 miles) resulting in reflection, absorption, and noise. Many hundreds of trajectories must be simultaneously found and tracked in this radar input, and analyzed in detail. The information is to be gathered and fully analyzed over a period of, say, 3 seconds at most and Sprints dispatched (another second to ignition?) and guided. Such a programming problem in pattern recognition is not yet solved. Progress with this type of problem has been much slower than was estimated in advance, and development much more expensive. The time-sharing problems involved in these computations are also staggering.

Professor J. C. R. Licklider has discussed the fact that as computer programs have become larger, programmer effectiveness has dropped. The processing units for the ABM system would have to be many times larger than any previously built and the programming far more extensive, complex, and sophisticated. Professor Licklider writes, "The significant thing is that the main causes of inefficiency lie outside the individual programmer. If (the number of programmers working on a given system were increased from) 100 to 1000, the hourly productivity of each would decline to one-third or one-fifth—or possibly one-twentieth. It may well be that, for any given state-of-the-art, there is an upper limit to the rate of production of complex integrated software . . ."¹⁴

We would like to add that development of an effective detector-control system for Sprints as discussed will be possible only through extensive realistic experiments or tests. A system developed with experience of one missile reentry with decoys will not operate in the presence of many missiles and decoys, and a system developed with experience of these will not operate in the presence of recent nuclear explosions. As Dr. Foster has stated, it would be very valuable (in our opinion, practically essential) to develop it with tests involving atmospheric explosions (forbidden by the test ban treaty).

It is correct to include the expense connected with these difficulties under the heading of cost overruns, since it arises from the difficulty in the course of development to meet specifications for particular hardware and software. Cost overruns are included in our final estimate as discussed below. We will not include added costs for premature deployment of an inadequate electronics system in, say, 1971 or 1972. We hope such premature deployment will not occur.

Cost overruns

History of Overruns

Detailed analysis of Department of Defense contracting reveals that the Pentagon consistently pays substantially more than was initially estimated for its weapons systems. The actual cost divided by the original cost estimate is called the cost overrun factor. The problem we now consider in our analysis of ABM costs is determination of a reasonable cost overrun factor. We shall discuss both the record of other weapons systems and the general reasons for substantial initial underestimates of cost.

The cost of previous systems can readily be separated into costs for development and costs for production. Average overruns appropriate for application to the ABM are found to be about the same for the two types of costs. A study by Professors Merton J. Peck and Frederic M. Scherer contains a record of cost overruns for development of a

number of missile and aircraft projects, mainly in the late 1950's.¹⁵ Their results, with added information, are presented in Table I. These sample projects were of high priority; however, they were typical, not exceptional, in overruns. Several of the well known cases of failure and very high overruns of the period are not included (e.g., Hound Dog, SAGE).

The asterisks in Table I indicate the projects in which "state-of-the-art" problems were severe. They illustrate situations in which techniques to be used were not well-understood or well-developed at the initial stages of the program, so that new areas of engineering had to be developed in addition to the more conventional design work. At present, as we have stressed in Section II above, a useful ABM design would have severe "state-of-the-art" problems in its electronic components, particularly in programming. On the other hand, prototype missiles have flown and thus development difficulties are not expected there. It is not clear how severe warhead research problems will be. Since the major portion of projected development costs is for the electronics system, the appropriate cost factor is among the higher values in Table I, such as those marked by asterisks: it should be more than a factor of 3. Considering that research has been under way for some time and that the contractor, Bell Telephone Laboratories, is particularly strong, we shall use the factor of 3. Previous experience suggests that, along with this overrun, development would be completed approximately two years later than predicted.

Table I.—Development cost overruns

Program	Overrun
Atlas *	4.0

B-58	2.4
F-4H	2.5
Jupiter	0.7
F-105	3.0
Average	3.2

*Projects with severe "state-of-the-art" problems.

Production costs play a larger part of projected ABM costs than development costs. A study by Professors A. W. Marshall and W. H. Meckling contains a record of production cost overruns.¹⁶ These are listed in Table II, according to difficulties with the state-of-the-art: small risk, medium risk, and high risk. Highly complex weapons systems with extensive electronics are classified as the riskiest projects. The Safeguard ABM clearly falls into the "high risk" category—that is, by Richard A. Stubbing's definition, "a system in which at least one major component must be redesigned. The radar, computer and circuitry are the heart of each electronic system, and redesign in this area reflects the very highest degree of uncertainty as regards expected performance."¹⁷ The average cost for "high risk" systems is 3.4 times the initial estimate. However, Stubbing notes that "the largest cost increases are in missile development, which during this period advanced into a new and radically different technology, involving computers and other electronic equipment capable of solving complex guidance and control problems without human assistance." The average cost for "high risk" missiles was 4.6 times the initial estimates. We see that production overrun experience is very similar to development overrun experience.

Table II.—Production cost overruns

Small risk:

Average	3.4

The cost-overrun history cited above has continued in this decade without noticeable change. Let us discuss the two projects which are at this time very prominent in the news: the C-5A transport and the F-111 fighter-bomber. Professor Scherer has recently testified on overruns in these programs:¹⁸ "The cost for developing the F-111 was originally estimated at \$700 million by General Dynamics and \$900 million by military analysts. By 1968, actual development costs had soared to \$2 billion. The Phoenix air-to-air missile for the Navy version of the F-111 was to be developed for \$175 million. Actual costs were nearing \$420 million when the program terminated." The production costs follow the same pattern of grossly underestimated costs for the final product. The initial estimate was \$2.8 million, including engine, for the Air Force version. The final price is about \$6 million for each F-111A. Initially the cost of the Navy's F-111B was put at \$3.5 million for each aircraft. The final cost would have been about \$9 million. This weapons system would probably have been initially placed in the medium-risk category of Table II. Similar very large overruns apply to the Cheyenne helicopter, Ma in Battle Tank (MBT), short range attack missile (SRAM) and other recent projects.

On the C-5A, Scherer testified, "No one seems to know what the true overrun in the C-5A program is, but, for example, as nearly as one can tell, the cost of the first 58 airframes will exceed Lockheed's contract cost estimate by about \$900 million, or 64 percent. Compared to the F-111 experience, this is not at all bad. But transport programs have traditionally attempted less ambitious technical advances than combat-weapon systems, and their cost overruns have been correspondingly lower." As shown in Table II, low risk aircraft showed an average cost increase of 40%. By this yardstick, the C-5A is not an improvement.

Thus we see that any internal reforms initiated by Robert McNamara did not change the cost overrun picture which has been well documented for the 1950's. Indeed, we shall now present arguments that such overruns are inherent to our general system of new weapons development and procurement. We conclude that overrun factors of 3 or more are to be expected on the basis of past experience for a system such as ABM. We

Footnotes at end of article.

July 9, 1969

shall apply a factor of 3 to projected costs other than construction and maintenance (where we assume no overrun).

Basic Reasons for Overruns

Basic reasons for cost overruns have been given as (i) inflation, (ii) Defense Department and contractor "optimism," (iii) contractor inefficiency, and (iv) technological uncertainty (state-of-the-art problems).

(i) Inflation: The effect of inflation is calculable. Apologists for the contractors notwithstanding, unforeseen inflation should not have been an important element in the overruns.

(ii) "Optimism": Professor F. M. Scherer in recent testimony pointed out:

"Getting a major weapons program started is not easy and realistic cost estimates have a sobering effect. Recognizing this, industrialists and military officers are inclined to view a program's future prospects through rose-tinted glasses." Scherer presented two illustrations, the Skybolt and the Nike Hercules (an ancestor of the proposed ABM): "Prime contractor for the Skybolt guided missile program was Douglas Aircraft Company. In the spring of 1959, when 14 firms were competing for the Skybolt job . . . Douglas found its backlog situation desperate. Skybolt appeared to be its best new opportunity, and it went all-out in the design competition. . . ." Scherer goes on to detail the dramatic denouement of this case whose repercussions remain with us. The Nike Hercules, was executed under prime contracts by Western Electric and its affiliate, Bell Telephone Laboratories (as with Safeguard). At the beginning in 1953, it was projected that the ground guidance and control equipment for Hercules could be obtained by converting existing Nike Ajax equipment in the field for \$210,000 a battery. "However, when negotiations for the first production contracts began in the early months of 1955, Western Electric announced a new (and better) approach . . . This turned out to cost \$1.7 million per battery . . . In interviews, Western Electric representatives acknowledged that their production engineering staff members knew early in the game that a field modification program would prove to be impractical, but that they had presented the highly optimistic field modification cost estimates because they were more "sellable" to the Army and Congress."

In the past the only authority that has attempted to bring about some realism to cost estimates before major decisions are made is the Office of the Secretary of Defense, OSD. But there are good reasons why one might expect OSD efforts to be inadequate, including the length of lines of communications within DOD and, particularly, lack of motivation. Other considerations such as balance between the services may be more important than cost.

(iii) Contractor Inefficiency: Contractor inefficiency is a difficult problem because the projects are very long-term and thus are non-competitive over long periods, because there is a very close relationship between DOD and contractors, and because it appears to be in the national interest to see major weapons contractors maintain their capabilities. Problems such as support of excess staff during lean periods and the fact that it would indeed be unreasonable to make contractors suffer for natural difficulties going beyond the state-of-the-art make it very difficult to monitor and judge proper costs. The decision-making process calls for constant consultation between contractors and DOD at all stages. In many respects the DOD and its contractors function as one administrative structure. Consequently, the problems of policing costs cannot be solved by admonishing the DOD to supervise its contractors more closely.

(iv) State-of-the-Art: We feel that tech-

nological difficulties are underestimated as a serious impediment to accurate cost estimates. In the private sector, corporations are very cautious in developing new products. Technically difficult projects are not pushed prematurely. Contrast the military: A tremendous premium has been placed on new kinds of capabilities and relatively less stress on simplicity and reliability. In areas where new technology has to be developed, it is not possible to estimate costs in advance without the likelihood of a large error. Rather than being realistic about this, the military is strongly motivated to err on the low side. Thus we see great fluctuation in cost overruns from project to project and large cost overruns on the average, particularly where problems with the state-of-the-art were severe.

Thus, although there have been many attempts to improve the cost-overrun situation and although these will continue, efforts made after the initial estimate has been made will at best have marginal benefits. The problems are inherent, and will not be circumvented by procedural changes in DOD or showcase default of contract cases. Possibly Congress can develop an independent expert group charged with monitoring programs both technically and economically. However, such a possibility would have little effect on a project beginning now. Our conclusion is that cost overruns for new programs, such as ABM, will be characteristic of similar programs in the past. Thus we estimate that final costs will be 3 times the initial estimates for all R and D and procurement items.

Are Overruns Related to Success or Failure of the Program?

Some high-overrun projects were very successful and well worth the cost. More typical in cases of sophisticated systems is inability to meet specifications. Stubbing cites a "sample of 13 major Air Force/Naval aircraft and missile programs with sophisticated electronics system initiated since 1955 at a total cost of \$40 billion . . . Less than 40% of the effort produced systems with acceptable electronic performance—an uninspiring record that loses further lustre when cost overruns and schedule delays are also evaluated." Many of the projects listed in the tables above must be regarded as failures to meet reasonable overall specifications.

We stress the relevance of this to Safeguard, where the carrot or yearly reevaluation has been held out to Congress. The probability is low that the radar data-processing control system will work as a whole under realistic conditions. There is a likelihood, based on experience with past systems, that the attempt to make it work will continue at great expense even after overwhelming difficulties become apparent to technical staff.

This important point can be illustrated by the TFX or F111. The TFX provides an excellent analogue to the ABM because it too was an entirely new weapons system—and a very expensive one. An important factor

in continuing the expenditures is the scarcity of hard data available to the public for estimating costs. Despite rumors as early as December, 1964, that the TFX costs were spiraling and a Department of Defense communiqué admitting that they were higher than the original estimates, the president of General Dynamics, Frank W. Davis, felt secure enough to issue, in November 1967, a public denial that the plane was caught up in a price increase.

The public finds itself constantly reassured that its billions of dollars of tax money are being well spent, even if they are not. In March, 1965, it was learned that the Navy version was overweight, that the engines were malfunctioning, and that its missile weapons system was still incomplete. On April 22, 1967, an F-111B crashed. More technical problems were found that August. The Navy version had trouble taking off from an aircraft carrier in September, and later that month a fire broke out in the tail of an F-111. In October, Assistant Navy Secretary Robert A. Frosch said that although the F-111B "will probably not meet all the initial specifications . . . [it] represents the finest fleet air defense system available in the immediate future." Almost a year of expenditures was to go by before the Navy was to cancel the overweight F-111B.

The Air Force, however, persevered optimistically through 1968 in the face of highly publicized crashes, difficulties with terrain-avoidance radar, and too-high cost. General G. P. Disoway, commander of the Tactical Air Command, belittled the reports of troubles with the F-111A saying: "We always have a lot of problems with airplanes until we get them out into the field and then the people in the field seem to cure it." Finally, in January, 1969 the Air Force relented and cut back its orders with General Dynamics. Severe difficulties continue, but Secretary Laird insists upon keeping the assembly lines at Fort Worth running.

The money for this failure cannot be shut off. Once a program begins too much money and prestige are at stake for it to be readily terminated.

We stress, in concluding this subsection, that experience suggests that very deleterious technical difficulties in ABM development are unlikely to prevent substantial deployment. Although there are examples to the contrary, it is hard to stop a program under way. The cost overrun is likely to be large regardless of whether the system is technically a success or a failure.

Cost Estimate

The Revised ABM involves 9 sites with a total of 36 MSR's and 1250 Sprints. Other expenses are scaled from the Defense Marketing Survey⁵ estimates for Safeguard as shown in Table III. A cost overrun factor of 3 is introduced for research, development and procurement, but not construction, operation and maintenance. The total cost of the Revised ABM is \$40.5 billion and of the Safeguard ABM is \$27.7 billion.

TABLE III.—COST ESTIMATE IN BILLIONS OF DOLLARS (THROUGH 1975 FOR PROGRAMS WITHOUT OVERRUNS)

Item	Safeguard		Revised ABM	
	Without overruns	With overruns	Without overruns	With overruns
PAR (long range radar).....	0.56	0.56
MSR (missile site radar).....	1.5	4.5
Spartans.....	1.05
Sprints (at \$800,000 each).....	.56	1.0
Data processing, command and control.....	2.0	3.25
Warheads.....	.2125
Total, procurement.....	5.9	17.7	9.6	28.7
Construction.....	2.10	2.1	3.5	3.5

III. AN ALTERNATE TO ABM
Superhardening

The primary purpose of the Safeguard ABM system is to provide a high level of protection for our Minutemen ICBM's force against a Russian first strike. We shall now consider an alternative approach to the problem of ICBM security and its relative advantages.

The U.S. Air Force "Hard-Rock" program provides such an alternative.¹⁹ Hard Rock is a program to bury Minuteman silos deeper and to further isolate and strengthen them. Measured in terms of blast pressure that can be sustained, the proposal is to superharden our Minuteman silos from the present average 300 pounds per square inch over-pressure to a planned 3000 psi, with control areas approaching a hardness rating of 7000 psi in some instances. Some \$58 million was allocated to the program in Fiscal 1970, but the program has been brought to a virtual standstill by the Nixon administration in the attempt to sell Safeguard ABM.

There is no question that the hardening of underground missile silos renders them extremely invulnerable to the effects of nuclear explosions. A missile silo hardened to 3000 psi could survive the air blast of a 10 megaton explosion at ranges of less than 1000 feet.²⁰ The principal damage mechanism to these underground structures is not the air blast, but the tremendous ground shock accompanying a surface or near surface nuclear blast. There is considerable evidence that heavy, well designed underground structures will sustain no heavy damage from ground shock beyond 1 1/4 crater radii from "ground zero", that is, just outside the ground crater dug by a nuclear blast. The dimensions of the crater formed depend primarily on the yield of the weapon and the type of soil in which the burst occurs. A 10 megaton surface explosion in dry soil will cause a crater of 1400 feet radius, with heavy damage to underground structures extending 1745 feet.²¹

The effectiveness of a superhardened silo thus depends on the accuracy with which the enemy warhead can be brought on target. At present, U.S. and Russian ICBM's are capable of CEP's²² of about 2500 feet. Although this figure could conceivably be improved somewhat by technological breakthroughs, we expect no more than a marginal decrease in ballistic missile CEP's.²³

The Department of Defense has stated that the Russians would not attempt a first strike unless they could destroy 95% of our Minuteman missiles, thus rendering our ICBM retaliation ineffective. The question, then, is how many warheads the Russians would have to launch at our 1000 superhardened Minuteman in order to destroy at least 95% of them.

Table IV gives the number of warheads, of various yields, that must be delivered at a superhardened silo in order to achieve a 95% probability of destroying the target. Three different CEP's are used to account for possible state-of-the-art improvements in weapon delivery accuracies.

If we assume that all Russian missiles will carry a 25 megaton warhead and will have

TABLE IV.—NUMBER OF WARHEADS REQUIRED FOR A 95-PERCENT PROBABILITY OF DESTROYING A SUPERHARDENED SILO

Weapon yield (megatons)	Destruction radius (feet)	Number of warheads to achieve 95 percent kill		
		CEP = 2,500 ft.	CEP = 2,000 ft.	CEP = 1,500 ft.
1	811	47	27	15
4	1,287	12	11	6
10	1,746	9	6	4
25	2,368	5	4	2
49	2,963	3	2	2

a CEP of 1/2 nautical mile of 2000 feet, then four missiles would have to be detonated per Minuteman. In order to destroy 95% of our 1000 Minutemen they would have to launch about 6000 missiles (assuming 67% probability of successful launch and detonation).²⁴ This is to be compared with Secretary Laird's estimate that the Soviets would have about 500 such missiles in the mid-seventies.

Our calculation involves the assumption that first strike capacity would be credible only if the first wave of missiles were adequate. Dr. Foster and Richard Latter have suggested that the Russians could plan to send over second and third waves of ICBM's after somehow observing which Minuteman silos did not suffer close hits.²⁵ We already assume a great deal of optimism on the part of the initiators of a first strike if we assume that they would trust that our ICBM's would not be fired before the first wave. The suggestion that they would plan to trust the U.S. to await second and third waves without retaliation is, indeed, surprising.

An examination of Table IV shows that multiple warheads do not significantly affect the picture.²⁶ Thus with superhardening, where the CEP of the attacking weapon is comparable or greater than the radius at which the emplaced ICBM can be damaged, MIRV (Multiple Independently-targetable RV) capability is of no value. It would not add first-strike capability. Detailed study of this important result is needed.

The cost of the Hard Rock superhardening program is estimated at over \$5 billion. A four year research and development program has been proposed for a new superhardened silo at \$50 million a year.²⁷ These numbers are to be compared respectively with our \$40 billion estimate for an ABM system and with the \$1/2 billion a year R & D program for ABM's. The relatively low R & D costs for superhardening illustrate the fact that it is a civil engineering problem involving no great advances in state-of-the-art.

The principal advantages of superhardening vs. anti-ballistic missiles are cost (approximately one-seventh of the cost of ABM as estimated in this report), effectiveness, reliability (there are few mechanical or electrical parts which could fail and render the system useless), and relative invulnerability to countermeasures. Most important from the standpoint of the arms race, superhardening is passive. It does not pose a long run threat of increased offensive capability. It need not inspire a race to develop countermeasures.

Conclusions

Protection of the U.S. nuclear deterrent is of the highest priority. Proponents of the Safeguard ABM have claimed that it is necessary and credible as protection against a Soviet first strike, deployable at a cost of \$11 billion and completely defensive and therefore not a step in weapons escalation.

If these claims were true, we would support the Safeguard, but the proposal is questionable on every one of these points.

Necessity for ABM

The need for an ABM is a relative question. It must be judged with due reference to the total U.S. defense system: the U.S. has four deterrents such that a small part of any one of them is adequate.²⁸ The ABM is proposed as a marginal protection for one of these. The four deterrents are (1) ICBM's, (2) SAC long range bombers (which remain a remarkably credible deterrent), (3) nuclear missile submarines²⁹ and (4) thousands of warheads deliverable by some 2000 vehicles (intermediate range planes and missiles) stationed at aircraft carriers and hundreds of foreign bases. There are various means of protection for all four deterrents. For ICBM's, aside from ABM, there is mobility (which the U.S. has apparently not chosen), timing

(i.e., the missiles can be fired before the attack is completed)³⁰ and hardening. We have shown in the previous section that superhardening would be very effective.

Credibility of ABM

Arguments have been presented on the technical problems faced by ABM. These arguments can be summarized by the statement that ABM is an unusually complex system that cannot be fully developed by realistic trial and error. Experience indicates that the system as a whole is unlikely to work. In addition, the Safeguard proposal itself does not call for adequate deployment to create a credible defense.

Cost of Deployment

Our cost estimate, based on experience with analogous systems and on expansion of Safeguard into a Revised ABM with some credibility, is \$40 billion compared to some \$5 billion for superhardening.³¹

Potential for Escalation

The ABM approach to defense begins a spiral of measures and countermeasures leading to rapidly increasing cost and, perhaps, to instability. Reacting to actual and potential Soviet deployment of ABM, the U.S. has already developed: hardened warheads,³² electronic countermeasures, and sophisticated decoys. Development and deployment of a sequence of very costly measures and countermeasures can easily be envisioned. The offense holds a lead time of about a decade in this race.

For the above reasons we oppose deployment or partial deployment of ABM. We support continued research and development of ABM at a reasonable level. The present level of some 1/2 billion dollars a year is, perhaps, excessive.

We also support action in the near future to safeguard our ICBM's if that action can be shown to be relatively inexpensive, credible, and not conducive to a rapid arms spiral. On this basis we support superhardening of Minuteman silos.

Box 289, MIT Branch Office, Cambridge, Mass., 1969; "A Critique of the Safeguard ABM", Council for a Livable World, Washington, D.C., 1969; R. L. Garwin and H. A. Bethe, Scientific American, 1968.

³ On occasion, protection of SAC bomber bases and protection against accidental attack have been advanced as subsidiary reasons for ABM area defense. The former is unreasonable from a cost stand point compared to alternatives. If the highly unlikely possibility of accidental attack is considered to require a defense, an ABM system could be designed which would provide some defense if given adequate warning. This system would not be Safeguard.

⁴ A particular disadvantage of deployment in the continental U.S. is that natural tests of the system will not be possible.

⁸ Number of Minutemen Protected: Deduction from number of Sprints; CBS-TV Documentary, May 1969; R. Lapp, The New Republic, June 28, 1969.

⁹ If we assume each Sprint has an 80% probability of being effective, and assume reasonable strategies of attack and defense then 1200 Sprints would actually protect 77% of the 400 Minutemen if each is attacked by two perfectly aimed and function-

July 9, 1969

ing RV's. This assumed success rate of four-fifths is, on the basis of experience, excellent field performance for a system such as Sprint including detection and analysis of incoming RV, command, launch, guidance and detonation. The problem of reliability of complex systems is brought out by experience with the Apollo shots. Very large expert teams employing long count-downs with the replacement of many dozens of parts during count-down are required for the launches to go on schedule with reasonable reliability. Experience with demonstration launches of installed Minutemen, presumably under standard conditions with no count-down, has been frequent failure.

²¹ P. 293, ref. 20.

²² The CEP, or Circular Error of Probability, is the radius of an imaginary circle drawn around the target in which 50% of the delivered warheads will fall.

²³ Basic research is presently being done on terminal guidance systems that guide the reentering warhead directly to the target. It is conceivable, although not probable, that the massive technological problems involved could be overcome to make such a system feasible. However, such systems are extremely vulnerable to counter measures that will render them totally ineffective; thus we do not consider them as a threat.

²⁴ If they could achieve a CEP of $\frac{1}{4}$ n.m., or 1500 feet, then they would have to launch about 3000 missiles. If we assume 80% success for their missiles and a CEP of $\frac{1}{4}$ n.m., as Dr. Foster has in one of his estimates, then they would have to launch 2500. This degree of accuracy is not available to the Soviet SS-9 missile being deployed.

²⁵ New York Times, May 13, 1969 and Allensmith Column, Ann Arbor News, June 9, 1969.

²⁶ For example, even if each multiple warhead had the same accuracy as the single

missile, which will not be true, then three 4-megaton IRV's will be no more effective than the one 25-megaton weapon. Eight one-megaton IRV's will be no more effective than the 25-megaton weapon. These numbers correspond roughly to the maximum number of MIRV's which could be carried instead of one 25-megaton RV. Without superhardening, MIRV's could be relatively effective, as has been stressed by the Defense Department. Assume three 4-megaton IRV's per missile with 20% malfunction rate for the independent targeting but otherwise $\frac{1}{2}$ n.m. accuracy and $\frac{2}{3}$ reliability as assumed above. Then without superhardening about 1300 missiles (i.e., 4 RV's per silo) would be needed for an effective first strike against our Minutemen.

²⁷ Ref. 15 and Walter Andrews, Aerospace Technology, January 15, 1968.

²⁸ G. Rathjens, Scientific American, April 1969; I. F. Stone, New York Review, March 27, 1969.

²⁹ Some 41 Polaris submarines are presently in service; at least 31 of these will be equipped in the near future with Poseidon missiles. Proposals exist to equip the Poseidon missiles with multiple independently targeted warheads, MIRV's. Up to ten warheads per missile are contemplated. Assuming that ten warheads per missile are used, and there are 16 missiles per submarine, there will be 160 warheads available in a single Poseidon submarine. By Defense Department criteria just two such submarines constitute a massive deterrent.

The effectiveness of this SLBM (Submarine Launched Ballistic Missile) deterrent is dependent on the continuing mobility and invulnerability of the nuclear submarine. These factors will be compromised only if the U.S.S.R. develops an anti-submarine technology capable of detecting and continuously tracking all missile submarines in transit and on station. Rear Admiral Levering Smith, director of the U.S. Navy's strategic systems project, states that "he is quite positive that the Polaris system will remain relatively invulnerable for another forty years. He knows of no new Soviet anti-submarine warfare methods."

We note that from the standpoint of the arms race the SLBM is mainly a defensive weapon since it is neither highly accurate nor powerful and so would be ineffective against hardened sites.

³⁰ R. Lapp, ref. 8.

³¹ Another comparison cost is roughly \$10 billion to deploy the present Minuteman force.

³² The proposal by the AEC to build production facilities for these warheads was announced in 1967; the cost was \$32 million.

LEGISLATIVE PROGRAM

Mr. DIRKSEN. Mr. President, I ask the distinguished majority leader about the program for tomorrow and also tonight.

Mr. MANSFIELD. It is my understanding that today, after the general debate on the pending measure is disposed of, the distinguished Senator from West Virginia intends to call up the supplemental conference report.

For tomorrow, we will continue on the debate.

ORDER ADJOURNMENT UNTIL 11 A.M., TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent at this time that when the Senate completes its business this evening, it stand in adjournment until 11 o'clock tomorrow morning.

The PRESIDING OFFICER (Mr.

HUGHES in the chair). Without objection, it is so ordered.

Mr. YARBOROUGH. Mr. President, will the Senator yield for an inquiry?

Mr. MANSFIELD. I yield.

Mr. YARBOROUGH. Will committees be permitted to meet until 12 noon tomorrow?

Mr. MANSFIELD. Yes.

ORDER FOR RECOGNITION OF SENATOR HOLLINGS ON TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the distinguished Senator from South Carolina (Mr. HOLLINGS) may be recognized for not to exceed 40 minutes after the disposition of the Journal on tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT FROM THURSDAY, JULY 10, UNTIL 11 A.M., FRIDAY, JULY 11, 1969

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate completes its business tomorrow, it stand in adjournment until 11 o'clock on Friday morning, July 11, 1969.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR CHURCH ON FRIDAY

Mr. MANSFIELD. Mr. President, I ask unanimous consent that after the disposition of the Journal on Friday, July 11, the distinguished Senator from Idaho (Mr. CHURCH) be recognized for not to exceed 1 hour.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. YARBOROUGH. Mr. President, on Friday, will committees be permitted to meet during the 1 hour when the Senator from Idaho is recognized?

Mr. MANSFIELD. Yes.

Mr. DOMINICK. Subject to the right, however, of an objection—through the period for the transaction of routine business?

Mr. MANSFIELD. Yes. That is all the Senator is talking about.

Mr. HOLLAND. Will there be a period for the transaction of routine business?

Mr. MANSFIELD. Both mornings.

Mr. HOLLAND. The two Senators from Florida wish to introduce a bill at that time. It may take 15 minutes.

Mr. MANSFIELD. Fine.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Hackney, one of its reading clerks, announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 11400) making supplemental appropriations for the fiscal year ending June 30, 1969, and for other purposes; that the House receded from its disagreement to the amendments of the Senate numbered 4, 11, 13, 16, 27, 29, 31, 33, 38, 39, 43, 46, 51, 53, 54, 55, 56,

July 9, 1969

58, 60, 62, 87, 91, and 92 to the bill and concurred therein; and that the House receded from its disagreement to the amendments of the Senate numbered 6, 7, 8, 40, 42, and 90 to the bill and concurred therein, severally with an amendment, in which it requested the concurrence of the Senate.

ENROLLED BILLS SIGNED

The message also announced that the Speaker had affixed his signature to the following enrolled bills:

S. 1647. An act to authorize the release of 100,000 short tons of lead from the national stockpile and the supplemental stockpile; and

H.R. 3689. An act to cede to the State of Montana concurrent jurisdiction with the United States over the real property comprising the Veterans' Administration Center, Fort Harrison, Mont.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION, OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

Mr. FULBRIGHT. Mr. President, I do not wish to detain the Senator much longer. I think he misunderstood the point I was trying to make.

Actually, the hearings I am speaking of were not designed to try to find out what the Russians' political position is today, or the intrigue and gossip with the Kremlin, or even in the White House and in our own Government.

The point of the hearings was to try to understand what it is that has afflicted us and other people over the years in our ability to come to agreements which would avoid the creation of war.

We have had CIA representatives at our committee. We have had them on two or three occasions, as the Senator knows. Personally, I think they are probably the best information about the Russians in this area—not in the area I am speaking of—of any of the people the Senator has spoken of. When he mentions people like Fainsod, and so forth, they are experts, such as they are, with very limited personal acquaintance and knowledge in Russia. That is no fault of their own.

I have been told by Ambassador Llewellyn Thompson, as a matter of fact, that Senator ELLENDER, a distinguished Senator of this body, has seen more of Russia and knows them better than anybody in the State Department, more than

Llewellyn Thompson himself. Llewellyn Thompson told me that Senator ELLENDER was allowed to go places and to see factories and sites all over Russia that they would not allow Ambassador Thompson himself to see. In effect, Senator ELLENDER saw more of Russia than one of our Ambassadors who had been there on two tours of duty.

But this is not what I am talking about. I think it is a most unusual phenomenon that two great countries, we and the Russians, are unable—and it is not the first time—to come to some kind of *modus vivendi*. We cannot come to where we are able to stop this expenditure of our funds. In this country it amounts to \$80 billion this year, and we have created a situation, in the richest country in the world, that now threatens us with a form of bankruptcy—that is, in the sense of such high interest rates and such a shortage of credit that we are verging upon the creation of a panic. Something is wrong.

What I was trying to get at is what it is that makes these countries, the Russians as well as ourselves, take postures which make it almost impossible to come to an agreement. This year we are spending, in this budget, approximately \$80 billion. The Russians, to the best estimate of the CIA, are spending the equivalent in purchasing power of \$60 billion. It is a lot more than either one of these countries should be spending on arms.

What I am getting at is not how they devised their budget and all the other superficial and other arrangements they make. I am trying to find out why two great communities act like such fools. I do not believe anybody has studied it.

As a matter of fact, my committee had before it an anthropologist who said that in World War II this country sponsored a very intensive study of the Japanese with respect to what makes them tick, why they feel as they do about the Emperor, why they feel as they do about one another, how they feel about big business, and so forth. The researchers did a good job in that study and they made recommendations to General MacArthur which our Government followed, and which were beneficial and contributed to the American success in that operation.

I asked our witness: "Is there anybody to your knowledge making similar studies about the Russians?" He said, "No." That is the point I was making. We do not make a serious effort to understand the motivation of the Russians when we consider the kinds of programs we are discussing here today.

The CIA is the one Government agency that I have seen that has given me some hope that we have some people who are seriously trying to understand the Russians. I do not see anybody else who is trying to understand them. All we are doing is following the traditional way of dealing with possible enemies, by building more and more arms. Apparently it is the easiest thing to do although it is more expensive. That is all we seem to know how to do: More arms. What we are doing is not designed to bring about the kind of agreement the Senator from Kentucky (Mr. COOPER) spoke about a moment ago.

Mr. STENNIS. Mr. President, will the Senator yield to me briefly.

Mr. JACKSON. I yield.

Mr. STENNIS. Mr. President, I shall not elaborate. I think the Senator's speech and his discussion were outstanding. He is always outstanding in this field or in any other field he undertakes to become informed in. He has made a real contribution. Later I shall comment on certain paragraphs of his speech.

Mr. LONG. Mr. President, will the Senator yield?

Mr. JACKSON. I yield.

Mr. LONG. Mr. President, I compliment the Senator on his fine presentation. It has been my privilege during my service in the Senate to serve on the Committee on Armed Services and the Committee on Foreign Relations. It is very unfortunate that the Committee on Foreign Relations seems to have decided it should be the Committee on Armed Services. Their functions are entirely different. The function of the Armed Services Committee is to keep this country so strong that we can defend ourselves. Is that correct?

Mr. JACKSON. The Senator is correct.

Mr. LONG. The function of the other committee is to try to get along with other people.

I might say there was a time when I was on the Committee on Finance and the Committee on Foreign Relations. There were six members from the Committee on Foreign Relations who served on the Committee on Finance. The change of heart they had when they left that committee room was absolutely beyond belief. Six Senators would vote and then walk across the square to the Committee on Finance and be as tight as Dick's hatband because the whole thinking of the other committee is different.

The Committee on Foreign Relations would spend money and give it all away, with no feeling of responsibility; but the philosophy of the Committee on Finance is that we must pay for things, and we do not give away anything unless we get something in return. The difference in point of view was absolutely fantastic. Six Senators would walk across that square and vote diametrically in opposition to the way they voted in the Committee on Foreign Relations.

Finally, this Senator began to feel as if he were suffering from schizophrenia. Therefore, I resigned from the Committee on Foreign Relations so I could think one simple way: if I am going to pay something, I want to get something. If I do say so, I have been very happy with being on the Committee on Finance and the Committee on Commerce where one always thinks in terms of—"Let me see. Is this a good thing for Louisiana; or is this a good thing for America?"

I read this statement by Dick Goodwin. He said our biggest mistake was when we provided the Army with equipment to fight a war. He said that is why we are in the war in Vietnam and that if we had no weapons we could not fight and, therefore, there would be no war.

The logical extension of that philosophy would be that since we would have no weapons and no defense, we would just about have to apply for annexation

July 9, 1969

to the Soviet Union, and, in that way, avoid war.

Frankly, I think we should defend ourselves and we should have the strength and courage that goes with pride in our country. I think the answer is that we should be as strong as the other fellow. I take it that is the burden of the Senator's argument. We should be able to defend ourselves. As I understand it, the Senator is not saying we should overkill the other man, but just be able to defend American homes.

Mr. JACKSON. The basic problem we face is not new. It is the age-old problem of preserving and nourishing individual liberty. From time to time, an adversary has come to the fore on the world scene, in the form of a totalitarian society such as the Nazi dictatorship in World War II, or as we face today in the form of Soviet imperialism. The problem is basically, as I see it, the question of whether or not we are willing to do the things necessary to preserve and encourage individual liberty.

Mr. LONG. Mr. President, will the Senator yield further?

Mr. JACKSON. I yield.

Mr. LONG. It appears that what was said by Magsaysay in the Philippines is correct. He said, "Here are two things, my clenched fist and my open palm. You can shake my hand or if you want to fight I will fight you." That is the approach of Americans. We never had a war with the Soviet Union and there is no reason why we should. However, the best way to assure there will be no fighting is that we stay strong enough to defend ourselves.

Mr. JACKSON. Mr. President, I wish to conclude by saying what I said several times during my prepared remarks. I do not think there is any greater priority than the requirement to try to reach agreement with the Soviet Union to limit arms. Of course, this agreement has to be enforceable. I feel very deeply that we have the best chance of reaching an agreement from a position of strength, and if anyone has any doubt about how to negotiate with the Soviets, ask the Czech people.

Mr. YARBOROUGH. Mr. President, will the Senator yield to me for 1 minute in light of what the Senator from Louisiana has just said?

Mr. JACKSON. I yield.

Mr. YARBOROUGH. Mr. President, what the distinguished Senator from Louisiana said reminds me of certain expenditures we are making, and I think that in our debates on these different points we should bear in mind the question of national resources.

The budget for January called for \$5.2 billion in ammunition for 1 year in Vietnam. I thought there were 250,000 Vietcong and North Vietnamese soldiers there, but I checked with the distinguished Senator from Missouri (Mr. Symington), and he checked with the Department of Defense, and we are advised that there are 240,000 North Vietnamese and Vietcong soldiers in South Vietnam rather than 250,000.

Mr. President, assuming there are 240,000 North Vietnamese and Vietcong combat troops in South Vietnam, if one were to take \$5.2 billion which was asked

for ammunition alone for 1 year, that would be \$21,666.66 for ammunition alone for 1 year to shoot at each Vietcong and North Vietnamese soldier in South Vietnam.

If one were to take the estimated cost of the war of \$3 billion a month or \$36 billion a year and divide it by 240,000, being the number of North Vietnamese and Vietcong troops in South Vietnam, that would be \$150,000 a year to fight each Vietcong and North Vietnamese soldier in South Vietnam.

However, on schools we have requested a budget of \$2.3 billion for all elementary and secondary education for 52 million American schoolchildren.

That figures out to \$44 per year for schoolchildren in America, to educate them. In other words, \$44 for 52 million American schoolchildren, and \$21,666.66 a year just for ammunition to shoot at each Vietcong in Vietnam. If there is a more unsound, economic, domestic political policy, I cannot imagine what it would be. I think it is a piece of folly what we have done and are doing.

I do not wish to prolong this discussion. The distinguished Senator from Washington has said that he has yielded the floor but the Senator from Louisiana (Mr. Long) went into this question of priorities and throwing away money, and I thought I would add that footnote as to how we are really throwing it away.

Mr. PERCY. Mr. President, it would be my intention to make a few comments on the colloquy now going on, and then to yield to the distinguished Senator from Kentucky (Mr. Cooper) for the purpose of introducing an amendment; then to follow it up with some comments on a very important agreement reached with the West German Government today by the administration. But before doing that, I should like to yield to my friend from Arizona who has been patiently waiting for what he tells me will be a 30-second comment.

Mr. GOLDWATER. Mr. President, I thank the distinguished Senator from Illinois for yielding to me.

Mr. President, there was some discussion on the floor a short time ago about the Hudson Institute and the Lincoln Laboratory of MIT.

I have acquired some information which I think is needed and will be of interest to the Senate.

On the Hudson Institute, the percent of the budget which is defense funded for the fiscal year ending June 1968 is as follows:

Total budget \$1.36 billion; nongovernment \$370,000, or 27 percent; Department of Defense \$950,000, or 69 percent; other Government agencies \$40,000 or 3 percent. In the case of the Lincoln Laboratory at MIT, 100 percent of the budget is Government funded; 99 percent from the Department of Defense; and 1 percent from NASA, the National Science Foundation, and the Department of Health, Education, and Welfare.

Once more I thank the Senator from Illinois very much for yielding to me.

AMENDMENT NO. 68

Mr. PERCY. Mr. President, I yield at this time to the distinguished Senator from Kentucky (Mr. Cooper).

Mr. COOPER. Mr. President, I ask unanimous consent that I may submit an amendment, with the understanding that the Senator from Illinois (Mr. Percy) will not lose his right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. COOPER. Mr. President, I submit an amendment to S. 2546 on behalf of the Senator from Michigan (Mr. Hart) and myself. I ask that it be printed, and that it also be printed in the Record.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Chair would inquire of the Senator from Kentucky, does he wish to call it up at this time?

Mr. COOPER. No, Mr. President.

The text of the amendment is as follows:

At the end of the bill add a new section as follows:

"Sec. 402. Funds authorized to be appropriated by this Act or any other Act for the acquisition of an antiballistic missile system may be used only for research, development, testing, evaluation and normal procurement incident thereto, and may not be used for the deployment of an antiballistic missile system or any part or component thereof or for the acquisition of any site or preparation of any site for the deployment of any such system."

The PRESIDING OFFICER. The amendment will be received and will lie on the table.

Mr. PERCY obtained the floor.

Mr. GORE. Mr. President, will the Senator from Illinois yield for a question?

Mr. PERCY. I am delighted to yield to the Senator from Tennessee for a question.

Mr. GORE. Mr. President, has the Senator from Illinois noticed the shift in strategy, emphasis and the amended justification which has appeared yesterday and today?

Before the Senator answers that question, let me bring to his attention that when President Nixon appeared on television before the American people to announce his position with respect to the ABM issue, his principal reason given for recommending deployment of the ABM was that it was necessary in order to preserve the integrity of our deterrence.

When Secretary of Defense Laird appeared before the Armed Services Committee and the Committee on Foreign Relations, he said that deployment of the ABM is necessary "in order to preserve the integrity of our deterrents."

Now yesterday, in public comment, the able and distinguished Senator from Mississippi (Mr. Stennis), chairman of the committee, has put principal emphasis upon another point.

Both he and the Secretary of Defense have abandoned advancement of the earlier position.

Now, today, the distinguished Senator from Mississippi says that it is necessary to improve our bargaining position with the Soviets.

Today, the distinguished Senator from Washington (Mr. Jackson) poses his remarks on that point. The President has asked for it, he said; we must do it to strengthen our bargaining position with the Soviets.

We are back to the old canard of arming in order to parley. No longer is it ad-

July 9, 1969

vanced that deployment of the ABM is necessary in order to preserve the integrity of our deterrence.

Mr. President, if it is not necessary, then who wants this thing?

This basic point is no longer advanced. Read the colloquy now published by Secretary of Defense Laird. He retreated from that position. The Senator from Mississippi has retreated from that position. The Senator from Washington has now retreated from that position.

Now a new position is being taken, not that it is necessary in order to preserve the integrity of our deterrence, not that it is necessary for our defense, but that it will strengthen our bargaining position with the Russians.

Has not the Senator noticed that shift in emphasis?

Mr. PERCY. I had noticed that. I should make comment on it before we leave tonight, if I am able to make a few remarks. But right now I can classify such logic, most respectfully, as pure hogwash.

Mr. STENNIS and Mr. JACKSON addressed the Chair.

Mr. PERCY. Mr. President, I have been asked to yield to my distinguished colleague from New York, who has been waiting quite some time to make a short comment, and then I would be glad to yield to the Senator from Mississippi.

Mr. JACKSON. Mr. President, as long as the two Senators just referred to are on the floor and standing on their feet, I think that in all fairness, we should be heard.

Mr. PERCY. I am happy to yield to the Senator from Mississippi.

Mr. STENNIS. Mr. President, I do not want to prolong this argument on the ABM, but the Senator from Tennessee (Mr. GORE) is mistaken when he states he has noticed a change in my position. I say that with all respect to him. There is no change in my position about the ABM as a deterrence, nor is there any change in my thought that the President of the United States is going to negotiate.

I would hope he would not have the rug pulled out from under him before he speaks to the Russians by any Republican, Democrat, or anyone else—it does not make any difference who it might be. That is just commonsense. I have said that since January, somewhere along there. I continue to say that because that is my belief. We do not have to read any books to find that out. I thank the Senator from Illinois very much for yielding.

Mr. JACKSON. Mr. President, will the Senator from Illinois yield?

Mr. PERCY. I yield.

Mr. JACKSON. I want to say exactly the same thing. I have not changed my position regarding the ABM. I think it is very clear that it is needed to protect our deterrence. The fact that I relate it to negotiations at this time, I think, is most pertinent. It is important that the President of the United States, as a representative at the negotiating table, does not have the rug pulled out from under him. That is the way it will be interpreted, if we deny funds for ABM at this time.

That is my position, and I have not changed my views.

Mr. LONG. Mr. President, will the Senator from Illinois yield?

Mr. PERCY. Mr. President, I could comment further on that same point, but right now I yield to my distinguished colleague from New York (Mr. JAVITS).

Mr. JAVITS. Mr. President, there are two observations I should like to make on the remarks which have just been made by my colleagues on the question on negotiation. One is the dimension, which has not been mentioned sufficiently in debate, and I hope it will have the attention of all Members of the Senate; namely, that it is not so much what we can expect from the negotiators as they stand now, but what we can expect from them when they actually are in negotiation. It is my judgment, as one Senator—and I think there is a great deal of opinion on this subject—that the dimension of the negotiations will be very much more serious in trying to come to a big rather than a small agreement, from our deployment of Safeguard. That is a critically important point because of the impact on others.

If we are there with our hands for the moment in the cookie jar; that is, they have some kind of ABM and we have some kind of ABM, the result will be a mouse or the whole of the negotiations may amount to preventing atomic weapons on the seabed or something like that. We have got to put on an abrasive attitude toward committing ourselves not to deploy, and then we will be in there fighting for a big agreement through negotiation.

That is the very atmosphere and attitude that negotiations require if they are really going to meet what the world has a right to expect. Otherwise we are going to have people, as if in the grocery business, all of whom may have some kind of atomic weapons, arriving at little agreements, as a result of little "buy this" negotiations, and letting the press think they have done something big.

I think the greatest argument against deployment is that then we are really building a fire under our negotiators to do something appreciable, because we are running risks. The Senator from Washington is right, we are running risks. As the Senator from Kentucky (Mr. COOPER) has said, that is the very reason why we should do what we suggest be done, because the running of risks will enable us to get something big rather than something miniscule, which will be the case if we go on this way, and we will settle nothing until we get an atomic holocaust.

As the Senators from Michigan and Kentucky have invited Senators to ask to join them, I myself have the honor, with the permission of the Senate, to ask unanimous consent that I may be included as a cosponsor of the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. PERCY. I yield.

Mr. MANSFIELD. Mr. President, there has been a great deal of talk about negotiating from strength. The ABM sys-

tem is supposed to give us strength 6 or 8 years from now.

There has been some talk that the Soviet Union exceeds us in ICBM's, the Minuteman and Titan. I do not think that is applicable. I say that most respectfully, although I do admit that by the end of this year, according to our best intelligence estimates, they may be 25 or 30 ahead of us as far as ICBM launchers are concerned.

As far as sea launchers are concerned, at the end of last year there were 656 Poseidon missiles, compared with 45 missiles of similar type on Soviet submarines.

The third is in the intercontinental bombers, the B-52 and the B-58. This country had 645, and the Soviets had 150 of their bombers. I think the Soviet figure still would not exceed that, because it had gone down from 155 the preceding year.

So if we are talking about strength, we have it, and they know we have it.

Mr. PERCY. Mr. President, I ask unanimous consent to join as a cosponsor of the amendment submitted by the Senator from Kentucky and the Senator from Michigan.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PERCY. Mr. President, I yield to the Senator from Montana.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that I may be a cosponsor of the pending Cooper-Hart amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CRANSTON. Mr. President, will the Senator yield?

Mr. PERCY. I yield.

Mr. CRANSTON. Mr. President, I ask unanimous consent that I may join in the same manner.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PERCY. I yield.

Mr. GORE. Mr. President, I make the same request.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PERCY. Mr. President, I believe the debate this afternoon, the colloquy that followed the speech of our distinguished colleague from Washington, was extremely valuable. I think it is very important that the colloquy followed because of the very grim picture that was painted by the Senator from Washington (Mr. JACKSON) and the grim picture that was painted of the position of my distinguished friend and our former colleague in the House, Melvin Laird, which, if left unclarified, might cause some people to believe that we should erect an iron curtain; in fact, that we should triple-plate it; that the situation was so critical that we should insulate and isolate ourselves.

Yet we know that is not the interpretation the Secretary of Defense placed on it. In the concluding comment made by the distinguished Senator from Washington, he clarified completely that he did not intend that at all; that he himself earnestly hoped we could find a negotiated settlement of the arms race now going on; that we could find a way to deescalate the danger and the terror along

July 9, 1969

S 7785

the path on which the two nations are now proceeding.

I believe that this is the interpretation which all of us would like to place on these remarks, remarks the Senator had every right to make. He is not speaking for the U.S. Government or the administration. He is speaking as one Senator. There are people who would agree with every word in his speech.

The intention in this country, on the part of every President we have had in our time, whether Democrat or Republican, is to bring down the curtain, to perforate it, to bring about a thaw in the cold war, to try to normalize in every way our relations with the Soviet Union. That was the policy of President Johnson, President Kennedy, and President Eisenhower before them, and it is certainly the policy today of President Nixon. I do not think anyone would say that President Nixon is naive about communism or the Soviet Union, or their intention or their capability. He is alert to all of that. He has been a lifetime student of the Communist movement.

On the other hand, President Nixon has taken the initiative and he has set the tone for this country and the hope for the country in saying:

Let us work toward these negotiations. We are willing to start them as of July 31, the end of this month.

Certainly he has full expectation that those talks will be underway very early in August.

I do not think any one of us could say that the Soviet Union will negotiate an agreement with us that is just in our interest and not in their interest. No one would believe that they would, or even, perhaps, should. We are not unaware of the fact that we cannot hope to have an agreement with the Soviet Union unless it also serves the Soviet interest.

We have a coincidence of interests. Faced with a coincidence of interests, we have the opportunity for agreements. That was how we achieved an agreement on Austria. That was how we achieved an agreement on the testing of atomic weapons. We had that same coincidence of interests when we agreed on a non-proliferation treaty. It is hoped that we will have many more bases of accord in the future.

I would simply say that there is no question in anyone's mind that we must have a credible deterrent. In this respect I agree completely with the distinguished Senator from Tennessee. He has indicated, and I would indicate, that a credible deterrent depends upon two principal factors: First, the power to retaliate against anyone who dares to strike against us and, second, the will to use that power; and let no nation have any question about either point, the first or the second. We have the power. We have the will to use that power if attacked and if the free world is endangered by any nation.

Having said that, I think we can carry on this debate on the military procurement bill before us.

I think the way we carry this debate on will be exceedingly important. It is important because the Nation is watching us. The Nation is divided on many

issues. People are settling these issues in different ways. We are going to settle this issue with reason, not emotion. We are going to resolve our differences because we are 100 men with this great responsibility in this Chamber, equally divided, roughly, on one very important part of the military procurement authorization bill. But we are going to approach this problem by trying to analyze it, look at the conditions, look at the adversary, or the potential adversary, and look at and weigh all the alternatives.

I would like to say that I think it is with great pride that all of us will have this debate led by the distinguished chairman of the Armed Services Committee, the Senator from Mississippi (Mr. STENNIS).

I think we all have a good feeling about having that committee under his chairmanship, because he is a man of great intelligence, a man of utter fairness, as demonstrated time and again in his relationship to his colleagues, and a man of absolute integrity. It would be hard to fill the shoes, in this job, of Senator RUSSELL; but I think all of us, unanimously, including Senator RUSSELL himself, would feel that no one is better qualified; and in this instance, the national interest, the seniority system of the Senate, and the great ability of the distinguished Senator now holding the chairmanship all coincide.

I myself am very proud to have had the privilege, over the past 2½ years, of working with the Senator who will lead those who oppose the ABM deployment at this time. Senator COOPER, a distinguished Senator from a sister State of Illinois, has been a friend of mine for many years. I think he embodies the qualities which citizens want and deserve in their representatives. He is beloved in his own State; he is respected throughout the country. He is respected by every Member of this body, and by the President of the United States.

I have seen him study this issue as I have never seen anyone study any issue before. I have sat alongside him for well over a year now, as he has interrogated experts in the field of intelligence, the military field, and the appropriate scientific fields, to try to discover what the truth of this matter is.

He is a man of great judgment; and I think it is a remarkable thing that the battle will be headed by the two men probably best qualified to oppose each other. Each of them has come to a different conclusion after weighing the same set of facts. This is perhaps why the administration admitted, when they made the decision to go ahead with an ABM system, that it was a marginal decision.

It is a very difficult decision. We happen to think that we have the votes to win, and we will win in the effort to delay deployment, for a number of reasons; but we respect the judgment of those who take a different position than we do.

I should like to make a few comments that I put together this morning to answer, to a degree, the points that have been raised by the distinguished Senator from Washington.

The issue before the Senate regarding

the anti-ballistic missile system is between those who would start ABM deployment now and those who would continue research and development, testing, and evaluation to produce a more workable system than is now available if it should ever become necessary to deploy that system.

By continuing research, development, and testing, by not beginning deployment in the United States now, we can make the deployment decision later. That decision can be based on whether we can develop a system that will work and on what we learn of Soviet intentions at the forthcoming nuclear arms talks.

Proponents of starting ABM deployment now say it would strengthen the President's hand in talks with the Soviet Union. I would simply, respectfully, say that in my judgment this is hogwash.

The President will be in a strong position if the Congress orders continued testing, research, and development to make the now-vulnerable Safeguard system really effective. Hasty deployment of a highly vulnerable ABM system cannot possibly increase the credibility of our military defenses.

The Safeguard proposal for beginning deployment at sites in Montana and North Dakota will require early installation of today's vulnerable missile site radars—MSR's—and construction of ABM sites where realistic testing really cannot occur. It would freeze the system in an ineffective state.

It would make far more sense to redesign the radars, to test them at Kwajalein, and to deploy a full system out there where intercepts of nonnuclear missiles can be tested.

I am not a technician nor a scientist; but I was down here some 25 years ago as a procurement officer for the Navy. I spent some 25 years as a defense contractor. I have worked with the military over a period of many years, including 3 years in military service.

The situations I fear most, and the times I have gotten into the deepest trouble as an industrialist or as a procurement officer, have been when we rushed ahead with a system that was not yet ready for production. We invariably delayed, in the end, deployment or production. We delayed and frustrated the objective we were trying to achieve, in our haste to put into production something that was untested.

Proponents of immediate deployment contend that a year's delay will make it impossible to catch up with the proposed schedule of putting two sites in operation by the end of 1973 and making the whole system operational by 1975.

This is untrue. If we do not begin deployment now, but rather—and I for one would be willing—begin production of long leadtime components, we can at relatively small cost start deployment—should it later appear advisable—a year from now and still meet the Pentagon's schedule.

In my dedication to the security and national interest of the United States—and I know that my dedication is matched by the dedication of every other Member of the U.S. Senate—I will support, and I know every other Senator will

S 7786

support, whatever level of military spending seems required.

But I think the word "sufficiency," as used by the President of the United States, was one of the most significant words yet contributed to the vocabulary of this dialog.

I have not been convinced that deployment of the ABM will yield any net gain in national security. The fact is that this system in its present stage of design and development—even if approved by the Congress—will probably never be fully deployed because it has yet to be perfected as a weapons system. We need lose no time as we conduct arms talks with the Soviet Union, because we can use that time for development of less expensive, smaller radars which can be better defended than the present vulnerable design permits.

The main reason cited for ABM deployment is to deny the Soviets a preemptive first-strike capability. The fact is that it would be sheer lunacy for the Russians to attack the United States with nuclear weapons even without us having the ABM because:

First. The underwater Polaris fleet remains ready to strike a devastating response.

Second. At any time about 250 of our intercontinental bombers are on 10-minute alert, and their air-to-ground nuclear rockets would be part of the retaliatory strike.

Third. It is impossible that our entire Minuteman Titan force could be wiped out with one blow.

These are facts of which the biggest, rashest hawk in the Kremlin is well aware.

In order for the ABM to make sense, the Soviets would have to believe: First, they could with a sudden attack wipe out all our nuclear forces if we did not have it; and, second, our ABM would preserve enough of our nuclear forces intact to make any such Soviet attack suicidal.

However, the present ABM system is too vulnerable to provide such protection, and our overall missile forces are sufficiently protected to maintain a devastating second-strike capability without the ABM.

On the eve of the arms talks with the Soviet Union, let us continue—even accelerate—the research, development, and evaluation process. Let us also give ourselves a reasonable period of time to determine, in the words of Secretary of State Rogers:

If the Russians want to go out of the ABM business.

Then we can do the same same.

I urge that we do nothing that would in any way frustrate the success of these negotiations, nor do anything that would in any way appear to look cynically upon such negotiations, which I truly believe are in our common interest.

BALANCE OF PAYMENTS

Mr. PERCY. Mr. President, I want to commend the administration for its announcement today of a new 2-year offset arrangement with Germany to help defray U.S. military balance-of-payments

costs for maintaining U.S. troops in Germany. The new agreement goes a long way toward correcting the absolutely scandalous arrangements that have been concluded in recent years under which, on very short-term loans, at prevailing market rates of interest, we are paying interest on money to defend and to provide for the defense of Western Europe.

Speaking as one Senator, I think that those arrangements have been simply impossible to continue. And I think they would have imperiled our whole ability to support our level of forces in Europe.

The new 2-year offset arrangement is for \$1,513 million which represents around 80 percent of the total U.S. balance-of-payments costs in Germany. Sixty-one percent of the total offset will be in the form of purchases in the United States by Germany for a total of \$925 million. The other \$595 million will take the form of other financial transactions. The largest single other item is that Germany will buy \$250 million of U.S. Treasury bonds with a 10-year maturity at 3½ percent. This represents a considerable advance over past offset loans where interest rates were at prevailing market rates of interest. Even more important is that Germany is blocking interest on its past loans to the United States and leaving it in the U.S. Treasury. The \$32.5 million of interest will be applied to military purchases in the United States.

In addition, Germany is buying up \$118 million of Eximbank and Marshall Plan debts owed to the United States; is prepaying \$44 million of other German debts to the United States; and is setting up a special fund of \$150 million for German investment in the United States.

It is my understanding from the Under Secretary of the Treasury on the telephone this afternoon that that is the only part of the financial arrangement that will carry commercial interest rates.

This new agreement is a major step toward creating a sounder financial basis for U.S. expenditures in NATO in that it covers 80 percent of all our balance-of-payments expenses, primarily using purchases.

We must still strive for a 100-percent offset; an offset that involves only purchases and not loans. If loans are to be used, we must be absolved of any interest costs.

This is the principle that I was striving for when I presented a plan to the NATO North Atlantic Assembly in June for a multilateral automatic offset arrangement for all military expenditures within NATO. The principle is that no country should gain or lose on the military balance-of-payments account as a result of its commitment to the common defense of NATO.

The administration has taken a big step toward this goal, and I am encouraged that in the future we shall be able to arrive at an agreement that will automatically offset military expenditures 100 percent through the use of purchases in the United States. This would also eliminate the agonizing, and I would say disturbing, and some would say humiliating,

bilateral negotiations that endanger German-American relations.

As rapporteur—working chairman—of the Balance of Payments Subcommittee of NATO, I plan to continue my work toward this goal.

I know of no greater threat to the continuation of our current U.S. troop level in Europe than the balance-of-payments crisis that we face today. We must continue our efforts until we reach a total offset on our NATO military balance-of-payments account.

Mr. President, I yield the floor.

SECOND SUPPLEMENTAL APPROPRIATIONS BILL, 1969—CONFERENCE REPORT

Mr. BYRD of West Virginia. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 11400) making supplemental appropriations for the fiscal year ending June 30, 1969, and for other purposes. I ask unanimous consent for the present consideration of the report.

The PRESIDING OFFICER. The report will be read for the information of the Senate.

The assistant legislative clerk read the report.

(For conference report, see House proceedings of July 8, 1969, p. H5620, CONGRESSIONAL RECORD.)

The PRESIDING OFFICER. Is there objection to the present consideration of the report?

There being no objection, the Senate proceeded to consider the report.

The PRESIDING OFFICER. The Senator from West Virginia is recognized. Mr. MUNDT. Mr. President, will the Senator yield?

Mr. BYRD of West Virginia. I yield.

Mr. MUNDT. Mr. President, I think we should have a short quorum call.

Mr. BYRD of West Virginia. I agree. Mr. President, I ask unanimous consent that I may put in a brief quorum call without losing my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, the grand total of the budget estimates of new obligational authority considered in connection with this bill was \$4,814,305,334. The House version of the bill recommended \$3,783,212,766, and the Senate version of the bill recommended appropriations of \$4,459,669,644. The Senate will recall that subsequent to the House committee consideration of the bill, supplemental emergency requests submitted directly to the Senate amounted to a figure in excess of \$450 million. The final bill agreed to in conference is in the amount of \$4,352,357,644. This is a reduction under the total

Senate

WEDNESDAY, JULY 9, 1969

The Senate met at 11 o'clock a.m. and was called to order by the President pro tempore.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Almighty God, creator, preserver, redeemer and judge, infuse our hearts and minds with Thy higher wisdom that we may measure these days against the long years yet to come, and to judge our daily actions by Thy divine decrees. Invest our deliberations and our decisions with eternal meanings, that generations to follow may call us "blessed." Pour out Thy blessing upon this land that we may present unto Thee a nation cleansed, and redeemed. Equipped with righteousness and justice, with grace and generosity, may we have a part in Thy great redemption and at last establish the peace of Thy kingdom. Amen.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Tuesday, July 8, 1969, be dispensed with.

The PRESIDENT pro tempore. Without objection, it is so ordered.

LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that statements in relation to the transaction of routine morning business be limited to 3 minutes.

Mr. DOMINICK. Mr. President, reserving the right to object—and I shall not object—I wonder if it is possible to get consent to go beyond 3 minutes.

Mr. MANSFIELD. Oh, yes.

Mr. DOMINICK. I have a 7- or 8-minute speech.

Mr. MANSFIELD. Surely.

Mr. DOMINICK. I have no objection.

The PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider the nomination of George H. Goodrich, of Maryland.

There being no objection, the Senate proceeded to the consideration of executive business.

The PRESIDENT pro tempore. The nomination will be stated.

DISTRICT OF COLUMBIA COURT OF GENERAL SESSIONS

The assistant legislative clerk read the nomination of George H. Goodrich, of

Maryland, to be an associate judge of the District of Columbia court of general sessions for the term of 10 years.

The PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of this nomination.

The PRESIDENT pro tempore. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to, and the Senate resumed the consideration of legislative business.

ORDER OF BUSINESS

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. MANSFIELD. I am delighted to yield.

The PRESIDENT pro tempore. The Senator from Mississippi is recognized.

Mr. STENNIS. I thank the majority leader for yielding to me.

Mr. President, speaking as chairman of the committee, it is my concept that it is the committee's duty on the pending matter, the military authorization bill, to do everything possible to get this matter fully presented to the jury, so to speak—to the Senate.

The bill contains many major matters of far-reaching importance that go to the vitals of our security.

Second, I have a very strong feeling about the debate being conducted in open session as much as possible; and only with respect to classified matters that I thought were of the utmost importance would I think of anything other than an open session.

Third, if we can avoid going over the same matter a second time in closed session, I think we should do so.

So, in an effort to continue getting this bill fully presented, not only from my viewpoint, but also from that of all other members of the committee, I believe it would be better now to proceed in this manner: that the Chair have it understood that the Senator from Maine (Mrs. SMITH), who is the ranking minority member of the Committee on Armed Services, will be recognized soon today, to present her views on the bill as a whole. This would further present the picture as we developed it in the committee; that then the two subcommittee chairmen, the Senator from Nevada (Mr. CANNON) and the Senator from New Hampshire (Mr. MCINTYRE), and the minority members of those subcommittees be given an op-

portunity to present their views. Of course, this would all be in open session.

I am not attempting to lay out any pattern for the Chair. I am simply making known the purpose and desires of the committee in presenting this bill.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. STENNIS. I yield. I have discussed this matter briefly with the majority leader.

Mr. President, will the Senator from Montana yield, to permit me to make one additional point?

Mr. MANSFIELD. I yield.

Mr. STENNIS. I wish to emphasize that to make the debate meaningful on matters that ought to be heard in a closed session, I shall judge later as to when I shall ask for a closed session. But I express the hope now, and say for my own part, that it is my hope that we will try to consolidate such matters in one closed session.

Mr. MANSFIELD. That is fair enough. So the Senate is on notice that there will not be a closed session today.

Mr. President, I ask unanimous consent that the order entered yesterday to that effect be rescinded.

The PRESIDENT pro tempore. The Chair is advised by the Parliamentarian and the journal clerk that no order to that effect has been entered.

Mr. MANSFIELD. That is correct; it was an understanding.

The PRESIDENT pro tempore. Then the understanding is withdrawn.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. DIRKSEN. Mr. President, I think that in this dialog it should be abundantly clear to all that, if there are minority Senators who believe they have matters that ought to be presented in a closed session, they will not be precluded from making that request. Of course, any Senator can so move.

The PRESIDENT pro tempore. The Chair thinks he should make an observation. The rule of recognition in the Senate provides that "the Presiding Officer shall recognize the Senator who shall first address him." It is in the discretion of the Chair to recognize Senators under this rule.

By tradition and through custom that has existed for many years, the Chair does, as a rule, give priority of recognition first, to the majority leader; second, to the minority leader; then to the Senator who is in charge of a bill; and next to the ranking minority member of the committee or other Senators concerned with presenting the bill. I know of no rule or custom at present that goes beyond that practice.

Every member of the committee—indeed, every Member of the Senate—who wishes to have an opportunity to do so,

S 7717

in the present status of the case, will be afforded an opportunity to speak to his heart's content on this particular issue.

Every Senator who wishes to speak will be recognized in due season, unless the Senate, by unanimous consent, limits debate and precludes him from doing so.

Mr. DIRKSEN. I was addressing my remarks particularly to rule XXXV, under which a Senator can move for a closed session. If his motion is seconded, the rule is automatically invoked by the occupant of the Chair.

The PRESIDENT pro tempore. That, of course, is correct. But any Senator may be recognized, and it might be that before a single word were said in debate in closed session, a motion could be made to return to open session. If a majority of the Senate so desired, they could return to open session.

Mr. STENNIS. Mr. President, will the Senator yield to me?

Mr. MANSFIELD. I yield.

Mr. STENNIS. Mr. President, it is not necessary to say this but I wish to kill any kind of inference that anyone has brought in that I was trying to exclude anyone. The rules speak for themselves. The Chair has so well stated the custom of the Senate about recognition and I think that is the correct rule. I was merely undertaking to explain to the Senate as a body what the committee was trying to do in presenting the bill.

Several Senators addressed the Chair.

The PRESIDENT pro tempore. Does the Senator from Montana yield and, if so, to whom?

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent, in view of the changed situation, that all committees of the Senate be permitted to meet during the session of the Senate today and I ask that attaches notify the committees that are in session to that effect.

The PRESIDENT pro tempore. Without objection, all committees of the Senate will be permitted to meet during the session of the Senate today.

The Senator from Montana has the floor.

ORDER OF BUSINESS

Several Senators addressed the Chair.

The PRESIDENT pro tempore. The Chair understands that the Senate is operating under the 3-minute rule.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that I may proceed for 2 additional minutes.

The PRESIDENT pro tempore. The Senator from Montana requests that he may proceed for 2 additional minutes. Without objection, it is so ordered.

Mr. TOWER. Mr. President, will the Senator yield for a question?

The PRESIDENT pro tempore. Does the Senator from Montana yield to the Senator from Texas?

Mr. MANSFIELD. I yield.

Mr. TOWER. Mr. President, I would like to ask the distinguished majority leader, in view of this development now, it is possible, is it not, that the closed session would come on tomorrow?

Mr. MANSFIELD. Not necessarily. I would not think so. I think there will be some open discussion first and very likely the closed session will not come tomorrow. What I say is subject to change.

Mr. TOWER. I wish to propound a further question.

Mr. MANSFIELD. Yes.

Mr. TOWER. At the time the motion is made to close the doors will there be propounded a request relative to the presence of staff members on the floor?

Mr. MANSFIELD. There will, indeed.

Mr. TOWER. I would like to serve notice to the Senate that it is my current intent to raise an objection to any staff members being allowed on the floor during the time when the doors are closed.

Mr. MANSFIELD. For the information of the Senate, I have discussed this matter with the distinguished chairman of the committee, the Senator from Mississippi (Mr. STENNIS), and the distinguished minority leader (Mr. DIRKSEN) on the basis of precedents. There were four staff members outside of the regular members of the Committee on Armed Services who were permitted on the floor at the time of the last closed hearing. If this is going to get out of hand I think the only way to face up to it would be that no staff members, not even from the committee, be allowed because if each Senator is going to ask that his staff member be present I think the need for a closed session goes out the window because we have a hard enough time keeping our own mouths closed. If we get them in here the roof is going to blow off.

If this matter gets out of hand there will be no staff members allowed and that is the way rule XXXV reads. It refers to closed sessions as affecting Senators only.

The PRESIDENT pro tempore. The Chair would ask the clerk to read part 2 of rule XXXVI, which relates to this matter. There has been a good deal of discussion about who should be allowed on the floor. This rule very clearly establishes who shall be allowed on the floor.

The assistant legislative clerk read as follows:

RULE XXXVI EXECUTIVE SESSIONS

2. When acting upon confidential or Executive business, unless the same shall be considered in open Executive session, the Senate Chamber shall be cleared of all persons except the Secretary, the Chief Clerk, the Principal Legislative Clerk, the Executive Clerk, the Minute and Journal Clerk, the Sergeant at Arms, the Assistant Doorkeeper, and such other officers as the Presiding Officer shall think necessary; and all such officers shall be sworn to secrecy.

Mr. TOWER. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state his parliamentary inquiry.

Mr. TOWER. Mr. President, when the rule refers to officers of the Senate that would mean they would have to be officers of the Senate and could not be individual staff members. Is that correct?

The PRESIDENT pro tempore. Unless it was in the discretion of the Presiding Officer who could permit them under the language of this rule. But it has never been the custom or practice to allow it and the present Presiding Officer would

not permit the presence of any attachés, particularly if objection was made, and the Senator from Texas has indicated he would object.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. GOLDWATER. Mr. President, I wish to make one comment with respect to this possible request for advisers to be on the floor from the committees other than the Committee on Armed Services.

I think it is proper, if it could be allowed, to have experts from the Committee on Armed Services, but the Foreign Relations Committee has been holding hearings in the field of armed services, and they are unalterably opposed to many things that the Committee on Armed Services is for.

I think it would be a big mistake to allow people on the floor who come with a prejudiced or prejudged view on the matter of weapons, ABM's and so forth. It is the job of the Committee on Armed Services to present the case and not the Foreign Relations Committee. I may be wrong, but I do not think I am.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that I may be recognized for 2 minutes.

The PRESIDENT pro tempore. The Senator from Arizona can yield to the Senator from Montana.

Mr. MANSFIELD. Mr. President, will the Senator yield to me?

Mr. GOLDWATER. I yield the floor.

The PRESIDENT pro tempore. The Senator from Arizona has taken his seat.

Mr. MANSFIELD. One of the difficulties in this body with respect to the committee system concerns the infringement of authority and responsibility. Sometimes the line is drawn pretty thin, and it is hard to say where it lies. Nowadays, because the field of defense is so overlapping, it becomes increasingly difficult to determine where the responsibility of one committee begins and the responsibility of another committee ends. It is overlapping, it is a difficult question, and it goes beyond the committees here involved. I recall that the chairman of the Committee on Foreign Relations has had questions raised about certain hearings held by the Committee on Government Operations, which were in the field of foreign policy.

Mr. GOLDWATER. I am looking at it from a technical standpoint. The expertise in this matter is in the Committee on Armed Services and not in some other committee.

I am very happy that the distinguished Senator from Mississippi refrained from holding hearings on foreign policy. I think that is the job of the Committee on Foreign Relations.

Mr. MANSFIELD. Sometimes the two committees work together on a full committee or subcommittee basis. So far as expertise is concerned, there is enough expertise on the other side, on the anti-ABM side, that should be given consideration. With that in mind, I had a discussion on my own initiative with the distinguished minority leader to the effect that there should be equal distribution respecting staff floor privileges so that the same number of attachés or administrative assistants would be available on

each side. In that way no advantage could be achieved one way or the other.

I wish to express my deep personal thanks to the distinguished Senator from Mississippi for what he had to suggest when this matter was brought to his attention, when it seemed it might get out of hand. He stated that as far as he was concerned, he would be glad to bear the load himself and not have the two men from the Committee on Armed Services on hand.

Mr. GOLDWATER. The chairman can do that—

The PRESIDENT pro tempore. The time of the Senator from Arizona has expired.

Mr. GOLDWATER. Mr. President, I ask unanimous consent that I may proceed for 2 additional minutes.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

Mr. GOLDWATER. The problem that comes up in my mind is, Where do we put an end to this? If the Committee on Armed Services is allowed one for the majority side and one for the minority side and the Committee on Foreign Relations is allowed one, because I do not think there is any minority side to it, then some other Member comes up and says, "I have got an interest in this. I have done a great deal of studying on it. I have a brilliant young man who has spent the past 3 weeks studying this matter and I think he should be on the floor. If we start that, then I suggest that everyone is entitled to have some expert behind him.

Mr. MANSFIELD. I tend to agree with the Senator that we will end up by having no "experts" or none in an unofficial capacity on the floor. Perhaps that is the best way to handle the situation. Certainly, Senators are supposed to have mature judgment and a grasp of the subject which they are discussing in this Chamber. They should be prepared to undertake that responsibility to the full and take it unto themselves, solely, if necessary.

Mr. GOLDWATER. I thank the Senator.

S. 2570—INTRODUCTION OF A BILL PROVIDING FOR THE TERMINATION OF JET AIRCRAFT OPERATION AT WASHINGTON NATIONAL AIRPORT

Mr. DOMINICK. Mr. President, I ask unanimous consent that I may proceed in the morning hour for not to exceed 10 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. DOMINICK. Mr. President, I introduce a bill concerning aviation problems at the Nation's Capital. Specifically, my bill proposes to phase out the use of jet planes at Washington National Airport, transferring these plane operations to Dulles and Friendship International Airports.

The PRESIDENT pro tempore. Without objection, the bill will be received and appropriately referred.

The bill (S. 2570) to provide for the termination within 18 months of the use of Washington National Airport by jet

aircraft, and to develop a plan for high-speed surface transportation connecting the city of Washington with Dulles International Airport and Friendship International Airport, introduced by Mr. DOMINICK, was received, read twice by its title, and referred to the Committee on Commerce.

Mr. DOMINICK. Mr. President, I fully recognize that jets have been using Washington National regularly since they were first permitted at that airport in April 1966. During the ensuing 3 years or so, the operations involving jet planes have become rather deeply entrenched. Recognizing that to cause a withdrawal of such plane operations overnight would create an undue hardship on the carriers involved, I am proposing a gradual phaseout to cover perhaps 18 months from the time of enactment. I think this is only fair.

But I insist that the jets have got to go from Washington National.

This is not a snap judgment on my part, because I have been considering this situation for 3 years. Back in June 1966, I called the attention of the Senate to the problem that jet operations at Washington National were creating for the people of the metropolitan area.

At that time, I had written to Gen. William F. McKee, Administrator of the Federal Aviation Agency, protesting the jet operations at the airport. I based my protest on four criteria:

First, that the congestion of traffic at this busy air facility was made worse by the advent of jet operations.

Second, that the noise level had become particularly acute, especially in certain areas of the Metropolitan Washington region. With the coming of warm weather, resulting in open windows and increased outdoor activity, the frequent noise problem became all the worse.

Third, that the opening of Washington National to jet planes resulted in a transfer of activity from underutilized Dulles International Airport, which was designed and located to accommodate jets, to Washington National, which was not designed for them, and certainly not located with the jet in mind.

Finally, I pointed out that the use of jets at the close-in airport made use of this facility by general aviation less feasible.

There is, however, still another source of irritation and complaint which has grown steadily worse since the advent of jet aircraft at National. I refer to the sooty exhaust plume which is emitted from these jets as they land and take off over our city.

According to a report from the Secretary of Health, Education, and Welfare, pursuant to the Air Quality Act of 1967, aircraft operating out of Washington National Airport dumped an average of 17.6 tons of pollutants into the air over Washington every day during 1967. With the sharp increase in traffic at National since that time, a new measurement today would undoubtedly show a sharp increase in the amount of pollution being generated by this increased traffic.

Commercial air carriers alone conducted 238,224 landings and takeoffs at Washington National in 1968. Multiply that number of takeoffs and landings by

the average pollution emission of these aircraft and we reach the startling result that air carriers using Washington National Airport last year dumped 10,553 tons of pollution on the Nation's Capital.

Probably the most apparent objection by the people of the metropolitan area is, and has always been, their subjection to the noise bombardment every few minutes during heavy traffic periods. Here is what the Washington Post of April 26, 1966, had to say about the introduction of jet planes at Washington National Airport:

NOISE COMPLAINTS CONTINUE IN 2D DAY OF JET SERVICE AT NATIONAL AIRPORT

National Airport continued to be deluged by noise complaints yesterday while some airline officials, far from complaining, were citing increased passenger business as justification for bringing in the jets.

The Federal Aviation Agency received 223 telephone calls as of late yesterday afternoon complaining about airplane noise. The figure for Sunday, the first day of regularly-scheduled jet service at National, was 176.

The vast majority of complaints, according to the FAA, have come from the Georgetown and Foxhall areas. A few have come from neighborhoods south of the airport.

The jetliners landed mostly from the north and took off heading south on Sunday, so complaints from Georgetown and Foxhall mostly concerned landings.

The wind shifted yesterday, which meant the pattern was reversed with most take-offs heading north. The new jets' highly touted steep-climb capability apparently did not convince Georgetown and Foxhall residents that they were quieter than their predecessors.

Meanwhile, an American Airlines spokesman said that four of the company's six jet flights to Chicago on Sunday were "completely sold out, one was 80 per cent full and the last, the 10 p.m. flight, had 40 passengers. We had a much better day than usual to Chicago."

Eastern Air Lines reported 4740 passengers Sunday. A spokesman said business was up 5 to 7 per cent Sunday and was slightly better yesterday.

United Air Lines reported an 8 per cent over-all increase in passenger traffic.

An FAA spokesman said half of the complaints during the past 48 hours did not mention jets specifically, but just objected to "noise."

He also said, somewhat cheerfully, that there were 14 complimentary calls Sunday and 21 yesterday.

One caller objected to a twin-engine plane flying over the prohibited area between the Capitol and the Potomac. The National tower said they had not controlled the plane and had not even seen it. But the call prompted a careful records check. It was from the White House.

Mr. President, as I mentioned before, Washington National Airport was neither designed nor located to take on jet traffic. We have no less than the word of a former Federal Aviation Administrator on this.

During hearings on Washington, D.C., airports held in 1963 before the House Subcommittee on Transportation and Aeronautics of the Interstate and Foreign Commerce Committee, Administrator Najeeb Halaby was replying to a comment of Congressman FRIEDEL on the use of Friendship Airport. Administrator Halaby, referring to his predecessor at the Federal Aviation Agency, told the subcommittee:

Mr. Chairman, it occurs to me, in a sense the Federal Aviation Agency diverted traffic to Friendship Airport and gave it this great surge of traffic in the first 3 years of the jet age. If the Federal Aviation Administrator had wished to hurt, to be unjust to Friendship, he would have built up Washington National as a jet airport, and monopolized all the traffic. He didn't do that, sir. He refused the jets in there because Washington National is not built, designed, or set up for jet traffic. Therefore, the Congress built a new airport, in its wisdom.

Administrator Halaby, later in the same hearings, reiterated this specific point while commenting on the buildup of traffic at Friendship brought on by the jet plane. He told the subcommittee:

Then the jet came in and for the simple, artificial reason that the jet could not properly be accommodated by the Washington National Airport at Gravelly Point, they got an airfall, or windfall of flights into Friendship.

J. B. Hartranft, Jr., in a statement to the subcommittee on behalf of the Aircraft Owners & Pilots Association pointed out that Dulles was designed to serve jet traffic, while Washington National was not.

Mr. President, I insist that it is highly incongruous to foist jet traffic on overcrowded Washington National, which is not designed for such planes, while not doing everything possible to utilize Dulles, and perhaps Friendship, more since they are fully prepared for jet planes.

The maddening congestion which exists at Washington National not only tries the patience of passengers and employees alike, but is a serious hazard to the residents of Washington. Congestion is so bad lately that at times the shuttle flights between Washington and New York have been delayed from 1 to 2 hours in both directions. And under such conditions, a midair collision could result in losses of life and property damage of catastrophic proportions.

A statistical comparison of operations at Washington National with Dulles tells the full story.

During 1968, the total volume of non-military traffic at Dulles was:

[Takeoffs and landings]	
Air carriers.....	58,876
General aviation.....	98,128
Total.....	157,004

For 1968, the nonmilitary volume at Washington National was:

[Takeoffs and landings]	
Air carriers.....	238,224
General aviation.....	104,939
Total.....	343,163

So there we have it, specifically spelled out. Over twice as many operations crowded in at Washington National than at Dulles. And Dulles is handling a volume which is far below its capacity.

An Editorial Research Reports study, "Airport Modernization," published February 22, 1967, emphasized the point of deliberately underutilizing Dulles while overloading Washington National. The study declared that:

Dulles International, which opened in 1962, was intended to be the nation's first

jet-age airport. Located 26 miles west of Washington, Dulles in its 4½ years of operation has remained a jet-age white elephant, operating at a loss and accommodating only a fraction of the passenger traffic it is capable of handling. In part, this is due to the convenience of National in contrast to the 45-minute motor coach ride, at \$2.50 per person, to Dulles; cab fare to the city is \$13. The airlines serving Washington failed to shift sufficient flights from National to Dulles because of these factors. As a result, in fiscal 1965 National accommodated 6.5 million passengers while Dulles recorded a total of only 863,000 passengers.

Dulles suffered still another blow when the FAA decided in April 1966 to allow small jets to use National. Almost immediately National was serving 18,000 additional passengers a day, while Dulles was serving 15,000 fewer. Overloading of terminal facilities created chaos at National. Consequently, authorities ordered the airlines to limit combined operations to 40 flights an hour in order to cut the number of passengers crowding into the terminal, and a number of flights were shifted back to Dulles. Nevertheless, during calendar 1966 National served almost 8 million passengers while Dulles served 1.2 million.

Reports that consideration was being given to a \$200 million expansion of National to make it possible for larger jets to use the field provoked three dozen citizen groups to organize a campaign to phase aircraft operations out of the Potomac River airport altogether by 1970. FAA officials tried to damp down complaints about noise by requiring pilots in good weather to reduce power at 1,500 feet and follow the Potomac or Anacostia rivers until their planes reached the 3,000-foot level. But pilots contend that reduction of power is not safe, and citizens insist that the noise is not measurably reduced. An FAA study issued January 26 asserted that noise from the jets was no greater than from propeller craft, but the study convinced neither the irate residents nor the citizens' Committee Against National.

The President recently submitted a message to Congress outlining the problems of air transportation in the Nation. In it the President cautioned:

Existing jet ports are adding to the noise and air pollution in our urban areas . . . These important social and conservation considerations must be taken into greater account in future air systems development.

I think this is indicative of a growing awareness that jet aviation is a significant contributor to our urban air pollution problem, as well as the noise problem. And, recognizing the proximity of Washington National Airport to the city, this caution applies to that air facility. (At this point Mr. HOLLINGS took the chair as Presiding Officer.)

Mr. DOMINICK. Mr. President, the main attraction at Washington National, of course, is its proximity to the downtown area. In other words, the time-distance factor involved in transportation to and from the facility at Washington National compared to that for travel to and from Dulles Airport places the latter at a disadvantage.

In order to make Dulles more attractive to both carriers and travelers, and incidentally to realize a more equitable return on the obviously large investment at Dulles by way of utilization, we must plan and construct some means of rapid transit to connect the downtown area with the airport.

The problem of travel to and from airports has become a general one since

today's airport must be located at a considerable distance from the central city, as is the case of Dulles. In his message on the problems of air transportation, the President recognized that travel between the airport and the city required special attention, and he therefore stated:

Most important, government at all levels, working with industry and labor, must see to it that all aviation equipment and facilities are responsive to the needs of the traveler and the shipper and not the other way around. Transportation to airports, whether by public conveyance or private vehicle, is as much a part of a traveler's journey as the time he spends in the air, and must never be viewed as a separate subject. A plane travels from airport to airport, but a person travels from door to door. I have directed the Secretary of Transportation to give special attention to all the components of a journey in new plans for airports and airports improvements.

This is exactly what I have in mind, and what I am recommending for Dulles. Such a facility has already been built and placed in service at Cleveland. It was built with the assistance of Federal funds, and appears to be a success. It could serve as a model to serve other cities as a rapid transit link with their airports. The Cleveland facility is a rail transit line.

There are other possible types of rapid transit facility which could be adapted to serving Dulles and other major airports.

One possibility would be the use of a combination bus and monorail system. The bus would travel between the center city and the airport at high speed by suspension using an overhead monorail device. Then at either end of the trip, the bus would disengage from the monorail and travel conventionally. This system would combine the features of high speed for the city-airport trip with full flexibility while in the city and also at the airport.

A regular monorail system operating between the city and the airport would greatly aid the problem of travel to and from Dulles, if the bus-monorail plan would delay such a program or be considered not feasible. The George Washington Parkway, beltway, and Dulles express road affords the right of way needed for a monorail system.

But whatever the system decided upon, high-speed transportation to Dulles International Airport will aid materially in having this excellent terminal achieve its potential.

Mr. President, the people of Washington have waited patiently, and in vain, for relief from the evils that jet operations at Washington National thrust upon them. I fear that the situation will not correct itself, and that it will continue to grow worse. It is evident that only through specific legislation will a solution be found. The bill I am introducing is designed to accomplish this. It is my sincere hope that we act on this matter with all the haste and concern the situation demands.

Mr. President, I just want to say two things quickly.

I tried my living best to get General McKee to take some action on this matter. I do not know how long it was and how many letters I wrote and how many

tional program for farmers, and for other purposes.

The PRESIDING OFFICER. Without objection, it is so ordered.

§S. 2561

Mr. SCOTT. Mr. President, I ask unanimous consent that, at its next printing, the name of the Senator from Wyoming (Mr. HANSEN) be added as a cosponsor of the bill (S. 2561) to incorporate Pop Warner Little Scholars, Inc.

The PRESIDING OFFICER. Without objection, it is so ordered.

DISPOSITION OF FUNDS APPROPRIATED TO PAY A JUDGMENT TO CERTAIN INDIANS—AMENDMENT

AMENDMENT NO. 67

Mr. HARRIS submitted an amendment, intended to be proposed by him, to the bill (S. 885) to authorize the preparation of a roll of persons whose lineal ancestors were members of the Confederated Tribes of Weas, Piankashaws, Peorias, and Kaskaskias, merged under the treaty of May 30, 1854 (10 Stat. 1082), and to provide for the disposition of funds appropriated to pay a judgment in Indian Claims Commission Docket No. 314, as amended, and for other purposes, which was referred to the Committee on Interior and Insular Affairs and ordered to be printed.

AGM

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH—AMENDMENT

AMENDMENT NO. 68

Mr. COOPER. (for himself, Mr. HART, Mr. JAVITS, Mr. MANSFIELD, Mr. PERCY, Mr. CRANSTON, Mr. GORE, Mr. WILLIAMS of New Jersey, Mr. FULBRIGHT, Mr. SYMINGTON, and Mr. MONDALE) submitted an amendment, intended to be proposed by them, jointly, to the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorize personnel strength of the Selected Reserve of each reserve component of the Armed Forces, and for other purposes, which was ordered to lie on the table and to be printed.

(The remarks of Mr. COOPER when he submitted the amendment appear later in the RECORD under the appropriate heading.)

Mr. McGOVERN subsequently said: Mr. President, I ask unanimous consent that my name be added as a cosponsor to the amendment to S. 2546 offered by the gentleman from Michigan (Mr. HART) and the gentleman from Kentucky (Mr. COOPER) relating to deployment of and the acquisition of sites for an antiballistic missile system.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia subsequently said: Mr. President, at the request of the distinguished Senator from Massachusetts (Mr. KENNEDY), I ask unanimous consent that, at its next printing, his name be added as a cosponsor of the Cooper amendment to the bill (S. 2546).

The PRESIDING OFFICER. Without objection, it is so ordered.

NOTICE OF HEARINGS

Mr. BIBLE. Mr. President, I wish to announce that hearings have been scheduled before the Subcommittee on Parks and Recreation of the Committee on Interior and Insular Affairs on three bills to establish national historic sites in recognition of three of our great Presidents. They are:

S. 2000, to establish the Lyndon B. Johnson National Historic Site;

Senate Joint Resolution 26, to provide for the development of the Eisenhower National Historic Site at Gettysburg; and

S. 560, to provide for the establishment of the William Howard Taft National Historic Site.

The hearings will be held in room 3110, New Senate Office Building on Tuesday, July 29, 1969, commencing at 10 a.m.

Anyone desiring to testify on any of these proposals should advise the staff of the Senate Committee on Interior and Insular Affairs.

NOTICE CONCERNING NOMINATIONS BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nominations have been referred to and are now pending before the Committee on the Judiciary:

Farley E. Mogan, of Oregon, to be U.S. marshal for the district of Oregon for the term of 4 years, vice Eugene G. Hulet;

John O. Olson, of Wisconsin, to be U.S. attorney for the western district of Wisconsin for the term of 4 years, vice Edmund A. Nix.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in these nominations to file with the committee, in writing, on or before Wednesday, July 16, 1969, any representations or objections they may wish to present concerning the above nominations, with a further statement whether it is their intention to appear at any hearing which may be scheduled.

THE FAILURE OF VETERANS TO UTILIZE THE COLD WAR GI BILL IS A NATIONAL TRAGEDY

Mr. YARBOROUGH. Mr. President, one of the great disappointments of a democracy is when a law is passed for the benefit of the people, but the people who could benefit from it remain ignorant or unaware of the law and its potential.

One such disappointment is the cold war GI bill, which I sponsored and after

a long fight was finally enacted by the 89th Congress. The disappointment arises from the excruciating fact that only one out of 10 of the returning Vietnam veterans, who have not completed high school, have made use of the high school entitlement. This matter is discussed in a thoughtful editorial appearing in the San Francisco Examiner recently.

I have long felt that the Veterans' Administration is not doing an adequate job of informing these returning veterans of the opportunities available to them under the cold war GI bill. The editorial discusses the matter of utilization and poignantly focuses on this problem.

I ask unanimous consent that the editorial, entitled "GI Benefits," published in the San Francisco Examiner of June 7, 1969, be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GI BENEFITS

At a time when anti-poverty programs are being drastically curtailed it is ironic, to say the least, that so few eligibles are taking advantage of the solid economic elevator provided by the GI Bill of Rights. Figures made available by the Veterans Administration indicate that something is shockingly wrong somewhere.

After World War II, some 50 percent of veterans availed themselves of the GI bill help to get more education—the best possible route out of poverty and third-rate jobs. As of the first of this year, however only 19 percent of eligible Vietnam veterans were using the bill to get more training at colleges, vocational schools or on-the-job programs.

What is especially disturbing about the lowered figure is that an estimated 500,000 of the 2.7 million Vietnam veterans thus far discharged do not have even high school diplomas. Yet of the 500,000 only 21,000 today are taking advantage of a special high school subsidy.

Sen. Ralph W. Yarborough (D-Tex.), calling the situation a "tragedy," blames the VA for "not doing anything to get these men into school." He said the VA, despite the fact that the GI bill is virtually open-ended in funding, is soft-pedaling the education opportunities in order to hold down its budget. The VA vehemently denies the charge.

We simply do not know who or what is responsible, but we agree the situation is tragic—and inexcusable. Perhaps the VA, as it claims, is "doing more than ever" to inform returning veterans of all their GI bill benefits. Obviously much more must be done. Returning veterans in need of further education somehow must be persuaded to take wider advantage of the opportunities available, not merely "informed" of them.

DR. JOHN N. KNOWLES

Mr. DOLE. Mr. President, I do not know Dr. John H. Knowles, but I agree with the opinion expressed in the Tuesday, July 8, issue of the Evening Star, that the decision not to appoint him as an Assistant Secretary of Health, Education, and Welfare was apparently a proper one.

I doubt whether many Senators really had strong feelings for or against Dr. Knowles, and would also guess that his nomination would have been confirmed had his name been submitted and that I would have perhaps voted for its confirmation.

In retrospect, since Dr. Knowles is now becoming a spokesman not for medicine, but for what he considers to be the political ills of this country, I, for one, am thankful that he was not appointed. Apparently, Dr. Knowles is not content to concern himself with medicine, but he now poses as an expert on school guidelines and appears to have become an instant political analyst.

At any rate, I believe the editorial in the Evening Star, "Telling It Like It Isn't," will be of interest, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TELLING IT LIKE IT ISN'T

Dr. John H. Knowles, recently turned down by the President for the nation's top health post, says he "likes to speak out and tell it like it is."

He was talking in that context about Medicaid, which he called the "lousiest waste of taxpayers' money and the most ill-conceived program which ever came down the chute."

Being a medical man and a hospital administrator, Dr. Knowles may be qualified to pass judgment on Medicaid. But when he undertakes to diagnose the performance of the President, he not only fails to tell it like it is, he talks like a diagnostician who has never even seen a political medical school.

According to the Associated Press, Dr. Knowles told a Boston television audience on Sunday that the White House under President Nixon "is in the grip of the arch conservatives and progress is at a complete standstill." He went on to say that the influence of conservative pressure groups on the President is "absolutely catastrophic."

This doesn't sound like the pronouncement of a physician whose professional training should make him wary of hyperbole. Neither does it make any sense.

Let's take a look at the political record. Dr. Knowles says he sees Mr. Nixon as a man "who's got his finger on the pulse of 51 or 52 percent of the people involved in a conservative backlash—a swing to the right."

Last November the Nixon winning margin was about 43.4 percent of the total vote. If the latest Gallup poll is accurate, however, 63 percent of the people today approve of the way the President is handling his job. Only 16 percent disapprove, the others being listed among the "no opinions."

This massive expression of approval is hardly what one would expect in the case of an administration which, in a little more than five months, turned in a performance which is "absolutely catastrophic." Nor do the extravagant comments by Dr. Knowles reflect any mature understanding of the fact that Nixon, in contrast to Hubert Humphrey, campaigned as a relatively conservative White House aspirant.

All of which leads us to something of a word-eating reflection: Politics aside, maybe the President was right in deciding that it was better to leave Dr. Knowles in charge of the Massachusetts General Hospital than to name him as Assistant HEW Secretary for Health and Scientific Affairs.

THE PESTICIDE PERIL XXII

Mr. NELSON. Mr. President, an article by Hunter James, published in the Sunday Baltimore Sun, reviews the current controversy over the use of the persistent pesticide, DDT.

The article traces DDT from its initial development and use as a killer of

malaria, typhus, cholera, and Rocky Mountain spotted fever to its present threat as a killer of wildlife, fish, and potentially man. DDT has been linked to cancer, and some authorities predict an epidemic-like outbreak of DDT-related cancers within the next 10 to 30 years.

Mr. James reports:

The fear among scientists is not just that the cumulative effects of DDT may one day manifest themselves in horrible ways, but that the damage may be irreversible.

Most action responding to this alarming threat has been on the State level. Some States have banned its use outright, and many other State legislatures are presently considering similar proposals.

Alternatives to DDT are being studied. It appears that biological control—such as the use of natural predators—is one of the most effective and safe.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DDT—PERSISTENT PROTESTS, A LITTLE ACTION, GROWING THREAT

(By Hunter James)

A single-engine crop duster comes clattering down over the summer landscape. A cloud of DDT billows down, covers the young plants with a noxious dusty film, drifts with the wind across the surrounding fields and roadsides or into the nearby woods, killing the grasshoppers and junebugs as well as the boll weevils and tobacco worms.

And goes on killing them all summer long.

The deadly and lasting effectiveness of DDT has worried scientists since the day it came into general use. Unlike less potent insecticides, it does not break down and dissipate readily. It gathers over long periods in the soil and water, on the leaves of growing things, and in the fatty tissues of animals and man—and its effect is cumulative. That's what makes it so economical to use and also why it poses a threat to human life.

The threat has only recently become tangible enough to cause widespread alarm. And there are still those who believe that the good of DDT outweighs the bad.

SILENT SPRING

Invented in Sweden a quarter of a century ago, the compound has helped make American farms the most productive in the world. It has also been used to knock out malaria, typhus, cholera, Rocky Mountain spotted fever and other serious diseases.

But the clamor against DDT and its derivatives is big and growing. It began seven years ago with the publication of Rachel Carson's "Silent Spring," a book now regarded as an almost-classic statement on the subject of pesticide poisoning. Miss Carson cited massive kills of frogs, snakes and birds as evidence of the damage DDT can cause. The long-term effects are quite different, but just as deadly. In the American bald eagle, for example, the poison manifests itself in the reproductive process. Eggshells become too thin to protect the young, and for that reason the bald eagle and other magnificent species—peregrine falcon, osprey and others—rapidly are becoming extinct.

In man the effect may be even more subtle, even more dangerous. Numerous studies have linked DDT to cancer. The relationship has not been definitely established, but most scientists feel there is more than enough evidence to justify banning the stuff. Some authorities, including Dr. W. C. Hueper, former director of the Nation-

al Cancer Institute, believe there could well be an epidemic-like outbreak of DDT-related cancers within the next 10 to 30 years.

NELSON LEGISLATION

Last March, the Food and Drug Administration helped focus attention on the pesticides problem with a seizure of more than 21,000 pounds of coho salmon from warehouses in Wisconsin and Minnesota. A sample of the same batch of fish, taken from Lake Michigan, had been found to contain DDT residues of 12 to 19 parts per million, far higher than what had been found before and almost three times as high as the federal tolerance for beef.

The seizure brought prompt action from Robert Finch, Secretary of Health, Education, and Welfare. Despite opposition from five Republican governors in the Great Lakes region, he set a relatively stringent tolerance level for fish: five parts per million. Surprisingly, it was the first time there had been a limit of any kind. Mr. Finch also appointed a committee to investigate the pesticide menace and report back in six months with recommendations for bringing it under control.

Senator Gaylord Nelson (D. Wis.), more alarmed than his state's governor (one of the five opposing Secretary Finch's action) took the occasion to introduce legislation permanently outlawing the use of DDT. The frightening thing to him was that the pesticide residues in the fish had "probably traveled hundreds of miles through the air, water and soil" and had been "consumed through the normal food chain of up to a half-dozen organisms."

The senator is among those who believe that Miss Carson may have understated her case in "Silent Spring." Yet he has little hope that his bill will pass. He introduced a similar measure last year and the year before. Each time it died in the Senate Agricultural Committee.

LAWS ARE WEAK

Except possibly for the Food and Drug Administration, federal agencies have been singularly unresponsive to the threat posed by pesticides. Laws are weak and implementation weaker.

The Agriculture Department's Agricultural Research Service is the agency chiefly responsible for policing the registration, distribution and use of pesticides. If the government's General Accounting Office can be believed, the agency's performance has been inexcusably lax.

The GAO says the department has seized only a fraction of the products found to be below government standards and has repeatedly failed to take legal action against shippers accused of violating the law. Furthermore, the GAO says it has permitted food-handling establishments to use the pesticide Lindane despite reservations voiced by health authorities.

Although pesticide control is plainly a federal problem, since dust from Iowa can harm plants and wildlife in Nebraska, Congress has been reluctant to act. Most of what action there is exists in the states.

BIOLOGICAL CONTROL

About a third of them have no laws at all governing the use of DDT. Others, including Maryland, have recently adopted mild restrictions. Still others have banned it outright.

After the coho salmon seizure, the Michigan Agricultural Commission banned the sale of DDT indefinitely. Senator Nelson's state, Wisconsin, has been holding hearings on the problem for almost six months and will probably decide this fall whether to follow suit. After the first of the year California will not allow its use except in non-dust form. Arizona has banned it for a year, and the New York Pesticide Control Board wants it banned permanently except for emergency use. Rhode Island plans to out-

ABM Foes Bar a Retreat On Eve of Senate Debate

White House Shows No Sign of Backing Down as Showdown Is Forecast— Panel's Report Gives 2 Views

By JOHN W. FINNEY
Special to The New York Times

WASHINGTON, July 7—On the eve of the Senate debate on the Administration's Safeguard Antiballistic missile defense system, the bipartisan opposition assumed today a no-compromise stance toward the White House.

With the Administration

Text of Committee's report will be found on Page 12.

showing no signs of beating a retreat, the result was to set the stage for a showdown fight between the White House forces and the Senate opposition, with the outcome far from certain.

The Senate Armed Services Committee provided a backdrop for the fight today when it issued a report containing the

arguments for and against Safeguard.

The stiffening attitude of the opposition to Safeguard was summed up by Senator Mike Mansfield, the Senate Democratic leader, who commented: "If they don't want an accommodation, we just will have to battle it out." Senator John Sherman Cooper of Kentucky, the Republican leader of the opposition, seconded the Mansfield view.

After weeks of dropping hints that it was willing to accept a compromise that would save the Administration's face, the opposition has concluded that there is no White House interest in reaching an accommodation that would avoid a

Continued on Page 12, Column 1

Continued From Page 1, Col. 7

knockdown fight in the Senate.

White House officials in recent days have been suggesting that the Administration has prepared to accept some modifications, but none that would go far enough to satisfy opposition demands for a decision against deployment at this time of the Safeguard system.

Meanwhile, however, the White House, according to Republican Senators, has been preventing representatives of the opposition from seeing President Nixon—a policy that has only contributed to the new adamant stand of the opposition.

The Senators who oppose Safeguard deployment suspect that the White House, in its no-compromise position, may be misjudging its strength in the Senate.

At this juncture the Senate

is so closely divided that the outcome, as Senator Mansfield put it, is a toss-up. The opposition, however, is reasonably confident that it can command a bare majority, an assessment that has contributed to its new view that the initiative for a compromise must now come from the White House.

Strategy Session

Opposition Senators met this afternoon for a final strategy session for the debate, which is expected to open tomorrow or Wednesday and probably continue through most of July.

Tentative agreement was reported to have been reached on an opposition amendment that would preclude the use of any funds for deployment but permit the Army to continue with research and development on an antiballistic system.

In the Administration bill before the Senate, the Army has

requested \$345.5-million for procurement of radars and computers for the first two planned Safeguard sites in North Dakota and Montana. In addition, \$400-million is being requested for research and development and \$12.7-million for construction of Safeguard missile test facilities on Kwajalein Island in the Pacific.

The opposing arguments that will be heard over and over in the forthcoming Senate debate were set forth today by a divided Senate Armed Services Committee in a report on a \$20-billion military procurement bill that contains authorization for initial deployment of the \$10.8-billion Safeguard system.

The committee majority argued that the system was necessary to strengthen the President's hands in strategic arms control talks with the

Soviet Union and to protect the nation's nuclear deterrent against a growing Soviet Missile force.

Citing Mr. Nixon's statement that the system was "essential for national security," the majority unilaterally abandon all deployment of our ABM's, what incentive do we give the Soviets to negotiate with us a limit on a reduction in their ABM deployment?"

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment of the amendments and the third reading of the bill.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill (H.R. 11612) was read the third time.

THE MILITARY AUTHORIZATION BILL

Mr. STENNIS. Mr. President, I shall not delay the Senate. However, for the information of Senators present, the majority leader, the Senator from Montana, as I understand, if the pending bill is completed today, will be ready to make an announcement that the military authorization bill, with one slight exception, will be the next order of business. I would rather he make the announcement.

I shall have a few remarks to make about the debate on that bill. I hope that the Senators will stay after the rollcall.

MESSAGES FROM THE PRESIDENT—APPROVAL OF JOINT RESOLUTION

Messages in writing from the President of the United States were communicated to the Senate by Mr. Leonard, one of his secretaries, and he announced that on July 1, 1969, the President had approved and signed the joint resolution (S.J. Res. 123) to extend the time for the making of a final report by the Commission To Study Mortgage Interest Rates.

REPORT ON THE IMPLEMENTATION OF THE AUTOMOTIVE PRODUCTS TRADE ACT OF 1965—MESSAGE FROM THE PRESIDENT

The VICE PRESIDENT laid before the Senate the following message from the President of the United States, which, with the accompanying report, was referred to the Committee on Finance:

To the Congress of the United States: I hereby transmit the third annual report on the implementation of the Automotive Products Trade Act of 1965. The report contains information with respect to the United States-Canada Automotive Products Agreement, including automotive trade, production, prices and employment in 1968. Also included is other information relating to activities under the Act.

RICHARD NIXON.

THE WHITE HOUSE, July 7, 1969.

DEPARTMENT OF AGRICULTURE AND RELATED AGENCIES APPROPRIATIONS, 1970

The Senate resumed the consideration of the bill (H.R. 11612) making appropriations for the Department of Agriculture and related agencies for the fiscal year ending June 30, 1970, and for other purposes.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall the bill pass? On this question the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. KENNEDY. I announce that the Senator from Washington (Mr. MAGNUSON), and the Senator from Wisconsin (Mr. NELSON) are absent on official business.

I also announce that the Senator from New Mexico (Mr. ANDERSON), the Senator from Nevada (Mr. CANNON), the Senator from Hawaii (Mr. INOUE), the Senator from Connecticut (Mr. RIBICOFF), and the Senator from Alaska (Mr. GRAVEL) are necessarily absent.

On this vote, the Senator from Alaska (Mr. GRAVEL) is paired with the Senator from Connecticut (Mr. RIBICOFF). If present and voting, the Senator from Alaska would vote "yea," and the Senator from Connecticut would vote "nay."

I further announce that, if present and voting, the Senator from Hawaii (Mr. INOUE), the Senator from Washington (Mr. MAGNUSON), the Senator from Wisconsin (Mr. NELSON), and the Senator from Nevada (Mr. CANNON) would each vote "yea."

Mr. SCOTT. I announce that the Senator from Michigan (Mr. GRIFFIN) is absent on official business.

The Senator from Vermont (Mr. PROUTY) is necessarily absent, and if present and voting, would vote "yea."

The Senator from Delaware (Mr. WILLIAMS) is detained on official business.

The result was announced—yeas 88, nays 2, as follows:

[No. 55 Leg.]

NOT VOTING—10

Anderson	Inouye	Ribicoff
Cannon	Magnuson	Williams, Del.
Gravel	Nelson	
Griffin	Prouty	

So the bill (H.R. 11612) was passed.

Mr. HOLLAND. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. MANSFIELD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. HOLLAND. Mr. President, I move that the Senate insist upon its amendments and request a conference with the House of Representatives thereon, and that the Chair be authorized to appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. HOLLAND, Mr. RUSSELL, Mr. STENNIS, Mr. ELLENDER, Mr. HRUSKA, Mr. YOUNG of North Dakota, and Mr. MUNDT conferees on the part of the Senate.

Mr. MANSFIELD. Mr. President, it has been a great pleasure to witness again the handling of a measure by the distinguished senior Senator from Florida (Mr. HOLLAND). As the chairman of the Agriculture Subcommittee of the Committee on Appropriations, he has exhibited once more his superior managerial skill and ability.

This funding measure is designed to maintain our present farm program. May I say that as extensive and broad as that program is, every one of its many facets and features are thoroughly known and well understood by Senator HOLLAND. His outstanding advocacy, his great legislative skill and ability, his strong persuasive capacities were exhibited on this measure as they have been on all proposals that gain his endorsement. The Senate is grateful once again to Senator HOLLAND. The Senate's overwhelming approval of this funding bill adds another outstanding achievement to his already abundant record of public service.

Of course the swift and efficient disposition of this measure was aided immensely by the senior Senator from Nebraska (Mr. HRUSKA). His strong advocacy and his splendid cooperation were essential to this great success.

Others, too, should be singled out for their participation. The Senator from Delaware (Mr. WILLIAMS) is to be commended especially for his contribution in offering and urging his amendment. That may also be said for the distinguished Senators from New York (Mr. GOODELL and Mr. JAVITS), the Senator from Iowa (Mr. MILLER), and the Senator from Michigan (Mr. HART). These and other Senators joined to assure expeditious and efficient action today on this measure. The Senate is deeply grateful.

AAS AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

Mr. MANSFIELD. Mr. President, I move that the Senate turn to the consideration of Calendar No. 281, S. 2546, and that the bill be laid before the Senate and be made the pending business.

The PRESIDING OFFICER (Mr. ALLEN in the chair). The bill will be stated by title.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 2546) to authorize appropria-

Jackson, who said dieldrin is "five to fifty times as toxic as DDT," asserted that an earlier recommendation by a regional office of the Department of Agriculture called for dieldrin applications at Kelly Air Force Base, Texas, in highly dangerous amounts.

"Previous applications of this chemical in substantially the same dosages recommended for use at Kelly AFB have been shown to have devastating effects upon fish, wildlife, poultry and livestock," said Jackson.

In another suspension action, the Agriculture has cautioned that insect strips like Shell's No-Pest Strip Insecticide should not be hung where infants or ill or aged people are confined.

Shell has been notified to include on all future strips a cautionary statement to this effect, and to stop distributing any already-manufactured strips that do not carry such a statement.

Mr. HOLLAND. Mr. President, I have consulted with the Senator from Nebraska and we are willing to take the amendment to conference except that we want an understanding of the words in the fourth line of the Senator's amendment, "or substantially affected."

If we understand the Senator wants this to apply to the use of these prohibited pesticides within States, that is all right. However, what does he mean by the words, "or substantially affected?"

Mr. HART. Mr. President, that language is intended to respond to the problem—and let me localize it to Michigan—where if there were a national forest immediately adjoining the State of Michigan in Ohio, and there was no prohibition in Ohio against DDT, for example, and the application of DDT that close to our border would substantially affect the fish and wildlife in Michigan, then Michigan would be able to object to its use and persuade the Department to seek an alternative.

Mr. HOLLAND. Mr. President, I doubt if we could go that far in conference. However, I am willing to take the whole amendment to conference, having voiced my doubts about the words, "or substantially affected."

Mr. HART. Mr. President, I thank the Senator very much.

Mr. HRUSKA. Mr. President, I know the amendment comes at a late hour, but I do not object to its being accepted with the understanding that we might refine it further if necessary.

Mr. HART. I am very grateful.

The PRESIDING OFFICER. The question is on agreeing to the amendment. The amendment was agreed to.

Mr. MUNDT. Mr. President, I send to the desk an amendment and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 34, line 15, strike out "\$2,000,000" and insert "\$3,000,000."

Mr. MUNDT. Mr. President, I have discussed the amendment with the distinguished chairman of the subcommittee and the ranking Republican member, both of whom have agreed to its merit and I think they are willing to accept it.

In the 1970 budget the administration recommended an appropriation of \$3 million to enlarge the important new phase of the rural housing program, the so-called mutual self-help housing program for low income rural people.

The House reduced that amount to \$1,250,000. In our committee it was increased to \$2 million. My amendment brings the amount to the \$3 million recommended by the budget.

I point out that this is a new program and that about 3,000 additional low-income families can be helped if we provide the \$3 million.

In this housing, a lot of "sweat equity" is involved because farmers for low income land people not only take the assistance that is made available to them, but they also put into the housing a lot of their own effort, collectively and individually. I think that in terms of pride and dignity it is a very small investment in responsible citizenship. I heartily recommend that we increase the amount to the \$3 million recommended by the budget.

Mr. HOLLAND. Mr. President, the Senator from Nebraska and I are willing to accept the amendment and take it to conference.

I recently had a communication from the county agent of Collier County, Fla., in which Immokalee is located. The county agent tells me that the principal help in the way of housing for the migrant workers there in the last year has been from this particular program. He gave me the number of new homes created through this self-help machinery. Perhaps it has real meaning in places that are not big enough to have housing authorities.

I am glad to take the amendment to conference. I understand that my distinguished friend, the Senator from Nebraska, joins me.

Mr. HRUSKA. Mr. President, I am glad to join the distinguished Senator from Florida in accepting the amendment. I believe the matter should be given further consideration.

Mr. MUNDT. I thank the Senators.

The PRESIDING OFFICER. The Chair advises the Senator that the amendment would not be in order at this time.

Mr. HOLLAND. Mr. President, I ask unanimous consent that the former action of the Senate in agreeing to the committee amendment be reconsidered so that the Mundt amendment may be considered at this time.

The PRESIDING OFFICER. Without objection, it is so ordered.

The question is now on agreeing to the amendment of the Senator from South Dakota to the committee amendment.

The amendment was agreed to.

The committee amendment, as amended, was agreed to.

TEXAS LEGISLATURE ASKS \$220 MILLION FOR AGRICULTURAL CONSERVATION PROGRAM

Mr. YARBOROUGH. Mr. President, the agricultural conservation program is one of the most worthwhile programs I know, and I have supported it fully from the time I first came to the Senate in 1957. It reaches over a million farms each year and results in the application of the greatest amount of conservation measures to the land at the lowest cost per acre of any similar program.

I pointed out on July 2 in my statement before the Senate on the agricultural appropriations bill for fiscal year 1970 that the \$185 million recommended by the Senate Committee on Appropria-

tions was too low and that at least \$220 million should have been recommended. However, I also pointed out that the committee's recommendation was \$185 million over the administration's request, but lower than the House allowance.

I have a duly authenticated copy of Senate Concurrent Resolution 116 from the State of Texas which was passed and properly certified by both the Senate and the House of the Texas Legislature. This resolution shows the value of this program to Texas and the Nation. It also questions the wisdom of the attempted elimination of this program by the present administration and asks that the agricultural conservation program be reinstated at its former allocation level of \$220 million for fiscal year 1970. I agree with this resolution from the Texas Legislature, and think the \$220 million should have been allowed for the agricultural conservation program.

Mr. President, I ask unanimous consent that Senate Concurrent Resolution 116 as passed and certified by the Texas Legislature be printed in its entirety along with the names of its signers at this point in the Record.

There being no objection, the resolution was ordered to be printed in the Record, as follows:

SENATE CONCURRENT RESOLUTION 116

Whereas, President Nixon's 1970 fiscal year Budget proposes complete elimination of funds for the National Agricultural Conservation Program; and

Whereas, The Texas Legislature, through their appropriation and law making processes have always recognized the absolute necessity for state and national conservation programs; and

Whereas, The National ACP is the only conservation program available to all farms and ranches of the nation with its cost-share provisions designed to get widespread conservation participation from a maximum number of farmers and ranchers; and

Whereas, Spiraling population growth emphasizes the urgency for our land uses to be in accordance with the very best conservation measures; and

Whereas, This program more specifically affects approximately 300,000 Texas Farms and Ranches, consisting of approximately 150,000,000 acres of land; now, therefore, be it

Resolved, By the Senate of the 61st Legislature, the House of Representatives concurring, that the Agricultural Conservation Program of the United States be reinstated at its former allocation level of \$220,000,000 for the year 1970, that funds for this program be updated annually to meet the increasing costs of carrying out conservation measures, and that emphasis be placed on the need for these funds to reach as many farmers as possible in order to assure that the conservation message is fully reflected to the entire nation; and be it further

Resolved, That copies of this Resolution be sent to the President of the United States, the Secretary of Agriculture, Members of the House and Senate Agricultural Committees and to the entire Texas Congressional Delegation.

BEN BARNES,
Lieutenant Governor.

Speaker of the House.

I hereby certify that S.C.R. No. 116 was adopted by the Senate on May 30, 1969.

CHARLES SCHNABEL,
Secretary of the Senate.

I hereby certify that S.C.R. No. 116 was adopted by the House on May 31, 1969.

DOROTHY HALLMAN,
Chief Clerk of the House.

July 7, 1969

tions during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana.

The motion was agreed to; and the Senate proceeded to consider the bill.

Mr. STENNIS. Mr. President, will the Senator yield to me?

Mr. MANSFIELD. I yield to the Senator from Mississippi.

Mr. STENNIS. Mr. President, I wish to make a brief statement about what the committee has done in connection with this bill.

I think we are going to have a good solid debate about the bill on the floor, but I merely wish to point out now that it is a most important bill not only because it involves \$20 billion or more but also because it will necessarily greatly affect, perhaps to a large extent, the level of our national security in years to come.

During several months the Committee on Armed Services held hearings on the bill and then for several days, over a period of 2 weeks, the committee carefully considered the entire testimony, all of the items in the bill of any substance were passed on separately, and the committee has reported the bill to the Senate. The full text of the hearings, the index, together with the report and the bill in final form have been passed by the committee. This is a Senate bill which was delivered this morning at 10 o'clock or at 10:30 to the office of each Senator.

I shall present this matter tomorrow, and in a reasonable time, but going somewhat into detail as to the high points. I shall present the entire matter to the Senate.

We heard a great deal of testimony that was classified. That is true with respect to any bill that has important items in it such as this bill, which pertain to our security and conditions all over the world. There was a great deal of classified testimony of necessity about what may be the trend and success or failure of weapons developments by our potential adversaries or those that might be aggressors against us. The committee went into those matters more fully than usual. We received classified documents. Much of the testimony and debate had within the committee could be of the greatest benefit to any potential enemy.

It is apparent from press reports that there will be attacks on certain provisions of the bill. There are provisions in the bill which some Senators oppose, and there are provisions which some Senators favor. Other Senators oppose generally the military amounts, the general total amount; and they have expressed an intention to move to reduce that military authorization.

I wish to emphasize that I believe in the right of every Senator to oppose any bill in its entirety or any part of any bill.

There is nothing finer than to have a real and genuine debate. Each Senator is entitled to all relevant facts. Each Senator is not only entitled to know the relevant and pertinent facts to reach a decision on how to vote, but each Senator has a duty to become informed of the facts. Likewise, I have a duty as the so-called floor manager of the bill to inform Senators of anything I know to help them fully understand the reasons, circumstances, and justification of the authorization request.

What I am leading up to is this. Unfortunately, it is not possible to present all of those matters in open session. We cannot present fully the testimony we acted on in making these recommendations, and I say that for the same reason I have stated heretofore: This material would be of great benefit to our adversaries and compromise security to the extent that our military forces might now or in the future be placed in jeopardy.

It is for that reason that after I make my best efforts to bring out the whole issue and place it on the table, so to speak, I will make a motion under rule XXXV for a closed session. I have no doubt that a closed session will expedite the debate greatly, so that we may get all the facts before the Senate. As far as I am concerned, a closed session would not have to be extended, but the duration would be determined by Members of the Senate.

To refresh the recollection of Senators, rule XXXV merely provides:

On a motion made and seconded to close the doors of the Senate, on the discussion of any business which may, in the opinion of a Senator, require secrecy, the Presiding Officer shall direct the galleries to be cleared; and during the discussion of such motion the doors shall remain closed.

Mr. President, it will be with some reluctance that I shall make that motion. I have never done so before, but the comprehensive facts that have been developed and the far-reaching questions that are involved, the development of far-reaching weapons, the air and sea missiles all involve extremely sensitive testimony. For that reason I will make that motion at the proper time. I thought I should bring that to the attention of Senators today.

I have one other point that will involve a matter of security. The general rule, as Senators will recall, is that only those persons can be present in the Chamber who meet security requirements and have approval. Of course, that includes all Senators. Some of this information will be of the highest classification. Therefore, I give that notice now.

I thank the Senator from Montana for his consideration in yielding.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. STENNIS. I shall yield to the Senator in a moment.

I thank the Senator from Montana for yielding so that this matter may be placed before the Senate. I am not going to try to rush it but I hope we can have attendance that is better than average. I hope we can have nearly full attendance. I believe if we really get the facts we can pass on them in view of the

enlightenment we have. I believe sound decisions will prevail. The committee membership is familiar with this matter and they will help present the bill. We have subcommittees that conducted hearings and they will be called on.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. MANSFIELD. Mr. President, I am delighted that the chairman of the committee in charge of the bill which has just been laid before the Senate has indicated that he intends to move for an executive session. It will be my pleasure to second that motion because I think it is almost mandatory that there be a motion to that effect in view of developments which have occurred over the past several years, and not just this year.

I am pleased also to note that on this day 91 Senators are present. I would hope, health permitting, we would have attendance of nearly 100 Senators until the bill is disposed of one way or the other, because this will be the most important bill which will come before Congress this session. It therefore behooves all Senators, regardless of their feelings, to be here and if they feel like it to participate in the debate which will be undertaken.

The bill will not be disposed of this week. I doubt that it will be disposed of next week. I hope it will be disposed of before the end of the month.

Thus, I join the distinguished Senator from Mississippi in what he had to say in urging that all Senators be here, because this is a most important and worthwhile bill and certainly merits the attention of every Senator.

I thank the gracious Senator from Mississippi for making the announcement he did today so that the Senate is now on notice as to what to expect in the days and perhaps the weeks ahead.

Mr. STENNIS. I thank the distinguished Senator from Montana.

Mr. SYMINGTON. Mr. President, may I ask the distinguished Senator from Mississippi if he plans to give his position on the bill and, before there is further discussion, to ask for a closed session. I ask that because if there is to be a closed session, those of us who are apprehensive about certain aspects of the bill might like to present charts which could not be presented in an open session. Of course, it will take a little time to prepare those charts.

Mr. STENNIS. Yes. I was going to make a motion as the final part of my presentation of the bill on the major items in the bill that we would go on into a closed session.

Mr. SYMINGTON. Then would the able Senator yield for this further question: After he has presented the bill and had the closed session, would he have any objection if we had another closed session based on the testimony taken up to that time?

Mr. STENNIS. Well, does the Senator mean an additional closed session?

Mr. SYMINGTON. Yes.

Mr. STENNIS. I could not object to that. I would have no basis on which to object, even if I wanted to, but I would not object to that at all. I want a closed

July 7, 1969

session for the reasons I have already given.

Mr. SYMINGTON. I appreciate the sentiments of the Senator from Mississippi.

Mr. STENNIS. I thank the Senator.

Mr. PERCY. Mr. President, I have one brief question. I also commend the distinguished Senator from Mississippi for the procedure he has adopted. It will be extremely helpful.

My question is: We have staff members with classified clearance who could be of great help to us. In previous executive sessions, the Chamber has been cleared of all staff members. Would it be the intention of the chairman of the Committee on Armed Services to have staff members present if they have been cleared for classified material, and if so, whether classified, secret, top secret, whatever it may be?

Mr. MANSFIELD. Mr. President, I would have to object, much as I would dislike doing so. If anyone aside from those under the rules of the Senate were to be in attendance, I would wish to put him on notice now that I will object to any such consideration. I hate to do that, but I think there is no choice.

Mr. HOLLAND. Mr. President, first I wish to express thanks to the distinguished Senator from Mississippi for clearing today so that we could dispose of the agriculture bill. My question is: How long a notice does the Senator think we will have about a closed session? I ask this question because a week from Wednesday of this week is the beginning of the Apollo 11 voyage to the moon. I happen to know that many Senators have already indicated—and this would include the Senator from Florida—that they want to be there. Hence, we would like to have a couple of days notice ahead of time, because it would aid us materially in making our plans.

The Senator from Mississippi knows that I am not one to be away from the Senate, but I would certainly want to be on hand for that particular occasion so that I could plan with reference to the time limit ahead of the actual closed session.

Mr. STENNIS. Mr. President, with all deference to the Apollo 11 mission's going to the moon, I do not wish to offer a way we can stop some time next week. That is a matter to be worked out by the Senate. I think, I do not contemplate any secret session that will last later on into next week. My time will be fairly limited; but as to the other 99 Senators, of course, that would have to be determined by the Senate.

Mr. HOLLAND. All I am suggesting is that a couple of days' leeway or notice would be very helpful to me and to other Senators. If I have to be here, I shall be here. The Senator knows that. But a couple of days' notice would enable us to make our plans. We have all been asked. We have all been requested. Each Senator has been allowed to bring one member of his family if he cares to do so. I wish to bring my oldest son, who happens to be a marine veteran, subject to possible clearances, of course. But I would want to know if I could have a couple of days' notice ahead of time, be-

cause it would be very helpful to me and I know to other Senators.

Mr. STENNIS. That does not come until the middle of next week, does it?

Mr. HOLLAND. A week from Wednesday.

Mr. STENNIS. I think that is a matter solely for the Senate to determine, as to whether we recess for that day or what the Senate will do. I know that the secret session to which I refer will not last that long. At least I think it will not. I do not think there is any likelihood of it.

Mr. HOLLAND. All I am suggesting is that we have a day or two notice. It would be very helpful to me. I hope that the Senator will make some advance notice available to us.

Mr. STENNIS. I thank the Senator.

Mr. President, I yield the floor.

Mr. SYMINGTON. If the Senator from Mississippi will yield for just one more question, I was impressed with the suggestion made by the distinguished Senator from Illinois (Mr. PERCY), because this is a complicated matter. The books which are roughly comparable to the books now on Senator's desks today on the subject of the agriculture bill present in considerable detail the pros and cons of all the weapons systems. Those Senators who have the good fortune—as do I—to have listened to the hearings, and to have had the opportunity to study these weapons systems, and the pros and cons incident thereto, are in a fortunate position. But those Senators and their staffs who may not have been interested in it are in a less fortunate position. Therefore, if there is a closed session prior to discussion of the bill, it would appear to me that some Senators would not have the same advantage as others do in considering this very important bill.

Therefore, although I am entirely willing to accede, of course, to the position taken by the majority leader, I am in full agreement with the logic of the suggestion made by the Senator from Illinois.

Mr. MANSFIELD. May I say to the distinguished Senator from Missouri that the matter which he raised will, of course, be given consideration. I am fearful, however, that if we break the rule for one, we must break the rule for all. Hence, I am sure the Senator will understand, because of the peculiar situation in which a Member of the Senate finds himself in a closed session.

Mr. SYMINGTON. My position is not one of disagreement, but one of distress, because as we move to consideration of the bill on the floor, many Members are not as cognizant of the bill as members of the committee are.

Mr. MANSFIELD. With Senators like the Senator from Missouri, our experts will be available.

Mr. SYMINGTON. I would hope that staff people could be considered. Nevertheless, I accept the position of the Senator from Montana. My position was one of sympathy for the Senator from Illinois.

Mr. MANSFIELD. I understand.

ORDER FOR ADJOURNMENT

Mr. MANSFIELD. Mr. President, with the permission of the distinguished mi-

nority leader, concerning the request that the Senate come in tomorrow at 11:30 a.m., because both parties will have policy luncheons, I think it is better to ask unanimous consent that when the Senate completes its business today, it adjourn until 12 o'clock noon tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 1647—AUTHORIZATION FOR RELEASE OF 100,000 SHORT TONS OF LEAD FROM THE NATIONAL STOCKPILE AND THE SUPPLEMENTARY STOCKPILE

Mr. MANSFIELD. Mr. President, I ask unanimous consent that after the prayer and the reading of the Journal tomorrow, the Senate proceed to the consideration of House amendment to S. 1647, a bill having to do with the release of 100,000 tons of lead from the national stockpile and the supplementary stockpile. The bill passed this body but was amended in the House.

UNANIMOUS-CONSENT AGREEMENT

I ask unanimous consent that consideration of this amendment take place for not to exceed one-half hour, the time to be equally divided between the distinguished Senator from Missouri (Mr. SYMINGTON) and the distinguished Senator from Delaware (Mr. WILLIAMS).

The PRESIDING OFFICER. The Chair would ask the Senator from Montana, does that include any amendments thereto?

Mr. MANSFIELD. For the information of the Senate, there is a possibility that there may be a rollcall vote on the House amendment.

The PRESIDING OFFICER. The Chair would inquire of the Senator from Montana if it is a 1-hour limitation.

Mr. MANSFIELD. It is a one-half hour limitation, with 15 minutes to a side. There is only one amendment. That will be it.

The PRESIDING OFFICER. Is there objection to the unanimous-consent request of the Senator from Montana? The Chair hears none, and it is so ordered.

The unanimous-consent agreement reduced to writing is as follows:

Ordered, That during the consideration of the House amendment to S. 1647, an Act to authorize the release of 100,000 short tons of lead from the national stockpile and the supplementary stockpile, on Tuesday, July 8, 1969, after the prayer and approval of the Journal, debate on that amendment and all amendments thereto shall be limited to one-half hour to be equally divided and controlled by the Senator from Missouri (Mr. SYMINGTON) and the Senator from Delaware (Mr. WILLIAMS).

"WHY ABM?"—A FORTHCOMING BOOK BY HUDSON INSTITUTE

Mr. KENNEDY. Mr. President, later this month, on July 17, Pergamon Press plans to publish a book entitled "Why ABM?" The book is authored largely by members of the Hudson Institute of Croton-on-Hudson, New York.

All of us involved in the debate on the Safeguard ABM welcome additions to the already extensive literature on ABM. This literature includes numerous statements by the Department of Defense be-

July 7, 1969

CONGRESSIONAL RECORD—SENATE

S 7643

fore the appropriate congressional committees; a detailed series of questions-and-answers releases by the White House office; an extensive nongovernment analysis organized by Dr. Jerome Wiesner and Prof. Abram Chayes; continued reports by the Council for a Livable World; a pamphlet by the American Security Council; and numerous others.

We are best served at this point in the debate over ABM, I think, by credible, independent analyses seeking to answer the troublesome questions raised over the past 5 months. These include the ABM's workability; its arms race implications; its necessity; and other matters. Unfortunately, however, the Hudson Institute book does not appear to be an independent analysis. Rather, it appears to be one financed in part by the Department of Defense.

On March 27, 1969, the Hudson Institute signed a contract with the Pentagon's Safeguard Systems Command for a study effort entitled "Strategic Implications of BMD Response." The letters "BMD" stand for ballistic missile defense; the ABM, of course, is the principal measure proposed as a defense against ballistic missiles. The price of this study was set at \$34,973. Three months later, on June 20, 1969, this same contract was extended for an additional 4 months period, at a further cost of \$35,280. Thus, the Pentagon has contracted with the Hudson Institute for some \$70,253 for a short-range study of the strategic implications of responses to ballistic missile defenses. In other words, the Hudson Institute is examining, in part, what steps our adversaries might take in response to our ABM, and then what steps we would be forced to take in response to their steps, et cetera. Actually, the scope of work under this contract is classified secret—and thus not subject to public discussion.

This raises a number of serious questions.

Mr. Donald Brennan of the Hudson Institute testified in favor of the ABM before the Senate Foreign Relations Committee on March 28, 1969, ostensibly as an independent expert. Yet at that time the institute was under contract to the Pentagon for studies relating to the ABM.

The Hudson Institute, while under a Pentagon contract for this study, has apparently sponsored a book in favor of ABM deployment. Yet nowhere in the press reports is there an indication that Hudson Institute prepared this book while under Pentagon contract.

Only a few years ago there were revelations that the Government had, through contracts of this sort, arranged for the publication of books favorable to its positions without indicating the fact of Government support. The Congress acted at that time with an intent to forestall similar abuses in the future.

I do not think that the efficacy of the ABM debate is raised by this activity. We do not need more information from vested interests; rather, we need independent, objective, and skilled judgments. The Hudson ABM book does not appear to reflect this need.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. KENNEDY. I yield.

Mr. MANSFIELD. When I read in this morning's paper that a book on behalf of the ABM was being published by the Hudson Institute, I recalled that, for at least a decade, and very likely more, this institute has been under contract for research projects with the Pentagon. I have asked for some figures as to just how much the Hudson Institute has received as remuneration. Let me make it clear that I have no fault to find with the institute's publishing this book. But, at the same time, I think the special connection involved ought to be made very clear also. In going back only 3 years, including this year, the figures show that in 1967, this organization received from the Department of Defense \$713,000. In 1968 it received \$444,000, under a Democratic administration, I might say. So far in 1969, under both a Democratic and Republican administration, I would assume, it received \$873,000. That comes to about \$2 million covering 3 years, and the third year has not been completed.

I am wondering how much the Hudson Institute has received over the past decade or more, and I wonder how much it has produced in return. Aside from books and monographs such as this, I wonder what it has given to the Government for the money expended. I wonder how much of the research money, which comes to \$8 billion last year for the Department of Defense alone, has been siphoned to the Hudson Institute, the Rand Corp., colleges and universities, and other institutes in this country. I think that would make a most interesting study. And I would like to know the results, not to mention the subjects covered.

Mr. KENNEDY. Mr. President, in brief response, I think the figures that were placed in the Record by the majority leader are extremely important and significant. What troubled me in this regard, and what led me to comment on this matter, was the fact that Mr. Donald Brennan, of the Hudson Institute, testified on the question of the ABM before the Senate Foreign Relations Committee, ostensibly as an independent expert. I am sure some very serious questions are raised in the minds of all of us with respect to the relationship between the studies of the institute on the strategic implications of the ABM response for the Pentagon, which services were contracted for, and then the States given the later testimony of Mr. Brennan as an independent expert when he testified in support of the ABM. Now we have the announcement that the institute is going to publish this book.

As we begin what the majority leader has described as perhaps the most significant and important matter that will come before the Senate this year, we must come to grips with the problem of evaluation of evidence. It is timely that those questions be raised in order to evaluate the weight we ought to give various documents, statistics, and data as they are presented to us.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. KENNEDY. I yield.

Mr. GOLDWATER. In regard to the comments of both the Senator from Mas-

sachusetts and the Senator from Montana, I am sure they do not imply that we cannot trust the Hudson Institute. If we take that approach during the course of the debate, the Senate is going to be rather shocked at the tremendous amount of money that, under the guise of research and development, has been pumped into institutions in this country. From what I know about it, we might even talk about a 30-percent cut across the board without being hurt at all.

For example, Dr. Wiesner, of the Massachusetts Institute of Technology, is one of the receivers of Government money, but I do not for one moment regard Dr. Wiesner as having his judgment affected by the fact that he is one of the biggest contractors under the research and development funds.

I would feel very remiss in my concern about this whole question if I allowed the influence to stand that the Hudson Institute had done something under the table or something bad. Dr. Wiesner has testified in opposition to the ABM, I know Herman Kahn is for it and has testified in that manner.

It would be very difficult, in fact, at this stage of the game, to find some academic type who has not been on record publicly either for or against the ABM.

I am glad that the majority leader mentioned this matter. I hope I shall be able to present a complete inventory of these funds. I doubt that I shall be able to, because I can assure the Senator it is a tremendous outlay. But I think it is subject to some of the biggest cuts we can make in the military outlay.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. GOLDWATER. I am happy to yield.

Mr. MANSFIELD. I agree with the distinguished Senator from Arizona. I hope that he will not gather the impression that what was said by the distinguished assistant majority leader and the Senator from Montana carried any imputation or implication along the lines which the Senator thought he detected.

I was one of those who tried last year, and tried mightily, to bring about a 25-percent reduction in overhead cost for all of such research activity carried on by corporations and by universities and colleges. I had sweeping success in the Appropriations Committee, and resounding success on the Senate floor; but when the bill came back from conference, it was just another amendment which had lost its way.

The Massachusetts Institute of Technology is, I think, the recipient of the largest overall grant total for research from the Department of Defense; but I daresay that it is a rare university in this country which has not participated to some extent, which may or may not be a good thing. I should be happy to join the Senator this year in an effort to bring about a sizable reduction in cost of the research and development aspect of the Defense Department's activities, aside from missile projects and the like, and I would be hopeful that what the Committee on Armed Services has already accomplished—that is, to cut research by approximately \$1 billion—could be doubled on the floor this week or next.

July 7, 1969

I think the Senator understands the situation clearly. It is not a matter of imputation or implication; it is a matter of interest in how these funds are being spent, and what is achieved as a result of the spending.

Mr. GOLDWATER. I might say for the information of the Senate, and this will be brought out if it has not already been, that the full Senate Committee on Armed Services is divided into a number of subcommittees this year for the first time; and the Subcommittee on Research and Development, under the able leadership of the Senator from New Hampshire (Mr. McINTYRE), has turned in what in my opinion has been an outstanding job; but there is so much to uncover and to cover that it could not be done, in my opinion, in the time we have spent on it, which is about 5 months.

Mr. MANSFIELD. Will the Senator yield further at that point?

Mr. GOLDWATER. I yield.

Mr. MANSFIELD. I have boxes of documents this high, this long, and this wide [indicating]. I think it costs the Pentagon something on the order of \$100,000 to collect this information. May I say that when the Appropriations Committee became interested last year in the subject it did not know at the time what was being done in the middle and lower echelons as far as research was concerned. That was how widespread the problem was. It is very difficult to look into, because we can only make a start. There are as the Senator has pointed out, a terrific number of research projects which, in years gone by, the Pentagon has undertaken.

I do not blame the Pentagon. The blame must rest with us, here in the Congress, because all that had to be done, up until this year, was to ask, and the Pentagon received.

I am delighted that the subcommittee of which the distinguished Senator from Arizona is a member, and the full Armed Services Committee, were able to cut approximately \$1 billion from the research funds this year.

Mr. GOLDWATER. Mr. President, I should like to make a slight correction. I am not a member of that subcommittee.

Mr. MANSFIELD. The Senator should be.

Mr. GOLDWATER. But I am very much intrigued by it, because I had no idea of the extent of it. During my self-imposed sabbatical for 4 years, my former colleagues seemingly went rather wild on this subject of academic research and development. I do not mean research and development on such matters as bending iron or aluminum, or building things, but the kind of research and development for which I can find no relationship to the needs of the Defense Department. I hope—and this suggestion has been made to the chairman of the committee, who has shown great willingness to cooperate—that this subcommittee will be made permanent, with an adequate staff to go into these things, not just every year, but on a day-by-day basis.

I do not want the Senator from Massachusetts or the Senator from Montana to think I was reading into their comments anything that might imply dis-

honesty on the part of the Hudson Institute, but this can become a very emotional issue. I hope and pray it will not.

I think this is probably the most important issue this body will vote upon in many years. I believe the whole future of our country, nationally and internationally, rests upon what we can wisely do here, without permitting emotion to get into it.

I recall just the other day a citizen of our country, at his own expense, ran a full page advertisement in the newspapers, and was bitterly attacked on the floor of the Senate, even being called a liar. I hope we can discuss this matter in a gently and scholarly way. It will have to be discussed, and I know it will be.

Mr. KENNEDY. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield.

Mr. KENNEDY. In regard to the earlier reference to Mr. Weisner and MIT, the Record should reflect, that if there is a conflict of interest, Mr. Weisner's position on this subject would be likely to be against his own professional interests and those of MIT. In regard to Mr. Brennan and Mr. Kahn on the other hand, the record indicates that they decided matters consistent with the position and interests of the institution they represent.

I should also like to make just a further brief comment about MIT. Just last week, as a matter of fact, President Johnson and Dr. Killian came down to see me about the results of a rather extensive report that had been prepared by members of the student body, the faculty and certain select members of the alumni relative to the institute's position to the Lincoln Laboratories. The Lincoln Laboratories, as a matter of record, receives extensive funding from the Defense Department. The study indicates great interest in trying to find new directions to move in, away from the heavy dependence upon the Defense Department for funding of its activities. Many other great universities have similar connections with institutions which depend in significant measure upon Defense Department Research and Development funds and it is a source of concern to students, faculty and alumni.

Another example of this conflict is Stanford University and the Stanford Research Institute, with the latter receiving approximately half its operating budget of \$64 million from the Department of Defense.

I think it was to the credit of MIT, the faculty, and student body as well as the alumni, that they have really taken the bit in their teeth in seeking to determine what can be done to solve this dilemma. I think the position they have taken is a wise one, and the universities should be assured that we who are in Congress are going to have to try to find ways that we can help assist those institutions which have developed this dependency, to move out into other fields.

Mr. GOLDWATER. Mr. President, I am glad that the Senator has that attitude. I know that MIT has it; and I know that Stanford and many of our top universities engaged in nuclear re-

search, physical research, and so forth, will want to take another look at the problem.

But I think we also have to keep in mind that a lot of weapons are being dreamed up in the laboratories of these institutions. Though rarely do weapons systems come flowering full blown off the drawing boards of astronomical or aeronautical researchers, I think the future of our country will depend more and more upon the academic sector. I think our job is to help them determine what their guidelines should be as to their participation and what they should do, and get along further with handling the buck which, to paraphrase an old friend, stops here.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield to the Senator from Colorado.

Mr. DOMINICK. I wish to add one thing to what the Senator from Arizona has said, and that is that, while I can understand why we should oversee carefully the work carried on by the academic community under Defense Department auspices, I think it well to remember that until we can achieve a world in which everyone lays down his arms, we will have to continue doing research and development work.

If we do not have the academic community for assistance, it means we will have to do it in haste which, once again, means that the cost and the imagination and the ability to get this done as economically and feasibly as possible would be lost.

I would hate to see us do that. I have heard it said on the floor that we ought to get the ROTC out of the colleges. Yet young people whom I have talked to say they do not want the military, because they do not think the people are educated enough. I say, "If you want that, why do you not let the ROTC go through the colleges and get them into the military?"

It makes no sense to me to throw them out when we need educated officers.

We have to be careful in our analysis and not let emotion run away with us and say that we do not want a war and so we are going to get out of the whole situation.

Mr. PELL. Mr. President, in connection with what portion of the Hudson Institute funds comes from the Department of Defense, I happened to ask Dr. Donald Brennan of the Hudson Institute that very question when he appeared before us in open session.

Dr. Brennan's reply quoted on page 383 of the hearings before the Subcommittee on International Organizational Disarmament Affairs for March 28, 1969, was:

The proportion would be perhaps three-fourths.

That would mean that only one-fourth of the funds of the Hudson Institute come from any sources anywhere, private or governmental, in the United States other than from the Defense Department.

Mr. GORE. Mr. President, the more Senators know about the ABM question, the more Senators in my opinion will

July 7, 1969

S 7645

oppose the deployment of an ABM weapon system.

When the question was before Congress heretofore, my subcommittee held extensive secret hearings. So far as I know, no secrets were withheld from the committee. But much information essential for a public judgment upon the issue was withheld from the public and from the Senate generally, except that any Senator, of course, could go to the committee rooms and obtain from the vaults the secret testimony and there read it.

This year, upon my recommendation, the subcommittee concluded to have public hearings. We felt that it was essential to involve the American people in this very important, very basic decision.

The hearings, as Senators know, have been extended. Members of the intelligence community and the universities, scientists, engineers, and authorities made themselves available by the hundreds to testify.

It has been, I believe, truly an educational experience. At the beginning of that hearing the opposition to the deployment of ABM was very much in the minority. As information accumulated, so did opposition.

So far as I know, no secret information has now been withheld from my committee. Therefore, we are fully prepared to debate it in secret session. I shall bring to the floor of the Senate numerous secret documents, including the testimony of the CIA. Nothing will be withheld from the Chamber. The more Senators know about the ABM, the more Senators will be opposed to it. I intend to afford them the opportunity to know the full story.

I know what the secrets are. What are they? They involve intelligence, intelligence estimates, sources of intelligence. They involve the yield of weapons, the geometry of weapons, trajectory, time elements, details of computers, radar, and so forth.

The secret information is largely technical.

Mr. President, there is ample information available not only to the Senate but also to the American people with which to reach a decision upon the central issue involved.

What is the central issue? It is whether or not it is necessary to deploy an antiballistic defensive weapon system, the ABM, in order to preserve the integrity of the U.S. deterrence against a nuclear war.

This is the principal basis upon which this deployment is advanced. In the words of both the President and the Secretary of Defense, ABM deployment is necessary, "to preserve the integrity of our deterrence."

Is it? Is it? That is the central issue, and on that we have joined issue. It is neither necessary nor advisable.

Why is it not necessary? It is not necessary because our country has massive power of retaliation in a variety of categories—Minutemen, the ICBM's in our Minute silos, intercontinental airplane bombers, our nuclear submarine fleet, missiles on foreign bases, planes on foreign bases, tactical weapons under our command in the NATO forces, nuclear missile launches aboard surface vessels.

There are so many and so much that our country has the power to lay 48 weapons—each one 50 times as powerful as the one that destroyed Hiroshima—on each of Russia's 50 largest cities. But Mr. Laird in public testimony on television before the American people, with millions of people listening and watching, said the Soviets are going for a first strike capability. Then he added, "There is no question about that."

Mr. President, there has been no intelligence estimate of the National Board of Intelligence to support that conclusion. And that information will be brought here in detail before the Senate.

Throughout this fight, there has been an attempt to spread an aura around the ABM, an aura of secrecy and thus win by secrecy what cannot be won in public debate in the light for all to see.

The Pentagon and the Pentagon projects thrive on secrecy. But Senators shall know.

I say the essential facts necessary to reach a judgment upon the central issue are publicly known, and I am proud to have had a part in making them publicly known.

Oh, yes. Mr. Laird says that deployment of ABM is necessary to preserve the integrity of our deterrence; therefore, he says, we must deploy ABM.

Is it necessary? The answer is "No," because of the magnitude of this country's retaliatory capacity. Deterrence has two parts: First, the power to retaliate with devastation upon an enemy who should attack the United States; second, the will to use that power. There is no question that the United States has the power; and if this country should be attacked with nuclear weapons, I have no doubt that it has the will to use that power. The important question is, What is the estimate of the Soviets of these two elements? What is their estimate of our power to retaliate if they should launch a nuclear war against us? I think they know what our power is.

What is their estimate of our will? This I do not know. But I surely do not wish to plant any questions in their mind. They are not frightened with ABM's. ABM's are not a deterrent.

Right in the beginning of this debate, let it be known that the senior Senator from Tennessee believes that we need to preserve the integrity of our deterrents. There will be no victory in a nuclear war. We would lose; they would lose; civilization would lose; everything would be lost in a nuclear exchange between Russia and the United States.

The way to win this battle is to prevent nuclear war; and to prevent it we need to have a deterrent—an unquestioned deterrent—not only the power to retaliate, but the will to retaliate. The important place for that to be rested is in the mind of anyone thinking to attack the United States with nuclear weapons. This is the central question.

Secretary Laird, in more recent testimony, has not again repeated his view that the Soviets were going for a first-strike capability. A first-strike capability, as the senior Senator from Missouri knows, is a word or term of art to the military. I placed in the Record an official interpretation of the term. It means,

in laymen's language, the capability of striking a country a first blow with such devastation that that country will not have the power to retaliate with unacceptable risk.

I ask the Senator from Missouri if that is a correct statement.

Mr. SYMINGTON. I would say that it is a correct interpretation.

If the Senator from Tennessee will yield to me for a brief remark, I would hope that every Member of the Senate would realize that for many years the distinguished senior Senator from Tennessee has been a member of the Joint Committee on Atomic Energy.

Mr. GORE. I thank the Senator from Missouri. I was a member of a small subcommittee that handled the appropriation for the Manhattan District when Oak Ridge, Tenn., was still a wilderness. I have been involved in nuclear energy since its very beginning. So far as I know, no secrets have ever been withheld from me. No secrets will be withheld from the Senate in this debate.

Mr. SYMINGTON. Mr. President, will the Senator further yield?

Mr. GORE. I yield.

Mr. SYMINGTON. I am glad that the able Senator brought up that fact, because he was deeply interested in the atomic picture when he was a Member of the House of Representatives for many years prior to his coming to the Senate. Therefore, I say without fear of contradiction that his position in this matter is at least as experienced as that of any other Member of the Senate.

Mr. GORE. I thank the Senator.

I wanted to say at this time, right in the very beginning, that we need to keep our minds on the central question: Is the deployment of ABM necessary to preserve the integrity of our deterrence? I think the answer, unquestionably, is No. Then the question is, If unnecessary, or though unnecessary, is it advisable? This leads to the involvement of our will and the estimate of our will. But more important, perhaps, it leads to the third point, which is that our deployment of ABM will stimulate and accelerate another round in the nuclear armaments race, out of which will come not more but less security for our country; less opportunity, not more, to avoid a nuclear war. So let us start the debate on this level.

I know there are questions as to whether it will work; questions about the computers; questions about the radar; questions about accidental detonations; many questions and doubts. These are mostly tangential and secondary issues.

The fundamental issue, let me repeat, is this: Is the deployment of ABM necessary for the Soviets to know that we have the power to retaliate with devastation if they should level an atomic attack against us? And is it necessary or advisable to deploy ABM to convince them of our will to do so if they start a war? Or would ABM deployment affect their estimate of our will to retaliate?

We have no intention of starting nuclear war. Our strategy has been postulated on the thesis that the way to prevent a nuclear war is to have the power to retaliate. This is the deterrence. This is what Winston Churchill called the balance of terror.

July 7, 1969

So, Mr. President, let the Senate examine these basic questions. We can argue all day and all week about the technicalities, about the computers, about the programming of computers, about the geometry of the weapons, the yield of weapons, projectile timing, and so forth. These things will have a bearing upon the issue. But the essential facts are already available, not only to the Senate, but, fortunately, to the American people, to reach a decision on the basic question.

Mr. HART. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. HART. I merely wish to thank the Senator for opening the debate in the fashion he has—effective, restrained, thoughtful, and, I think, magnificent. I wish all Senators could have heard it.

Mr. GORE. I thank the Senator from Michigan.

Mr. PELL. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. PELL. I wish to add my own word of accord and to add that I wish all Senators could read the thrust of the argument of the Senator from Tennessee which, I think, is well digested from many hours of testimony.

Mr. GORE. I thank the Senator.

Mr. President, I call attention to the fact that the secret hearing with Secretary Laird on the question of intelligence estimates, after the making of certain deletions, is going to the printer tonight.

It will be available to the public on Wednesday or Thursday and then the Senate and, fortunately, the American people can determine for themselves whether the Secretary now maintains that the "Soviets are going for a first-strike capability."

Mr. KENNEDY. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. KENNEDY. Mr. President, I wish to join with Senators in commending the distinguished Senator from Tennessee on his most eloquent and well-reasoned presentation this evening. I think this Senator not only this evening but also during the conduct of the hearings he held, with the quality of the witnesses and the thrust of his questions, performed an extremely important service to this body and to the people.

I wish to join him and commend him this evening. I wish to say that I am certainly hopeful that his voice will be heard often during the course of discussion and debate because there are few Members of the Senate who have his understanding, background, and experience in this subject.

I thank the Senator for his comments and my only regret is that more Senators did not hear him.

GREECE

Mr. PELL. Mr. President, Rowland Evans and Robert Novak have written three excellent columns that appeared in the Washington Post on the present situation in Greece. The first of these articles, entitled "Greece Facing Grim Alternatives: Salazar-Type Rule or Bloody Revolt," appeared in the Post on June 19. The second, entitled "U.S. Ac-

tion Against Greek Junta Is Prevented by Military Needs," appeared on June 23. The third, entitled "Nature of Greek Junta Underscored by Arrest of Distinguished General," appeared on June 26.

I ask unanimous consent that these three articles be printed in the Record at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. PELL. Mr. President, Mr. Evans and Mr. Novak make statements that deserve close attention. They note that if the colonels who seized power in 1967 ever intended any partial return to representative government, that intention is dead. They quote the Deputy Premier as saying, when asked about popular elections, "Nobody wants elections" and theorize that this attitude may be due to the fact that the military regime's popular base is so low that calling elections "would be equivalent to surrendering power." They characterize Greece as a "huge political pressure cooker" which they say may explode into insurrection with Communists in leading roles. Messrs. Evans and Novak argue that the need for a tough U.S. stand against the military dictatorship "is being undermined by the Pentagon's military requirements in the eastern Mediterranean." They report that the commander of the U.S. Military Advisory Group and his subordinate officers "have exercised little discretion in telling their Greek counterparts how they oppose the Embassy's fastidiousness about democracy." In their last column, they point to the case of the imprisoned General Koumanakos against whom no formal charge is pending, no trial is scheduled, and no limit of imprisonment has been placed. The implications of the sentiments aroused by the Koumanakos case, according to Messrs. Evans and Novak, include the possibility that many Greeks who have viewed Communists as their blood enemies now see the colonels ruling Greece as their real foes.

The three columns by Messrs. Evans and Novak do not paint a pretty picture but they do portray the political situation in Greece today with its very real dangers for Greece tomorrow.

This also brings to our minds the need that there be appointed to Athens a tough-minded, strong-willed, civilian-oriented ambassador who will express the wishes of the United States the best he can and will nudge Greece a little further along toward democracy.

EXHIBIT 1

GREECE FACING GRIM ALTERNATIVES: SALAZAR-TYPE RULE OR BLOODY REVOLT

ATHENS.—The Greek military dictatorship, after two years of bland assurances to Washington about restoring democracy, intends to retain power indefinitely without free elections—posing immense danger to long-range stability in the strategic eastern Mediterranean.

If the colonels who seized power April 21, 1967, on the pretext of preventing communism here ever intended any partial return to representative government, that intention is dead. Even the few politicians who have tried to cooperate with the colonels now concede that Col. George Pappadopoulos, the Premier, envisions an institutionalized tyranny modeled after Salazar's 37-year dictatorship in Portugal.

Unlike our last visit there two years ago when the freshly installed junta pledged an early return to constitutional forms, the regime now regards itself as permanent. Brig. Gen. Stylianos Pattakos, Deputy Premier and the junta's No. 2 man, bristled when we asked about popular elections. "That is an internal matter that you cannot inquire about," he said. "Go ask the people on the street. Nobody wants elections."

Indeed, all objective sources here agree that the military regime would lose badly in free elections. The colonels' "revolution," attempting by edict to transform the Greeks into work-oriented puritans, has depleted what popularity the regime enjoyed in 1967. Although past Greek governments have had excellent success in rigging elections, the military regime's popular base is so low—perhaps 10 per cent—that calling elections would be equivalent to surrendering power.

Unwilling to surrender power, the colonels have turned Greece into a huge political pressure-cooker with the true feeling of the Greeks suppressed by the local gendarmerie's watchful eye. An election today probably would show a sharp leftward swing. More ominously, after two or three additional years, the pressure-cooker may explode into insurrection with Communists in leading roles.

These ominous prospects have their source in perhaps the tightest police state this side of Moscow. Violating the colonels' own new constitution, non-Communist potential foes of the regime—mainly army officers and intellectuals—are imprisoned without indictment or trials. Reports of torture are impossible to verify in detail, but maltreatment and brutalization of low-level political prisoners continue.

Former political leaders are watched constantly. They cannot speak their view, are denied passports to travel abroad, and have their mail and telephone calls monitored. One former Premier cannot move without a car full of police agents following him. All former cabinet members are tailed when they visit their old constituencies.

The regime's iron vise is even tighter on the academic world. So many teachers have been purged that the educational system is crippled. Distinguished professors are subject to humiliating interrogation by Col. John Ladas, hard-line secretary general of the Interior Ministry. University students, solidly against the regime, are intimidated by police agents attending their very classes. A further deterrent is formed by severe prison sentences given six young teaching assistants (two of whom later were tortured) for distributing anti-junta propaganda.

The first armed resistance against this tyranny has come from the right: clandestine supporters of exiled King Constantine. Infrequently reported in the controlled Greek press are daily bombing incidents in the heart of Athens (forcing the government court martial to change buildings): There have been unconfirmed reports that the royalist resistance was responsible for the recent deaths of three pro-junta officers.

Thus, 16 retired officers arrested recently are all royalists with anti-Communist records (two of them with service in the Korean war). The regime's contention that the arrested officers participated in a left-wing army plot is only a propaganda smokescreen.

Harassing though it may be, however, the royalist resistance is incapable of overthrowing a regime so vigilant against potential opposition. Remembering the existence of the anti-Nazi resistance in World War II, Greeks fear that the Communists—better organized than ever—will dominate if and when the resistance assumes major proportions.

That day remains relatively distant. Greek Communists, badly fragmented into rival segments, are passive. The Soviet Ambassador here is circumspect, declining to discuss
