We might be able to take an objective view, and I think we could probably have early hearings. What would be the opinion of the distinguished chairman of the Committee on Armed Services as to how soon, if we had hearings, this arrangement might become law, if a committee approved it and the Senate approved it? Would enactment be possible this year?

Mr. STENNIS. It would be entirely possible. Probably it would not be possible to attach it to this bill, but I have no doubt that with all the probings and pushings that are going on during this calendar year, something will come of it.

I think the experience from those probings and from what we have learned in this debate and in other matters will make it possible to report a much better bill to the Senate, if it is decided to report one.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. GOLDWATER. I have asked the Senator from Mississippi to yield so that I might ask a question of the distinguished Senator from Pennsylvania, in order to clear up a question that was

raised, in part, by his prior statement, when he referred to the Department of Defense system of reporting, or something like that.

Section 501(a) reads:

The Secretary of Defense, in cooperation with the Comptroller General, shall develop a reporting system for major contracts entered into by the Department of Defense, any department or agency thereof, or any armed service of the United States, for the development or procurement of any weapons system or other need of the United States.

Throughout that section there is reference to Department of Defense reporting. I invite attention to the top of page 4 of the amendment, paragraph (e):

(e) The Comptroller General shall, through test checks, and other means, make an independent audit of the reporting system developed by the Secretary of Defense and shall furnish to the Congress and to the Committees on Armed Services and the Committees on Appropriations not less than once each year a report as to the adequacy of the reporting system, and any recommended improvements.

The question that comes to my mind is raised because, if my understanding is correct, this is pretty much the system under which the Department of Defense has been operating for the last several years, namely, an auditing system of its own, which is occasionally audited by the General Accounting Office. Would the Senator's amendment call for a separate auditing besides the audits that have been done by the Department of Defense?

Mr. SCHWEIKER. First of all, Mr. President, they do not have a central auditing system now. That is one thing I mentioned a moment ago. The Comptroller General was shocked that, in order to get the figures on the larger contracts, he could not even go to one central office or one central person who was responsible. It was diversified through many branches of the Pentagon and many offices. There is no central office in the Pentagon where those figures are available. So this amendment would force such an office to be established.

Mr. GOLDWATER. In a way, I am glad to see that system done away with, which was partially due to the huge overruns on the C-5A, which was first reported as happening as early as December 1967. I was wondering whether it would not be a better idea to have the GAO itself directly responsible for setting up the system of audits in the Defense Department—in other words, not create a creature over there that could again be manipulated or controlled by someone who did not want the true figures coming out.

Mr. SCHWEIKER. That was my original suggestion, and the Comptroller General said it was not practical; that it would cost too much and demand too much of their energies; that he could accomplish the same thing—and that is why I accepted his wording on the amendment—if they would let the Department of Defense be basically responsible for setting up the system, but they would oversee it. It was as a matter of economy and not trying to throw their operations out of gear that I accepted his suggestion.

Mr. GOLDWATER. Did the Senator confer with the Department of Defense as to what their feelings might be to his suggestion?

Mr. SCHWEIKER. Frankly, I did not feel the Department of Defense would be very responsive to having any auditing in their system, so I did not. It would be something like asking the fox to watch the henhouse.

Mr. GOLDWATER. I could understand that had the Senator been faced with the prior administration in the Pentagon. I think this administration is very, very heavily in favor of its being done. That is why I thought the Senator might have asked them if they had any idea or had reached any idea from the committee appointed under Mr. Packard to study this whole program. If he has not, I can certainly understand why. I would hope, however, that, if the amendment is defeated and he desires to introduce it as a separate piece of legislation, officials of the Defense Department would come before us. I am sure, just as much as he does and just as much as the Senator from Arizona does, they would like to see a better watchdog setup over this whole matter. I thank the Senator from Pennsylvania for his indulgence.

Mr. YARBOROUGH. Mr. President, in recent months, it has become clear to me and I am certain to other Senators, that the present provisions for supervising contracts between the Department of Defense and private industry are not adequate to insure that the public interest and the public purse will be protected. I refer specifically to the shocking increase in the cost of the C-5A transport aircraft. On July 29, 1969, there appeared in the Washington Post, an article entitled, "AF Lists Cost Rise of C-5A." This article carefully explains the circumstances under which the cost of this plane has risen by nearly \$2 billion. I ask unanimous consent that this article entitled, "AF Lists Cost Rise of C-5A" be printed at this point in the RECORD.

Mr. President, Senator SCHWEIKER's amendment would empower the General Accounting Office, an arm of the Congress, to audit contracts entered into by the Department of Defense. I believe that this will be a major step toward preventing this type of waste that has been going on in the past. I support Senator SCHWEIKER's proposal.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AF LISTS COST RISE OF C-5A

(By James G. Phillips)

An Air Force study ordered by Defense Secretary Melvin R. Laird reported yesterday that costs of the giant C-5A transport aircraft have increased by \$1.7 billion and may go up even more.

The Pentagon added that some of the cost increases reflected its decision to modify the aircraft (increase its size) and add additional spare parts that had not been contemplated in the original purchase.

The expected final cost for the 120 planes built by Lockheed has been the subject of continuing controversy over the last few months. Critics of the C-5A have estimated the price tag at \$5.3 billion, an overrun of \$1.9 billion.

The Pentagon report, prepared by a task force under Assistant Air Force Secretary Philip N. Whittaker, revealed that the total

cost of the program had increased from \$3,369,000,000 at the time of the contract award in 1965 to a current total of \$5,125,000,000. This represents an overrun of more than \$1.7 billion.

In a Pentagon press conference unveiling the report, Air Force Secretary Robert C. Seamans Jr. criticized "ambiguities and deficiencies" in the original contract for the plane and hinted that the remaining 39 aircraft in the original 120-plane package may not be purchased unless contract revisions are made.

Asked whether the threat of curtailing the purchase amounted to a negotiating weapon, Seamans replied: "It certainly is."

But Seamans added that the Air Force was satisfied with the plane's performance and hopes it can follow through on the full original purchase.

The main feature of the contract that Seamans criticized was the plane's repricing formula—the so-called "golden handshake" under which Lockheed can make up its losses on the first order of 58 planes by charging a higher price on the second purchase of 62.

He said the Air Force would open immediate negotiations with Lockheed to revise this formula and other provisions of the contract involving the amount the company can charge for spare parts and the amount the Government can penalize the company for deficiencies or late delivery.

The report, prepared by 11 different Air Force committees and a four-man outside civilians review group, was ordered by Laird on April 30. It covered the entire eight-year history of the program, from the beginning of its planning in 1961.

In his letter submitting the report to Seamans, Whittaker said his aim had been "neither to conduct a witch hunt nor to perform a whitewash."

Despite its criticisms of the original contract, the panel emphasized that it "by no means represents a windfall" of profits for Lockheed. In comparison to other aircraft programs, the report said, it was questionable whether Lockheed would reap even normal profits, "let alone excessive" ones.

Nonetheless, the report said, the repricing formula was a "reverse incentive" that should be dropped from the contract.

If this and other controversial provisions weren't revised, the report added, there was a "distinct possibility" that the plane's cost overrun could increase.

The report noted that the \$5.1 billion estimate for the total program was a 52 per cent increase over the original target costs. It said this was mostly attributable to inflation and the addition of \$295 million for spare parts and aircraft modifications not included in the original cost projection.

While the report cleared Lockheed of any charges of profiteering on the aircraft, it was sharply critical of the company's procedures in estimating original costs.

It said the company had been "overly ambitious" in underbidding its two competitors, Boeing and McDonnell Douglas, and had erred in assuming that the project was just a scaled-up C-141—another large cargo plane produced by Lockheed.

But in response to reporters' questions, Seamans and Whittaker denied that the company had deliberately "bought into" the program with low initial cost estimates in order to get "bailed out" later with a higher price for the second production run.

Whittaker said the company's thinking had been marked by too high a degree of technical optimism, too low a projection of inflation, and a desire to keep its plant fully operating after the final production run of C-141s.

"What the various interplay of those factors was is anybody's guess," he concluded.

UNANIMOUS-CONSENT AGREEMENT

Mr. STENNIS. Mr. President, I have conferred with the Senator from Penn-

sylvania. It is agreeable with us, if it is agreeable with the Senate, to have just 5 minutes to each side for debate now, and then proceed to a vote. I make that request.

The PRESIDING OFFICER. Is there objection to the unanimous-consent request? The Chair hears none, and it is so ordered.

Who yields time?

Mr. SCHWEIKER. Mr. President, for the life of me I cannot understand why it is that the largest operation that the Government has going, namely, the Department of Defense, would not subject itself to some kind of certified public accounting or some kind of auditing system or some kind of statutory authority that insures the figures will be accurate and honest. I had the privilege in the other body of serving for 6 years on its Committee on Armed Services, and for a short time I have served on the same committee in this body.

Frankly, our decisionmaking process is totally related to the accuracies of details and fiscal figures and accounting presentations. After the inquiries into the C-5A and other matters in this body and the other body, it is obvious to me that we have been making many false assumptions and making many decisions based on erroneous facts.

What is so objectionable to having an auditor check into these matters? What is so objectionable to having the General Accounting Office have subpoena power, as the Senator from Kentucky pointed out, to call in contractors? We do it with respect to some other programs, but when 40 percent of our national budget goes to defense, why do we not have a fiscal watchdog in this area?

As far as costs are concerned, the cost of an \$80 billion operation is one half of one one-hundredth percent. That is what the cost would be, even if everything went wrong with the system, according to their estimates. I would like to repeat that. The cost of the proposal at the outside would be something like \$4 million for 200 people—about one-half of one one-hundredth percent.

If we look at the C-5A for a second, we see where we would have saved thousands more than that. What is wrong with investing a little of the taxpayers' money to get a dividend that would return into their pockets perhaps a million times the investment, or perhaps be devoted to other activities of the Federal Government?

The chairman of the committee has been most cooperative. I wrote the committee and the chairman and advised them on June 18 that I was preparing this amendment for the consideration of the committee. We had 2 weeks in which to have hearings or in which to suggest hearings. On the floor today was the first time I ever even heard the word "hearing" mentioned. I think it is important to point out that we have had plenty of time to hold hearings. I canvassed the senior members of the committee. It was obvious they were against the amendment. So I did not press it to a vote. I thought, in good conscience, there was not much point in pushing it to a vote when the chairman

expressed complete opposition to my amendment. But I think it is important to note that we did not have hearings, that I was not offered an opportunity for hearings. I think this is the first time I have heard the word "hearing" discussed.

Mr. DOLE. Mr. President, will the Senator yield for a question?

Mr. SCHWEIKER. I yield.

Mr. DOLE. First, I commend the Senator from Pennsylvania, with whom I had the pleasure of serving in the House of Representatives for 8 years. There are those of us on both sides who see a great deal of merit in the amendment, but, unlike the Senator from Pennsylvania, we have not had an opportunity to give it serious study or consideration. I would hope there would be hearings on the proposal. I heard the chairman state that he is willing to have hearings at the earliest possible time.

I would not want to prejudge the amendment, but I believe we would be in a better position if we had hearings and the opportunity to hear testimony not only from the Defense Department but from contractors and the GAO.

While many of us are sympathetic with the general idea of what the Senator would hope to accomplish, I trust the Senator agrees that the proper way to proceed would be to first have hearings, if the amendment is defeated, and then see what should be done.

Mr. SCHWEIKER. I thank my distinguished colleague. I appreciate his comments. I think we had ample opportunity to hold hearings, but I was not given that opportunity, and we did not hold hearings.

I think the amendment is pretty much self-explanatory. It is a question of whether we want to accept the basic principle of having a fiscal watchdog over the Defense Department. In view of what we read in the news media today, I do not know how anyone could suggest anything other than that we should have a watchdog when we consider what is happening in the Defense Department.

I think the issue is clear. The distinguished Senator from Mississippi says he does not want to give them subpoena power. How in the world can we ask somebody to be accountable for something, and then not provide the authority to back it up? How can we ask them to be auditors, and then say, "we do not give you the responsibility or the authority to see that the facts are available"?

I think it is important also that this concept was evolved and developed by the Comptroller General himself. I was surprised to hear of his letter to the Senator from Mississippi, because when I talked to the Comptroller General some 6 or 8 weeks ago and asked him the same question, he told me that this was a matter of basic policy for Congress and the Senate itself to decide, that this was our issue.

The PRESIDING OFFICER. The Senator's 5 minutes have expired.

Mr. STENNIS. Mr. President, if the Senator needs more time, I will give him a minute.

Mr. SCHWEIKER. No, I am through.

Mr. STENNIS. In reply to the state-

ment that the Senator has just made, I shall review the matter briefly.

This proposed amendment, with no hearings and no report on it, with no committee having passed on it, and recommended by no committee, would change the whole structure of the concept and mission of our General Accounting Office. I have said we should have hearings, and I meant every word of it, of course. I believe the other committee that has jurisdiction over the General Accounting Office should have hearings, before making such a far-reaching change as this amendment would effect. That can be handled.

There is no definition of terms, and no estimate on the number of people who would be required as new employees, nor of the cost of the operation.

The head of the General Accounting Office, Mr. Staats—and I think he is an exceptionally fine and capable man, and a real administrator, doing splendid work—has looked into all of this and come to his own conclusions. I did not try to influence him. I shall quote briefly from a letter which, after we had talked about the matter a few days ago, I asked him to write. I simply said to him, "Well, if you don't mind, just put that down in the form of a letter." I read briefly, for those who were not here before:

Before legislation of this type is enacted, it would be our recommendation that the most careful consideration be given to it by the Congress. The type of reviews made by this office and the needs of the interested committees of Congress need further development and exploration.

That is exactly what I had said about it after I read his letter.

The letter continues:

For these reasons, we believe that legislation prescribing a particular form of reporting at this time would be unwise. In general, we believe the basic authority of the General Accounting Office is adequate to carry out the program which we outlined.

He had outlined a proposed program in the first two pages of his letter.

Mr. President, in view of the fact that we have readily agreed, and wanted to agree, to have hearings on the whole concept of this matter, hearings which it was just not possible to hold at the late date it was mentioned to me, and in view of the fact that I, as chairman of the committee, have pledged myself to institute such hearings and consider the matter on its merits; in view of the fact that this subpoena power will have to be measured and carefully drawn; and since I believe everyone has had all the time he needs to consider the matter here, I believe, if we are going to take further action, it would be better just to move now to table the amendment, and have a vote on that motion.

May I have the attention of the Senator from Pennsylvania? I just stated that, in view of the fact that we have agreed on the need for hearings and a continuation of this matter, I believe it would be better just to have a motion to table, and vote on that; and, if that does not dispose of the matter, we could have another vote, but if it did dispose of it, then we would agree to go on with the hearings.

Mr. SCHWEIKER. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. SCHWEIKER. First, there was some indecision in the Senator's mind as to which committee the matter should come before; so there is not much sense in holding hearings in our committee before that matter is settled.

Mr. STENNIS. That will all be taken up. I think it ought to be voted upon, but we could use that as a start.

Mr. GRIFFIN. Mr. President, I believe the concept embodied in the amendment offered by the Senator from Pennsylvania is excellent. I am strongly inclined to support what he is trying to do.

On the other hand, a responsible legislator cannot help but be impressed by the complexity of the issues raised and by the need for committee hearings on such a legislative proposal.

In view of the assurances given by the Chairman of the Armed Services Committee that hearings on this proposal will be conducted and that it will be carefully considered, I believe it would be best at this time to afford the committee that opportunity.

At the same time, I wish to commend the Senator from Pennsylvania for presenting the amendment and for the outstanding leadership he is providing. He is moving in the right direction, and I hope we will soon be in a position to vote approval of such an amendment.

Mr. STENNIS. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has only seconds.

Mr. STENNIS. I have concluded my remarks; and in the spirit of the premises, I move to lay on the table the amendment proposed by the Senator from Pennsylvania.

Mr. SCHWEIKER. Mr. President, I ask for the yeas and nays.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion by the Senator from Mississippi (Mr. STENNIS) to lay on the table the proposed amendment of the Senator from Pennsylvania (Mr. SCHWEIKER). On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. KENNEDY. I announce that the Senator from Indiana (Mr. BAYH), the Senator from Tennessee (Mr. GORE), the Senator from Maine (Mr. MUSKIE), and the Senator from Alabama (Mr. SPARKMAN) are necessarily absent.

Mr. SCOTT. I announce that the Senator from Nebraska (Mr. CURTIS) is detained on official business, and if present and voting would vote "yea."

The result was announced—yeas 44, nays 51, as follows:

[No. 69 Leg.]

YEAS—44

Allen	Ellender	Long
Allott	Ervin	Magnuson
Anderson	Fannin	McClellan
Baker	Fong	McGee
Bennett	Goldwater	Miller
Bible	Griffin	Montoya
Boggs	Gurney	Russell
Byrd, W. Va.	Hansen	Smith
Cannon	Holland	Stennis
Cotton	Hollings	Symington
Cranston	Hruska	Talmadge
Dirksen	Inouye	Thurmond
Dole	Jackson	Tower
Dominick	Jordan, N.C.	Young, N. Dak.
Eastland	Jordan, Idaho	

NAYS—51

Aiken	Hatfield	Pearson
Bellmon	Percy	Hughes
Brooke	Javits	Fell
Burdick	Kennedy	Prouty
Byrd, Va.	Mansfield	Proxmire
Case	Mathias	Randolph

Goodell	Mundt	Tydings
Gravel	Murphy	Williams, N.J.
Harris	Nelson	Williams, Del.
Hart	Packwood	Yarborough
Hartke	Pastore	Young, Ohio

NOT VOTING—5

Bayh	Gore	Sparkman
Curtis	Muskie	

So Mr. STENNIS' motion to lay Mr. SCHWEIKER's amendment on the table was rejected.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Pennsylvania.

Mr. STENNIS. Mr. President, I think this matter should be discussed further, for the information of Senators, and I ask unanimous consent that additional time of 15 minutes to each side be allotted.

The PRESIDING OFFICER. Is there objection?

Mr. SAXBE. I object.

The PRESIDING OFFICER. Objection is heard.

Mr. STENNIS. Is there objection, Mr. President?

The PRESIDING OFFICER. Objection is heard.

Mr. STENNIS. Mr. President, I would not have made that request, except—

Mr. MANSFIELD. Mr. President, will the Senator make his request again?

Mr. STENNIS. I do not care to pursue the matter against the will of the Senate.

Mr. SCHWEIKER. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator renew his request?

Mr. STENNIS. Mr. President, I ask unanimous consent that we have additional debate on the question of this amendment and that 15 minutes be allotted to each side, under the usual control.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Who yields time?

Mr. STENNIS. Mr. President, the Senator from Florida has an inquiry. I yield to him for that purpose.

Mr. HOLLAND. I would like to have 5 minutes.

Mr. STENNIS. Mr. President, this is a far-reaching amendment.

Mr. KENNEDY. May we have order, Mr. President?

Mr. STENNIS. It provides for certain quarterly reports to be made by the General Accounting Office regarding major contracts, and it includes a power of subpoena for the General Accounting Office in that field.

Mr. President, I will be as brief as I can. The General Accounting Office has been over this matter many times, and I have a letter from Mr. Staats in which he says that he has reviewed the entire matter and that he thinks present legislation gives him abundant authority,

and he does not favor the adoption of this amendment.

Referring now to the contents of the amendment—I think this is highly important—it would change the whole nature, concept, and mission of our General Accounting Office.

Mr. YOUNG of Ohio. Mr. President, may we have order? I ask that the Sergeant at Arms be directed to clear the corridor—

Mr. LONG. I object.

The PRESIDING OFFICER. Does the Senator from Mississippi yield?

Mr. YOUNG of Ohio. I ask that the Sergeant at Arms clear the aisle.

Mr. STENNIS. Objection is heard, Mr. President. I do not want to be charged with the time.

My concern about this matter is the loose language that changes the very nature of our General Accounting Office, as I have said, and gives the most far-reaching subpoena power to the General Accounting Office to go into all the files and the records of all the contractors concerning any contract it may select. That, in itself, is not bad. The committee has that subpoena power. Congress has that responsibility. This committee is pledged and dedicated to following up that money. We already have the machinery in operation. We have on our staff highly qualified men, now on a reimbursable basis from the General Accounting Office, but it is going to be made permanent with some personnel. I am satisfied that they will have the capacity to make these quarterly checks and then report to us.

The Department of Defense has gone into the matter by having their own quarterly checks into these contracts. They have also put this matter under the scrutiny of the Budget Bureau, but I merely mention that in passing.

The President has set up a blue-ribbon panel to go into this subject. I am sure that the experiences of this year are going to culminate in making it possible to know where we are and what we should do.

There have been no hearings with respect to this amendment; there is no record here. It does not have the recommendation of the Committee on Armed Services, because it was withdrawn and no vote was requested. There is no estimate of what it would cost or how many new employees would be involved; and the language is very loose, indeed, as to how far it would go in granting this tremendous authority.

This is a vital subject. Let this matter be introduced as a bill, and let us get some qualified people to testify about it—for example, the General Accounting Office, the Department of Defense, and outside witnesses. Then we will know where the problem is and what the best solution is. The General Accounting Office tells us now that this is not the best solution, that it is not the way to go at it. No one is telling us that it is the best solution, except for the general statements on the floor, unsupported by any kind of testimony.

If that is the way to run far-reaching affairs such as this, it is a new chapter in the book. We have members of the

committee who are qualified to pass on matters of this kind, and they have not had a chance to do so. They are qualified to make recommendations. Members of the committee have jurisdiction over the General Accounting Office. They are qualified in every way. They have not had this opportunity. There has been no testimony—just a lick and a promise and a hope and a demand that something be done. I, too, want something done. I am pledged over and over to follow up any dollars that are authorized.

But I think by all standards the committee should have a chance to pass on this matter. They know something about the problem and they should be able to make a recommendation.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. SYMINGTON. Mr. President, I would respectfully urge the Senate to give full consideration to the inherent danger which could lie in agreeing to an amendment of this character without hearings.

I have had experience with the General Accounting Office as an industrialist, as a member of the executive branch, and as a Member of Congress. The General Accounting Office is the watchdog of the Congress, and as a result of the decision of the chairman of the Armed Services Committee we are already moving into a more direct relationship.

If the Comptroller General of the United States, who would function as a result of this legislation in a new field, object to this legislation, should we not, before we consider this bill, want to know why he objects, why he thinks it would be less favorable to the taxpayers?

Another aspect occurs. I have respect for the new Secretary of Defense, a former Member of Congress, and the Deputy Secretary of Defense, as successful businessmen as we have in the country today. They are trying to see that the taxpayers get the most for their dollar in this defense field.

A contract was mentioned on the floor of the Senate recently by advocates of this amendment. That has little to do with current efforts being made in the Department of Defense today to tighten control.

Mr. President, I do not believe it wise to cut into current functioning, unless it is clear just what his new authority and responsibility would be, the Comptroller General.

For those reasons, I would urge Senators, after this constructive statement made by the chairman, who is already using more than ever before General Accounting Office people in committee work, that we have hearings before reaching any conclusion about this legislation.

There are two witnesses I would like to hear. First, the Secretary of Defense. Second, the Comptroller General of the United States, who for some 20 years or more was Deputy Director of the Bureau of the Budget and therefore has had more experience than most with respect to contractual relationships with the Government.

August 7, 1969

Mr. STENNIS. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has 6 minutes remaining.

Mr. STENNIS. Mr. President, I yield to the Senator from Pennsylvania.

Mr. SCHWEIKER. Mr. President, I yield to the Senator from Kentucky.

Mr. COOK. Mr. President, we talked about whether there should be hearings on no more than an auditing procedure, and the fact that the Comptroller General with the Secretary of Defense is developing a reporting system. This occurs in many other departments of the Government. One of the major arguments of the Senator from Mississippi, the chairman of the committee, when we first started the debate, when there were three Senators in the Chamber, was that he absolutely abhorred the idea that this bill had in it the power of subpoena. He said that was not the way to do it; and he said that was not the American way to do it.

Mr. President, I want every Senator to know that many of us have given the authority to many agencies, which I have already listed. I will list them again. We have given the power of subpoena and to bring witnesses, to seek books and records, to the Civil Aeronautics Board, to the Federal Communications Commission, to the Federal Trade Commission, to the Commerce Department, to the Securities and Exchange Commission, to the SBA, the Department of Justice, the Department of Agriculture, the Department of Labor, the Federal Deposit Insurance Corporation, the National Labor Relations Board, and last, but not least, we have given it to the Internal Revenue Department. We have given that authority to the Internal Revenue Department, the power to subpoena, to go into anybody's records or tax returns, to get anybody's books. We are sitting here today saying that the power of subpoena to the average American individual has been given as a matter of law, but the chairman has said the power of subpoena rests with the committee, and we can do this if we want to but we are not going to make it a matter of law that the Department of Defense and its contractors must subject themselves to the power of subpoena when we want to look into whether they abided by their contracts.

Mr. STENNIS. Mr. President, I think my statement was that after hearings and decision in this matter, I might favor giving this power.

Mr. COOK. Mr. President, I do not wish to argue with the chairman of the committee, but he made clear he did not want to give it to such an agency as this, that it rested in the committee, and that he wanted to have hearings.

On many occasions the Senate has said that the power of subpoena is already a matter of law to many agencies of the Federal Government; but to the Department of Defense and its contracting officers, it is not given.

I thank the Senator for yielding.

The PRESIDING OFFICER. Who yields time?

Mr. SCHWEIKER. Mr. President, there has been a lot of talk about hearings. There has been a lot of talk about

study, and there has been a lot of talk about consideration.

I would like to set the record straight in this regard. I wrote to fellow members of my committee on June 18, 2½ weeks before the bill was reported. At that time, was anybody willing to have hearings? Was anybody willing to talk about hearings? Was anybody interested in studies, or anything but being opposed to the amendment? As far as bringing the amendment to a vote, we did take an informal showing around the table, and obviously I was outnumbered. Of course, I did not force the matter to a rollcall vote for obvious reasons. It was obvious I was opposed by the senior members of the committee, and I did not force a rollcall vote.

I do not understand why we need hearings. I do not understand why we need a study to see if the Department of Defense should have an auditor. It is as simple as that. Should we have a fiscal watchdog to see where the \$80 billion being spent is going, or where 41 percent of our budget is going? Why do we need hearings to determine whether an auditing function is called for?

Mr. COOK. Mr. President, will the Senator yield?

Mr. SCHWEIKER. I yield.

Mr. COOK. Is it not a fact that in the defense bill on which we are about to vote, or will vote next week or next month, there is an item of \$1.5 billion of Defense Department contractual overruns and, had there been a watchdog, an auditing system in effect long before this, perhaps we would not have to make up for such errors and inconsistencies by substitute legislation in the future?

Mr. SCHWEIKER. The Senator is correct. Other things also came to light. I will not mention the weapons system. We have in this bill \$20 billion for weapons systems.

We found one weapon, which the particular service involved did not want, that involved \$1.5 billion. Only because one of the members of the committee was a pilot and knew something about it did we take \$1.5 billion from the bill and reverse the error. That is the kind of matters we are confronted with when we do not have an actual up-to-date auditor to tell us what is going on.

To vote on \$20 billion and not know fiscally what is in it is a matter of conscience with me, and it is a matter which can be rectified only by auditing and fiscal responsibility. I do not understand why we are not ready to spend \$4 million at the outside, which is the Comptroller General's figure, and 200 people at the outside, which is what they might need to establish this responsibility. That is one-half of one one-hundredths percent of our defense budget. Why are we not willing to put an investment in auditing like any other large corporation, like any other operation in the country that deals with \$80 billion? For the sake of our taxpayers, if for no one else, we should do that.

Mr. JAVITS. Mr. President, will the Senator from Pennsylvania yield?

Mr. SCHWEIKER. I yield.

Mr. JAVITS. I have two questions I should like to ask the Senator. I notice

his time period for the Secretary of Defense to review his 3 calendar months.

Business experience would indicate—and I am not saying this in a hostile manner because I am sympathetic to the amendment—but business experience would indicate that that causes every review to run into every other review.

I wonder whether the Senator has had any experience on this which makes the 3 months preferable, or whether he would be interested in making it 6 months.

The other question I have is whether subdivision F on page 4 of the amendment was really clear, that there should be spot audits? There is something in the minds of business people, kind of being crawled over by different sets of audits. It seems to me what the Senator had in mind, rather than any mandatory audit, would be a spot audit on the part of the Comptroller General.

Now those two points go to the practicality, I am sure, of what the Senator is trying to bring about. I think, if I divine the Senator correctly, that he does want control of oversight, which we really cannot give because we are not organized for it; but he does not want, either, inordinate costs to creep into the manufacturing itself, because we will be paying for all of it in the contract, and if he has to, the contractor will charge for it, and he does not want to interfere with efficient operation by an inordinate amount of paperwork, which is vexing to the contractor.

Mr. SCHWEIKER. Yes. I concur, and thank the Senator for his constructive remarks. Three months was selected because in a number of the major weapons systems, a 6-month lag is too long.

The C-5A option was exercised several months ago. We will never be on top of an exercise of an option in a major contract properly if we have that 6-month lag.

The amendment affects only large, major weapons systems. I ask the Senate to keep that in mind. We are talking primarily about weapons systems that account for more than \$100 million a year each. This involves only about 55 contracts. Thus, we are not talking about 90 percent of the burdensome reporting. We are also talking about spot audits at the request of the Comptroller General.

We worded the amendment in his language, in his way, so that he would live with it, so that it would be practical. He suggested this language to overcome the problem the Senator from New York is concerned about.

Mr. JAVITS. On page 4, line 10 "the costs incurred and to be incurred," does the Senator have in mind the same order of magnitude of major contracts in the \$100 million range that he refers to?

Mr. SCHWEIKER. Yes. This is correct.

Mr. JAVITS. I thank the Senator.

Mr. STENNIS. Mr. President, I yield 3 minutes to the distinguished Senator from Illinois.

Mr. DIRKSEN. Mr. President, the pending amendment just came to my attention this noon. I did not know that it was going to be submitted. I had a chance to look at it with a sandwich in one hand and the amendment in the other.

August 7, 1969

S 9355

I thought it was a far-reaching proposal that certainly deserves a lot more consideration than it will get in this discussion.

I heard it pointed out earlier today that this should go to the Government Operations Committee for hearings and then subsequently to the Appropriations Committee, or to the Armed Services Committee—either one.

The Government Operations Committee is the oversight standing committee in the Senate. It is the oversight standing committee also in the House of Representatives. If we want to note how much authority and jurisdiction it has, all we have to do is look in the rule book and see where it spells out the jurisdiction of every one of the standing committees of the Senate.

That is the oversight committee.

What this is, in essence, is an oversight operation on major Federal contracts as provided in section 1 of the bill. It goes awfully far and perhaps there has to be modification of the language if we are going to do exactly this.

To what extent it modifies our concept of the General Accounting Office and the Comptroller General is not too readily apparent until the matter is given far more study than it has had up to this point.

Thus, I share with the chairman of the committee the belief that this should not be put in this bill until it has had further consideration.

For that reason, I think that the amendment should be voted down because there will always be an opportunity to go before the Government Operations Committee and see what should be done.

I served on that committee years ago and I know what its jurisdiction is. I know the latitude of its power. The sky is almost the limit, so far as that committee is concerned. That is the proper place for an amendment of this kind. It only adds to my conviction that it should be rejected at this point and given much more consideration than it has had up to this good hour.

Mr. STENNIS. Mr. President, I yield myself the remaining 2 minutes.

The PRESIDING OFFICER. The Senator from Mississippi is recognized for 2 minutes.

Mr. STENNIS. Mr. President, I have already read the letter from the Comptroller General, Mr. Staats.

When the pilot of an airplane says that he had better not fly the plane today because of adverse weather conditions, and so forth, we take his advice. On that same basis, I read from Mr. Staats' letter again:

For these reasons, we believe that legislation prescribing a particular form of reporting at this time would be unwise.

Mr. President, this is an important matter. I have no personal concern about it except my obligation to the Senate. But I say right now that we had better stop this matter here, and get it before the Government Operations Committee which is the parent committee of the GAO of which the Senator from Arkansas is chairman. I have learned that the Senator from Connecticut is chair-

man of one of the outstanding subcommittees in that group. Let them analyze and make recommendations. If the Senator from Pennsylvania wants it to come over, we would like to have it come over to the Armed Services Committee, too, and let us analyze and perhaps make recommendations—whatever we want to. But I say that we are dealing with deadly stuff here, dealing in shotgun methods when no one knows, as the Senator from Illinois pointed out, what the phrases mean, and no one knows how far it will go to change the nature of the GAO, about which the Senator from Missouri has advised us.

No one knows what a major contract is. What is a major contract? That is what the amendment says. It goes to major contracts. Can anyone say what is a major contract—with no proof, with no record, with no hearings, with no report from the committee, and no kind of recommendations.

Let us not go off the deep end here on one of the most important matters we have, on something we all are trying to do something about.

The PRESIDING OFFICER. The Senator from Pennsylvania has 4 minutes remaining.

Mr. YARBOROUGH. Mr. President, will the Senator yield 1 minute to me?

Mr. SCHWEIKER. I yield 1 minute to the Senator from Texas.

Mr. YARBOROUGH. In answer to what the Senator from Mississippi has just said, in subsection (c) on page 3 of the amendment, beginning on line 14, the language reads:

The Secretary of Defense after consultation with the Comptroller General and with the chairman of the Committees on Armed Services and the Committees on Appropriations of the Senate and the House of Representatives shall prescribe criteria for the determination of major contracts under subsection (a).

So the chairman of the committee will be a part of those determining what a major contract is. This agency of the Government, which has these big war contracts, owes some responsibility to the people of the United States, such as in the case of the C-5A, which rode in with a bill \$700 million more than it was supposed to cost the people of the country. It is about time that the Congress exercised the power of the purse strings. This Department should be accountable, like all the rest, to the people of the country. This Department has a special largesse. They go scot-free. It is about time that the people in that Department were made responsible for it.

Mr. SCOTT. Mr. President, will the Senator yield briefly?

Mr. SCHWEIKER. I yield to my colleague from Pennsylvania.

Mr. SCOTT. Mr. President, the phrase "scot free" was used. I want to make it clear that, as far as I am concerned, the Pentagon is not to be freed of me or my ideas. I think the junior Senator from Pennsylvania is quite right that there ought to be a willingness to account, a willingness to avoid overruns, a willingness to operate the Defense Department for the primary concern of the taxpayers, and we should give the Congress and the Comptroller General the right to have

something to say about it. Therefore, I support the amendment offered by my colleague from Pennsylvania.

Mr. SCHWEIKER. Mr. President, the point has been brought out about the Comptroller General's expressing a certain view in a letter. I would like to point out that, 6 weeks prior to that letter, the Comptroller General was in my office. When I asked him exactly the same question, he said it was a matter of policy for the Senate to decide whether we should place the auditing function in the Comptroller General. I am delighted to see that letter, but 6 weeks ago, verbally, he gave me that very answer.

We talk about whether this amendment should go to the Armed Services Committee or should go to the Government Operations Committee or should go to other committees. All I can say is that I, as a member of the Armed Services Committee, am asked to vote for a \$20 billion bill. How on earth can I meet my responsibility if I do not even know the figures are honest? How can I meet my responsibility if I do not know whether that \$20 billion figure has any meaning in terms of being audited, or going through the process of certified public accounting, or having some kind of relation to giving us the basic tools of the trade that we have lacked so long to enable us to ride herd on the Pentagon?

Mr. President, I ask unanimous consent to have 2 additional minutes.

The PRESIDING OFFICER. The time of the Senator from Pennsylvania has not expired. He has 2 minutes.

Mr. SCHWEIKER. It is suggested that this proposal should go to this committee for hearings or to that committee for a report or to that committee for study. All I say is that we have had no hearings, we have had no report, and we have had no study. I suggest that if we go the course suggested, we will have no bill as well.

The issue is very simple. Are we going to take some fiscal responsibility for supervising these huge amounts of money, as is done for other departments? Are we going to decide priorities for spending the money as we do in our domestic programs?

I may add that this amendment has been on the desk since the 18th of July. Every Member has had an opportunity to see it or study it. It is not a matter of a new amendment or a quick amendment. I think this amendment was on the desk of each Senator for a longer time than most amendments are. It is clear. It is simple. The issue is whether we are going to supervise fiscally an \$80 billion budget and exercise our responsibility.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Pennsylvania, offered for himself and other Senators. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. EAGLETON (after having voted in the affirmative). On this vote, I have a pair with the Senator from Nebraska (Mr. CURRIS). If he were present and voting, he would vote "nay"; if I were

at liberty to vote, I would vote "yea." Therefore, I withdraw my vote.

Mr. KENNEDY. I announce that the Senator from Indiana (Mr. BAYH), the Senator from Nevada (Mr. CANNON), and the Senator from Tennessee (Mr. GORE) are necessarily absent.

I further announce that, if present and voting, the Senator from Nevada (Mr. CANNON) would vote "nay."

Mr. SCOTT. I announce that the Senator from Tennessee (Mr. BAKER), the Senator from Nebraska (Mr. CURTIS), and the Senator from Alaska (Mr. STEVENS) are detained on official business.

If present and voting, the Senator from Tennessee (Mr. BAKER) and the Senator from Nebraska (Mr. CURTIS) would each vote "nay."

The result was announced—yeas 47, nays 46, as follows:

[No. 70 Leg.]
YEAS—47

Aiken	Hughes	Pearson
Bellmon	Javits	Pell
Brooke	Kennedy	Percy
Burdick	Mansfield	Prouty
Byrd, Va.	Mathias	Proxmire
Case	McCarthy	Randolph
Church	McGovern	Saxbe
Cook	McIntyre	Schweiker
Cooper	Metcalfe	Scott
Fulbright	Mondale	Spong
Goodell	Montoya	Tydings
Gravel	Moss	Williams, N.J.
Harris	Muskie	Williams, Del.
Hart	Nelson	Yarborough
Hartke	Packwood	Young, Ohio
Hatfield	Pastore	

NAYS—46

Allen	Fannin	McGee
Allott	Fong	Miller
Anderson	Goldwater	Mundt
Bennett	Griffin	Murphy
Bible	Gurney	Ribicoff
Boggs	Hansen	Russell
Byrd, W. Va.	Holland	Smith
Cotton	Hollings	Sparkman
Cranston	Hruska	Stennis
Dirksen	Inouye	Symington

Dole	Jordan, N.C.	Thurmond
Dominick	Jordan, Idaho	Tower
Eastland	Long	Young, N. Dak.
Ellender	Magnuson	
Ervin	McClellan	

PRESENT AND ANNOUNCING A LIVE PAIR AS PREVIOUSLY RECORDED—1

Eagleton, for.

NOT VOTING—6

Baker	Cannon	Gore
Bayh	Curtis	Stevens

So Mr. SCHWEIKER's amendment (No. 85) was agreed to.

Mr. SCHWEIKER. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. DIRKSEN. I move to lay that motion on the table.

Several Senators asked for the yeas and nays.

The PRESIDING OFFICER (Mr. SAXBE in the chair). The yeas and nays have been requested. Is there a sufficient second?

The Chair is in doubt as to whether there is a sufficient second. The Senate will be in order, and the clerk will count.

The Chair is satisfied that there is a sufficient second. The clerk will call the roll. The question is on agreeing to the motion to lay on the table the motion to reconsider.

The assistant legislative clerk proceeded to call the roll, and Mr. AIKEN answered in the affirmative.

Mr. GOLDWATER. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

Mr. AIKEN. Mr. President, I had already voted "no."

Mr. FULBRIGHT. Mr. President, a point of order. The Senator from Vermont had already voted.

The PRESIDING OFFICER. The Chair is of the opinion that the rollcall had started. The rollcall will continue.

The assistant legislative clerk resumed the call of the roll, and Mr. ALLEN answered in the negative.

Mr. GOODELL. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. GOODELL. Mr. President, may we have the question stated again?

The PRESIDING OFFICER. The question is on agreeing to the motion to lay on the table the motion to reconsider. An affirmative vote will lay the motion on the table. A negative vote will not.

The assistant legislative clerk resumed the call of the roll.

Mr. METCALF (when his name was called). On this vote I have a pair with the Senator from Tennessee (Mr. BAKER). If he were present and voting, he would vote "nay"; if I were at liberty to vote, I would vote "yea." I withhold my vote.

Mr. EAGLETON (when his name was called). On this vote I have a pair with the Senator from Nebraska (Mr. CURTIS). If he were present and voting, he would vote "nay"; if I were at liberty to vote, I would vote "yea." I withhold my vote.

The rollcall was concluded.

Mr. KENNEDY. I announce that the Senator from Indiana (Mr. BAYH), the Senator from Nevada (Mr. CANNON), and the Senator from Tennessee (Mr. GORE) are necessarily absent.

I further announce that, if present and voting, the Senator from Nevada (Mr. CANNON) would vote "nay."

Mr. SCOTT. I announce that the Senator from Tennessee (Mr. BAKER), the Senator from Nebraska (Mr. CURTIS) and the Senator from Alaska (Mr. STEVENS) are detained on official business.

The Senator from Maryland (Mr. MATHIAS) is absent on official business.

The respective pairs of the Senator from Tennessee (Mr. BAKER) and that of the Senator from Nebraska (Mr. CURTIS) have been previously announced.

The yeas and nays resulted—yeas 46, nays 45, as follows:

[No. 71 Leg.]

YEAS—46

Aiken	Hatfield	Pell
Bellmon	Hughes	Percy
Brooke	Javits	Prouty
Burdick	Kennedy	Proxmire
Byrd, Va.	Mansfield	Randolph
Case	McCarthy	Saxbe
Church	McGovern	Schweiker
Cook	McIntyre	Scott
Cooper	Mondale	Spong
Ellender	Montoya	Tydings
Fulbright	Moss	Williams, N.J.
Goodell	Muskie	Williams, Del.
Gravel	Nelson	Yarborough
Harris	Packwood	Young, Ohio
Hart	Pastore	
Hartke	Pearson

PRESENT AND GIVING LIVE PAIRS, AS PREVIOUSLY REPORTED—2

Metcalfe, for.
Eagleton, for.

NOT VOTING—7

Baker	Curtis	Stevens
Bayh	Gore	
Cannon	Mathias	

So the motion to lay on the table was agreed to.

The PRESIDING OFFICER. Is there further amendment?

Mr. MANSFIELD. Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will be in order.

Mr. MANSFIELD. Mr. President, are there any amendments at the desk?

The PRESIDING OFFICER. There are a number that have been submitted and printed. They have no parliamentary standing. They have not been called up.

Mr. MANSFIELD. Does any Senator desire to call up an amendment now? If we are going to stay late and get through with this bill, hopefully by August 13, now is the time for all good men on both sides of the aisle to come to the aid of their party. [Laughter.]

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. PROXMIRE. Some eight amendments on chemical and biological warfare are pending. We are trying to work out now with Senator MCINTYRE an agreement on these amendments, and some of us who have amendments feel that these amendments should go first.

Mr. MANSFIELD. I see.

Mr. PROXMIRE. For that reason, I would appreciate it if we could have a little hiatus.

Mr. LONG. Then, may I put something in the RECORD at this time?

Mr. MANSFIELD. Yes.

TAX REFORM

Mr. LONG. Mr. President, the lead editorial of the Wall Street Journal today deals with the tax reform package. It is a very thoughtful editorial and deserves the attention of every Member of the Senate. It is entitled "From Confusion to Chaos," and describes the bill in its present form, as voted on by the House of Representatives, in the nature of a tax reform measure.

I ask unanimous consent to have the editorial printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FROM CONFUSION TO CHAOS

One thing can be said with certainty, anyway, about the new tax bill. It was born in

August 7, 1969

confusion, and if it is passed in its present form, it will splice confusion with chaos.

Beyond that, certainty fades even among tax experts in or out of Government. As Edwin S. Cohen, Assistant Secretary of the Treasury, ruefully put it, the House tax "reform" bill might better be known as "the lawyers and accountants relief act of 1969."

If the members of the House Ways and Means Committee didn't quite know what they had put in the bill when they approved it, which they didn't, and if the Treasury Department officials aren't quite sure yet what some of it says, which they aren't, pity the poor taxpayer trying to figure out what has been done to him. Or, for that matter, the newspapermen, poor wretches, trying to explain it all to their readers.

What happened, in case you got lost in the news, was that the Ways and Means Committee approved the bill last Friday in a great rush to answer the clamor for "reform," which is of course something that everybody's for.

Since many of its provisions had been announced piecemeal, at least in principle, there was a general understanding that the bill would help the low income taxpayer and soak the wealthy taxpayer; but since many of the provisions had not been put into precise language, and no committee report was available, there was considerable confusion as to what had actually been done. In a tax bill, the exact words are more important than the generalities.

Indeed, even Chairman Mills, one of the oldest hands in the taxing business, had to confess himself confused. On Tuesday he had to reassemble his committee to amend the rate schedules for low income taxpayers because of what Mr. Mills called a "misunderstanding." As it turned out, a \$2.4 billion misunderstanding.

So don't expect from us this morning any definite explanation on what it all means. A summary of the bill was finally made available this week (minus, of course, the changes made on Tuesday) but it takes time to digest 226 pages of tax prose and another 143 pages of "technical explanation" even if you're a Philadelphia lawyer.

But a few observations may not be out of order.

One is that there are a lot of happy things proposed, for the future if not the present. By the end of 1972, if you can dream so far ahead, the general tax rates will be reduced by an average of about 5%. If you're in the lowest tax bracket the exemptions have been increased so that you may not have to pay any taxes at all; about 5.2 million people will be removed from the tax rolls entirely. If you're in the top tax bracket, you can keep 35% of your top earnings instead of just 30% as at present—maybe, if you have the right kind of income.

Moreover, if you earn your own income—as distinguished from those lazy fellows, retired or otherwise, who live off of dividends of savings account interest—your top tax won't take more than half of what you earn.

Another observation is that it is a canard to label this a soak-the-rich tax bill, in spite of its heralded provisions for a minimum tax aimed at the rich. Short of Castro confiscation it's hard to write a tax bill that will be more than an inconvenience to Fords, Rockefeller or Kennedys.

The man who gets dunked is the man in the middle, the corporate executive or the doctor or lawyer who may have no real wealth but high earnings for a brief span of years. That is, the man with mixed income, some from salary, some from savings; the man with some capital gains that he has been counting on for his retirement years.

For all the rules on such things as deferred compensation, stock options, many forms of pension plans and almost everything else on which the retirement plans of such men might be based—all these rules would

be changed. Some of these changes would even penalize those already retired who planned in good faith on the rules at the time; almost all of them would penalize younger men planning now for retirement. Hardly anybody can figure out yet precisely how the new rules would affect particular cases, but it is clear enough that the punishment is aimed not at the rich but at the successful.

Yet however all this may affect individuals, happily or otherwise, other changes are sure to have far-reaching effects, though uncertain ones, rippling out through the economy.

No one, for example, can anticipate the effects of the new treatment proposed on heretofore tax exempt bonds of states, municipalities, school boards and the like. The uncertainty is acknowledged in the proposed provision that these local authorities will be eligible for a Federal subsidy to offset the effects—but there is a sociological and political effect, as well as an economic one, in forcing them to go hat in hand to Washington. An unmeasurable effect.

Unmeasurable also are the effects of provisions in the bill which would revamp the tax treatment of charitable contributions, stock dividends, the handling of corporate bonds and debentures, depreciation charges for utility firms, cooperatives, foundations, multiple corporations. Some of these may be worthy reforms, some not. The point, rather, is that no one can anticipate now what unexpected, and perhaps untoward, effects all these things may have on that most complicated of mechanisms, the ecology of a complex economy.

Chairman Mills himself admits as much. He has promised that his committee will "later" analyze the impact of the bill he now proposes.

Somehow "later" seems not quite soon enough.

ACM

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each reserve component of the Armed Forces, and for other purposes.

Mr. MANSFIELD. Mr. President, there may well be votes.

Mr. MAGNUSON. If there is no amendment, is the bill not automatically up for third reading?

Mr. MANSFIELD. No, Mr. President. In that case, I ask—

Mr. MAGNUSON. I just asked the question. The Chair has not answered the question. When there are no amendments to be offered, does the bill automatically go to third reading?

Mr. MANSFIELD. Mr. President, I have the floor.

I ask unanimous consent that the pending business be laid aside temporarily, and that the Senate proceed to the consideration of Calendar No. 214,

H.R. 7206, an act to adjust the salaries of the Vice President of the United States and certain officers of Congress. There will be votes.

Mr. STENNIS. Mr. President, reserving the right to object, I want to inquire what the situation will be now. If we are going to have any other amendments this afternoon, it seems to me that we should take them up now.

It is correct, as the Senator has said, that a number of amendments, at my suggestion, are in conference with one of the subcommittee chairmen. But there are many other amendments that can be taken up, and we certainly will not get through before the August recess unless we keep working on this bill. Simply because it is inconvenient for someone to call up this amendment, I do not think is sufficient reason. I am speaking now in the interest of keeping the bill moving.

The PRESIDING OFFICER. In answer to the question, there is a pending request of the Senator from Montana. As to the bill (S. 2546), the Chair will bring the bill to a third reading, if no one, after a hiatus, seeks recognition to speak or to bring up an amendment.

Mr. MANSFIELD. Mr. President, if I have to do it myself, I will offer an amendment in order to prevent third reading. I have no amendments, but I hope this matter is not pushed, because the right of every Senator must and will be protected.

Mr. President, I renew my request.

Mr. STENNIS. Mr. President, reserving the right to object, I did not suggest third reading.

Mr. MANSFIELD. I know the Senator did not.

Mr. STENNIS. I just wanted it understood—

Mr. MAGNUSON. I did not suggest it, either. I just asked what the rule was. And I got the right answer. [Laughter.]

Mr. STENNIS. One more question: Does the Senator from Montana expect extended debate on the salary bill?

Mr. MANSFIELD. No. I understand that the distinguished Senator from Delaware will offer an amendment relative to the pay raise commission. The yeas and nays will be requested. I do not know whether there will be any, but I would hope that we could dispose of this bill within an hour, and that, if there is any argument, we could have rollcall votes as soon as possible, so that we can all be on record.

Mr. HOLLAND. Mr. President, the Senator from Florida was not able to make his opinion heard on the last amendment, and he wishes to speak 4 or 5 minutes on it, because he thinks this will be a matter in conference which should require the expression of opinions of Senators who have strong opinions on it. After he has made that statement, he would be very happy to agree to the request of the majority leader.

Mr. MANSFIELD. Mr. President, I withdraw my request. I thought this had been cleared. The Senate was given notice on this. A decision has been made on the previous motion, and I had hoped, in the interest of comity with the other side and with the Committee on Post Office and Civil Service,

which had agreed unanimously to something or other, that we could tend to this and give the chairman of the committee a chance to eat. He has not had a bite since breakfast. I had hoped we could get on with this bill and have the other comments later. But, on the basis of the request made, I reluctantly withdraw the request.

The PRESIDING OFFICER. The Chair has heard no objection to the request of the Senator from Montana.

Mr. HOLLAND. I shall object unless I am allowed to speak 4 or 5 minutes on the subject I mentioned.

Mr. MANSFIELD. The Senator can get the time on this bill if he wants it, but if he wants it separate, I will withdraw the request.

The PRESIDING OFFICER. Objection is heard.

The question recurs.

Mr. HOLLAND. Mr. President, the decision just made by the Senate, by a cliff-hanger vote, is a decision on a matter which I think should be fully discussed in the RECORD, because surely it will be in conference and surely all reasonable arguments should be heard on it.

The Senator from Florida had asked for time to be heard, and the amount of time available was not sufficient, so he was not allowed to make his statement.

Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will be in order.

Mr. HOLLAND. Mr. President, I can speak a good deal longer than 4 or 5 minutes, if it is necessary, but I would prefer to confine my remarks to the shortest possible time.

Mr. President, I had asked the Presiding Officer to recognize me as soon as the result of the vote was announced. I did not realize that I had to go further than that in order to exercise my rights in this matter.

Mr. President, I think the Senator from Mississippi, the chairman of the Armed Services Committee, and the Senator from Missouri, one of the ranking members of the committee, and others who spoke were exactly within their rights and exactly stated the facts that the function of the so-called Schweiker amendment materially changes the functions of the General Accounting Office.

It was for that reason that I thoroughly agreed with that that the matter required and was intended to have full study by the Committee on Armed Services and also by the Committee on Government Operations before it should be seriously considered by the Senate.

The Senator from Florida would like to see an act passed under which the General Accounting Office was more fully availed of in connection with checking on defense contracts. He wants that to be made clear but he is not willing to take that action in the overriding of the two fine committees that the Senator from Florida has mentioned; nor is he willing to take it in this action which has been taken which materially changes the function of the General Accounting Office.

Mr. President, I ask unanimous consent to have printed in the RECORD the

list of the members of the Committee on Armed Services, which is so ably headed by the Senator from Mississippi as chairman of the committee and by the Senator from Maine (Mrs. SMITH) as the ranking minority member.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

ARMED SERVICES

John Stennis, of Mississippi, *chairman*.
Richard B. Russell, of Georgia.
Stuart Symington, of Missouri.
Henry M. Jackson, of Washington.
Sam J. Ervin, Jr., of North Carolina.
Howard W. Cannon, of Nevada.
Stephen M. Young, of Ohio.
Daniel K. Inouye, of Hawaii.
Thomas J. McIntyre, of New Hampshire.
Harry F. Byrd, Jr., of Virginia.
Margaret Chase Smith, of Maine.
Strom Thurmond, of South Carolina.
John G. Tower, of Texas.
Peter H. Dominick, of Colorado.
George Murphy, of California.
Edward W. Brooke, of Massachusetts.
Barry Goldwater, of Arizona.
Richard S. Schweiker, of Pennsylvania.

Mr. HOLLAND. Mr. President, I next ask unanimous consent to have printed in the RECORD the list of members of the Committee on Government Operations which is so ably headed by the senior Senator from Arkansas (Mr. McCLELLAN) and by the senior Senator from South Dakota (Mr. MUNDT) as the ranking minority member.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

GOVERNMENT OPERATIONS

John L. McClellan, of Arkansas, *chairman*.
Henry M. Jackson, of Washington.
Sam J. Ervin, Jr., of North Carolina.
Edmund S. Muskie, of Maine.
Abraham A. Ribicoff, of Connecticut.
Fred R. Harris, of Oklahoma.
Lee Metcalf, of Montana.
Eugene J. McCarthy, of Minnesota.
James B. Allen, of Alabama.
Karl E. Mundt, of South Dakota.
Jacob K. Javits, of New York.
Charles H. Percy, of Illinois.
Robert P. Griffin, of Michigan.
Ted Stevens, of Alaska.
Edward J. Gurney, of Florida.

Mr. HOLLAND. Mr. President, in the first place I do not believe the Senate realizes what it has done has been to render a vote of no confidence. The vote of the Senate is a vote of no confidence in these two fine committees and their members.

The Senator from Florida has the fullest confidence in the membership of both of these committees. Incidentally, the distinguished Senator from Pennsylvania, who offered the amendment, is a member of the Committee on Armed Services, and the Senator from Florida has confidence in him. I would like to see this subject matter seriously considered by the appropriate committees before the Senate is required to act upon it.

In the second place, I wish to call attention to the language in the amendment, which has just been agreed to by a majority of one vote of the Senate, which I think completely changes the nature of the General Accounting Office. I will read, therefore, from page 4 of the amendment of the distinguished Senator

from Pennsylvania (Mr. SCHWEIKER) beginning at line 8 under subsection (f):

(f) The Comptroller General shall make independent audits of major contracts where in his opinion the costs incurred and to be incurred, the delivery schedules, and the effectiveness of performance achieved and anticipated are such as to warrant such audits and he shall report his findings to the Congress and to the Committee on Armed Services and the Committee on Appropriations of the Senate and of the House of Representatives.

Mr. President, the Senator from Florida has used the General Accounting Office a good many times. I see present in the Chamber the distinguished senior Senator from Nebraska (Mr. HRUSKA) who is the ranking minority member of the committee of which I am chairman. The Senator from Nebraska will well recall that our subcommittee has on various occasions used the General Accounting Office to investigate matters which we thought required investigation. It has done so ably, and its opinions have been very fine opinions, and they have been very helpful to the members of the committee and Congress.

I have been here for 23 years and never has it been even remotely suggested that the Comptroller General shall be the moving party, shall be the policymaker, shall be the decisionmaker on the question of where he goes with his investigation. Yet the wording which I have read from the amendment just agreed to makes it clear that, "the Comptroller General shall make independent audits of major contracts where in his opinion the costs incurred and to be incurred, the delivery schedules, and the effectiveness of performance achieved and anticipated are such as to warrant such audits."

I know of no such provision in any other act ever passed in Congress, at least in these 23 years, or any action ever taken by Congress or any committee of Congress in these 23 years, which even approaches this degree of giving complete discretion, complete judgment, complete decision, complete power to the General Accounting Office, and the means to the Comptroller General, as to where he shall go in a vast agency of Government which spends something like \$80 billion.

I thoroughly agree with the letter of the Comptroller General to the distinguished chairman of the Committee on Armed Services which made it very clear that he thought that such matter was a serious matter, would represent a serious departure, did require long hearings, did require decision on how many additional employees might be required, did require decision as to just what would be the function of Congress and what the function of the Comptroller General in this vast field of expenditures of the Department of Defense would be, which every one of us agrees should be carefully supervised by Congress.

But, Mr. President, note carefully the independent decision and independent judgment this amendment just past gives to the Comptroller General, no matter how fine a man he is, because the whole concept of the setting up of the General Accounting Office was to set up an office which would be an arm of Con-

August 7, 1969

S 9359

gress, not the head, not the guide, not the leader, not the one determining policy, but the arm of the Congress to investigate where Congress felt investigation should be made. The General Accounting Office has uniformly been so used in all of the cases in which I have had any information at all as to their various activities, which have been many.

Therefore, the Senator from Florida simply wants the Record to show he completely agrees on the two major points with the position taken by the distinguished chairman of the committee: First, that hearings are absolutely necessary, that this is a vital, very important, and serious matter; and, second, as agreed to, the amendments means a very great change in the functioning of the General Accounting Office and makes of it instead of an arm of Congress the leader and guide of Congress in various major fields of expenditure.

The Senator from Florida would have no objection at all to the granting of subpoena powers in proper cases, and he has voted on many occasions to give subpoena powers to various investigating committees and various regulatory agencies and the like. That is not a part of the objection of the Senator from Florida, but he does object to this kind of handling of such an important matter and particularly when this matter marks a complete change of the character of the General Accounting Office. It is an important arm of the legislative department, and not of the executive department. It is an arm to which we can refer matters which Congress thinks should be investigated and reported upon.

To turn the Comptroller General loose without any guidance except the language here relating to—in his opinion—which is the wording, he can move as he pleases in any area looking for matters he thinks important.

Mr. President, I wanted this statement to appear in the Record because I have very strong feelings in the matter, and because I think I have as strong a desire as any in this Chamber to have properly reviewed and properly supervised the expenditures of vast amounts of money which we entrust to the Defense Department for expenditures. But I am not willing on this floor, without a committee report, without committee hearings, particularly when it is clear the amendment was offered to the committee and then withdrawn without the committee's being given a chance to pass upon it. I am not willing to vote for such a far-reaching amendment which, in effect, is a vote of no confidence as to the Armed Services Committee and the Government Operations Committee and is, in effect, a vote which would change completely the nature of the GAO which is one of the very important agencies belonging to the legislative branch and which we may regard as our investigating arm. That is what it is.

I thank the Senator from Mississippi for yielding to me.

Mr. STENNIS. I thank the Senator for his fine remarks. I am sorry he did not have an opportunity to speak before this time.

Mr. HOLLAND. I thank the Senator.

I realize the difficulties under which he is operating. I have no feeling about the matter at all. I simply wanted to have in the Record a clear statement of my opinion on this matter because, may I respectfully say, I differ with the majority of Senators who have voted for this amendment without hearings, as far-reaching as it is, that it should be adopted and written into law.

GREAT PLAINS CONSERVATION PROGRAM

Mr. ELLENDER. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on H.R. 10595.

The PRESIDING OFFICER laid before the Senate a message from the House of Representatives announcing its disagreement to the amendments of the Senate to the bill (H.R. 10595) to amend the Act of August 7, 1956 (70 Stat. 1115), as amended, providing for a Great Plains conservation program, and requesting a conference with the Senate on the disagreeing votes of the two Houses thereon.

Mr. ELLENDER. I move that the Senate insist upon its amendments and agree to the request of the House for a conference, and that the Chair be authorized to appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. EASTLAND, Mr. HOLLAND, Mr. JORDAN of North Carolina, Mr. AIKEN, and Mr. COOK conferees on the part of the Senate.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Geisler, one of his secretaries.

PUBLIC TRANSPORTATION—MESSAGE FROM THE PRESIDENT (H. DOC. NO. 91-145)

The PRESIDENT pro tempore laid before the Senate the following message from the President of the United States, which was referred to the Committee on Commerce:

To the Congress of the United States:

Public transportation has suffered from years of neglect in America. In the last 30 years urban transportation systems have experienced a cycle of increasing costs, decreasing funds for replacements, cutbacks in service and decrease in passengers.

Transit fares have almost tripled since 1945; the number of passengers has decreased to one third the level of that year. Transit industry profits before taxes have declined from \$313 million in 1945 to \$25 million in 1967. In recent years 235 bus and subway companies have gone out of business. The remaining transit companies have progressively deteriorated. Today they give their riders fewer runs, older cars, and less service.

Local governments, faced with demands for many pressing public services and with an inadequate financial base, have been unable to provide sufficient assistance.

This is not a problem peculiar to our largest cities alone. Indeed, many of our small and medium-sized communities have seen their bus transportation systems simply close down.

When the Nation realized the importance and need for improved highways in the last decade, the Congress responded with the Highway Act of 1956. The result has been a magnificent federally-aided highway system. But highways are only one element in a national transportation policy. About a quarter of our population lack access to a car. For these people—especially the poor, the aged, the very young and the handicapped—adequate public transportation is the only answer.

Moreover, until we make public transportation an attractive alternative to private car use, we will never be able to build highways fast enough to avoid congestion. As we survey the increasing congestion of our roads and strangulation of our central cities today, we can imagine what our plight will be when our urban population adds one hundred million people by the year 2000.

We can not meet future needs by concentrating development on just one means of transportation. We must have a truly balanced system. Only when automobile transportation is complemented by adequate public transportation can we meet those needs.

THE PUBLIC TRANSPORTATION PROGRAM

I propose that we provide \$10 billion out of the general fund over a 12-year period to help in developing and improving public transportation in local communities. To establish this program, I am requesting contract authorization totaling \$3.1 billion for the first five years starting with a first year authorization of \$300 million and rising to \$1 billion annually by 1975. Furthermore, I am asking for a renewal of this contract authorization every two years so that the outstanding contract authorization will never be for a shorter period than three years. Over the 12-year period, \$9.5 billion is programmed for capital investments and \$500 million for research and development.

The program which I am recommending would help to replace, improve and expand local bus, rail and subway systems. It would help to develop and modernize subway tracks, stations, and terminals; it would help to build and improve rail train tracks and stations, new bus terminals, and garages.

The program would authorize assistance to private as well as public transit systems so that private enterprise can continue to provide public services in urban transportation. It would give State governments an opportunity to comment on project applications in order to improve intergovernmental coordination. It would require local public hearings before any major capital construction is undertaken. And it would permit localities to acquire rights-of-way in advance of system construction in order to reduce future dislocation and costs.

Fares alone cannot ordinarily finance the full cost of public transit systems, including the necessary capital investments. Higher fares usually result in fewer riders, taking much of the "mass"

out of mass transit and defeating the social and economic purpose of the system.

One problem with most transit systems operating today is that they rely for revenues on people who *must* use them and make no appeal to those who have a choice of using them or not. Thus we have the self-defeating cycle of fewer riders, higher fares, lower revenues, worse facilities, and still fewer riders.

The way to break that cycle is to make public transit truly attractive and convenient. In this way, more riders will provide more revenues, and fares can be kept down while further efficiencies can be introduced.

In addition to assistance for capital improvements, I am proposing substantial research and technology efforts into new ways of making public transit an attractive choice for owners of private cars. These would include:

- Advanced bus and train design to permit easier boarding and dismounting.
- Improved interiors in bus and trains for increased convenience and security for riders.
- New traffic control systems to expedite the flow of buses over streets and highways.
- Tracked air cushioned vehicles and automated transit.
- Flexible bus service based on computer-forecast demands.
- New bus propulsion systems which would reduce noise and air pollution as well as cost.
- Systems such as moving sidewalks and capsules to transport people for short distances within terminals, and other major activity.

In summary, this public transportation program I am recommending would give State and local governments the assurance of Federal commitment necessary both to carry out long-range planning and to raise their share of the costs. It would meet the challenge of providing resources that are adequate in amount and it would assure adequate duration of their availability.

The bus rider, train commuter and subway user would have better service. The car driver would travel on less congested roads. The poor would be better able to get to work, to reach new job opportunities and to use training and rehabilitation centers. The centers of big cities would avoid strangulation and the suburbs would have better access to urban jobs and shops.

Most important, we as a Nation would benefit. The Nation which has sent men to the moon would demonstrate that it can meet the transportation needs of the city as well.

RICHARD NIXON.

THE WHITE HOUSE, August 7, 1969.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Presiding Officer laid before the Senate messages from the President of the United States submitting the nomination of George E. Woods, Jr., of Michigan, to be U.S. attorney for the eastern district of Michi-

gan, and withdrawing the nomination of Louis R. Bruce, of New York, to be Commissioner of Indian Affairs, which nominating message was referred to the Committee on Interior and Insular Affairs.

TEMPORARY EXTENSION TO OCTOBER 31, 1969, OF AUTHORITY CONFERRED BY THE EXPORT CONTROL ACT OF 1949

Mr. MUSKIE. Mr. President, I ask that the Chair lay before the Senate a message from the House of Representatives on House Joint Resolution 864.

The PRESIDING OFFICER laid before the Senate the joint resolution (H.J. Res. 864), to provide for a temporary extension to October 31, 1969, of the authority conferred by the Export Control Act of 1949, which was read twice by its title.

Mr. MUSKIE. Mr. President, I ask unanimous consent that the Senate proceed to its immediate consideration.

The PRESIDING OFFICER. Is there objection to the present consideration of the joint resolution?

There being no objection, the Senate proceeded to consider the joint resolution.

Mr. MUSKIE. Mr. President, what is involved here is the authority of the Commerce Department to regulate exports from the United States. The Senate has before it on the calendar a bill which has been considered by the Committee on Banking and Currency and reported to the Senate which deals with the expansion and regulation of exports. However, in order to give that bill proper consideration, we need temporary extension for the second time of the present law.

This joint resolution would have that effect. The House has approved it. We have cleared it with both sides of the aisle.

I therefore ask that the Senate approve this resolution at this time.

Mr. BYRD of Virginia. Mr. President, will the Senator from Maine yield?

Mr. MUSKIE. I yield.

Mr. BYRD of Virginia. What is the length of time for the extension?

Mr. MUSKIE. It is a 60-day extension from August 31. The first temporary extension expires then. This joint resolution extends it to October 31, in order to allow consideration of the principal legislation which is on the calendar.

Mr. BYRD of Virginia. I thank the Senator from Maine.

The resolution (H.J. Res. 864) was read the third time and agreed to.

SUBCOMMITTEE MEETING DURING SENATE SESSION

Mr. JAVITS. Mr. President, with the consent of both sides, I ask unanimous consent that the Subcommittee on Education of the Committee on Labor and Public Welfare may meet for 15 minutes to report a bill to the full committee at this particular time.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE SALARY ADJUSTMENTS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the pending business be laid aside temporarily and that the Senate proceed to the consideration of Calendar No. 214, H.R. 7206.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. H.R. 7206, to adjust the salaries of the Vice President of the United States and certain officers of the Congress.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

AMENDMENT NO. 39

Mr. WILLIAMS of Delaware. Mr. President, I send to the desk my amendment No. 39 and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. At the appropriate place insert a new section:

That (a) section 225 of the Federal Salary Act of 1967 is hereby repealed.

(b) Section 216 of such Act is amended by striking out "and subject to the operation of section 225 of this title."

Mr. WILLIAMS of Delaware. Mr. President, on April 29 this amendment was approved by a rollcall vote, and the vote was 49 to 36. I see no reason to debate the issue again. Surely there will be an equally favorable vote again. It is being offered on behalf of the Senator from Virginia (Mr. BYRD), the Senator from Colorado (Mr. DOMINICK), and myself.

It merely repeals the President's commission under which congressional salaries are fixed every 4 years. I am ready to vote.

Mr. President, I call for a division.

The PRESIDING OFFICER. A division is called for.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. YOUNG of Ohio. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. YOUNG of Ohio. Mr. President, I ask for recognition.

The PRESIDING OFFICER. The Senator from Ohio.

Mr. YOUNG of Ohio. Mr. President, the pending bill, which was passed in the other body and was reported by the Post Office and Civil Service Committee, proposes to increase the salary of the Vice President from \$43,000 a year to \$62,500 a year.

Earlier in this session the Congress increased the salary of the President of the United States by 100 percent, from \$100,000 per annum to \$200,000 per annum.

I recall that an amendment was offered to increase the salary of the President by only \$50,000 per annum. I supported that 50-percent increase. However, that

August 7, 1969

S 9383

(Mr. AIKEN), the Senator from South Carolina (Mr. THURMOND), and the Senator from Montana (Mr. MANSFIELD) be added as cosponsors of S. 2593, to exclude officers and employees of Western Hemisphere businesses from being charged against the Western Hemisphere immigration quota.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2718

Mr. BENNETT. Mr. President, I ask unanimous consent, that at the next printing, the names of the distinguished Senator from Tennessee (Mr. GORE), the distinguished Senator from Nevada (Mr. BIBLE), the distinguished Senator from Washington (Mr. JACKSON), and the distinguished Senator from New Mexico (Mr. MONTOYA) be added as cosponsors of S. 2718, to modify ammunition record-keeping requirements.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2721

Mr. JAVITS. Mr. President, I ask unanimous consent that, at the next printing, the names of the Senator from Illinois (Mr. PERCY) and the Senator from Alaska (Mr. STEVENS), be added as cosponsors of S. 2721, the Insured Student Loan Emergency Amendments of 1969.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2758

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Minnesota (Mr. MONDALE), I ask unanimous consent that, at the next printing, the name of the senior Senator from New York (Mr. JAVITS), be added as a cosponsor of S. 2758, to amend section 312 of the Housing Act of 1964 to eliminate the provision which presently limits eligibility for residential rehabilitation loans thereunder to persons whose income is within the limits prescribed for below-market-interest-rate mortgages insured under section 221(d)(3) of the National Housing Act.

The PRESIDING OFFICER. Without objection, it is so ordered.

ENROLLED BILL PRESENTED

The Secretary of the Senate reported that on today, August 7, 1969, he presented to the President of the United States the enrolled bill (S. 714) to designate the Ventana Wilderness, Los Padres National Forest, in the State of California.

THE 1970 NASA AUTHORIZATION BILL—AMENDMENTS

AMENDMENT NO. 128

Mr. YARBOROUGH. Mr. President, I submit an amendment intended to be proposed by me, to the Senate Aeronautical and Space Sciences Committee amendment to the bill H.R. 11271, the 1970 NASA authorization bill.

Scarcely 2 weeks ago this country launched three men to the moon. After a perfect trip into a lunar orbit, the Eagle and Columbia separated to attempt the first manned lunar landing. The entire world heard the words of

Comdr. Neil Armstrong declare that man had landed on the moon. Then the miracle of television brought us live the first human footsteps on the moon and the first exploration by men of an extraterrestrial body. The subsequent lift-off, rendezvous, and docking, return to earth, reentry, and splashdown completed the historic flight of Apollo 11.

This flight, and our entire space program, have demonstrated beyond any doubt the extraordinary power and sophistication of our space technology. It is difficult to comprehend that most of this technology did not exist 10 years ago. With the trail-blazing cooperation of Government, private industry, labor and education, we fulfilled the most challenging goal of the 1960's—the placing of men on the moon and their safe return.

The amendment which I submit today looks to the 1970's as years of vast potential for mankind—not only in the now human realm of space, but in every field of human endeavor. The first ten years of the space program have produced not only the headlines of accomplishment in space, but also thousands of products and techniques useful to all Americans. Teflon, space communication satellites, miniaturization, computer technology, photography and sensors of body functions are several of the most famous of these. Each person who views a television news report knows of the instant news available via satellite. Without the space program, it is doubtful that we would have as many and as varied innovative products and techniques as we have today. Especially in the field of computer technology and communications, it may be said with justification that the advancements made with the direct assistance of space research have provided industry, education, health and Government with tools to begin to handle the tempo of the 1970's.

As we prepare to enter the 1970's, we have chosen to continue exploring space and developing the earthly benefits from such exploration. The question before us is how rapidly shall we proceed? Many who urge cutback think of the money spent on space exploration as benefitting us only to the extent that we acquire additional knowledge of space. If this were true, then our large expenditures on space might be valid subjects for criticism. But for each dollar we invest in NASA, we in America and around the world receive uncounted additional dollar benefits in spin-off technological developments, in addition to the intangible benefits to our world stature and the increased respect for our American system of government.

Only yesterday Dr. Thomas Paine and Dr. George E. Mueller, top NASA officials, urged this country to set a national goal of going to mars in the 1980's. They realize that the technology we have rapidly developed in the last 10 years should continue to be used productively. Congress and the administration will certainly give these recommendations thorough study. But while this study is continuing, we must not make reductions in the NASA budget which would impair NASA's ability to undertake new and challenging projects.

As chairman of the Senate Committee on Labor and Public Welfare, Chairman of the Subcommittee on Health, and member of the Subcommittee on Education, I am daily involved with the extremely pressing needs of poverty, health, education—the entire waterfront of our domestic needs. These needs must be met. However, the money for the solution of our domestic problems should not come from the valuable, productive, peace-directed program of NASA. Let us rather look to the huge cost overruns of the Defense Budget, the overwhelming and unwise expense of the Vietnam war, and now the unproven and costly ABM proposal. At this crucial time in this Nation's history, we should commit ourselves to an all-out, crash effort to secure peace and to solve our domestic problems. But cutting the NASA authorization is not the way to pursue these goals.

In the 1970's, we will need to develop our maximum potential in technology if we are to keep pace with the knowledge explosion and to make significant inroads into our domestic problems. The NASA authorization bill, to be considered by us shortly, commits us to a more limited program than we should follow.

My amendment increases the NASA authorization as reported by the Senate Aeronautics and Space Sciences Committee. The increases my amendment suggests in the research and development of Apollo, space flight operations, bio-science, space application, lunar vehicle procurement, space vehicle systems, electronics systems, human factor systems, basic research, space power and electric propulsion systems, chemical propulsion, aeronautical vehicles and tracking and data acquisition simply raise the authorization for those items to the amount passed by the House; and these increases constitute a total accretion of \$256,500,000 in research and development and \$6,350,000 in research and program management.

I would like to see the Senate authorize more funds than this. In the fall of 1968 NASA stated to the Bureau of the Budget that \$4.2 billion was needed for fiscal year 1970 for a minimum space program and \$4.7 billion if we wanted to consolidate a position of world leadership. My amendment authorizes the bare minimum that we, as a nation, should commit to space. Its adoption is vital to the proper balance in our national priorities; it is vital to the future of our exciting and promising space program; and it is vital, in my opinion, to the interests and well-being of our country.

The PRESIDING OFFICER. The amendment will be received and printed, and will lie on the table.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH—AMENDMENT

AMENDMENT NO. 129

Mr. FULBRIGHT. Mr. President, in conformity with an understanding with

the chairman of the Armed Service Committee, I submit an amendment, intended to be proposed by me, to the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each reserve component of the Armed Forces, and for other purposes, and ask that it be printed and lie on the table, and which, I will, of course, call up at a later date.

The PRESIDING OFFICER. The amendment will be received and printed, and will lie on the table.

AMENDMENT NO. 130

Mr. MCGOVERN (for himself, Mr. GOODELL, Mr. HATFIELD, and Mr. PROXMIER) submitted an amendment, intended to be proposed by them, jointly, to Senate bill 2546, supra, which was ordered to lie on the table and to be printed.

(The remarks of Mr. MCGOVERN when he submitted the amendment appear earlier in the RECORD under the appropriate heading.)

ADDITIONAL COSPONSORS OF AMENDMENT

AMENDMENT NO. 85

Mr. SCHWEIKER. Mr. President, on July 18, I submitted amendment No. 85 to S. 2546, the military procurement authorization bill. At this time, I ask unanimous consent that, at the next printing, the names of the Senator from Missouri (Mr. EAGLETON) and the Senator from Utah (Mr. MOSS) be added as cosponsors.

The PRESIDING OFFICER. Without objection, it is so ordered.

NOTICE OF HEARING ON NOMINATION OF COMMISSIONER OF INDIAN AFFAIRS

Mr. JACKSON. Mr. President, for the information of the Members of the Senate and other interested persons, I announce that the Committee on Interior and Insular Affairs will hold an open hearing on the nomination by President Nixon of Louis R. Bruce, of New York, a full-blooded Indian, to be Commissioner of Indian Affairs, Department of the Interior. Mr. Bruce's father was a Mohawk chief and his mother an Oglala Sioux. The hearing will be held at 10 o'clock on Monday, August 11, in the committee room, 3110 New Senate Office Building.

As one who long has been deeply concerned with the advancement of Indians, I note with heartfelt approval that President Nixon is following the precedent established by President Johnson in appointing an Indian to head the Bureau of Indian Affairs, the agency of the executive branch with direct responsibility for the economic and political development of our American Indians. Mr.

Bruce will succeed Robert L. Bennett, an Oneida Indian, as Commissioner. Mr. Bennett served from April 1966, until this year.

Mr. President, I ask unanimous consent that a biographical sketch of Mr. Bruce setting forth his experience, education, and background be printed in the RECORD at this point.

There being no objection, the biographical sketch was ordered to be printed in the RECORD, as follows:

RÉSUMÉ OF LOUIS R. BRUCE

Home address: 44 West 10th St., New York, N.Y. 10011 (212) 477-0011.

Farm: RD #1, West Lake Road, Richfield Springs, N.Y. 13439, Tel: (315) 858-0292.

Office address: Executive Director and Chairman of the Board of Trustees, Zeta Psi Educational Foundation & Fraternity, Columbia University Club, 4 West 43rd Street, New York City, N.Y. 10036, Tel: (212) 736-0992.

Background information: Born December 30, 1906, on the Onondaga Indian Reservation and raised on the St. Regis Reservation (Mohawks). My father, Dr. Louis Bruce, a Mohawk Indian, whose father was Chief of the Mohawks, was a former dentist, major league baseball player, was also missionary to his people. During his whole life he fought for a better life for Indians. He was active in all Indian organizations until he died in 1968. He campaigned for the Indian Citizenship Bill of 1924. He was always a staunch Republican and campaigned for his party and urged Indians to vote.

Mother was an Oglala Sioux, born and raised on Pine Ridge Reservation until she was sent to Lincoln School in Philadelphia, Pa. Her mother was a full blood who never spoke English. She was married twice, first to a full blood and second to Joseph Rooks who was part English. There were 18 children. Today I have many relatives in South Dakota, some Pine Ridge and some Rosebud.

My sister and I both are enrolled members of Oglala Sioux, each with 160 acres of allotted land. At Mother's death we inherited 320 acres of her allotment. I had the pleasure of living on Pine Ridge for 4 years as a child.

Education: After attending reservation schools I was sent to Cazenovia Seminary, a Methodist Prep., where I participated in sports and school activities. I was elected President of the Junior and Senior Classes and as a Senior was Captain of Football, Baseball, Track and Basketball. I was Inter-scholastic Pole Vault Champion and as a result won a Scholarship to Syracuse University. I majored in Psychology and Business Administration. I worked my way through college tending furnaces, waiting on tables and my fraternity Zeta Psi, helped me at every turn for which I shall forever be grateful. I spent 4 years 1926-1930 at Syracuse. Later on, I took special non-credit courses in Public Speaking, Marketing, Community Organization, Public Relations and Personnel Administration at Columbia, Penn State and Cornell. 1950-51 American Management Association, New York, N.Y.

Family: Married to Anna Jennings Wilkoff; three children and five grandchildren. Oldest son Reserve Captain Air Force, PHD in Nuclear Physics, teaching at New Mexico State University.

1932 to the present I have always owned and operated a 600 acre dairy farm in Richfield Springs, N.Y. Part of the time operated by farm managers and at present operated by my youngest son. We are also in the horse breeding business. This is our permanent home.

1966-1969 to present—Executive Director and Chairman of Board of Trustees, Zeta Psi Educational Foundation and Fraternity. Plan,

direct and supervise seminars, workshops and conferences for college students who are members on 40 different campuses in Canada, and United States. Work with Deans and faculty advisors and assist each chapter with budgeting and general operation of 40 properties. Issue and interview students for grants and loans. Work with 21 adult members of the Board who serve as regional directors. Assist with placement of graduates on jobs or graduate schools. Also serve as consultant on Housing, including college housing, marketing and fund raising.

1966-1964 Public Relations and Promotions Director, MidEastern Cooperatives, a chain of cooperatives (23) Super Markets. Worked with Boards, trained employees edited magazine, supervised food testing programs.

1964-1961 community relations consultant, Executive Department, New York State Housing Division. Promotion and explanations of various types of housing to civic groups. Arranged and conducted Volunteer Leadership Seminars, assisted in organizing Boards, committees and conducted sessions for management personnel. Prepared and wrote management guides. Surveyed community needs, organized youth groups in ghetto areas and in Public Housing developments.

1961-1959 Special Assistant Commissioner for Cooperative Housing, FHA, Washington, D.C. Supervised, analyzed and expedited policy procedures for all Cooperative Housing developments in the territories of U.S. with full authority to present the policies of the commissioner. Served on national, state and local committees on housing. Worked with congressional leaders on legislation and participated in hearings. Spoke before Housing groups and civic organizations.

Was instrumental in changing the regulations of FHA for benefit of Indians. Promoted and organized the First National American Indian Conference in Washington, D.C. on Housing. (Copies of memos attached)

1959-1955 vice president, Compton Advertising Agency, New York.

Supervised and directed advertising campaigns in the food field and in the dairy and dairy product area. Supervised marketing studies in cities and assisted with American Dairy Association programs.

1955-1946 Member of Board of Directors, Dairymen's League Cooperative Association, New York.

Served as Education and Youth Director, conducting membership and employees meetings on the marketing of milk and products. Conducted Leadership Institutes for youth and adults. Testified at hearings. Represented the League on state and national committees.

1946-1942 Operated farm with training programs for war benefit. Active in community with youth groups. Initiated the Youth Council Programs.

1942-1935 New York State Director for Indian Projects, National Youth Administration.

WRITING AND HONORS

Winner of Freedoms Award for "Outstanding Contribution in promoting American way of Life," as result of article written—"What America Means to me."

Award was presented at Valley Forge by President Eisenhower.

1953—Winner of American Indian Achievement Award.

1950—Readers Digest—"Indian Trail to Success."

Editor—Highlights & Briefs—MidEastern Dairymen's League News (Youth section). The Circle of Zeta Psi.

1961—Received Distinguished Service Award at Zeta Psi International Convention.

1964—National Boy Scout Awards.

1967—Outstanding Service.

1958—National Rural Youth Special Achievement Award.

August 7, 1969

Fourth, paragraph 2 of section 1 is deleted in the bill as recommended by the committee, because it is unnecessary in light of the legislation enacted during the 90th Congress (82 Stat. 354), which grants the Secretary general authority to make exchanges.

Mr. ALLOTT. Mr. President, the only amendment of interest is the one discussed in the paragraph enumerated "second." The other amendments are purely technical and are completely acceptable to me and the chairman of the full committee the Senator from Washington (Mr. JACKSON) and the chairman of the subcommittee, the Senator from Nevada (Mr. BIBLE).

The amendment of interest deletes the word "condemnation" from the text of the bill. The word "condemnation" was inserted in the bill by the Senate committee for the purpose of making it "abundantly clear to all concerned, that the power of condemnation is granted to the Department of Interior and the Park Service and can be employed swiftly, in the event it should become necessary to preserve the integrity of the monument."

The House points out in its report that—

The power of eminent domain is included by general law in the authority to acquire lands with donated or appropriated funds, its reiteration adds no new authority and is not necessary for the purposes of this legislation.

With this understanding, that is the Department of Interior has the power of eminent domain under general law and can employ that power with respect to the acquisition of lands for the Florissant Fossil Beds National Monument, I find this amendment acceptable to me, and I understand it is acceptable to the chairman of the full committee and the chairman of the subcommittee on that same basis. The intent of the Senate has not been changed, and the legislative history will show that the Secretary of the Interior has the power to condemn land under this bill.

Mr. President, I felt that it would be helpful to ascertain the position of the Department of the Interior with regard to the power of eminent domain under general law, I, therefore, instructed Mr. Charles Cook, minority counsel of the Senate Interior Committee, to obtain in writing the Department's position. In a letter dated August 4, 1969, and addressed to Mr. Cook, Deputy Solicitor Raymond Coulter sets forth the position of the Department that the authority to purchase lands includes the authority to acquire lands by condemnation. This authority is based upon general authority granted in the act of August 1, 1888, 25 Statute 357, 40 United States Code, section 257, and subsequent judicial interpretation of that statute.

Mr. President, I ask unanimous consent that the letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. DEPARTMENT OF THE INTERIOR,
 OFFICE OF THE SOLICITOR,
 Washington, D.C. August 4, 1969.
 CHARLES F. COOK, Esq.,
 Minority Counsel, Committee on Interior and
 Insular Affairs, U.S. Senate, Washington,
 D.C.

DEAR MR. COOK: You have informally requested our views on the question whether the specific authority in a statute to acquire land by purchase would include the authority to acquire by condemnation. It is my opinion that it does.

The pertinent portion of the act of August 1, 1888, 25 Stat. 357, 40 U.S.C. § 257, provides as follows:

"In every case in which the Secretary of the Treasury or any other officer of the Government has been, or hereafter shall be, authorized to procure real estate for the erection of a public building or for other public uses, he may acquire the same for the United States by condemnation, under judicial process, whenever in his opinion it is necessary or advantageous to the Government to do so. * * *"

It has been held that this provision provides the authority to condemn where the authority to acquire property by purchase has been conferred by the Congress. *United States ex rel. TVA v. Welch*, 327 U.S. 546, 554; *United States v. Kennedy*, 278 F(2) 121, 122; *Swan Lake Hunting Club v. United States*, 381 F(2) 238.

In both the *Hanson Co.* case and the *Swan Lake Hunting Club* case, the Congress conferred the authority to purchase, and in both cases the court upheld the authority of the Federal agency involved to acquire by condemnation. In the *Swan Lake Hunting Club* case, which dealt with the Migratory Bird Conservation Act, 16 U.S.C. § 715 et seq., the court said, about the application of the 1888 statute quoted above as follows:

"This statute consistently has been interpreted to authorize acquisition by condemnation where specific authority to purchase has been conferred. 381 F(2) at 240."

We hope this information will serve to satisfy your request.

Sincerely yours,
 RAYMOND C. COULTER,
 Deputy Solicitor.

Mr. ALLOTT. Mr. President, with this legislative history and supporting materials, I believe that the question of condemnation is settled with regard to the acquisition of lands for the Florissant Fossil Beds National Monument.

Mr. President, I urge the Senate to concur in the House amendments in order that this measure may be sent to the White House at the earliest possible moment. There is urgency with regard to this measure as there is an imminent threat of commercial encroachment, and I believe it is in the national interest that this measure be signed into law at the earliest practicable date.

Mr. President, I wish to express my thanks to the distinguished Senator from Nevada whose basic interests, I am sure, do not lie in scientific research any more than mine do, but he has expressed great interest in this matter and has gone to great pains to hold hearings and to investigate.

The Senator from Nevada has become convinced, as I have, that this is one of the great paleontological points of interest in the United States. I wish to express my deep appreciation to the Senator from

Nevada at this time for his interest and support in the passage of the bill.

The amendments proposed by the House of Representatives are entirely satisfactory, particularly when compared with the opinion of the Deputy Solicitor and the House report.

Mr. BIBLE. I thank the Senator.

Mr. President, I yield to the distinguished junior Senator from Colorado, who is a cosponsor of the bill and who has been very active and very effective in connection with passage.

Mr. DOMINICK. Mr. President, I thank my friend, the Senator from Nevada, who has been such a help in this matter, as well as the senior Senator from Colorado (Mr. ALLOTT).

I was happy to cosponsor the bill and to participate in the hearings, and to do whatever I could to expedite the matter. I wish to say to both of them that this measure exemplifies the fact that when we have something which is really important, which could be threatened by some development which would injure the cause of the national monument, Congress can move rapidly and efficiently. I think we have acted in this manner in connection to prevent what otherwise would have ruined this national monument.

Mr. ALLOTT. I thank the Senator.

Mr. BIBLE. I thank the Senator.

Mr. President, I move that the Senate concur in the amendments of the House of Representatives.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Nevada.

The motion was agreed to.

ARM
 AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

AMENDMENT NO. 86

Mr. EAGLETON. Mr. President, my amendment No. 86 to S. 2546 has been printed. I ask that the amendment be laid before the Senate and made the pending business.

The PRESIDING OFFICER (Mr. PROXMIER in the chair). The amendment will be stated.

The ASSISTANT LEGISLATIVE CLERK. The Senator from Missouri (Mr. EAGLETON) proposes for himself and the Senator

August 7, 1969

from Oregon (Mr. HATFIELD) an amendment, as follows:

On page 2, lines 18 and 19, strike out "\$276,900,000;" and insert in lieu thereof "252,400,000;"

On page 2, line 26, strike out "\$1,638,600,000" and insert in lieu thereof "\$1,608,600,000".

At the end of the bill add a new section as follows:

"Sec. 402. None of the funds authorized to be appropriated by this or any other Act may be expended in connection with the design, development, testing, production, or procurement of the main battle tank designated as the MBT-70; and no funds may be appropriated for any such purpose until after the Comptroller General of the United States has completed and submitted to the Congress a comprehensive study and investigation of the past and projected costs of such tank and a thorough review of the considerations which went into the decision to produce such tank. In carrying out such study and investigation the Comptroller General of the United States shall, among other things, consider—

"(1) why research and development cost estimates have had to be revised steadily upward since 1965;

"(2) whether the MBT-70, considering its revised estimated production costs, will be the most effective weapon to meet the contingency for which was originally planned;

"(3) whether the strategic projections made in 1963 with regard to the use of the MBT-70 will still be valid when it finally becomes available for use; that is, will it be obsolete as the result of advanced technology and new strategy; and

"(4) whether there are more feasible and less expensive alternatives to the development of the MBT-70.

The Comptroller General of the United States shall submit the results of his study and investigation, together with such recommendations as he deems appropriate, to the Congress not more than six months after the date of the enactment of this Act."

Mr. MANSFIELD. Mr. President, I have discussed this matter with the Senator from Missouri (Mr. EAGLETON) and he has told me that it is not his intention to debate this amendment tonight but to have it as the pending business, so that it will be before the Senate and debate commenced thereon at the conclusion of the brief morning hour which we will have tomorrow.

Mr. EAGLETON. I thank the Senator.

ORDER FOR ADJOURNMENT FROM FRIDAY UNTIL 10 A.M. ON MONDAY, AUGUST 11, 1969

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate completes its business tomorrow it stand in adjournment until 10 a.m. on Monday next.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR RANDOLPH ON MONDAY, NEXT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that at the conclusion of the prayer and disposition of the Journal on Monday next, the distinguished Senator from West Virginia (Mr.

RANDOLPH) be recognized for not to exceed 30 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, under the previous order the Senator from West Virginia will be followed for a period of not to exceed 30 minutes by the Senator from Kansas (Mr. PEARSON).

The PRESIDING OFFICER. The Senator is correct.

SUBSTITUTION OF CONFEEE ON H.R. 6508

Mr. MANSFIELD. Mr. President, I ask unanimous consent to substitute the Senator from Virginia (Mr. SPONG) for the Senator from Alaska (Mr. GRAVEL), as a conferee on the part of the Senate on H.R. 6508, the California Disaster Relief Act.

The PRESIDING OFFICER. Without objection, it is so ordered.

INDEFINITE POSTPONEMENT AND WITHDRAWAL FROM THE CALENDAR OF H.R. 13080

Mr. MANSFIELD. Mr. President, I ask unanimous consent that Calendar No. 332, H.R. 13080, an act to continue for an additional 15 days the existing rates of income tax withheld at the source, be withdrawn from the calendar and postponed indefinitely.

The PRESIDING OFFICER. Without objection, it is so ordered.

LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that there be a brief period for the transaction of routine morning business with statements made therein limited to 3 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXECUTIVE COMMUNICATIONS, ETC.

The VICE PRESIDENT laid before the Senate the following letters, which were referred as indicated:

PROPOSED ALCOHOL BEVERAGE CONTROL AMENDMENTS ACT OF 1969

A letter from the Assistant to the Commissioner, Government of the District of Columbia, transmitting a draft of proposed legislation to amend the District of Columbia Alcohol Beverage Control Act (with accompanying papers); to the Committee on the District of Columbia.

PROPOSED ZONING LEGISLATION IN THE DISTRICT OF COLUMBIA

A letter from the assistant to the Commissioner, government of the District of Columbia, transmitting a draft of proposed legislation to amend "An act providing for the zoning of the District of Columbia and the regulation of the location, height, bulk, and uses of buildings and other structures and of the uses of land in the District of Columbia, and for other purposes," approved June 20, 1938, as amended (with accompany-

ing papers); to the Committee on the District of Columbia.

PROPOSED DISTRICT OF COLUMBIA HOUSING REVOLVING FUND ACT AND PROPOSED DISTRICT OF COLUMBIA UNCLAIMED PROPERTY ACT

A letter from the assistant to the Commissioner, government of the District of Columbia, transmitting a draft of proposed legislation to establish a revolving fund for the development of housing for low and moderate income persons and families in the District of Columbia, to provide for the disposition of unclaimed property in the District of Columbia, and for other purposes (with accompanying papers); to the Committee on the District of Columbia.

REPORTS OF COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the cessation of unauthorized payments of proficiency pay and variable reenlistment bonuses to candidates in officer training programs, Department of Defense; dated August 6, 1969 (with an accompanying report); to the Committee on Government Operations.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the effectiveness and administration of the Legal Services program under title II of the Economic Opportunity Act of 1964, Office of Economic Opportunity, dated August 7, 1969 (with an accompanying report); to the Committee on Government Operations.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the VICE PRESIDENT:

A resolution adopted by the general meeting of the taxpayers of El Paso County, Inc., Colorado Springs, Colo., praying for the curbing of expenditures; to the Committee on Appropriations.

A resolution adopted by the general meeting of the taxpayers of El Paso County, Inc., Colorado Springs, Colo., requesting that the Congress let the surtax expire; to the Committee on Finance.

A resolution adopted by the general meeting of the taxpayers of El Paso County, Inc., Colorado Springs, Colo., remonstrating against the proposed guaranteed annual income; to the Committee on Finance.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. BIBLE, from the Committee on Interior and Insular Affairs, without amendment:

S. 1108. A bill to waive the acreage limitations of section 1(b) of the Act of June 14, 1936, as amended, with respect to conveyance of lands to the State of Nevada for inclusion in the Valley of Fire State Park (Rept. No. 91-348).

By Mr. BIBLE, from the Committee on Interior and Insular Affairs, with an amendment:

S. 2564. A bill to amend the Act fixing the boundary of Everglades National Park, Fla., and authorizing the acquisition of land therein, in order to authorize an additional amount for the acquisition of certain lands for such park (Rept. No. 91-347).

By Mr. ANDERSON, from the Committee on Interior and Insular Affairs, with an amendment:

S. 203. A bill to amend the Act of June 13, 1962 (76 Stat. 96), with respect to the Navajo Indian irrigation project (Rept. No. 91-363).

Congressional Record

PROCEEDINGS AND DEBATES OF THE 91st CONGRESS, FIRST SESSION

Vol. 115

WASHINGTON, WEDNESDAY, AUGUST 6, 1969

No. 133

Senate

(Legislative day of Tuesday, August 5, 1969)

ABM

The Senate met at 11 o'clock a.m., on the expiration of the recess, and was called to order by Hon. HERMAN E. TALMADGE, a Senator from the State of Georgia.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

O Thou Sovereign Lord of life and of history, judge of men and nations, whose covenant is to bless those who desire to know and to do Thy will, help us this day that by prayer and study we may know and do Thy will. By the illumination of Thy spirit make us precise in analysis, accurate in expression, pure in motive, and wise in decision.

O Lord, grant us Thy grace and wisdom more perfectly "to establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity." Enable us to "put on the whole armour of God; to be strong in the Lord and the power of His might," and to deploy the strength of our true character, so that as a people we may send forth missiles of friendship and good will to all mankind.

In Thy holy name we pray. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., August 6, 1969.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. HERMAN TALMADGE, a Senator from the State of Georgia, to perform the duties of the Chair during my absence.

RICHARD B. RUSSELL,
President pro tempore.

Mr. TALMADGE thereupon took the chair as Acting President pro tempore. (At this point a disturbance occurred in the gallery. The Presiding Officer directed the Sergeant at Arms to preserve order.)

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Journal

of the proceedings of Tuesday, August 5, 1969, be approved.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I yield myself one-half minute, out of the time allotted, to ask unanimous consent that the Senate go into executive session to consider a nomination on the Executive Calendar.

There being no objection, the Senate proceeded to the consideration of executive business.

The ACTING PRESIDENT pro tempore. The nomination on the Executive Calendar will be stated.

U.S. MARSHAL

The assistant legislative clerk read the nomination of Albert A. Gammal, Jr., of Massachusetts, to be U.S. marshal for the district of Massachusetts.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is confirmed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of the nomination.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to, and the Senate resumed the consideration of legislative business.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, for the information of the Senate, none of the regular committees will be permitted to meet during the session of the Senate this afternoon.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The ACTING PRESIDENT pro tempore. The Chair lays before the Senate the unfinished business, which will be stated by title.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein missile range, and to prescribe the authorized personnel strength for the Selected Reserve of each reserve component of the Armed Forces, and for other purposes.

The Senate resumed the consideration of the bill.

The ACTING PRESIDENT pro tempore. The question is on agreeing to amendment No. 101 of the Senator from Michigan.

Who yields time?

Mr. MANSFIELD. Mr. President, I ask unanimous consent to take out of the time of both sides the time for a quorum call; and I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. Is there objection?

Mr. TOWER. Mr. President, reserving the right to object, do I correctly understand that the time is to be charged to both sides?

Mr. MANSFIELD. To both sides, yes.

The ACTING PRESIDENT pro tempore. Without objection it is so ordered. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. TOWER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Who yields time?

S 9235

S 9236

CONGRESSIONAL RECORD — SENATE

August 6, 1969

Mr. STENNIS. Mr. President, I yield 15 minutes to the Senator from Virginia.

The ACTING PRESIDENT pro tempore. The Senator from Virginia is recognized for 15 minutes.

Mr. BYRD of Virginia. Mr. President, the Senate has been debating for 5 weeks the military procurement authorization bill. Most of the discussion has centered around whether or not the United States should deploy an anti-ballistic-missile defense system.

I think these discussions have been good.

I think the debates on both sides of the question have been illuminating and well handled. I wish to mention particularly the speech made yesterday by the distinguished Senator from Alaska (Mr. GRAVEL). I thought it was a well handled address.

I did not agree, and I do not agree with his conclusions, but I think his speech was somewhat typical of the excellent presentations that have been made on both sides of the question.

Mr. President, yesterday the distinguished senior Senator from Maine introduced an amendment as a substitute for the Cooper-Hart amendment.

The amendment offered by the Senator from Maine presents a clear-cut issue to the Senate.

The amendment introduced by the Senator from Maine would knock out all funds dealing with an anti-ballistic-missile defense system.

Those Senators who feel that this Nation should not have an ABM program will now have the opportunity to vote on this clear-cut issue.

All the other amendments which have been offered, including, particularly, the amendment offered by the distinguished Senator from Kentucky (Mr. COOPER) and the distinguished Senator from Michigan (Mr. HART), do not present as clear cut an issue. But the Senator from Maine has given the Senate an opportunity to register in a clear-cut way its approval or disapproval of an ABM system.

Mr. GORE. Mr. President, will the Senator yield?

Mr. BYRD of Virginia. I am on limited time but I will be glad to yield very briefly to the Senator from Tennessee. I would like to finish my remarks but I yield very briefly to the Senator.

Mr. GORE. I withdraw the request.

Mr. BYRD of Virginia. Mr. President, I wish to comment briefly now as to whether or not it would be in the best interest of our Nation to deploy an anti-ballistic-missile defense system.

First, we must consider what the proposed system will do and what it will not do.

The missile defense system is not an offensive weapon. It is purely a defensive one.

It is not a warmaking weapon. Its only use is to protect the United States in the event of attack. If the United States is not attacked then this weapon would not be used.

It does not add to our Nation's offensive potential but it does add to our Nation's protection.

President Nixon believes that the Safeguard system will strengthen the hand of the United States in any arms control talks with the Soviet Union. I believe that history teaches us that the Russians respect strength.

In speaking of the Soviet Union, what evidence is there to suggest that the United States should not be on the alert as to Soviet capabilities? We all know that in 1962 the Soviet Union brought offensive missiles to the island of Cuba, 90 miles off our shores.

We all know that the Soviet Union is the major supplier of major weapons for the North Vietnamese, and they have been for 4 years.

We all know that it was the Soviet Union that stood behind Nasser when he provoked hostilities with Israel in 1967.

We all know of the brutal invasion of Czechoslovakia by the Soviet Union in 1968.

We all know that in 1969 the Soviet Union further tightened the screws on Czechoslovakia.

So, Mr. President, I say that in this uncertain world of violence and instability it is important for our Nation to attempt to develop some defense against nuclear weapons.

Before it is completed the ABM system will be a costly one. Balanced against the cost is this: In this imperfect world of international violence and instability, can we afford not to develop some defense against nuclear attack?

Those who have discussed the ABM, and most of the expert witnesses testifying in regard to the ABM on both sides of the question, agree that the Soviet Union has been and is substantially increasing its offensive capability.

The evidence seems conclusive that with the SS-9 the Soviets have the capability to knock out land based strategic U.S. missiles.

Basically, the United States is relying on a strong offensive capability as the best deterrent against aggression. But if U.S. missile sites are knocked out, the U.S. retaliatory power is decreased.

Those who oppose deployment of the ABM system seem to put considerable faith in the possibility of arms control talks.

Most of those who oppose deployment of the ABM system feel that the Soviets have no intention of using its giant SS-9's to attack U.S. missile sites.

But, Mr. President, no one really knows what Russia's intentions are.

Most seem agreed, however, as to the magnitude of Russia's growing capability. To me, this is the most significant evidence obtained from the multitude of testimony in regard to the ABM system.

Another fact recognized by all scientists is that a long leadtime is required for deployment of a defensive system. There is a difference of opinion as to the precise number of years, but all scientists agree that the leadtime is substantial.

Thus, if the United States is to have an ABM defensive system by 1975, the deployment must begin now. None can say whether world conditions will be

better or worse 6 years from now. All of us hope that, somehow, the statesmen of the world will find a formula for world peace. But there is no evidence to suggest that such a formula is in sight.

Last year, I voted for substantial reductions in non-Vietnam defense costs, and will do so again this year. I favor a reduction of \$2 billion in the pending military procurement legislation. I have reached the conclusion, however, that it would be unwise to eliminate funds for the development of a system to protect the United States in the event of nuclear attack.

Mr. STENNIS. Mr. President, the Senate is out of order. May we have order in the Chamber.

The ACTING PRESIDENT pro tempore. The Senate will please be in order.

Mr. JACKSON. Mr. President, will the Senator from Virginia yield?

Mr. BYRD of Virginia. I yield.

Mr. JACKSON. I commend and highly compliment the able Senator from Virginia for an excellent analysis of the problem. I think the record he has made in his speech regarding the nature of the adversary is, indeed, very important in any Senator's coming to a conclusion on a vote on this important issue.

I must say that the able Senator from Virginia has put his finger right on the problem. We have spent a lot of time talking about the technical aspects of the ABM system but we have not had the kind of discussion, in my judgment, as to the nature of the adversary.

How can we really make a decision when we have not had that kind of presentation that I think is so essential. The Senator from Virginia has made a real contribution in this area in analyzing the kind of adversary we are up against.

I think that this point, as well as the points he is now making add immeasurably to this debate, and to the confidence of those Senators who really want to make sure that we are making the right move in trying to protect our deterrent so essential to the peace of the world.

Mr. BYRD of Virginia. Mr. President, I am very grateful to the Senator from Washington for his remarks.

Mr. TOWER. Mr. President, will the Senator from Virginia yield?

Mr. BYRD of Virginia. I yield.

Mr. TOWER. I should like to associate myself with the remarks of the Senator from Washington in commending the Senator from Virginia on his speech.

We should understand there is every reason to believe that the Soviet Union is not trying to achieve parity in terms of arms but, indeed, superiority.

Does not the distinguished Senator from Virginia think that since this evidence is very present, indeed, that we had better be considering how we will maintain our superior defense posture in the midseventies?

Mr. BYRD of Virginia. I quite agree with the distinguished Senator from Texas.

The ACTING PRESIDENT pro tempore. The time of the Senator from Virginia has expired.

Mr. STENNIS. Mr. President, does the Senator from Virginia desire more time?

August 6, 1969

Mr. BYRD of Virginia. Five minutes.
Mr. STENNIS. Mr. President, I yield 5 additional minutes to the Senator from Virginia.

The ACTING PRESIDENT pro tempore. The Senator from Virginia is recognized for 5 minutes.

Mr. BYRD of Virginia. Mr. President, I should like briefly to summarize my position in regard to the ABM system and at the same time attempt to summarize the statements which have been made on both sides of this controversy.

First, I think we should be aware that the Senate, last year, under a Democratic President, agreed to proceed with the deployment of an ABM defensive system.

Why should it not now agree when we have a Republican President?

Number 2, the scientific community is sharply divided on the deployment of an ABM system, as to whether it can be accomplished and whether an effective system can be developed.

We know that many scientists, such as Dr. Teller, who developed the hydrogen bomb, feel that it can be developed. The entire world has just witnessed a demonstration of what Americans can do when, on July 20, we landed 2 men on the moon. Thus, I am willing to give the benefit of the doubt to the scientific community, those who feel that an effective system can be developed.

Third, most agree—perhaps all agree—that the Soviet Union has been and is substantially increasing its defensive capability.

Fourth, the ABM is purely and solely a defensive weapon. It cannot be used for offensive purposes.

Fifth, the evidence is that the Soviets with the SS-9 have the capability—we do not know what the intentions are—but the Soviets have the capability to knock out U.S. missiles.

Sixth, a long leadtime is required for the deployment of a defensive system. There is a difference of opinion as to the precise number of years, but all seem agreed that the length of time is substantial.

Seventh, those who oppose deployment of the ABM seem to put considerable faith in arms control talks. Well, the President of the United States is the only man, through his representatives, who can speak for the United States at the oncoming arms control talks.

The President of the United States is convinced that the deployment of an ABM system would strengthen his hand when the talks are held.

Thus, while I have had doubts concerning the ABM proposal, I have decided to resolve those doubts in favor of defense.

In such technical and complex matters as the ABM, it is not possible to be certain whether we are right—either those who take the position I take, or those who take the contrary position—none of us can be certain that we are right.

So while I have doubts concerning the ABM proposal, I have decided to resolve the doubts in favor of defense.

In the light of world developments, I have concluded it would be wise to support the Commander in Chief in his

firm belief that our missile bases must be protected against foreign attack.

In recent years, the world has made great strides in almost every line of endeavor—in medicine, in scientific achievements, in space.

But in learning to live in peace with one another, the nations have made little progress. During the past quarter of a century, the United States has been involved in three major wars.

Until a more peaceful world is at hand, it seems to me we have little choice but to spend the necessary funds in an effort to deter an attack on the 200 million people in the United States.

In such complex and technical matters as the ABM deployment question, it is not possible to be certain, but it is possible to be prudent. I support prudence.

Mr. COOK. Mr. President, will the Senator from Virginia yield?

Mr. BYRD of Virginia. If I have any time left, I shall be glad to yield to the Senator from Kentucky.

The PRESIDING OFFICER (Mr. BAYH in the chair). The time of the Senator from Virginia has expired.

Mr. STENNIS. Mr. President, I am sorry; I cannot yield right now. I yield myself 2 minutes on the amendment.

Mr. President, a great deal has been said from time to time to the effect that we must vote for the Cooper-Hart amendment; otherwise Congress would not be exercising control over this program. In other words, if the bill as written now is passed, it will be "goodbye" as far as Congress is concerned. There has been a great deal in the press on that, and statements have been made on the floor in various ways to that effect.

Mr. President, that impression, or statements to that effect, are just in total error. The big purpose of the authorization bill is the requirement that these matters have to come here to be authorized. There is a double control over it, through appropriations. That applies in the other body with the same force and effect. That matter is clear-cut, very positive and definite, as to what it means. It will have to be authorized and appropriated before any further use is made of it. I just wanted to state that for emphasis.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. STENNIS. I want to be courteous to the Senator. I do not have much time. I yield to him.

Mr. FULBRIGHT. The Senator makes reference to what, as the Senator knows, I said exactly—not exactly, but partly. I think I made clear in my remarks, both in my prepared remarks and my extemporaneous remarks, that this is the first time an important military request has been debated on the floor of the Senate. I did not say, and I did not mean to say, it had not been examined carefully in the Armed Services Committee.

One of the embarrassing things for me in this whole matter is that I have the greatest respect for the Senator from Mississippi; and certainly I always have had, and still do, for the Senator from Georgia. I know they have done their best. They are great patriots, and they have done a good job in their committees.

But I have been in the Senate 25 years. The Senator has said there has been supervision, and so forth; but it has not taken place on the Senate floor. I have never witnessed or participated in a serious debate on it.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. STENNIS. I yield 1 minute.

Mr. FULBRIGHT. The Senator from New York raised an important matter. As the Senator from New York and I said yesterday, this is the very core of this matter. The most important matter involved in this debate is whether or not the Senate has the power, the will, and the determination to resist all of the influences brought to bear on the Members of the Senate. I mean legitimate influences. I mean from their constituents, from the great industries in the various States. I do not discount these influences and I do not in any way criticize them. I know I am subject to them just as well as anyone else. It is a fact of life in this great industrial Nation that the United States has become. I am not saying it in a critical way. But it is a serious matter.

I do not believe the Senator can cite a single case in which a serious challenge has been made on the floor of the Senate to any military program, involving, since World War II, over \$1 trillion—more than \$1,000 billion. I have never heard a serious debate take place on it. This is the first time. That is the only point I make, and I do not think the Senator will disagree with it.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. STENNIS. Mr. President, I yield one-half minute.

The Senator from Arkansas is discussing a wholly different matter from what I brought up. I merely brought up that the passage of the bill as written will still leave control of all this program in the hands of the Congress except the part that is in the bill. That is all. I do not complain about what the Senator has said. Of course, we will have control over it. Whether we have in the past exercised it is beside the issue.

Mr. FULBRIGHT. Of course, the Constitution gives us control. I am saying Congress has not exercised it. This is the first opportunity I have seen to exercise it. I agree that the Constitution gives us the power.

Mr. McINTYRE. Mr. President, will the Senator yield me time for a comment on that point?

Mr. STENNIS. Mr. President, I cannot yield any more just now. I just do not have the time. I dislike not to yield.

Mr. McINTYRE. Mr. President, will the Senator from Michigan (Mr. HART) yield to me briefly?

Mr. HART. Mr. President, I yield 1 minute.

Mr. STENNIS. Mr. President, I yield 1 minute.

The PRESIDING OFFICER. The Senator from New Hampshire has been yielded 1 minute. The Chair will let the Parliamentarian determine where that 1 minute came from.

Mr. McINTYRE. Mr. President, I have a comment on the question of control, because my distinguished chairman has

August 6, 1969

just said that control over the whole ABM system is something that we on the Armed Services Committee, through the authorization bill, do exercise. And yet I know—and he must know—that under the experience we have had, if we do not express our senatorial decision putting strict control on the system on the record, then as we take up the authorization bill next year the system will be coming in the back door. We are not exerting the type of control that we in the Senate and the Congress should exercise over this massive new system. So I disagree seriously with my chairman on the question of control.

Mr. MURPHY. Mr. President, will the Senator yield?

Mr. STENNIS. Mr. President, I do not believe it is possible to carry on debate on controlled time in this way. We can come back to it later.

Mr. COOPER. Mr. President, I yield myself some time from our time, but I want to comment on two points.

The PRESIDING OFFICER. The Senator from Kentucky.

Mr. COOPER. Mr. President, in responding to the Senator from Mississippi, I want to say that when we speak about future control over this system, through appropriation and review, I doubt that it will be effective. We will make the essential decision today.

The second point I make is that last year the Senator from Michigan (Mr. HART), I, and other Senators offered the amendment with the primary purpose of opening up the defense budget to debate in the Senate and in the country. Debate upon the military appropriation bill has been opened in the Senate and the Congress, and for the first time an opportunity has been provided for all Members to exercise their judgment and responsibility.

On those two points I must disagree with the Senator from Mississippi.

Mr. HART. Mr. President, I yield myself 1 minute.

Before it is lost in the more wide-ranging debate, I think some comment should be made with respect to the point the Senator from Virginia made at the outset. He began, it will be recalled, by saying the amendment offered by the Senator from Maine (Mrs. SMITH) now gave us a clear-cut choice. Those who do not want the anti-ballistic-missile system now have the opportunity to say so and make it stick by adopting that amendment.

I think it clarifies—and helpfully—our alternative courses but the two courses earlier available have been clear. There are three now. The first is provided by the committee recommendation that we deploy an antiballistic missile labeled the "Safeguard." The second is the Cooper-Hart amendment, which says that we shall research and develop what we would hope might be an effective anti-ballistic-missile system, but we shall not undertake to deploy a doubtful system. The third is the proposal now by the Senator from Maine. This in effect abandons any effort to develop, through research and underwriting, a testing program to obtain an effective ABM system.

Those choices are clear cut. It would seem to me that the complexity of the anti-ballistic-missile technique and the relative ease of neutralizing any anti-ballistic-missile system now attainable, argues for research and against deployment. The alternative means now available to our deterrent strike force are, both in time and cost, within reach and much more prudent and effective than the deployment of a doubtful system.

I yield to the Senator from Tennessee.

Mr. GORE. Mr. President, I wish to point out that the amendment offered by the distinguished senior Senator from Maine may go further than she intends, because it would not only prevent testing, research, evaluation, and development, procurement of an ABM, but it would also prohibit testing, research, development, evaluation, or procurement of "any part or component of such system."

This would prevent the testing, evaluation, and procurement of such parts and such components as may be necessary for other missile developments when those same components and those same parts would be used in any possible ABM deployment. Many of these missile parts and components are identical with those used in other systems, and there are many other such weapons systems under evaluation and under study, and have been for the past decade, and will doubtless be, and should be, for the next decade.

So it would seem to me that if the amendment of the senior Senator from Maine were confined purely and strictly to deployment of the Safeguard anti-ballistic-missiles, then we might consider accepting it; but so long as it applies to and prohibits testing, evaluation, procurement, or research and development of "any part or component of such system," then it goes too far, and cannot be accepted. We must proceed with evaluation, testing, and research in many fields, including parts and components that may or may not be used in the ABM missiles.

Mr. MCINTYRE. Mr. President, will the Senator yield?

Mr. HART. I yield to the Senator from New Hampshire.

Mr. MCINTYRE. The remarks of the Senator from Michigan overlooked an amendment that will be offered either today or tomorrow by me. That amendment, it seems to me, reaches a common ground, because it retains control in Congress of the ABM system, and at the same time recognizes the possibility of the threat, and gives us a chance, if we want one, a year from now or possibly later, to move to deploy the ABM system.

Mr. HART. Mr. President, if there is time left, I shall react only to the point of saying I would be much more comfortable if we did not begin installing the machinery at the two proposed sites of the system, which would happen under the McIntyre amendment.

Mr. COOK. Mr. President, will the Senator yield?

Mr. HART. I yield 1 minute to the Senator from Kentucky.

Mr. COOK. I wanted to get into the record, in respect to the reliance of the Senator from Virginia on Dr. Teller,

that I spent 1 day with Dr. Teller in the presence of the junior Senator from Alaska, and the next day spent quite some time with Dr. Teller, together with the Senator from California, the Senator from Ohio (Mr. SAXBE), and the Senator from Kansas (Mr. DOLE).

I wish to express at this time, with reference to this reliance, that I came away less convinced after those 2 days of discussions with Dr. Teller than I was before.

I might further state for the record that I know of no time whatsoever that Dr. Teller was ever against the expenditure of massive funds, or ever against the deployment of any major missile system that the Defense Department wanted. He is the same distinguished scientist who said, about a month or so ago, that the was delighted that man could walk on the moon, because we might well use the moon as a source for atomic and hydrogen explosions in the future. I just wanted to get that into the record.

Mr. HART. Mr. President, I yield 5 minutes to the Senator from Kansas.

Mr. PEARSON. Mr. President, I wish to respond to a point that has been developed in this debate and reiterated many times. It is a minor theme, perhaps, rather than a major theme, but it has recurred very often in the colloquy on the Senate floor. It has not been reduced to a cliché; it is a point seriously made in a serious debate, but it takes the expression that the construction and deployment of the ABM is essential because we must keep our options open, or, expressed in another way, that we must give the President a second button.

I think every Member of this body would agree that it is desirable to have as many alternatives as possible, and have them available at all times. But the question arises as to whether or not the construction and deployment of the ABM really will keep our options diverse and usable. It may in fact close some of the avenues open to us. The decision to deploy may be one that will prevent us from taking other courses in the future; that will prevent us from increasing our Polar fleet, the strongest part of our deterrent; that will prevent or block off the prospect of hardening to a greater degree our missile sites, or going to mobile launches, or increasing our offensive capability, or even, in fact, relying upon the superiority in numbers we now have at all strategic force levels.

It does seem to me that it might be reasonable to assume that to continue on the course urged by the proponents here would overcommit us to a single type of response, rather than opening up more avenues or more alternatives to us.

I am troubled by the associated argument of keeping our options open, which, as I have said, takes the form of proposing that we give the President a second button. Under the Safeguard system, the perimeter acquisition radar, extending some 2,000 or 2,500 miles out, can pick up a missile coming across the globe at perhaps 17,000 miles per hour.

Mr. FULBRIGHT. Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will be in order.

Mr. PEARSON. That, I think the authorities indicate, gives us a time of about 10 minutes to react. Our radar tracks it, runs it through a computer, makes a decision as to a possible target, relays this information to the missile site radar, where the tracking is continued, and the guidance system for the Spartan and the Sprint is put into motion.

If we have a blackout condition, it could take away 5 minutes. If we have an FOBS condition, it could limit the time to 3 minutes. If we have a launch in a submarine off the shore, it may be a little later time. It may be that under all these conditions, as a practical or sensible matter, we are not going to give the President another button to push, because there simply would not be time to do it.

He may be on a very valuable trip in Western Europe or Asia, such as President Nixon has just made with great advantage to this country.

But perhaps, really, what it will amount to will be similar to the very honest, courageous position that a distinguished Senator on this side of the aisle took some years ago in a campaign in which he faced up to the practicalities of nuclear exchange in Western Europe and indicated that it might be necessary to delegate some authority for the use of nuclear weapons. This is precisely what may well be the result, and, it seems to me, may be the only result, in this instance.

I bring this to the attention of the Senate in relation to the minor point relating to the second-button concept and the idea of keeping our options open.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum, the time for the quorum call to be charged to both sides.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. HART. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. EAGLETON in the chair). Without objection, it is so ordered.

Who yields time.

Mr. HART. I yield myself 2 minutes.

Mr. STENNIS. Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will be in order.

Mr. HART. Mr. President, as we approach the vote on this amendment, I think it is in order that it be made very clear that there is not a partisan division on this question, and there should not be a partisan division on an issue of this character.

A year ago, a Republican Senator from Kentucky and a Democratic Senator from Michigan sought to persuade the Senate to say "No" to a Democratic President who wanted to deploy an anti-ballistic-missile system. We were beaten. I think that even those who a year ago advocated that system now agree that it was a mistake.

In any event, they are now here with a new one, and this year a Republican Senator from Kentucky and a Demo-

cratic Senator from Michigan seek to persuade the Senate to say "No" to a Republican President who wants to deploy the same machinery that they advertised as great for city defense last year, but now say it is magnificent for defense of Minuteman missiles.

The division is clear on both sides. There are those on my side of the aisle who have a deep conviction that this is an unwise proposal. There are those on the Republican side who share that conviction. There are those on the Republican side who are convinced that our security requires that we go forward with deployment. There are those on my side who share that conviction.

Whatever the outcome, it ought not be read by the country or by nations that observe our actions and react to them as a partisan debate or a partisan issue. It involves people and sanity in a nuclear age.

The PRESIDING OFFICER. Who yields time? The time will be running equally on both sides.

Mr. TALMADGE. Mr. President, will the Senator from Mississippi yield me 5 minutes?

Mr. STENNIS. I yield 5 minutes to the Senator from Georgia.

Mr. TALMADGE. Mr. President, a few years ago, I was one of the Senators who voted against the ratification of the Nuclear Test Ban Treaty. One of the most compelling reasons why I voted against the ratification of that treaty was that the Russians had fired nuclear missiles at nuclear missiles. The United States had not. In other words, the Soviet Union at that time was dealing from knowledge. The United States of America at that time was dealing from ignorance. As a result of the knowledge the Soviet Union gained from those experiments, they have at least partially deployed an anti-ballistic-missile system around Leningrad and Moscow. They evidently thought it would work, from the experimentation they had done, or they would not have deployed this system.

At the present time, we have eminent scientists who say that the system will not work. We also have eminent scientists who say that the system will work. So the scientists themselves are divided on the issue. But we must also remember, Mr. President, that when we were discussing whether to build an atomic bomb, many scientists said, "No, don't build it; it won't work."

The same situation was true when it came to the thermonuclear bomb. The same situation was true when it came to the Polaris submarine. Think of what the defense posture of our country would be today had we not gone forward with the development of those weapons systems.

Assuming for the sake of argument that the system will not work, what have we lost? A few billion dollars. Assuming that the system will work, and we fail to utilize it, we are gambling with the security of this Nation. We are gambling with the lives of 204 million people in the United States. We are gambling with civilization itself.

Mr. President, when you have an issue where we are gambling the future of the

country on the one hand and gambling money on the other hand, as far as the Senator from Georgia is concerned, there is but one way to resolve the issue and that is in favor of our country continuing to exist and protecting our people.

We hear a great deal of talk about national priorities. What is the greatest national priority any nation can have? The greatest national priority is to exist, to continue. What is the greatest priority we can have in this Nation? It is to protect the lives of our citizens. That is the issue we are talking about as far as the Senator from Georgia is concerned, and on that issue I am unwilling to gamble the fate of our country.

Mr. FULBRIGHT. Mr. President, will the Senator yield to me for 5 minutes?

Mr. HART. I yield.

The PRESIDING OFFICER. The Senator from Arkansas is recognized for 5 minutes.

Mr. FULBRIGHT. Mr. President, I think the distinguished Senator from Georgia has presented in a very concise and a very effective manner the essence of the case for the ABM. I would only like to make a few observations about his presentation.

By and large, the scientists I have heard who oppose the ABM do not say it will not work under optimum conditions. Rather, they raise serious doubts that it will be effective in wartime conditions; that is, with the enemy actually exploding nuclear bombs over the radars, and so on. They raise that kind of question. They do not say it will not work under the ideal conditions that such things as the Apollo worked when there was no effort to thwart it.

My recollection is that those who opposed the hydrogen bomb, like Dr. Oppenheimer, did not say we could not make a hydrogen bomb. I think they were quite convinced we could. They had been the principal scientists in the development of the atomic bomb. Their position was that we did not need it, that it was a dangerous thing, and that on policy grounds we should not do it. I do not recall that they said we could not do it technically.

I did not say, Mr. President, you could not make an ABM which under optimum conditions would shoot down incoming missiles, especially if they come from Vandenberg Air Base. However, when it comes to programing a computer to deal with an almost infinite variety of situations that would be involved in a belligerent situation, at least as of now it is quite impossible even to program the computer, assuming you had a computer able to deal with that kind of complexity.

But that is not the main point. I agree with the Senator as to his priorities. The No. 1 priority is the preservation of the United States. In that sense I do not mean just physical preservation; I mean the society of which our Constitution is our basic charter. That is what we are really talking about. It is not just the physical existence of this piece of real estate, but the kind of society that I believe all Members of this body are devoted to.

This is where the critical difference comes in. I think the Senator and those

who advocate his position are talking about a specific means as being indispensable to the preservation of this system. This is where we part company. I believe, and I believe most of the Members who heard the testimony believe, there are better ways and more effective ways to protect our physical security than building Safeguard. We believe this is a very secondary or dubious way to do it. For example, the Senator from Missouri, who is one of the best qualified men in this body, who is a Senator who has been a Cabinet member as Secretary of the Air Force, with long experience in the armed services, and who is from a family having long experience in the armed services, has made very clear his views about the ineffectiveness of this particular system. He suggests that if this is a very major matter of protection of our physical security, we should have mobile Minuteman.

We have had not only the views of the Senator from Missouri, but we have had testimony, if one does not care what it may cost, that if we are prepared to spend \$10 billion, \$20 billion, \$100 billion then we are saying that this Safeguard system is about the most inefficient and least likely way to provide effective security that we can think of. We are not saying, "Do not have regard for the military security of the United States."

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. FULBRIGHT. Mr. President, will the Senator yield to me for 2 additional minutes?

Mr. HART. I yield.

Mr. FULBRIGHT. Mr. President, in other words, the Senator from Missouri and I agree it would be much less expensive and much more effective if, instead of trying to protect the static Minuteman with the obsolete concept developed under the old Nike-Zeus and Sentinel systems, we had a mobile Minuteman system and moved them around, in the same way we move the Polaris around under the water. This would keep the enemy from knowing where they are and nullify the concept of destroying them, which is the job of the ABM.

We had testimony to the effect that defending the Minuteman, this particular ABM system is already obsolete. The ABM could easily be overcome with a multiplicity of weapons. Being static they can be targeted, and the accuracy of ICBM's is improving.

What we disagree about, and I do respect the judgment of the Senator from Georgia, is not the ultimate security of our country. We are saying that this system is not a proper system or appropriate system; that it could lead to incalculable cost. We believe we have had experience with other missile systems which have proved to be completely ineffectual and have been abandoned at great cost. Furthermore, we are concerned with other circumstances involving difficulties with our financial situation and our economy. We believe these circumstances should be taken into account when the Senate passes judgment in this particular case.

The PRESIDING OFFICER. Who yields time?

Mr. ERVIN. Mr. President, will the Senator from Mississippi yield to me for 3 minutes?

Mr. STENNIS. Mr. President, I yield 3 minutes to the Senator from North Carolina.

DEPLOYMENT OF ABM

Mr. ERVIN. Mr. President, Dr. Emil John Pawlowski, the eminent Massachusetts psychiatrist, who has visited relatives behind the Iron Curtain, is a good judge of the minds of men. In his recent book entitled "Path to Permanent Peace," he has made some trenchant observations which are highly relevant to the proposal now being debated by the Senate.

I invite the attention of the Senate to certain of these observations which appear on pages 95, 102, 103, and 104 of his book:

It is an admitted fact, but not accepted by all, that the Communists want to rule the whole world. Their policy has been to gain victory through subversion, and not from all-out war. However, if they thought they could beat the United States, their strongest enemy, without too much difficulty, they would in all probability wage a war against us. Many people in the United States do not recognize, or do not want to recognize, the seriousness of the Communist threat to our country and our way of life. They would hesitate to go to war unless we were openly attacked, and some, not even then. Perhaps the greatest deterrent to an all-out war between the Communists and the free peoples of the world is the atomic bomb. If it were not for the fact that both sides, including leaders, would lose in a nuclear war, we might have had a confrontation with Russia years ago. It is surely regrettable that the people of the world did not act early enough to have prevented Communism from becoming as strong as it is today.

A weak country is going to provoke immature, aggressive countries to try to exploit it. Even a country which might be of the same strength as that of an aggressor will invite attack from the immature, competitive, and jealous aggressor. It is necessary for a country to be strong, and to have the aggressor know that it is strong and will use its strength, if it wants to be left alone to live in peace. It must appear to the aggressor that it would be foolhardy to try to exploit the country.

In the case of the United States coping with the Communists, there seems to be no longer any danger that they could overwhelm us without being destroyed, too—if we maintain our superiority. We could lose our superiority, however, because of corruption and collapse within our country. If this country continues with its pathological cultural trends, condoning lack of discipline, dependency, laziness, moral decline, corruption, inadequate law enforcement, rioting, catering to the wealthy, unjustified labor strikes, bureaucracy, Socialism, and the stifling of people's opportunities for the utilization of their potentials in the search for security, there could, in fact, be internal weakening and collapse of the country. Whether or not the future generations of Communists might try to beat us in a war will depend upon our maturity, wisdom, and physical strength, and their maturity and wisdom. Had they believed that they could have conquered us without significant losses themselves, they, as aggressors, most probably would have tried to have done so by this time. We now have to repel their every aggressive action, all the while making ourselves overpoweringly

stronger than they. We must surpass them not only militarily, but also with our maturity and wisdom, our arts and sciences, our government and way of life, and in all other areas, including space exploration. It is not that we should seek to advance ourselves based on comparing ourselves with them, but rather to realize our potentials to the limit so that we can safeguard our existence and the existence of all other free peoples as dignified human beings. So long as they want to make us slaves we have to oppose them in every respect, no matter what they say or do to try to distract us, as in the way of proposing troop withdrawals and truce talks. We believe they are wrong in what they are doing, and we have to admit that we are really at war with all Communists. However, we do not want to fight an all-out war. Our strength should discourage them from attempting to fulfill their neurotic ambitions at this time. We have to believe, and let the Communists know, that we are not afraid of war, even nuclear war, and that we will fight to our deaths to preserve our way of life. We should not be intimidated by them. Only those people who are emotionally immature and insecure would say: "Better Red than dead."

Although I have had the privilege of sitting for many years on the Senate Armed Services Committee, I do not consider myself a defense expert, and least of all an expert on such a highly technical weapon system as Safeguard. But I do have some long-term familiarity with that particular program and I have had the opportunity to participate with my colleagues on the committee in their deliberations on a number of annual Defense authorization bills. On the basis of that experience and in consideration of the additional points of view brought out during the current debate, it is my judgment that the weight of the evidence clearly favors the deployment of the Safeguard system at this time.

In reaching this judgment I have weighed to the best of my ability all of the arguments pro and con on each of the major questions involved in this controversy.

First. Could the Soviets by the mid-1970's acquire a capability sufficient to endanger our strategic deterrent? The weight of the evidence clearly indicates that they could—if they continue on their present course and we take no further action now to increase our presently planned strategic offensive forces or to improve their survivability. There is general agreement that the Soviets could by the mid-1970's acquire a force of SS-9 ICBM's and submarine-launched missiles large enough virtually to destroy our entire land-based missile and manned bomber forces in a surprise attack.

Some have argued that our Polaris/Poseidon forces alone would be a sufficient deterrent. They point out that the 31 planned Poseidon submarines carrying 16 missiles each with 10 warheads per missile represents a force of almost 5,000 warheads. But they neglect to point out that only somewhat more than half of these submarines would be on a station at any one time, that not all of the warheads could be expected to reach their targets, and that the Poseidon warheads are very small as these things are measured.

But most important of all they overlook the point that it would be the height of

August 6, 1969

S 9241

folly, considering what is at stake, to depend for our deterrent upon only one of the three major elements of our strategic offensive forces, no matter how invulnerable it may appear to be today. We have witnessed major technological surprises in the past and common prudence would dictate that we must do everything possible to hedge against them in the future.

Second, Will the Soviets continue on their present course? I am convinced that no one knows the answer to this question, but until we have evidence to the contrary we must assume that they will. The survival of not only our own Nation but that of the entire free world depends upon our clear and continued ability to deter a Soviet nuclear surprise attack upon ourselves and our allies. In this area of the defense program there is absolutely no room for error; all doubts must be resolved in favor of the continued adequacy of our deterrent. That is another reason why I would consider it foolish to rely for our deterrent on only our Polaris/Poseidon forces, or on any other single element of our strategic offensive forces. I really cannot see how any prudent person can disagree with that basic principle.

Third, Would the deployment of the Safeguard system offer the best choice in insuring the continued survival of that minimum force required for deterrence. Let me acknowledge at the outset that there are other ways to achieve that objective, but none of them in my judgment would serve our purpose as well. It has been suggested, for example, that we increase the size of our strategic offensive forces—deploy more Minuteman or build more ballistic missile submarines. This course, I believe, would be highly provocative and undesirable at this particular time. It would inevitably stimulate the strategic arms race. Although we know full well that our strategic nuclear war policy is irrevocably based on deterrence, the Soviet planners, just as our own, must always consider capabilities and not just declared intentions. If we were to add to our strategic offensive forces at this time we would, in effect, be increasing our first-strike capabilities.

In contrast, the deployment of the Safeguard system would add absolutely nothing to those capabilities. I am sure that every Member of this body is aware that the Spartan and Sprint missiles are suitable for defense only and cannot be launched against the Soviet Union; and I am sure the Soviet planners know that, too. So there is a very great difference between the deployment of a defensive system such as Safeguard and the deployment of additional offensive weapons such as Minuteman missiles or ballistic missile submarines.

It has also been suggested that we move our land-based missiles into harder silos, instead of protecting them with ABM's. The Defense Department has already undertaken the development of such silos, but there are distinct physical limits to hardening. Furthermore, with continuing improvements in the accuracy of Soviet offensive missiles even these silos could become vulnerable to large warheads. Thus, it may become neces-

sary both to super harden and to defend those missile silos if we want to maintain a survivable land-based missile capability in the future. And, if we wish to maintain a survivable manned bomber capability, it may also be necessary to disperse further our alert bomber forces and defend them with ABM's against a surprise attack by Soviet ballistic missile submarines.

Fourth, Will the Safeguard system work? This is perhaps the most controversial aspect of the Safeguard proposal. The experts themselves appear to be divided on this question. But it seems to me, on balance, that the weight of the evidence favors the conclusion that the Safeguard system will work well enough for the purposes intended. The Defense Department has been working on ABM defense for almost 15 years. A vast amount of knowledge and experience has been acquired. The major components of the system have been developed to a point where their characteristics and capabilities are well understood. Moreover, the objective here is to insure that a sufficient portion of our strategic retaliatory forces survive to enable us to strike a decisive retaliatory blow even after absorbing a Soviet surprise attack. The Safeguard system can achieve this objective even if it works at less than 100-percent effectiveness.

It has been suggested that the Soviets could overcome the presently planned Safeguard deployment by increasing the number of their offensive missiles. This is undoubtedly true, but if the Soviets choose to run this race we have no alternative but to run it with them—if we are determined to maintain our strategic deterrent in the future. Admittedly, it is becoming more and more difficult to maintain it, but this does not mean we must throw up our hands in despair. We have succeeded in deterring a Soviet nuclear attack thus far, and with proper foresight and firm determination we can continue to do so.

Fifth, Will the deployment of Safeguard endanger the forthcoming talks with the Soviets on the limitation of strategic armaments? I can find no evidence that it would. The Soviets have already deployed an ABM system around Moscow and certainly that is no impediment to us. The Soviet leaders themselves make a clear distinction between offensive and defensive systems. They do not consider their ABM system a threat to us, and from what they have said I would conclude that they would not consider our deployment of Safeguard a threat to them. Furthermore, the figures published by the Defense Department clearly show that the deployment of a thin ABM defense, whether Sentinel or Safeguard, would reduce our fatalities from an all-out Soviet attack by only about 10 to 20 percent—from 110 to 120 million to 100 million. Therefore, their deterrent would be clearly unaffected by our decision to deploy Safeguard.

Mr. President, I have touched upon only the major issues related to the Soviet threat to our strategic offensive forces. There are two other purposes for which Safeguard is proposed—defense of

our people against the potential Chinese Communist ICBM threat and defense against an accidental launch from any source. President Nixon has just recently reassured our Asian friends and allies that the United States will protect them against nuclear aggression. I submit that his hand would be greatly strengthened in this regard by the deployment of Safeguard. He would then be in a position to make good on his promise without risking the destruction of American cities once the Chinese Communists have achieved an ICBM capability. Repeated analyses by the Defense Department over the last few years have clearly established the fact that a thin ABM defense over the entire Nation could provide a very high level of protection for our population against the kind of ICBM threat Communist China is expected to be able to mount in the 1970's. And this same system could protect us against an accidental launch from any source.

For all of these reasons, the deployment of Safeguard should be started now. The program proposed by President Nixon is quite reasonable. Instead of the \$1.8 billion requested in the January budget, he is asking for less than \$800 million. And of that amount, more than half is for research and development, which I understand has the support of most of the Members of this body.

So what is at issue here is less than \$400 million, most of which is for procurement. And may I remind the Senate that the production program has already been started with the approval of the Congress last year. If we fail to approve additional funds for this purpose now, the ongoing production program will have to be terminated, entailing the loss of several hundred million dollars and a delay in deployment of at least 2 years. It seems to me that it would be far more prudent and sensible at this particular stage to make the additional investment of less than \$400 million and keep the program going for another year. By that time we should be in a much better position to evaluate the prospects for an agreement with the Soviet Union on the limitation of strategic armaments, as well as the potential Chinese ICBM threat.

Mr. President, I ask unanimous consent to have printed in the RECORD as a part of my remarks a convincing article entitled "ABM and the Liberals," written by Stewart Alsop which appears in the issue of Newsweek bearing a future date, namely, August 11, 1969.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ABM AND THE LIBERALS
(By Stewart Alsop)

WASHINGTON.—During the long debate on the ABM, it became more and more obvious that the anti-ABM senators and their allies in the liberal-intellectual community were not really attacking a weapons system—they were attacking a symbol. It also became more and more obvious that they had chosen the wrong symbol.

The attack on the ABM was basically a way of expressing the furles and frustrations generated by the war in Vietnam. But the ABM was in several ways a very bad symbol of what the liberals wanted to attack. As a

result, they were forced to take positions which were both illogical and illiberal.

The liberals' first line of attack was that the system wouldn't work; and that even if it did, there was no need for it, because the Russians could not build the kind of offensive missile force which could really threaten our Minuteman retaliatory force. Neither senators, nor columnists, nor scientists from wholly different fields who like to see their names in the papers are capable of discussing certain complex technical subjects intelligently. But even in this arcane field, common sense is still useful, and in recent weeks two leading scientists made remarks to this reporter which sounded like common sense.

Some time before Neil Armstrong and Edwin Aldrin performed their moon-walking miracle, Dr. John Foster, chief Defense Department scientist, remarked that "of course, ABM is a much easier proposition, technically, than the moonshot." Surely this is common sense. Surely if we can put men on the moon we can build a workable missile defense.

COMMONSENSE

Dr. Albert Wohlstetter, a widely respected specialist in the nuclear-strategic field, made the other common sensible remark. When the ABM opponents say the Russians won't be able to build the kind of missile force which could knock out our Minuteman complex in a first strike, Dr. Wohlstetter remarked, they are assuming that the Russians several years from now won't be able to do what we know how to do right now. This, he added sensibly, is not a safe assumption to make.

The liberals' second line of attack has been that the ABM is just another expensive boondoggle of the "military-industrial complex." This line was best expressed by Tom Wicker, able columnist for the anti-ABM New York Times. The ABM, Wicker wrote, is an example of the "unlimited military expenditure in the quest of security," which has led the military to demand "more and more weapons . . . and more and more money to support them."

The notion that more and more money has been spent for more and more strategic weapons is an article of faith among the anti-ABM liberals. But it just doesn't happen to be true. In fact, as Dr. Wohlstetter points out, we are actually, allowing for inflation, spending about half as much for strategic forces now as we were in General Eisenhower's last year as President—\$13.6 billion in 1959, as against an estimated \$8 billion for 1970. The money has gone, not into more and more strategic weapons, but into the war.

ABM A RESPONSE

The liberals' third line of attack is that the ABM is aggressively "escalatory." This has been a hard line to maintain, simply because the wholly defensive ABM system could not hurt a single hair of a single Russian head. As Russian Premier Kosygin has said, such defensive weapons "are not the cause of the arms race." The ABM is, of course, a response to the rapidly growing (offensive) force of multi-megaton, multi-targeted Soviet S-99 missiles. The people who have really been spending "more and more money" for strategic weapons are the Russians. On this point the "intelligence community" is in a rare state of unanimity.

The last, and oddest, liberal line has been that the best response to the Russian offensive missiles is not defensive missiles but more American offensive missiles. If it turns out that the SS-9s are a real threat to the Minutemen, then build more Minutemen. And if nuclear war threatens, then all we have to do is "empty the holes"—fire our missiles before the Soviet missiles could knock them out. Thus have the liberals become rather surprisingly, advocates of the "massive retaliation" theory of the late John Foster Dulles.

The trouble with the theory that it would give a future President no choice between capitulation and a nuclear war which, according to the best estimates, would kill about a quarter of a billion Americans and Russians. The whole point of the ABM project is not simply to maintain what Winston Churchill called "the balance of mutual terror," but also to give a future President what John Kennedy called "a choice between Armageddon and surrender."

Obviously, there would be no choice if our cities were attacked. But the SS-9s are designed to hit the Minuteman complex, not the cities. The simple existence of a missile defense would make a "counterforce attack" on the Minuteman complex far less likely. If it came, a future President could choose to ride it out, in the knowledge that he retained the bargaining power inherent in a surviving retaliatory force.

THE ERRING GENERALS

Surely it is rather odd that the liberals should wish to deny this option to a future President. The main reason is that many liberals simply want a stick—any stick—with which to beat the "military-industrial complex."

Undoubtedly, the attitude of Congress, and of recent Presidents too, has been much too reverent toward the military. Almost all generals, as this reporter pointed out before it became fashionable to do so, are almost always wrong about all wars. This is so not because generals are bad people (most of them are able and honorable men) but because the process of getting to be a general endows a man with a built-in bias about wars. There has been no war in recent history about which almost all American generals have been wronger than the war in Vietnam.

Moreover, almost all generals are wasteful, and no generals are more wasteful than American generals, partly because America is rich. But the main reason generals are wasteful is that wars are wasteful. The worst of war's waste is in human lives, of course, for in all wars young men, who have done nothing to deserve death, die.

A war which is not won is intolerably wasteful. This explains the passion which has gone into the attack on the ABM, for it is essentially a protest against a tragic, unwon war. But it is simply not logical to protest against the war, and the generals who were wrong about it, by attacking the ABM. It is not logical to protest the loss of some 37,000 American lives by denying to a future President the option he may desperately need if he is to have a chance of saving 250 million lives. It is not liberal either.

Mr. FULBRIGHT. Mr. President, will the Senator yield for a question on his first remark?

Mr. ERVIN. I do not have any time to yield. The Senator from Arkansas might get time from the other side.

Mr. FULBRIGHT. I would like to make an observation on the Senator's first comment.

Mr. STENNIS. Mr. President, we are going to reach a point, if I may respond, where those who wish to interrogate speakers will have to get time from their own side.

I am glad to yield 2 minutes to the Senator from North Carolina, if he so desires.

Mr. FULBRIGHT. If the Senator will just yield for an observation or perhaps a question.

Mr. STENNIS. Mr. President, I yield 2 minutes to the Senator from North Carolina, if he so desires.

Mr. ERVIN. Yes, Mr. President, I yield to the Senator from Arkansas.

The PRESIDING OFFICER. The Senator from North Carolina is recognized for 2 minutes.

Mr. FULBRIGHT. The question raised by the Senator is what constitutes the strength of the United States. That is the question at issue. The Senator assumes that the only criterion of strength in the community is the number of weapons it owns. The point that those of us who oppose the ABM system make is that when we look at the difficulties this country is now experiencing, all the way from city riots, reflected even in our own Capital City recently, and in all the major cities nearby, as well as student riots, crime in the streets, and so forth, we are saying that to expend over \$1,000 billion on weapons is weakening this country and is much more likely to make it subject to domination either by Fascist or Communist countries—

Mr. ERVIN. I believe the Senator from Arkansas is making a speech on my 2 minutes.

Mr. FULBRIGHT. Does not the Senator agree that just armaments alone are not the only criterion which makes our country strong?

Mr. ERVIN. Yes, it requires men who have the will to protect liberty as well as armaments to protect this country in the dangerous world in which we live at this moment. I am not willing to jeopardize the safety of my country by voting against the deployment of a defensive weapons system which is designed merely to save from destruction the retaliatory power of our Minuteman missiles.

Mr. President, I yield the floor.

Mr. FULBRIGHT. If the Senator will yield me 1 further minute—

Mr. HART. Mr. President, I yield 1 minute to the Senator from Arkansas.

The PRESIDING OFFICER. The Senator from Arkansas is recognized for 1 minute.

Mr. FULBRIGHT. Mr. President, I still submit that the Senator is basing his comments on the assumption that the only source of strength and certainly the prime area of the concept of strength and security lies in armaments.

I say that armaments are only one aspect of it. I am not sure, under present conditions, that it is the most important one, because on the best authorities we have, we know that the strength of Russia and the strength of the United States where armaments are concerned is that each have enough to destroy the other more than once—in fact, anywhere up to 10 times over.

I say that the strength we now lack is in the unity of our people. What we need now is to reconcile the young people of this country, the city people of this country, and the rural people of this country, to the idea of returning the United States to what it used to be under more normal conditions.

The PRESIDING OFFICER. The time of the Senator from Arkansas has expired.

Mr. ERVIN. Mr. President, will the Senator from Mississippi yield me 30 seconds?

Mr. STENNIS. Mr. President, I yield 1 minute to the Senator from North Carolina.

The PRESIDING OFFICER. The Senator from North Carolina is recognized for 1 minute.

Mr. ERVIN. Two things are required to protect this Nation's liberty in this precarious world.

First, a people who are willing to keep their hearts in courage and patience and lift up their hands in strength.

Second, the weapons necessary to enable them to do these things.

It is the supreme duty of the Congress to make such weapons available to our country.

Mr. SYMINGTON. Mr. President, will the Senator from Michigan yield me time?

Mr. HART. Mr. President, I yield 3 minutes to the Senator from Missouri.

The PRESIDING OFFICER. The Senator from Missouri is recognized for 3 minutes.

Mr. SYMINGTON. Mr. President, later on I shall make a short statement about what I believe is a mistake from the standpoint of national security; namely, deployment now of this Safeguard system. I am sorry the distinguished and able Senator from Georgia has left the Chamber as I would comment briefly on what he said about a previous decision.

It was in 1949 that, to the surprise of many people, the Soviets exploded their first nuclear weapon. It was a mission of the Air Force at that time to watch the air and winds therefore we are the first to know of it.

The question of how far we went with a hydrogen bomb was a political decision largely, not a military decision.

What worries me is the emphasis by ABM proponents about the vast technological capacity of the United States, which no one could deny, as a reason for going ahead with the system.

They talk about the glorious achievements of Apollo 11, which are so true; but I would hope they would go to a Cape Kennedy launching pad and see the type and character of effort being made there by our foremost scientists and engineers in order to accomplish one particular mission at a planned time and over a long period of weeks.

If they would do that, I doubt they would compare such a superb accomplishment with what might happen, all over the United States on an afternoon, comparable to December 7, 1941, no advance notice, with all these holes in the ground manned by sergeants, corporals, enlisted men, and junior officers.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. HART. Mr. President, I yield 2 additional minutes to the Senator from Missouri.

The PRESIDING OFFICER. The Senator from Missouri is recognized for 2 minutes.

Mr. SYMINGTON. Everything would have to work adequately so as to succeed in defending the country.

I have studied, to the best of my ability, the tremendous complexity of this system. We know one of the radars has never been built, and that the software to go into the computer has not yet entered the computer because it is admitted to

be the most complicated computer in the history of mankind.

I would ask those who bring up the technological achievement argument to consider that we have no better laboratories than our automobile laboratories where they project new automobiles in the laboratory which are, in essence, perfect. But there have been major campaigns waged against these same automobile companies because of inadequacies in actual operation, a very small percentage of the fine cars put out.

I think this is comparable to the problem of hundreds of missiles which would have to operate suddenly, and there can be no such percentage of failure.

The PRESIDING OFFICER. Who yields time?

Mr. HART. Mr. President, I suggest the absence of a quorum, with the time to be divided equally on both sides.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. HART. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HART. Mr. President, I yield 20 minutes to the able Senator from Massachusetts (Mr. BROOKE).

The PRESIDING OFFICER. The Senator from Massachusetts is recognized for 20 minutes.

THE ABM DECISION—DEADLOCK OR ACCOMMODATION?

Mr. BROOKE. Mr. President, the conclusion of this vital debate approaches. All of us sense that the decision before us is a momentous one, and the prolonged discussion of this matter is fully justified by the significance of the issue. Many Members have offered their analyses and advice on this question, and I do not presume to review all aspects of the subject at this late date. Rather, I propose to touch on only a few of the more critical features of the decision we face.

After much study, the conclusion to which I have been drawn is firm. I do not believe that the United States should commit itself to deployment of an antiballistic-missile system at this time.

This conclusion is based on a broad range of considerations. In my judgment, additional work should be done on the proposed Safeguard technology before any commitment to deploy a system is made. But the more important factors are not technical or economic. The fundamental issue posed by Safeguard concerns the future course of the arms race, with all that implies for the security and well-being of both ourselves and the Soviet Union.

Before going forward with deployment of such technology, we should first explore the many dimensions of strategic weaponry in the proposed strategic arms limitation talks. The central question for those negotiations is clear: Are the United States and the Soviet Union prepared to recognize the requirements of

mutual deterrence? Are they prepared to acknowledge and act upon the premise that neither side can engage in strategic deployments which jeopardize the capacity of the other to retaliate?

If agreement can be achieved on this fundamental principle of security in the nuclear age, there should be real possibilities for specific arrangements to stabilize the balance of forces between the two great powers. If there is no such agreement, I think we will enter the most dangerous competition in arms in the history of mankind. This is especially true with regard to the developing capability of both countries to deploy multiple warhead missiles capable of striking more than one target.

To President Nixon's great credit, his revision of the former Sentinel ABM proposal was based on a recognition of the realities and the requirements of mutual deterrence. In his March statement he stressed his awareness of the risks of provocative innovations in the strategic forces, and specifically rejected the options of deploying either a heavy city defense or more offensive weapons. Either action might appear to the Soviet Union as a threat to its retaliatory capacity.

No previous President has made so explicit a formulation of mutual deterrence as the pillar of American policy. If he acts consistently on this basis, and if the Soviets are prepared to do likewise, Mr. Nixon will have an unparalleled opportunity to curb the arms race and to negotiate a reasonable strategic arms agreement with the Soviet Union.

The long debate on ABM has left no doubt that such an agreement is the preferred objective of the vast majority of Senators and citizens. There are other points of consensus, too, which stand out in sharp relief to the division and controversy surrounding this issue.

There is consensus that the United States should continue intensive research and development on ABM systems, for possible use either in the event of mutual agreement to deploy such weapons or in the event of failure to reach any agreement on reducing the impending threat to our retaliatory forces. Such studious critics of Safeguard as Hans Bethe and Wolfgang Panofsky have made a point generally accepted in the technical community: Hard-point defense appears technically feasible and in principle could be a sensible response to a Soviet deployment of accurate MIRV's capable of attacking our Minuteman force. So there is no disagreement over the desirability of continuing a vigorous program to perfect such technology.

As a measure of this consensus, there is widespread willingness in the Senate to authorize for research, development, and testing the full amount requested by the administration for fiscal 1970, including those moneys requested to start deployment of the Safeguard weapons system. The central disagreement concerns the question of committing the United States now, in the immediate prelude to the expected SALT talks, to deploy this ABM system.

August 6, 1969

It is a common tendency in a hard-fought debate to lose sight of the qualifications and reservations attached to arguments and to treat judgments as more conclusive than they are in fact. The debate over the Safeguard system is no exception. My own examination of the technological pros and cons, drawing on a broad variety of technical opinion, has led me to a decidedly mixed verdict.

The technology involved has been very extensively studied. I believe the system is probably better than its harshest critics are willing to acknowledge, but not demonstrably good enough to justify a commitment to deploy. Most of the first-blush criticisms, such as its capacity to handle the blackout problem, have been thoroughly analyzed and it appears that they have been adequately resolved in theory. But it is admitted by all that major technical uncertainties remain to be resolved.

Three such uncertainties stand out: First, are the radars so vulnerable that the system can easily be defeated? Second, can the computers and their immensely complicated software be made to perform to the necessary standards? Third, can the many components be successfully integrated into a working, reliable system?

It is alleged that smaller, harder, cheaper, and more numerous radars would be preferable for the hard-point mission. But there are obvious difficulties in obtaining the desired performance from such simplified radars, and it is certain that it would be some time before such technology could be brought from the concept stage to working hardware.

The large, relatively soft, high-capacity radars proposed for Safeguard are closer to readiness than the alternatives being suggested, but that is of little value if they can be easily destroyed.

Whether their admitted softness to blast effects is a crucial vulnerability depends on whether they can be effectively defended, since even very large warheads would have to penetrate to fairly close ranges of a few miles to deliver such destructive overpressures. The survivability of the radars could be greatly enhanced, albeit at major costs, if additional radars are deployed beyond those now proposed. Redundant radars would permit the system to employ the so-called preferential mode of defense, protecting only certain radars while an attacking force would have to target all missile site radars. Speaking in general and on the assumption that the system worked as planned, preferential defense could be a large advantage to the system and could economize defensive missiles in roughly a 1-to-4 ratio to the offense. On balance, the vulnerability of the radars must be recognized as a very serious problem, although one which may be soluble.

The second major area of technological uncertainty, the computers and their programming, can also not be resolved definitively at this time. The task of perfecting these components is a demanding one, although systems approaching the scale of the Safeguard computers have been produced and are functioning.

The computer-software problem merges into the overall question of whether the myriad components can be assembled into a system that meets the incredibly great demands imposed on any ABM, even one designed exclusively for hard-point defense. No amount of paper analysis can resolve this question. It is, I submit, the essence of the technological doubts which have been raised by the Safeguard scheme. Moreover, it is the issue which will plague any ABM system.

All of these problems argue that, if the Safeguard system or a variant thereof is to be deployed at some time, the first order of business is a large-scale test and evaluation to determine the operational feasibility of such a system.

But the basic dilemmas affecting our decision are not really technological; they are political and strategic. The Senate and the House, in conjunction with the President, must weigh the various risks to our national security and determine the most prudent course. In this evaluation, military and technical estimates mingle with guesses and instincts about Soviet intentions, about the nature and feasibility of arms control negotiations, and about the impact on those negotiations of the decision we are about to make.

Will a decision to deploy Safeguard be a boon to the SALT talks, by demonstrating support for the President and a determination to protect our deterrent in case those talks fail? Or will such a decision prove a detriment to the negotiations, injecting an additional element of threat into an already tense situation? The President based his recommendation, one surmises, largely on the view that proceeding with ABM at this time would both encourage the Soviet Union to negotiate in earnest and provide a valuable fallback capability in case the talks should fail to produce results.

On this matter judgments can and do differ. I consider it arguable whether the Safeguard system would in fact induce the Soviets to negotiate more expeditiously. Whether it does depends heavily on unknown and largely unpredictable psychological factors in the Soviet leadership, as well as on the balance of contending forces within the Moscow hierarchy. To some Soviets the U.S. decision to proceed with ABM and other weapons may seem a valid reason for urgent diplomacy; to others it may be cited as a challenge to be met and a cause for delaying genuine negotiations.

On the record of Soviet attitudes toward defensive systems, it seems even more probable that U.S. deployment of an ABM, particularly a thin capability intentionally designed to leave American cities hostage to Soviet retaliation, would be a matter of relative indifference. However, the President obviously considers the proposal an important ingredient in his approach to the SALT talks, and his judgment deserves careful consideration in our assessment.

To be skeptical of the positive value of ABM as an incentive to negotiations is not to conclude that a defeat for the President on this issue is likely to promote fruitful discussions. Indeed, it

would be my view that either a rejection or an acceptance of the administration's proposal by a narrow margin could weaken the country's negotiating posture in the SALT talks.

Deep domestic division on matters at the heart of a diplomatic venture has never been an asset to the United States or any other democracy. It could well be that such evident cleavages in our body politic would tempt the Soviets to try to exploit the President's political vulnerability on this score by various maneuvers in the SALT talks.

The result could be diplomatic stalemate, on issues which must be promptly addressed with a minimum of propaganda, if we are to turn down the arms race and find a more secure basis for our strategic relationships.

It is this line of reasoning which our revered senior colleague from Vermont, Senator ARKEN, expressed so directly and vividly in his remarks some days ago. This Nation has a large interest in avoiding a razor-thin decision on such paramount questions. That is why I feel confident that Senator ARKEN captured the sentiment of both the Senate and the Nation in urging the President to modify his proposal. It is abundantly clear that there will be no consensus on the present recommendation. At this stage, while the outcome in the Senate is somewhat uncertain, we all know that there will not be a large majority, if indeed there is any majority at all, for deployment of Safeguard.

Our vote later today on the Cooper-Hart amendment will leave no doubt as to the opposition in this body to an immediate decision on deployment of the Safeguard system. I had hoped that prior to reaching this confrontation the administration would recognize the facts of the situation and seek a reasonable arrangement to defer that decision. It has failed to do so, despite numerous overtures from those opposed to deployment.

I am confident that the vote on this amendment will make its point with historic force: the President cannot proceed on the course he has proposed without adequate support in the Senate. Whatever the outcome of today's vote there will remain an urgent need to build a consensus on national policy concerning the ABM. So, in casting our vote today, all of us should be looking to this larger task.

In looking beyond this vote, our esteemed colleague from New Hampshire has already sketched out the essential elements of a reasonable accommodation. He has made clear that, whether the present amendment passes or fails, he intends to offer his proposal later this week.

Senator MCINTIRE'S amendment would explicitly reserve to the Congress for later decision a commitment to deploy an ABM weapons system. It would specifically foreclose, pending later action, the installation of any operational missiles and the acquisition of any sites for deployment of such a system. Thus this plan would satisfy the central political point of concern to those of us who wish to defer any such decision. But at the same time this proposal would permit

August 6, 1969

a start on testing and evaluation of the radars, computers, and associated electronics. It would authorize such testing at sites which could, if the progress of the technology and the evolution of international relations warrant, later become operational. Thus, it would meet the stated objective of the President to preserve the option of early deployment of an ABM defense for a portion of the Minuteman force.

I find much to commend this suggestion. The Soviet Union follows the debates in this Nation. They would scarcely fail to comprehend the measure of restraint shown by such a moderate decision in the Senate. And it should be especially evident to Moscow that further decisions on actual deployment of an ABM system will hinge directly on the results of the SALT talks. If any decision on this matter is likely to influence the Soviets favorably in the SALT talks, I would judge this combination of prudent preparation for possible deployment and obvious restraint short of immediate deployment would be most likely to do so.

Furthermore, by deferring any decision to deploy, but permitting test and evaluation of the electronic heart of the proposed system, the most critical technological questions may be worked out. If they are resolved satisfactorily, if the radars, computers, software, and other elements can be integrated effectively, our subsequent decisions can be made with higher confidence. If, in the meantime, improved radar technology and possibly smaller, less expensive missiles can be perfected, it may be possible to employ them. In any event, the overriding systems question, the issue applicable to any ABM system—namely, can such elements be put together in a working system—can be addressed in a more realistic way.

Shaking down and testing the technology now closest to operational status should significantly improve our capacity to pursue the next generation of such technology, if need be. I must say that I have always been troubled by the argument of those who answer the proponents of Safeguard by asserting that, first, the system will not work and, second, we will not let you prove whether or not it will work. Judgments vary on the workability of this system, and it behooves us neither to commit to its deployment, nor to constrain efforts to test it out short of actual deployment.

It is this kind of accommodation to which I believe the majority of the Senate is groping.

The remarkable leadership shown by Senator COOPER and Senator HART, who have been in the forefront of this effort for over a year, has paved the way for a sensible resolution of this matter. All Americans are in their debt. In advancing their amendment they have provided a clear focus for those of us who oppose a commitment to deploy an ABM at present. If an accommodation is eventually reached, their efforts will be largely responsible. If it is not possible to do so, the vote for their amendment, which I and many others will cast, will constitute the closest thing to a vote of no confidence

on an issue of national security in recent American history, probably since the Senate's rejection of the League of Nations' Covenant.

That is an outcome devoutly to be avoided, if possible.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. BROOKE. Mr. President, I ask for 5 additional minutes.

Mr. HART. Mr. President, I yield 5 additional minutes to the Senator from Massachusetts.

The PRESIDING OFFICER. The Senator from Massachusetts is recognized for 5 additional minutes.

Mr. BROOKE. Mr. President, a hazard in any debate of great moment is that issues of wisdom become transformed into matters of fundamental principle. We face today not a question of principle, but a complex matter of judgment. We are united on the central issues of principle. We are agreed that the security of the United States must be preserved. We are agreed that arms control negotiations with the Soviet Union should be pursued. We recognize that the ABM issue, as a major element in the thermonuclear balance, touches the peace and well-being not only of Americans but of all men on earth.

The Senate, then, must resolve this issue not in terms of some ideological commitment or aversion to the ABM, but in light of how best to serve the overriding concerns we all share in this realm.

The lesson of the last year's great debate on the ABM is, I believe, a decisive one. It is that Congress is beginning once more to recognize its responsibility and to assert its authority on the crucial questions of peace and security. The intense debate over the city-oriented Sentinel defense has already accomplished much of its purpose. The profound concerns which that proposal raised in this body and in the Nation undoubtedly contributed to its revision. It is already apparent that military systems can be changed or dropped, that Congress and the people can exert effective influence in these matters.

That seems a modest enough accomplishment for a system of self-government. But where questions are so inherently complex, where issues are so technical and information so shrouded in secrecy and uncertainty, it is no trivial feat for the Senate to perform as it has in developing the policy implications of ABM. The decision is still in doubt, but I believe the Nation has been well served by the manner in which the Senate has approached it. I hope that the Nation and the world will continue to be well served by the way in which we resolve it.

Mr. COOPER. Mr. President, will the Senator yield 1 minute?

Mr. HART. Mr. President, I yield 1 minute to the Senator from Kentucky.

The PRESIDING OFFICER. The Senator from Kentucky is recognized for 1 minute.

Mr. COOPER. Mr. President, as always the Senator has made a very reasoned and balanced speech on the issue. There is much more that I could say if time

would permit it, because of the efforts of the Senator in this field, particularly relating to MIRV.

The Senator has stated the chief point correctly. It is a question of Congress recognizing its responsibility and asserting its authority on the crucial questions of peace and security, and the fact that we should resolve this issue not in terms of some ideological commitment, but in light of how best to serve our overriding concerns at this time.

Mr. BROOKE. I thank the Senator from Kentucky.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I ask unanimous consent that the time consumed in a quorum call be divided equally between both sides, and I suggest the absence of a quorum.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. McGovern in the chair). Without objection, it is so ordered.

UNANIMOUS-CONSENT REQUEST

Mr. MANSFIELD. Mr. President, with the concurrence of the distinguished minority leader; the manager of the bill, the distinguished Senator from Mississippi; the authors of the pending amendment, the Senator from Kentucky (Mr. COOPER) and the Senator from Michigan (Mr. HART); and the distinguished senior Senator from Maine (Mrs. SMITH)—and I believe I speak with their full concurrence when I make the following unanimous-consent request—I ask unanimous consent that at 2 o'clock the amendment submitted by the distinguished senior Senator from Maine (Mrs. SMITH) to the amendment be laid before the Senate and made the pending business; that there be a time limitation of not to exceed 1 hour, the vote on the amendment to occur at 3 o'clock; and that the time between 2 o'clock and 3 o'clock be equally divided between the distinguished senior Senator from Maine (Mrs. SMITH) and the distinguished senior Senator from Mississippi (Mr. STENNIS).

The PRESIDING OFFICER. Is there objection?

Mr. FULBRIGHT. Mr. President, reserving the right to object, on an amendment to the Cooper-Hart amendment, does not the Senator from Kentucky (Mr. COOPER) control the time? I raise this point as a question.

Mr. MANSFIELD. That can be worked out.

Mr. STENNIS. Mr. President, reserving the right to object—and I shall not object—perhaps the distinguished majority leader could make a statement in explanation as to where that would leave the Senate after the Smith amendment is voted on, if it is not agreed to.

Mr. MANSFIELD. Mr. President, will the Senator yield?

August 6, 1969

Mr. STENNIS. I yield.

Mr. MANSFIELD. Mr. President, we would allow a little leeway, if necessary, to put in a quorum call to make sure the great majority of Members are in the Chamber around 3 o'clock when the Smith amendment would be disposed of. Then, the time taken out of the original agreement up to 1 hour would be used subsequent to the debate on the Smith amendment, before voting on the Cooper-Hart amendment.

Mr. STENNIS. Mr. President, approaching the matter the other way, whatever time each side has remained on the Cooper-Hart amendment when the Senator from Maine starts making her presentation on her amendment, would be remaining and available for use after the Smith amendment is disposed of, provided it is not agreed to.

Mr. MANSFIELD. The Senator has stated the situation far better than I could, and that is the way it would be.

Mr. PASTORE. Mr. President, reserving the right to object, I wish to inquire how much time is remaining on the Cooper-Hart amendment.

Mr. MANSFIELD. Roughly, 1 hour and 45 minutes.

Mr. HART. No.

Mr. PASTORE. Mr. President, once the hour is taken out for the Smith amendment, how much time will be allowed for the Cooper-Hart amendment?

Mr. MANSFIELD. One hour.

Mr. PASTORE. What is the remaining time? That is my question.

Mr. HART. Mr. President, may I inquire how much time remains on the pending amendment?

The PRESIDING OFFICER. The time remaining is from now to approximately 4 minutes after 3.

Mr. FULBRIGHT. How is the time divided?

Mr. STENNIS. Mr. President, may I inquire how much time is remaining on the Cooper-Hart amendment for the proponents of the amendment?

The PRESIDING OFFICER. The proponents have 44 minutes remaining.

Mr. STENNIS. Mr. President, how much time is remaining for those who oppose the Cooper-Hart amendment?

The PRESIDING OFFICER. The opponents have 62 minutes remaining.

Mr. STENNIS. Mr. President, a further parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. STENNIS. Mr. President, if we continue the debate, these figures would change according to how each side would make use of their time between now and 2 o'clock. Is that correct?

The PRESIDING OFFICER. The Senator is correct. The time remaining after 3 o'clock would depend on how each side uses its time between now and 2 o'clock.

Mr. MANSFIELD. Mr. President, in view of the developments, I ask unanimous consent, except for the 2 minutes which will be yielded to the distinguished junior Senator from Vermont (Mr. Prouty), that at the conclusion of his remarks, and all remarks thereto, the Senate stand in recess until 5 minutes of 2 o'clock, at which time a quorum call, we hope, will bring all 100 Senators to the Chamber.

The PRESIDING OFFICER. Is there objection? The Chair hears no objection, and it is so ordered.

Mr. STENNIS. Mr. President, I yield 3 minutes to the Senator from Vermont (Mr. Prouty).

The PRESIDING OFFICER. The Senator from Vermont is recognized for 3 minutes.

Mr. PROUTY. Mr. President, the crevice in this debate has spread out from here across the land and become a chasm of misunderstanding.

Tragically, outside this body the intricacies of the ABM issue were distorted by simplification. Labels and slogans prevailed over definitive analyses.

As the breadth of the gorge widened and antagonists drew further apart, their voices raised. Reason was lost in a barrage of invective. The essence of the pending vote disappeared in a fury of hyperbole.

At some point the acronym "ABM" lost its identity with a weapons system. It became instead a symbol of diverse dissatisfactions.

"Stop the ABM" became a frenzied incantation against the Defense Establishment, a form of punishment for miscalculation and mismanagement.

To others the ABM became a symbol of patriotism, the last bulwark of our Republic.

Where once there was an issue—to proceed with Safeguard as the President recommended or to modify his proposal—now there are a multitude of diverse causes rallying around a symbol.

Sadly, today many champions of these causes envision this Chamber as Armageddon with the forces of good and evil arrayed for the final battle.

I look to these people whose hopes and fears were conscripted into what they thought was to be the last struggle. For them, I condemn the delusion of simplifications, labels, and slogans.

Whatever position soon prevails, the greater consequences may lie in the folly of rallying to symbols rather than substance, of following slogans rather than reason. History is replete with proof that a nation's internal delusions may be more disastrous than external collusions.

Mr. MANSFIELD. Mr. President, to clear the record, the time between now and 5 minutes to 2 o'clock is not to be taken out of either side, is that correct?

The PRESIDING OFFICER. Without objection it is so ordered.

Mr. MANSFIELD. Second, I ask unanimous consent that the distinguished senior Senator from Maine (Mrs. SMITH) be recognized at 2 o'clock p.m.

The PRESIDING OFFICER. Is that for the purpose of calling up her amendment?

Mr. MANSFIELD. Yes, Mr. President, for the purpose of calling up her amendment. As a matter of fact, I ask unanimous consent that the distinguished Senator's amendment to the amendment be laid down now and made the pending business.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the clerk will state the amendment.

The ASSISTANT LEGISLATIVE CLERK: In lieu of the matter proposed to be added

by amendment numbered 101, add the following:

Sec. 402. None of the funds authorized by this or any other Act may be used for carrying out, after the date of enactment of this Act, any research, development, testing, evaluation, or procurement of the anti-ballistic missile system known as the Safeguard system, or to carry out any research, development, testing, evaluation, or procurement of any part or component of such system.

Mr. HART. Mr. President, for purposes of clarification with respect to the time, do I understand correctly that the time between now and 5 minutes to 2 o'clock p.m., will not be charged to either side?

The PRESIDING OFFICER. The Senator is correct.

Mr. HART. And the time not yet used by either side will remain available to both sides when the Senate resumes at 3 o'clock p.m.?

The PRESIDING OFFICER. That is the understanding of the Chair.

Mrs. SMITH. Mr. President, I ask for the yeas and nays on my amendment.

The yeas and nays were ordered.

RECESS UNTIL 1:55 P.M.

The PRESIDING OFFICER. Without objection, the Senate will now stand in recess until 5 minutes before 2 o'clock p.m.

(At 1 o'clock and 24 minutes p.m., the Senate took a recess until 1:55 p.m. today.)

At 1:55 p.m., the Senate reassembled, when called to order by the Presiding Officer (Mr. McGovern in the chair).

ACM
AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each reserve component of the Armed Forces, and for other purposes.

The PRESIDING OFFICER. The Senator will be in order.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. To which side does the Senator want the time charged?

Mr. MANSFIELD. Neither side, and with the understanding that the Senator from Maine (Mrs. SMITH) has the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. TYDINGS in the chair). Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, I ask the Chair to order the Sergeant at Arms to clear the Chamber except for those attachés who have business on the floor. Senators would like to hear what is going on and not have to fight their way through a press of manpower in getting into the Chamber.

The PRESIDING OFFICER. The Sergeant at Arms will clear the Chamber, in accordance with the request of the Senator from Montana.

Who yields time?

Mr. MANSFIELD. Mr. President, I believe that the distinguished Senator from Maine, who has a half hour, has the floor.

The PRESIDING OFFICER. The Chair recognizes the Senator from Maine.

How much time does the Senator desire?

Mrs. SMITH. Such time as necessary.

Mr. President, I am told that this morning my amendment was attacked on the claim that it went too far, for it would adversely affect the Nike X advance development.

Let me set the record straight. This simply is untrue. The adoption of my amendment will not affect Nike X advance development. The bill has \$141 million for Nike X under a separate account. This amendment was approved by our committee and has nothing to do with the Safeguard system.

In addition to the R. & D. for Nike X advance development, the Army seeks \$3 million for anti-ballistic-missile activities in research and development funds at White Sands Missile Range. This also has nothing to do with Safeguard.

Mr. President, I offer this amendment in the nature of a substitute to the Hart-Cooper amendment because I believe that the proposed Safeguard anti-ballistic-missile system is too vulnerable and too costly and would be a waste of resources at a time when we must carefully determine our national priorities.

Even the advocates of the Hart-Cooper amendment have at length expounded on their opposition to the Safeguard ABM system. Yet, the Hart-Cooper amendment is a partial approval of the Safeguard ABM system in that it proposes a compromise authorization for research, development, testing, evaluation and normal procurement incident thereto for the Safeguard ABM system.

I do not approve of such a compromise and such authorization for the Safeguard ABM system. It would be a "foot in the door" authorization for a system in which I have no confidence.

Why waste funds on research and development of a system in which you have no confidence? To do so is to beg the question.

Why not face the issue directly instead of obliquely? If you have no confidence in the Safeguard ABM system, then why vote for any kind of authorization for it in any manner?

Why vote for authorization of research and development of a system in which

you have no confidence? Why vote to develop a system in which you have no confidence? Why vote to develop a system when you are opposed to deployment of such a system?

Mr. President, on the proposed ABM system, I find myself torn between the desire to grant to the President of the United States and the leader of my political party that which he feels is necessary and my own conscience that it is not only not necessary but would be an unwise application of resources.

The United States is the most resourceful Nation in the world. But our resources are not unlimited. We must face up to the fact that there are limits and that those limits dictate a conscientious effort to establish priorities.

As I see it, the purpose and mission of the proposed ABM basically is deterrence—to deter Russia from a miscalculation of attacking the United States because we would have sufficient defenses for our missile sites.

To the contrary, I think offensive strength is the better deterrent and as such rates national security priority over the proposed ABM system. For what really deters Russia from attacking us is our offensive arsenal.

That is what the Soviets respect the most—that is what has stayed their hand during each confrontation starting with the first Berlin crisis on through the Cuban missile crisis—that is what has preserved the peace for two and a half decades—and it is that which is most likely to cause the Soviets to engage in meaningful talks on arms limitations.

I keep hoping that arms limitations talks will ultimately be productive—that the Soviets will be reasonable, sincere, and constructive—that we can bequeath a peaceful world to succeeding generations—that we can find accommodation with honor and security for each other and for the world.

But I am like the "show me" Missourian as I have watched the Soviets achieve a power status of first class magnitude by developing devastating weapons in complete secrecy—boastfully parading them on so-called peaceful May Day repeatedly in great surprise to our best intelligence forces—and totally rejecting inspection procedures whether it be on the limited test ban or on nonproliferation of nuclear weapons.

And, Mr. President, I am convinced that the proposed Safeguard ABM system would be woefully inadequate against a massive Soviet attack on our country should the Russians decide to attack. Make no mistake about it, if the Russians decide to attack it will be a massive attack with full utilization of all of their devastating weapons on cities as well as missile sites.

There are those who seem to think that both the United States and Russia have reached a technological plateau and in this thinking tend to doubt the probability of the development of a system superior to the proposed ABM system.

I do not share this view. I do not think that either of the two countries has reached a technological plateau. Instead I think that technology is pro-

gressing so rapidly and that the state of the art is changing so swiftly that the proposed ABM will be obsolete and outmoded before it is ever put in place.

I do not want our Nation and our people to have a \$40 billion or \$20 billion or even a \$10 billion obsolete white elephant ABM system on our hands.

I am without scientific knowledge, training, or ability. I certainly cannot speak with authority. But I certainly can speak with conviction—and I am convinced that the proposed ABM would be not only a tragic waste of money but even more tragically a self-deluding maginot line false sense of security.

Instead I have greater confidence and faith in the ability of our scientists to develop a far more effective and far less costly system than the proposed ABM system.

I am sure that it is no breach of security when I say that I have great hopes that before too long a sufficiently powerful laser will be developed for the defense not only of our missile sites but as well of our people and our cities.

I have been dubious about the practicability of the proposed ABM system ever since it was first proposed. Frankly, it lacked credibility to me—both the system and the rationale for it.

I do not believe that we need have any fear of a nuclear attack on this country by Red China for many, many years. Red China simply does not have the capability to wage nuclear war against us and would not have for many, many years.

While I think the Russian Kremlin leaders—as differentiated from the Russian common man and woman—would destroy the United States without hesitancy if they thought it was to their advantage and they could do it without any great risk to Russia, I cannot see the men in the Kremlin contemplating that now.

Why? Because I am sure that the increasing defiance of law and authority in the United States by growing dissent that has degenerated into violence and the open advocacy of, and militancy for, anarchy—that this trend is increasing the confidence of the men in the Kremlin that they, and their system of communism, can complete a Communist conquest of the United States without the necessity of firing a shot.

Why then should they devastate the resources of this Nation with nuclear attack? Why would they want to destroy the American resources that they so avidly covet?

Why would they want to have the tremendous problem of rehabilitating and reconstructing a nuclear devastated country when they are growing so confident from trends here that their own advocates among Americans will ultimately deliver this country to them?

No, Mr. President, I simply cannot buy the rationale of fear of the men in the Kremlin advanced in advocacy of the proposed ABM. I simply do not find it credible. And I have so told President Nixon.

For these reasons, I do not believe that we have to precipitously rush into a most dubious ABM system for fear that Russia is on the verge of attacking us—I do not

believe that there is an imminent threat of such urgency as to preclude us from trying to develop a more effective and less costly system than the proposed ABM system within not too distant a future.

Reaching the decision that I have on the ABM has not been easy. As the ranking Republican on the Armed Services Committee, it is neither pleasant nor easy to oppose the Republican President on this issue.

In the past I opposed a Democratic President when he proposed the ABM. I opposed him on the proposed thin system—on the Sentinel system—because I felt it would be obsolete before it could be put in place—and because I felt that the claim that it was for defense against Red China was not credible.

I have felt a personal obligation as the top Republican on the Committee on Armed Services to try to see my way to supporting the Republican President on this issue—and I have listened intently in trying to find the proposed Safeguard ABM system to be sufficiently improved over the Sentinel ABM system and sufficiently credible to change and support the leader of my own political party.

But I remain unconvinced—and I cannot see my way to change my position because it is now a Republican President making the proposal instead of a Democratic President.

I respect the sincerity of those who have opposed the President on some of his selections for high Federal office and have successfully blocked him on those selections. I would hope that there would be a reciprocity of respect for my own sincerity in this ABM issue. I know that there is from President Nixon.

The more I study the history of the proposal of an ABM system the more evident becomes the lack of credibility and consistency of the rationale for it.

First, a thick ABM system was proposed on the basis of defending against Russia. Then when opposition developed to the proposed thick ABM because of its great cost, the shift was made to a thin ABM system on the basis of not defending against Russia but against Red China and on the rationale of cost effectiveness.

Thus, the first shift—from thick to thin—from defense against Russian attack to defense against Red Chinese attack.

Then sites were selected and plans started on the thin ABM sites in the defense of cities and population centers.

But then another rebellious tea party broke out in Massachusetts on the part of irate citizens of the locality of a proposed site in Massachusetts—and the political fat was in the fire.

And then came another shift in the theory and rationale of the ABM—the shift from the defense of cities and population centers to defense of the missile sites.

What has not been so apparent to many is another very decided shift—for now the talk in support of the proposed thin Safeguard ABM system is not for defense against Red China but rather for defense against Russia.

Mr. BYRD of West Virginia. Mr. President, may we have order in the galleries?

The PRESIDING OFFICER. Visitors in the galleries are guests of the Senate and will be in order. Please keep the gallery doors closed. The Senate may proceed.

Mrs. SMITH. Mr. President, thus, the rationale for an ABM system has made the full circle in shifting on the factor of whom it is proposed to defend against for first it was the thick system to defend against Russia then it shifted to the thin Sentinel system to defend against Red China and now it is back to the thin Safeguard system to defend against Russia.

This shifting on against whom to defend—first Russia then Red China and then back to Russia—coupled with the shifting on what to defend—first the cities and population centers and now the missile sites—not only taxes one's credulity but even challenges one's imagination as to what the next shift will be by the advocates of the ABM.

Mr. President, I have read that retaliatory action has been taken against some of us who oppose the ABM system. I find that difficult to believe because no such action against me has even been hinted. Instead I have found President Nixon and members of his staff to be very patient and courteous and understanding about my opposition to the ABM.

On the other hand, Mr. President, it has been charged that opposition to the ABM is being used just to try to stop President Nixon. I think that is an unfair charge. In opposing the ABM, I am certainly not trying to stop President Nixon any more than are those in his own party who have opposed some of the administrative policies of his administration.

Mr. President, let me make it crystal clear that while I do not believe in the ABM, I do believe in America.

I do believe in our form of Government—but I do not believe in the ABM.

I do believe in our Republic—but I do not believe in the ABM.

I do believe in free enterprise—but I do not believe in the ABM.

I am for our American way of life—but I do not believe in the ABM.

The ABM is not an acid test of patriotism.

Mr. FULBRIGHT. Mr. President, will the distinguished Senator from Maine yield?

Mrs. SMITH. I yield.

Mr. FULBRIGHT. I wish to commend the distinguished Senator from Maine for one of the most perceptive speeches I have heard on the subject of the ABM. As the ranking minority member of the Committee on Armed Services, with a long history of interest in this matter, which she has outlined so lucidly, I think her speech makes one of the most persuasive cases I have heard anyone make with regard to this extremely important question.

I wonder whether I might ask the distinguished Senator this question: As the Senator knows, I have supported the Cooper-Hart amendment, but I share practically everything the distinguished Senator has said about the ABM, particularly the Safeguard ABM.

As I understand it, the distinguished Senator's amendment is confined to the Safeguard ABM—I am only inquiring

now, I am not trying to put words in her mouth—let me ask my question a different way—is the Senator opposed to research and development in the field of radar development and computers, neither of which have been developed? In other words, I wonder whether the Senator really wishes to prohibit research in the general area of sophisticated radars and computers. To make it more specific, would it be acceptable to the distinguished Senator to provide for research and development on advanced radars and computers suitable for a sophisticated weapons system?

Would such research be inconsistent with the distinguished Senator's thought in her amendment?

Mrs. SMITH. The Senator from Maine would thank the distinguished chairman of the Foreign Relations Committee and in answer to his question would say that he may recall at the beginning, I said there was \$141 million for the Nike X in the bill which I have supported and continue to support. No, my opposition to research and development is only insofar as the Safeguard system is concerned.

Mr. FULBRIGHT. I appreciate that very much. I am sympathetic with the distinguished Senator's statement on this subject. I am committed, of course, to support the Cooper-Hart amendment because I felt, up until now at least, that it was the only practicable way we might be able to restrain deployment of the ABM.

In all candor, I feel compelled to support the distinguished Senator's amendment with that understanding, because I think it has a great deal of merit to it. However, if that should fail, I will also be bound to support, as I am committed to support, the Cooper-Hart amendment because that is the only alternative I will have. But I appreciate very much the amendment of the distinguished Senator. I think that she has made one of the finest contributions to this debate that has been made so far.

Mrs. SMITH. I thank the distinguished Senator from Arkansas very much for his kind remarks.

The PRESIDING OFFICER. The galleries will please be in order. Visitors in the galleries are guests of the Senate, and the galleries will be in order.

The Senator from Maine has the floor.

Mr. AIKEN. Mr. President, will the distinguished Senator from Maine yield?

Mrs. SMITH. I yield.

Mr. AIKEN. Mr. President, I want to commend the distinguished Senator from Maine for having given the most logical and courageous speech which has been heard on this floor for a month.

Mrs. SMITH. I want to thank my distinguished colleague and friend from Vermont.

Mr. President, will the Chair please advise me as to the time remaining to me?

The PRESIDING OFFICER. The distinguished Senator from Maine has 4 minutes remaining.

Mrs. SMITH. Mr. President, I should like to hold that time.

Mr. STENNIS. Mr. President, as manager in charge of the time in opposition

August 6, 1969

CONGRESSIONAL RECORD — SENATE

S 9249

to the amendment offered by the distinguished Senator from Maine, I would want to be certain that insofar as possible those who wish to speak be recognized.

I yield to the Senator from Kentucky for such time as he may need, say, 6, 7, or 8 minutes.

Mr. COOPER. Mr. President, I should like to be recognized for 5 minutes.

The PRESIDING OFFICER. The Senator from Kentucky is recognized for 5 minutes.

Mr. COOPER. Mr. President, before I address myself to the amendment offered by the distinguished Senator from Maine, I should like to say that I do not believe a more eloquent speech has been made—

Mr. PASTORE. Mr. President, we must have order in the Senate if we are to hear the Senator from Kentucky.

The PRESIDING OFFICER. The point of the Senator from Rhode Island is well taken. Senators themselves must be in order if we are to preserve quiet in the Chamber. The Senate will please be in order.

The Senator from Kentucky may proceed.

Mr. COOPER. Mr. President, as I said before, before addressing myself to the amendment offered by the distinguished Senator from Maine, I should like to say that I do not believe we have heard a more eloquent speech during this debate than the one just made by the distinguished Senator from Maine. I agree wholly with her appraisal of the assumed threat which has been made the basis for the proposed ABM system. I like her concept of true security for this country.

We respect the distinguished Senator from Maine for her knowledge of defense and security matters from long experience as the ranking Republican member of the Armed Services Committee, we respect her also for the integrity, courage, and conscience which she has demonstrated so many times on the floor of the Senate.

Mr. CASE. May I associate myself with the sentiments just expressed by the distinguished Senator from Kentucky.

Mr. COOPER. Mr. President, I should like to address now myself to her amendment which is wholly consistent with the position she has taken during the years we have been discussing an ABM system.

I know that other Members of the Senate have told the Senator from Michigan (Mr. HART) and me that they would prefer that our amendment would halt all research and development and procurement respecting the Safeguard system. Some will undoubtedly vote for Senator SMITH's amendment.

I find that the amendment of the Senator from Maine and the Hart-Cooper amendment are in agreement in several ways.

We who support the Hart-Cooper amendment, are in agreement with the position of the Senator from Maine (Mrs. SMITH) that the Safeguard ABM should not be deployed. We believe that it is not likely to prove an effective system for our country and will not enhance our security.

The amendments differ upon the question of providing funds for research and development, testing and evaluation. Our amendment seeks to determine if it is possible to build an effective system which might be needed if the grim threat which has been laid before the Senate day after day ever becomes a reality.

Listening to the colloquy between the chairman of the Foreign Relations Committee and the Senator from Maine, it occurred to me that our amendments may not be as far apart as it might seem. Her amendment refers only to Safeguard, and provides that no funds authorized by this or any other act may be used in any way with respect to the Safeguard system. Therefore the amendment might be interpreted to authorize continued research, development, evaluation, and testing only with regard to the design of the Safeguard system.

I ask a question to determine, if I can, if we are in agreement. Does the Senator's amendment prohibit any funds to be used in connection with any anti-ballistic-missile system, or is the Senator's amendment directed solely to funds for the Safeguard system?

Mrs. SMITH. The Senator from Maine will say, no, it is not unlimited. It is only to the Safeguard system.

Mr. COOPER. If the Senator's amendment should be amended so that it would provide funds for testing, evaluation, research, and development could be used in an effort to design a more effective anti-ballistic-missile, and amended to provide that funds could be used for that purpose. Would such an amendment be consonant with the purpose of the Senator from Maine?

Mrs. SMITH. My amendment is confined to the Safeguard only, as I have said; and also, the distinguished Senator from Kentucky will recall that I said that there is \$141 million in the bill for advanced development of anti-ballistic-missile systems, which I support.

Mr. COOPER. It has been suggested—and I cannot answer for other colleagues—that the Senator's amendment should be modified to provide that funds available in this bill or made available by prior acts could be so used—

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. COOPER. May I have 2 minutes?

Mr. STENNIS. Yes. I yield the Senator 2 minutes.

Mr. COOPER. Could be so used as I have suggested to design a system which might be effective. I ask, if that were done, would such an amendment be acceptable to the Senator from Maine?

Mrs. SMITH. I think the statement I have already made on the \$141 million would be the answer to the Senator's question. I would even be willing to increase that amount.

Mr. COOPER. Would the Senator be willing to increase the amount to the sums which are proposed in the bill before us?

Mrs. SMITH. On what items?

Mr. COOPER. Only for research, development, testing, and evaluation of a system other than the proposed Safeguard anti-ballistic-missile system.

Mrs. SMITH. I am agreeable to increasing the funds for the Nike X system.

Mr. COOPER. I shall discuss the matter with my colleague the Senator from Michigan, and others to see if there is a possibility of bringing our amendments into some common ground; but if we cannot, again I want to say that the distinguished Senator from Maine has brought light upon this issue. I know there will be Senators who support our amendment, who, I believe, will vote for the amendment of the Senator from Maine. I would point out that there are only two opportunities to prohibit the deployment of the Safeguard anti-ballistic-missile system. The first opportunity will come on the vote upon the amendment of the Senator from Maine.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. COOPER. May I have 1 minute?

Mr. STENNIS. I yield 1 minute more.

Mr. COOPER. If the amendment should fail, then I would hope that Senators who vote for the amendment of the Senator from Maine will recognize that the last opportunity to prohibit the deployment of the system—which is doubtful, which will not enhance our security, and which will inhibit our peace talks—will be on the vote on the Hart-Cooper amendment.

If we do not vote either for the amendment of the Senator from Maine or for the Hart-Cooper amendment, it will be understood by the administration that twice on this day the Senate of the United States has approved the deployment of the Safeguard anti-ballistic-missile system.

I have no quarrel—I am sure the Senator from Michigan (Mr. HART) does not—for any Senator who votes for the amendment of the Senator from Maine, but I do hope that those who do, know that it will be consistent and logical to vote for the Hart-Cooper amendment, if the amendment of the Senator from Maine should fail.

Mr. HART. Mr. President, will the Senator yield me 1 minute?

Mr. STENNIS. I yield 1 minute to the Senator from Michigan.

Mr. HART. I just want to say that I have listened to our colleague from Kentucky, coauthor of the amendment. I agree fully with everything he has said. As he has indicated, any Senator may well vote for the Smith amendment, but let us not blink the fact that if that amendment fails and the Cooper-Hart amendment is rejected, the Senate will have written the ticket and we deploy. If any Senator thinks that is the ultimate disaster, he should support one or the other of these amendments.

Mr. STENNIS. Mr. President, may I inquire how much time remains in opposition?

The PRESIDING OFFICER. The Senator from Mississippi has 19 minutes.

Mr. STENNIS. Mr. President, I yield 4 minutes to the Senator from Tennessee (Mr. GORE).

The PRESIDING OFFICER. The Chair recognizes the Senator from Tennessee for 4 minutes.

Mr. GORE. Mr. President, this has been one of the most hotly contested

issues, one of the most important issues, in the history of the Senate. We struggle for the moment in the balance. It may be possible to achieve a majority will. Indeed, as the eloquent speech of the distinguished senior Senator from Maine (Mrs. SMITH) illustrates, the majority will of the Senate now appears against deployment of the ABM. I believe this to be true. If that be true, surely there is a way—parliamentarily—for this majority to express itself and to work its will. This is why I address the Senate, and more particularly the distinguished senior Senator from Maine, with whom I have had the honor to serve in both houses of Congress.

The Senator has significantly, if not modified, her stated intention which could be interpreted as in contravention of her amendment. The amendment, if I may take a moment to call attention to it, would prohibit research, development, testing, evaluation, or procurement of "any part or component of such system." As the Senator from Arkansas (Mr. FULBRIGHT) has pointed out, a significant component of an ABM deployment is radar. Another, and a most sensitive component, is computerization.

These systems are necessary in other weapons systems, both nuclear and non-nuclear. The able senior Senator from Maine has said that she favors—indeed, she says she has previously voted for—procurement and further research and development in these fields. This is very close to the will and the wish of the senior Senator from Tennessee.

But the only way the amendment can be made explicit is for the senior Senator from Maine to modify her amendment. Should the distinguished senior Senator from Maine be willing to modify her amendment so as to permit research, development, and evaluation of computer systems and radar systems, systems common not only to all models of anti-ballistic-missile systems, but to other missile systems, then widespread support of the amendment of the distinguished Senator from Maine might be possible.

The PRESIDING OFFICER. The Senator's time has expired.

Who yields time?

Mr. STENNIS. Mr. President, I yield 2 minutes to the Senator from Texas.

Mr. TOWER. Mr. President, I never cease to be impressed with the tremendous courage of the distinguished senior Senator from Maine. I can remember a time when, on this floor, she cast a vote against the ratification of the test ban treaty. There were very few of us who voted against that treaty. I can remember other occasions when she has asserted her great independence. I can state, at least for this proponent of the ABM system, that I shall always hold her in high regard for making such a positive, hard-hitting statement. She has, certainly, my deep admiration, and I shall continue to be proud to serve under her leadership as the ranking minority member of the Armed Services Committee.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I yield 2 minutes to the Senator from Illinois.

Mr. PERCY. Mr. President, I shall vote against the substitute offered by the distinguished Senator from Maine, and I should like to explain why. I do so because I am committed to continued research and development in the field of anti-ballistic-missile systems. But I should like to join my fellow Senators in expressing our admiration to the Senator from Maine for her courage and her foresight; and, although she has disclaimed any particular technical or scientific competence, I think she has demonstrated that she has something that perhaps the rest of us cannot share—womanly intuition—and also something I hope we all possess, exceedingly good judgment.

I only hope that if her amendment and any modifications thereof fail, she and others will support the Cooper-Hart amendment, because this would be far more than half a loaf—the cost of continuing research and development as against the estimated \$40 billion figure that has been mentioned by some for deployment would be only 1 percent; so I think that she and others would achieve a 99-percent loaf in supporting the Cooper-Hart amendment.

Mr. COOK. Mr. President, will the Senator yield?

Mr. PERCY. I do not have control of the time.

Mr. STENNIS. I yield the Senator from Illinois an additional minute, if the Senator from Kentucky wishes to respond.

Mr. COOK. I associate myself with the remarks of the Senator from Illinois.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I yield myself 1 minute.

No one could possibly appreciate the fine sentiments of the Senator from Maine any more than I do, not simply because of our present situation, but because I have been there, as a member of the committee, all these years since the Senator from Georgia has been senior member of one group and the Senator from Maine, now the ranking member, formerly next to the ranking member, before the retirement of the former Senator from Massachusetts, Mr. Saltonstall.

I have seen honesty on both sides as the situation developed, one system after the other, with reference to missile development; and I appreciate so much her sentiments as well as, at the same time, the sentiments of the Senator from Georgia, the former chairman of the committee, who has worked so assiduously on the same proposition.

I know that this year, everything she says apropos of this matter—

The PRESIDING OFFICER. The Senator's time has expired.

Mr. STENNIS. I yield myself 1 additional minute—is not only true, but goes beyond bare truth. It has sincerity and deep concern behind it.

Of course, I would not support her in this amendment, because the vital issue here is with respect to the necessary, and I think absolutely necessary, further research.

Mr. JAVITS. Mr. President, will the Senator yield me 1 minute?

Mr. STENNIS. Yes; I shall be glad to yield to the Senator from New York in a moment, if my time has not expired. However, let me add this thought:

Mr. President, I have felt all the while that the real issue here is reflected by the Cooper-Hart amendment, and that that is the one that has been debated and should be decided.

I yield now to the Senator from New York.

Mr. JAVITS. Mr. President, I agree with the Senator from Mississippi that the Cooper-Hart amendment is the issue. It has been debated, and should be decided, because that issue is the symbolic as well as the practical one: Will or will not the Senate assert its power over this highly sophisticated escalation in the nuclear arms race?

I pay the Senator from Maine all homage for her position. While it is true we could exclude the Safeguard system, why exclude the ABM itself? It is as eligible for research as any other system. Later on in the day, it may possibly come to something. But I agree with the Senator from Mississippi that the issue before us is symbolic. The whole world regards the Cooper-Hart amendment as the issue, and our stand on that issue is the thing that will determine the policy of this country, perhaps for years to come.

Mr. STENNIS. Mr. President, I yield 3 minutes to the Senator from Missouri.

Mr. SYMINGTON. Mr. President, in my opinion, this relatively short talk by the distinguished senior Senator from Maine is just another reason for my being very proud to serve with her in the Senate. She is logical, she is persuasive, and she, as usual, evidences extreme intelligence with respect to the matter at hand.

I do have some hesitation to vote for her amendment, however, because some of the advocates have emphasized the importance of matching the Soviets in this field.

In this connection, in this country we were chasing missiles with the Nike-Hercules, and later with the Nike-Zeus, and then with the Nike X, and now, in effect, we have combined the Nike-Zeus with the Nike X in what was once called the Sentinel system, and is now called the Safeguard system; in summary, four efforts.

In the Soviet Union, there was an ABM system which they developed around Leningrad, well after we started work on our ICBM systems. Then later there was the Galosh system, which the Soviets have certainly decided not to go ahead with as planned, and now, they, too, are researching a further system which is comparable to our research and development in this ABM field.

There has been no deployment of that system on their part, and there would be, I hope, no deployment of this system at this time. Inasmuch as we all agree that the most important single blessing that could happen for mankind is some form of meaningful control of nuclear weapons and all they connote, I would hope that we could reach agreement on this roughly same plateau. That is the only reason I would vote against the amendment the distinguished senior Senator from Maine

August 6, 1969

has proposed. I am for the Cooper-Hart amendment.

Mr. STENNIS. Mr. President, I had promised to yield to the Senator from Alaska. I now yield 1 minute to the Senator from Alaska (Mr. STEVENS).

Mr. STEVENS. Mr. President, I have not participated in the debate. However, I think that we all owe a debt to the distinguished senior Senator from Maine.

She has presented the issue that has been presented by our mail—at least by my mail. My constituents are either for or against the ABM system. That is what she has presented to the Senate and to our people.

I think that the people from Alaska, as stated by the junior Senator from Alaska, are at least 2 to 1 for the ABM system.

For that reason, I shall vote against the amendment of the senior Senator from Maine and also the Cooper-Hart amendment.

Mr. STENNIS. Mr. President, I yield 1 minute to the Senator from Kansas.

The PRESIDING OFFICER. The Senator from Kansas is recognized for 1 minute.

Mr. DOLE. Mr. President, while I do not support the amendment of the distinguished senior Senator from Maine, I certainly commend her.

As the Senator from Alaska (Mr. STEVENS) has just stated, the Senator from Maine has cleared the air with respect to the ABM vote.

Our mail is either anti- or pro-ABM. And each Senator now has the chance to vote for or against the ABM. The Senator from Maine has given each of us a clear-cut opportunity to express our position.

Mr. STENNIS. Mr. President, I yield 1 minute to the Senator from New York.

The VICE PRESIDENT. The Senator from New York is recognized for 1 minute.

Mr. GOODELL. Mr. President, I appreciate the very sincere and deep conviction of the distinguished senior Senator from Maine on this issue.

I regret under the circumstances we face that I must oppose the amendment of the Senator from Maine. I intend to vote for the Cooper-Hart amendment.

Mr. President, after months of hard review in committees of the Senate, after long hours of debate in this Chamber, after weighing the many views of citizens concerned over this important issue, the time has come to make a decision.

The question before us can be stated briefly: Should Congress authorize the deployment of missile defense of two Minuteman complexes along with Kwajalein construction and Safeguard research and development at a cost of \$759 million for fiscal year 1970?

This question, however brief; this proposal, however limited in initial objective, is complicated by the enormous issues that it introduces.

Nuclear war is the problem we are being asked to face. The Pentagon has told us to think the unthinkable and to guard against it.

Since nuclear weapons came into being, our aim has been to guard against their use in war. What has emerged then are several principles to guide

against the horror of nuclear war. One is assured destruction capability. This calls for a military might capable of inflicting an unacceptable degree of damage upon any aggressor. It warns a potential enemy that nuclear aggression means suicide to the aggressor. The other principle is damage limiting capability. This calls for a military might capable of minimizing the effect of enemy weapons that could damage us.

These guides are familiar to us. Throughout the years, they have served to justify a vast buildup in weaponry with destruction potential capable of world annihilation.

Our capability has reached a point where we must now ask: How much destruction power is enough?

Varying estimates have been made on the current status of the nuclear arms race. What appears as constant in each is overkill.

Still, the Pentagon asks that we deploy an ABM. Still the Pentagon has plans for the multiple independently targeted reentry vehicle—MIRV. With MIRV, one missile can destroy several different targets such as enemy ICBM sites. With MIRV, the side that would strike first would have an advantage since one ICBM might be able to destroy several unfired ICBM's in place.

It has been pointed out in the course of debate, that if MIRV is deployed, it will be difficult for nuclear nations to know how many warheads another has. It will be difficult to know what country is where in the nuclear arms race.

Mr. President, if ABM and MIRV go unchecked, we will be in an arms race of proportions unknown in weapons history. We will be racing not only with the Russians and Red China but with ourselves as well.

Today, we are to decide whether to deploy the Safeguard ABM.

No matter what the limited scale of Safeguard which has been proposed, we simply cannot assume that there will be no Soviet response.

I fear what is in store is the inevitable action-reaction cycle.

A natural response to an ABM deployment by the United States would be further Soviet MIRV development and possible deployment.

In turn our own efforts in MIRV capability would increase.

Then will both sides look to deploying land-mobile missiles?

Mr. President, escalating new elements of uncertainty can only weaken the stability of deterrence with resulting peril to the security of our country.

Rather than fill a "deterrent gap" as the Pentagon claims it will, ABM could unleash a weapons race spiralling beyond the possible control by nations.

Mr. President, the burden of proof for an ABM rests on the Pentagon. We have been told that it is needed to plug a "deterrent gap." Yet to date, there has been no confirmed evidence that such a gap exists. Over the years, we have been told of a "bomber gap"; then of a "missile gap." We found out later that there had been errors in estimates of Soviet strength and that the military strength of the United States had all along been in fact superior.

Unilateral armament is the net effect of so many of the Pentagon's programs. "Confirmed" and "possible" estimates of potential enemy capability in war planning seem to give way to what war-game strategists think is "possible." For the "possible," and for just another option in contingency planning, we have spent billions on weapons. Far too often, it appears that funds for weapons are merely spent on an arms race against ourselves.

So it is that over the years we have spent billions of dollars to fill gaps that have not existed. Weapons have come and gone. Billions of dollars have been spent on developing weapons destined to be obsolete on the production lines due either to challenges of comparative technological development or simply that a new idea seemed more promising in terms of military effectiveness. Initial cost estimates of military hardware have been left behind as extra costs have spiralled.

Large cost increases over initial cost estimates are still with us. The complete Safeguard is currently estimated to cost \$11 billion; but it could be much more.

The arms race is still with us. If the Soviet response to Safeguard is to place MIRV's on the SS-9, will the ABM be obsolete? Will the Pentagon request a safer guard against estimated Soviet capability by requesting a thickened ABM? Cost for this type of ABM is beyond estimate.

Mr. President, the ABM debate has meant many things to each of us. Concern over ABM has spread over offensive weapons, such as MIRV's and the effects of both on SALT the strategic arms limitation talks. Concern has extended to the entire Defense budget which now totals \$80 billion or over half of the Nation's \$144 billion controllable budget. There is growing feeling that with more commonsense, defense spending could be reduced without risk to national security and with savings in the billions.

Many of us feel that military spending decisions must be considered in the context of unmet human needs in our cities and in areas of rural poverty. We simply cannot afford to let our domestic priorities be distorted by limitless spending on costly military hardware of questionable usefulness.

There is growing skepticism over the way in which the Pentagon presents its requests for funds. Over and over again, military requests are presented as defensive-sounding programs when actually they are perilous and provocative taking us up several more rungs on the "balance of terror" ladder.

Concern over ABM has spread to the question of popular control over Pentagon requests with an insistence that Congress carefully review military programs in terms of such questions as: Do we really need this program? And why are we pursuing this course of weapons program?

What is significant in all of this is that ABM has meant one thing to all of us. ABM has moved our thinking beyond what science has done; and beyond what the military wants to do with science and weaponry. ABM has moved our

August 6, 1969

thinking to what America must do now for its future and that of humanity.

Security of this Nation, both at home and among nations, is and must continue to be our first and foremost priority in protest and in policymaking. It will not be achieved by the military scientists or in stages of false security derived from an ABM system.

Time still remains to take the risks of peace: in economic competition among nations, in social development within nations, in binding arms control agreements, and in international cooperation. Time still remains to pool the tremendous resources of scientific talent, both at home and throughout the world, to convert knowledge to kill to knowledge to preserve; to redirect creativity from warlike purposes to peaceful purposes; and to free the energies of man from a threatened world to a more livable world.

For these reasons, I shall vote against deployment of the Safeguard ABM in the next year.

Mr. STENNIS. Mr. President, how much time does the opposition have remaining on the amendment?

The VICE PRESIDENT. Each side has 4 minutes remaining.

Mr. STENNIS. Perhaps the Senator from Maine wishes to use some time.

The VICE PRESIDENT. Does the Senator from Maine wish to use some time?

Mrs. SMITH. Not right now.

Mr. STENNIS. Mr. President, I yield 1 minute to the Senator from Colorado.

The VICE PRESIDENT. The Senator from Colorado is recognized for 1 minute.

Mr. DOMINICK. Mr. President, I thank the Senator from Mississippi.

With all deference and fondness for my distinguished leader on the Armed Services Committee, I must say that I do not see how we can fruitfully support the amendment.

It is my own feeling that, with the threats that face us, we have to maintain the credibility of our second-strike retaliatory force and, unless we can do something of this nature, we will be forced, as I think the Senator from Maine herself has said, to put in a lot more offensive weapons which, in my opinion, would be more provocative in terms of increasing the arms race and would be less satisfactory in terms of public reaction to the nuclear problem we all face.

So, with all due respect for my good friend and distinguished leader in the Armed Services Committee, I am afraid I cannot support the amendment.

Mr. STENNIS. Mr. President, as far as I now know, no other speakers want time. If it is desired, I am ready to yield back the time.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. STENNIS. Mr. President, I yield 2 minutes to the distinguished Senator from Arkansas.

The VICE PRESIDENT. The Senator from Arkansas is recognized for 2 minutes.

Mr. FULBRIGHT. Mr. President, I am very intrigued by the significance of the amendment of the Senator from Maine.

It strikes me that it is entirely consistent with what I have been saying

against the deployment at this time of Safeguard and, I would say, any other system. This happens to be the one under consideration. However, at the same time the Senator from Maine is in favor of continued research in this field involving such things as sophisticated computers and radars which are an integral and indispensable part of any kind of system, whatever one may call it.

The Senator says that in another part of the bill there is authorization for Nike X. However, I take it from that statement that she is not for the deployment of the Nike X or any other weapon, but simply for research in the general field relating to this kind of weapons system.

I do not see any inconsistency in that with what I have been saying or with what other people who support the Cooper-Hart amendment have been saying. If I understand it correctly, it is entirely consistent.

If there is clarification needed in order to make that clear, I should think the Senator from Maine would be willing to do that. I certainly would.

The time is rather short in which to do that. However, as I understand what the Senator has said, I believe it is entirely consistent with what we have tried to do with the Cooper-Hart amendment. Therefore, as I have said, I shall support the amendment. If it fails, I shall support the Cooper-Hart amendment.

Mr. STENNIS. Mr. President, I respectfully say that I do not intend to use any more time now. However, I understand I have 1 more minute remaining.

The VICE PRESIDENT. The Senator is correct.

Mr. GORE. Mr. President, will the Senator from Maine yield?

Mrs. SMITH. I am glad to yield to the Senator from Tennessee.

The VICE PRESIDENT. The Senator from Tennessee is recognized.

Mr. GORE. Mr. President, I wonder if the distinguished senior Senator from Maine is agreeable to modifying her amendment as follows:

On page 2, after the word "system", strike the period and insert a comma and the following words: "provided that funds contained herein for research and development of radar and computer components of other weapons systems shall not be affected."

Mrs. SMITH. Will the Senator read the last part of the suggested modification?

Mr. GORE. The last part reads:

Insert a comma and the following words: "provided that funds contained herein for research and development of radar and computer components of other weapons systems shall not be affected."

Mrs. SMITH. Mr. President, the Senator from Maine would be willing to accept the modification.

Several Senators addressed the Chair. Mr. STENNIS. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator will state it.

Mr. STENNIS. Mr. President, have the yeas and nays been ordered?

The VICE PRESIDENT. The yeas and nays have been ordered, and it would

take unanimous consent to modify the amendment.

Mr. GORE. Mr. President, the Senator from Maine can ask for unanimous consent to modify her amendment.

Mrs. SMITH. Mr. President, first I yield to the Senator from New Jersey.

The VICE PRESIDENT. The Senator from New Jersey is recognized.

Mr. CASE. Mr. President, will the Senator from Tennessee modify his suggestion to include an exception not only for funds contained in the pending bill, but also elsewhere, because the main provision of the amendment proscribes the use of any funds.

Mr. GORE. Mr. President, that is entirely agreeable.

Mrs. SMITH. Mr. President, I ask unanimous consent that my amendment be modified as suggested by the distinguished Senator from Tennessee.

Mr. GOLDWATER. I object.

The VICE PRESIDENT. Objection is heard. Who yields time?

Mr. FULBRIGHT. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator will state it.

Mr. FULBRIGHT. Mr. President, this request having been refused, would it be in order at a later date to offer the amendment with the modification the Senator from Maine has requested?

The VICE PRESIDENT. The Parliamentarian advises the Chair that if it were considered a substantial change, it would be in order.

Mr. FULBRIGHT. It would be in order to offer it later.

The VICE PRESIDENT. The Senator is correct.

Mr. SYMINGTON. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator will state it.

Mr. SYMINGTON. Mr. President, does the Parliamentarian consider that the substantial change recommended by the Senators in question to the amendment of the Senator from Maine is a substantial change?

The VICE PRESIDENT. The Parliamentarian advises the Chair that he is not ready to pass final judgment on that, but that he would be inclined to consider it as a substantial change. That is not decided at the moment.

Mr. SYMINGTON. Mr. President, a further parliamentary inquiry.

The VICE PRESIDENT. The Senator will state it.

Mr. SYMINGTON. Mr. President, how long does the Parliamentarian believe it will be necessary for him to take to consider this before he can give his decision?

The VICE PRESIDENT. The Parliamentarian has not had a chance to inspect the language.

Mr. STENNIS. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Chair will make the decision after the Parliamentarian has advised it.

Mr. SYMINGTON. The Chair, of course, is correct.

The VICE PRESIDENT. Who yields time?

August 6, 1969

Mrs. SMITH, Mr. President, I will be very glad to yield back any time that remains, if the distinguished chairman of the committee does likewise.

The VICE PRESIDENT. The Senator from Maine has agreed to yield back the remaining time if the Senator from Mississippi will yield back the 1 minute he has remaining.

Mr. FULBRIGHT, Mr. President, will the Senator yield to me?

Mr. STENNIS. The Senator from Maine has yielded back the time—

Mr. FULBRIGHT. I wish to propose a question. In view of the fact that the Chair has ruled—

The VICE PRESIDENT. Does the Senator from Mississippi yield time to the Senator from Arkansas?

Mr. STENNIS. Yes.

Mr. FULBRIGHT. In view of the fact that the Chair has ruled that this amendment, as proposed to be modified by the Senator from Maine, can be offered, I would appeal to those who wish to object, because it certainly will be offered. It is simply in the interest of saving time. We could now short circuit a rather long and roundabout move by having a vote on it now. If nobody else will offer it, I will; but I think others will.

The VICE PRESIDENT. The Chair is perfectly willing to entertain the request if it is renewed.

Mr. FULBRIGHT. Mr. President, I would respectfully ask unanimous consent again that the Senator from Maine be allowed to modify her amendment, because it has been ruled as a parliamentary matter that it can be offered.

Mr. STENNIS. Mr. President, a point of order.

Is it in order for the Senator from Arkansas to request that the Senator from Maine modify her amendment?

The VICE PRESIDENT. The request is in order by unanimous consent.

Mr. STENNIS. Mr. President, I object. The VICE PRESIDENT. The Chair hears objection.

All time has expired.

Mr. MANSFIELD. Mr. President, if I may have the attention of the Senate, I would like to make an unusual request at this time, considering the circumstances.

We have a very distinguished visitor in the Chamber, and I would like, with the permission of the Senate, to suspend briefly so that the distinguished Senator from Alabama (Mr. SPARKMAN) can take the floor and introduce our guest.

The VICE PRESIDENT. Without objection, the Senator from Alabama is recognized.

VISIT TO THE SENATE OF THE SPEAKER OF THE BRITISH HOUSE OF COMMONS

Mr. SPARKMAN. Mr. President, we are honored today with the visit of a distinguished guest. We had the privilege of lunching with him, together with some members of the Committee of Foreign Relations, and we had a very fine discussion.

I should like at this time to present to the Senators the right Honorable Horace Maybray King, the Speaker of

the British House of Commons. [Applause, Senators rising.]

The VICE PRESIDENT. On behalf of the Senate, the Chair is very happy to welcome our distinguished guest.

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed at this point in the RECORD a brief biographical sketch of our distinguished visitor.

There being no objection, the sketch was ordered to be printed in the RECORD, as follows:

THE RIGHT HONORABLE HORACE MAYBRAY KING, SPEAKER OF THE BRITISH HOUSE OF COMMONS

Rt. Hon. Horace Maybray King, P.C., B.A., Ph.D., M.P.; British politician; born May 25, 1901; educated at Stockton Secondary School and King's College, University of London. Head of English Department, Taunton's School, Southampton, 1925-46; Headmaster Regents Park School, Southampton, 1947-50; Member of Parliament since 1950; Speaker's Panel, Chairman, 1953-64; Chairman of Ways and Means 1964-65; Speaker of House of Commons since 1965; Vice Chairman, Cultural Committee, Council of Europe, 1960.

Publications: *Selections from Macaulay*, 1933; *Selections from Homer*, 1940; *Selections from Sherlock Holmes*, 1948; *Parliament and Freedom*, 1951.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

In the meantime, Senators might want to meet the distinguished Speaker of the House of Commons.

The VICE PRESIDENT. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The VICE PRESIDENT. Without objection, it is so ordered.

ACM
AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

Mr. MANSFIELD. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator from Montana will state it.

Mr. MANSFIELD. What is the situation at the moment?

The VICE PRESIDENT. The question is on agreeing to the amendment of the Senator from Maine. All time has expired. The yeas and nays have been ordered.

Mr. STENNIS. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator from Mississippi will state it.

Mr. STENNIS. Under the unanimous-consent agreement, is it not true that all time for debate has expired?

The VICE PRESIDENT. That is true. Mr. STENNIS. Mr. President, a further parliamentary inquiry.

The VICE PRESIDENT. The Senator from Mississippi will state it.

Mr. STENNIS. That being true, is not the next step, under the unanimous-consent agreement, to call the roll for a yeas-and-nays vote on the amendment?

The VICE PRESIDENT. The Senator is correct.

Mr. STENNIS. I call for the regular order.

The VICE PRESIDENT. The time can be extended by unanimous consent.

Mr. SYMINGTON. Mr. President, a parliamentary inquiry.

Mr. STENNIS. I call for the regular order.

Mr. SYMINGTON. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator from Missouri will state it.

Mr. SYMINGTON. After the vote on this amendment, will it be in order to offer another amendment?

The VICE PRESIDENT. It will be in order after time on amendment No. 101 has expired.

Mr. SYMINGTON. I thank the Chair. I call for the vote.

Mr. STENNIS. The regular order, Mr. President.

The VICE PRESIDENT. The clerk will call the roll.

The assistant legislative clerk called the roll.

The result was announced—yeas 11, nays 89, as follows:

[No. 64 Leg.]		
YEAS—11		
Alken	McGovern	Saxbe
Fulbright	Muskie	Smith
Gore	Nelson	Young, Ohio

So the amendment (No. 122) offered by Mrs. Smrrh as a substitute for the Cooper-Hart amendment was rejected.

The VICE PRESIDENT. It is the understanding of the Chair that the time remaining on the amendment of the

Senator from Michigan recurs as the order of business. The proponents have 44 minutes remaining. The opponents have 58 minutes remaining. Pending the expiration of the agreed-upon time on the amendment of the Senator from Michigan, no further amendments will be in order except by unanimous consent.

Mr. STENNIS. Mr. President—

The VICE PRESIDENT. The Senate will be in order.

Mr. STENNIS. Mr. President, I move to reconsider the vote by which Mrs. SMITH's amendment (No. 122) was rejected.

Mr. TOWER. Mr. President, I move that the motion to reconsider be laid on the table.

The motion to table was agreed to.

Mr. STENNIS. Mr. President, I had asked for recognition. Has the Chair ruled on the tabling motion?

The VICE PRESIDENT. The motion to lay on the table was agreed to.

Mr. STENNIS. Mr. President, I yield now 20 minutes to the Senator from Rhode Island (Mr. PASTORE).

The VICE PRESIDENT. The Senator from Rhode Island is recognized for 20 minutes.

Mr. JAVITS. Mr. President, before the Senator does that, would he yield? Would someone yield me 30 seconds for a parliamentary inquiry? I think the Chair said something we want to hear about.

Mr. STENNIS. Mr. President, I have the floor.

The VICE PRESIDENT. The Senator from Mississippi has the floor.

Mr. JAVITS. Would the Senator allow us just to make a parliamentary inquiry?

Mr. STENNIS. Mr. President, I want to be courteous to the Senator. I do not know the nature of this matter. We had a recess a moment ago. I asked the Senator from Rhode Island to wait and that I would yield him time.

Mr. JAVITS. The Chair said something about no further amendments, which I think perhaps we should have clarified. We certainly should know the whole story.

The VICE PRESIDENT. Does the Senator from Rhode Island yield to the Senator from New York?

Mr. PASTORE. I yield 30 seconds to the Senator from New York.

The VICE PRESIDENT. The Senator from New York is recognized for 30 seconds.

Mr. JAVITS. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator from New York will state it.

Mr. JAVITS. The Chair just stated something about other amendments, which we did not understand. Would the Chair please clarify his statement?

The VICE PRESIDENT. The Chair stated that pending the expiration of the agreed-upon time on the amendment of the Senator from Michigan, no further amendments would be in order except by unanimous consent.

Mr. JAVITS. I thank the Chair, and I thank the Senator from Rhode Island.

Mr. PASTORE. Mr. President, may we have order?

The VICE PRESIDENT. The Senate will be in order. Please, gentlemen, may we have order in the Senate?

The Chair has no intention of allowing the proceedings to continue until there is order in the Senate.

Please, gentlemen.

The Senator from Rhode Island.

Mr. PASTORE. Mr. President, the challenge of our time is peace—

Mr. STENNIS. Mr. President, would the Chair keep the Senate in order so that those who wish to hear may hear?

The VICE PRESIDENT. The Chair is doing his best.

Mr. STENNIS. Yes.

Mr. PASTORE. Mr. President, the challenge of our time is peace—an honorable peace—and to avert, if possible, a nuclear and a thermonuclear holocaust.

The Senate may be divided on some matters, but certainly there is no division among us on the basic purpose—

The VICE PRESIDENT. Will the Senator withhold for a moment?

Please, gentlemen, may we have order in the Senate?

Will those not having business on the floor kindly clear the Chamber?

The Senator from Rhode Island.

Mr. PASTORE. Mr. President, this Senate may be divided on some matters, but certainly there is no division among us on the basic purpose of American policy. It has always been, and still is, our goal to achieve a just and lasting peace.

We do not apologize for American efforts to support and to encourage a decent peace, and the United States of America has always been in the forefront seeking to limit and to reduce world armaments.

To be more specific, Mr. President, in 1946, under the administration of President Truman, when we had a monopoly on all atomic weapons, we offered, under the Baruch plan, to internationalize the atom and to share the hopeful possibilities of the nuclear age with the entire world.

Regrettably, we were summarily rebuffed by the Soviets. The Kremlin, instead of accepting our offer, proceeded with a hard-driving nuclear weapons program of its own, leaving us no alternative but to develop a strong Western nuclear deterrent.

Notwithstanding this, the United States, under President Eisenhower, under President Kennedy, under President Johnson, and now under President Nixon, has always vigorously pursued our aim of achieving understandings and agreements in arms control and in disarmament.

Now, gentlemen, let us face it. The only real solution to the mad race in armaments is limitation of all weapons.

In this day and age, with the world the way it is, complex and troubled as it is, it is not a question so much of what we want. The big question is, How do you get it?

We have made some small progress. The Nuclear Test Ban Treaty was achieved in 1963, and now, today, we are awaiting the ratification by the Soviets of the Nonproliferation Treaty, which they have not yet done.

In pursuance of my official duties as a member of the Joint Committee on Atomic Energy since 1962, I was much involved in the discussions and developments on the Nuclear Test Ban Treaty. And I stood on this floor side by side with the Senator from Arkansas and urged the Senate to ratify that treaty. I attended all the hearings in consideration of that treaty, even going, at the behest of President Kennedy, to Moscow in August of 1963 to witness its signing.

As for the Nonproliferation Treaty, Senators will recall that I introduced the resolution calling on President Johnson to exert every possible effort to bring about a treaty, and that that treaty was reported by the Joint Committee on Atomic Energy and was ratified on this floor by a vote of 84 to 0.

So let no one say here that I am not for peace and that I am not for disarmament.

We must admit that these achievements are small steps. Yes, we are thankful and grateful for them, but, by the same token, we have got to admit that it just is not enough. It just is not enough. We need more, and much more.

Unfortunately, we have learned by bitter experience that the process of limiting world armaments on any reliable basis is a long and tedious and difficult task.

Now, why am I for a defense system and why do I support the committee's recommendation?

Mr. President, I am not a late-comer to the conviction that an anti-ballistic-missile system is necessary for our security, nor are my convictions the result of the process of association, that if A is for it, I can be for it, and if B is against it, I should be against it. My conviction is my position is predicated on my own study, my own attendance at hearings, my own hearing at briefings from all of the responsible authorities of this Government.

In December of 1964, as chairman of the Joint Committee on Atomic Energy, I visited our establishment at Livermore, Calif., the place where we conduct all of our experiments and most of our experiments in weapons. And while I was there in 1964 they showed me a photograph of a missile that looked like a defense missile. They did not know for sure what it was, but it had all the appearance and it had all the characteristics of being an antiballistic missile. We were not sure. So we studied it, and we called John McCone in, who came in before our committee, and we called in all our authorities, whether it was from the Defense Department, Atomic Energy Commission, Los Alamos, Livermore, or anywhere else. They confirmed the fact that it was an antiballistic missile.

I will tell the Senate how they got it in 1964. In 1958 we began an "informal moratorium" on testing in the atmosphere with the Russians. We did not test and they did not test. At that time we were negotiating for a nuclear test ban treaty.

We pursued that plan under John F. Kennedy, but on August 30, 1961, while our negotiators were in Geneva talking with the Russians, they broke the mora-

August 6, 1969

torium and conducted 50 atmospheric tests with a total yield of about 120 megatons, and that is when they detonated their terror bomb—a 55-to-60 megaton blast when they developed the atomic warhead for their antiballistic missile—and we did nothing.

In 1963, at the invitation of President Kennedy, I went to the White House. At that time, we were considering the multilateral naval force for the Atlantic Alliance. We had a long discussion.

Finally I asked him, "Mr. President, what will we do when Red China becomes a nuclear power?"

President Kennedy hesitated. He looked me straight in the eye, and then he said:

John, at that time we will have to reappraise the balance of power in the world.

One year and a half after that March meeting in 1963, on October 16, 1964, the Chinese, by surprise and before all expectations, detonated a nuclear device; and since then, they have had eight nuclear tests some of which have been of a thermonuclear nature, even superior to the efforts of the French who did not achieve a thermonuclear device, until last summer.

Those are the facts. We held hearings before our Joint Committee to find out what the threat of China was to our national security. We published a report, and then I was invited to speak at the launching of the *Narwhal* submarine at Groton, Conn. This was in September of 1967. I stood up and called upon the administration to go full-steam ahead, in view of the accomplishment of the Russians and of the Chinese, to work out an antiballistic missile defense system.

This, as I say, was in September 1967, after President Johnson had met with Kosygin at Glassboro in June of 1967, 3 months before. Senators will remember that. They met at Glassboro to talk about disarmament, and they met at Glassboro to talk about an antiballistic missile, and how we could bring it under control. Will you ever forget? Kosygin left Glassboro and went to New York, and held a news conference. At that news conference, he rebuffed us completely, and said:

Nothing doing; you can fly a kite as far as I am concerned, unless you get out of Vietnam unilaterally.

And that is where we stand.

In 1968, we authorized the antiballistic missile. Up to that time there had been no talks, and there had been no willingness to talk on the part of the Russians. But when we passed the authorization on June 24, 1968, within 3 days the Soviets announced they were ready to talk.

I am not saying that that action of the Senate is what induced them to talk, but all I am saying is, is it not an extraordinary coincidence? Is it not extraordinary that the minute we show we mean it, then they begin to respect us?

But I ask Senators to recall, after they broke that self-imposed moratorium in 1961, how long after that did we have the Cuban crisis? We had that in October of 1962, and I should like to ask my friends here who say, "Let us trust the

Russians," what made Khrushchev dare to put those missiles on Cuba? What daring made him do it? And why did he take them off? Because John Kennedy stood up. John Kennedy, who spent \$800 million on the antiballistic missile in 1961, 1962, and 1963. He spent \$285 million in 1961, \$287 million in 1962, and \$278 million in 1963.

Now some are calling it a boondoggle. Well, I say to my friends who like to quote John F. Kennedy, I never considered him a boondoggler. He spent \$800 million on the antiballistic missile. That is how much he thought it would not work.

I say to my friends who say this cannot work, "Well, now, the Russians have deployed 67 around Moscow. I know that the Kremlin is crafty and cunning, but they are not stupid. They are not putting their money in 67 weapons that will not work."

I am asking my friends, if the Russians put their money in an anti-ballistic-missile that they think will work, then why cannot we? Here is the Nation that was first to split the atom. Here is the Nation that was first to put a man on the moon. Why do we sell American science short? What is this inferiority complex about the superiority of American science? If they can do it, why cannot we do it? We put a man on the moon, did we not? John Kennedy in 1961 said, "We will put a man on the moon first," and we did, in 1969.

But did we leapfrog to our first jump to the moon? Of course not. We had to send Alan Shepherd up, in May of 1961, and he was up there for 15 minutes and 13 seconds. If we had not sent him up for 15 minutes and 13 seconds, we would never have put a man on the moon in July of 1969.

For some reason, if one is for the ABM, he must prove that it is the ultimate. When has that ever happened? Does anyone believe we would have the modern Lincoln Continental if we had never had the first flyver? Of course not.

Mr. JACKSON. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. JACKSON. Mr. President, I should like to ask the Senator if he is aware that, in 1962, it was said that the lunar orbital rendezvous technique would be a poor way to send a man to the moon, that it would not work, that it would involve too great risks for the lives of the astronauts, and so on. Is the Senator aware that the man who said that was Dr. Jerome B. Wiesner, the science adviser to President Kennedy? Fortunately, President Kennedy did not follow the counsel of Dr. Wiesner on that issue. Dr. Wiesner is now the leading opponent of the ABM. President Kennedy followed the advice of the responsible technical experts in NASA.

Mr. PASTORE. The best way I can answer that is that Jerome Wiesner—and he is a good friend of mine; I know all about Jerome. He was the scientific adviser to President Kennedy in 1961, 1962, and 1963; and while he was scientific adviser, John Kennedy spent \$800 million on the ABM. So it is either one of two things: He was either advising

Kennedy wrong, or Kennedy was not listening to him. [Laughter.]

I mean, there you are. I studied geometry. [Laughter.]

You cannot have it both ways.

I will admit that this is not the ultimate answer, and I do not think we should have to prove that it is.

Let me tell you something else, about taking care of the poor. Here is one man who apologizes to no one about taking care of the poor. I stood on this floor alone and offered an amendment to override the House of Representatives and override my Appropriations Committee by increasing a cut that the House made, and was sustained by the Appropriations Committee on an amendment to raise it by \$225 million.

Let nobody tell me that I am taking bread out of the mouths of the hungry in order to get the bomb. Let him tell that to somebody else.

Furthermore, who ever said we had to make a choice? After all, if we need the ballistic missile for the security of the Nation, let us have it. If we do not need it, let us do away with it. That was the purpose of the Smith amendment. If we do not need it, let us do away with it. Let us be honest about it.

The only question is: Will it work? I have already covered that ground. It is said that the ballistic missile is expensive. Everything is expensive. What are we talking about in the bill? A difference of \$345 million. Yet we spend almost \$500 million in Vietnam every week. If we can spend \$500 million on strangers to keep them free, why can we not spend \$345 million to save our American population? We are not so poor that we have to give up the security of our country.

Who ever said I had to make a choice between my father and my mother? Why can I not have security and feed the poor, as well? Can we not do that in America? Why should it be a question of one against the other? What good is it to have a full belly if the Russians and the Chinese are going to take us over? What good is it?

Now as to the miracle of our time: Today is the 24th anniversary of the dropping of the atomic bomb on Hiroshima—August 6, 1945. To me it is a miracle that no country has ever done such a thing since then. But why not? We had a monopoly in 1946. Now there are five members of the "nuclear club"—the United States, Great Britain, the Soviet Union, France, and Red China. That is the problem; that is the dilemma.

Do we want to sit back and rely on the intransigence of the Russians? I say we should go ahead and do it. I say, "OK, let us talk."

John Kennedy said:

Let us never negotiate out of fear. But let us never fear to negotiate.

I asked President Nixon point blank: "Will this deter you or interfere with your talks on disarmament?"

He told me categorically: "This will help me. It will strengthen my hand."

The VICE PRESIDENT. The time of the Senator from Rhode Island has expired.

August 6, 1969

Mr. PASTORE. May I have 5 additional minutes?

Mr. STENNIS. Mr. President, I yield 5 additional minutes to the Senator from Rhode Island.

Mr. PASTORE. So I say to my friends: That is why I am for the antiballistic missile. It is not my job to sell this, and I do not intend to sell it. I do not expect to persuade or to influence any Senator's vote.

I do not care whether one is for or against it. I will say this for us: we are all sincere. This is a matter of judgment, conviction, and conscience.

Let me say that this idea that if one is for the ABM, he is a stooge or the captive of the industrial complex and that if one is against it, he is blind to the perils in the world is nonsense.

Every Senator in the Chamber understands the perils in the world. We are, of course, in disagreement as to how we meet and overcome the problem.

I say we cannot do it by just wishing for it. And I am hopeful for the day when we can take every missile and smash each one into junk. I hope for the day when we can take every bomb and dismantle each one of them.

I detest the day when the bomb became technically feasible. The bombs that fell on Hiroshima and Nagasaki were a scourge of mankind. I do not want to see another one dropped.

All I want to see us do is what we must do to prevent a holocaust. There is only one way to do that, and that is to assure the credibility of our deterrent power so that they will not take that chance. That is all we are doing. All we are talking about is a defensive weapon. It is a weapon that will not go off until they send—God forbid—one of their bombs and we have to stop it. Otherwise, we will not have to use an antiballistic missile.

The sad part of it is that I will never be able to prove my case. I never want to prove it. I pray to God that I will never have to prove I am right, because at that time it will be too late.

Let me tell the Senate that we can build all the antiballistic missiles we want to and we can build all the offensive missiles we want to. But if this thing ever lets go, God help us all.

I find no comfort in the fact that we can kill 150 million Russians on a second strike after they have killed 50 million Americans on a first strike.

I am not interested in the numbers game. I love humanity right down to the last individual. We have to save humanity. And if we are going to bring back our forces from the rest of the world, if we are not going to continue killing our soldiers, and if we are to begin to mind our own knitting, then let us begin to mind our own skin. That is what I am talking about.

Let me conclude by saying that whatever the vote of the Senate is, I shall abide by it.

My only prayer this afternoon, and I say this with all my heart, is that I hope, whatever decision we make, it will be for the sake of the security of this country and for the future of our people.

Mr. President, I ask unanimous consent to have printed at this point in the

RECORD an excerpt from the report of the Joint Committee on Atomic Energy entitled "The Impact of Chinese Communist Nuclear Weapons Progress on U.S. National Security," and a chronology of events relating to atomic weapons and disarmament matters.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

IMPACT OF CHINESE COMMUNIST NUCLEAR WEAPONS PROGRESS ON U.S. NATIONAL SECURITY

One of the crucial matters affecting U.S. national security is the development by foreign nations of nuclear weapons and the accompanying delivery systems. The present nuclear threat to the United States and the free world comes from the Soviet Union and Communist China. In order properly to understand the scope and magnitude of this threat, the Joint Committee has over the years held executive hearings at which nuclear weapons experts have charted the progress of foreign nations as they developed and refined their nuclear arsenals.

The emergence of a serious threat from the Chinese Communists began in 1964. In a brief span of less than 3 years, Red China has had six nuclear tests. The last one on June 17, 1967, was in the megaton range and indicated that they were making rapid progress in thermonuclear design. They are also making progress in the development of delivery vehicles for megaton weapons. The internal strife in Red China appears to have had little, if any effect on their nuclear weapons program to date.

The trends in nuclear weapons development by foreign nations have been followed closely by the Joint Committee. These trends have been borne out by subsequent events. Progress, particularly by Red China, has been more rapid and surprisingly more effective than had been expected or indeed predicted.

The nuclear and thermonuclear capabilities of the Soviet Union are generally well known and understood by the American public. The Joint Committee's intention in this report is to bring into perspective the accomplishments and possible future trends in the development of Red China's nuclear offensive force.

BACKGROUND

As the nuclear threat posed by the Chinese Communists became more pronounced, Chairman Pastore decided to conduct a special inquiry regarding Chinese Communist nuclear weapons development. This probe began on January 11, 1967, and was formally announced at the Joint Committee's first public hearing of the 90th Congress on January 25, 1967.

In connection with this study the Joint Committee received the following testimony in executive session:

January 11, 1967: Richard Helms, Director of the Central Intelligence Agency.

February 1, 1967: Dr. Norris Bradbury, Director, Los Alamos Scientific Laboratory, and Dr. Michael May, Director, Livermore Radiation Laboratory.

Mar. 13, 1967: Secretary of State Dean Rusk.

July 13, 1967: Representatives of the Department of Defense, CIA, and AEC.

These witnesses presented testimony concerning advances being made by Communist China in developing nuclear weapons as well as their progress in developing the capability to deliver these weapons against neighboring countries or the United States.

Detailed technical presentations were heard concerning each individual Chinese Communist nuclear test and an assessment was made of future developments by Red China in the field of nuclear weapons and associated delivery systems.

An analysis of the impact of the emergence of Red China as a nuclear power on U.S. foreign policy with particular emphasis on the proposed nonproliferation treaty was also presented.

Information concerning French and Soviet nuclear weapons and delivery methods were also discussed but principal emphasis was on Red China.

CONCLUSIONS

On the basis of various hearings we have had and studies made by the Joint Committee, the following committee conclusions have been developed:

1. Chinese nuclear weapons capabilities

The Chinese Communist test of June 17, 1967, at the Lop Nor Nuclear Test Site was her sixth nuclear test in the atmosphere and her first in the megaton range. Such a test was expected because of the success of the preceding thermo-nuclear experiment conducted on December 28, 1966. The Chinese purposely may have limited the yield of that test—their fifth test—to keep the fallout in China at an acceptable level. The fifth test indicated that the Chinese had taken a major step toward a thermonuclear weapon.

There is evidence that the sixth test device—with a yield of a few megatons—was dropped from an aircraft.

Analysis of the debris indicates use of U^{235} , U^{238} , and thermonuclear material. As in the other tests, there is no evidence that plutonium was used. The preliminary indication is that a considerable improvement accompanied the increase in yield. A large amount of U^{238} was used in the device.

The sixth Chinese nuclear test has confirmed the conclusion reached from the analysis of the fifth Chinese nuclear test that they are making excellent progress in thermonuclear design. They now have the capability to design a multimegaton thermonuclear device suitable for delivery by aircraft.

We believe that the Chinese will continue to place a high priority on thermonuclear weapon development. With continued testing we believe they will be able to develop a thermonuclear warhead in the ICBM weight class with a yield in the megaton range by about 1970. We believe that the Chinese can have an ICBM system ready for deployment in the early 1970's. On the basis of our present knowledge, we believe that the Chinese probably will achieve an operational ICBM capability before 1972. Conceivably, it could be ready as early as 1970-1971. But this would be a tight schedule and makes allowance for only minor difficulties and delays. We believe that the Chinese have already completed the development of a medium range ballistic missile. We have no indication of any deployment.

We also believe that by about 1970 the Chinese Communists could develop a thermonuclear warhead with a yield in the few hundreds of kilotons in the MRBM class and that they could develop an MRBM warhead with a megaton yield about a couple of years later. Meanwhile, should they desire a thermonuclear bomb for delivery by bomber, they could probably begin weaponizing the design employed in the sixth test.

The missile-delivered fourth Chinese test demonstrated that the Chinese now have the capability to design a low yield fission warhead compatible in size and weight with a missile. With a few tests, the Chinese could probably design an improved fission weapon for MRBM or bomber delivery. However, they may forego extensive fission weapon production in order to have materials and facilities available for thermonuclear weapon systems.

The Chinese bomber forces consist of a few hundred short-range jet bombers and a handful of somewhat longer range bombers. We have no knowledge of a Chinese plan to develop heavy intercontinental range bombers.

Earlier, the Communist Chinese conducted four other nuclear detonations:

October 16, 1964: Low yield (up to 20 kilotons).

May 13, 1965: Low intermediate (20 to 200 kilotons).

May 9, 1966: Intermediate (lower end of 200 to 1,000 kiloton range).

October 27, 1966: Low intermediate (20 to 200 kilotons).

The Chinese were able to continue their nuclear program after the Soviets apparently ceased technical assistance in this area by 1960, and detonated a uranium device in October 1964.

All of the Chinese detonations have utilized enriched uranium (U^{235}) as the primary fissionable material. Uranium-238 was also present in all tests. The detonation of any device which also contains U^{238} results in some fissioning of the U^{238} . The debris from their third and fifth tests indicated some thermonuclear reactions had involved lithium-6 in those devices.

We believe that the Chinese are interested in the development of submarines equipped with suitable relatively long-range missiles; at this time we have not determined the exact nature or status of the program.

2. French nuclear test program

Turning to the French nuclear test program, in February 1960 the French tested their first atomic device. In 1966 the French conducted five nuclear tests. In 1967 they held a short series of three tests. Another series of tests is planned for next summer. All of the 1966 tests were plutonium fission devices. The last two tests in 1966 were experiments aimed at the thermonuclear development.

The year's tests were conducted on June 5, June 27, and July 2. They were suspended by balloons, above the Mururoa Lagoon. The tests all had low yields. The French announced that all of the tests were to be of triggers for thermonuclear devices which the French still have not tested.

Although French officials continue to state publicly that France will detonate her first thermonuclear device in 1968 when enriched uranium becomes available, there have been hints in the press that France is having her difficulties with its program. Should this be true, the first generation of both the land-based and submarine-launched missile systems might have to use warheads developed in the 1966 series.

To recapitulate, the Chinese are well ahead of the French in thermonuclear weapon design. In 2½ years and six tests the Chinese have successfully tested a multimegaton thermonuclear device. The French, on the other hand, have conducted many more tests over a 7-year period and have not yet tested a true thermonuclear device or achieved a megaton size yield.

The French have developed higher yield fission weapons than the Chinese. The French have achieved yields of up to 250 kilotons while the Chinese fission devices have had lower yields.

The French now have an operational strategic force of about 60 Mirage IV aircraft with a stockpile of 60 to 70 KT nuclear weapons. At this time the Chinese do not have such an operational strategic force.

SUMMARY

The Joint Committee believes that the American public needs to know the threat that is posed by Red China. Communist China has emerged with a fledgling, but effective, nuclear weapons capability. This capability has and will continue to have a great effect on U.S. foreign policy in the Far East. It will have an effect on our relations with the South East Asia Treaty Organization. It will have an effect on the nonproliferation treaty principally because of the close connection between Chinese nuclear power and the national security of India. Its effect will

also be felt by Japan. Moreover, the Chinese Communists could use nuclear blackmail to assert their position not only broadly in Asia, but specifically in Southeast Asia.

Perhaps most significant for the United States is the fact that a low order of magnitude attack could possibly be launched by the Chinese Communists against the United States by the early 1970's. At present we do not have an effective anti-ballistic-missile system which could repel such a suicidal (for the Chinese) but nevertheless possible strike.

It is for these reasons that the Joint Committee feels the assessment it has made, based upon information received in executive sessions, should be brought before the American public—not to overemphasize or to underplay but to state clearly and concisely with due regard for the protection of intelligence sources where we stand in relation to this emerging threat to our national security.

SIGNIFICANT DATES IN ATOMIC WEAPONS DEVELOPMENT AND SUBSEQUENT TEST BAN AND NONPROLIFERATION NEGOTIATIONS

DATES OF CERTAIN NUCLEAR WEAPONS EXPLOSIONS

July 16, 1945: First U.S. nuclear device test, Alamogordo, N. Mex.

August 6, 1945: First atomic bomb dropped on Hiroshima.

August 9, 1945: Second atomic bomb dropped on Nagasaki.

August 29, 1949: First Soviet atomic test.

October 3, 1952: First nuclear bomb test by the United Kingdom.

November 1, 1952: Hydrogen device fired at Eniwetok by United States.

August 21, 1953: First hydrogen device tested by U.S.S.R. detected by United States.

February 13, 1960: First French atomic test.

October 16, 1964: First Chinese atomic test.

DATES OF NEGOTIATIONS OF DISCONTINUANCE OF NUCLEAR WEAPON TESTS

June 14, 1946: U.S. proposal for international control of atomic energy (Baruch plan).

June 19, 1946: U.S.S.R. proposed alternate plan including insistence on retention of Security Council veto power over any control system.

March 24, 1957—Bermuda declaration: Joint declaration by the United States and the United Kingdom to conduct nuclear tests in such a manner as to keep world radiation from rising to more than a small fraction of the level that might be hazardous to continue to announce test series, also expressed willingness to announce tests to the U.N. and permit international observation if the U.S.S.R. would do the same.

November 14, 1957—General Assembly Resolution 1148 (XII): Regulation, limitation, and balance reduction of all armed forces and all armaments; conclusion of an international convention (treaty) on the reduction of armaments and the prohibition of atomic, hydrogen, and other weapons of mass destruction. Among its provisions, this resolution urged the immediate suspension of testing of nuclear weapons with prompt installation of effective international control, including inspection posts equipped with appropriate scientific instruments located in the United States, the Soviet Union, and the United Kingdom, and at other points as required.

December 10, 1957: Soviet proposal that U.S.S.R., United States, and United Kingdom discontinue all tests as of January 1, 1958.

March 31, 1958: Decree of the Supreme Soviet concerning the discontinuance of Soviet atomic and hydrogen weapons tests.

April 28, 1958: President Eisenhower by letter to Khrushchev proposed that both nations have the technical experts start to work on the practical problems involved in

disarmament, particularly working toward the suspension of nuclear testing. President Eisenhower stated: "I reemphasize that these studies are without prejudice to our respective positions on the timing and interdependence or various aspects of disarmament."

May 9, 1958: Letter from Khrushchev accepting Eisenhower's proposal of April 28 to have experts study the problems involved in an agreement on the cessation of atomic and hydrogen weapons tests as far as inspection and control are concerned.

July 1, 1958: Conference of Experts from the West (United States, United Kingdom, Canada, and France) and East (U.S.S.R., Czechoslovakia, Poland, and Rumania) met in Geneva.

August 21, 1958: Conference of Experts adopted a final report for consideration by governments. Conference of Experts recommended the so-called Geneva system of detecting nuclear explosions. This system recommended a network of 180 control points. It should be noted that the American representatives, during this Conference, had taken the position that 650 control points would be necessary to have adequate protection down to 1 kiloton. Through compromise with the Soviets, they settled on the 180 stations, but then had to point out the weakness between the area of 1 and 5 kilotons.

August 22, 1958: President Eisenhower announced that based on the Conference of Experts' report, the United States was prepared to negotiate an agreement with other nations which have tested nuclear weapons for suspension of nuclear weapons tests and the establishment of an international control system.

The President also indicated that the United States would withhold further testing on its part of atomic and hydrogen weapons for a period of 1 year from the beginning of the negotiations unless testing is resumed by the Soviet Union.

October 31, 1958: First meeting in Geneva of the Conference on the Discontinuance of Nuclear Weapons Tests.

November 4, 1958—General Assembly Resolution 1252 (XIII): The discontinuance of atomic and hydrogen weapons tests. Among its provisions, this resolution urged the parties involved in the test-ban negotiations not to undertake further testing of nuclear weapons while these negotiations are in progress. It expressed the hope that the Geneva test-ban conference would be successful and lead to an agreement acceptable to all. It also requested the parties concerned to report to the General Assembly the agreement that might be the result of their negotiations; and requested the Secretary General to render such assistance and provide such services as might be asked for by the conference commencing at Geneva on October 31, 1958.

November 7, 1958: President Eisenhower announced that the United States had detected additional tests by the Soviets subsequent to October 31, 1958.

December 28, 1958: The President appointed a panel on seismic improvement to review technical problems and to recommend methods of improving seismic detection.

January 5, 1959: United States released data showing many underground tests could not be detected by Geneva experts system recommended in 1958. Indicated Geneva system applicable at 20-kiloton rather than 5-kiloton threshold.

February 22, 1959 to March 2, 1959: Macmillan meeting with Khrushchev. During this meeting Macmillan and Khrushchev discussed the establishment of quotas for numbers of onsite inspections in countries where suspicious events have taken place.

April 13, 1959: United States proposed phased testing ban limited in first phase to atmospheric tests below 50 kilometers, with simplified control system, if Soviet Union

continued to insist on veto for onsite inspections.

April 23, 1959: Soviets reject U.S. proposal to stop only atmospheric tests and said numerous onsite inspections would not be necessary for complete ban.

June 22, 1959 to July 10, 1959: Technical Working Group No. 1 met in Geneva to study high-altitude detection problems. On July 10 Geneva Technical Working Group I proposed establishment of system of earth satellites and installations of additional equipment at control posts to detect high-altitude explosions.

August 26, 1959: United States extended unilateral suspension to end of 1959.

August 27, 1959: United Kingdom said it would not resume tests as long as Geneva negotiations showed prospect of success.

August 28, 1959: U.S.S.R. pledged not to resume testing unless Western Powers did so.

November 21, 1959—General Assembly Resolution 1402 (XIV): Suspension of nuclear and thermonuclear tests. Among its provisions this resolution expressed the hope that the countries involved in the test ban negotiations at Geneva would intensify their efforts to reach an agreement at an early date; it further urged the countries concerned in these negotiations to continue their voluntary ban on testing nuclear weapons; it also requested the countries concerned to report to the General Assembly the results of their negotiations.

November 25, 1959: Technical Working Group II met in Geneva with the Soviets and the British. This group met to consider data from the Hardtack series of nuclear explosions and the findings of the Berkner panel. On December 18, 1959, at the conclusion of the meetings held by Technical Working Group II, U.S. members of Geneva, Technical Working Group II reported that a large number of seismic events could not be identified without on-site inspection, even with improved techniques. The Soviet members of Geneva Technical Working Group II disagreed with U.S. finding.

December 29, 1959: United States said it was free to resume testing after end of 1959 but would not do so without giving advance notice.

February 11, 1960: United States proposed phased agreement, first phase to provide for cessation of tests in atmosphere, oceans, and outer space, to greatest height that could be effectively controlled; underground tests above 4.75 seismic magnitude (estimated by United States to equal explosion of about 20 kilotons) would also be covered; the 4.75 threshold would be lowered as capabilities of detections system were improved, 20 or 30 percent of unidentified seismic events above threshold should be inspected. United States experts estimated that this would mean about 20 inspections per year in U.S.S.R.

March 19, 1960: Soviets offered to conclude treaty on cessation of tests, together with moratorium on underground tests below magnitude 4.75, and to agree to point research program on understanding that weapons tests would be halted during program.

March 29, 1960: United States and United Kingdom said they would agree to voluntary moratorium on underground weapons tests below magnitude 4.75 after treaty was signed and arrangements were made for coordinated research program.

December 20, 1960—General Assembly Resolution 1577 (XV): Suspension of nuclear and thermonuclear tests. This resolution urges the countries involved in the Geneva test-ban negotiations to seek a solution for the few remaining questions so that a test-ban agreement could be achieved at an early date; it further urges the countries concerned in these negotiations to continue their present voluntary suspension of the testing of nuclear weapons; it also requests the countries concerned to report the results

of their negotiations to the Disarmament Commission and the General Assembly.

March 21, 1961: First meeting under the new administration of the Geneva Conference on Discontinuance of Nuclear Weapons Tests. United States proposal presented by Ambassador Arthur H. Dean, Soviet Union introduced its troika proposal on this date.

April 18, 1961: United States and United Kingdom introduced draft treaty to the Geneva Conference.

May 5, 1961: Statement by President Kennedy on the Geneva test-ban negotiations made at his news conference. Mention is made of the new United States and United Kingdom proposals and the introduction of the troika proposal by Russia.

June 4, 1961: Khrushchev delivers Soviet aide-memoire concerning disarmament and nuclear weapons tests to President Kennedy at Vienna. Insists the question of control hinges on Western Powers accepting proposals on general and complete disarmament.

June 6, 1961: Kennedy reports to American people on his Vienna talks with Khrushchev.

June 6, 1961: Khrushchev reports to Russian people on his talks with President Kennedy. (Tass report topics covered:) General and complete disarmament, banning of nuclear weapons, cessation of tests, question of control. Hammarskjold, the German question (peace treaty).

June 17, 1961: U.S. aide-memoire to Soviet Russia concerning Geneva test-ban negotiations. Repeated new proposals offered by the United States and the United Kingdom on March 21, 1961.

June 28, 1961: President Kennedy announces appointment of Committee of Scientific Experts to advise him on test-ban problem.

July 5, 1961: Soviet note replying to U.S. note of June 17, 1961, concerning suspension of nuclear weapon tests. Says Soviet proposals have been distorted. Brings up again supervision of inspection and control by equal representatives of three basic groups: Socialist states, capitalist states in Western military bloc, and neutral states (troika).

July 15, 1961: U.S. note to Soviet Union referring to the Soviet note of July 5, 1961, on the Geneva test-ban negotiations. Says Soviet note contains a multitude of irrelevant and unwarranted comments. Confines its reply to the central issue: Is the Soviet Union prepared to reach an accord which would halt nuclear tests under effective international control?

July 15, 1961: United States and United Kingdom request to United Nations to place on the agenda the 16th General Assembly an item entitled "The Urgent Need for a Treaty To Ban Nuclear Weapons Tests Under Effective International Control."

July 20, 1961: President announces membership of nuclear test study group.

August 10, 1961: President announces he has reviewed report of Scientific Committee and is sending Ambassador Dean back to Geneva.

August 30, 1961: Soviets announce plans to resume nuclear testing. Among the reasons cited by the Soviets for taking this step were the turn-down of the troika proposal, the nuclear tests carried out by the French beginning February 13, 1960, and the Berlin situation.

August 30, 1961: White House statement on the Soviet's announcement that they planned to resume nuclear testing. This statement expressed concern and resentment in regard to the Soviet decision to resume nuclear testing. It added that the Soviet decision presented a threat to the entire world. It denounced the Soviet pretext for resumption of weapons testing by mentioning that the Berlin crisis was created by the Soviets themselves. It also mentioned that the Soviet Union bears heavy responsibility before all humanity for this decision which was made in complete disregard of the United

Nations. It concluded by announcing that Ambassador Arthur Dean was being recalled immediately from his post as chief negotiator at the nuclear test ban meetings.

September 1, 1961—November 4, 1961: The Soviet Union conducted a series of approximately 50 atmospheric nuclear tests with a total yield of about 120 megatons. The tests were conducted at three different locations in the Soviet Union: Semipalatinsk, Novaya Zemlya, and east of Stalingrad. The series was highlighted by a 55- to 60-megaton detonation on October 31, 1961, despite a resolution adopted October 27, 1961, by the United Nations appealing to the U.S.S.R. to refrain from carrying out their stated intention to explode a device of this yield.

September 3, 1961: President Kennedy, in a joint statement with British Prime Minister Macmillan, proposed that the Soviet Union agree immediately to discontinuing testing nuclear weapons in the atmosphere. The note suggested that the United States, United Kingdom, and U.S.S.R. representatives meet in Geneva not later than September 9 to record the agreement to cease nuclear testing in the atmosphere and report it to the United Nations.

September 5, 1961: President Kennedy announced that the United States would resume nuclear testing. He ordered the tests carried out in the laboratory and underground "with no fallout." This decision was made after the Soviets set off their third nuclear test in the atmosphere in 5 days. President Kennedy, in referring to the Kennedy-Macmillan statement of September 3 on banning nuclear testing in the atmosphere, said the offer remains open until September 9, 1961.

September 15, 1961: The United States detonates its first underground nuclear device since the end of the test moratorium at the Nevada Test Site.

November 2, 1961: The President announces that the policy of the United States will be to proceed in developing nuclear weapons to maintain a superior capability for the defense of the free world against any aggressor. This statement indicated that the United States would make necessary preparations in case it becomes necessary to test in the atmosphere.

December 22, 1961: A joint communique was issued by President Kennedy and Prime Minister Macmillan following a 2-day meeting in Bermuda. They agreed that it was necessary "as a matter of prudent planning for the future, that pending the final decision [to resume atmospheric testing] preparations should be made for atmospheric testing to maintain the effectiveness of the deterrent."

January 29, 1962: Geneva Conference on the Discontinuance of Nuclear Weapons Tests breaks up at 353d meeting. The United States proposed an adjournment, and Soviet negotiator Tsarapkin said, "This is the end."

February 7, 1962: President Kennedy and British Prime Minister Macmillan said they have proposed to Soviet Premier Khrushchev that another supreme effort to halt the nuclear arms race be made by raising next month's 18-nation general disarmament conference to the Foreign Ministers' level.

February 14, 1962: President Kennedy urged Premier Khrushchev not to press his proposal for an 18-nation summit meeting on disarmament. However, he assured the Soviet leader that he was ready to participate "at any stage of the conference when it appears that such participation could positively affect the chances of success."

February 21, 1962: Premier Khrushchev replied to President Kennedy's letter of February 14 still insisting on a summit conference on disarmament.

February 24, 1962: Letter from President Kennedy to Premier Khrushchev. President Kennedy replied to Premier Khrushchev's letter of February 21, 1962, stressing that heads-of-state participation at the Geneva

August 6, 1969

Conference should be reserved until a later stage in the negotiations after preliminary agreements have been reached at the Foreign Ministers' level.

March 2, 1962: President Kennedy announced that he had ordered a resumption of nuclear tests in the atmosphere in late April unless the Soviet Union agrees before then to an "ironclad" treaty banning all tests. The President held out to Khrushchev the promise of a summit conference at which such a treaty could be signed, and also said that a satisfactory treaty would be offered by the West at the disarmament conference opening in Geneva on March 14, 1962.

March 4, 1962: The Soviet Government sent the United States a message delivered to the State Department advising that Foreign Minister Gromyko would go to Geneva. The Kremlin message was reported to have said that Khrushchev had reluctantly accepted the Foreign Minister proposal.

March 14, 1962: 17-nation disarmament conference opened in Geneva. (Originally 18-nation conference, but France did not attend.)

March 15, 1962: The United States, during the Geneva Disarmament Conference, clearly indicated its willingness to drop the 4.75 threshold and to make the test ban treaty, from the outset, complete in its coverage by banning all tests in the atmosphere, outer space, underground, and in the oceans. The response of the Soviet Union to this proposal indicated an unwillingness on their part to accept a treaty with or without the U.S. proposed amendment.

March 16, 1962: Premier Khrushchev announced that Soviet scientists had developed a "global rocket" invulnerable to antimissile weapons and that it rendered obsolete the early warning system of the United States.

April 10, 1962: The White House released a joint United States-United Kingdom statement on nuclear testing appealing to the Soviet Union to agree to a nuclear test ban with adequate safeguards including the principle of international verification. This statement indicated that if such an agreement was not successful then the test series scheduled by the United States for the latter part of April would go forward.

April 10, 1962: Prime Minister Macmillan added a personal message to the joint Anglo-American note to Premier Khrushchev on a nuclear test ban asking him to accept an inspection procedure and "all all the peoples of the world with a new sense of hope."

April 12, 1962: Premier Khrushchev rejects the Kennedy-Macmillan joint statement on nuclear testing.

April 16, 1962: Eight neutral nations appealed to the nuclear powers to persist in their efforts to reach agreement on prohibiting nuclear weapons testing for all time. They suggested establishing a system for continuous observation and control on a scientific and nonpolitical basis, built on existing national network of observation posts.

April 18, 1962: United States offered a three-stage plan for disarmament having as its goal general and complete disarmament and gradual replacement of the armed power of single nations by a strengthened United Nations. The disarming process would be balanced to prevent any state from gaining a military advantage, and compliance with all obligations would be effectively verified.

April 22, 1962: Joint Committee on Atomic Energy in summary-analysis of 1961 Vela hearing, reports that nearly 3 years of research had brought no material progress toward an effective method of detecting clandestine underground tests.

April 25, 1962: First, 1962 U.S. nuclear test in the atmosphere. This test was of an intermediate yield from a plane near Christmas Island. The President approved the resumption on nuclear testing after repeated unsuccessful attempts by the United States to

get the U.S.S.R. to agree to a nuclear test ban treaty with adequate safeguards.

April 26, 1962: Secretary of State Rusk justified the new series of tests on the basis of refusal of the Soviet Union to accept the kind of international verification necessary for a test ban agreement. The Secretary of State referred to President Kennedy's address of March 2 in which he set forth the reasons why a certain number of tests would be necessary in the absence of an international agreement banning nuclear tests with adequate assurances; and, secondly, that it is a major objective of American policy to bring an end to testing immediately and permanently when we were assured that testing had been abolished.

May 1, 1962: France conducts underground explosion of nuclear device in Algerian Sahara.

May 2, 1962: Disarmament talks were resumed in Geneva. British Minister of State John Godber said U.S.S.R. must change its attitude toward verification measures if the world is to have general and complete disarmament.

May 16, 1962: Premier Khrushchev confirmed U.S.S.R. determination to test. He based his decision on the fact that the United States had resumed testing in the Pacific.

June 14, 1962: The 18-Nation Disarmament Conference recesses.

July 12, 1962: Secretary of State Dean Rusk reports that the preliminary Vela results, released by the Defense Department on July 7, offer some promising signs for detecting and identifying nuclear tests but emphasized the new findings cannot be considered a substitute for control posts or on-site inspections.

July 13, 1962: Soviet Union served official notice that it claims the right to be the last nation to carry out nuclear weapon tests.

July 16, 1962: The 18-Nation Disarmament Conference reconvenes in Geneva. The United States proposes discussion of scientific findings, particularly from Project Vela.

July 21, 1962: The Soviet Government announces its decision to resume nuclear tests.

August 1, 1962: President Kennedy stated at his news conference that on the basis of recent technical assessments, the United States can work toward an internationally supervised system of detection and verification for underground testing which will be simpler and more economical than the system which was contained in the treaty which we tabled in Geneva in April 1961. He emphasized that these new assessments do not affect the requirement that any system must include provision for on-site inspection of unidentified underground events.

August 5, 1962: The Soviet Union detonates a nuclear explosion in the atmosphere in the order of magnitude of 30 megatons. This is the first of some 40 tests, continuing until December 25.

August 8, 1962: U.S. Delegate Dean proposed reducing the number of control posts to something like 80—a reduction of more than half. He offered this concession in view of his contention that detecting devices have gone ahead rapidly. Thus, our techniques for detecting sneak tests are much better.

August 9, 1962: Ambassador Dean formally introduces a new proposal for a comprehensive test ban treaty based on a worldwide network of internationally supervised, nationally manned control posts. Provided the Soviets agree to the principle of obligatory on-site inspection, the numbers of control posts and on-site inspections would be substantially reduced from previous U.S. proposals. Ambassador Zorin immediately rejects the new proposal.

August 20, 1962: The U.S.S.R. rejected proposals for a partial nuclear test ban treaty.

¹ The 18-Nation Disarmament Conference now composed of 17 nations. France, an original member withdrew at the beginning of the Conference.

The idea of a halfway treaty was advanced by Brazil, Sweden, and Italy. The proposed treaty would stop atmospheric tests immediately to ease fallout dangers.

August 27, 1962: The United States and Great Britain offered the Soviet Union the choice of an internationally inspected total ban on nuclear weapons tests or an uninspected limited ban. The limited ban would cover tests in the atmosphere, in space and under water pending further negotiations for a treaty to include underground tests, the most difficult to identify.

August 29, 1962: The U.S.S.R. submitted to the Disarmament Conference a formula for halting nuclear weapons tests that the United States and Britain have repeatedly termed unacceptable because of inadequate guarantees and safeguards for inspection of suspicious events.

August 29, 1962: President Kennedy welcomed a Soviet proposal that all nuclear testing cease by January 1. But he reiterated the Western position that an enforceable treaty, complete with inspection provisions, be signed first.

September 7, 1962: The 18-Nation Disarmament Conference recesses, but the Test Ban Subcommittee remains in session.

October 24, 1962: At the United Nations, Brazil proposes denuclearization of Latin America and Africa which would include a ban on nuclear weapon tests in these continents.

November 4, 1962: President Kennedy announces the end of the current series of atmospheric nuclear tests, but states that underground tests will be continued in Nevada. The last atmospheric detonation was November 4, 1962.

November 6, 1962: The General Assembly adopts a two-part resolution on nuclear tests. Part (A), sponsored by 37 powers and approved by a vote of 75 to 0 with 21 abstentions, calls for the cessation of testing by January 1, 1963, and an interim arrangement with certain assurances if no final agreement is achieved by that date. Part (B), sponsored by the United States and the United Kingdom and approved by a vote of 51 to 10 with 40 abstentions, urges the early conclusion of a comprehensive test ban treaty with effective international verification. The United States and the U.S.S.R. abstain on part (A), and the U.S.S.R. opposes part (B).

November 13, 1962: At Geneva, Ambassador Tsarapkin suggests that unmanned seismic stations be employed as an addition to existing national detection stations to monitor a test ban.

November 26, 1962: The 18-Nation Disarmament Conference reconvenes for the third session.

November 28, 1962: In an attempt to end the deadlock at Geneva, Swedish Delegate Rolf Edberg proposed a moratorium on all nuclear tests while an international group of scientists works out underground control methods satisfactory to both the West and the Soviet Union.

December 3, 1962: The U.S.S.R. rejected the proposal for setting up a nuclear test ban put forth by the Indian-Swedish delegations.

December 4, 1962: The Soviet Union told the United States and Great Britain that as long as they insisted on on-site inspection there would never be any agreement to end nuclear testing. Joseph B. Godber of Britain declared that dismissal of the neutralist efforts to break the test ban stalemate was "not the action of a responsible government."

December 4, 1962: Arthur H. Dean told the Soviet Union that unmanned seismic stations the so-called black boxes—cannot serve as a sole guardian of a nuclear test ban.

December 10, 1962: In the 18-Nation Disarmament Conference, Ambassador Tsarapkin formally proposes the establishment of two or three unmanned seismic stations on

the territories of states possessing nuclear weapons. Locations by zones for those to be placed in the Soviet Union are named. This proposal is conditioned on the abandonment by the West of its insistence on international control and obligatory on-site inspection.

December 19, 1962: Premier Khrushchev, in a letter to President Kennedy, states that the Soviet Union is now prepared to accept two or three on-site inspections per year on Soviet territory. In addition, he says there could be three unmanned seismic stations on Soviet territory. The final location of the stations is left open.

December 20, 1962: The 18-Nation Disarmament Conference recesses.

December 28, 1962: President Kennedy in reply to Premier Khrushchev, indicates encouragement that the Soviets have now accepted the principle of on-site inspection, but states that the figure of two or three on-site inspections is not sufficient, nor are three unmanned seismic stations. He denies that the United States offered to agree on three inspections. The United States has reduced the number of on-site inspections to 8 from 10.

January 4, 1963: Arthur H. Dean announced that he had submitted his resignation on December 27, 1962, as chief U.S. negotiator at the Disarmament Conference at Geneva.

January 7, 1963: In a letter to President Kennedy, in further exchange on the subject of on-site inspection, Premier Khrushchev holds to his contention that an annual quota of two or three inspections is sufficient.

He emphasizes that he considers agreement in principle a great unilateral concession, and he agrees to further discussion on the questions between United States and U.S.S.R. representatives.

January 14, 1963: United States and Soviet representatives meet in New York. The United States is represented by William C. Foster, Director of the U.S. Arms Control and Disarmament Agency; and the U.S.S.R. is represented by N. T. Fedorenko, Soviet Ambassador to the U.N. and S. K. Tsarapkin, chairman of the Soviet delegation to the 18-Nation Disarmament Conference. Discussions continue in New York until January 22 when they are moved to Washington.

January 26, 1963: President Kennedy orders that preparations for underground testing in Nevada be suspended in the hope that the Western-Soviet discussions presently taking place in New York and Washington would materially enhance the prospects for an effective agreement on a test ban.

February 1, 1963: The New York and Washington, D.C., discussions on a test ban are slated to be taken up at the 18-Nation Disarmament Conference scheduled to be resumed on February 12. In a press conference, Secretary of State Rusk expressed the disappointment of the United States that the position of the Soviet Union appeared to have hardened into a take-it-or-leave-it attitude on their offer for two or three on-site inspections per year. The Secretary states: "The idea of on-site inspection is not simply a political question involving the acceptance of on-site inspection in principle, but is the practical problems of establishing arrangements which in fact do provide assurance that agreements are being complied with."

February 1, 1963: President Kennedy orders resumption of the preparations for underground testing in Nevada.

February 8, 1963: The scheduled series of underground tests is begun in Nevada.

February 12, 1963: The 18-Nation Disarmament Conference reconvenes at Geneva.

February 22, 1963: The ACDA announces in Washington that the United States is willing to consider possible acceptance of seven on-site inspections, providing the modalities of inspection can be agreed upon.

February 28, 1963: In a Moscow election

meeting speech, Premier Khrushchev reaffirms his refusal to consider anything but three on-site inspections per year.

April 1, 1963: The United States and United Kingdom delegations table a memorandum of position concerning the cessation of nuclear weapon tests. This memorandum sums up the Western position on general principles of agreement on-site inspection and automatic seismic station arrangements, and includes specific proposals submitted to date.

August 5, 1963: Limited test ban treaty is signed in Moscow.

August 31, 1963: Hot-line teletype system between Washington and Moscow becomes operational.

October 7, 1963: President, with the advice and consent of the Senate, signs the limited test ban treaty.

October 10, 1963: The limited test ban treaty enters into force.

December 31, 1963: Premier Khrushchev calls on all states to conclude an international agreement "for the renunciation by the states of the use of force for the settlement of territorial disputes and boundary questions."

January 8, 1964: In his state of the Union message, President Johnson announces that U.S. production of enriched uranium will be reduced by 25 percent and that the Atomic Energy Commission will close down 4 of its 14 reactors producing plutonium for weapons. The President calls on the Soviet Union to take similar steps.

January 18, 1964: President Johnson, in his reply to Premier Khrushchev's letter of December 31, 1963, appeals to the Soviet Union to support concrete steps to strengthen peace, by urging that both nations present new proposals at Geneva on the prevention of the spread of nuclear weapons, cessation of the production of fissionable materials for weapons uses, the transfer of large amounts of fissionable materials to peaceful uses, the prohibition of all nuclear tests, limitations on nuclear weapons systems, reduction of all risk of war by accident or design, and progress toward general disarmament.

January 21, 1964: The Eighteen Nation Disarmament Committee (ENDC) reconvenes in Geneva.

In a message to the ENDC, President Johnson submitted proposals designed to: prohibit the use of force, achieve a verified freeze of nuclear delivery vehicles, achieve a verified agreement on the cessation of the production of fissionable material for weapons, reduce the danger of accidental war and surprise attack, and halt the spread of atomic weapons.

April 20, 1964: President Johnson announces that he has ordered "a further substantial reduction" in the production of enriched uranium. Combined with the reduction announced last January, the overall reduction in the production of enriched uranium will be 40 percent over a 4-year period.

Premier Khrushchev announced discontinuance of the construction of two new reactors for the production of plutonium and that the production of uranium 235 would be substantially reduced over the next several years (On November 24, 1965, in Khrushchev's statement of April 20, 1964, the AEC stated "there is no evidence to confirm that the Soviets have indeed done what they stated they would do.")

April 21, 1964: Prime Minister Douglas-Home announces that United Kingdom production of military plutonium will gradually be terminated.

April 28, 1964: The ENDC recesses.

June 9, 1964: The ENDC reconvenes.

June 11, 1964: The IAEA Board of Governors approves an agreement between the United States and the Agency whereby four U.S. reactors will be placed under Agency safeguards against diversion to nonpeaceful ends.

June 25, 1964: At the ENDC, the United States presents a plan to provide verification for a cutoff in the production of fissionable materials for weapons.

August 27, 1964: At the ENDC the Indian representative states that under no circumstances will his country use its nuclear capabilities for nonpeaceful purposes.

September 17, 1964: The ENDC adjourns.

October 16, 1964: Communist China explodes its first atom bomb.

October 24, 1964: The chairman of India's Atomic Energy Commission states that India might be compelled to manufacture nuclear weapons unless some important and tangible steps are made toward general disarmament.

November 1, 1964: The White House announces that former Deputy Secretary of Defense Roswell L. Gilpatric has been appointed by the President to head a special panel to study ways and means of preventing the spread of nuclear weapons.

December 8, 1964: Following their Washington conference, President Johnson and United Kingdom Prime Minister Wilson issued a communique in which they express agreement on the urgency of a worldwide effort to prevent proliferation of nuclear weapons.

December 30, 1964: In a New Year's greeting to Premier Kosygin, President Johnson expresses the hope that practical agreements can be reached soon in the area of arms control.

January 19, 1965: AEC announces that the United States has detected venting from the Soviet underground test of January 15.

January 26, 1965: In a statement before the House Foreign Affairs Committee, ACDA Director Foster states that the Soviet test of January 15 may have been a technical violation of the limited test ban treaty.

February 15, 1965: AEC announces it will further reduce the rate of production of enriched uranium. The new reduction will be gradually carried out from 1966 to 1969.

May 14, 1965: Communist China explodes its second atomic bomb.

May 17, 1965: In the Disarmament Commission, ACDA Director Foster suggests a broad program of measures to halt the proliferation of nuclear weapons.

July 27, 1965: ENDC convenes at Geneva. In a message to the delegates, President Johnson states that the American delegation is instructed to seek "agreements that will limit the perilous spread of nuclear weapons, and make it possible for all countries to refrain without fear from entering the nuclear arms race," "effective limitation of nuclear weapons and nuclear delivery systems" and a "truly comprehensive test ban treaty."

August 8, 1965: Pope Paul VI urges mankind to renounce forever use of atomic weapons and prays that men will "no longer place their trust, their calculations, and their prestige in such fatal and dishonoring weapons."

August 17, 1965: At the ENDC, the United States presents a draft nonproliferation treaty.

August 31, 1965: At the ENDC the Soviet Union rejects the U.S. draft nonproliferation treaty of August 17.

September 16, 1965: The Conference of the Eighteen Nation Committee on Disarmament (ENDC) adjourns following the conclusion of its 234th plenary meeting.

September 23, 1965: In a speech at the United Nations, Ambassador Goldberg stresses that the first priority toward the goal of general and complete disarmament "must be given to halting the spread of nuclear weapons."

September 24, 1965: Soviet draft treaty on nonproliferation presented to the Secretary General of the United Nations.

October 17, 1965: William Foster, Director, Arms Control and Disarmament Agency, in a speech at the United Nations calls for the resumption of the ENDC at Geneva.

November 25, 1965: At the United Nations 26 nations present a draft resolution on the "urgent need for suspension of nuclear and thermonuclear tests." This draft resolution was subsequently sponsored by nine other nations.

December 3, 1965: The 35-nation draft resolution of November 25, 1965 approved by the General Assembly by a vote of 92 to 1 with 14 abstentions. Albania votes against the resolution. The following countries abstain: Algeria, Bulgaria, Byelorussian S.S.R., Congo, Cuba, Czechoslovakia, France, Guinea, Hungary, Mauritania, Mongolia, Poland, Ukrainian S.S.R., and the Soviet Union.

December 28, 1965: Ambassador at Large Averell Harriman leaves Washington to visit Eastern Europe on a peace mission for President Johnson.

January 27, 1966: The 18-Nation Disarmament Committee is scheduled to reconvene in Geneva.

SIGNIFICANT DATES CONCERNING DISARMAMENT DEVELOPMENTS, 1966 TO PRESENT

January 18, 1966: Senator Pastore (Dem., R.I.), Vice Chairman of the Congressional Joint Committee on Atomic Energy, and 52 other senators sponsored a resolution urging "serious and urgent efforts" to achieve a treaty and reach a solution of the nuclear proliferation problem.

February 23, 1966: Testifying before the Joint Committee on Atomic Energy, Secretary of State Rusk welcomed the Pastore resolution as a "significant expression of congressional support" for President Johnson's efforts to meet the threat of nuclear proliferation.

April 27, 1966: Secretary of State Rusk in a press conference denied that he had decided to "forego indefinitely" plans for "an allied nuclear weapons system." He said the United States had made no decision to foreclose A.N.F. or "any other collective approach to the problem."

April 28, 1966: At the ENDC, ACDA Director Foster announced that the United States had offered the IAEA access to Nuclear Fuel Services, Inc., a commercial chemical plant in West Valley, N.Y., processing plutonium to assist the IAEA in the development of safeguard procedures and the training of inspectors. He characterized the offer as "a new contribution to the development of safeguards" against the diversion of peaceful atoms to weapons use.

May 7, 1966: President Johnson announced that the United States would seek a treaty in the United Nations to prevent sovereignty claims in space and to seek an accord on cooperation and peaceful exploitation. In New York, Ambassador Goldberg requested an early meeting of the Legal Subcommittee of the UN Outer Space Committee to consider the President's proposal.

May 9, 1966: The Chinese Communists detonated their third nuclear device and asserted that it contained "thermonuclear material." They stated that their program was intended to oppose American "nuclear blackmail" and "U.S.-Soviet collusion and monopoly of nuclear weapons." Recalling their nuclear disarmament proposals of October 17, 1964, and May 14, 1965, they again declared that China would not be the first to use nuclear weapons.

May 10, 1966: The ENDC recessed until June 14. In his closing remarks, ACDA Director Foster blamed the Soviet Union for the impasse in negotiations and said it was regrettable that "it was the Soviet Union that at first gave assistance in the nuclear field to Communist China" which "may now be regarded with some dismay by those who granted it." Ambassador Roshchin blamed the United States and its allies in NATO for "blocked progress" but concluded that opposing positions were better understood.

May 17, 1966: The Senate unanimously approved the Pastore resolution commending

the President for steps already taken, and supporting "the principle of additional efforts" for a nuclear nonproliferation treaty.

June 14, 1966: The ENDC resumed in Geneva. ACDA Director Foster in his opening remarks reminded the Committee of the 20th anniversary of the Baruch plan.

June 16, 1966: Ambassador Goldberg submitted a U.S. draft treaty on the exploration of the moon and other celestial bodies to Kurt Waldheim, Chairman of the Committee on the Peaceful Uses of Outer Space.

The Soviet Union also submitted to the United Nations a draft treaty on peaceful exploration and research in outer space and asked that it be included on the agenda of the twenty-first session of the General Assembly.

July 2, 1966: France exploded an atomic bomb on Niururoa atoll in the Pacific, the first in a series of explosions scheduled for the area.

July 12, 1966: At Geneva the Legal Subcommittee of the U.N. Committee on the Peaceful Uses of Outer Space began discussion of the U.S. and Soviet draft celestial-bodies treaties. Ambassador Goldberg stated that the drafts, though different in scope, would be reconcilable if there was good will and common purpose to reach agreement.

July 27, 1966: Prime Minister Eshkol told Jerusalem journalists that Israel had no nuclear arms and would not be the first to introduce them into her area.

July 28, 1966: At the ENDC, ACDA Deputy Director Fisher proposed the application of IAEA or equivalent international safeguards to the peaceful nuclear activities of non-nuclear-weapon states and to all international transfers of nuclear material and equipment for peaceful uses, in order to prevent the proliferation of nuclear weapons and to prevent nuclear weapons from being developed "under the guise of peaceful application of nuclear energy."

September 21, 1966: Secretary of State Rusk expressed hope for international agreements on the peaceful uses of space and on non-proliferation. He also hoped that the time would come "when, by permitting effective inspection on their own soil, the Soviets will make possible progress in reducing armaments."

September 24, 1966: Observing ACDA's fifth anniversary, President Johnson pledged the United States "to continue to search for peace." "When the United States was the only nation possessing atomic weapons," he said, "we urged others to join us in placing all atomic facilities under international control."

October 10, 1966: President Johnson met with Foreign Minister Gromyko in Washington to discuss a number of topics, including non-proliferation. After the talks, Mr. Gromyko told the press that the exchange was useful and that "it looks like both countries... are striving to reach agreement" on a non-proliferation treaty.

October 27, 1966: The Soviet Union set off the world's largest underground nuclear explosion—equal to more than a million tons of TNT—which seismic signals indicated as a yield in the intermediate to high range. The AEC reported the test was conducted on Novaya Zemlya.

October 27, 1966: Communist China's New China News Agency announced successful conclusion of a guided-missile-nuclear-weapon test with an explosive yield in the range of 20 kilatons.

November 4, 1966: By a vote of 110 to 1, with 1 abstention, the General Assembly adopted resolution 2149 (XXI) on renunciation of actions hampering the conclusion of a non-proliferation agreement. Albania voted against the resolution, and Cuba abstained. The resolution was cosponsored by the United States, Soviet Union, and other countries.

November 16, 1966: At the AEC's Hanford

plant near Richland, Washington, representatives of 50 nations and several international agencies watched the demonstration of a U.S. method of monitoring a shutdown plutonium-producing reactor.

December 2, 1966: The First Committee adopted by a vote of 99 to 0, with 10 abstentions, the tripartite draft resolution on the elimination of foreign military bases in the countries of Asia, Africa, and Latin America.

December 8, 1966: In Austin, President Johnson announced that the United States and the Soviet Union had reached agreement on a draft treaty barring weapons on the moon and other celestial bodies.

December 19, 1966: The General Assembly unanimously adopted resolution 2222 (XXI), endorsing the proposed treaty on the peaceful uses of outer space.

December 21, 1966: At a news conference, Secretary of State Rusk said that the United States would like to see "some means developed" to avert another upward spiral in the arms race and to avoid the "wholly new major levels of expenditure" which would be required by deployment of anti-ballistic missile defense systems by the two major powers. He expressed the hope that the Soviet Union would agree to refrain from entering this new and costly phase.

December 28, 1966: Communist China carried out a nuclear test at Lop Nor in Sinkiang province.

January 10, 1967: In his State of the Union message to the Congress, President Johnson declared that U.S. policy in East-West relations was "not to continue the cold war but to end it." Referring to Soviet ABM development, he emphasized that "the important link between Russia and the United States" was "our common interest in arms control and disarmament."

January 27, 1967: The Treaty Governing Activities of States in Exploration and Use of Outer Space Including Moon and Other Celestial Bodies was signed at Washington, London, and Moscow.

March 2, 1967: President Johnson announced at a news conference that Premier Kosygin had replied to his letter of January 27 and agreed to bilateral discussions on "means of limiting the arms race in offensive and defensive nuclear missiles."

April 25, 1967: The Senate unanimously approved (88-0) the outer-space treaty of January 27, 1967.

May 19, 1967: Tass announced that the Presidium of the Supreme Soviet of the USSR had ratified the outer-space treaty.

June 17, 1967: Communist China successfully exploded its first hydrogen bomb at the Lop Nor center in Sinkiang, the site of China's five earlier nuclear detonations.

June 23, 1967: After their first meeting at Glassboro, N.J., President Johnson said that he and Premier Kosygin had agreed that it was "now very important to reach international agreement on a non-proliferation treaty."

June 25, 1967: At the conclusion of the Glassboro, N.J., summit conference, President Johnson stated that he and Premier Kosygin had discussed arms limitation and had agreed that Secretary of State Rusk and Foreign Minister Gromyko would "pursue this subject" further in the immediate future.

August 24, 1967: At the ENDC, the United States and Soviet Union tabled separate but identical texts of a draft non-proliferation treaty.

September 9, 1967: In a speech at the launching of nuclear submarine NARWHAL, Senator Pastore calls for development of a U.S. ABM system.

September 18, 1967: Speaking at San Francisco, Secretary of Defense McNamara announced that the United States would deploy a limited anti-ballistic missile system against Communist China.

October 10, 1967: The outer-space treaty of January 27 entered into force when the United States, the United Kingdom, the Soviet Union, France, and other nations deposited their instruments of ratification at Washington, London, and Moscow.

November 3, 1967: Secretary of Defense McNamara announced at a press conference that the Soviet Union was believed to be in the process of developing an orbital nuclear missile that could reduce the warning time of an attack on the United States to about 3 minutes. He called the new Soviet system a "fractional orbital bombardment system (FOBS)."

November 6-7, 1967: Joint Committee on Atomic Energy and Senate Preparedness Committee hearings on Scope, Magnitude, and Implications of the United States Anti-Ballistic Missile Program, held.

November 18, 1967: Marshal Krylov, Commander-in-Chief of the Soviet Strategic Rocket Forces, announced at Moscow that the USSR had developed new missiles "capable of delivering nuclear warheads to the target along ballistic and orbital trajectories." He said that the head portions of these rockets carried devices to break through the enemy's anti-missile defenses.

December 2, 1967: President Johnson announced that when Safeguards were applied under the non-proliferation treaty, the United States would permit the International Atomic Energy Agency to apply its safeguards to all nuclear activities in the United States, with the exception only of those with "direct national security significance."

December 5, 1967: By an 85-0 vote with 9 abstentions, the General Assembly passed resolution 2286 (XXII) approving the Treaty for the Prohibition of Nuclear Weapons in Latin America. Cuba, the Soviet Union, and France were among the abstaining states.

December 18, 1967: The General Assembly passed resolution 2340 (XXII) establishing an *ad hoc* committee to study the exploration and use of the sea-bed and ocean floor. The vote was 99 to none, with no abstentions.

December 24, 1967: The AEC announced that the Chinese Communists had conducted their seventh atmospheric nuclear test explosion. The low yield detonation was held in the Lop Nor testing area. This test, unlike the six earlier ones, was not publicly announced by the Peking authorities.

January 18, 1968: The ENDC reconvened in Geneva. The United States and the Soviet Union submitted separate but identical revised texts of the draft non-proliferation treaty.

February 12, 1968: President Johnson told the Congress that the draft non-proliferation treaty of January 18 was the most significant achievement of the U.S. Arms Control and Disarmament Agency since its establishment.

March 7, 1968: In the ENDC, the United States, the United Kingdom, and the Soviet Union submitted to a draft Security Council resolution on security assurances to non-nuclear weapon states. The resolution would recognize that the nuclear-weapon permanent members of the Security Council would have to "act immediately in accordance with their obligations under the United Nations Charter" against a nuclear attack or threat of nuclear aggression against a non-nuclear weapon state.

March 20, 1968: In the U.N. *Ad Hoc* Committee To Study the Peaceful Uses of the Sea-Bed, the Soviet Union proposed that the ENDC negotiate an international ban against using for military purposes the sea-bed and ocean floor beyond the limits of national jurisdiction.

April 1, 1968: At Mexico City, the United States signed Additional Protocol II to the Treaty for the Prohibition of Nuclear Weapons in Latin America (see February 14, 1967). The protocol calls on nuclear-weapon states

(1) to respect the statute of denuclearization in Latin America, (2) not to contribute to violations of the basic provisions of the treaty, and (3) not to use or threaten to use nuclear weapons against the Latin American parties to the treaty.

June 4, 1968: In his commencement address at Glassboro State College, President Johnson said that the United States was anxious to reach an agreement with the Soviet Union to avert a "costly anti-ballistic missile race between the United States and the Soviets." He said that the United States was now ready to put an end to the nuclear arms race, provided that it and the Soviet Union could reach "binding agreements" which would "preserve the security of each nation."

May 31, 1968: Speaking to the General Assembly, President Johnson said that the non-proliferation treaty was the "most important international agreement in the field of disarmament since the nuclear age began."

June 24, 1968: U.S. Senate votes funds for a U.S. ABM system.

June 27, 1968: In the Supreme Soviet, Foreign Minister Gromyko announced that the Soviet Union was ready to begin discussions with the "Western nuclear powers" concerning a "mutual restriction and subsequent reduction" of offensive and defensive missile systems.

July 1, 1968: The non-proliferation treaty was opened for signature at Washington, London, and Moscow. The representatives of 56 countries signed during the White House ceremonies.

July 11, 1968: In a statement to the Senate, Foreign Relations Committee, General Wheeler, the JCS Chairman, said that the JCS had long supported "balanced, phased, safeguarded, and verifiable arms control measures." In reviewing the non-proliferation treaty, they concluded that the treaty did not "operate to the disadvantage of the United States and our allies" and that it did not "disrupt any existing defense alliances" of the United States.

August 20, 1968: Armed forces of the Soviet Union, Poland, Hungary, Bulgaria, and East Germany invaded Czechoslovakia.

August 24, 1968: At Mururoa atoll, France exploded its first hydrogen bomb.

September 4, 1968: NATO's Defense Planning Committee announced that a meeting of military experts to study plans for mutual arms reduction by NATO and the Warsaw Pact nations had been called off as a result of the Soviet invasion of Czechoslovakia.

September 5, 1968: Speaking before the National Press Club, Secretary of Defense Clifford said that he did not think that the U.S. decision to install the Sentinel ABM defense system and to continue MIRV tests would "hinder the success of the proposed U.S.-Soviet negotiations on strategic arms limitations. He said that the Soviet invasion of Czechoslovakia indicated that a "significant American military presence in Western Europe" was still needed, and that "when and if we negotiate, safety and success demand that we negotiate from strength."

September 11, 1968: In a press statement, Mr. Nixon endorsed the non-proliferation treaty but urged the Senate to delay approval until the "posture and intentions of the Soviet Union toward Czechoslovakia and other nations of Central and Western Europe can be reassessed."

September 17, 1968: The Senate Foreign Relations Committee approved the non-proliferation treaty by a 13-to-3 vote, with 3 abstentions. Senators Hickenlooper, Aiken, and Williams abstained from voting, while Senators Dodd, Lausche, and Mundt voted against the treaty.

September 29, 1968: Secretary of Defense Clifford said in a television interview that the United States "should maintain a nuclear superiority vis-a-vis the Soviet Union. He believed this issue involved the "very exist-

ence of our nation as a nation," and "you deal much better with the Soviet Union when you deal from strength."

October 25, 1968: At a news conference, Secretary of Defense Clifford said that the Soviet Union had considerably narrowed the nuclear missile gap in recent years, but that the United States still maintained, "substantial military superiority" over the Soviets.

December 10, 1968: The Soviet Union announced an increase in its military budget for 1969.

December 27, 1968: Communist China conducted an atmospheric hydrogen bomb test in the Lop Nor area. The detonation had a yield of about three megatons and was the eighth Chinese atmospheric test detected by the United States.

January 14, 1969: Appearing before the Senate Armed Services Committee, incoming Secretary of Defense Laird stated that negotiations between the United States and the Soviet Union concerning missile reductions had been set back "at least for 9 to 12 months" as a result of the Soviet's invasion of Czechoslovakia last year.

January 20, 1969: The Soviet Government announced that it was ready to "start a serious exchange of views" with the United States on a "mutual limitation and subsequent reduction of strategic nuclear delivery vehicles, including defensive systems."

January 27, 1969: At his first Presidential news conference, President Nixon said that he favored the non-proliferation treaty, but that he would have to confer with the National Security Council and Congressional leaders on whether this was the proper time to ask the Senate to approve it.

February 5, 1969: In a special message to the Senate, President Nixon formally asked for approval of the nuclear nonproliferation treaty.

February 25, 1969: The Senate Foreign Relations Committee approved the non-proliferation treaty by a vote of 14 to 0. Senator Dodd (Dem., Conn.) abstained.

March 13, 1969: The U.S. Senate by a vote of 83-15 gave its advice and consent to ratification of the non-proliferation treaty.

March 14, 1969: President Nixon announced that the United States would deploy a modified ballistic missile defense system to be known as the Safeguard program.

March 17, 1969: Dr. DuBridge, Science Adviser to the President, stated in a letter to President Nixon that he thought the Safeguard antiballistic missile system approved by the President represented a "sound and reasonable approach to our strategic defense problem."

March 18, 1969: The Eighteen Nation Disarmament Committee (ENDC) began its 15th session at Geneva. In a letter to ACDA Director Smith, President Nixon stated that the "fundamental objective" of American foreign policy was the establishment of a world of "enduring peace and justice" in which international disputes would be resolved "without resort to war."

April 7, 1969: At a press conference, Secretary of State Rogers said that nothing was hindering the start of the strategic arms limitation talks between the United States and the Soviet Union. He said he expected them to begin in the late spring or early summer.

April 10, 1969: The Department of State announced that the United States and the Soviet Union would hold technical talks in Vienna, beginning April 14, on the peaceful uses of nuclear explosions.

April 16, 1969: The United States and the Soviet Union issued a joint communique at the conclusions of the Vienna talks on peaceful nuclear explosions declaring the talks "timely" and "very useful" and recommending that additional talks on the subject be held.

May 22, 1969: At the ENDC, the United States submitted a draft treaty to ban the

emplacement of nuclear weapons and other weapons of mass destruction on the seabed and ocean floor beyond a three-mile coastal limit.

June 19, 1969: President Nixon told his news conference that the United States was completing its strategic review. Secretary of State Rogers had informed the Soviet Ambassador that the United States had set July 31 as the target date for the beginning of the talks.

July 3, 1969: In a message to the ENDC, President Nixon expressed the hope that a "sound seabed arms control measure" could be presented to the General Assembly.

July 10, 1969: In an address to the Supreme Soviet, Foreign Minister Gromyko said that the Soviet Union was prepared for Strategic Arms Limitation Talks (SALT) and hoped that both sides would bear in mind its "paramount importance."

July 11, 1969: In a press statement, Secretary of State Rogers said that Gromyko's speech seemed to be "positive in tone." He said that the United States considered SALT a "significant step forward in our relations with the Soviet Union" and was awaiting a Soviet response on the time and place of the talks.

Mr. PASTORE. Mr. President, I thank Senators for listening.

The VICE PRESIDENT. Who yields time?

Mr. JACKSON. Mr. President, will the Senator from Kentucky yield some time?

Mr. FULBRIGHT. Mr. President, I hope the Senator from Kentucky will not yield time to the opposition.

Mr. COOPER. Mr. President, I understand that 44 minutes remain.

The VICE PRESIDENT. The Senator is correct.

Mr. JACKSON. Mr. President, how much time remains to the opposition?

The VICE PRESIDENT. Thirty-three minutes remain to the opposition.

Time is running.

The Senator from Kentucky is recognized.

Mr. COOPER. Mr. President, I yield 10 minutes to the Senator from Missouri.

The PRESIDING OFFICER (Mr. GURNEY in the chair). The Senator from Missouri is recognized.

Mr. SYMINGTON. Mr. President, I ask that we have order and that the time involved not come out of my time.

The PRESIDING OFFICER. The Senate will be in order so that the Senator may be heard.

The Senator may proceed.

SIGNIFICANT REASONS AGAINST SAFEGUARD DEPLOYMENT

Mr. SYMINGTON. Mr. President, it would appear that just about everything which could be said has been said about the proposed deployment of this Safeguard ABM system.

For months, based on the facts, it has been difficult indeed for me to understand why there has been such unparalleled desire, from so many quarters, to deploy this system at this time.

Perhaps there is one aspect which has not been adequately emphasized; namely, if the strength and reliability—specifically, the lethal yield, megatonnage, and CEP, accuracy—now ascribed to the Soviet SS-9 missile by our Defense Department is correct, it would appear that our Minuteman, in their fixed missile sites, will shortly become obsolescent if not actually obsolete.

If this is correct, then I believe it is important to weigh carefully our entire defense posture—what should we have, what should we do so as to attain adequate security at minimum cost in lives and treasure.

What are the true national priorities incident to our increasingly limited resources?

I do not agree with this sudden elevation to unprecedented performance by the Defense Department of this liquid-fueled Soviet SS-9, actually nothing more than a possible improvement to our own now abandoned liquid-fueled Titan ICBM. But if the Department is correct, then, in recognition of the tremendous increase in the art of nuclear yield as against weight, it would seem clear that it is of paramount importance to our national security for us to establish, now, a major research and development program for the establishment of mobile missiles on the ground comparable to the mobile status of Polaris on the seas.

Finally, after long study, it is my conviction that, first, because some of the five primary components have not yet been built, let alone tested, and because of their complexity, these units may not work adequately, when linked together, in case of a sudden all-out attack; second, no one has ever yet asserted that the Safeguard radar is right in design to defend hard missile sites; third, no one has presented any logical answer to the constantly repeated assertions of objective scientific experts that the Safeguard radar is vulnerable to even the smaller Soviet SS-11 missiles, of which they have hundreds, and fourth, and no one yet has ever denied that a relatively slight addition to the production of Soviet SS-9's would nullify any effective defense which could be obtained as the result of the deployment of this Safeguard ABM system.

Except for heavy multiplication of the relatively small number of Sprints and Spartans that are now planned in this Safeguard system—figures so small that unfortunately they have never been declassified—the only defense offered to this devastating criticism is that the very high cost of the SS-9's to the Soviets would prevent them from increasing SS-9 production; an argument absurd on the face of it.

To illustrate this absurdity, consider the fact that the latest unit cost of the Minuteman III, our most modern ICBM, is currently estimated at less than \$5 million, that figure including various R. & D. and site costs.

But in effort to rig up some answer to the charge that the Soviets could totally nullify any effective defense obtained from Safeguard by means of but a small increase in SS-9 production, we are now told that the unit cost to the Soviets of future SS-9's would be \$30 million.

In other words, in this ever more strange dialogue of justification, we are now asked to believe that in a country where we are told each man in turn is told where to work, when to work, and at what wages he shall work, the cost of the new Soviet ICBM will nevertheless be over six times greater than the cost to our own taxpayers of our newest ICBM.

If the Senate now decides to accept this latest justification for deployment

of this unproved weapons system, I believe that it will be a sorry day, indeed, for the security and well-being of this country.

Now Mr. President, I do not, in any way, criticize the sincerity of those who are for this system or those who are against it. But 24 years ago, as Assistant Secretary of War, I heard what could be well described as "terror talks" about the Soviet danger, have heard them consistently over this quarter century, and am hearing them again today.

When I objected to this system because the technology of it did not appear right to me, I was criticized. Some people said, "We thought you were one of us." Well, I am "one of us." I am an American citizen, as we all are.

I did some research, and found that, since the end of World War II, I have worked for and voted for \$953 billion of the taxpayers' money to protect this country. So as of the end of this session, I will have voted for over one trillion dollars, \$1,000 billion, to protect the United States against outside danger.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. SYMINGTON. If I may finish this one point.

Mr. President, it has gotten to a point in the Senate—and I say this with great respect—that we have some Senators who can hear the farthest drum before the cry of a single hungry child in the street; and we have some Senators, fed up with that approach, who can hear all the children, whether or not they are hungry, before they can hear a single drum.

Then there is another group, and a large group, which can hear every single child and every single drum and say: "What of it? I'll vote for all the children and I'll vote for all the drums."

That is perhaps the worst position. It is as clear as light that the integrity of the dollar, through such problems as inflation and the continuing unfavorable balance of payments, is slowly but steadily being eroded to the point where our people are suffering—really suffering—not only the really poor, but also those with average and less than average incomes in this country.

Therefore, I earnestly hope there is a fourth group on this floor, a group who will say: "We have to establish some priority. We cannot go on forever listening to the terror talks about the dangers which are made to justify the latest of these new weapons systems being presented to the Congress."

I say this as one who admits his own error in voting for every one of these systems up to this particular Sentinel-Safeguard system.

I yield to the Senator from Arkansas.

Mr. FULBRIGHT. I merely wanted to emphasize what the Senator said about how much we have appropriated since World War II and how, on every occasion, if a question has been raised, we have heard exactly the same kind of talk as the Senator from Rhode Island has just given us.

Now we look at the situation in this country. The Senator from Missouri has often talked of it, and it has resulted, to

a great extent, in the diversion of over a trillion dollars.

Actually, when the Senator says he has voted for \$935 billion, he is talking about direct costs of the military. He does not include such things as the indirect costs of the veterans' program and in the interest on the debt created by the military. If that is used, it is \$1,250 billion.

This is one of the troubles with this country today, because we have neglected so many of the other activities. The Senator from Rhode Island very glibly says if we need anything else, we can have it; there is no matter of choice. Well, this has been proved to be clearly not feasible under our system. The Senator, himself, knows this, when we consider the critical situation this country is in today, financially and internally, from the disaffection of so many people in the ghettos and the universities.

So I agree with the Senator from Missouri, and I do hope that on this, the first occasion that the Senate has ever seriously challenged, on the floor of the Senate, any military program, the Senate will at least resolve any doubts in favor of some restraint upon the growth of the largest military establishment the world has ever seen.

Mr. SYMINGTON. Mr. President, I thank the Senator from Arkansas for his constructive comments.

I have served 17 years on the Committee on Armed Services with one of the most gracious and intelligent people with whom it has ever been my privilege to work, the senior Senator from Maine. To the best of my knowledge—although I may be wrong—this is the first weapons system that she has ever questioned in such open fashion. I would hope that my colleagues on both sides of the aisle would give at least some respect to her opinion in a field in which there is no greater authority in this body than the senior Senator from Maine.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I yield 5 minutes to the senior Senator from Wyoming.

Mr. MCGEE. Mr. President, hopefully, we will soon decide the question of deployment of antiballistic missiles. The long hours of debate over this vital, if not agonizing, question have reinforced what all of us, Senators and citizens alike, have long known. That is, our decision here will not be easy.

The question before us is of unprecedented dimension. The testimony heard in Senate committees and the long debate on the floor have all been tools to help us in our decision. The coming determination on the deployment of the ABM may hold in balance more answers to the mystery of the future than any of us would like to believe. For this reason, making the right decision becomes a more awesome responsibility than any one mortal could possibly wish in his own time. As painful and as difficult as the decision is for all of us as Senators of the United States, we are required by the Constitution, by tradition and constituent expectation to do so.

Until now, much overstatement and misstatement has characterized the widespread discussion on the ABM. Wishful thinking and emotional "druthers" have often swept the dispute beyond the normal rules of reason; and most serious of all, the longer the debate has gone on, the more intransigent have the proponents and opponents become.

A major casualty of the ABM dispute has been the open mind and the flexible judgment. The temptation to freeze one's opinion; to lock in one's case and then to assemble as much evidence as possible to prove that case too often has come to dominate the forensics of the Nation's debaters on this question.

The well-being of the human race, as well as the national interest of the United States, demands that our judgment here be as error free as possible. The quest for wise judgment forces us to use every analytical tool at our disposal. One such tool would, in my estimation, be a set of four questions. Such a set would be something like the following questions:

First. Do the security demands of the United States require the ABM?

Second. Will the ABM work?

Third. Will our adoption of an ABM system escalate the arms race?

Fourth. Are there viable alternatives to the ABM?

As imperative as is the need for certainty in responding to these questions, the current status of data, facts, information and the interminable unknown have surfaced only one firm conclusion and that is no one knows for sure. This is what is so characteristic of the hours and hours of hearings, the pages and pages of testimony, and the days of debate about the ABM.

The questions I refer to have not become less imperative by the testimony and by the debate, so, my comments are only one Senator's attempt at answers to the urgent questions so far raised by our discussions.

The first of these urgent questions is: Do the security demands of the United States require the ABM?

Both sides in the controversy are generally agreed that some eventualities which would upset the security of the United States might indeed come to pass. In the first place, both sides have agreed—generally speaking—that the Soviet Union's big SS-9 Missile might be able to destroy virtually all the American Minuteman intercontinental missile force in a surprise attack.

Second is the possibility that the growing Soviet missile-carrying submarine fleet might be used to launch a surprise attack on the American Bomber Force.

Third is the possibility that the Mainland Chinese might deploy a force of ICBM's that could threaten the destruction of a number of American cities.

Fourth is the possibility of an accidental or a demonstration launch of a missile by one of the nuclear powers.

What is so characteristic of all these possibilities is that they are, indeed, possibilities not certainties or even probabilities. Wisdom has for some time dictated that meaningful choicemaking has

seldom been allowed the luxury of certainty.

The second question we must answer in our deliberations over the ABM system is: Will the ABM work?

Here again there is little disagreement over whether the various components of the Safeguard system taken separately will work. All of them except the long-range perimeter acquisition radar have been built and successfully tested.

But, all this does not permit us the ease of accepting the facile implication that we must buy the Safeguard system; since we do not know, with clear certitude, whether all the components when put together will work in an emergency. Yet, it is all we have at this point, and the need for ABM seems to me still present, even though we do not have absolute assurance that it will all work in an emergency.

Perhaps there is some point in recalling that similar doubts about "workability" preceded the final successful completion of other weapons systems.

The third question raised in the controversy over the ABM system is even more difficult than the first two. That is: Will our adoption of an ABM system escalate the arms race?

Here again, the question is a matter of judgment. Will the hopes for world peace be enhanced if the United States goes ahead with deployment of a major new weapons system while it engages in the disarmament talks that are sure to be extremely complex and may last for 4 or 5 years? Or will the hopes for peace be enhanced if the United States stops deployment of both Safeguard and multiple war heads as a dramatic first step in the negotiations?

Whether or not these questions are a matter of judgment does not allay the reality of the Soviet Union's SS-9 missile. Nor do the questions relieve us of the fact of a growing Soviet missile-carrying submarine fleet. The questions give us scant comfort in the face of mainland China's determination to build ICBM's. And last, the possibility of an accidental or a demonstration launch of a missile by one of the nuclear powers is not lessened by the question.

Therefore, before deciding that a limited ABM deployment would trigger a new level of the arms race, one would have to establish within reasonable certainty that the "balance of terror" would be seriously upset. However risky or frightening the maintenance of such a balance may appear to be, it has in the past afforded a better climate for talks than the contrary condition of serious imbalance. For example, during the time that the United States had a monopoly on atomic bomb delivery capability, there was no disposition in Moscow to discuss arms limitations. Now that the Soviets and the Americans have achieved their relative balance of terror the prospects for meaningful talks, at least, have noticeably improved. The proposed "thin line" deployment would not add to the delicate scales of balance new elements not already present.

By the same token, it is argued by some political scientists that the mainland

Chinese cannot afford to discuss arms limitations at least until they have acquired a delivery capability. For the predictable future, however, the relevant make-weights for nuclear balance will be held in American and Soviet hands.

If, on the other hand, our failure to deploy a thin line of ABM's should forfeit our relative balance of capabilities, would not the chances for U.S.-U.S.S.R. negotiations have been set backward?

Because the answers to the first three questions are dominated by uncertainties, the fourth question becomes almost chimerical. Are there viable alternatives to the ABM?

The necessity for an answer does not diminish in the face of the illusive difficulty of the question. The fact is, if the consequences of the decision not to employ the ABM system prove to be wrong, then it would be disastrous to the United States. On the other hand, if we build the ABM system and do not have to use it, such a decision would not be a disaster. I know there are those who believe that weaponry expenditures destroy our chances of resolving our grave domestic problems. But, I believe that the vaunted wealth of the United States allows us not only to safeguard national security but to resolve the very serious internal problems as well. And deployment conceivably could even preserve the chance for new solutions to the disarmament question.

Even so, this Senator, as an individual human being, for example, is plainly structured constitutionally in opposition to military might; he is philosophically fearful of unrestrained arms races. His personal "druthers" would be to oppose the ABM. And were he still a professor in the classroom, he might well be out on the public platform crusading against the ABM.

As a U.S. Senator, however, I have sought to isolate in my own conscience the requirements of a public sense of responsibility, and have made an effort to equate that sense with an understanding of that even deeper responsibility which falls upon the shoulders of the President of the United States. This, then, becomes the key to my quest for the necessary answer regarding the limited deployment of the ABM.

The President of the United States—any President, not just this one—I presume, must start from his own assumption that his decision may be wrong. Only in this way can he then measure the consequences of human error for the people of his country. Should he decide to deploy the ABM system and this turns out to be a wrong decision, would the consequences be irretrievable? Or, on the other hand, should he decide to veto the system and this turned out to be a wrong decision, what would it mean? In the simplest terms it could mean, in the first instance, the wasting of several billions of dollars—little more. In the second instance, however, if scrubbing the system proved to be a wrong decision, the obvious consequence could be serious, if not fatal, to our country's security.

Or, even the pending compromise proposal could risk the loss of irretrievable

time should the optimists turn out to be wrong.

The sheer uncertainty surrounding the search for the right answer must weigh heavily on the sense of responsibility of any President of the United States. It would seem to boil down to the President's having to back into the lesser of two evil choices. While a Senator on either side of the argument can still afford to be wrong with less disastrous consequences for the country or for the world, the President cannot.

For this reason, there ought to be a greater understanding of the importance of protecting the President's options—of allowing the President the opportunity to hedge his bets in order to keep open the choice of correcting or adjusting the national course as we learn more and as the known factors permit a more sophisticated judgment.

As the country in general and the Senate of the United States in particular now approach the time for decision on the ABM, I believe it important to keep uppermost in our minds the requisite of Presidential responsibility in arriving at that decision.

The awful loneliness imposed by that sense of responsibility on the conscience of a President—be he a Truman, an Eisenhower, a Kennedy, a Johnson, or a Nixon—ought to evoke a deeper understanding in the heart of each Member of this body. It is in that spirit of understanding that I have chosen to support the President of the United States in his request to proceed with a limited deployment of an anti-ballistic-missile system.

Mr. President, I wish to concentrate on one point. It is a very personal point. It has to do with the philosophy of this liberal Democratic Senator in regard to this special issue. In a sense, I think it would be fair to say that I have sort of backed into this position.

One of the real casualties in this dialog, in these debates, and in this controversy, in my judgment, has been the freezing of many minds, the closing of many more of them; and I hope that once we get this behind us, there will be a thawing out again. For that reason, what I have to say at this time has nothing to do with persuading anyone to consider the rightness or the wrongness of my particular view; because, if the truth were known, I am constitutionally structured, as an individual human being, to oppose armies, to oppose generals, to oppose arms races. It just goes against my grain. And I would not mind confessing that if I were back in the classroom, professing again on my campus, I probably would be out crusading against the ABM.

But on this special occasion I have tried to isolate in my conscience and within the dimensions of my personal philosophy what I have striven to understand better than I ever have before, and that is the loneliness of the responsibility that finally devolves upon the shoulders of the President of the United States—any President of the United States, not just the present one.

I must say, Mr. President, that while I can have my own biases on this question, the world will survive if McGEE is wrong.

The world probably will survive the decision that any Senator in this body makes. If I am wrong, I can just say: "Sorry, Chief; let us try something else. We will go on our way." But in the case of the President, the issue is slightly different, and if he makes a wrong decision, the consequences are far more serious than if I do.

Thus, I have tried to approach a closer understanding of the kind of situation in which he finds himself. I would think, although I have no reason for knowing, that any president would have to back into this matter by assuming that he is wrong, so if he decides to agree to an ABM deployment and assuming he turns out to be wrong, what are the consequences? In this case I suppose the consequences would be the expenditure of a great many billions of dollars as Senators have mentioned, and probably more than that.

But the real test comes when a president has to ask himself, "Suppose I am wrong if we do not deploy it. Then, what are the consequences?" I think it is immediately obvious that the consequences then are those of a highly escalated price and a price that goes beyond dollars and taxes, a price that might be irretrievable because of the passing events of our time.

On this basis, as I have searched for understanding on my own part, I thought of that terrible isolation that falls upon a President, be he a Truman, Eisenhower, Kennedy, Johnson, or a Nixon, and that he has to be prepared to take the lesser of evil alternatives. We have to help him, in my judgment, to protect his options, and to hedge his bets.

Whatever else emerges from our hours and hours of debate and hearings, it is that none of those who testified before us are willing to testify quietly alone with us that they are sure they are right. There is that haunting uncertainty.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MCGEE. There is that haunting uncertainty of not being sure that behooves me to support the President in protecting this option, in hedging on this point, until we can learn more in the days ahead about the judgments that we will still be required to make.

The PRESIDING OFFICER. Who yields time?

Mr. HART. Mr. President, I yield to the senior Senator from Maine. How much time does the Senator request?

Mrs. SMITH. Mr. President, I shall take only—

Mr. NELSON. Mr. President, I wish to inquire if this is on the time of the proponents of the measure.

Mr. HART. It is. I wish to explain to the distinguished Senator from Wisconsin, who understood he had 10 minutes and we were advised he had requested 5 minutes, that we will make our best effort to deliver on the time we have been asked to provide. I think all of us understand why time is now unanticipatedly being allocated to the Senator from Maine.

Mr. NELSON. Yes, I am wondering. Some of us have brief remarks.

August 6, 1969

The PRESIDING OFFICER. Does the Senator wish to state a parliamentary inquiry?

Mr. NELSON. Mr. President, I would like to ask unanimous consent that whatever time the Senator from Maine uses be changed to the time on the bill.

The PRESIDING OFFICER. There is no time on the bill.

Mr. STENNIS addressed the Chair.

The PRESIDING OFFICER. The Senator from Mississippi is recognized.

Mr. STENNIS. Mr. President, will the Senator restate his request? What is the request of the Senator?

Mr. NELSON. Mr. President, I would like to have the Senator from Maine recognized from some other time rather than on the time of some of us who would like to make remarks. Perhaps we should ask unanimous consent that each side be granted 5 more minutes.

Mr. STENNIS. The time now being used is on the amendment.

Mr. HART. The Senator can have all of my time remaining, which is 2 minutes.

Mr. STENNIS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. STENNIS. Mr. President, at this stage of the proceedings, under the unanimous-consent agreement, is it in order to offer an amendment to the Cooper amendment?

The PRESIDING OFFICER. It is not in order until the time has expired, unless it is by unanimous consent.

Mr. HART. Mr. President, I yield to the distinguished Senator from Maine.

Mrs. SMITH. Mr. President, I shall take only a minute.

I thank the distinguished Senator from Michigan for yielding.

Mr. President, at the expiration of time on the Hart-Cooper amendment I intend to offer another amendment, and for the information of the Senate I will read the amendment at this time. The amendment will be my original section 402, with an additional provision:

Sec. 402. None of the funds authorized by this or any other Act may be used for carrying out, after the date of enactment of this Act, any research, development, testing, evaluation, or procurement of the antiballistic missile system known as the Safeguard system, or to carry out any research, development, testing, evaluation, or procurement of any part or component of such system; *Provided*, That funds contained herein or elsewhere for research, development, test and evaluation of components, and related procurement, of any other advanced antiballistic missile system or other weapons system shall not be affected.

I have copies of the proposal on my desk if anyone wishes to read it.

Mr. COOPER. Mr. President, will the Senator yield for a parliamentary inquiry?

The PRESIDING OFFICER. Who yields time?

Mr. COOPER. Mr. President, I make a parliamentary inquiry in order to be certain. When all the time has elapsed upon the Cooper-Hart amendment, will it then be in order for the Senator from Maine to offer her amendment?

The PRESIDING OFFICER. The Chair advises the Senator that it would

be in order for anyone to offer an amendment at that stage.

Mr. COOPER. I want it to be specific. I ask about the amendment of the Senator from Maine.

Is there any parliamentary device which can prevent her from offering her amendment when all the time has elapsed, if she secures the floor?

The PRESIDING OFFICER. No; nothing would prevent its offering at that time.

Mr. COOPER. Mr. President, I would like to make an announcement.

Mr. FULBRIGHT. Mr. President, may we have order? It is difficult to hear the Senator.

The PRESIDING OFFICER. The Senate will be in order.

Mr. COOPER. Mr. President, the Senate knows of the long hours of debate we have had on the Hart-Cooper amendment. We believed in it, and worked for it, and fought for it. We have been joined by many other Senators in this body who have worked in the same way.

We have had an opportunity to listen to the distinguished Senator from Maine when she first presented an amendment and, of course, she has been very kind to discuss her amendment with us.

She will offer a new amendment. The Senator from Michigan (Mr. HART) and I have considered it with many others and decided that her amendment, in a different way, but as precisely and perhaps more clearly accomplishes the purpose of our amendment.

So when the opportunity arises I shall vote for her amendment. My colleague, the Senator from Michigan (Mr. HART) will speak for himself, but I know we will vote for her amendment and we would hope very much that all of those who have been so kind as to support the amendment which we offered will join us in supporting the amendment of the Senator from Maine.

Mr. MURPHY. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I yield myself 1 minute to make a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. STENNIS. Mr. President going back to the proposition about the amendment, no amendment has been offered now or sent to the desk. Is that correct?

The PRESIDING OFFICER. The Senator is correct.

Mr. STENNIS. But I have one in my hand—which is not my own.

My point is that the amendment of the Senator from Maine, another amendment, offered on that same subject, would have to carry a substantial difference in substance.

The PRESIDING OFFICER. The Senator is correct.

Mr. MURPHY. Mr. President, a parliamentary inquiry.

Mr. STENNIS. Does the Senator wish to be recognized?

Mr. MURPHY. No. I wish to address a parliamentary inquiry.

Mr. STENNIS. I yield 1 minute for that purpose.

Mr. MURPHY. Mr. President, when the Senator from Maine offers a new amendment, will it be in order for debate, will time be controlled, and for how long?

The PRESIDING OFFICER. The Chair advises the Senator there will be 1 hour under the previous agreement, which would be divided equally.

Mr. STENNIS. I yield 10 minutes to the Senator from Washington.

Mr. JACKSON. Mr. President, in my opening remarks in this debate on July 9, I addressed the Senate on the main considerations which lead me to support President Nixon's request for the authorization of phase I of the Safeguard ABM. Later, at a closed session of the Senate, I discussed many of the classified matters relating to the proper consideration of this issue. Since that time, I have noted a recurring theme of those who oppose the President's ABM request: It is said that the Safeguard ABM "will not work."

This is not the first time we have heard this argument against a new development. When the first automobile chugged down the street, there were loud cries of "The darn thing will never work, get a horse." When the first pair of pajamas was put on sale, a man looked at it and predicted it would never replace the old-fashioned nightshirt.

In 1906, we were told that heavier-than-air craft would be incapable of sustained flight. Who said that? Simon Newcomb, an American scientist of the first rank, and he said that a few years after the Wright brothers flew at Kitty Hawk.

In 1933, we were advised that we were never likely to be able to control atomic energy to a useful extent. Who said that? Dr. Ernest Rutherford, the great English scientist and Nobel Prize winner, and he said it less than a decade before we achieved the first sustained nuclear chain reaction.

At the end of the 1940's, we were told the H-bomb might not prove feasible. Who said that? Various members of the prestigious General Advisory Committee to the Atomic Energy Commission. In the end, every member of the General Advisory Committee recommended, for one reason or another, that we not go forward with the hydrogen bomb—except Dr. Glenn Seaborg, who was away in Europe when the committee met on October 29, 1949. And who were the members of the General Advisory Committee? They were a Who's Who of the American scientific fraternity.

It is our good fortune that President Truman rejected the advice of these noted scientists. He concluded that the Soviets would go ahead with their own program, whatever we did, and that to leave the field and possibly sole possession of the H-bomb to Russia would be a criminal dereliction of duty. As things turned out, the Soviets were already hard at work on the H-bomb. Their test came at about the same time as ours at Eniwetok and was also a successful one.

In 1949, a book was on the presses with a prediction that it would be 10 years before the Soviets would produce a work-

August 6, 1969

able atomic bomb. When the Soviets exploded an atomic bomb in August 1949, the printing presses had to be stopped, and the prediction cut out of the type. Who was the author of the book? The distinguished scientist, Dr. Vannevar Bush, who directed the important Office of Scientific Research and Development during World War II. The book was his well known "Modern Arms and Free Men."

In 1949, we were told that it would prove impossible to make relatively accurate intercontinental rockets—that in fact such rockets would be extremely inaccurate and astronomically expensive. Who told us that? Dr. Vannevar Bush.

In February 1953, it was said that the Soviets could not be expected to have any ICBM's before the late 1960's. Who made that prediction, plainly in error before the year 1953 was even over? That prediction was made in the final report of the Lincoln Summer Study, among whose prominent members were President James Killian of MIT, Dr. Carl Kaysen of MIT, and Dr. Jerome B. Wiesner of MIT.

In 1956, we were told that it was not technically feasible to put H-bombs in intercontinental missiles. Who told us that? P. M. S. Blackett, the outstanding British scientist and Nobel Prize winner in physics. And he told us that at a time when it had been known in the classified literature for more than 2 years that it was technically feasible and when, in fact, this knowledge had played an important part in the decision to accelerate the U.S. ICBM program.

In 192 it was said that lunar orbital rendezvous would be a poor way to send men to the moon, that it would not work, that it involved too great risks for the lives of the astronauts, and so on. Who said that? Dr. Jerome B. Wiesner, then science adviser to President Kennedy. Fortunately, President Kennedy did not follow Dr. Wiesner's counsel on this issue. He followed the advice of the responsible technical experts in NASA.

We all recognize the right of scientists to speak their minds. The men I have cited were able and knowledgeable. They have made outstanding contributions in their own professions and disciplines. The point is: Exact prediction on these matters defies absolute assertion, and even great scientists can be wrong.

In short, we do not settle an issue like the ABM by claiming it will not work. Distinguished scientists will be found on both sides of this sort of issue. Trying to make one's case by the method of scientific authority will not wash. Like President Truman in the H-bomb decision, and like President Nixon now in the ABM decision, we Senators have to use our heads and exercise our judgment in evaluating the conflicting points of view and in weighing all the relevant considerations.

As my colleagues know, some critics of Safeguard have tried to give the impression that the whole scientific community is up in arms against the Safeguard ABM. This is a wild distortion of the facts. Even the scientists who appeared before the Senate Armed Services Committee as opponents and critics of the Safeguard system did not go out on the

limb of saying that Safeguard would not work. And there is no doubt whatsoever about the eminence of those scientists who believe Safeguard is practicable and who strongly support going forward with the program as recommended by President Nixon—such men as:

Dr. Freeman Dyson, professor, Institute of Advanced Study in Princeton.

Dr. Charles Herzfeld, former director, Advanced Research Projects Agency.

Dr. Willard Libby, Nobel Prize winner in chemistry, professor of chemistry and director of the institute of geophysics and planetary physics at the University of California, Los Angeles, and a former member of the AEC.

Dr. William McMillan, professor chemistry, UCLA.

Dr. Frederick Seitz, president, Rockefeller University, recently president of the National Academy of Sciences.

Dr. Harold Smith, associate professor of nuclear engineering, University of California at Berkeley.

Dr. Edward Teller, associate director, Lawrence Radiation Laboratory, University of California.

Dr. John Wheeler, professor of physics, Palmer Physical Laboratory, Princeton University.

Dr. Eugene Wigner, Nobel Prize winner in physics, professor of mathematical physics, Princeton University.

Mr. President, the Safeguard system is the result of a very comprehensive research and development effort. The components are more fully advanced and better tested than were the components of the Polaris missile system, when a comparable go-ahead was given.

We solved greater and more complicated technical problems to make the successful Apollo flight, than we find in the Safeguard program. Surely, if we can walk on the moon, we can make the Safeguard program work.

Since President Nixon made his request for the Safeguard ABM on March 14, the facts of growing Soviet strategic offensive capabilities are more ominous—not less so.

The Soviets are continuing to install their very large SS-9 missiles, each capable of carrying one gigantic 20- to 25-megaton warhead. The number of their SS-9 missiles operational or under construction now considerably exceeds the figure of 230 used as late as May by Secretary Laird. Moreover, the number exceeds the earlier estimate of the intelligence community for the time period involved.

Since March, the Soviets have tested multiple reentry vehicles on their SS-9; three such RV's—each with payload equivalent to a 5-megaton warhead—per missile, and the tests have not been unsuccessful.

Also, our information now is that the Soviets have launched or have under construction more than 20 "Y" class Polaris-type submarines. The Soviet Union not only has the plant capacity to produce as many as six to eight of these "Y" class submarines a year, but the current information is that they are in fact producing them at the rate of eight per year at two assembly-line facilities. It is considered likely that as production experience is gained the rate of output from

the two facilities might increase significantly.

In recent months, more and more informed analysts of Soviet developments, right, left, and center, are assessing the Soviet leadership as evident products of the Stalin system, not inclined or able to move the Soviet Union out of the vicious circle of repression, fear, repression. The defection of Anatoly Kuznetsov is just the latest testimony to the trend toward the domestic hard line in Russia. Furthermore, an increasing number of Western analysts are warning that the Soviet Union faces a leadership crisis, the outcome of which is unpredictable. We do not know who will have the finger on the Soviet nuclear trigger in the months and years ahead. The enormous Russian arsenal will be at the disposal of whatever "strong man" or ascendant faction of tough, ambitious figures maneuver to the fore in the struggle for power and influence going on within the Politburo.

Furthermore, three danger spots in the world show no signs of quieting down; the threatening situation on the Sino-Soviet border where both sides have piled up vast arsenals; the potentially explosive conditions in Central Europe, where the Kremlin is using force to turn back the clock in Czechoslovakia; and the Middle East, where no agreements are in sight, and where the bitter conflict goes on. Crises in any one of these areas—and in other areas—could get out of hand; the trouble and violence could spill over and involve us directly.

Hence, there is everything to be said for the United States maintaining a strong and prudent defense posture.

And, as I see it, this means moving now to give a future President an option between capitulating to any nuclear attack and "emptying the holes" in an all-out nuclear war. The whole point of the Safeguard ABM is to keep open the option for a future President for what John Kennedy called "a choice between Armageddon and surrender."

Mr. President, I do not find the prospects of negotiating reliable agreements with the Soviet Union on the limitation of offensive and defensive nuclear systems as rosy as some people now paint them. But we have to do our best, for if there is a chance to have successful negotiations we must not miss it.

I am confident President Nixon is going to be in a better position—as the Senator from Rhode Island (Mr. Pastore) so well stated a short while ago—to negotiate with the Soviets on nuclear arms control, when the Senate has voted to give him the authority to move ahead with phase I of Safeguard.

The purpose of negotiations with Moscow on offensive and defensive nuclear systems is to reach mutually acceptable agreements that improve the chances for building a peaceful world. We do not want just negotiations. We want serious and productive negotiations that advance the prospects for a more stable, decent world in which individual liberty can survive and flourish. So our preparation for these negotiations and our stance as we enter them are very important.

The PRESIDING OFFICER. The time of the Senator from Washington has expired.

Mr. STENNIS. Mr. President, I yield 2 additional minutes to the Senator from Washington.

The PRESIDING OFFICER. The Senator from Washington is recognized for 2 additional minutes.

Mr. JACKSON. Mr. President, I think it very likely that the Soviets will want to maintain a limited ABM defense to give them some future protection from nuclear coercion and attack from Communist China and other secondary nuclear powers. In any case, I do not see how anyone could realistically expect to get Moscow to agree to limit its ABM deployment, if we abandon the deployment of our ABM's, unilaterally, before the negotiations even begin. Nothing in the record of negotiations on the control of arms suggests that this would be the way to have a successful parley with the Soviets.

I believe there is some chance that we could come to an agreement with the Soviet Union for a limited ABM defense on both sides—for example, an agreed ceiling on the number of ABM's for each side—provided that the Congress does not foolishly throw that chance away by now scuttling our own program.

In my view, nothing would be more detrimental to our diplomatic effort—or more shortsighted in the cause of world peace—than to deny President Nixon the strong hand he needs just as his negotiators are about to sit down at the conference table.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, how much time is left for the opposition?

The PRESIDING OFFICER. Fifteen minutes.

Mr. STENNIS. Mr. President, we have used quite a bit of the time on this side. I respectfully ask to be relieved of yielding now, and ask the other side to yield some time.

The PRESIDING OFFICER. Does the Senator from Michigan yield time?

Mr. HART. Mr. President, what time remains on the side of the proponents?

The PRESIDING OFFICER. Thirty minutes remain on the Senator's side.

Mr. HART. And the opponents?

The PRESIDING OFFICER. Fifteen minutes.

Mr. HART. Mr. President, I am prepared to yield time to the Senator from Wisconsin (Mr. NELSON), but he is not present at the moment.

Mr. STENNIS. Mr. President, I yield 3 minutes to the Senator from Iowa (Mr. MILLER).

The PRESIDING OFFICER. The Senator from Iowa.

Mr. MILLER. Mr. President, there is not much I can add to what the able Senator from Washington and the able Senator from Rhode Island have had to say, except I would like to put in perspective one point that the Senator from Missouri has been stressing very greatly, and that is the terrible cost of our defense budget.

There is no one in the Senate who is not concerned about the size of the defense budget. No one has a premium on

that concern. But let us put it in perspective. The other day I sought to do that, and I regret that my colleague the Senator from Missouri did not hear me.

I pointed out that our gross national product for fiscal 1970 will be \$960 billion. If our defense budget goes through at \$78 billion, including only the sum of \$345 million for the Safeguard system, it will mean that 8.1 percent of our gross national product will go for national defense. Last year it came to 8.2 percent. Five years ago the total was 8.4 percent. Ten years ago it was 8.5 percent. Fifteen years ago it was 9.5 percent.

Mr. President, if we take a look at it from that standpoint, we are not doing as badly, considering the relationship of our defense budget to our gross national product, or our country's capabilities, as we were 15 years ago. In fact, as compared with 3 years—5 years ago, 10 years ago, and 15 years ago—it will be less.

I am not saying that we should not be concerned about defense costs, but I think there has been just too much talk about it without taking it in the perspective in which I put it.

One last comment. For a long time I thought the Cooper-Hart amendment was being supported by Senators who recognized the need for an ABM system and recognized the need for a Safeguard system, but wanted to limit the funds to research and development. Now the Senator from Kentucky tells us that they can support the Smith amendment because the Smith amendment would do away with the Safeguard system altogether. I do not think we have been given the proper approach on this question, with all deference to my colleague from Kentucky. I do not think the true position has been shown to us.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. COOPER. Mr. President, may I have 1 minute to respond?

Mr. HART. I yield 1 minute to the Senator from Kentucky.

Mr. COOPER. Mr. President, the amendment which the Senator from Michigan (Mr. HART) and I have offered, which has been debated for weeks, would deny the use of any funds during the next fiscal year for deployment and provide funds only for research and development.

When Senators study and consider the amendment which will be proposed by the Senator from Maine (Mrs. SMITH), I believe they will find the Smith amendment could achieve the same result. I have read her amendment carefully and discussed it with her. The amendment proposes that no funds shall be used for research and development, test, evaluation, or procurement for the Safeguard system—as designed. It would prohibit its deployment, as ours would.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. HART. I yield 2 additional minutes to the Senator from Kentucky.

The PRESIDING OFFICER. The Senator from Kentucky is recognized for 2 additional minutes.

Mr. COOPER. We have been fighting against the Safeguard system because we

have said again and again on the floor that we do not believe it is designed correctly. We have advocated that the funds be used for designing a new system. This is the purpose of Senator SMITH's amendment, also.

The amendment of the Senator from Maine provides that these funds can be used for any purpose connected with research and development, testing, and evaluation, concerning this or any other weapons system or any other advanced ballistic missile system. Our amendment seeks research on a better designed ABM system.

As I said a few minutes ago, the amendment of the Senator from Maine is perhaps more precise than ours is. But I find no essential difference between our two amendments. I want to make this clear.

The PRESIDING OFFICER. Who yields time?

Mr. HART. Mr. President, I yield 5 minutes to the Senator from Wisconsin.

The PRESIDING OFFICER. The Senator from Wisconsin is recognized for 5 minutes.

Mr. NELSON. Mr. President, more than 4 years ago, in the spring of 1965, I was here on the floor of the Senate arguing and voting against appropriations to launch a land war in Vietnam. The same pundits of the press, the same generals in the Pentagon, and the same Members of Congress, were then making the same arguments for intervention in the war in Vietnam that they are now making for deployment of the ABM. There is hardly a single proponent for intervention in the war in Vietnam in all America who now does not wish we could turn the clock back to avoid that tragic mistake. Five years from now, in my judgment, they will be confessing their mistake on the ABM as they are now confessing, privately and publicly, their mistake on Vietnam.

On April 18, 1968, I introduced the first amendment to delete appropriations for the anti-ballistic-missile system. That amendment received only 17 votes. Since that time there has been increasing widespread debate over the wisdom of deploying this weapons system and increasing opposition to it until, it appears now, the Senate is about equally divided. It is interesting to note that the membership of the Foreign Relations Committee, which conducted extensive hearings on this issue is divided 10 to 4 against deployment and the Armed Services Committee is divided 10 to 8 in favor of deployment. Thus, a majority of 18 to 14 on these two committees is opposed to deployment.

In any event, as I see it, the most disturbing thing about the Safeguard proposal to deploy antiballistic missiles is its disastrously bad timing. At this very point the United States and Russia are in a position to begin negotiations which could put an end to the arms race. This is the heart of the issue before us. We can either take the initiative now to push for arms control agreements or we can add fuel to the escalating weapons race by deploying an anti-ballistic-missile system. Whatever merits the proponents claim for an ABM, Russia knows that we have sufficient nuclear warheads

August 6, 1969

in hardened missile sites on the ground, in bombers, and in inaccessible submarines to retaliate with devastating force upon any country that attacks us. Russia occupies the same relative posture of strength toward us.

If under these circumstances it is not possible for the great powers to move for negotiations to deescalate the arms race, we may as well concede it never can be done. If that is the gloomy prospect we can resign ourselves to an endless weapons race that dramatically increases insecurity in the world, dissipates critical resources and contributes to the growing disillusionment with political systems here and elsewhere which are so remarkably efficient at making war and so utterly incapable of creating a peace.

What we should do now is postpone on-site deployment of the ABM while we continue research and development. If at some later date compelling reasons arise for deployment, that issue can be decided then. At the time we announce the postponement, we should initiate talks for deescalation. All elements are now present for mutually beneficial negotiations.

This is the first time such an opportunity has appeared in 20 years. If we pass it up we may have to wait another 20 years. The world cannot afford that.

If we deploy a new weapons system Russia responds with another and we react with something else. After the Safeguard system, each side expands from a thin system to a thick one, and then to the multiple warhead—MIRV—and then to construction of launching sites on the bottom of the ocean, and so on without end.

Former Secretary of Defense Robert McNamara said it well:

It is precisely this process of action and reaction upon which the arms race feeds, at great cost to both sides and benefit to neither.

In the growing debate over the military budget in general and the ABM in particular, we are really witnessing the opening of a much broader debate over a much larger question—what are and what should be our national priorities? How long can we continue to ignore critical social, political, and economic problems on the homefront and still maintain the unity of our people? We can spend all our resources for defense, and have nothing left to defend. We can populate our country with shiny new missiles and other glamorous armaments and ignore the continuing decay of our cities, the overwhelming pollution of our rivers and lakes and air, the children who go hungry and sick in this affluent society, the educational institutions that limp along for lack of funds.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. NELSON. Mr. President, I ask for one more minute.

Mr. FULBRIGHT. I yield the Senator from Wisconsin 2 additional minutes.

The PRESIDING OFFICER. The Senator is recognized for an additional 2 minutes.

Mr. NELSON. Is it not remarkable that almost any weapons system the mind of man can conceive we will fund to the patriotic chant of "national de-

fense" when in fact each step up the escalation ladder brings us closer to a certain end spelled "international disaster." Is it not ironic that we can spend \$350 million a year on chemical agents and disease organisms that would wipe out whole populations of people but we have to close Job Corps camps and send unfortunate boys and girls back to the streets because we need to save \$57 million in the current budget? Does not it give one cause to ponder the character of a society that can enthusiastically spend \$25 billion for the moon landing and fund only \$214 million in a lamentably insignificant effort to stay the pollution of our rivers, lakes and streams? Remarkable though the achievement, to what avail do we discover the physical composition of all the barren planets in our solar system while man's depredations destroy those characteristics that distinguish this planet from all the rest?

A year ago, the U.S. Senate was debating another version of the ABM—the Sentinel program. I opposed that system, and said that if it was bad politics to do so, at least it was good sense, and that is something worthwhile nowadays.

Right now we have a "sufficiency" of arms capability that is almost beyond comprehension. Future plans for our Polaris submarines will give them 6,000 underwater warheads poised for action. Add to this right now 1,000 land-based Minuteman missiles, 7,000 tactical nuclear weapons in Europe, plus another 1,000 for our bombers. Enough to snuff out any country and the rest of the world. How much is enough? Between the United States and Russia there are stockpiled enough nuclear weapons to equal 15 tons of TNT for every man, woman, and child on earth.

Over the weeks all the arguments pro and con have been made. There is really nothing to add. I would emphasize once more, however, that all experts agree that any anti-ballistic-missile system can be quite simply neutralized by saturation. It is only necessary to make a photographic count of the ABM silos and produce enough offensive missiles to absorb the system. This point is not in dispute. Is anyone in doubt that either side would do exactly that in the event the other deployed an ABM? We in fact have already responded to the limited deployment of 72 antiballistic missiles around Moscow in precisely this fashion. They may protect Moscow for a limited time against attack by China, but they offer no defense against our system. They know that and so do we.

Every Member of the Senate has viewed the Defense Department chart that shows how many offensive missiles it will require to neutralize both phase I and phase II of our proposed ABM system. The Russians know what that number is as well as we do since it is a relatively simple mathematical calculation. Thus, I wonder why the Defense Department has not made the chart public as suggested by the distinguished Senator from Missouri, Senator SYMINGTON. It would seem obvious that the American public is en-

titled to know as much about that chart as the Russians do.

Of course, one response the proponents make to the saturation argument is that we can expand our ABM if they try to neutralize our system, as they will certainly do, and therein lies the catalytic agent for a dramatic escalation of the arms race.

Former Defense Secretary McNamara graphically described the folly of spending when he said:

\$4 billion, \$40 billion, or \$400 billion—and at the end of all the spending, and at the end of all deployment, and at the end of all the effort, to be relatively at the same point of balance on the security scale that we are now.

Certainly we cannot expect to throw a new weapons system into the arms race and then join the Russians in meaningful arms control negotiations.

Mr. President, I ask unanimous consent that remarks I made in opposition to deployment of the ABM on April 8, 1968, and April 19, 1968, be printed in the RECORD at the conclusion of my remarks.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

[From the CONGRESSIONAL RECORD, Apr. 8, 1968]

Mr. NELSON. The price tag on this proposal is now \$5 billion. As we all know, it will be higher. We are told it is aimed against China missiles only. It is conceded by everyone that at best it would be effective against a crude, unsophisticated delivery system. On February 2 of this year, Defense Secretary McNamara testified before the Armed Services Committee that this was a Chinese oriented system. When Senator DOMINICK asked, "If a Soviet missile should come within that particular defense system you could handle that one?" Secretary McNamara replied:

"If it were only one missile, yes. However, if it were the size attack the Soviets are capable of mounting today, the answer is 'No.'"

In a speech, a few months ago on September 18, 1967, the Defense Secretary said:

"Our strategic offensive forces are immense. All of these flexible and highly reliable forces are equipped with devices that insure their penetration of Soviet defenses."

Mr. McNamara said further:

"None of the [ABM] systems at the present or foreseeable state of the art would provide an impenetrable shield over the United States. There is clearly no point . . . in spending \$40 billion if it is not going to buy us any significant improvement in our security. Every ABM system that is now feasible involves firing defensive missiles at incoming offensive warheads in an effort to destroy them. But what many commentators on this issue overlook is that any such system can rather obviously be defeated by an enemy simply sending more offensive warheads, or dummy warheads, than there are defense missiles capable of disposing of them."

He reminded his audience that the United States has "already initiated offensive weapons programs costing several billions in order to offset the small present Soviet ABM deployments."

Secretary McNamara pointed out that four distinguished scientific advisers to three Presidents—Eisenhower, Kennedy and Johnson—"have unanimously recommended against the deployment of an ABM system designed to protect our population against a Soviet attack." He went on to say:

"We have the power not only to destroy completely China's entire nuclear offensive forces, but to devastate her society as well."

He went on to elaborate on the folly of spending "\$4 billion, \$40 billion, or \$400 billion—and at the end of all the spending, and at the end of all deployment, and at the end of all the effort, to be relatively at the same point of balance on the security scale that we are now."

So, nevertheless, we are now in the treadmill process of spending \$5 billion on a system that may not work at all and, at best, could have some brief, some transitory value until China slightly refined its delivery system, which everyone concedes they can easily do—and certainly will.

What incredible manner of logic is this? We can, as Mr. McNamara put it, totally destroy "China's entire nuclear offensive forces" and "devastate her society as well," but, he says, we should install this system because "one can conceive conditions under which China might miscalculate."

I respectfully suggest to Mr. McNamara that the fertile human mind can conceive of almost any condition it wants to. With that assumption, any proposition can be logically supported.

It is, I think, a weird process of reasoning that causes us to spend \$5 billion on a system of doubtful and certainly temporary value on the belief that China might be insane enough sometime to attack us knowing it would result in devastation for their whole society.

We cannot even wait to conclude our first round of folly in Vietnam before launching into a second round of folly in a nuclear missile race.

In 1965, when we intervened in Vietnam with a military ground troop commitment, it was argued, among other things, that it was a necessary move to contain China. High State Department including the Secretary of State and other officials, used the same argument to justify each stage of the escalation. Now we are there with over a half million troops and draining our Treasury at the rate of \$25 billion a year in an enterprise we wish we had never undertaken in the first place.

China has not a single troop in the war but somehow we are supposed to be containing China by fighting the Vietnamese.

Now, again, under the guise of defending ourselves against the same enemy, China, we are launching a little "thin missile system" which, like the Vietnam war, will balloon into a big thing—and, like Vietnam, 5 years from now we will all be saying, how in Heaven's name did we ever get trapped into this? Well, it is not easy, but it can and will be done if we work at it hard enough.

I think the truth of the matter is, this is not an anti-Chinese system at all, but the first step in construction of a major heavy ABM system. Of course, many of the proponents—I emphasize this—of the thin system do not intend that result any more than they intended a big war in Vietnam, but that, nevertheless, will be the result.

The signposts along the route we are traveling are clear and we can read them down that route as far as the eye can see—they read: We escalate; they escalate; we escalate; and so forth, until we reach the end of the line, wherever that may be. As Mr. McNamara put it, we could spend \$4 billion, \$40 billion, or \$400 billion on an ABM system and at the end be relatively at the same point of balance on the security scale that we are now.

In commenting on the futility of it all, Dr. Jerome Wiesner, science adviser to the President, said:

"Defense against thermonuclear attack is impossible."

Dr. Ralph Lapp stated:

"I believe that for every wrinkle you introduce into defense there are 10 more wrinkles

that can be introduced in the power of the offense."

I am aware that the Joint Chiefs and the military hierarchy favor the heavy ABM just as they favored intervention in Vietnam, and we who oppose it will be told now, as we were then, that we are wrong and the military knows what is best. And, again, 5 years from now, if we are still around, we will have the doubtful honor of pointing to our sad mistake—and we will be told then, as now, to quit talking about the past—that is history—let us talk about the future. And so mankind goes down his merry road to disaster.

There is, of course, no doubt that this authorization will pass. This is an election year and we all know that the two biggest words in the English language are "national defense," "national defense." If you just shout them loud enough you are in the clear—you win and your opponent loses. It is just plain unpatriotic to question any appropriation for national defense. Defense against what? It does not matter what, or where, or how, or whether it makes any rational sense at all—just utter the magic words and you are in the clear.

We know that the military-industrial complex favors this appropriation; we know that Congress supports it; I assume that the public does, too. But I do not and I will not vote for it. I cannot in good conscience vote for a program that will launch us into a spiraling missile escalation which has no end and no purposes either. If that is bad politics, at least it is good sense and that is something worthwhile nowadays. For my part, I would rather leave here with my conscience than stay here without it.

In conclusion, may I say, how much better it would be if we just poured this money into our troubled cities for programs to right what is wrong in America. Lest we do that soon, we may not have a worthwhile society left here in America for the ABM to defend.

Mr. President, I ask unanimous consent to have printed at this point in the Record an article entitled "Experts See 'Thin' ABM Vulnerable," published in the Washington Post of Sunday, March 3, 1968; an article entitled "Defense: The Missile Nobody Needs," written by William E. Jackson, Jr., and published in the New Republic of October 28, 1967; and an article entitled "Anti-Ballistic-Missile Systems," written by Ricard L. Garwin and Hans A. Bethe, and published in the Scientific American of March 1968.

There being no objection, the material was ordered to be printed in the Record, as follows:

"[From the Washington Post, Mar. 3, 1968]

"EXPERTS SEE 'THIN' ABM VULNERABLE

"The Chinese will be able to build missiles that will penetrate the so-called 'light' ABM system the United States intends to construct, according to statements by two groups of American scientists.

"An article in the March issue of Scientific American by Richard L. Garwin and Hans A. Bethe, both long associated with the development of American nuclear weapons, argues that the proposed system 'will add little, if anything, to the influences that should restrain China indefinitely from an attack on the U.S.'

"The two scientists argue that the Chinese can surmount the American system, 'whose characteristics and capabilities have been well publicized.' Their article discusses this possibility in considerable technical detail.

"Bethe is a Nobel Prize winning physicist. Garwin, a Columbia University physicist, was recently reported to have gone to South Vietnam, a report setting off rumors that nuclear weapons were being deployed there. But Pentagon officials later said he went instead to Thailand.

"The Federation of American Scientists, in

a statement, called the ABM system 'irresponsible on fiscal grounds' and 'pointless on military grounds.' The Federation statement said that 'the basic technical fact is that this system can be easily neutralized by the Chinese by using relatively simple and cheap penetration aids or by developing different means of weapons delivery.'

"Both the Garwin-Bethe article and the FAS statement express fear that the 'light' ABM system, approved last September by Defense Secretary Robert S. McNamara, will not stop here. Both believe there will be great pressure to expand the system into one designed to protect against Soviet ICBMs at a cost of \$40 billion or more.

"The FAS statement is also critical of incoming Defense Secretary Clark M. Clifford's statement that he will seek 'clear-cut nuclear superiority' over the Soviet Union. The statement said that 'at today's level of weaponry there can be no such thing.'"

[From the CONGRESSIONAL RECORD, Apr. 19, 1968]

Mr. NELSON. Mr. President, my remarks are addressed to the bill itself, which I am going to vote against.

There are, it seems to me, any number of routes a country may follow down the road to disaster. We seem to be traveling several roads at the same time; namely, the war in Vietnam, the destruction of our environment and the disintegration of our great cities.

One would think that these manmade disasters would be sufficient for any country to contend with at one time. But, apparently not.

We are now about to trigger a missile race with Russia, an offensive and defensive missile escalation that literally will have no end.

The so-called thin missile system is not aimed at China at all. That is ridiculous. It is simply an opening wedge for the installation of a heavy system aimed at Russia which will cost us \$30 to \$40 billion, when the system will be obsolete anyway. We will have succeeded only in exacerbating the balance of terror.

Mr. President, I will not vote for this bill because it involves this authorization for the Sentinel thin missile system.

I predict that every single Member of this body who votes for this bill which will start this escalation by construction of the thin missile system, will regret his vote and the honest ones will publicly apologize for it in less than half a dozen years.

Mr. HART. Mr. President, I yield 1 minute to the Senator from Oklahoma.

Mr. HARRIS. Mr. President, because I have voiced my opposition to the Safeguard missile system on the floor of the Senate on other occasions, and since the issue is rather clear now, and the time of the proponents is very limited, I have been requested, rather than to detain the Senate at this time, to ask unanimous consent that a detailed statement by me of my reasons for supporting the pending amendment be printed in the Record; and I now do ask unanimous consent that those remarks be printed in the Record at this point.

The PRESIDING OFFICER. Without objection, it is so ordered.

The statement is as follows:

Mr. HARRIS. Mr. President, I would like to speak in behalf of the pending amendment to S. 2546.

Passage of the amendment does not mean that an ABM system would never be developed. It means, rather, that deployment would be postponed while we consider

August 6, 1969

S 9271

whether the ABM is indeed necessary for our national defense.

This amendment would limit funds for the ABM system to those needed for research and development. Deployment and site acquisition would be delayed pending the results of this further research.

In the past, we have spent enormous sums to deploy weapons systems. All too often these systems have been abandoned before becoming operational or have been declared obsolete shortly after deployment. Especially with our mounting domestic problems, we cannot afford to spend the taxpayer's dollars in such an undisciplined and incautious manner.

Matthew Arnold, in describing 19th century England said:

"We show as a nation laudable energy and persistence in walking according to the best light we have, but we are not quite careful enough, perhaps, to see that our light be not darkness."

Today, in 20th century America, there is a great need for us, as a nation, to be certain that "our light be not darkness"—that we not misunderstand the true meaning of the "security" we seek. In the nuclear age, security can derive only from stability. It is all too obvious that the spiraling arms race, on the periphery of which we exist today, presents the ultimate in instability and thus insecurity.

To preserve an adequate level of stability and security requires a slowing of the arms race—an event which can occur today only through agreement between the United States and the Soviet Union.

It is clear that deployment of the ABM at this time could be very detrimental to our negotiations with the Soviet Union, and this is the most important argument in favor of the pending amendment.

The Administration claims it is essential that we bargain from the position of strength which the ABM will supposedly provide. The debate on this question of our present military strength has established clearly the impressive state of our deterrent force.

I recently met with the Chief of Naval Operations, Admiral Moorer, to discuss the current status of our Naval force. I must say that I am impressed with our Navy and its great flexibility, mobility, and almost unquestioned effectiveness. As an example, Admiral Levering Smith, Director of the Navy's strategic systems project, has stated that the Polaris Submarine will remain invulnerable for another forty years. To eliminate the effectiveness of our submarine force, the Soviet Union would have to develop an anti-submarine technology capable of tracking all missile submarines. Since the free world controls a great percentage of the shorelines, the tracking of our submarines becomes an almost impossible task.

Our advantage over the Soviet Union in the intercontinental bomber category has also been established. We have a clear numerical advantage of 646 intercontinental bombers to their 150 to 155. In addition, our bombers can carry three to four warheads, compared to the two which Soviet bombers can carry.

It is estimated that in the event of attack we could have no less than 40% of our bomber force in the air. This force, like our nuclear submarines, is clearly impressive and clearly superior to its Soviet counterpart.

The third deterrent force discussed during the debate, ICBM's, is for all purposes evenly balanced with neither power being able to claim a superior force.

Finally, we have the capacity to deliver thousands of warheads with intermediate range planes and missiles stationed on aircraft carriers and foreign bases. By reason of the strategic location of these weapons, it is generally conceded that we have a formidable deterrent force in these weapons alone.

Notwithstanding the numerical superiority we have in these various categories, the So-

viet Union has nonetheless indicated its willingness to negotiate arms limitations.

They do so recognizing that we live within a structure of nuclear deterrence with both nations maintaining the ability to destroy the other.

If either we or the Russians try to radically alter this relative nuclear vulnerability in an attempt to obtain a first strike capability, or what appears to be a first strike capability, the only choice available to the other side will be to react with new weapons costing billions of dollars.

It is important that one understand that once we leave the present arms level in the elusive search for nuclear superiority, there will be much less opportunity for meaningful arms negotiations. The next plateau of armaments, the ABM and the MIRV reaction, does not very easily lend itself to arms control.

I do not mean to indicate that the Soviet Union will agree with us on arms limitations just out of the goodness of their hearts. Nor will we agree with them just to be nice to them.

Each of us will agree with the other—if at all—only because we find it in our own self interest to do so.

There are indications that the Soviet Union, beset with border clashes with mainland China and increasingly feeling a growing demand for consumer goods at home, may now have begun to see that, since neither country can or will allow the other to achieve any substantial defensive or offensive advantage, some mutually enforceable agreement now for arms limitations could provide the same kind of military parity which would exist after we had both spent untold additional billions on new systems.

Whether these talks are eventually successful or not, they are long overdue, and we should get on with them. In the meantime, we should do nothing which would damage in advance their possibility for success. The point is that we have the time to do so, while continuing research and development on an admittedly undeveloped and untested ABM system.

By withholding authorization for the deployment of the ABM we leave open what may in fact be the last feasible option for successful talks which both the United States and Russia have indicated a desire to hold. If we now deploy the Safeguard system, we make much more difficult any eventual agreement with the Soviet Union, which President Nixon has made clear he seeks.

Daily, in debate on this floor, the technical feasibility of the ABM has been questioned, along with the effectiveness of detector-control systems. Responsible and informed members of the scientific community assert that an effective detector-control system can be developed only through extensive and realistic experiments and tests. This strongly suggests the need for further research and development in order to assure the workability of the system before initiating costly construction and deployment.

In the past, we have sometimes proceeded too quickly in procuring components for systems not fully developed. Such haste has resulted in expenditures in excess of \$4 billion for missiles such as the Mauler, Typon, Navaho, and others which were never deployed.

In the past 16 years we have spent billions of taxpayer's dollars on systems which were only briefly deployed—the Nike-Ajax, Regulus, and Atlas D, E, and F.

My fellow Oklahomans well remember the silos which were dug in the Southwest section of our state for the Atlas Missile. Barely completed and dedicated, they were abandoned. They are now for the most part empty—waiting for the ingenuity of man to devise other uses for these multi-million dollar holes in the ground.

This program and similar ones cost the taxpayers approximately \$19 billion.

This is not to say all of the money expended in these programs was wasted. In some instances, for example, we greatly improved our technology. But, the point is that recommendations in this field are not necessarily infallible, and where we have time to do so, as in the instant case we should take the time to determine that our technology has been perfected.

Finally, one must confront the questions of our national priorities. National security should be, and is a major concern of all Americans. But what of health, safety, education, and happiness of our people? Is this not also a part of our national security? These are the things that are necessary for man's "growth, joy and reason." These are more truly the things that give us our strength and our purpose.

Erich Fromm, among others, has warned us of an inherent danger in our technology—acceptance of the principle that something ought to be done because it is technically possible to do it.

Quoting Dr. Fromm:

"The principle means the negation of all values which the humanist tradition has developed. This tradition said that something should be done because it is needed for man, for his growth, joy, and reason, because it is beautiful, good, or true. Once the principle is accepted that something ought to be done because it is technically possible to do it, all other values are dethroned, and technological development becomes the foundation of ethics."

Indeed it would be tragic if we spend billions on a weapons system and find that in the end it has lessened the national security we seek because of its adverse effect on the coming arms negotiations with the Russians and because it has decreased our economic ability to meet pressing needs here at home.

The diversity of opinion on the ABM proposal is evidence of its complexity and significance. I think we realize that we may be setting forth priorities and goals for this nation that will be hard to change. So, let us not imitate the Queen of Hearts who had to pass sentence first and then hear the evidence. The pending amendment gives us the opportunity to develop the evidence and then weigh it carefully before acting finally. I hope it will be adopted.

The PRESIDING OFFICER. Who yields time?

Mr. HART. I yield 2 minutes to the Senator from Illinois.

Mr. PERCY. Mr. President, I intend to support the Cooper-Hart amendment, but I also wish to indicate a clear intention to support a modification which the Senator from Maine has indicated she intends to submit. I do this because I feel that the modified Smith amendment can accomplish everything that I feel is needed to be done on the antiballistic missile system.

It would enable the redesign of the MSR to make it less vulnerable. It would enable redesigning to make a number of multiple radars available, rather than the single MSR that would be at each site; and it would enable us to design a system that would be far less vulnerable.

In addition, it would give us the time to see whether the Soviet Union is serious about the intention to negotiate, and whether it intends to seriously try to find a way to stop the nuclear arms race.

Mr. President, each of us sees this problem from a different perspective. I have, in common with the distinguished Senator from Missouri, a background in military procurement, though his experience was at a substantially higher

August 6, 1969

level than mine, and we have had comparable experience in the electronics industry. I suppose it could be said that both the Senator from Missouri and I are members and have been members of the military-industrial complex for about a quarter of a century.

I oppose the Safeguard system, simply because I think we all know several things. We know that it has never been fully assembled. We know that it has never been fully tested. We know that it has never been, therefore, fully evaluated. We have no idea, really—any of us—what it will cost. The range of estimates is from a low of \$8 billion to figures mentioned by members of the Armed Services Committee ranging up to \$40 billion.

I feel it would be a great mistake to rush into production and deploy a system when we do not know whether it will work, whether it can be put together, to effectively carry out its mission, whether it will carry out its objectives, or what it will actually cost.

My own experience in production would lead me to believe we will actually lose time by rushing into production on a system that has not even been fully completed in design.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. HART. Mr. President, how much time remains?

The PRESIDING OFFICER. The Senator from Michigan has 16 minutes remaining. The Senator from Mississippi has 11 minutes.

Mr. HART. I yield 4 minutes to the Senator from Arkansas.

Mr. FULBRIGHT. Mr. President, I agree with the Senator from Wisconsin that about all that can be said on the substance of this issue has been said. I simply wish to clarify my position with regard to the amendment of the Senator from Maine.

I think it would accomplish the same ultimate objective as the Cooper-Hart amendment.

It may be that some, because of prior commitments to the Cooper-Hart amendment, would feel that they cannot support the amendment. I would hope that everyone who will support the Cooper-Hart amendment will feel free to support the amendment of the Senator from Maine. If, by any chance, that amendment should fail, then, of course, they will have another opportunity to vote.

I can only say with regard to these systems, by way of review, that for 25 years this country has placed its principal reliance upon armaments. The major expenditures of this Nation have been for armament. We have piled up the most prestigious amount of arms the world has ever seen. These arms have the capacity to destroy all the world, and certainly all of the countries within the Communist bloc.

The Communists, of course, have similar armaments.

I do think we should give very serious consideration at least to a change in our approach to this policy.

Surely, none of us is satisfied with present conditions in our country.

We have seen our present policy result in internal turmoil all the way from the

ghettos in the cities to the universities and many other areas.

We have seen our present policy result in many of the things the Senator from Wisconsin has stated. I will not repeat them.

I do plead with my colleagues to give prayerful consideration to this need for a slight change in direction to promote the security of our country.

I cannot help believing that the security of our country does not result from the piling up of more and more weapons of varying kinds in our arsenals and neglecting the internal strength of our country.

Surely, with the warnings we have had, ranging all the way from the riot in Watts to the burning and riot in Washington, we have had a warning that different priorities are required.

It seems to me that the first step toward that would be for us to take this small degree of change of direction in our expenditures for military equipment.

The main significance of this particular change, of course, is in the arms race. And it would be a gesture of good will and a token of our good will to other nations who are interested in deescalating the arms race.

I do hope that the Senate, in view of the present conditions and our past experience, will at least take the slight risk involved in trying another approach to our security.

There has been a tendency to identify the amount of arms we have with security, in the belief that arms and security are the same thing, only said in different words. I do not think that is true. Security, to a great extent, must depend on the internal strength of our Nation.

The PRESIDING OFFICER. The time of the Senator has expired. Who yields time?

Mr. HART. Mr. President, I yield myself 1 minute.

The PRESIDING OFFICER. The Senator from Michigan is recognized for 1 minute.

Mr. HART. Mr. President, as other Senators have done, I came to the floor with an elaborate speech. It would not have changed any minds, although it might have made me comfortable when looking at the RECORD.

The only thing I desire to say that may have some effect is that, with the Senator from Kentucky (Mr. COOPER), I hope very much that the Senate will support the amendment intended to be offered by the able Senator from Maine.

That amendment achieves, I think, the objective that is common to all of us—to encourage research and to insure against deployment.

This is the last chance we have to correct a mistake we made last year when we approved deployment of ABM Sentinel.

The people of this country, by their voices of protest have helped us to obtain this opportunity to correct that mistake. Let us not repeat the mistake again.

Mr. President, I yield 5 minutes to the Senator from Kentucky.

The PRESIDING OFFICER. The Senator from Kentucky is recognized for 5 minutes.

Mr. COOPER. Mr. President, I want to make it clear that the Senator from Michigan and I have offered is not withdraw and in the event the amendment offered by the Senator from Maine should be defeated—and I hope it will not be—there will be a vote on our amendment.

I have talked a great deal in this debate, and I shall now make my last speech for the RECORD.

The debate upon the proposed Safeguard anti-ballistic-missile system has been long and hard fought. But it has been worthwhile. It has proven the absolute necessity of the democratic process of inquiry and public debates. It has challenged the Senate as a body to exercise its responsibilities and has challenged the courage of the administration to enter negotiations with the Soviet Union for the control of arms without binding itself to a weapons system, which the negotiations will seek to control.

It has been urged again and again in the debate that a decision must be made now to deploy the Safeguard system, that it is essential to the security of our country. The responsibility for national security rests with the Congress as well as with the executive branch of our Government. We respect the President's grave responsibilities, but the Constitution calls for a joint judgment. It is a trust given the Congress by the people.

The relation of the issue before us to national security, with its vast implications for the protection and future of our country, has caused the Senate to debate its definition and the Nation's goals.

If, as has been argued, national security means a decision at this time to deploy the Safeguard system, to protect our country's retaliatory nuclear forces—the deterrent—I submit that it is a narrow definition, and the supporters of Safeguard have not made their case.

The United States possesses now vast superiority over the Soviet Union in nuclear strength. Compared to the Soviet Union's 2,200 deliverable warheads, the U.S. arsenal includes 4,200 warheads, deliverable from land, the air, and under the seas. If the Soviet Union continues to increase its strategic nuclear weapons, our country can and will increase its nuclear strength and, if needed, can speed the construction of a more effective ABM system. The bill before us is proof that the administration is increasing its offensive nuclear weapons. It provides funds for the Minuteman III program, for MIRV, for converting Polaris submarines to Poseidon, and for attack submarines. The Department of Defense has portrayed a grim picture of Soviet capabilities. It should give all the facts and tell our people that the United States has the capability to protect the deterrent.

Deployment of the Safeguard system is not possible in fiscal year 1970. No component, no part of a component of Safeguard can be emplaced on any missile site in fiscal year 1970. Research and development must proceed for some time on the antimissiles—Spartan and Sprint—and the warheads will not be

August 6, 1969

CONGRESSIONAL RECORD — SENATE

S 9273

ready until 1974. The radars simply do not exist. A missile site radar—MSR—is being tested at Kwajalein. Construction of the perimeter acquisition radar—PAR—the development of the necessary computers has begun, but their “software”—the feeding of necessary information and intelligence into the computers—has not yet been fully developed.

The amendment which we support does not lock the hands of the President. It provides full funds for research and development. It does prohibit in fiscal year 1970 the procurement of components of the Safeguard system. They have not been tested separately or as integrated units. Their procurement could “lock in” our country to Safeguard, a system which outstanding scientists, who have spent years working on ballistic systems, have testified is not designed for missile site defense, and cannot be effective without a minimum expenditure of \$40 billion. A decision to deploy now, to lock in the system, will not contribute to national security.

We have a kind of security today. It is the ability to destroy the Soviet Union or any other power. The Soviet Union has this security as well.

The pursuit of security through nuclear power alone will never end. It will waste the fruits of the earth and make the labor of men empty. It will increase the sense of futility, particularly among the young. For we and the Soviets, with all our technology, can be reduced to dust at any moment. The green earth and millions who live on it can be burned to grey ashes. This specter is the essence of the nuclear arms race. This is our present security.

A point of view is held by some in this land which has been hardly challenged, but which we challenge today. It is that the United States is required to install nuclear systems against every threat, assumed or potential. It requires one to think of the loss of millions of human beings as if there were no rational alternative.

There is a rational alternative. Our country has the opportunity to strive through negotiations to halt the arms race. We ask that the decision to approve Safeguard—a new weapons system—shall not be made at this time, so that the United States may enter negotiations, supported not only by its overwhelming nuclear power, but also with the power that proceeds from the best purposes of our system of government, from the belief in world order and moral force.

I know the heavy responsibility that bears upon all who will vote today—opponents and proponents of deployment alike. All are moved with a common purpose—the ultimate and true security of our country.

We ask the Senate to take the course of reason, with confidence in the strength of our country, to seek ways to reduce, rather than accelerate, the nuclear arms race. This course offers the only hope of true security for our country and the endangered world.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I yield 4 minutes to the Senator from Arizona.

First, may we have order in the Chamber?

The PRESIDING OFFICER. The Senate will be in order. The Senator from Arizona is recognized for 4 minutes.

Mr. GOLDWATER. Mr. President, I would not want the debate to end without clearing up a few technical points. I would not want the future readers of the CONGRESSIONAL RECORD to think that we could let go unchallenged some rather erroneous—and I think—foolish statements made on technical points.

We have been told that the radar will not work. We have been told that the computer system will not work. I know a little about radar. I have used them. I know a little about computers. I have used them.

The present state of our radar art is an exceptionally high one. We have three-dimensional radar available. We have excellent range and excellent definition. We have a radar system at Eglin Air Force Base. It is called the PSR 85. That is the phase search radar.

This is used to locate the position of satellites, some of them traveling much higher than radar search would be required in the event of incoming missiles. We have the MSA system already operative in the Pacific. The PAR is under construction. It is a 5,000 element radar, about which there is no question as to its feasibility and workability.

As to the computers: We are told that the state of the art is not far enough developed to have a computer to figure out what to tell the missile as it goes out to seek the incoming missile.

I would like to remind Senators that there are available—in fact, in use—two commercially made radars that are nearly twice as big in capacity and required ability as the computer about which we are talking here. These are run by enlisted men. A doctorate is not required to run these computers. The computers at NASA headquarters, for example, after the Apollo flight, have 5 million words stored. This is the biggest computer in the world, and in history, and probably will never be equaled.

What are the problems this computer and radar face that are so gigantic? They really are not gigantic. We know the location of every missile site in Russia, just as they know the location of every missile site in this country. We can tell fairly well which silos of hers are aimed at which targets of ours, and she can do the same we can. Any missile launched from Russia to hit any target in this country probably would not deviate more than 2 or 3 degrees in its trajectory, the two countries being so far apart. We know the height of the trajectory it would have to attain; we know the speed that the missile would have to attain. In other words, we are looking through a tube—if we think of a trajectory as a tube—about 2 or 3 degrees in extreme width, to enable a missile to hit a target in this country.

This is not complicated. If you tell me that a man is going to shoot me and he is in the corner over there and I can see him and he has a rifle aimed at me, I can do something about it. I do not have to have a lot of computered facts.

We know where they are coming from; we know the height of the trajectory; we know the speed. The computer merely has to react to the radar telling the computer “Here comes an enemy bogey,” and off goes the missile, if that is desired.

Mr. President, I merely wanted to clear up this point. I know it is not going to change one vote. I just do not want future generations to think that the Senate would allow erroneous statements to continue about the ability of American science and American technology and American know-how to produce what is a much simpler system than the system we developed, against the advice of noted scientists, to get men to the moon.

That is all I have to say on that subject, Mr. President.

Mr. STENNIS. Mr. President, how much time remains for those in opposition to the amendment?

The PRESIDING OFFICER (Mr. EAGLETON in the chair). Seven minutes.

Mr. STENNIS. Mr. President, I yield myself 7 minutes, or so much thereof as I may actually use.

I realize that this matter has come to the point at which all phases of it have been discussed; but I think that, for the Committee on Armed Services, I should make a brief summary, at the expense of some repetition, of just what is involved.

In the first place, Mr. President, with respect to this missile system, which we have and which Russia has and which Red China may have, the best possible defense and the best possible chance is for those systems to stay there unused. That is what we all pray for. In other words, take Russia first. I would have a very happy thought if I knew we had an effective ABM and they had one, also. I believe that would be the best guarantee that they would not be used. And let each know the other has it. But perhaps it is not possible to have a perfect one, anyway. Certainly, they are on their way—there is no denial of that—and we are burning up daylight now if we let a situation develop in which they have an effective one, or one they believe is effective, and they know we do not have one.

Even if they never fire theirs, there is the blackmail, there is the uncertainty, there is the gnawing void in our mind on everything. So the blackmail value to them would be tremendous. And whatever perfection we had in ours would certainly be a great investment in negotiation, peace of mind, and other proposals.

I say that as one who is deeply concerned about the effectiveness of these ICBM's; and there might not be anyone left, anyway, if each turned loose on the other.

I wish to make a further point, Mr. President, with respect to the proponents of the Cooper-Hart amendment. They say, “Yes, there is a threat”—they have said it until a few minutes ago—and we think that threat ought to be met. There is a threat of some kind. We ought to have an ABM system. We favor the research for it.” That, without limit, has been the story here until a few minutes ago. So that is the recognition of a threat.

They have gone so far as to say: "Yes, we need ABM; we need this system. We want this money to stay in here for the Safeguard." That is what the vote showed a minute ago. "We want that money in here for the research on the Safeguard system." So they must believe there is something to the idea of a threat and that this is a step in meeting that threat.

Until this afternoon, the only difference between the bill as reported by the committee and the Cooper-Hart amendment pertained to this relatively small amount of deployment, which is another phase of advance testing; and that is what the President trimmed it down to—the absolute minimum, to keep from losing all that time. So under the Cooper-Hart amendment and the bill itself, there is no difference except as to those very small items.

It has been said over and over—I do not wish to take the time now just to repeat—that this is a defensive weapon, after all. And that is what it is—purely defensive. I never can be made to believe, with what little commonsense I have, that Russia or anyone else would consider that as an act of aggression. No one blames anyone else for self-defense. Self-defense is natural and it is inherent. There is an old saying: "Even the worm will turn to protect itself." I do not follow one iota the argument that this is aggression. But some of those who make that argument turn right around and say: "Do not go into a Maginot Line concept; do not get on the defensive in a Maginot Line concept." That is a total contradiction of the idea of the others that this is aggression.

May we have a semblance of order, Mr. President?

The PRESIDING OFFICER. The Senate will be in order.

Mr. STENNIS. Mr. President, this just reduces it to the hard, practical matter of whether we are going to cut this off now, after admitting that we need a system and that this one has shown promise, to keep it going—whether or not we cut it off entirely for this last step.

What are the circumstances? The President of the United States, who is planning to go to this conference, has said, "Before I go, before I leave, I want your backing on this weapon." That is what he said, and I know that is what he meant.

What are we going to tell him? Let us not fool ourselves. We are going to jerk the rug out from under him, and not give him anything to stand on except a lot of words. "Oh, Mr. President, we are going to trust you to negotiate, but you do not have judgment enough to say what kind of backing you think you need in weapons and also in moral support. We are not behind you either way. We will not let you have the weapons. Therefore, we take away our moral support."

They deny it, but that is where we are going to leave it. I am going to stand by our Chief of State, and it makes no difference who he is. He wants this weapon to protect us; I think he should have it.

The PRESIDING OFFICER. The Sen-

ator from Michigan has 6 minutes remaining.

Mr. HART. Mr. President, I yield the time remaining to the able majority leader.

The PRESIDING OFFICER. The Senator from Montana is recognized for 6 minutes.

Mr. MANSFIELD. Mr. President, I deny that those of us who are opposed to the ABM system are undermining the President or are adopting a morally indefensible position. I think that we should get away from the emotion and get down to as many of the facts as we possibly can, recognizing no matter what our position, none of us, not a single one of us, is infallible.

We are approaching a high water mark in the debate on the ABM. For the record I wish to reiterate that three times last year I voted with the distinguished Senator from Kentucky (Mr. COOPER) and the distinguished Senator from Michigan (Mr. HART) against the ABM under a previous Democratic administration.

There have been emotions displayed in this debate today. That is understandable as the heat generates and the arguments become a little bit more personal. There have been many illustrations of what went on in 1898, 1905, and 1912, as if that had anything to do with the question of the ABM, even if the illustrations were correct, and they were. But by and large this debate has been solid, it has been statesmanlike, it has been nonpartisan, and regardless of one's position, in my opinion, it has been in the national interest.

The President made a judgment. He brought about a drastic configuration of the Sentinel system, which he inherited. After a reassessment and reevaluation, he came up with the Safeguard. The President faced up to his responsibility, made a judgment, and rendered a decision; and I honor him for it.

But as Senators we also have to face up to our responsibilities, render a judgment, make a decision, cast a vote, and then we are responsible to the people of the States from which we come for what we do in this and in other instances. That is the way it should be.

For all I know, the advocates of the anti-ballistic-missile system may be right and I may be wrong. But I have to make a decision. I cannot take a walk. I do not wish to avoid a vote. So one has to do what one thinks is best and be prepared to accept the consequences, good or bad.

The statement has been made that some of us are advocating giving up the ABM unilaterally. No such statement has been made by anyone in opposition to this proposal because, as a matter of fact, I am not aware that we have any ABM's at the present time.

I would point out, though, that even though we do not have radars and computers, Sprints and Spartans, we do have parity as of this moment with the Soviets in the matter of ICBM's; that we are infinitely superior in the field of the Polaris missile, where we have about a 12-to-1 or 13-to-1 advantage. If I read the press correctly this morning, there is a decidedly greater advantage because

we have some multiple warheads, I understand, on some of the Polaris missiles. In the field of heavy bombers, the nuclear bombers, we have at least a 4-to-1 and possibly a 5-to-1 superiority.

The question has been raised about cost and that has bothered me. It was my understanding that originally the cost was to be \$6.3 billion for the entire system. The distinguished Senator from Maine this afternoon on the floor of the Senate estimated the cost to be about \$12.5 billion.

I am worried about the question of reliability, too, and I must disagree with my good friend, the Senator from Arizona (Mr. GOLDWATER) who seems to have such faith in the radar which would be installed but which would be very vulnerable, very soft, and very dangerous as far as the missiles themselves are concerned. I have little in the way of faith, as yet, on the question of computers and much needs to be done.

I wish to say in conclusion that what we want to achieve is balance, balance between our offensive needs and our domestic problems.

One priority that we should hold out is hope to our people and the world so that we can get away from a possible mad momentum engendered by an arms race. We should do all we can through negotiations and otherwise to achieve peace, not just for ourselves but for all mankind.

The VICE PRESIDENT. All time has expired. The question is on agreeing to the amendment offered by the Senator from Kentucky (Mr. COOPER) and the Senator from Michigan (Mr. HART).

Mrs. SMITH. Mr. President, I send to the desk an amendment and ask that it be stated.

The VICE PRESIDENT. The amendment will be stated.

The ASSISTANT LEGISLATIVE CLERK. The Senator from Maine (Mrs. SMITH) proposes an amendment in the nature of a substitute. In lieu of the matter proposed to be added by amendment No. 101, add the following:

SEC. 402. None of the funds authorized by this or any other Act may be used for carrying out, after the date of enactment of this Act, any research, development, testing, evaluation, or procurement of the antiballistic missile system known as the Safeguard system, or to carry out any research, development, testing, evaluation, or procurement of any part or component of such system; *Provided*, That funds contained herein or elsewhere for research, development, test and evaluation of components, and related procurement, of any other advanced antiballistic missile system or other weapons system shall not be affected.

Mrs. SMITH. Mr. President, I yield myself 2 minutes.

Mr. GORE. Mr. President, I make the point of order that the Senate is not in order.

The VICE PRESIDENT. The Senate will be in order. The Senator from Maine may proceed.

Mrs. SMITH. Mr. President, the observations I made on my original amendment apply to this amendment, for this amendment merely clarifies my original amendment.

August 6, 1969

I think that the additional language suggested by the Senator from Tennessee (Mr. GORE), the Senator from Kentucky (Mr. COOPER), and the Senator from Michigan (Mr. HART), is most acceptable.

Mr. STENNIS and Mr. HART addressed the Chair.

The VICE PRESIDENT. The Senator from Mississippi is recognized.

Mr. STENNIS. Mr. President, I ask for the yeas and nays on the last amendment offered by the Senator from Maine.

The VICE PRESIDENT. Is there a sufficient second? There is a sufficient second. The yeas and nays are ordered.

Mr. HART. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator will state it.

Mr. HART. Mr. President, is the amendment now pending subject to the agreement earlier entered into, namely, that there will be 1 hour of debate equally divided?

The VICE PRESIDENT. The Senator is correct.

Who yields time?

Mr. STENNIS. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator will state it.

Mr. STENNIS. Mr. President, the situation on the division of time now is the same as it was on the first amendment offered by the Senator from Maine. Is that correct?

The VICE PRESIDENT. The Senator is correct.

Mr. STENNIS. Mr. President, since it falls to me on this side I do want representation had with that time. I assume the Senator from Maine would use time first. I make that announcement.

The VICE PRESIDENT. The Senator from Maine is recognized.

Mrs. SMITH. I yield to the Senator from New York.

Mr. JAVITS. Mr. President, I think it is important that the Senate have something of the rationale which went into the additional language we now find—

The VICE PRESIDENT. The Chair would inquire of the Senator from Maine how much time is yielded to the Senator from New York.

Mrs. SMITH. I yield 3 minutes to the Senator from New York.

The VICE PRESIDENT. The Senator from New York is recognized for 3 minutes.

Mr. JAVITS. Mr. President, I think it is important that the Senate have some concept of the additional language which went into the Smith amendment and why I shall vote for it. I hope very much, as Senators HART and COOPER have announced, that other Senators who support the Cooper-Hart amendment will vote for it, too.

What it does is to make, in my judgment, a very substantive difference in opening up research and development, testing, evaluation, and related procurement to advance ABM systems other than Safeguard.

This does not mean that if Safeguard has a transistor that we cannot deal with that transistor in another system, or a weapon, or a Sprint, or a PAR, or

anything else that happens to be in the Safeguard system. But it does take off the restraints on the ambit of research and development which we are authorizing so as to reject Safeguard as the system upon which the research and development will be focused and extend it to the most advanced, the best ABM system our people may wish to research and experiment with.

It seems to me, as the Senator from Kentucky (Mr. COOPER) has said, that represents the fundamental concept which we have had in respect of the Cooper-Hart amendment, and represents acceptance by the Senate of responsibility for a weapons system of such major character, with such portentous political effect as we have been debating here that, therefore, it should be acceptable to those of us—

The VICE PRESIDENT. The time of the Senator from New York has expired.

Mrs. SMITH. I yield 1 additional minute to the Senator from New York.

The VICE PRESIDENT. The Senator from New York is recognized for 1 additional minute.

Mr. JAVITS. Who found the previous amendment too restrictive in terms of its being negative, but now it introduces a positive note which we had hoped to preserve and, indeed, it amplifies and expands that in terms of the area and the field it will cover.

Mr. FULBRIGHT. Mr. President, will the Senator from New York yield?

Mr. JAVITS. I yield.

Mr. FULBRIGHT. To make it plain and concise, this amendment will allow the research and evaluation, but it will delay at least for a year any further authorization.

Mr. JAVITS. The Senator is exactly right.

Mr. FULBRIGHT. That is its effect.

Mr. JAVITS. Yes. It will have the same effect and, at the same time, give a broader field for research and development, which all of us agree to.

Mr. FULBRIGHT. The actual deployment will be delayed.

Mr. JAVITS. The Senator is exactly right. I thank the distinguished Senator from Maine for yielding to me.

Mr. HART. Mr. President, will the Senator from Maine yield me 1 minute?

Mrs. SMITH. I yield 1 minute to the Senator from Michigan.

The VICE PRESIDENT. The Senator from Michigan is recognized for 1 minute.

Mr. HART. Mr. President, not being certain that there would be opportunity available under controlled time, under the Smith substitute, I indicated earlier, as we were approaching the closing of controlled time on the Cooper-Hart amendment, my strong hope that the Smith amendment would be supported by all of us who, over the months, have had a deep conviction that it would be wrong at this period, in the development at this moment in the world's negotiations in search of arms control, to deploy any ABM system.

This amendment, which is against deployment, as the Senators from Arkansas and New York have indicated, makes clear the fullest opportunity for

the Department of Defense to undertake research on behalf of what may never be found; namely, a good system.

Mr. DOMINICK. Mr. President—

Mr. STENNIS. Mr. President, the Senator from Texas is ready to speak and waive time on the other. I yield 4 minutes to the Senator from Texas.

The VICE PRESIDENT. The Senator from Texas is recognized for 4 minutes.

Mr. TOWER. Mr. President, I think it should be made adequately clear that the proposal by the distinguished Senator from Maine, as it has been modified from its original form, actually changes nothing. I repeat, it changes nothing. It still wipes out the ABM. It wipes out research and development on Safeguard.

Now I have heard Senators in this Chamber say that they favor research and development on Safeguard to determine whether it will be made workable.

If this amendment is adopted, there will never be any research and development on Safeguard, at least not next year. The fact is, those who say they want ABM research and voted against the Smith amendment the first time, would be inconsistent if they failed to vote against it the second time. Certainly, those who said that they would accept a system with some modifications would be inconsistent if they vote for this amendment, because it will wipe out the Safeguard program. It will wipe out any research, any development, any testing, or any evaluation on Safeguard. It will wipe it all out. Let me make that clear.

This is a much stiffer proposal than the Cooper-Hart amendment. I think that Senators had better vote very carefully on this amendment because they may be wiping out for a year any Safeguard research and development, if the amendment is agreed to.

We know that the Russians possess the SS-9 which is not the type of system designed for soft targets. It is the type of system designed for missile sites. I think we can draw the conclusion that they are building towards a first strike capability.

I do not see why we have to listen to a lot of talk about provocation. On the one hand, the opponents say that it will not work and the Russians will have it. If that is the case, then there is no provocation.

On the other hand, even if they do not, the Russians have said they do not regard such deployment as a provocation.

This is a system which is not aimed at people. It will not harm the hair on one Russian's head, even if it were fired off.

So far as escalation of spending is concerned, we spent much less money on strategic weaponry during the last year of the Eisenhower administration beyond that which the Soviet Union spent—about twice as much as we did—on strategic weaponry. That is one of the few things our intelligence community all agree on.

I think that we would be taking a tremendous chance if we relied on the good will and good intentions of the Soviets, when they have got a "gun" already at our temple.

Make no mistake about it, there is no change in the second amendment. The latter just clarifies the language.

If we want to wipe out the ABM altogether, that is what we will be doing if we vote for the second amendment. We will be wiping out research and development on Safeguard altogether.

Mr. STENNIS. I yield 3 minutes to the Senator from Missouri.

Mr. SYMINGTON. Mr. President, with all due respect to the Senator, to say that this amendment wipes out all development of the ABM is not accurate. Some of us, years ago, opposed the Nike X. Some of us, years ago, opposed the Nike-Hercules.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. SYMINGTON. I will be glad to yield shortly.

Mr. TOWER. The Senator has called this inaccurate. I request that he yield.

Mr. SYMINGTON. I am tight for time but would be glad to yield on the Senator's time.

Mr. TOWER. All right; if the Senator from Mississippi will grant it.

Mr. STENNIS. I yield 1 minute to the Senator from Texas.

Mr. TOWER. The Safeguard system is described in specific language.

Mr. SYMINGTON. I thought the Senator from Texas referred to any ABM system, not just the Safeguard system.

Mr. TOWER. I said the Safeguard system.

Mr. SYMINGTON. If I am wrong on the record, I am glad to apologize. We have had the Nike-Ajax and then the Nike-Hercules; then we had the Nike-Zeus and later the Nike X. One is the Spartan part of the present Safeguard system, formerly the Sentinel system. The Sprint is the former Nike X.

Therefore what we have had is an ever-shifting, ever-changing group of components.

I noticed the word carefully placed in the amendment of the Senator from Maine—"components." There will be the right to research all these components in effort to develop an ABM system that will be satisfactory. I happen to believe the proposed system may not work. Therefore, I would rather see more research and development before we ask the American people to spend additional billions of dollars for deployment. That is what, in my opinion, this amendment says; and also that is the thrust of the Cooper-Hart amendment. Therefore, I support the amendment of the distinguished Senator from Maine.

Mr. STENNIS. Mr. President, I yield 5 minutes to the distinguished Senator from Georgia.

Mr. RUSSELL. Mr. President, I congratulate the distinguished Senator from Maine. If she succeeds in having her amendment adopted in its present form, she will have carried the original amendment, or it will have that very effect. There cannot be any possible question about that. I feel that the distinguished Senator from Maine is too good a legislator not to know that if this amendment carries, it will have the effect of her original amendment and will prohibit "any research, development, testing,

evaluation, or procurement of the anti-ballistic missile system, known as the Safeguard system, or to carry out any research, development, testing, evaluation, or procurement of any part or component of such system."

If there can be any more far-reaching language than that to strike down and eliminate any research and development on this system, a system which has been researched now for some 8 or 10 years at a cost of more than \$5 billion, I do not know how it could possibly be drafted.

To say that this additional language which is now proposed has no effect on the Safeguard project—which is referred to by the name of Safeguard in the submission of the Department of Defense and in the report of the committee to this body—is to me something that is incomprehensible, because the additional language only says that nothing herein contained shall affect "any other"—note that language; not the Safeguard but "any other"—system.

So this amendment if adopted will kill all the research and all the development of the so-called Safeguard system after Senators have stood here on the floor day after day and stated they were in favor of research and development, but not deployment. This strangles it in the crib. There is no chance for it to have another breath of life in the bill if this amendment goes into effect. There is nothing in this additional language that mitigates the effect of that statement in any degree. It refers to "any other advanced anti-ballistic-missile system or any other weapons system shall not be affected."

If this amendment had not been offered with this language added, it would have had exactly the same effect on the other weapons system which this language has, which is none; but the basic thrust of the original amendment advanced by the distinguished Senator from Maine to eliminate the Safeguard is not mitigated in the slightest degree or affected in any way by this additional language. I do not see how Senators can possibly construe it as affecting it in any way, because it does not relate to any exemptions for the Safeguard program or any components thereof.

It says "provided that funds for other advanced" systems shall not be affected. But the amendment would kill any project that is embraced within the Safeguard system. Of course that includes all the generation missiles the Senator from Missouri referred to, the Nike-Zeus, which grew up to the other systems, such as Hercules, and was carried on, but they are today all components of the Safeguard system.

I will say this much: It is my solemn opinion that, if this amendment is agreed to and if the Department of Defense moved forward in the slightest degree with research and development of any component of the so-called Safeguard system, it would be in defiance of this mandate from the Congress and the Department of Defense would subject itself—very properly—to very drastic criticism.

Mrs. SMITH. Mr. President, I yield 2 minutes to the Senator from New Jersey (Mr. CASE).

Mr. CASE. Mr. President, I asked for this time to make two points, both related to the same matter, the substantial difference between the original amendment proposed by the Senator from Maine and the amendment now pending before us. I could not have supported the original amendment because I believed it was necessary for us to attempt to develop, by research and development, an anti-ballistic-missile system for the defense of our Minuteman, and I was very doubtful that the language of the original amendment would have permitted that.

Clearly, the present language does permit it. It is substantially different. It would be possible, for example, under the amendment, to take components of the Safeguard system, do research on them as a part of another system, the Sprint missile, the Spartan missile, radars, computers, and what-not, all of which, although a part of the Safeguard system, could be worked over and changed for inclusion as another anti-ballistic-missile system—that is the difference—an anti-ballistic-missile system which has a chance of doing the job.

That bears directly on the question of whether we have a substantially different amendment. Otherwise, I for one would not be able to support it.

Mr. SYMINGTON. Mr. President, will the Senator yield me 1 minute?

The PRESIDING OFFICER. The Senator's time has expired.

Mrs. SMITH. Mr. President, I yield 1 additional minute to the Senator from New Jersey so he may yield to the Senator from Missouri.

Mr. CASE. I yield to the Senator from Missouri.

Mr. SYMINGTON. Is it not true that the Safeguard system is part of the Nike X system, and part of the Nike-Hercules system, and part of the Nike-Zeus system, and part of the Sentinel system; and therefore we would continue to utilize all these various components and their improvements in the engineering and evaluation of any new system.

I would respectfully present that if we followed the opinion of some people as to what under the revised Smith amendment we could or could not do, we could not take even one transistor used in the Safeguard system and utilize it in any new system. Of course the amendment does not mean that. In all good humor, I suggest we should do again what we have already done some five or six times before, and that is change the name. Let us call the new development the Life-guard system. Then everything will be all right and we can proceed with further research and development.

Mr. JAVITS. Mr. President, will the Senator yield?

Mrs. SMITH. I promised to yield to the Senator from Tennessee.

The PRESIDING OFFICER. How much time does the Senator from Maine yield?

Mrs. SMITH. I yield 4 minutes to the Senator from Tennessee.

Mr. GORE. Mr. President, the pending amendment is considerably different from the amendment previously voted

August 6, 1969

upon. If Senators will turn to pages 21, 22, 23, and 24 of the report, they will find four pages of missiles for which the pending amendment would provide research, development, test, and evaluation of components and related procurement.

Mr. President, these include all of the Navy missiles, and all of the Air Force missiles. Let me read the names of some of them: Polaris, Sidewinder, Phoenix, Standard missile, Tartar, Terrier, Talos, Chaparral, Redeye, Hawk, Pershing, Tow missile, Minuteman I, Minuteman II, Minuteman III, Shrike, Sparrow, Sram.

The pending amendment would not touch any funds available in this bill or, to quote from the amendment, "elsewhere," for research, development, testing, and evaluation of components related to procurement of any of these items.

Moreover, it would permit research and development on components common to both Safeguard and these other missiles. It is, Mr. President, the deployment of the Safeguard ABM system toward which the pending amendment is pointed. The adoption of the pending amendment, as would the adoption of the Cooper-Hart amendment, would prevent the deployment of the Safeguard antiballistic missile. It would not prevent research and development, evaluation and testing, or funding thereof, on any other missile system listed on these four pages.

Therefore, Mr. President, I hope that a point of order will not be made against the amendment. If it were not a material change, why would the junior Senator from Mississippi and the junior Senator from Arizona object to the distinguished Senator from Maine modifying her amendment according to her stated legislative will?

The VICE PRESIDENT. The Senator's time has expired.

Mrs. SMITH. Mr. President, I yield 1 minute to the Senator from New York.

Mr. JAVITS. Mr. President, I rise only to ask the Senator from Maine, who is the author of the amendment, a question.

The Senator has heard interpretations of her amendment made by me, by the Senator from New Jersey, and by the Senator from Missouri. The interpretations are substantive. Does the Senator accept those interpretations as stating her intention in offering the amendment?

Mrs. SMITH. Mr. President, the proof that there is a substantial difference between my original amendment and this new amendment as proposed is that the latter has been accepted by the sponsors of the Cooper-Hart amendment.

Mr. JAVITS. And the Senator does accept these interpretations to which I have referred as stating her intention in offering the amendment?

Mrs. SMITH. That is correct.

Several Senators addressed the Chair.

Mr. STENNIS. I yield 1 minute to the Senator from Kentucky.

Mr. COOPER. Mr. President, as one of the sponsors of the Hart-Cooper amendment, I should like to say that neither of us ever saw the Smith amendment until it was sent to the desk. We voted against the original amendment of

the Senator from Maine because we did not believe it met the purposes of our amendment. I opposed, and Senator HART opposed, the original modifying language proposed by the Senator from Tennessee (Mr. GORE). But in discussions, and with various objections being made—some made by Senator HART and me, and some by others—the amendment which the Senator from Maine has now sent to the desk was agreed upon for these reasons:

I have the greatest respect for the Senator from Mississippi, but I must say that commonsense leads me to disagree with him.

The VICE PRESIDENT. The Senator's time has expired.

Mr. COOPER. One-half minute more. What we, who oppose the ABM, are seeking is to prevent its deployment. It is the insistent, compulsive reasoning of those who favor deployment that they want a premature decision to deploy a future system—a step which we oppose.

First, our amendment provided for full research and development of ABM technology; and second, its purpose was to see if it was possible, by intensive research and development, to develop a system which might work, and which would be surer to work than the one which has been proposed by the administration. If it was ever necessary to deploy a system we might then have an effective system.

The amendment offered by the Senator from Maine as her first proposal, was perfectly in accord with one of our views, that this system should not be deployed now; but we felt that research and development should go on.

The VICE PRESIDENT. The Senator's time has expired.

Mr. COOPER. Ten seconds more. She added that provision of research and development to her second amendment. Thus it differs. It certainly differs from her first amendment; and what she has said shows that what she intends is in accord with the intentions of Senator HART and myself and our supporters in offering our amendment.

Several Senators addressed the Chair.

Mr. STENNIS. Mr. President, I yield to the Senator from Florida 1 minute.

Mr. HOLLAND. Mr. President, is it not true that the Senator's amendment does provide for the use of the funds provided in this bill for research and development on the Safeguard?

Mr. COOPER. It provided for the use of the funds—

Mr. HOLLAND. To the extent of \$400.9 million, did it not?

Mr. COOPER. Will the Senator let me finish?

The VICE PRESIDENT. The Senator's time has expired. Who yields time?

Mrs. SMITH. Mr. President, how much time do I have remaining?

The VICE PRESIDENT. The Senator from Maine has 10 minutes remaining.

Mrs. SMITH. I reserve that for the time being.

The VICE PRESIDENT. Who yields time?

Mr. STENNIS. Mr. President, I think the Senator from Kansas had asked me first. I yield 2 minutes to the Senator from Kansas.

Mr. DOLE. Mr. President, I take this time to address a question to the Senator from Maine. Do I understand correctly that her original amendment would have prohibited the use of any funds for deployment, research, and development of the Safeguard?

Mrs. SMITH. That is correct.

Mr. DOLE. Do I understand that her present substitute has the same purpose, to prohibit funds for Safeguard research or development?

Mrs. SMITH. Of the Safeguard; that is correct.

Mr. DOLE. So my point is that there is really no difference between her first amendment and this substitute, because what was implied in the Senator's first amendment she is spelling out in her second amendment. I think the intentions are the same; if you are totally against the Safeguard system, you will vote for the Smith amendment; if you are for research and development, as was the Hart-Cooper amendment, you vote against the Smith amendment.

Mr. STENNIS. Mr. President, I yield next to the Senator from Colorado, 3 minutes.

Mr. DOMINICK. Mr. President, I shall not take long on this, but I have been sitting here for 5 weeks listening to this debate on the Cooper-Hart amendment, and until today, I have never heard them say they were against research and testing of the Safeguard system. Over and over again, I have heard the Senator from Kentucky and his supporters get up and say, "We want to test this on Kwajalein; we do not want it in North Dakota, and we do not want it in Montana. We will do it on Kwajalein. We have MSR out there, and we are going to test it there."

If we accept this amendment, according to its language, you cannot test it with the MSR on Kwajalein; as a matter of fact, you cannot test it anywhere, because it is a component of the system. You cannot put together a PAR, or do any of these things we have been talking about for 5 weeks.

All of a sudden, we are faced with a complete turnabout, in about a half hour, where the Cooper-Hart group all of a sudden say they are in support of this amendment.

On what basis? On the basis of what facts do we suddenly find ourselves no longer in favor of research and development on the component parts of the Safeguard missile? I certainly must confess that I am confused and concerned, and I think what we are doing is avoiding the real issue, which is the vote on the Cooper-Hart amendment. We have already voted on that of the Senator from Maine.

Mr. STENNIS. Mr. President, I yield 2 minutes to the Senator from Florida.

Mr. HOLLAND. Mr. President, notwithstanding the positive assertions of the Senator from Tennessee, shown at page 25 of the report, it breaks down the requested authorizations for the Safeguard antiballistic missile system under three items—(a), (b), and (c).

The largest item is (b), and it reads as follows:

(b) The request for an authorization for funds for research and development for the

Safeguard system in the amount of \$400.9 million.

That amount was continued available for research and development under the Cooper-Hart amendment.

That amount is cut out and will not be available for research on Safeguard or anything else under the pending amendment.

I would want that to be clearly understood by every Senator.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield.

Mr. STENNIS. Mr. President, I think the Senator is absolutely right, without any doubt whatsoever.

Mr. HOLLAND. I thank the distinguished Senator.

Mr. GORE. Mr. President, will the Senator yield?

Mr. HOLLAND. I will yield in a moment.

I have also inquired of the clerk of the committee, who advises me that the other funds available for research are \$141 million for the Nike X missile.

But that is all that would be available under the particular amendment, and not for use on the components of the Safeguard missile at all, but simply for use on the components of the latest Nike model.

There is not any comparison between the two objectives. I state this because I know it is true. The Cooper-Hart amendment does permit the retention of \$400.9 million in the bill. However, the pending amendment would cut it out for all practical purposes.

Mr. GORE. Mr. President, will the Senator yield?

Mr. STENNIS. Plenty of time remains on the other side.

Mrs. SMITH. Mr. President, I yield 3 minutes to the Senator from Tennessee.

The VICE PRESIDENT. The Senator from Tennessee is recognized for 3 minutes.

Mr. GORE. Mr. President, the senior Senator from Tennessee referred to pages 21, 22, 23, and 24. Funds are untouched for any missiles or any components thereof or funding thereof on any of those four pages.

Funds would be prohibited for the items on page 25 which do not contain components identical or necessary for the four previous pages.

Let me read it. It reads:

One missile site radar, (Grand Forks).

Funds would be denied by the pending amendment for that.

It reads:

One missile site radar data processor, (Grand Forks).

Funds would be denied for that.

The VICE PRESIDENT. The time of the Senator has expired.

Who yields time?

Mr. HOLLAND. Mr. President, will the Senator yield me 1 minute?

Mr. STENNIS. Mr. President, I yield 1 minute to the Senator from Florida.

Mr. HOLLAND. Mr. President, I want to make it very clear, and there is no doubt about it, that the \$400.9 million which would have been retained in the bill for research and development of

Safeguard by the Cooper-Hart amendment would be cut out by the pending amendment.

The Senator from Tennessee nor anyone else will deny that, because that is the fact. And Senators should realize that it is a fact.

Mr. GORE. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield if I have time remaining.

Mr. GORE. The Senator is incorrect, because the amendment would not deny any funds available in this bill or elsewhere for components of advanced ABM or other missile systems. That is plain.

What it does prohibit, let me read again from page 25:

Advance procurement for one other perimeter acquisition radar . . . (Malmstrom).

It prevents the deployment at Grand Forks and also—it runs over to the other page—it prevents the deployment in both North Dakota and Montana.

If, however, components needed for the missiles on the previous four pages are identical with those that would be used in Safeguard, research and development can continue upon those.

That is perfectly plain from the amendment.

Mr. HOLLAND. Mr. President, I ask unanimous consent that section 402 of the amendment, as rewritten, be printed at this point in the Record.

There being no objection, section 402 of the amendment, as rewritten, was ordered to be printed in the Record, as follows:

SEC. 402. None of the funds authorized by this or any other Act may be used for carrying out, after the date of enactment of this Act, any research, development, testing, evaluation, or procurement of the antiballistic missile system known as the Safeguard system, or to carry out any research, development, testing, evaluation, or procurement of any part or component of such system; provided that funds contained herein or elsewhere for research, development, test and evaluation of components, and related procurement, of any other advanced antiballistic missile system or other weapons system shall not be affected.

Mr. STENNIS. Mr. President, I yield 1 minute to the Senator from California.

Mr. MURPHY. Mr. President, I point out to my distinguished colleagues that in the colloquy in committee if the missiles on pages 21, 22, 23, and 24 would have done the job, we would not have had to include page 25, which is headed, "Safeguard Anti-Ballistic-Missile System."

I would like to make clear one other point. In the heat of the debate, there is one very important consideration in the judgment of those who have asked for this system, and that is the time when this system will be ready.

For every year that goes by now, in the judgment of our best scientific brains, we lose 2 years in the time when the system would be ready.

I hope that my colleagues will bear that in mind at this moment. This cannot be delayed. That is why the President has asked for it at this time.

Mr. STENNIS. Mr. President, I yield 2 minutes to the Senator from New Hampshire.

Mr. COTTON. Mr. President, we have been hearing utterances to the effect that Congress was going to assert itself and that Congress was not going to let itself be subjected to this military-industrial complex, whatever that is, not let the Pentagon do anything that Congress does not know about and authorize.

If the wording of the pending amendment is not an open invitation and is not a mandate to the Pentagon to do by subtlety and circumvention what the Cooper-Hart amendment would let them do openly, they would have to go ahead with research for the Safeguard system. However, at the same time what they would be doing would be also research for some other kind of system or defense.

I can easily understand those—although I do not agree with them—who want to authorize research and development but not the installation of the Safeguard or an ABM, whichever we wish to call it. But when we agree to an amendment upon which the debate here has been so confusing, anyone who tried to establish a legislative history would realize it is simply an invitation to the Pentagon, after all our protestations that Congress was going to assert itself and no one was going to put anything over on Congress, to go ahead and, by subtlety, do what the proponents of the Cooper-Hart amendment would let them do.

Mr. RUSSELL. Mr. President, will the Senator yield?

Mr. COTTON. I yield.

Mr. RUSSELL. Mr. President, I have been very curious as to why all of a sudden the very carefully drawn Cooper-Hart amendment was abandoned and scuttled in favor of this amendment, the meaning of which, to say the least, is somewhat controversial.

Everyone can understand the Cooper-Hart amendment. It very clearly said we could go ahead with research and development, but that we could not deploy the system.

We now have an amendment that says we cannot go ahead with research and development of even any component, but that we can go ahead with other systems.

I think it is noteworthy that all those who proposed to vote for the original amendment have very vigorously shifted their support to the amendment of the Senator from Maine.

There cannot be any question that if one reads the amendment it carries out completely the intention of the original amendment of the Senator from Maine.

If the Senate keeps its faith, and it should, as to the matter, it will not drop suddenly, like a hot cake, the very clear amendment that we have been debating for some weeks and on which long speeches have been written and delivered on both sides, in favor of some other amendment, brought here at the very last minute.

Mrs. SMITH. Mr. President, I yield 3 minutes to the Senator from Illinois.

Mr. PERCY. Mr. President, I think it is very important that we clarify the distinction here between what we truly do mean.

If the distinguished Senator from Georgia, the chairman of the Appropriations Committee, is correct, I would find

August 6, 1969

S 9279

myself in a position to vote against the amendment. But my understanding is entirely different. I think it is almost a question of semantics as to what we mean by a name.

I understood the Sentinel system had Sprints, Spartans, PAR's, MSR's, and computers and software for the computers. As I understand it, the Safeguard system has Sprints, Spartans, PAR's, MSR's, and computers and software for the computers. However, its mission is different.

It has been moved from the cities and put at the missile sites and is hard protection rather than protection of areas.

I would like to ask the distinguished Senator from Maine whether, under the amendment, as now modified, we could accomplish the things that I feel are necessary to be accomplished. Is it possible, under the amendment offered, as it is now being debated, for the MSR to be redesigned so that it can be made harder and less vulnerable than the present system?

Mrs. SMITH. That is my understanding.

Mr. PERCY. It can?

Mrs. SMITH. That is my understanding.

Mr. PERCY. Is it possible to replace the one, single, exceedingly expensive MSR, missile site radar, which costs an estimated \$150 to \$165 million each, and there is only one at each site—a radar that could be destroyed by an SS-11, much less an SS-9, if sent by the Russians, and, therefore, highly vulnerable and much more vulnerable than are hardened missile sites themselves—and do research, design, development, evaluation, and testing with a multiplicity of radars then, that could be hardened and made less vulnerable?

Mrs. SMITH. My interpretation would be "Yes."

Mr. MURPHY. Under the distinguished Senator's amendment, would it be possible to continue the testing and evaluation of Sprint's, a program that is intended to be carried on a Kwajalein?

Mrs. SMITH. Yes.

Mr. PERCY. Could we then continue the testing and evaluation of Spartan?

Mrs. SMITH. Yes.

Mr. PERCY. Could we develop the software for the computers that would be required for a ballistic-missile system that could be named other than Safeguard, because it would be slightly modified and changed, just as the distinguished Senator from Missouri has indicated we have changed and taken the genesis of the whole development of ABM from the beginning to systems that successively we decided not to deploy until we have finally come to Sentinel and Safeguard, and we would attach this to the next advanced stage of a perfected ABM system? Does the Senator from Maine perceive that we could do this under this modification?

Mrs. SMITH. That would be my interpretation, yes.

The PRESIDING OFFICER (Mr. EAGLETON in the chair). The time of the Senator has expired.

Mr. PERCY. Will the Senator yield me 30 seconds?

Mrs. SMITH. I yield 1 additional minute to the Senator.

Mr. PERCY. Is there, then, this distinction between the original amendment, which was overwhelmingly defeated, and this amendment? Could all the things I have named be done under the original amendment which the Senator feels we can do under the modified amendment?

Mrs. SMITH. I would say no.

Mr. RUSSELL. Mr. President, will the Senator yield?

Mr. PERCY. May I conclude on one point?

If the answer is in the affirmative on everything that needs to be done, I intend to vote for the modified amendment of the distinguished Senator from Maine.

I yield to the Senator from Georgia.

Mr. RUSSELL. The Senator has described the various systems. Does he not consider all those as components of the Safeguard system?

Mr. PERCY. All the items I have listed?

Mr. RUSSELL. That the Senator from Illinois has enumerated.

Mr. PERCY. Yes; I do.

Mr. RUSSELL. How does the Senator view the language that says no research, testing, or evaluation shall be done on any part or component of the Safeguard system?

Mr. PERCY. Also, the language is clear: It says, "provided that funds contained herein or elsewhere for research, development, test and evaluation of components, and related procurement, of any other advanced anti-ballistic-missile system—"

Mr. RUSSELL. "Any other."

Mr. PERCY. "Or other weapons systems shall not be affected."

Mr. RUSSELL. If the word "other" does not take it completely away from Safeguard, I do not know what word in the English language could be used.

Mr. PERCY. If the distinguished Senator from Maine feels that we can carry out all the missions which we feel must be carried out, I can support it.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, I yield 2 minutes to the Senator from Tennessee.

Mr. BAKER. Mr. President, I am much concerned with the developing and evolving distinction, or apparent distinction, between the original Smith amendment and the modified Smith amendment. In a most respectful way, I suggest that we are dealing with something more than semantics, but, rather, something that is very vital to the interpretation of what we are about to do. Words, after all, are more than semantics; and any fair reading of the amendment proposed by the distinguished Senator from Maine is to the effect that you cannot go ahead with research, development, testing, the evolution, or the procurement of the Safeguard system by name.

Mr. RUSSELL. Or any component.

Mr. BAKER. Or any component thereof.

The modification goes on to say, "provided that funds contained herein," and so forth, "and related procurement of any other advanced anti-ballistic-missile system."

Mr. President, I respectfully suggest that any other advanced missile system taken in context with the description of Safeguard by name positively excludes any evolutionary changes or differences from the Safeguard system, and that, as a matter of law, as a matter of statute, we are about to preclude the evolutionary development of any improvement of even the concepts developed in the Safeguard system thus far. I do not believe that is the intention of the Senate today. I do not believe we intend to scrap what we have done so far and require our scientists to start over from scratch with some other system; but I believe that is the fair intentment and the inevitable effect of the words that are before the Senate in the new amendment.

The PRESIDING OFFICER. The time of the Senator has expired.

Who yields time?

Mr. STENNIS. Mr. President, I yield 1 minute to the Senator from Texas.

Mr. TOWER. Mr. President, it occurs to me that what the distinguished Senator from Illinois has just suggested is that if we change the name of the system and go ahead and do all these things, it will not matter. I wonder if it would be in order for us to offer an amendment to change the name of the system to something other than Safeguard.

The PRESIDING OFFICER. Who yields time?

Mrs. SMITH. I yield 1 minute to the senior Senator from Vermont.

Mr. AIKEN. Mr. President, I note that everyone who has spoken so fervently in opposition to the proposal of the Senator from Maine has been even more outspoken against the Cooper-Hart amendment. Everyone who has been in the Senate more than 6 months knows that if the amendment offered by the Senator from Maine is as bad as the devotees of ABM say, they would be working to attach it to the Cooper-Hart amendment instead of killing it. That is just practical politics.

Mr. STENNIS. Mr. President, I yield 1 minute to the Senator from Iowa.

Mr. MILLER. Mr. President, the Senator from Missouri, who originally supported the Cooper-Hart amendment, now says he supports the amendment of the Senator from Maine because it would knock out the Safeguard system, and he says he does not think the Safeguard system will work.

The Senator from Missouri well knows that you cannot determine the answer to that question until you have service testing, and you cannot have service testing until you have deployment. That is what the Cooper-Hart amendment is all about.

So I suggest that we get on and defeat this amendment and then defeat the Cooper-Hart amendment, so that we can have service testing to prove who is right and who is wrong on whether this can work.

Mr. STENNIS. Mr. President, I yield 1 minute to the Senator from Arizona.

Mr. GOLDWATER. Mr. President, I ask the distinguished Senator from Maine two questions.

Both the Senator from Texas and the Senator from Missouri have inferred that all we need to do is to change the name of Safeguard to something else, such as Rightguard or Outguard, and we can get around the Senator's amendment. Is that correct? Does the Senator say "Yes" to that?

Mrs. SMITH. I could not give a yes or no answer to that.

Mr. GOLDWATER. I think the Senator should be able to give an answer. One of the Senator's supporters has made the charge that it could be. One of the Senator's opponents has made the charge. I think it is something the Senator should consider.

One other question. The Senator from Maine serves on the committee. Does the Senator know of any other advanced anti-ballistic missile system that is being considered at the present time?

Mrs. SMITH. No; I would have to say I do not.

Mr. GOLDWATER. So, in effect, the Senator is suggesting that we rub out approximately 15 years of testing and ask the scientists and the engineers to start again.

Mrs. SMITH. Of course, it could be that the Nike X is advanced development.

Mr. GOLDWATER. But not under the language of the Senator's amendment, as I understand it.

Mrs. SMITH. It would not be my understanding. There is money in this for the Nike X and the Nike-Zeus.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. STENNIS. Mr. President, I yield myself such additional time as I may have.

This is tragic; this is a tragedy.

The PRESIDING OFFICER. The galleries will be in order.

Mr. STENNIS. It is a legislative monstrosity, when there is not time to analyze, to find the meaning of words, to check and doublecheck, and to throw this in like a double-barreled shotgun and fire both barrels at the same time. Let us listen to the words.

There are \$400 million, in round numbers, in the bill for research and development for Safeguard. The first Smith amendment would knock it as high as the sky and take it out by name.

The amendment states:

None of the funds . . . may be used for . . . any research, development, testing, evaluation, or procurement of the anti-ballistic missile system known as the Safeguard system . . .

The Safeguard system went down the drain there.

Then, there are the words, "or to carry out any research, development, testing, evaluation, or procurement of any part or component of such system." That is the Safeguard. The Senator from Maine wanted to cancel all research and would do so by that language.

Now, I read the remainder of the language. The foregoing language was the language voted on a few moments ago. That would be the law, just like the Medes and the Persians. [Laughter].

Provided that funds contained herein or elsewhere for research, development, test and evaluation of components, and related procurement, of any other advanced antiballistic missile system.

Other than what? Other than the Safeguard, of course. It states, "or other weapons system."

Other than what? Other than the Safeguard. Then, it states, "shall not be affected."

Of course, they are not affected. They were not affected by the original Smith amendment. They are not affected by this amendment. The same language is here, "shall not be affected."

Mr. President, every word that was in the first Smith amendment about Safeguard is in this amendment. Senators who have been saying they are for research for Safeguard and for this amendment are going to have awfully red faces and they are going to be trying to get out of that situation. That is why I say it is tragic; it is compounded tragedy. It is legislating in the dark where we do not know what these words mean.

I yield back my time.

SEVERAL SENATORS. Vote! Vote! Vote!

The PRESIDING OFFICER. The Senator from Maine has 4 minutes remaining.

Mr. JAVITS. Mr. President, will the Senator yield to me for 1 minute?

Mrs. SMITH. I yield.

Mr. JAVITS. Mr. President, one thing has now been made clear by the Senator from Mississippi in his speech. He has failed to account for the fact that the amendment introduced by the Senator from Maine (Mrs. SMITH) does not affect the money in the bill. The bill states in section 201 that there is \$1,638,600,000 for research, development, testing, and evaluation. Now all the Senator from Maine is doing is to put a restriction on how that money can be used. If that restriction allows use of \$400 million for research on an ABM system, it is still in the bill. Section 402 does not take it out of the bill. Therefore, the interpretation of the Senator from Maine controls rather than the interpretation put on it by the Senator from Mississippi.

Mr. HARTKE. Mr. President, there are only two questions at issue in our votes today:

First. Will the ABM work?

Second. Do we need it for our national defense?

Question is not, Can we trust the Russians?

Question is not, Do the Russians have an ABM?

Question is not, Does the President of the United States carry a heavy and lonely burden?

Question is not even how much the system would cost, because if it is needed and would work, no price is too high, but if it is not needed or will not work, a single dollar is too much.

Those are the only, the operative questions: Will it work? Do we need it? All other questions turn on the answers to those two questions.

Will it work? Opponents and defenders alike admit we do not know. That is why those of us who favor the Hart-Cooper approach are willing to authorize sub-

stantial funds for R. & D. We are not unreasonable—we are not dogmatic. We say only that the scientific doubts are so weighty that further R. & D. is called for.

For me, the far more crucial question is the second: Do we need it for our national defense? The answer is perfectly clear: We do not.

The only justification offered for Safeguard is that it—and it alone—can protect our deterrent force against a Communist first strike.

That is simply untrue.

Our second-strike force is invulnerable. Even the most massive and successful Soviet attack on the two Minuteman bases could not save the attacker from an utterly devastating response from our Polaris submarines, from our manned bombers, and from our thousands of other ICBM's and IRBM's both here and abroad.

And that is the meaning of second-strike invulnerability—that the Nation which sustains a first strike will still have enough offensive capacity left to punish the attacker beyond endurance.

We have that now—without our ABM. We shall continue to have it—and to an even greater extent as our multiple warhead missiles are deployed on land and sea—without an ABM.

The Communists dare not attack us—with or without an ABM—because they know they would suffer utter devastation if they did.

It is that simple. Deterrence is deterrence. Adding a multibillion-dollar ABM system will add nothing—not one iota—to our present overwhelming deterrent force.

The rest, Mr. President, is oratory. And I think we have had enough of that.

Mr. RANDOLPH. Mr. President, a distinguished American has said:

The present tensions with their threat of national annihilation are fostered by two great illusions. The one, a complete belief on the part of the Soviet world that the capitalist countries are preparing to attack them; and sooner or later we intend to strike. And the other, a complete belief on the part of the capitalist countries that the Soviets are preparing to attack us; that sooner or later they intend to strike. Both are wrong. Each side, so far as the masses are concerned, is desirous of peace. Both dread war. But the constant acceleration of preparation may, without specific intent, ultimately precipitate a kind of spontaneous combustion.

Those are the words of a man of unquestioned patriotism—a man who was probably the greatest soldier of the 20th century, the late Douglas MacArthur. That illusion of which he speaks has been a dominant theme running through the arguments of those who advocate deployment of the Safeguard ABM. And it is that illusion which continues to lead us down the path of nuclear weapons proliferation.

I have the very distinct impression that those who support deployment of the Safeguard system have reacted to this issue as if the toxin of war with Russia has sounded, as if the gauntlet has been thrown down. Yesterday we talked of possible accommodation, of arms control, and of consultation. To-

August 6, 1969

CONGRESSIONAL RECORD — SENATE

S 9281

morrow we may discuss such matters. But today it is nuclear war. Every scare, every ghost, every hostile phrase and activity have been paraded through this Chamber to justify the Safeguard as a protection against the Soviet threat. Any indication of relaxing tensions between the United States and Russia has been downgraded. Frankly, I sense the tone and the temper of some of the arguments simply as scare tactics. The issues cannot be separated—peace yesterday—nuclear war today—peace tomorrow, hopefully. This Senate dialog constitutes a critical element of any future arms control initiatives undertaken with the Soviet Union. After frightening the people of our country with the prospect of a fantastic Soviet superiority over the United States in weaponry, it is inconceivable that we can reverse our field to talk of accommodation.

There are persons who deny that the decision to deploy an ABM potentially stimulates the arms race and induces a reaction from the Russians. These individuals completely disregard a basic theory of conflict. The installation of any measure to protect an offensive capability generates from your opponent—if he is totally committed to the proposition of superiority over you—the effort to counteract your advancement. To state that the system which you install is "defensive" and therefore not provocative, is illogical. It seems to me that during this debate many proponents of the ABM have used a reference to comments from the Soviet Union that an ABM system is defensive and not meant to be provocative to justify their position. Of course, the Russians issue such statements, because they are utilized as rationale for a Russian ABM. Curiously, this proposition from the Soviet Union is accepted, while other comments are dismissed as being purely Soviet trickery. There is little reasoning here. Because the Soviet Union has installed ABM facilities surrounding Moscow and because we are stating that our system is primarily as a defense of retaliatory forces, the proponents of the ABM theorize that it follows accordingly that Russia will not construe this as a hostile action. Here is the failure to recognize the proposed phased deployment of the ABM in other areas of the United States, purportedly as a defense against China, leaving open the question of later modification as an enlarged defense system. Thus, the Soviets are to leave this unanswered question on the side of our good will, rather than taking the initiative to move forward with nuclear weaponry to counteract the more frightening prospect of an expanded American ABM system. Here is the assumption that the Soviet Union is willing to take the risk—while ours is to be a no risk policy. In my mind, there is no doubt the ABM stimulates the arms race. It is provocative. Be that as it may there are other facets to this very difficult problem which auger against the proposed deployment of the Safeguard system.

Mr. President, I believe it is critical to dispel a false and dangerous impression that has been generated during the months of discussion of the ABM. The United States is not without a massive

deterrent force. Our Republic is not defenseless. Time has not run out on the American system. Our Nation has a strong and viable offensive capability. In fact, we have the capacity for overkill. Let there be no mistake about this fact. And our defense posture will continue to be strong.

Mr. President, I comment on a number of vital factors. Earlier, I used the phrase "scare tactics." This is to be avoided. We must present the facts to the American public but I submit that we must not leave the citizens of this country with the notion that our land is defenseless.

A Russian first strike against the United States is not inevitable. Secretary of Defense Melvin Laird has stated that in the event of a Russian attack:

I am hopeful that we would be able to react immediately to an attack. . . . I do not want to frighten people about this I want the Soviet Union, and I want any potential aggressor to understand that we are going to be in a position where we will respond immediately.

It is my belief that we are in that position to respond. What does the Secretary of Defense refer to when he talks of our ability to respond immediately? America possesses an intricate system of radar and early warning devices which provides a capability to detect a hostile attack. This elaborate system is composed of the distant early warning—DEW—line, the ballistic missile early warning system—BMEWS—the SAGE system and other systems. There is no need now to again discuss the functions of these systems in detail. This has been done. We know that they provide an extensive and flexible early warning system. We continue to pursue research and development programs to refine our existing capability and to develop more sophisticated equipment. Thus, to speak only in term of the number of missiles and warheads disregards a critical element of our deterrent capability.

The early warning device facilities which give credibility to our offensive weapons systems cannot be ignored. And I suspect that we are in a better position and have a better prospect of major advances in this system than in any area of our weapons system.

What is behind this early warning system? What is the immediate response capability to which Secretary Laird has referred? The United States possesses a deadly arsenal of weapons, consisting of approximately 1,054 ICBM's, 41 Polaris submarines with over 600 missiles, over 500 bombers and hundreds of carrier-based fighter bombers with a nuclear weapons capability. This capacity involves nuclear tonnage sufficient to destroy the Soviet Union. The minority statement contained in the report on the procurement had this significant comment:

We do believe that any primary defense against the threat of nuclear attack lies in our deterrent capacity. In this connection, we believe that with our Polaris fleet, our land-based ICBM's, our strategic bombers, and the thousands of additional nuclear warheads we have at sea and abroad, if we were attacked we could destroy the Soviet Union some fifty times over.

The term is "overkill."

It is particularly significant that our Polaris missiles cannot be targeted by enemy missiles as in the case of our fixed base ICBM's. The Polaris striking force, which has within its arsenal the nuclear force to destroy the Soviet Union, is not restricted to set geographic coordinates. We continue to develop advanced missile systems for the Polaris submarine. And this arsenal is adaptable to expansion to meet increased threats. There is no substantial indication that the capability of the Polaris system is being threatened by Russian countermeasures.

Against this present—I emphasize present—array of weaponry, we have the statements by the Secretary of Defense that the Soviet Union could have approximately 2,500 ICBM's by 1975 and 1,000 submarine-launched missiles for a total of 3,500 missiles. We do not know that the Soviets will have this total. These are intelligence estimates, about which Secretary of Defense Laird said:

Our national intelligence projections for the mid-1970's involves a large measure of judgment rather than hard evidence.

Yet, the proponents of the ABM persist as if the projected Russian force for 1975 were a reality today. And it is equally fallacious to lump in the Soviet capability the numbers of intermediate-range or medium-range missiles. This may be indicative of the Russian global deployments, but it is not indicative of meaningful levels of weapons in terms of the ABM issue. Yes, the Russians possess the same overkill capacity we have. Thus, in discussing the achievement of nuclear superiority, we do not mean the advantage of a few additional missiles. Rather, one must visualize thousands of missiles, which, if developed by any one nation, negates an effective ABM as conceived under the present proposal.

Against this background of nuclear weaponry we are asked to support the deployment of a defensive system which protects only a part of the American offensive capability—the ICBM. This part does not contain probably our most valuable deterrent, the Polaris submarine striking force. Even acknowledging the necessity of this protection the proposed ABM system has been not only questioned by scientific experts but also has been determined by many of them to be unworkable. It is my feeling that there are questions with regard to the reliability of the Safeguard missiles in this system in view of the number of weapons failures experienced in the most optimum testing conditions.

However, the ABM does not merely involve the effectiveness of the missiles. The heart of the ABM is a complex system of radars and computers, parts of which have not been built let alone tested under the optimum conditions. And yet we are to accept at face value the contentions of the proponents that this system—missiles, radars, and computers—will operate under the most horrible conditions imaginable—a nuclear conflict. I am unable to accept that position. I again quote from the minority statement on the ABM:

Safeguard is the most complicated technological development ever planned for op-

eration by man. The system consists of three major component parts: (1) missiles, (2) radars, and (3) computers.

Although we have had a long and therefore disturbing series of failure in missile testing, including another Minuteman failure only last week, there is no reason to conclude that the two Safeguard missiles, the Spartan and the Sprint, will not work. But there is reason to doubt that the long-range radar (PAR) and the short-range radar (MSR), parts of which have not been built let alone tested, will operate successfully together in that almost instantaneous manner which would be necessary in case of sudden attack; and there is even more reason to doubt that the computer, which has been neither built nor tested, and which is admittedly far more complicated than any computer ever yet attempted, will operate properly when called upon to do so.

Finally, it is logical to consider whether, even if these three separate components would operate properly as separate units, would they so operate when combined. For obvious reasons, the testing of any joint operation has not been possible.

The second reason is the vulnerability of the system. Because the resistance strength (PSI) of the MSR radar is less than 10 percent of the strength of the missile site in its present conformation that radar is very vulnerable even to the less lethal, less accurate Soviet SS-11 missile, of which the Soviets have hundreds more than they have SS-9s.

Because the MSR radar is designed to guide both Safeguard missiles to their targets, if it is knocked out the entire Safeguard system would be blinded and therefore worthless.

I think it is particularly significant also to remember that in launching a nuclear attack the enemy has available a multitude of tactics and gimmicks with which to evade a defensive system. Those in our Defense Department are confident we have such an ability to evade or bypass any ABM system which the Soviet Union has deployed. There is a likelihood that the Soviet Union possesses the same capability in this regard as does the United States. I see no merit in taking a system—a system which has not been subject to the extensive research and development procedures normally followed by our Defense Department—and deploying it with the presumption that we will then make it work. In responding to the reliability questions, many proponents of the ABM have utilized the arguments that if we can send a man to the moon we can surely make this system work. In my mind there is a failure in this argument to recognize that the recent moon shot was a result of years and years of preparation involving thousands of scientists and numerous preparatory launchings prior to focusing an entire agency of the Federal Government on a single launching operation. And launching in terms of the ABM we have a vastly different problem. The issue here involves the ability to launch hundreds of missiles against incoming missiles instantaneously as opposed to a single launching operation with a lengthy countdown and preparation period. I do not downgrade our space program. But that effort is not the same as what must be done with an ABM.

Mr. President, there is no doubt in my mind that additional research and development work on an ABM system is absolutely essential. I shall support a

research and development program. I oppose the deployment of a system whose components have not been through even the most preliminary testing stages. I firmly believe that the ABM is a step toward escalation of the arms race at the very time that our Nation and the Soviet Union are creating the climate for arms discussions. We can approach such discussions with a strong position. The United States is not at the mercy of Russia and the United States will not be at the mercy of Russia by 1975.

Mrs. SMITH. I yield back the remainder of my time.

Mr. STENNIS. Mr. President, do I have time remaining?

The PRESIDING OFFICER. The time has expired.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The VICE PRESIDENT. Without objection, it is so ordered.

All time has expired. The question is on agreeing to the amendment of the Senator from Maine to the amendment of the Senator from Kentucky and the Senator from Michigan.

Mr. TOWER. Mr. President, a parliamentary question.

The VICE PRESIDENT. The Senator from Texas will state it.

Mr. TOWER. As I understand, the question is on agreeing to the amendment in the nature of a substitute for the Cooper-Hart amendment. If the substitute fails, the question recurs on the Cooper-Hart amendment.

The VICE PRESIDENT. The Senator is correct. The question is on agreeing to the amendment in the nature of a substitute for the Cooper-Hart amendment. The yeas and nays have been ordered, and the clerk will call the roll.

The bill clerk called the roll.

The yeas and nays resulted—yeas 50, nays 50, as follows:

[No. 65 Leg.]
YEAS—50

Alken	Hart	Muskie
Bayh	Hartke	Nelson
Brooke	Hatfield	Pearson
Burdick	Hughes	Pell
Cannon	Inouye	Percy
Case	Javits	Proxmire
Church	Kennedy	Randolph
Cook	Magnuson	Ribicoff
Cooper	Mansfield	Saxbe
Cranston	Mathias	Schweiker
Eagleton	McCarthy	Smith
Ellender	McGovern	Symington
Fulbright	McIntyre	Tydings
Goodell	Metcalf	Williams, N.J.
Gore	Mondale	Yarborough
Gravel	Montoya	Young, Ohio
Harris	Moss	

NAYS—50

Allen	Dirksen	Holland
Allott	Dodd	Hollings
Anderson	Dole	Hruska
Baker	Dominick	Jackson
Bellmon	Eastland	Jordan, N.C.
Bennett	Ervin	Jordan, Idaho
Bible	Fannin	Long
Boggs	Fong	McClellan
Byrd, Va.	Goldwater	McGee
Byrd, W. Va.	Griffin	Miller
Cotton	Gurney	Mundt
Curtis	Hansen	Murphy

Packwood	Sparkman	Thurmond
Pastore	Spong	Tower
Prouty	Stennis	Williams, Del.
Russell	Stevens	Young, N. Dak.
Scott	Talmadge	

The VICE PRESIDENT. On this vote the yeas are 50, and the nays are 50. The Vice President votes nay. The amendment is rejected.

Mr. STENNIS. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. TOWER. Mr. President, I move that the motion to reconsider be laid on the table.

The motion to lay on the table was agreed to.

The VICE PRESIDENT. The Chair would inform the Senate that the question now recurs on the amendment of the Senator from Michigan.

Mr. STENNIS. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator will withhold a moment. The Senate will please be in order.

The Senator from Mississippi will state the inquiry.

Mr. STENNIS. Mr. President, I ask for the yeas and nays on the Cooper-Hart amendment.

The yeas and nays were ordered.

Mr. STENNIS. Mr. President, a further parliamentary inquiry.

The VICE PRESIDENT. The Senator from Mississippi will state it.

Mr. STENNIS. What is the question now before the Senate?

The VICE PRESIDENT. The question now before the Senate is adoption of the amendment offered by the Senator from Michigan, amendment No. 101.

Mr. STENNIS. That is called the Cooper-Hart amendment, is that not correct?

The VICE PRESIDENT. That is correct.

Mr. SYMINGTON. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator from Missouri will state it.

Mr. SYMINGTON. Is all time on the Cooper-Hart amendment also—

The VICE PRESIDENT. All time on the Cooper-Hart amendment has expired.

On this question the yeas and nays have been ordered; and the clerk will call the roll.

The legislative clerk called the roll.

The result was announced—yeas 49, nays 51, as follows:

[No. 66 Leg.]
YEAS—49

Alken	Hart	Muskie
Bayh	Hartke	Nelson
Brooke	Hatfield	Pearson
Burdick	Hughes	Pell
Cannon	Inouye	Percy
Case	Javits	Proxmire
Church	Kennedy	Randolph

Fong	Miller	Thurmond
Goldwater	Mundt	Tower
Griffin	Murphy	Williams, Del.
Gurney	Packwood	Young, N. Dak.

So the Cooper-Hart amendment (No. 101) was rejected.

Mr. STENNIS. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. JACKSON. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER (Mr. EAGLETON in the chair). The bill is open to further amendment.

Mr. McINTYRE. Mr. President, I send an amendment to the desk.

The PRESIDING OFFICER. The amendment offered by the Senator from New Hampshire will be stated.

The legislative clerk proceeded to read the amendment.

Mr. McINTYRE. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with and that the amendment be printed in full in the RECORD at this point.

The PRESIDING OFFICER. Without objection, it is so ordered.

At the end of the bill, insert the following new title:

"TITLE V—SAFEGUARD ANTIBALLISTIC MISSILE SYSTEM

"SEC. 501. (a) In the case of funds authorized under this Act for the Safeguard antiballistic missile system, such funds may be used only for—

"(1) Research, development, testing and evaluation of the system's radars, computers, and related electronic equipment, and procurement thereof.

"(2) Preproduction expenses of the Sprint and Spartan missiles and the production of such missiles for research, development, evaluation and testing.

"(b) The equipment described in clause (1) of subsection (a) may not be installed at any proposed ABM site, except at or near Grand Forks Air Force Base, North Dakota, and Malmstrom Air Force Base, Montana."

"(c) None of the funds appropriated pursuant to this or any other Act may be expended for the acquisition of land, not now owned by the United States, or the use of land owned by the United States, for the construction or installation of any ABM facilities at any proposed ABM site, except at or near Grand Forks Air Force Base, North Dakota, and Malmstrom Air Force Base, Montana."

"(d) None of the funds appropriated pursuant to this or any other Act may be expended for the procurement, installation, or deployment of any operational missile as a part of any antiballistic missile system, nor for the construction of any silos or other launch facilities for any operational missile as a part of any antiballistic missile system."

Mr. McINTYRE. Mr. President, I also request that the amendment be made the pending business, in view of the lateness of the hour.

Mr. MANSFIELD. And, Mr. President, no action will be taken on the amendment until tomorrow.

The PRESIDING OFFICER. All proceedings will be suspended until there is order in the Chamber, including the upper galleries, or the doors will be closed. Mr. DIRKSEN. Mr. President, will the Senator from New Hampshire yield?

Mr. McINTYRE. I yield.

ORDER OF BUSINESS

Mr. DIRKSEN. Mr. President, I would like to query the distinguished majority leader concerning the program for the rest of the day and also tomorrow.

The PRESIDING OFFICER. We must have order in the Chamber. The gallery doors will be closed, so that Senators can hear each other and be heard.

The Senator from Montana.

ORDER FOR RECESS TO 10:30 A.M. TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the previous order granted for convening tomorrow be changed. I ask unanimous consent that when the Senate completes its business today, it stand in recess until 10:30 tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR HARTKE TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that immediately after the prayer and the Journal the distinguished Senator from Indiana (Mr. HARTKE) be recognized for not to exceed 30 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR CONSIDERATION OF THE McINTYRE AMENDMENT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that at the conclusion of the remarks of the distinguished Senator from Indiana, the pending business be laid before the Senate and that the Senate start the consideration of the McIntyre amendment, which is now before the Senate.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE MEETINGS TOMORROW

Mr. SPARKMAN. Mr. President, will the Senator yield at that point?

Mr. MANSFIELD. I yield.

Mr. SPARKMAN. May committees have the right to sit? We have a very urgent executive session, if we could sit until 12 o'clock.

Mr. MANSFIELD. Until 12 o'clock, but not beyond that hour.

LEGISLATIVE PROGRAM

Mr. MANSFIELD. Mr. President, for the information of the Senate, it is very possible that Calendar No. 214, H.R. 7206, an act to adjust the salaries of the Vice President of the United States and certain officers of the Congress, may be

brought up late in the afternoon tomorrow, if a break occurs, or if not then, on Friday. If it is brought up tomorrow, Members of the Senate had better be prepared for at least one rollcall vote, and perhaps more.

There will be no further business today, except speeches, unless a Senator has any questions.

Mr. MAGNUSON. Mr. President, I ask the majority leader, we have had pending here the merchant marine authorization bill for a long time. Upon inquiry, I have always received the answer that we wanted to finish this pending bill, which I understand.

The PRESIDING OFFICER. The Senate will be in order.

Mr. MAGNUSON. We cannot appropriate anything, we cannot even have the State, Justice, and Commerce Department appropriations continued, until we get this business completed.

The PRESIDING OFFICER. The Senate will be in order.

Mr. MAGNUSON. Until we get this authorization. But if we are going to break into the pending bill with another bill—

Mr. BYRD of West Virginia. Mr. President, may we have order? Senators cannot hear.

The PRESIDING OFFICER. We must have order in the Chamber. The Senators cannot be heard.

Mr. MAGNUSON. There are a great many of us on both sides of the aisle who would like to see this authorization out of the way.

The PRESIDING OFFICER. The occupants of the gallery are reminded that they are the guests of the Senate, and will be courteous and quiet.

Mr. MANSFIELD. The Senator knows there is a "hold" on it; amendments will be offered, and the matter cannot be disposed of in 1 day.

Mr. MAGNUSON. I know where the "hold" comes from, but I think the Senator from Delaware and I have always agreed on a time limitation. He will have an amendment on ship construction, which he normally has every year.

Mr. MANSFIELD. May I say to the distinguished Senator from Washington that I do not care whether the bill I announced is coming up, perhaps tomorrow, on the Post Office Department, ever comes or not, though something ought to be done for the Vice President. It is not my intention, except under the most unusual circumstances—and the joint leadership is in agreement on this—to set aside this measure for anything which will take up any length of time; and I dare say the bill which the Senator mentions—and it is a most important bill, and I recognize its need—will have to wait until we get through with the present business.

Mr. MAGNUSON. I do not think it will take up much time. I am sure the "hold"—I am just assuming this, but it usually is—is from the Senator from Delaware. If that bill cannot be taken up out of order, I am going to have to object to other bills also.

Mr. DIRKSEN. The other bill is not our bill. If the Senator wants to object

to the Speaker and the Vice President, that is his privilege.

Mr. MAGNUSON. I have objected to the Speaker and Vice President many times.

Mr. MANSFIELD. And I am sure that will continue in the future.

Mr. MAGNUSON. Many times. But I am not objecting in that sense. I am trying to point out the urgency of getting at this authorization bill. It is holding up the State, Justice, and Commerce Department appropriations, and holding up all kinds of things, if it goes over until October; and if the Senator from Delaware is here, I need not stand here and tell him what is happening to the American merchant marine, when we cannot even get it authorized, let alone get the money. The Senator from Delaware and I are going to have a big argument, as we do every time, about the money. But I say, let us at least authorize the money to let the merchant marine continue to exist, before it sinks.

Mr. MANSFIELD. We will get to it as soon as possible.

Mr. MAGNUSON. I am for the Vice President and the Speaker of the House of Representatives, and the majority and minority leaders.

Mr. MANSFIELD. Mr. President, may I raise the possibility of a Saturday session this week? The joint leadership is prepared to come in early to meet the convenience of the Senate, and do everything we possibly can to expedite the passage of the pending business.

Several Senators addressed the Chair.

The PRESIDING OFFICER. The Senator from New York is recognized.

Mr. JAVITS. Mr. President, since I shall require about 5 minutes, I yield 1 minute to the Senator from Nevada.

DEATH OF JOHN GOSNELL, EXECUTIVE OFFICER AND GENERAL COUNSEL OF NATIONAL SMALL BUSINESS ASSOCIATION

Mr. BIBLE. Mr. President, our Nation, our private enterprise system, and especially the small business community has suffered a great loss in the recent death of John A. Gosnell.

John Gosnell was both executive officer and general counsel of National Small Business Association. He made many significant contributions to the small business community in his 13 years of distinguished and dedicated service to the association.

The many Members of Congress who knew him were indeed fortunate. We could not fail to realize the measure of his worth, and somehow share it. John Gosnell was a forthright man without pretension, a man who possessed a sense of high obligation and a sense of humor.

In addition to his service on the National Advisory Council of the Senate Select Committee on Small Business; he was a member of the Advisory Council on Federal Reports; former vice chairman of the Small Business Committee of the American Bar Association; and was formerly a member of the Export Expansion Council of the Department of Commerce.

Mr. Gosnell was a member of the American, Federal, Arkansas, New York, and District of Columbia Bar Associations. Born in Little Rock, Ark., he was a 1925 graduate of Vanderbilt University. He was a specialist in the law of unfair competition and in trademark protection, and practiced law in El Dorado, Ark., Atlanta, Ga., New York, N.Y., and Washington, D.C. In earlier years he served with the Reconstruction Finance Corporation and the War Production Board.

Numerous tributes have been paid to him. Carl A. Beck, King of Prussia, Pa., chairman of the board of trustees, National Small Business Association said:

John Gosnell had a great many friends, a host of acquaintances, and was widely known in the Washington community. The high personal esteem in which he was held reflected substantial recognition and stature to our Association, and opened new avenues of service and representation to the Small Business policy. His incisive analyses, coupled with a ready wit and delicious sense of humor, built esprit de corps and teamwork among both staff and trustees. He will be sorely missed both within and without our organization, but the structure and relationships he built stand as a tribute to his contribution.

This is a time of bereavement for John's lovely wife, Relda, and his wonderful family. It is a time of sorrow for all the small business community. John Gosnell would surely feel, however, that there must not be mourning but renewed dedication to achievement of the principles in which he so strongly believed.

He once wrote these fundamental truths:

The truth is that the small enterpriser (entrepreneur) is the leaven of the socio-economic process, in a free economy, never static, hard to identify and define except by standards which are both arbitrary and temporary.

John Gosnell was a man capable of incisive appraisal, an articulate spokesman for private enterprise and a dedicated friend and supporter of the small business community.

Mr. JAVITS. Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will be in order.

S. 2789—INTRODUCTION OF THE HEALTH, NUTRITION, AND HUMAN NEEDS ACT OF 1969

Mr. JAVITS. Mr. President, I introduce today the Health, Nutrition, and Human Needs Act of 1969, designed to eliminate poverty-related hunger and malnutrition among the Nation's urban, rural, and migrant poor.

I am the ranking member of the so-called Hunger Committee, and joining me in introducing this measure are the Senator from Wisconsin (Mr. NELSON), the Senator from Pennsylvania (Mr. SCOTT), the Senator from Connecticut (Mr. DODD), and the Senator from Oregon (Mr. HATFIELD). Other Senators will undoubtedly join in sponsoring the bill; and I shall provide their names for the RECORD in due course.

As a result of initiatives taken by Senator MCGOVERN and other members of

the Select Committee on Nutrition and Human Needs, by other committees and Members of the Congress, and by concerned private citizens and groups—the Nation has “discovered” hunger in America.

The President's historic message of May 6, 1969, calling for “an end to hunger in America for all time,” and the actions taken by Secretary of Agriculture Hardin, Secretary of Health, Education, and Welfare Finch and others in the administration—overcoming some of the redtape that entangled their predecessors—have brought us from discovery of a national problem to a commitment to take appropriate action. Food stamp and other legislation proposed by my colleagues to deal with particular facets of the problem are welcome steps down the road from commitment to resolution.

The Senate established the Select Committee on Nutrition and Human Needs to determine what steps would be necessary “to establish a coordinated program” to assure “every U.S. resident adequate food, medical assistance, and related basic necessities of life and health.”

The “Health, Nutrition, and Human Needs Act of 1969,” which I introduce today, would provide, for the first time, a complete spectrum of programs designed to eliminate the disgrace of poverty-related hunger and malnutrition in the United States.

The act would establish six major programs:

First, a program of nutrition outreach is authorized to improve the effectiveness of our food and nutrition assistance programs at the local level by involving the Office of Economic Opportunity, and particularly Vista and other volunteers.

Second, the Nutrition Education and Information Act is designed to inform the Nation, and particularly its low-income citizens, of the nutritional and economic aspects of food use and acquisition and to determine the extent and effects of the failure to meet the nutritional requirements of human development.

Third, under the Maternal and Child Nutrition Act, low-income mothers, infants, and children would receive nutrients, supplemental foods, and health services related to malnutrition.

Fourth, the Private Industry Nutrition Assistance Act would provide incentives to small businesses, reform the Food Stamp Act of 1964, and establish a Private Sector Advisory Committee on Nutritious Foods, to increase the private distribution of nutritious commodities to low-income households.

Fifth, the Human Needs Act would direct the Secretary of Agriculture to utilize commodity distribution programs to supplement the food stamp and school feeding programs.

Finally, a National Advisory Council on Malnutrition would be created to make a continuing evaluation of all food and nutrition assistance programs, and to advise the President and the Congress. Extensive provisions in this act were designed to promote greater administrative cooperation among the Federal agencies involved in food programs.

REPORT ON OPERATIONS OF THE INTERNATIONAL COFFEE AGREEMENT—MESSAGE FROM THE PRESIDENT

The PRESIDENT pro tempore laid before the Senate the following message from the President of the United States, which, with the accompanying report, was referred to the Committee on Foreign Relations:

To the Congress of the United States:

I transmit herewith the 1968 report on the operations of the International Coffee Agreement.

This treaty, in force since 1963, is vital to the economic well-being of many friendly developing countries in Latin America and Africa. It has provided them stable and predictable earnings from their principal export crop and thus has encouraged their economic development. The United States consumer in turn has benefitted from stable prices considerably below the peaks reached before the Agreement entered into force. I hope to see the Agreement continued and strengthened. I reaffirm our support of the Coffee Diversification Fund, designed to encourage a shift of resources away from the production of surplus and unneeded coffee. Discussions with the Coffee Fund on the terms and conditions of a United States loan to the Fund are expected to begin fairly soon.

The report reviews the operations of the International Coffee Agreement in 1968. On April 30, 1969 agreement was reached with the Brazilian Government regarding Brazilian soluble coffee exports. This has obviated any immediate need for United States' action.

RICHARD NIXON.

THE WHITE HOUSE, August 5, 1969.

EXECUTIVE MESSAGES RECEIVED

As in executive session, the Presiding Officer (Mr. Young of Ohio in the chair) laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Hackney, one of its reading clerks, announced that the House had passed the bill (S. 714) to designate the Ventana Wilderness, Los Padres National Forest, in the State of California, with an amendment, in which it requested the concurrence of the Senate.

The message also announced that the House had passed the bill (S. 1611) to amend Public Law 85-905 to provide for a National Center on Educational Media and Materials for the Handicapped, and for other purposes, with an amendment, in which it requested the concurrence of the Senate.

The message further announced that the House had agreed to the amendment of the Senate to each of the following bills of the House:

H.R. 1632. An act for the relief of Romeo de la Torre Sanano and his sister, Julieta de la Torre Sanano; and

H.R. 2336. An act for the relief of Adela Kaczmariski.

The message also announced that the House had passed the following bill and joint resolution, in which it requested the concurrence of the Senate:

H.R. 11959. An act to amend chapters 31, 34, and 35 of title 38, United States Code, in order to increase the rates of vocational rehabilitation, educational assistance, and special training allowance paid to eligible veterans and persons under such chapters; and

H.J. Res. 764. A joint resolution to authorize appropriations for expenses of the President's Council on Youth Opportunity.

HOUSE BILL AND JOINT RESOLUTION REFERRED

The following bill and joint resolution were each read twice by their titles and referred to the Committee on Labor and Public Welfare:

H.R. 11959. An act to amend chapters 31, 34, and 35 of title 38, United States Code, in order to increase the rates of vocational rehabilitation, educational assistance, and special training allowance paid to eligible veterans and persons under such chapters; and

H.J. Res. 764. A joint resolution to authorize appropriations for expenses of the President's Council on Youth Opportunity.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The PRESIDING OFFICER. The hour of 1 o'clock having arrived, the Chair lays before the Senate the unfinished business, which will be stated.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein missile range, and to prescribe the authorized personnel strength of the Selected Reserve of each reserve component of the Armed Forces, and for other purposes.

The PRESIDING OFFICER (Mr. ALLEN in the chair). Under the unanimous-consent agreement, there will be 4 hours of debate on the pending amendment, the time to be equally divided between the proponents of the amendment and the opponents.

Who yields time?

Mr. HART. Mr. President, on the time allocated for those in support of the amendment, I yield 25 minutes to the able Senator from Massachusetts (Mr. KENNEDY).

The PRESIDING OFFICER. The Chair recognizes the Senator from Massachusetts.

Mr. KENNEDY. Mr. President, the debate over deployment of an anti-ballistic-missile system has engaged the Senate

intensely now for some 5 weeks. In general framework, however, this debate has been going on for more than a year—since June of last year, when Senators JOHN SHERMAN COOPER and PHILIP A. HART, in company with others, first moved to strike out the deployment funds.

Tomorrow, we arrive at a critical juncture in this year-long debate, when we vote on the Cooper-Hart ABM amendment to the Defense procurement authorization bill. In its simplest aspect, this vote will determine whether the Senate authorizes a \$350 million down payment on an \$11 billion military weapons system. But, in a larger context, the significance of the vote is much more broad, for the ABM may well prove to be the point at which a whole body of conventional wisdom was laid aside in favor of realism in defense planning and budgeting.

Because the realities of nuclear age defense planning have become so technical, it is highly significant that many in Congress and in the country at large are making a determined effort to remove the cloak of mystery which so long has shrouded national defense programs. It is simply irrelevant, in this climate of increasing sophistication, to fall back on the slogans and shibboleths which have traditionally passed as explanations in our consideration of multi-billion-dollar defense bills. Because so much is at stake, we must instead ask hard questions and demand full answers.

The ABM debate has taught us the value of looking closely at defense programs. As we approach tomorrow's vote, we do so prepared by weeks of hearings and months of discussion, both in committee and here on the floor. We also approach the vote with sharp and honest divisions of opinions and judgment. These divisions were apparent in the testimony of witnesses in the hearings conducted both by the Armed Services Committee and the Foreign Relations Committee. They were apparent in "ABM: An Evaluation," edited by Dr. Jerome Wiesner and Prof. Abram Chayes, and the books which appeared in rebuttal to it. Finally, they were apparent in the many public meetings and debates over the ABM which have been held through the spring and summer.

Here on the Senate floor in the past few weeks, the arguments for and against deployment have been many and detailed. We owe a debt of gratitude, I think, to those of our colleagues who have carried the burden of this enlightening debate. Senator STENNIS, particularly, should be singled out, because of the even-handed, open way he conducted the hearings on the ABM, and because of his continuing good grace in floor managing the bill and in bringing the matter to a vote. He has been joined by Senator JACKSON in presenting the bulk of the case for deployment, and together they have presented a careful series of arguments. On the other side of the issue, Senators COOPER, HART, SYMINGTON, FULBRIGHT, GORE, and MANSFIELD have repeatedly sought to match the claims and statements of many of those not in Congress with logic,

EFFECT OF CHANGES IN THE STANDARD DEDUCTION UNDER THE PROPOSAL ON PERSONS BELOW THE POVERTY LINE,
 CALENDAR YEAR 1969

Family size	Exemptions and minimum standard deduction allowed		Poverty income levels, 1969 ¹	Estimated number of poor persons (in thousands) ²			
	Present law	Proposal		Total	Number of poor now taxable	Number made nontaxable	Number helped, but still taxable
1	\$900	\$1,300	\$1,735	4,620	1,150	550	600
2	1,600	2,000	2,240	5,200	1,220	790	430
3	2,300	2,700	2,755	2,640	460	400	60
4	3,000	3,400	3,535	2,550	490	360	130
5	3,700	4,000	4,165	2,620	270	220	50
6	4,400	4,800	4,675	2,590	250	180	70
7 or more ³	5,800	5,800	5,755	7,600	450	50	400
Total				27,820	4,290	2,550	1,740
Total family units				10,630	2,180	1,250	940

¹ 1969 poverty levels are assumed to be 6 percent above the HEW nonfarm level for 1966. This conforms to the method by which the number of poor was projected.
² Includes both adults and children.
³ Averages about 8 persons per family.

Mr. MOSS. Mr. President, under the present law a single individual begins paying tax at an income level of \$900. With this new provision he would not incur any tax liability until his income exceeded \$1,300. A married couple with two children who now pays taxes on everything above \$3,000 will not begin to pay taxes under the new provision until their income exceeded \$3,400.

This proposal's most profound effect is on the 28 million individuals below the poverty line. I ask unanimous consent that a table which demonstrates this effects be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

EFFECT OF INCREASING THE PRESENT \$200 PLUS \$100 MINIMUM STANDARD DEDUCTION TO \$600 PLUS \$100 WITH \$1,000 CEILING
 (Dollar amounts in millions; number of returns in thousands)

AGI (in thousands of dollars)	Percent law tax	Tax decrease	Tax decrease as percent of present law tax	Number of returns with tax decrease	Number of returns made nontaxable	Number of returns shifting to standard deduction
0 to 3	\$1,159	\$415	35.8	9,760	2,025	870
3 to 5	3,177	420	13.2	7,870	320	1,120
5 to 7	5,439	200	3.7	5,940	15	980
7 to 10	13,925	95	.7	4,330		400
10 to 15	18,916					
15 to 20	7,550					
20 to 50	12,795					
50 to 100	6,326					
100 and over	6,202					
Total	75,490	1,130	1.5	27,900	2,360	3,370

Note: Details may not add to totals because of rounding.

Mr. MOSS. Mr. President, of these 28 million poor, 4.3 million of them are now taxed, but with this change in the minimum standard deduction this number would be reduced to 1.7 million. Much more, of course, must be done for the impoverished in this country, but at least we can begin by nearly eliminating the tax burden on the poor. The revenue loss of this relief is only \$1.2 billion. The Ways and Means package contains essentially the same proposal. Congress should delay this relief no longer.

Second, I recommend increasing the maximum standard deduction from the present 10 percent and \$1,000 maximum to 14 percent and \$1,800 maximum. This form of relief is primarily directed at the middle income groups since individuals with higher incomes will continue to find it advantageous to itemize their deductions. I ask unanimous consent that a table showing the effects of this provision be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

14 PERCENT WITH AN \$1,800 CEILING

Adjusted gross income class (in thousands of dollars)	Revenue loss (in millions of dollars)	Number benefiting (in thousands)
0 to 3	21	2,264
3 to 5	161	6,380
5 to 7	259	6,316
7 to 10	436	7,551
10 to 15	664	6,489
15 to 20	179	1,263
20 to 50	89	474
50 to 100	6	19
100 and over	1	2

Mr. MOSS. Mr. President, besides providing the bulk of the benefit to those in the \$5,000 to \$15,000 income brackets, this revision also promotes the goal of tax simplicity. In 1944 when the 10 percent standard deduction was first offered, 82 percent of the Nation's taxpayers chose to use it. Since then that percentage has been eroded to only 57 percent in 1969. If this proposal is enacted, the Treasury estimates that over 80 percent of those filing returns will again use the standard deduction. Such simplicity, by the way, would save the Treasury \$100

million in collection costs. The net revenue loss to the Treasury is estimated at \$1.8 billion.

The Ways and Means bill proposes that the standard deduction be increased in steps over the next 3 years to 15 percent with a \$2,000 maximum. I am not wedded to any magic figures, I want only that the relief for the middle income taxpayer be substantial and that it be immediate.

Third, I plan to offer an amendment which would allow those individuals using the standard deduction to deduct in addition any donations to charity which exceeded 3 percent of their adjusted gross income. The present tax structure encourages those who itemize their deductions—usually the more affluent—to donate to charity, but our tax laws withhold this incentive from those who take the standard deduction. The 3 percent threshold would exclude the minor charitable contributions but would still act as a stimulus to meaningful private giving by the 80 percent of the Nation's taxpayers who are expected to use the standard deduction. The revenue loss of this measure is estimated at \$440 million.

Fourth, I am cosponsoring the bill introduced by the Senator from Minnesota (Mr. McCARTHY) which would extend the head of household benefits to unremarried widows and widowers, and individuals who have attained the age of 35 and who have never been married or who have been separated or divorced for at least 3 years, and who maintain their own households. This equitable reform will cost the Treasury about \$300 million.

These four tax relief measures can and should be enacted immediately. The cost is only about \$3.7 billion. Over a longer period, I believe the relief must be even greater. I propose, therefore, that for the next 4 years the amount allowed for each personal exemption will be at \$1,000.

The present \$600 exemption has been in effect since 1948 and no one can claim that it is still adequate. But because of the present budgetary restraints and because this reform is costly, I regret to say that I feel the increase must be gradually instituted. But at least we can begin.

Mr. President, I have offered 15 proposals. Some of them are complex and all of them will be resisted by a multitude of special interests who have escaped their share of taxation in the past. But the public is angry and the Congress is listening. We can have comprehensive tax reform this session if we keep the pressure on. I hope that the House will pass the Ways and Means package. As I noted, the Ways and Means bill is not completely satisfactory, but at least it is a real beginning on which the Senate can build when a tax bill arrives in this body.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Geisler, one of his secretaries.

clarity, and reason. They have insisted that the debate should be kept on a high level, to the great benefit of the debate itself as well as of the Senate as an institution.

As we approach the conclusion of this discussion, it may be well to review where this complex issue now stands. With all respect to those who have so ably presented the case in favor of deployment, there remain three principal unanswered questions:

First, will the Safeguard ABM strengthen our national security?

Second, will the Safeguard ABM heat up the arms race?

Third, will the Safeguard ABM unnecessarily drain billions of dollars from other pressing needs?

The answers to these questions are not easily forthcoming. They were not easy for President Johnson nor for President Nixon. They are not easy for us. But they are so full of ramifications that we must exercise the greatest care in seeking a reasoned position on them.

I will not take the time of the Senate to review in detail all the arguments made so well in the past few weeks. Rather, I intend only to try to put some of them into perspective; for, as we vote, it is the long view of the implications of the vote itself which should concern us, and not the narrow arguments over one or two of the dozens of facets of the ABM debate.

If the Senate accepts the Cooper-Hart amendment, and if the amendment remains intact throughout the remainder of its legislative journey, then the Defense Department will be foreclosed from beginning deployment of phase I of the Safeguard ABM in fiscal year 1970. It will, however, have about half a billion dollars in fiscal 1970 to press research, development, testing, and evaluation of the whole variety of defenses to a hypothetical missile attack on this country.

It may prove useful to outline the implications of accepting the Cooper-Hart amendment, as one way of gaining a measure of perspective.

First, the amendment would put the United States on record against starting another lap in the arms race. It is self-evident that no one can really win the arms race, instead, we and our adversaries are forced to run around and around the track, spurring each other on by each new tactic, strategy, or weapon. One basic tenet of today's war planning is that the best defense is a good offense, because the attacker has so many advantages over the defender. We have no evidence that the Soviets can destroy or seriously damage our diverse and dispersed nuclear forces. Nor do we have any convincing evidence that they will have the ability to do so in the reasonably foreseeable future. Thus, acceptance of the Cooper-Hart "no deployment" amendment would be a clear signal that the United States, far and away the world's most powerful nation, was seeking to slow and eventually stop the otherwise perpetual motion of the arms race.

Second, it would put the Pentagon on notice that it no longer had a blank check from Congress, for far too long,

we have acted as if we believed the Pentagon had an exclusive license on knowledge and judgment in matters relating to national security. Our vast Pentagon budget; our overly large foreign commitments; our crazy-quilt draft laws—these are some of the legacies of our uncritical acceptance of Pentagon recommendations and practices. There is no reason in logic or procedure for us to treat the Department of Defense differently than we treat the Department of Labor or the Department of Health, Education, and Welfare when we review their budget requests. When the Pentagon seeks program funds, then we should examine the justifications for these programs with the same care we examine those for education, health, housing and all the others. The scrutiny to which we have put the ABM has indicated to roughly half the Senate that the justification for beginning deployment immediately is not a compelling one. This indication should have a salutary effect on our Pentagon planners, because in the future they may take increasing care to send to the Congress programs based more on the realities of the threat to our security and less on a desire for new weapons systems.

Third, it would indicate to those disenchanted with our present inattention to our domestic needs that the Congress both recognizes these needs and intends to do something about them. So long as we support marginal military projects, we will be woefully short of funds to help relieve the pressures here at home. And these pressures come not only from the poor among us; they come from our students, from our middle-income taxpayers, from our conservationists, and from many, many others. These pressures rise because the Government seems less to be governing than to be drifting, with no clear percepts or priorities. I see no reason whatever that we in Congress should avoid the very difficult question of priorities. If we do, inflation will take an even larger toll; cynicism and uneasiness will spread; and doubts that we can be masters of our own fate will be more widely held. Because the case for beginning ABM deployment is so marginal, this debate is an unequalled place to begin demonstrating that the Congress, at least, can develop and articulate a sense of national priorities and goals.

Fourth, it would put the Congress on record against premature deployment of complex electronic weapons systems. The cost overruns, overoptimism, and specification shortfalls in these systems are more and more shocking as more and more specific information becomes available. We all know that Apollo 11 was a stunning technological triumph, and we applaud those who contributed to it. But we must not forget the Mercury and Gemini flights which went before it, nor the previous Apollo flights themselves which taught lesson after lesson and gave us the confidence to proceed. Perhaps we can make the ABM work as it is designed to, despite the reservations voiced by many of our most outstanding scientists. But we cannot make any reasonable judgment about whether it will or will not work so long as many of

Safeguard's components remain unbuilt or untested, even in prototype, as Senator SYMINGTON pointed out on July 28. And because all the different components must work in complete concert, they should be tested as a complete unit. We should build prototypes of the system's components where the fullest evaluation and testing can be carried out. We should not build these prototypes on an operational site, because the tests can be neither as extensive nor as varied in the continental United States as they can be on a remote island. Once the prototypes are built and tested, we would then know whether the system worked or whether, like Apollo, we must refine and redesign before we rely upon it.

Fifth, it would put the Congress on record as seeking real value for its defense dollars. Even if Safeguard worked as designed, a number of studies—both classified and unclassified, both from within the Pentagon and from outside it—have demonstrated that the Soviets could easily neutralize it. When the evidence was made available, a few years back, that the Soviets were constructing a small and obsolescent ABM around Moscow, Defense Department officials assured a concerned Congress that it was a routine matter for us to overwhelm the Soviet ABM. Similarly, it is no less difficult for the Soviets to do the same thing to our ABM.

Thus, while Safeguard might work in a technical sense, it would not protect. This is one of the key points on which we must all be absolutely clear. If we spend the billions to construct phase I of Safeguard—placing defensive missiles around one-third of our Minuteman force—we have not bought an effective defense of those Minutemen because the Soviets can easily overwhelm it. I have previously, on July 10, read into the Record a table showing just how simply the Soviets can overcome Safeguard, using technology which exists today. Furthermore, if we spend those billions on Safeguard phase I, we have not added any protection to the rest of our deterrent—the remaining two-thirds of our Minuteman, our bombers, our submarines, or our tactical aircraft stationed around the world.

It has been argued here in the Senate that should the Soviets choose to counter our ABM by building more offensive missiles, then we could despond by adding more defensive missiles, thus nullifying their counter step. But if this is our intended response, then it seems to me we are deploying not a thin ABM, but the foundation of a much larger, thick ABM. If this is so, then we should be debating an ABM of far different dimensions and far larger cost than the one presented to us.

We might well ask what we would have bought if we deploy Safeguard phase I. We would have bought a number of radars, of computers, and of missiles. But they would be nothing more than idle monuments to the ingenuity of our scientists and engineers; their relative to the realities of weapons planning would be nil.

We might also ask what we would have bought if we deployed the full

Safeguard ABM, as it was outlined in testimony by Defense Department officials. We would not have bought any meaningful protection against the Soviets—nor against a determined Chinese attack. We may, though, have bought some degree of protection against accidental launches, if one makes certain assumptions about the state of readiness of our ABM and the level of crudeness of the attacking missiles. But neither the President nor the Secretary of Defense nor any of Safeguard's proponents have suggested that this alone is sufficient justification for proceeding with deployment of Safeguard.

Thus, in the absence of any convincing testament that Safeguard would add a solid element to our defense capabilities, we would be well advised to avoid spending our limited tax dollars on it.

Sixth, the Congress would indicate its concern over a continuing reliance for our strategic deterrent upon a land-based, fixed-site missile. As the ICBM's in both the Soviet's and our own inventories become more sophisticated, their accuracy increases. This in turn increases the vulnerability of the missile silos, and is presumably one reason behind the decision to deploy an ABM. If we assume that at some time in the future the Soviets—and we, too, of course—are able to refine ICBM guidance systems sufficiently, then the credibility of the fixed-site ICBM as a deterrent is gravely impaired because of the accuracy of the attacking warheads. This is so no matter how hard the silo is, because a detonation would throw dirt from the crater over the silo door, thus preventing it from opening to launch the retaliatory missile.

But this line of reasoning does not support deployment of Safeguard phase I, primarily because of the serious doubts about Safeguard's efficacy and the relative simplicity of neutralizing it. What it does support is intensive research and development into ballistic-missile defenses generally, to discover if there is some ABM system which offers a reasonable chance of success. Fixed-site ICBM's are not now obsolete, nor are guidance systems sufficiently refined. But it does appear folly to spend billions constructing an ineffective defense around missiles which may themselves soon be obsolete.

One of the most frustrating aspects of war planning in the nuclear age is the rapid rate of obsolescence of modern weapons systems. Thus, we are only now learning how to perfect MIRV's—which may be the most unsettling arms race development of the 1960's. We plan to install MIRV's on both Minuteman and Polaris missiles. Yet, as I have just outlined, the fixed-site Minuteman—to be fitted with MIRV's—may be obsolete. But we plunge steadily onward, spending billions, acting not so much rationally as reflexively. Every step we take requires a counterstep by the Soviets; every step the Soviets take requires us to take a counterstep. We develop and deploy a weapons system; the Soviets render it obsolete. And, of course, vice versa. All this absorbs billions of dollars, postpones the arrival of better lives for men and women and children

the world over, and throws cold water on our hopes for a stable and peaceful world.

Seventh, it would go far toward making the Department of Defense more candid in its dealings with the Congress. Traditionally, we are aware only of the tip of the iceberg in defense matters. Only grudgingly has the Pentagon filled out the record with the Congress on such items as the chemical and biological warfare program, the Cheyenne helicopter, the C-5A, the main battle tank, cost overruns, and of course the ABM. In each of these cases, the industry of an individual Senator or Congressman brought the facts out into the open, and serious abuses—actual or potential—were corrected.

In the case of the ABM, many of us have known for some time of the existence of studies or reports commissioned by the Defense Department which were critical of one or another aspect of the ABM. Yet, it has been the most difficult task to obtain these reports or studies, or even, in some cases, to get an official acknowledgement that they exist. It is my understanding that one such Defense Department classified study is similar to an unclassified study which I placed in the Record on July 17. Both studies examine various alternative ways of strengthening the credibility of our deterrent—as by deploying an ABM system, building more Polaris submarines, further hardening of our missile silos, or constructing more ICBM's. These alternatives are weighed, one against the other, in the studies—and the ABM is determined to be the worst of the four alternatives.

Now, it is reasonable to ask why we in the Congress, at some point during these past few months, were not told of this and of the other studies. There may be powerful and compelling reasons for choosing the ABM over the other alternatives, but we are not told what the reasons are. As a result, we must make assumptions as to the reasons, and this does not create an atmosphere of confidence in our dealings with the Pentagon.

I have listed seven possible implications of Senate acceptance of the Cooper-Hart amendment. There are of course more. But even the ones I have listed, it seems to me, argue in favor of postponing the deployment decision while pressing ahead with ballistic missile defense research and development, and while concurrently seeking to get the long-stalled arms control talks with the Soviet Union back on the track to consummation. We are just 3 weeks short of a year from the date once set for announcement of arms control talks. Yet there appears no urgency on our part to reopen those negotiations. Instead, we push MIRV testing and ABM deployment—all factors detrimental to the climate of cooperation so essential to successful talks.

We all seek a safer world and a better world. Yet we cannot have a safer world while we press forward toward a new and intensified lap in the arms race. Neither can we have a better world—either here at home or abroad—while we pour

two-thirds of our controllable budget expenditures into military programs. We are learning that the assumptions upon which our defense postures and budgets are constructed may well be unrealistic and out of date. If they are, and if we continue to stock our arsenals of war while neglecting our tools of peace, then the world we pass on to our children will be far worse than it is today.

We must think, as we consider our vote on the ABM, what shape we want for the world our children inherit from us. We can begin now to shape a safer and better world for them, or we can continue on as we have in the past. I have chosen the former course, and my vote against deployment of the ABM reflects that decision.

Mr. HART. Mr. President, will the Senator from Massachusetts yield?

Mr. KENNEDY. I am glad to yield to my good friend from Michigan.

Mr. HART. Mr. President, I rise not only to thank the Senator from Massachusetts for a speech that is cogent, persuasive, thoughtful, and balanced in its presentation, but I rise also to thank him for the many hours he has given to developing a broader understanding of the proposed ABM, its doubtful effectiveness, its assured cost, and its threat to successful arms control negotiations.

For many months the Senator from Massachusetts has been perhaps the one most effective Senator in encouraging the scholarly community of this country, those who have the technical understanding which none of us can approach, to come here and counsel with us, both in private discussions and in open sessions. It has been his invitation to which many of those distinguished American scholars have responded. It is largely as a result of the patient willingness on the part of these distinguished American scientists that has enabled us this year to be more comfortable in our belief that we do more fully appreciate and evaluate all the elements involved than was the case when the Senate confronted the ABM issue last year.

Senator KENNEDY's reasoned speech and its balance are a hallmark of his entire distinguished career in this body. The publication of the scientific papers that were assembled at the request and under the counsel of the Senator from Massachusetts are now in paperback form. Encouraging such publication reflects the understanding of the Senator from Massachusetts that, indeed as he said, the decision we take tomorrow will affect enormously the kind of world our children will have.

It would have been a less promising world had we not, largely with the help of the public, rescued ourselves from the decision to deploy the ABM system labeled "Sentinel" last year.

With him, I believe that it will be a better world if we avoid deploying the ABM system labeled "Safeguard" this year.

If that decision is made, it will be in very large part a consequence of the thought, energy and counsel of the Senator from Massachusetts.

Mr. MANSFIELD. Mr. President, will the Senator from Massachusetts yield?

August 5, 1969

CONGRESSIONAL RECORD — SENATE

S 9199

Mr. KENNEDY. It is always a pleasure to yield to the distinguished majority leader.

Mr. MANSFIELD. Mr. President, I must apologize for being delayed, but there was some official business I had to attend to. I did, however, have a chance to read the speech of my distinguished colleague, the assistant majority leader, and I want him to know that I join the distinguished Senator from Michigan (Mr. HART) by adding my commendation to the Senator for the work he did initially, not only this year but also last, and for the impetus which he gave to this issue and for the breadth of knowledge which he made available to the Senate. I assure him that, as always, he is rendering a great public service which will redound to the benefit of this body and to the country as a whole.

His well thought out, closely reasoned, and wholly logical proposal, in conjunction with the remarks made today by the distinguished Senator from Alaska (Mr. GRAVEL), has resulted in two of the finest contributions which have been made in this Chamber during this most important debate on one of the most important subjects to have come before this body during this decade.

Again to the Senator, my thanks and appreciation for a job well done and a presentation well made.

Mr. MUSKIE. Mr. President, will the Senator yield?

Mr. KENNEDY. I yield to the Senator from Maine.

Mr. MUSKIE. I would like to express my regret that I was not on the floor to hear all the Senator's presentation. I have had an opportunity to examine it, and it is consistent with the high quality of leadership that the Senator has shown on this issue over the past month. I like especially his choice of the seven implications to analyze the meaning of this debate and the issues which it involves. I am sorry I was not on the floor to get the full impression of what the Senator had to say. I compliment him.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. KENNEDY. I yield to the Senator from Kentucky.

Mr. COOPER. I wish to compliment the Senator on his statement. I agree with the Senator from Michigan that the debate on the ABM issue has been a process of education. All of us in the Senate have been required to educate ourselves on this question and to provide information to the country, and we have had to learn a great deal. The initiative taken by the Senator from Massachusetts in calling to our help and that of the public the knowledge of a great number of noted scientists, those without predisposition or bias, in my judgment, it was a service of incalculable value to the Congress and the country, for which we thank the Senator from Massachusetts, Senator KENNEDY.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. KENNEDY. I yield to the Senator from Missouri.

Mr. SYMINGTON. I join my colleagues in congratulating the assistant majority leader for an excellent talk. The Senator points out that the Soviets could easily

neutralize any addition in defense which came from Safeguard, and that is one of the more important aspects of the criticism of this system that has never been answered.

In recent hearings, when it was shown to my mind conclusively that a relatively slight addition in the production of the new Soviet SS-9 missile—a type we abandoned years ago as not being the right type or character of missile—would neutralize any effective defense provided by the deployment of Safeguard the Defense Department fell back into the question of cost.

It is very difficult for me to understand what, in dollars the SS-9 missile would cost the Soviet Union. More on that later. In any case I am glad the able Senator brought this out and congratulate him on his presentation.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. HART. Mr. President, I yield 2 additional minutes to the Senator from Massachusetts.

Mr. KENNEDY. I thank the Senator from Missouri for his comments. I believe one of the great contributions to this whole debate and discussion was the very important information the Senator from Missouri developed in demonstrating what would be necessary to overwhelm the implementation of phase I of the Safeguard system. I know there have been those who have argued that all we would have to really do is expand phase I into phase II, phase III, or phase IV. There were those who suggested this expansion in response to the arguments raised by the Senator from Missouri. What we were talking about then was not the thin system, which has been debated; but a thick system, which increases the magnitude dramatically and increases cost significantly, even above the cost that has been estimated here. The thick system is really a different kettle of fish. So I think the point the Senator from Missouri made in bringing that information into the debate was extremely important in helping resolve this issue in the minds of many Senators.

I think one of the other important contributions the Senator made was with reference to the status of the testing of the Safeguard components themselves, to which I referred in my statement.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. KENNEDY. I yield to the distinguished chairman of the Foreign Relations Committee.

Mr. FULBRIGHT. I want to join in commending the Senator for his statement, which I have just had a chance to read. I am sorry I was not able to be on the floor. There is one point I wanted to mention again, which is like the point made by the Senator from Missouri: I noted in the newspapers recently that Mr. Kissinger, one of the President's principal advisers, was reported to have said that even if the ABM did not work, it would be worth it because the Russians would not know it did not work.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. HART. Mr. President, I yield 2 minutes.

Mr. FULBRIGHT. Therefore the Russians would have to do all their planning on the assumption that it would work.

This may be a very good assumption in an academic atmosphere, but the Russians have experimented with the ABM. They started to install a system and then quit deploying it. They did so because they believed that, in the present state of the art, it would not work. So we are not kidding anybody. The Russians are not fools. They would know it did not work. So the idea of going ahead with it on the theory that, even though we knew it would not work, they would not know about it, and they would spend all their money trying to overcome it, does not make sense.

It seems to me that in considering the question of whether it will work, or whether it will not work, or the various difficulties it has, or will encounter, there has always been the assumption that it does not matter what it would cost. We seem to feel that in the realm of defense it would somehow be unpatriotic to raise the question of cost.

I do not agree with that, especially when we consider the fact that the President spent a great amount of time in promoting extension of the surtax. In other words, the importance of the financial condition of the country and approving the surtax indicate the administration's concern with inflation. We already have inflation. We have a very serious financial condition. Therefore, I do not think we should ignore the question of cost.

Does not the Senator agree that if we proceed to give the President authority tomorrow, if the vote is to authorize the ABM, the decision will be made and there will be no turning back on it?

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. HART. Mr. President, I yield 1 additional minute.

Mr. FULBRIGHT. It seems to me, having had such a serious debate about it, and having won the vote, we will be committed indefinitely and at incalculable cost, which would be anywhere from \$10 to \$50 or \$75 billion, to proceed. Does not the Senator agree with that?

Mr. KENNEDY. I agree with the comments made by the distinguished Senator from Arkansas. I would say that this is indeed a watershed in the decision made by the Senate in confronting this issue.

Second, I agree with the Senator completely about the openendedness of the whole deployment of the system, not only in the potential of the increased cost of the weapons system, as we have seen in recent times with respect to overruns and all the rest—

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. HART. I yield 1 additional minute.

Mr. KENNEDY. But I think, as I mentioned to the distinguished Senator from Missouri, in response to the materials which he brought to this debate, it would take a relatively short period of time for the Soviets to overcome phase I of the Safeguard system. The proponents of the system have said all we would have to do is build more—phase II, phase III, and phase IV. What we are getting into is an additional cost of tens of billions of dol-

lars, if we follow that logic to its legitimate end. The Senator has stated it accurately. I am in agreement with that observation. I think it is a most important one.

Mr. YARBOROUGH. Mr. President, will the Senator yield?

Mr. KENNEDY, I yield.

Mr. YARBOROUGH. I would like to associate myself with the remarks of the majority leader and his comments on the work of the assistant majority leader in the months of the debate that has been going on.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. HART. Mr. President, I yield 1 minute.

Mr. YARBOROUGH. And the knowledgeable people he has brought to Washington and the meetings that have been held and all the important work he has done. In addition to being the assistant majority leader, he has done much work off the floor to see that that information was obtained and that discussions were had in order to enable Senators to make up their minds on this question.

I compliment the Senator not merely for what he has said, and not merely for his work as assistant majority leader, but for the months of dedicated work he has done on and off this floor in connection with this crucial issue.

Mr. KENNEDY. I thank the Senator for his kind remarks.

Mr. MAGNUSON. Mr. President, I have decided to vote for \$760,000,000 for continued research and development of the missile defense concept. I will not vote, however, to deploy the antiballistic missile at this time. I am even somewhat reluctant to support this huge sum for research, because the great mass of scientific opinion on the ABM casts grave doubt on the likelihood that it will ever become a workable defense system.

As one Member of this body, and as a member of the Defense Appropriations Subcommittee, I have conscientiously examined the testimony, the reports, and all the technical data available to me on the subject of the ABM.

On the basis of that evidence, it is obvious to me that public debate has tended to obscure the real issue with which the Senate is faced. That issue is not whether America should be protected: we all agree that it should. The real issue is whether or not the ABM system, as proposed, would in fact add to that protection; if so, at what cost, and with what advantages over alternative defense programs.

The testimony I have heard, in scores of open and closed sessions of the Senate, suggests that the ABM may never work. Further intelligence indicates that even if ABM can be perfected technologically, it may not provide true defense against the weapons of tomorrow. In addition, the very Minuteman ICBM's the proposed system is designed to protect may themselves be an obsolete part of our nuclear arsenal within a few years.

These factors make it necessary to question this particular proposal, but this is not to question the value of defense. The decision to commit the already overburdened taxpayer to a multi-billion-

dollar weapons system is one we should not make hastily, particularly when that system may not provide defense at all. The cost of deployment, with its inevitable overruns amounting to billions, is too high a price for the illusion of defense without the substance.

We all want to provide America with the best defense system possible. To this end, I have voted for \$976 billion in defense spending since World War II—and there will be more to come. In that tradition, and in the desire to give America the benefit of every possible defense, I am willing to go the extra mile and approve this huge sum for research and development of the ABM concept. I hope this money will not be wasted, but if it is, it will still be a fraction of what we might have wasted on premature deployment of this proposal.

The alternative is to blindly buy an untested system, a weapon in search of a mission; to accept, from "A" to "Z," every proposal the Pentagon puts forth. But this alternative does not provide defense, nor is it my idea of how best to represent the people.

Deployment is a commitment that is sure to cost billions. It is a commitment to a weapon whose reliability is presently uncertain; a commitment to a weapon that might easily become the most expensive piece of ineffective military hardware in history. Let us face the facts: weapons system failure is a common occurrence in the history of the Pentagon.

What exactly is the system we are discussing? The very name—"Safeguard"—may prove to be the greatest misnomer in recent years. For there is neither the plan nor the expectation that this system, even if proven, could protect our cities. That was the task set last year for the Sentinel ABM system—a task the Pentagon finally abandoned, and a task that is presently impossible, for this year the military freely admits that there is no known method of defending a city from massive nuclear attack. Even before that fact was conceded, however, many people in the cities to be "protected"—and my hometown of Seattle was one—indicated they did not want an ABM for a neighbor.

Faced with the end of the Sentinel project, the military has retreated to the present alternative, whose alleged purpose is to protect a small number of Minuteman sites around the country. The theory behind this proposal is that if some of our Minutemen survive a nuclear attack, and can be fired in retaliation, the initial attack might never take place at all.

This might work—provided that the ABM's computer, its complex radars, and both its missile systems worked flawlessly. It is this last point—whether or not it has demonstrated the potential to perform reliably—that raises such persistent doubts in the minds of able Americans, in and out of Congress. The ABM may prove workable, after further research and development, but its projected performance simply does not justify its deployment now.

Some people have argued that even if the system doesn't work, the Senate

must vote to deploy it in order not to undermine the President's prestige in the coming arms talks with the Soviet Union. This theory is based on assumptions that are tenuous at best.

The Soviets will negotiate on arms settlements when it serves their political interests to do so—regardless of whether we deploy the ABM. That is their style; that is the way they do business with the West.

If any weapons will affect the Soviet's willingness to talk, it is our offensive ones that will do so. These we have perfected; these alone present a threat to which the Soviets might respond. Minuteman missiles, Polaris, and Poseidon submarines, perhaps even new manned or nuclear-powered bombers—these are weapons over which the Soviets might wish to negotiate. There is nothing very compelling to negotiate over a defensive missile system that may not even work.

These are the realities of nuclear strategy—whether or not the Pentagon admits it—and these are the realities upon which the President does not appear to have been objectively advised.

These are my honest doubts about the system we are debating, yet even with these doubts, I am not abandoning the ABM. I have stated that I will vote to give it a reasonable chance, a chance to prove itself through the research and development process. This is a process that is continuing: just this week, the Senate Defense Appropriations Subcommittee, of which I am a member, approved an \$80,000,000 extension of a contract for the development of improved missile defense system technology.

By deferring a deployment decision on the ABM until it is better developed, we do not jeopardize our security. We simply acknowledge that the ABM does not appear to be proper at this time.

Although America has a great many capabilities, the overburdened taxpayer cannot afford poor investments. A "no think" policy toward military spending—the type of policy that produced the TFX, nerve gas, the main battle tank, the C-5A, and countless others—will prevent us from solving both our military and our domestic problems.

Much of what I have said had already been said by others. I have come to my conclusion as a result of long hearings, discussions, questions of and answers from all kinds of people in the military field and the scientific and technological field. Members of the Senate and the House of Representatives, and members of the committee; and from discussing at some great length with many able Americans both in and out of Congress the matter before us.

Just as we must reexamine our military spending, we must take a new look at the strategic considerations to which that spending should be geared. We must not lull the American people into thinking that this system can defend them against the terrible threat of nuclear war.

We must convince ourselves, as well as our adversaries, that the only way to defend against a nuclear war is to prevent it: the only way to win a nuclear war is not to fight it.

August 5, 1969

CONGRESSIONAL RECORD — SENATE

S 9201

The PRESIDING OFFICER. Who yields time?

Mr. HART. I yield 10 minutes to the Senator from Texas.

Mr. YARBOROUGH. Mr. President, no one can deny that the issue confronting the Senate today is one of the most important of these Vietnam war years. For what faces us is not only a matter of preparation for war but also a matter of national priorities. This is another big war expense, piled on top of the Vietnam war which is now costing about \$36 billion a year.

The clear lesson of the past 5 years is that this Nation cannot afford to squander exorbitant sums for weaponry to be used helter-skelter all over this world, and at the same time address its attention to the rising needs of health, education, employment training, and other domestic needs. We cannot engage in this exorbitant squandering of our resources, and escape the highest interest rates in history, high taxes, and runaway inflation. Our economy cannot stand the reckless spending; our taxpayers are getting too wise to swallow it any longer. So we must choose now where we will place the greatest emphasis—on continued, wasteful, unrestricted, wild military adventures, or on the search for more effective solutions to our many problems here at home.

Of course, this is not an either/or matter; no rational man would advocate abandoning an adequate national defense. But as demands on our financial resources grow, so must the need carefully to examine each new request for military spending grow, in much the same way as we have been doing with domestic spending in the past. We must distinguish between essentials and non-essentials, between necessities and boondoggling.

The ABM proposal is one matter which should be examined with the greatest care before action is taken on it, because of the scores of billions of dollars it will ultimately cost. We must decide whether this is a billions of dollars boondoggle, or a valuable insurance policy.

From my study since the ABM proposal was made, and as the debate progressed, I have concluded that this is one project which is not necessary.

First, there are grave doubts about the technical feasibility of an antiballistic missile at this time. They have been debated too thoroughly on the floor to require further debate by me, and the Senate has heard of the tremendous technical problems which the ABM system must still surmount if it is to be a workable defensive device. Nothing has been said on the floor of the Senate to change my opinion on this score. This raises the economic question of why spend these billions, when money more wisely spent might obtain a more effective defense?

The ABM accelerates the arms race, without increasing the superiority to our arms. What we build, Russia will build. We now have complete arms superiority over the Russians. They are playing catch-up. If we build a new weapon system, they copy. It is needless proliferation built upon proliferation.

But the matter of gravest concern to me, the one closest to my heart, is the matter of national priorities. The estimated cost of this system since the debate started has already increased from slightly more than \$6 billion to \$11 billion; informed persons estimate the ultimate cost to approximate \$60 billion. Before 1 cent has been approved by Congress or one site has been built, the projected cost has increased by almost \$5 billion. How much higher will these costs go before the system is completed? Furthermore, even the arguments of the ABM proponents give grounds for grave doubts about our future expansion of this system into a hardened, "thick" antimissile system at a ultimately fantastic cost.

What is being talked about, then is no moderate sum. We are talking about a beginning of at least \$11 billion in the next few years. Those who support this proposal should stop and ask themselves how hastily they would want to proceed were this sum being requested for domestic programs and domestic progress. How quickly would they vote for an \$11 billion domestic program to elevate the standard of living in this country? Not very fast, I think, I do not believe in waste. I do not believe in spending vast sums of money for a boondoggle. And I think we need to proceed with the greatest care on this proposal for that very reason.

Furthermore, we are told by this administration that we must cutback in almost every domestic program in the Federal Government—cutback in education, cutback in housing, cutback in economic development, cutback in medicare and medicaid, cutback in health. They have cut the Hill-Burton hospitalization request by 60 percent, or more than half—cutback in child care, cutback in rural programs—cutback, cutback, cutback—cutbacks are being made in all these domestic programs. The reductions in the fiscal year 1970 budget recommended by this administration in April total \$1,211.3 million. Every domestic program has been funded at a level far below its authorization. Why? Because we are told that the money is needed for military spending. The Congress has authorized \$9 billion for education this year, but the administration requests that only \$3.2 billion be appropriated, or about 35 percent of the moneys authorized.

This administration has requested that we spend \$5.2 billion for ammunition to be shot at the Vietnamese, for the fiscal year beginning July 1 of this year. There are an estimated 240,000 North Vietnamese and north Vietcong now in South Vietnam. If we take that 240,000 and divide it into the \$5.2 billion they want for ammunition alone, Mr. President, that is \$21,666.67 for ammunition to shoot at each Vietcong and North Vietnamese soldier, whether they hit him or not. But they ask only \$3.2 billion for elementary and secondary education for the 72 million schoolchildren in America, which is \$44 for each child. They are willing to spend \$44 for education on each American child, and \$21,666.67 to

shoot at each Vietcong or North Vietnamese.

It is time, Mr. President, that we stop to think about what his Nation is doing, what our objectives are, and what should be the course of reason, intelligence, and rationality.

The proposed authorization for the ABM for this fiscal year, they keep saying, is "only \$759.1 million" for this year.

Mr. President, if this sum were deleted and the money applied to other uses, it would be possible from this sum to restore all cuts made in the budgets of OEO, the Department of Agriculture, EDA, HUD, and the Veterans' Administration together, plus \$156.3 million of the cuts made in the HEW budget. And we could do this without raising the total budget 1 cent.

I realize that the Cooper-Hart amendment now under consideration deleted none of the funds authorized in fiscal year 1970. I think the proper place to do this is in the appropriations measure and I hope it will be done at that time. But what the Cooper-Hart amendment does is delay the initiation of this ABM project. It gives us more time—time to evaluate the need for such a system, time to find other means to protect our retaliatory capacity, and hopefully, time to reach a meaningful agreement on arms limitation so that no expenditure of this type will be necessary. My point in reciting these figures is merely to give a graphic example of what this type of expenditure means in terms of domestic programs.

Let us be perfectly clear about what we are talking about here. We are talking about human beings and their hopes, aspirations, and lives. We are talking about children who may not be able to get an education, people who may not be able to build a home or start a business or improve a small farm. We are talking about people who may not be getting adequate health care or enough food to eat.

The administration cut back the loan funds for college students. It cut the funds for work studies in all five programs. We had to enable students to work through college. They cut back last year on the 6,000 fellowships financed 2 years ago. They cut it back to 3,500 fellowships.

The quality of American life is being pulled down to pay for this type of adventure.

We are talking about people not getting adequate health care—about 35 million of them. We are talking about people not getting enough to eat—some 20 million.

That is what is involved. Human beings are involved. Tens of millions are hungry in our country. Tens of millions in our country are without medical care. This is what is involved, not just dollars and cents. And how can we do this to them in good conscience and tell them we are doing it all for a weapons system which is not needed this year, and which might be of dubious worth in the first place?

Furthermore, as many of the opponents of this proposal have pointed out, weapons systems, once deployed, seem to develop a self-sustaining momentum of their own, even when obsolete. Once initiated, they are extremely difficult to dis-

continue, even if they will not do the job. So, knowing this and knowing the demands we will have on our budget in the coming years, why should we start on something potentially as costly as this proposal when there are such grave scientific doubts that it will accomplish the purpose?

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. KENNEDY. Mr. President, I yield an additional 5 minutes to the Senator from Texas.

The PRESIDING OFFICER (Mr. GRAVEL in the chair). The Senator from Texas is recognized for an additional 5 minutes.

Mr. YARBOROUGH. Mr. President, as an example of an area—just one—in which our Nation will face great challenges in the coming years, let me bring to the attention of the Senate what this administration's own U.S. Commissioner of Education, Dr. James E. Allen, Jr., was quoted as saying recently. The New York Times of July 9, 1969, reports that Dr. Allen predicted that by 1980, public spending on education would total \$100 billion annually, "with the Federal Government tripling its share of the cost for elementary and secondary schooling."

Using Dr. Allen's predictions, the Federal expenditure for elementary and secondary education alone will increase from the present \$4 billion per year to \$25 billion in 10 years. This is just an estimate of the Nixon administration. Many education experts say that Dr. Allen is too conservative in his estimate, and predict that the Federal share will increase to 50 percent of the total public outlay on education which would mean a \$50 billion annual Federal outlay by 1980.

We can thrash around in the quagmire of histrionics and rhetoric all we want, but there is no way that we can teeth out the bit placed in our mouth by the educational needs of our children and the other needs of all our people. We have a hard choice to make, and it is time that the chosen representatives of the American people face up to it. All of us would like to be able to tell our constituents that we took no chances at all with our military demands and that we met every military spending proposal presented to us, even proposals the value of which was questionable.

But, the realities of projected Federal revenues, of present inflation and Federal military spending, of the runaway interest rates and of the limits of the tax burdens that can be placed on our people, tell us with candor we cannot escape, that we cannot escape what we cannot continue to finance every demand that comes from the Pentagon and still meet the unyielding obligation we have to our children and their education and to our Nation and its inner welfare. We cannot continue to do both, Mr. President, and we all know it.

We know it from the inflation, high interest rates, the impaired living of the people of our Nation. Talk to them on any street in the country. Talk to them in the ghettos. Talk to the people who are rich in stocks. Talk to them all.

I think we would be wasting our money

were we to spend it on the ABM proposal. We would be spending to protect ourselves from imaginary demons beyond our borders and ignoring the very real enemies—hunger, poverty, ignorance, and physical suffering—here in this Nation that are boiling over in every class of our society. We should reexamine our priorities in this area and stop spending money on exorbitantly expensive unproven, doubtful projects such as the ABM. For this reason, I oppose without any hesitation the ABM deployment provisions of this bill this year.

The Military Establishment says that the ABM is necessary for our safety. But they say that about the War in Vietnam, when I know the war in Vietnam is doing more harm than benefit to this country. When the military leaders are so wrong about Vietnam that a blind man could see it these past years, why should we believe them to be infallible on the ABM? If the ABM is really necessary, let our military leaders close out the unnecessary \$35 billion a year war in Vietnam, and spend that money in a more sensible way.

I no longer believe, as I once did, that the military is wiser than the Congress about the necessity and the limits of military spending. My experience in 12 years in Congress convinces me that Congress is wiser and that Congress must reassert its constitutional power over the purse strings of our country before our economic system collapses from an overweight military burden.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD a telegram under date of August 2, 1969, from a number of my constituents.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

AUGUST 2, 1969.

Senator RALPH YARBOROUGH,
U.S. Senate,
Washington, D.C.

We support your opposition to deployment of the "Safeguard" ABM system. We urge you to speak out and vote for the Hart-Cooper amendment to the military procurement authorization bill S.R. 2546. We believe the "Safeguard" ABM system is unworkable and a waste of resources needed for vital domestic needs. We fear that deployment of the ABM will increase the arms race and will not give us any increased national security.

Mrs. Shirley Taylor, Mrs. R. T. Dutton, Groves, Tex.; Rose Durham Port, Neches, Tex.; Rev. Jim Jones, Rev. Robert C. Sneed, Groves, Tex.; Robert Chavey; Hector Ramirez, Fort Arthur, Tex.; Frank Rojas, Phillip Bordages, Brick Logan, Orange, Tex.; James Carter, Mr. and Mrs. George Cowart, Mr. and Mrs. Theo Kresser, Mr. and Mrs. Bobby C. Williams, Mr. and Mrs. C. A. Brink, Mr. and Mrs. W. L. Stertz, Sr., Tim Kidwell, Kurt and Kathleen Schroeder, James Blair, Wayne Sullivan, Larry Albright, Loretta Oliver, Gem Logan, Orange, Tex.; Mr. and Mrs. Jerry Hanks, Nederland, Tex.; Robert Briggs, Duane Force, Bob Heid, Tobe Duhon, Tommy Pitts, Don Humphrey, Ron Platt, and Phil Richey.

Mr. KENNEDY. Mr. President, I yield 4 minutes to the distinguished Senator from Utah.

The PRESIDING OFFICER. The Senator from Utah is recognized for 4 minutes.

Mr. MOSS. Mr. President, as we approach the historic vote set for tomorrow, I want to reaffirm my support of the Hart-Cooper amendment. I recognize the need for continued research and development of an ABM system, but I object to deployment at this time for the following reasons:

First. The technical difficulties involved in establishing an operative, reliable Safeguard system are at present insurmountable, in my opinion. Why should we burden the already overloaded middle-income taxpayer with a Presidential delusion?

The Hindenberg Zeppelin and the unsinkable *Titanic* demonstrated that even with man's best effort and most advanced technology, disaster can still follow. The difference of then and today is that today the disaster would not be localized; instead, the disaster would claim the world.

Second. The spiraling nuclear arms race will be escalated one step closer to holocaust and doom. The U.S. Senate must assume its position of leadership in the world's quest for peace. When our military superiority is as great as it is today, it seems utter folly to pour more taxpayer's money down the never-ending, always-increasing military appropriations drain—a drain, might I remind Senators, that is based on destruction of life and property, as opposed to constructive improvement of quality of life and environment.

Third. Last, and perhaps most important for the survival of the human race, is the false state of security that a questionable Safeguard system would create. In my remarks earlier to the Senate, I discussed the very real threat of defense planners becoming less reluctant to utilize nuclear weapons in their overall defense program. If this were to become the case, the chances of nuclear war occurring approach the absolute. The chances of maintaining the nuclear non-proliferation treaty, with smaller countries becoming more and more acutely aware of the increased dependence of the great powers on nuclear weapons, would become an impossible dream. The chances of a lasting peace based on trust would also be greatly diminished with passage of the ABM Safeguard system.

Mr. President, our country is facing a crisis in trust and confidence perhaps unparalleled in our Nation's history. People are beginning to ask why the Government spends \$85 billion plus a year on defense when the real threat to the common man is right within his own city or State. The threats of crime, poverty, unemployment, and disability—and of air and water pollution—are far more real to the average citizen of the United States than are his awareness and fears of the Russians or the Chinese.

In this new crisis situation we must come up with new answers to the old questions. We simply cannot go along with tradition because it is tradition; we simply cannot approve every military appropriation because it is a military request. We have to demonstrate to the

August 5, 1969

CONGRESSIONAL RECORD — SENATE

S 9203

citizens of this great Nation, and indeed the world, that we are taking a new direction; that we, as U.S. Senators, are concerned about and are working on how to correct the local threats of crime, poverty, and unemployment.

If we do not begin to work to solve these domestic problems, I am afraid that we, as a nation, are going to become victims to what the 19th century historian McCall predicted would be the reason for the fall of the United States. He foresaw that the United States would not succumb to external invasion but would instead fall to internal subversion caused by discontent and extremism.

The PRESIDING OFFICER. Who yields time?

Mr. TOWER. I yield myself 3 minutes.

Mr. President, there is a very excellent letter in the July issue of Science magazine from David C. Williams of the Space Power Research Division, Sandia Laboratories, Albuquerque, N. Mex.

It is a very devastating attack on the Chayes-Wiesner report, and I would like to read one of the points made, because it is a point we have tried to make over and over again in this debate:

According to the Chayes-Wiesner report, Secretary of Defense Laird's assertions (that the Soviets seek "superiority" or first-strike "counterforce" capability over the United States) are "not based on any intelligence about new weapons systems" but are, instead, merely his reinterpretations of older data that were not previously viewed with much alarm. Actually, of course, new intelligence has come in during the last year, but the key point—evidently overlooked by the report—is that earlier estimates of Soviet intentions optimistically assumed that their extremely rapid missile deployment was only aimed at achieving parity with the United States, not superiority. Unfortunately, in the past year the assumed leveling-off point has been passed, yet Soviet deployment continues unabated. Ergo, it is probable that they seek superiority after all.

Mr. President, I ask unanimous consent to have this letter in its entirety printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CHAYES-WIESNER REPORT CHALLENGED

The Chayes-Wiesner report (16 May, p. 807) criticizing the Safeguard ABM system is of such questionable quality that some comments must be made. Many of the relevant data are (unfortunately) classified, and arguments based upon such data inevitably degenerate into exchanges of the "So I say—So you say" type. I therefore eschew refutations based upon classified information and restrict myself to some more general comments:

(1) According to the Chayes-Wiesner report, Secretary of Defense Laird's assertions (that the Soviets seek "superiority" or first-strike "counterforce" capability over the United States) are "not based on any intelligence about new weapons systems" but are, instead, merely his reinterpretations of older data that were not previously viewed with much alarm. Actually, of course, new intelligence has come in during the last year, but the key point—evidently overlooked by the report—is that earlier estimates of Soviet intentions optimistically assumed that their extremely rapid missile deployment was only aimed at achieving parity with the United States, not superiority. Unfortunately, in the past year the assumed leveling-off point has been passed, yet Soviet deployment con-

tinues unabated. Ergo, it is probable that they seek superiority after all.

(2) The report asserts that we can afford to delay Safeguard because the Soviets will face a long "lead-time" in developing and deploying any new systems. Actually, the Soviet systems of such concern to Secretary Laird are already developed and even deployed in large numbers. That lead-time is already gone.

(3) I was startled by the recommendation that Safeguard not be deployed because each of its components "is at the extreme of sophistication for its type." Does this mean that the authors would have been more favorably inclined if Safeguard were already obsolete? Its advanced technology undoubtedly will require much time for debugging, especially with respect to integration of its components, which is one more reason for avoiding unnecessary delay in deployment.

(4) It is almost embarrassing to find the F-111 (TFX) listed among alleged Pentagon bloopers. Military men mostly opposed that system; it was passed anyway by civilian "experts" under then Secretary of Defense McNamara, during the Kennedy Administration whose science adviser was—remember?—Jerome B. Wiesner.

(5) Many of the report's arguments conflict with each other. For example, it is asserted that: (i) Even China will be able to penetrate the Spartan-only defense of our cities with ease; (ii) Safeguard will escalate the arms race, implying that even the Soviets will so respect the Spartan-only defense that they will fear it represents an attempt to erode their second-strike capability; (iii) the Spartan-plus-Sprint defense of our missiles will not increase the credibility of our second-strike capability, which implies that the Soviets will be so contemptuous of the combined system that they will feel certain they can penetrate it with nearly 100 percent efficiency in a very brief time (anything less will not save them from U.S. retaliation, and Safeguard will have "worked"). Make up your minds, boys: Is Safeguard bad because the Spartan defense won't even work against China or because it might even work against the Soviets; because the U.S.S.R. won't respect the system or because they will?

Though I favor Safeguard deployment, there are unquestionably many technological points that may be legitimately debated. Unfortunately, this hastily compiled report contains enough flaws and inconsistencies, many obvious even to intelligent laymen, that it is apt to damage the credibility of the scientific community more than it will damage the credibility of Safeguard.

DAVID C. WILLIAMS,

Space Power Research Division, Sandia Laboratories, Albuquerque, N. Mex.

Mr. COOPER. I suggest the absence of a quorum.

Mr. TOWER. Mr. President, I ask unanimous consent that the time consumed by the quorum call requested by the Senator from Kentucky be charged to neither side.

The PRESIDING OFFICER (Mr. MONDALE in the chair). Is there objection to the request of the Senator from Texas? The Chair hears none, and it is so ordered.

The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. COOPER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Who yields time?

Mr. COOPER. Mr. President, I yield 20 minutes to the Senator from New York.

The PRESIDING OFFICER. The Senator from New York is recognized for 20 minutes.

SAFEGUARD: THE TONKIN GULF OF THE NUCLEAR ARMS RACE

Mr. JAVITS. Mr. President, in these closing hours of debate on the ABM, I wish to raise an issue which I believe goes deeply to the experience of the Senate and the Nation within the past few years. It relates to the significance of our vote on the ABM in terms of future of governmental policy.

One of the great adages in Washington is that it is not enough to say so; we have to prove it either by action or by vote. That goes for politics and policies as well. The significance of the vote on Safeguard is that it could restore or begin to restore the authority of Congress with respect to foreign policy and military policy. Such authority is vested in the Congress by the Constitution but—as was brought out in the debate on the national commitments resolution—it has not been exercised in a significant way in recent years.

The Gulf of Tonkin resolution is a dramatic example.

It is interesting, indeed ironic, that the man in whom it awoke the greatest feeling that Congress was surrendering its power was the manager on the floor of the Senate of the Gulf of Tonkin resolution; namely, our very distinguished chairman of the Committee on Foreign Relations himself, the Senator from Arkansas (Mr. FULBRIGHT).

Mr. President, I see in the ABM vote a watershed in this regard. In my judgment, if we do successfully oppose deployment of ABM, then we will have gone far toward reasserting our constitutional prerogatives and responsibilities in the national security field.

Mr. President, that is the thesis which I should like to lay before the Senate. It is uniquely a Senate issue which will be here decided, precisely because it is so close, precisely because the scientific evidence is so contradictory that we must consider the ultimate effect upon Government policy of what we will be here deciding.

Interestingly enough, Mr. President, I am coming to the conclusion that it may not make so much difference in terms of what actually happens, whether we win or lose, because I have a hunch much the same thing is likely to happen in the end. I doubt very much that this weapon can be deployed even within the period the administration is talking about. We may come out at exactly the same place so far as this weapon is concerned whether the vote is 51 to 59 or 49 to 51 the other way.

What is very important is that we should recapture our constitutional prerogatives.

The eyes of the Nation—indeed of the entire world—are focused on the Senate this week. Tomorrow's vote on the Cooper-Hart amendment will be the "moment of truth" which decides whether or not this Nation can make a concerted effort to freeze the nuclear arms race. I agree with President Nixon when he said:

The choice will affect far more than our foreign policy; it will determine the quality of our lives.

What we decide will indeed have far-reaching consequences.

In his Air Force Academy speech, the President characterized opponents of the ABM program as "new isolationists" and said our objective was "unilateral disarmament."

He said: "I hold a totally different view of the world," and he ruled out compromise in the following language:

When great questions are posed, fundamental differences of opinion come into focus. It serves no purpose to gloss over these differences or to try to pretend that they are mere matters of degree.

The attitude of the President, together with the testimony of Secretary Laird and others, suggest strongly that the Safeguard ABM proposal may well be to the nuclear arms race what the Tonkin Gulf Resolution was to Vietnam. If the Senate acquiesces in the administration's decision to proceed with immediate ABM deployment, we must expect that the Nation and the world will accept Wednesday's vote as a determination that the nuclear arms world will be escalated—bid up—and that the likelihood, of at least, a freeze on strategic nuclear arms as a result of the SALT talks is considerably reduced. This is the way the then-President and the world took the import of the Tonkin Gulf Resolution as to combat involvement of U.S. troops in Vietnam.

The President has stated his position very clearly. In his Air Force speech he said:

The question, I submit, in defense spending is a very simple one: "How much is necessary?" The President of the United States is the man charged with making that judgment.

Moreover, the President has made it clear how he sees it between competing domestic and military priorities:

The aggressors of this world are not going to give the United States a period of grace in which to put our domestic house in order . . .

In my judgment, the Senate cannot accept the exclusive authority of the President to decide on the Nation's priorities and its military budget. In fact, article I, section VIII of the Constitution gives exclusive authority to the Congress "to raise and support armies, to provide and maintain a navy, to make rules for the Government and regulation of the land and naval forces."

An important constitutional question thus has been posed. I do not believe the Senate can duck this question.

It would be well for us to remember Secretary Katzenbach's assertion in 1967 that the Tonkin Gulf resolution was a "functional declaration of war." I do not think any of us felt that way when we voted for the Tonkin Gulf resolution, but later we seem to have had no effective answer to Mr. Katzenbach's assertion on behalf of the Johnson administration.

President Johnson and Secretary Rusk felt just as strongly about the Vietnam war as President Nixon and Secretary Laird feel about the Safeguard ABM. But the attempt of the Johnson administration to subordinate urgent domestic civilian needs to the insatiable budgetary demands of the Vietnam war produced

the gravest kind of domestic strains and strife, and caused the political destruction of the Johnson administration.

The apparent determination of the administration to cross the Rubicon of ABM and MIRV would make an escalation of the nuclear arms race inevitable unless checked by the Senate. In my judgment, it is essential that we defer the crossing of that Rubicon until a thorough effort has been made to negotiate a strategic arms limitation agreement in the SALT talks. We have it in our power—the power of the purse—to do this. It is a power which, in all prudence, we must exercise.

The danger of heedless escalation of the nuclear arms race is a very real one despite the efforts of Safeguard proponents to minimize this aspect of the debate.

Already there is some claim that the reasons for immediate ABM deployment given by Secretary Laird are having a detrimental effect on the commencement of the SALT talks. According to an article in the Washington Post of August 3, the position in Senate testimony by Secretary Laird "may have been seized upon by the Moscow hawks to demand a new review and a delay in the talks."

As much as we all hope that this report proves to be wrong, it is ironic that this very possibility was foreshadowed in the recent pro-ABM study produced by the Hudson Institute. This book, entitled "Why ABM?" has been widely touted by administration supporters as the reply to the anti-ABM study edited by Weisner and Chayes.

It states:

The testimony of Secretary Laird . . . contributed rather significantly to the crystallization of the critical attitudes of the Soviet commentators.

The author concluded:

Secretary Laird chose to invoke the imminent threat posed by alleged Soviet first strike intentions. . . . Hence the way the American Administration chose to argue its case for BMD tended to produce Soviet concerns lest the BMD decisions be used as a vehicle for expanding the strategic arms competition.

The alleged Soviet "first strike" threat, which Secretary Laird leaned on so heavily, was a red herring from the beginning. Even Secretary Laird has more or less backed away from that position now, after being confronted in the Foreign Relations Committee with the intelligence estimates of the CIA. But some damage may have already been done to the SALT negotiations.

The Pentagon's own testimony on "the Status of U.S. Strategic Power," just a year ago before Senator STENNIS' Preparedness Investigating Subcommittee, is sharply contrary to the Soviet "first strike" case which has been used by Secretary Laird.

The technological lead of the United States is unquestioned—and today should be even more so following the Apollo moon landing. Still, according to General Wheeler, the Chairman of the Joint Chiefs of Staff, an American "first strike" capability is not possible. His reasoning is significant:

It is literally impossible to buy sufficient forces at the present level of the art to de-

stroy the enemy strike capability before it is launched . . .

During these same hearings on the status of U.S. strategic power, Dr. John Foster, Director of Defense Research and Engineering, presented a very confident picture of our strategic posture and described the so-called action/reaction cycle in a way which may be very pertinent to the decision before us. He said:

So, in each case it seems to me, the Soviet Union is following the U.S. lead and that the United States is not reacting to the Soviet actions. Our current efforts to get a MIRV capability on our missiles is not reacting to a Soviet capability so much as it is moving ahead again to make sure, that whatever they do of the possible things that we imagine they might do, we will be prepared! . . .

And, as I see no reason to doubt Dr. Foster's statements, then we must conclude that the United States is in a position of sufficiently comfortable security to enter the SALT negotiations before crossing the ABM and MIRV thresholds. These two weapons systems represent a next generation of weapons, so to speak, and if we cross that threshold even before we give the SALT talks a chance, we will automatically escalate the arms race because the Soviets will inevitably follow our lead.

Our military planners seem determined to get ABM and MIRV in under the wire before any moratoria can be worked out. Probably they view this as a prudent holding operation against possible failure of the SALT negotiations. But in terms of prudence it seems to me to be dubious and fallacious.

There has been a big effort in this debate to minimize the question of costs. In my judgment, it would be unwise for Senators to kid themselves in this way. The issue is not the \$759 million in this bill—it is the probably hundreds of billions of dollars which the next round of the nuclear arms race will cost if we do not succeed in heading it off through negotiations.

The administration's approach to the SALT talks must not be the routine approach of the past. Such an attitude would be inadequate to the security needs of our Nation and to the historic opportunity before us to achieve a breakthrough in the limitation and control of nuclear weapons.

The old proverb that an ounce of prevention is worth a pound of cure is especially true as it applies to the nuclear arms race. If we can achieve a stabilization of the strategic arms race at present levels we will certainly have achieved far more in terms of national security than if we challenge the Soviets to a staggering new round of nuclear weapons systems by deploying Safeguard. That race can only end in bankruptcy or nuclear holocaust.

Several theories on the relationship of ABM to the SALT talks have been put forward by the administration. One theory is that Safeguard would have no effect on the SALT negotiations. Another theory is that we need Safeguard as a "bargaining chip" in the negotiations. Now a new theory—the strangest of all—is beginning to emerge. According to this theory, it would help negotiations if both sides have an anti-Chinese ABM. No-

August 5, 1969

CONGRESSIONAL RECORD — SENATE

S 9205

body has yet explained how an ABM system can be programed to work against only one nationality of missiles.

Implicit in this latest theory on ABM is an assumption that it is in the U.S. interest to side with the Soviet Union in its increasingly bitter dispute with Communist China. A recent article in the New York Times by Harrison Salisbury predicts an imminent possibility of large-scale war between Russia and China. I do not believe that the American people are convinced at this stage that the United States should be committed to the U.S.S.R. in some tacit defense arrangement nor have we the remotest notion of either the U.S.S.R. or the world's attitude on such a major move.

However, the worsening conflict between Russia and China does, in my judgment, have some direct bearing on the SALT negotiations. It indicates that the overall strategic balance is deteriorating from the Soviet viewpoint. The increased prospects for European unity, and the possibility of a joint European nuclear deterrent now under discussion among our NATO allies, are further indications that the Soviet Union will not be free—as Secretary Laird has postulated—to strive for a first-strike capability against the United States. The U.S.S.R. is going to have substantial strategic worries on both its immediate borders, east and west. To me, this contributes to the logic of making a determined effort now to a nuclear arms-control breakthrough.

In terms of U.S. security, Safeguard is clearly not required at this time. Its deferral, on the other hand, could be the catalyst which moves the search for an arms-control agreement to a new and historic plateau.

The alternative to a nuclear arms-control agreement is grim. At home we would not have the resources to deal in an adequate and human way with the exploding crises of our cities and our rural poor. We would not be able to relieve the anguish of black America—which is not prepared to wait any longer to achieve the benefits of equal citizenship. And, by sharpening the alienation of the younger people through the continued distortion of national priorities, we invite a massive repudiation of the whole system of life we have created when authority inevitably passes to the next generation.

Mr. FULBRIGHT. Mr. President, will the Senator from New York yield to me?

Mr. JAVITS. I am glad to yield.

Mr. FULBRIGHT. Mr. President, the Senator from New York made a few remarks which are of special interest to me. I agree with his analysis of the effect of the Gulf of Tonkin resolution and the hearings which the Committee on Foreign Relations held on that resolution. They certainly made a great impression upon me. I think his analysis as to the significance of that is exactly correct.

I disagree with him on the proposition that if the vote goes either way on the pending issue by one or two votes, there may not be very much difference as to its ultimate deployment. It may make a great deal of difference in terms of

money. I would hate to see \$10 billion thrown away on a gimmick, when there is no difference in the end. There should be a difference that will be worth our while.

Before the Senator from New York came into the Chamber, I alluded to a statement made by Mr. Kissinger, at least as reported in the newspapers, that it would not make much difference whether the ABM worked or not, the Russians would not know it and therefore they would have to plan on the basis that it will work. The Russians are not stupid. They have tried to develop an ABM. They cannot make it work. They quit deploying it.

We just passed a tax bill to get enough taxes to stem inflation, so that the question of money is important. I would, therefore, only disagree with the Senator in saying that there is no use throwing away \$10 billion.

Mr. JAVITS. I thoroughly agree with that.

Mr. FULBRIGHT. Now, the other point, as to the role of the Senate, is the important one. As a matter of fact, by coincidence, my own remarks will be devoted substantially to that, because I share the Senator's feeling.

Mr. JAVITS. I am highly honored.

Mr. FULBRIGHT. I think the Senate is in a position for the first time in 25 years, as a body, as the Senate—I am not talking about a committee—where it can make a serious challenge to a major weapons system or any major program involving the Defense Department. If we should lose this vote, I am afraid it will create the impression that the military establishment is simply too strong to be controlled by the Congress or the Senate. That would be unfortunate.

Mr. JAVITS. That is right. It would be unfortunate especially in the thinking of the Pentagon and in the way in which it swings its weight around. It would be the most salutary thing in the world if they were impressed by our power for a change.

Mr. FULBRIGHT. The Senator is correct. When we recall the role of the Senate on the C-5A and the new tank and the helicopter—which has been, fortunately, abandoned now—and when we remember the amounts of money that were spent on them and upon a number of other weapons systems, as described by Bernard Nossiter in the Washington Post a few weeks ago, a negative vote on this issue would have a salutary effect on the Pentagon. The Pentagon would be a little more careful about dispensing public funds.

Mr. JAVITS. And the Pentagon would know that somebody is really looking over their shoulder.

Mr. FULBRIGHT. And is interested.

I want to emphasize one point, because on several occasions serious consideration was given to how we could discourage continuation of the war by cutting appropriations. We always came to the conclusion that, because of the danger to the men in the field, because of the emotional factors associated with the conduct of the war, we simply could not take that route.

When we finally get down to it, this

is about the only really effective power Congress has—that is, the power of the purse. We can talk, we can give advice, we can do all of that sort of thing, but they do not have to abide by it. The only thing they can abide by is this power. That is why the point the Senator has made is a very important one.

Mr. MILLER. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. MILLER. In his statement the Senator referred to immediate deployment. Did he not?

Mr. JAVITS. Yes.

Mr. MILLER. It is my understanding there will not be immediate deployment and that it has been estimated officially that the earliest there could be any deployment would be about in 1973 or 1974. That does not seem to square with the immediate deployment concept the Senator has referred to.

Mr. JAVITS. The decision we are taking is the decision to deploy, and great nations do not bluff. If the Senate of the United States votes to deploy, then there is going to be deployment. We cannot assume there is not going to be, and we cannot be misled and put into that dead-end street or booby trap by the statement, "Well, we really may not deploy, though you are authorizing." That is precisely what the Senator from Arkansas (Mr. FULBRIGHT) argued on the Tonkin Gulf resolution. He answered question after question. He said, "This does not mean we will have extensive ground forces involved in Vietnam." He meant it in good faith. It is one of the reasons why he was so deeply hurt by the abuse of the good faith and trust he asked the Senate to put in it.

That would be precisely what we would face in this situation if we were ever taken in by the argument that "Well, fellows, don't worry about it, just give us the authority; we really may not do it."

Mr. MILLER. Would the Senator not recognize that if the Senate made the decision to authorize the President to proceed with long lead time procurement, which could not, before 1973 or 1974, result in deployment, that in 1970, 1971, and 1972, the Senate would have the power to say, "No further work on this, because we do not think it is necessary"? Does not the Senator realize that Congress has that power?

Mr. JAVITS. The Senator says quite properly that Congress would have the power, but it had the power to cut off appropriations for ground combat in Vietnam. The answer is that once a great nation, by a vote of its Senate, commits itself to a certain course, it is very difficult to change it. We may ourselves vote against it thereafter, just as we sought to stay our hand in cutting off appropriations for ground forces in Vietnam. Then, other forces come into play.

The point is that if we are right, we are right now, just as right as we will be after we have spent another \$1 billion, or \$2 or \$3 billion, or \$5 billion. We say we are right now. That is our argument before the Senate, the country, and the world.

I yield to the Senator from Michigan.

August 5, 1969

Mr. HART. Mr. President, I ask the acting manager of those in opposition to the amendment if he would be willing to charge the time consumed in colloquy to the opponents of the amendment.

Mr. DOMINICK. Mr. President, I will take the time the Senator from Iowa uses from our time, but not that of the Senator from New York.

Mr. JAVITS. No; that is fine.

Mr. HART. That is all I ask.

Mr. DOMINICK. I yield 5 minutes to the Senator from Iowa.

The PRESIDING OFFICER. The Senator is advised that the time cannot be divided in that manner.

Mr. HART. Would it not be possible that an agreement, assuming the opponents of the amendment concur, could be arrived at that will charge 5 minutes to the opponents of the amendment, of the time consumed in the discussion?

The PRESIDING OFFICER. The Senator's question is answered in the affirmative.

Mr. HART. Then I ask unanimous consent that that occur, if that is agreeable to the Senator from Colorado.

Mr. ERVIN. I object.

The PRESIDING OFFICER. Objection is heard.

Mr. MILLER. Mr. President, it seems to me that there are two answers to the argument of the Senator from New York. The first is that I do not believe there is any comparison between maintaining troops to conduct operations in Vietnam and the renewal of an authorization for continued development and deployment of an ABM system.

There are many people who are opposed to the Vietnam war. In fact, I think there may have been one or two Senators who were opposed to the Tonkin Gulf Resolution originally, who continued to vote for the appropriations, because failure to appropriate money could have caused a considerable loss of American life in Vietnam.

You do not have that situation with an ABM system. It is merely another weapons system. It is about the same thing as authorizing the President to go ahead with long leadtime procurement for the purpose of deploying, for surface testing, a weapons system such as AMSA, an advanced manned strategic aircraft. I do not think this proposal is in the same ball park, at all, as maintaining troops in the field to fight a war.

I think the second answer to the argument of the Senator from New York is that the President of the United States has given Congress his solemn assurance, in his message on this subject, that the entire ABM system will be reviewed periodically, to determine whether we should go forward with it in the light of international developments. I do not think we ever had that assurance on the Tonkin Gulf Resolution. So it seems to me that we have two very essential differences between the ABM deployment authorization now before us and support of troops in Vietnam.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. DOMINICK. Mr. President, I yield 5 minutes to the Senator from New York.

Mr. JAVITS. Mr. President, I will reply to the Senator's statement, and then attempt to complete my remarks.

All the Senator has done, it seems to me, is nicely underline and emphasize my point, because precisely the same points were made in the Tonkin Gulf resolution debate. One point was that it was routine. We were assured that the President did not "need" a resolution to go after those who were attacking us, but it would be a good thing, and very constructive, if Congress backed him up. Congress did.

Then that piece of paper got warm in Lyndon Johnson's pocket as it was flashed on every time he deployed another 100,000 men.

I think in a business like this, we always get to the same point we have in Vietnam, because the enemy reacts. We are not going to deploy this ABM without the Russians reacting. We will never again be in the same strategic position or environment because a deployment decision will inevitably alter the strategic situation as it now exists and will activate the "action/reaction" cycle.

In addition, there is talk about this being an answer to a Chinese missile threat. The only way to make Safeguard meaningful against China is by deploying not two sites, but 12 sites. They admit that.

So, once embarked upon this course, the whole prestige, dignity, and credibility of the country is committed. We will have decided, we will have acted; and it is my judgment that this would lead us in directions, just as in the case of the Tonkin Gulf resolution, which we never anticipated when we passed it.

It seems so innocuous; as the Senator from Iowa stated, it is just a weapons system on which we are going to do a little more experimenting and a little procurement, and nothing is really going to happen.

But when that piece of paper gets into the hands of a President who is deeply convinced that this is what America needs for security, not only against the Soviet Union but against China, then the sky is the limit as far as the use of it is concerned. He will feel perfectly justified, because he says to Senators, "You voted for this. You are all over 21 years old, and should have known what it was you were voting for. If you did not know, Senator JAVITS told you what it meant."

Mr. President, will the Senator yield me 2 more minutes?

The PRESIDING OFFICER. He has no more time.

Mr. MILLER. Will the Senator yield to me for just 1 minute?

Mr. HART. One minute.

Mr. MILLER. Mr. President, I think the Senator is still getting this out of context, because we have involved the difference between a weapons system and fighting a war. I would invite his attention to the fact that just a little over a year ago, against the recommendations of President Johnson and the Defense Department, Congress scrapped the Navy version of the TFX. One could say, following the Senator's argument, that when the TFX was originally authorized by Congress, we committed ourselves to proceed until the very end, and procure all kinds of Navy versions of the TFX.

It was decided by the Senate unani-

mously, in the Armed Services Committee, that we would scrap it, and the same thing can be done in this case.

Mr. JAVITS. May I answer that argument by pointing out that the TFX was nothing the Russians had to react to, whereas this is. This goes to the heart of the strategic struggle between the Russians and ourselves.

Second, Congress scrapped the TFX, if my memory serves me, not less than \$3 to \$5 billion later. That is what we were discussing just before, as the Senator from Arkansas pointed out.

Mr. President, one of the central arguments against the decision to deploy the ABM is precisely because it can be interpreted as an attempt to regain a first strike capability for the United States. This only increases the likelihood of a Soviet reaction, and threatens to make impossible any real agreement to contain the nuclear arms race at roughly present levels and weapons systems in the impending SALT negotiations.

In short, let us take counsel of the portentousness of this decision. Let us not fail to learn from the bitter lesson of the Gulf of Tonkin resolution which should have taught us by now that these decisions do not involve merely routine resolutions. The repercussions could involve thousands upon thousands of lives and, indeed, the fate of mankind.

AMENDMENT NO. 122

Mrs. SMITH. Mr. President, I send to the desk an amendment in the nature of a substitute for the Hart-Cooper amendment No. 101, and ask that it be printed. I shall call this amendment up at the appropriate time tomorrow.

The PRESIDING OFFICER. The amendment will be received and printed, and will lie on the table.

Mr. HART. Mr. President, I yield 20 minutes to the Senator from Arkansas.

The PRESIDING OFFICER. The Senator from Arkansas is recognized for 20 minutes.

Mr. FULBRIGHT. Mr. President, I am very sorry that the time was so short for the Senator from New York. I consider that the emphasis he is putting upon certain aspects of the case are extremely important. To me, they constitute the essentials of the case.

THE ABM IN POLITICAL CONTEXT

As with most of the great questions that come before the Senate, the issues in this ABM debate are broader than the subject officially at hand. Among the questions involved there is first of all the technical question—the workability and practicality of a proposed new weapons system. Then there is the foreign policy question—the probable effects of deployment of the ABM on our relations with the Soviet Union and the prospects for disarmament. Finally, there is the extremely important constitutional question—having to do with whether, how, and to what extent Congress is disposed to exercise its responsibilities under article I, section 8, of the Constitution, which requires Congress, among other things, to "provide for the common defense," "raise and support armies," "provide and maintain a navy," and "make rules for the government and regulation of the land and naval forces."

August 5, 1969

CONGRESSIONAL RECORD — SENATE

S 9207

The technical questions have been thoroughly discussed by Senators more expert in these matters than I. The only point I would emphasize is that the purely technical questions—whether and how the Russians might acquire the capacity simultaneously to destroy most or all of our Minuteman missiles, strategic bombers, and Polaris-Poseidon submarines, and whether and how that capacity could be denied them by deployment of the Safeguard—are questions which cannot be separated from the largely nontechnical question of intent, that is, whether the Russians actually desire and are actively seeking to acquire the capacity to eliminate our nuclear retaliatory capacity in a preemptive first strike.

The Secretary of Defense has steadfastly asserted that the Soviet Union is going for a "first-strike capability," although he has been less than steadfast in his adherence to any one definition of that term. Numerous experts, with whose testimony most Members of the Senate are now familiar, have contested the Secretary's prediction. Professor Rathjens for one told the Disarmament Subcommittee:

I would not claim that the development by the Soviet Union of such a first-strike capability is impossible, but it is at worst a distant prospect.¹

No one, of course, knows—or can know—for certain whether the Russians actually intend to try to acquire a "first-strike" capability, but we do know what our own capabilities are. On the basis of extensive testimony by leading experts in the field, there is virtually no doubt of our ability—without deployment of the ABM—to counter anything and everything the Soviets might do toward acquiring a first-strike capability. In order to acquire a first-strike capacity, the Soviet Union would have to be able to destroy all three components of our deterrent concurrently, and that, in the view of the experts, is beyond any foreseeable Soviet capability.

Perhaps even more important in this matter of intent is the ability of each side to influence the other by what it does and what it does not do. Even if the Soviets had no interest at all in acquiring a first-strike capability, we could easily arouse such an interest on their part by seeming to be going for a first-strike capacity ourselves. In matters of this kind, the two sides are bound to see a mirror image of each other. The Secretary of Defense cites the possibility that the Soviets may deploy their own extensive ABM system as one basis for his conjecture that they might acquire a first-strike capacity by the mid-1970's. Why would not our ABM arouse the same fears on their part that theirs would arouse on ours? Are they to be reassured by the knowledge that Americans, being good people, would never strike a preemptive blow, while they, being bad peo-

ple, must naturally expect us to guard against them by any and all means available?

Mr. President, in a recent exchange of letters the Secretary of Defense and I summarized our respective views on the ABM. I ask unanimous consent that Secretary Laird's letter to me of July 1 and my reply of July 8 be printed in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

THE SECRETARY OF DEFENSE,
Washington, D.C., July 1, 1969.

Hon. J. W. FULBRIGHT,
Chairman, Committee on Foreign Relations,
U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: In reviewing the transcript of my testimony before your committee on June 23, 1969, two matters appeared to me to be particularly troublesome from the standpoint of the publication of an unclassified version. The first concerns the wholesale deletion of Mr. Helms' testimony. While I completely agree with the necessity for this action, it does leave the public record incomplete. Since the major purpose of this hearing was to explore whether any differences existed between Mr. Helms and myself or between Department of Defense positions and those taken by the intelligence community, it should be obvious that the deletion of Mr. Helms' testimony from the public version creates certain grave obstacles to a balanced understanding of what transpired. Accordingly, the reader of this record, should be forewarned that no conclusions, one way or the other should be drawn from the printed testimony with regard to the position taken by Mr. Helms on any particular aspect of the intelligence estimates.

The second matter involves, essentially, a problem of semantics. The transcript reflects considerable confusion over such terms as "first-strike weapon," "first-strike capability," and "first-strike intentions." Notwithstanding several hours of intense discussion of these terms before your committee, I fear that a mutual understanding of their meaning will still elude us. This is particularly unfortunate because it is essential that both the Congress and the public understand the character of the threat which led to the President's safeguard proposal. Therefore, I would like to restate the issue in terms that avoid the semantic difficulties which apparently trouble some of the members of your committee when first-strike terminology is used.

As you well know, the strategic nuclear war policy of the United States since the end of World War II has been firmly based on the concept of deterrence. To achieve deterrence we must have what my predecessor Robert McNamara called an assured destruction capability. He defined this term in this last posture statement as follows: " * * * an ability to inflict at all times and under all foreseeable conditions an unacceptable degree of damage upon any single aggressor, or combination of aggressors—even after absorbing a single attack." He went on to say, "One can add many refinements to this basic concept, but the fundamental principle involved is simply this: it is the clear and present ability to destroy the attacker as a viable 20th-century nation and an unwavering will to use these forces in retaliation to a nuclear attack upon ourselves or our allies that provides the deterrent * * *"

Thus the question that presents itself is whether the Soviet Union could achieve by the mid-1970's a sufficient capability, in a surprise attack, to reduce our surviving strategic offensive forces below that critical minimum level required for assured destruction. This, Mr. Chairman, is the crucial issue, because if the Soviets should achieve such a capability, or believe they have achieved such

a capability, our deterrent would be lost and the chances of a global nuclear war greatly increased.

It is my carefully considered judgment, in which all of my principal military and civilian advisors agree, that the Soviet Union could achieve such a capability, or reach a position where they believe they have achieved such a capability, by the mid-1970's—if we do nothing now to offset it. This judgment is based upon the following conclusions:

1. The Soviet Union could acquire a capability to destroy virtually all of our Minuteman missiles. To be able to do so they would need: (a) at least 420 SS-9's with three independently targeted re-entry vehicles which have a capability of separating from one another by some relatively small number of miles; (b) each of these re-entry vehicles would have to have a warhead of approximately 5 megatons and a reasonably good accuracy; (c) the SS-9's would have to be retargetable; and (d) the range would have to be sufficient to reach all of the Minuteman silos. It is my understanding that the technical community and the intelligence community agree that the Soviet Union could have that capability by the mid-1970's.

2. The Soviet Union could acquire a capability to threaten severely the survival of our alert bombers. To do so they would need: (a) a force of about 15 Y-class Polaris-type submarines on station off our shores; and (b) the ability to launch the missiles on a depressed trajectory. It is my understanding that there is not disagreement within the intelligence community that they could have this capability as well by the mid-1970's.

3. Although we confidently expect our Polaris/Poseidon submarines to remain highly survivable through the early to mid-1970's, we cannot preclude the possibility that the Soviet Union in the next few years may devise some weapon, technique or tactic which could critically increase the vulnerability of those submarines. Nor can we preclude the possibility that the Soviet Union might deploy a more extensive and effective ABM defense which could intercept a significant portion of the residual warheads. In any event, I believe it would be far too risky to rely upon only one of the three major elements of our strategic retaliatory forces for our deterrent.

In summary, Mr. Chairman, it is entirely possible that the Soviet Union could achieve by the mid-1970's a capability to reduce, in a surprise attack, our surviving strategic offensive forces below the minimum level required for "assured destruction," and thus gravely weaken our deterrent. In my judgment, the overall strategic balance between the United States and the Soviet Union is much too close to run that risk. Therefore, something more must be done now to insure a favorable strategic balance in the mid-1970's and beyond.

Short of achieving a workable agreement with the Soviet Union on the limitation of strategic armaments, which at best will take some time, we are convinced that the deployment of phase 1 of Safeguard would be the most prudent and economical course we could pursue at this particular juncture. This action would place us in a position to move forward promptly not only with the defense of our Minuteman and bomber forces should the Soviet threat develop as I have described, but also with the defense of our population against the Chinese ICBM threat should that emerge during the next few years.

Mr. Chairman, I believe you will agree that this letter should be made part of the public record and inserted before Director Helms' prepared statement, the text of which cannot, of course, be published.

Sincerely,

MELVIN R. LAIRD.

¹ *Strategic and Foreign Policy Implications of ABM Systems*, Hearings by Subcommittee on International Organization and Disarmament Affairs of the Committee on Foreign Relations, U.S. Senate, 91st Cong., 1st Sess., Pt. I (Washington: U.S. Government Printing Office, 1969), p. 357.

JULY 8, 1969.

HON. MELVIN R. LAIRD,
Secretary of Defense,
Washington, D.C.

DEAR MR. SECRETARY: Thank you for your letter of July 1 regarding the transcript of your testimony before the Committee on Foreign Relations on June 23, 1969. You ask that your letter be made part of the public record and inserted at the beginning of the transcript. I will, of course, accede to your request. I would not, however, want your letter to stand without comment, and so I am also having this response inserted.

In the first paragraph of your letter, you express concern at the possible inferences that could be drawn from the fact that the public record is left incomplete because of "the wholesale deletion of Mr. Helms' testimony." I am sure you remember that originally, you were invited to appear in open session before the Committee on Foreign Relations to discuss your statement of May 22 before a closed session of the Committee on Appropriations of the House of Representatives which was subsequently made public. You took the position that you preferred to come in executive session and that you wished to be accompanied by the Director of the Central Intelligence Agency, Mr. Helms. I acceded to your request.

At the conclusion of our June 23 meeting, when I expressed the hope that it would be possible to release a sanitized version of the transcript of the meeting, you were the first to say that everything Mr. Helms had said would have to be deleted. The deletion of all Mr. Helms' testimony, and of certain portions of your testimony were made by the executive branch and not by the committee. If this procedure has resulted in what you consider to be an "incomplete" record which "creates grave obstacles to a balanced understanding of what transpired," to quote your letter, the responsibility for having brought about this result is surely yours and not mine.

You also say in the first paragraph of your letter that since the major purpose of the hearing was to explore whether any differences existed within the intelligence community, or between the Department of Defense and the intelligence community, you feel that the reader of the record should be warned that no conclusions should be drawn from the printed testimony with regard to the position taken by Mr. Helms on any particular aspect of the intelligence estimates. I would agree that the deletion of Mr. Helms' testimony—and, I should add, of certain portions of your testimony—does create an obstacle to a balanced understanding of what transpired at the meeting on June 23. In fact, as the record now stands it leaves the impression that there have been no disagreements within the intelligence community as far as certain recent developments in Soviet weaponry are concerned. I felt that I had no choice but to agree to the deletions requested by the executive branch on the grounds of national security. But the fact of the matter is that there have been disagreements within the intelligence community on such recent developments, although all the testimony given at our June 23 meeting indicating such disagreements has been deleted from the public record.

As for the second matter you find troublesome, which you refer to as a "problem of semantics," I do not agree with the implication of the statement in your letter that these "semantic difficulties" apparently trouble some of the members of the committee when "first strike terminology" is used. The problem of semantics, as you call it, arose in the course of the June 23 hearing when you were questioned about your statement at a public hearing of the Subcommittee on International Organization and Disarmament Affairs on March 21, that "with the large

tonnage the Soviets have they are going for our missiles and they are going for a first-strike capability." When you were asked on June 23 whether this statement did not mean that you ascribed to the Soviets a desire to achieve a capability to deliver "a knockout blow" against the United States, you denied that you meant to imply that was the Soviet intention and you appeared to redefine "first-strike capability" as meaning, simply, the ability of a weapon to destroy a missile in a hardened site. I think that a reading of even the sanitized transcript shows that semantic difficulties seemed to trouble you at least as much as, if not more than, members of the committee and that the points at issue are far more serious than mere semantics.

Turning to the second and third pages of your letter, you say that you base your judgment that the Soviet Union could achieve a capability to reduce our surviving strategic offensive forces below that critical minimum level required for assured destruction on three conclusions. It strikes me as somewhat simplistic to imply, as you do, that if the Soviet Union continues to build up its strategic offensive forces to the point where they could threaten to reduce our strategic offensive forces below the critical minimum level required, we would not and could not increase our strategic offensive forces. You seem to argue in your letter that the only thing that can be done to offset an increasing Soviet capability to reduce our strategic offensive forces below a "critical minimum" level is to begin deployment of an ABM system to defend Minuteman. For the reasons I have given, I find that argument specious on its face. I also find it questionable on the ground that you seem to take it for granted that the Safeguard system would be able to operate effectively and could do so in the face of a Soviet attack. As you know, questions have been raised by many of the most eminent scientists in this country as to whether the system is far enough along in its development to be deployed or whether further research and development are necessary. Others have raised questions regarding the vulnerability of the radar components. Still other questions have been raised as to whether the system could not be overcome—even when fully deployed—by an increase in Soviet missile strength on the order of only 10 percent. Your letter ignores these questions completely.

The first of your three conclusions is that the Soviet Union could acquire a capability to destroy virtually all of our Minuteman missiles by the mid-1970's if they deployed at least 420 SS-9's with three independently targeted reentry vehicles and if certain other conditions were met with respect to warhead size, accuracy, range, and retargetability. Without recapitulating the technical objections that have been made by experts to this argument, I would simply point out again that your statement assumes that the United States would not deploy additional Minuteman missiles, or other appropriate weapons, if the SS-9 threat continues to develop. Your statement also assumes that the Soviets would not deploy more than 420 SS-9's, or additional smaller missiles to use against radar installations, if they wished to counter the Safeguard system.

The second conclusion is that the Soviet Union could acquire the capability to threaten the survival of our strategic bombers by the mid-1970's providing they have by that time a force of 15 Polaris-type submarines on station and the ability to launch missiles on depressed trajectory. There are, as you know, a number of ways to reduce the threat to our strategic bomber force. One is to disperse bombers, moving more bomber bases inland. A second is to renew the procedure of keeping a certain number of bombers on airborne alert. Finally, while you do not mention the fact, we all know that

strategic bombers can be based abroad, so that Soviet submarines would have to be able to attack these bases as well.

Your third conclusion relates to the time period in which our Polaris/Poseidon submarines will remain effective. You state that "we confidently expect our Polaris/Poseidon submarines to remain highly survivable through the early to mid-1970's." Is it any wonder that the members of the Senate, not to mention the American people, find it difficult to take such a statement at face value when set against the statement made by Deputy Secretary of Defense Packard before the House Armed Services Committee, on April 15, at which time he said: "Based on the data we now have, we expect the Polaris to remain highly survivable until at least the late 1970's." * * * Secretary Chafee, in a recent letter to Senator Gore, said that his views were in accord with Mr. Packard's statement. Other authorities have made similar statements. I note, incidentally, that while you refer to the agreement of the intelligence community with your first two conclusions, you do not mention the views of the intelligence community regarding your third conclusion. You simply refer to what, in your opinion, "cannot be precluded."

You also refer, in your third conclusion, to "the possibility that the Soviet Union might deploy a more extensive and effective ABM defense." * * * Yet you do not mention the steps the Administration is ready to take, whether wisely or unwisely, to counter just such a Soviet development—that is, the conversion to the Poseidon system on our submarines, which will provide us with some 5,000 warheads instead of the 656 we now have, and the plans to fit Minuteman missiles with multiple-independently guided warheads.

I will close with two general comments.

First, by stating separately each of your three conclusions—that is, that the Soviet Union could acquire a capability to destroy virtually all of our missiles, to threaten the survivability of our bombers and to negate the effectiveness of our nuclear submarines—you imply that the Soviet Union could also acquire the capability to destroy all three elements of our deterrent concurrently. Many expert witnesses have pointed out in public Senate hearings that this implication—or perhaps it is an assumption on your part—is unfounded. If all three elements of our deterrent—that is, missiles, bombers and submarines—were not destroyed simultaneously, an attack on one would provide sufficient warning to permit use of at least one of the other two elements. Thus, a Soviet missile attack against our missiles would provide ample time to permit our submarines and bombers to retaliate. Conversely, a Soviet submarine attack on our bombers or our submarines would provide ample warning to permit us to launch our missiles. I will not belabor the point but will add only that, while the intelligence community, or the U.S. Intelligence Board, may agree that the Soviet Union could acquire by some time in the 1970's two of the three capabilities you mention in your letter, they have not agreed that the Soviet Union could destroy all three elements of our nuclear deterrent force simultaneously. Indeed, they have as you know, and as the public record makes clear, never concluded that the Soviets are "going for a first-strike capability."

My second general comment has to do with the assumption, which runs throughout your letter, that the Soviets could achieve certain capabilities in the future and that, before these capabilities are achieved, they must be offset by our development of even greater capabilities. In making this assumption, you ignore the mirror image that the Soviets must see, for on what basis can we assume that the Soviets do not feel about our development of greater weapons capa-

August 5, 1969

bilities just as we feel about theirs? Can they assume that we are not intent on being able to pose the same threat to them that the Administration says they could pose to us? You have claimed in your public statements, for example, that Safeguard will be an effective ABM defense able to intercept a significant number of their warheads. Yet you state in your letter, as a justification for your judgment that the Soviet Union could achieve a first-strike capability by the mid-1970's: "Nor can we preclude the possibility that the Soviet Union might deploy a more extensive and effective ABM defense which could intercept a significant portion of the residual warheads." Why would our deployment of an ABM system, which you and your associates claim to be effective, not be interpreted by the Soviets in much the same way?

In sum, Mr. Secretary, I find to return to your phrase, that I too have a "problem of semantics." Mine arises in considering your contention that the deployment of the phase I of the Safeguard system would be "the most prudent and economical course we could pursue at this particular juncture." It strikes me, on the contrary, that the deployment of this dubious new weapons system, virtually certain as it would be to destabilize the present arms balance and to initiate a costly and futile intensification of the arms race, would be the antithesis of prudence, at best wasteful, more probably prodigal, and quite possibly disastrous.

Sincerely yours,

J. W. FULBRIGHT, *Chairman.*

Mr. FULBRIGHT. Mr. President, it is urged that the ABM will be a useful bargaining lever in disarmament negotiations with the Russians. All previous experience shows that, far from facilitating agreement, the introduction of a new weapons system by one side invariably provokes the other side into matching or exceeding it. It was indeed our own apprehension about Soviet antiballistic-missile capacity that gave us the idea of MIRV. Each side tends to assume the worst, planning for what has come to be known as the greater-than-expected threat. When you acquire a new weapons system, you must assume that it may not work as planned while your adversary must assume that it will. The result is the stepping up of the arms race, with mounting danger, skyrocketing costs, and rapidly diminishing security. As a bargaining lever for disarmament, the ABM is likely to be as effective as gasoline shot through a firehose.

A word also seems in order about the cost of deploying the ABM. Taking into account the unrealistically low estimates to which the Pentagon is addicted and the inevitable stepping up of the arms race to which the ABM would surely lead, the ultimate costs are beyond calculation. In addition, as we all know, every new weapons system soon acquires a constituency—a process which is aided and abetted by the perspicacity with which Pentagon officials award lucrative contracts and establish new plants in the districts of influential Members of Congress. I have not the slightest doubt that, if the antiballistic missile is deployed, it will soon acquire its own powerful constituency, and then we will be saddled with it—for reasons wholly independent of its ostensible military utility.

According to current intelligence calculations, made in terms of equivalent real purchasing power, the Russians are spending about three-fourths as much

as we are on defense. Nonetheless, we are told, they threaten to pull ahead of us in strategic weapons and we must be prepared to counter that threat. I do not understand why they should be getting so much more for their money than we are. Perhaps the fault lies in inferior American efficiency—a disconcerting thought. Perhaps it lies in the lack of legislative oversight of the defense budget comparable in rigor and thoroughness to that exercised over the much smaller budgets of the other departments.

Be that as it may, by any standard the amounts spent on defense have become staggeringly disproportionate to the rest of the economy. It fills me with dismay when Department of Defense officials suggest that, as part of a "grand design" for strategic policy, we may be forced to "win" an arms race with the Russians by relying on our superior resources to spend them into bankruptcy. Such a strategy puts me in mind of the practice among the Indians of the Pacific Northwest known as the "potlatch." Starting as a rivalry in gift-giving for the sake of prestige, the practice degenerated, as the tribes became wealthier, into competitive orgies of waste and destruction, in which the competing tribes tried to establish their superiority by spending the others—and themselves—into ruin. If nothing else comes of the debate on this military procurement bill, we will be doing a major service to the Nation by putting the Pentagon on notice that Congress no longer intends to sit by in benevolent passivity while the generals and their civilian bosses vie with the Russians in a suicidal "potlatch."

Possibly the most significant long-term issue in this debate is the question of Congress will—or lack of will—to exercise its constitutional responsibilities for the general superintendence of the Armed Forces, or, as article I, section 8, of the Constitution specifies, for making "rules for the government and regulation of the land and naval forces." On June 25, by a vote of 70 to 16, the Senate expressed its judgment that a national commitment, to be valid, required the consent of Congress. The national commitments resolution was an assertion of the principle of congressional responsibility for foreign military operations; the issue now before us is a test of our determination to put that principle into practice.

Recent Presidents have claimed the authority not only to command the Armed Forces but to deploy them and commit them to hostilities on foreign territory. The current President has gone a step farther, claiming the authority to judge how much we spend on our Armed Forces. As President Nixon put it in his speech at the Air Force Academy on June 4:

The question in defense spending is "how much is necessary?" The President of the United States is the man charged with making that judgment.

Until recently many—perhaps most—of the Members of this body would have concurred passively in this sweeping assertion of Executive authority.

In practice we have concurred in this principle, repeatedly granting the executive anything and everything he has requested in the field of defense, and doing so with little or no debate. We did so because we thought it a patriotic duty, momentarily forgetting that we have a prior patriotic duty to preserve and exercise the responsibilities entrusted to Congress by the Constitution. Vested with the responsibility both for appropriating funds and for regulating the Armed Forces, Congress—and not, as Mr. Nixon asserts, the President—is charged with the responsibility for judging "how much is necessary" in defense spending.

Soldiers, like nature, abhor a vacuum. In the absence of congressional "rules for the government and regulation of the land and naval forces"—to quote once again the language of the Constitution—the armed services have become vigorous and effective partisans for their own favored policies, for new weapons systems and, of course, for funds to finance them. Playing fast and loose in politics, the armed services exert great influence on the executive, actively lobby in Congress, expend enormous sums on contract research in foreign policy, and, in the name of "public affairs," assiduously cultivate public opinion.

Last fall, for example, a nationwide publicity campaign in support of the ABM was outlined in a memorandum prepared by Lt. Gen. Alfred D. Starbird, the Sentinel System Manager, and approved by the Army Chief of Staff.² Prudently canceled by the Nixon administration in March of this year, the Starbird plan is nonetheless instructive as an example of the kind of partisan political activity in which the armed services are at liberty to engage in the absence of diligent congressional oversight.

Noting the rise of congressional and public opposition to deployment of the Sentinel, the memorandum outlined a publicity campaign to "gain public understanding of the reasons" for the ABM, to "gain the understanding of the people of affected communities," and generally to build public support for the ABM. To advance these purposes the memorandum outlined a program of press releases, magazine articles, interviews, and speeches. Press releases were to originate either with an Army official or a Sentinel contractor or subcontractor. Military personnel were themselves to write articles in favor of the ABM and also "to encourage and assist in the preparation of magazine articles on the Sentinel system by civilian scientific or technical writers of national stature." As to the speakers' program, the memorandum specified that senior Army personnel "will participate in this program to the maximum extent feasible."

Far more astonishing than the ultimate cancellation of this military propaganda campaign is the fact that it was contemplated at all. It is totally incompatible with the principle of a nonpolitical military establishment and, in this respect, an unacceptable incursion upon our constitutional processes. One can

² Sentinel System Master Plan, Part No. 3.22, "Public Affairs Plan for the Sentinel System," 12 November 1968.

hardly blame the military itself for these transgressions. It is only human nature for vigorous and intelligent men such as our top ranking military leaders to do all that they can to advance their own stock in trade. The real fault lies not with the soldiers who have taken the opportunity to fill a political vacuum but with the civilian officials who created that vacuum by vacating the field.

In this respect the major fault probably lies with Congress. In the wise and perceptive words of the senior Senator from Louisiana:

For almost 20 years now, many of us in the Congress have more or less blindly followed our military spokesmen. Some have become captives of the military. We are on the verge of turning into a militaristic nation. . . . We have forgotten many of the traditions and values which made this country great, and we have flung men, arms, and material almost heedlessly about the world.⁴

The heart and core of the issue is congressional control of military spending. If this control were thorough and effective, there would be little or no threat of militarism in American society. Insofar as congressional restraints are perfunctory and formalistic, leaving the Pentagon to be in effect its own judge and jury in the choice and funding of its weapons systems, then the military might as well be regarded as a full-fledged fourth branch of Government, with the extra advantage of being free from the checks and balances which inhibit the other three.

No agency or individual in the executive can relieve the Congress of its responsibility for putting limits on military spending. Even the Bureau of the Budget, which effectively controls domestic spending, is a toothless lion in its dealings with the Pentagon. Out of the \$6 billion reduction made in President Johnson's last budget, for example, \$5 billion came from domestic spending. The Defense Department is the only Government agency which is not subject to independent review of its funding requests by the Bureau of the Budget. Instead the Defense Department is permitted to designate an official of its own to work with each Budget Bureau examiner under a system of joint policy review. One Budget Bureau examiner is reported to have said that, whenever a Budget Bureau examiner requests information and his Defense Department counterpart does not wish to produce it, the matter is closed. The Bureau of the Budget's National Security Programs Division has only 26 examiners to review the \$80 billion defense budget; of these only four are concerned with strategic weapons systems such as the Minuteman and the ABM. Once a new weapons system is initiated, according to former Budget Bureau Director Charles Schultze, it is not evaluated again, even though the presumed threat to which it was supposed to respond turns out to be exaggerated or nonexistent.

Secretary McNamara described the relations of his Department with the Bureau of the Budget quite candidly in a

statement to the House Armed Services Committee in 1965. He said:

The Bureau of the Budget has absolutely no authority to determine in any way the budget of the Defense Department . . . I can't remember a single instance in which the Bureau of the Budget and I differed on a recommendation in which the President accepted the Bureau of the Budget view.⁴

Mr. President, my remarks on the Bureau of the Budget and the Pentagon are drawn from an excellent article by Barbara Newman called "Can the Budget Bureau Put the Lid on Pentagon Spending?" I ask unanimous consent that this article, which appeared in the *Washingtonian* for July 1969, be printed in the *Record* at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. FULBRIGHT. A great deal can be done, no doubt, to strengthen the Budget Bureau's ability to regulate military spending. The fact will remain, however, that both the Department of Defense and the Bureau of the Budget are agencies of the Executive, with as much or as little independent authority as the President wishes them to have. As long as the principal restraints on military spending are those within the executive branch, they are optional restraints, only slightly preferable than no restraints at all. Reflecting on the Pentagon's position in the funding process, I am reminded of a Damon Runyon character, a gangster from Detroit who forced his friends at gunpoint to shoot crap with blank dice, pointing out that he "remembered where the spots formerly were."

Only Congress is in a position to put spots on the Pentagon's dice. Aside even from the competence and experience of many members of the Armed Services and Appropriations Committees of the two Houses, Senators and Representatives bring the one indispensable qualification to the task of controlling military spending which not one single agency or individual in the entire executive branch can match. That qualification is the fact that we do not work for the President and, because we do not, we are free—as no one who serves the Executive can ever be free—to make independent judgments about the Executive's policies.

We are free to make independent judgments and, under the Constitution, it is our duty to do so. The question now before the Senate is a test of our willingness to meet that responsibility. Whether and how we do so may well prove to be the most significant long-term issue involved in this debate on the ABM.

I am, for all these reasons, opposed to deployment of the ABM. I am also concerned with certain other provisions of the military procurement bill, most particularly with title IV, which states that funds authorized under this or any other act for the use of the Armed Forces of the United States are also to be avail-

able to support "Vietnamese and other free world forces in Vietnam" and "local forces in Laos and Thailand."

I am puzzled by these clauses and would welcome an explanation of their meaning by the distinguished chairman of the Committee on Armed Services.

First of all, I would like to know whether, under title IV, there is any limit, or any way of imposing a limit, on the funds which could be transferred to non-American forces in Vietnam, Laos, and Thailand. Could the Secretary of Defense, under this provision, use all of the proposed \$20 billion to support South Vietnamese, Laotian, and Thai forces? Or only some specified part of that amount? And if there is a limitation, where is it carried under the law?

I would also like to know whether the chairman of the Armed Services Committee regards title IV as a national commitment of the United States in the sense in which that term was defined by the Senate resolution of June 25. Will we, by approving title IV, be committing ourselves to the defense of the present regime of Laos and Thailand in any manner or degree exceeding the provisions of the SEATO Treaty? More specifically, are the funds authorized by title IV to be used to implement the secret military agreement with Thailand—secret military-executive agreement, I should say—which we have recently been made aware. Perhaps the answer will be clearer when the Foreign Relations Committee is provided with a copy of the official text, which it has repeatedly—and thus far unsuccessfully—requested.

I raise these questions for the consideration of the chairman of the Armed Services Committee. I know that, as one of the 70 Senators who voted for the national commitments resolution, he is as concerned as I am to restore Congress' constitutional authority over the disposition of the Armed Forces and the making of national commitments.

The central issue in this discussion of the ABM, of our military policies and expenditures, and of the responsibilities of Congress in these fields is, of course, our national security. The Senators who support deployment of the ABM are deeply concerned with our Nation's defense. They will readily acknowledge, I am sure, that those of us who oppose the ABM are no less concerned with the national security. Perhaps it can be said that the proponents of the ABM and of large military expenditures are primarily concerned with the means of our defense, while others of us lay emphasis on the ends to be protected and preserved.

I think we would all agree that the central, commanding goal of American foreign policy is the preservation of constitutional government in a free society. That being the case, we are not at liberty, as is a dictatorship, to devise a national security policy solely on the basis of the effectiveness and cost of weapons systems, or even on the basis of military plus political considerations, such as the effect of any new weapons system on international disarmament negotiations. Both of these are of critical importance

August 5, 1969

but, as a constitutional democracy, we are also bound to weigh every step—every weapons system and every negotiation—in terms of their compatibility with our constitutional processes. When a new weapons system such as MIRV or the ABM is contemplated, we must ask ourselves not only whether these will effectively counter the Soviet SS-9's and how they will affect disarmament negotiations. We must also ask ourselves whether, by placing still another powerful instrument in the hands of our military, by delegating still greater power to the Executive and accordingly reducing the authority of Congress, we are not weakening the very constitutional processes we are trying to defend.

To fail to make these evaluations, and to give unexceptional priority to purely military considerations, is to sacrifice the ends of security to its means. It is hardly helpful to say that we would rather "err on the side of security" in such matters as the ABM, because security is involved on both sides of the issue. The more pertinent question is whether the instrument is compatible with the objective.

EXHIBIT 1

[From the Washingtonian, July 1969]

CAN THE BUDGET BUREAU PUT THE LID ON PENTAGON SPENDING?

(By Barbara Newman)

Robert P. Mayo is the typical quiet, competent, Nixon-style civil servant. For twenty years, he toiled away at the Treasury Department, specializing in debt management. In 1961, he became vice president of a Chicago bank—the one headed by David M. Kennedy, now Secretary of the Treasury. Mayo now directs the Bureau of the Budget (BOB).

Melvin R. Laird is acid-tongued and supremely confident. In eight terms as a Congressman from Wisconsin, he rose to the top ranks of House Republican leadership through the force of his keen intellect and Machiavellian personality. Laird now heads the Department of Defense (DOD).

The two men, caught up by growing public sentiment that military spending is too high, are on a collision course.

Poor Bob Mayo.

The first round came when Mayo, in an effort to cut the 1969-70 Pentagon budget, gave Laird a list of suggested spending reductions. Laird ignored Mayo. Out of an \$80 billion Pentagon budget, Laird chopped \$600 million, by reducing the number of B-52 bombing runs in Vietnam from 1,800 to 1,600 a month. Laird, the politician, knew that key Congressmen would oppose "selling out our boys in Vietnam" in order to comply with a Budget Bureau request for a defense spending cut.

Mayo was out on a limb. Laird had cut his budget as requested. Congress didn't like it. President Nixon maintained a tight-lipped silence. Mayo lost round one.

There is no question that the Bureau of the Budget, which exercises such potent control over domestic spending, has not been able to get a handle on defense spending. Of the \$6 billion trimmed from the \$199 billion Johnson budget for 1969-70, \$5 billion came from domestic spending. This, despite the fact that Vietnam, urban unrest, and weapons system cost overruns have increased both public and Congressional demand for a review and reordering of our national priorities.

When the new Nixon team appeared before Senator William Proxmire's Joint Economic Committee, Mayo was candid. He said he wanted "a more separate, highly com-

petent, highly skeptical look at the defense budget."

Proxmire, (D-Wisconsin), and Congressman William Moorhead (D-Pennsylvania) are both certain that the Budget Bureau does not exercise strong enough control over defense spending. They both think they have a hot issue—that 1969 is the year to probe Pentagon spending.

This is also the year to look at the Bureau of the Budget. An influential group of House members, led by Deputy Majority Leader John Moss of California, has introduced a resolution asking that a Select Committee be created to investigate Budget Bureau operations. Included in the group are six committee chairmen: Wilbur Mills, Ways and Means; Mendel Rivers, Armed Services; Chet Holifield, Joint Atomic Energy; Thomas Morgan, Foreign Affairs; Wayne Aspinall, Interior; and Samuel Friedel, House Administration. House Majority Leader Carl Albert of Oklahoma says the BOB investigation "is long overdue."

The Bureau of the Budget was set up in 1921 in an effort to coordinate and rationalize Government programs. It started out in the Treasury Department, and in 1939 moved to the White House to become a direct arm of the President. The Budget Bureau director is not a Cabinet officer; he is a Presidential appointee, and he does not require Senate confirmation.

The Budget Bureau has stayed small. It has a staff of 500, of whom 325 are professional staff. The BOB annual budget is only \$10 million. It runs no programs itself. It stays out of politics. Only five positions were affected by the Johnson-Nixon transition—the BOB director and four assistant directors. Of the five, only two—Mayo and Richard Nathan, assistant BOB director for human resources—have a distinctly Republican coloration. Dwight Ink, now assistant BOB director in charge of executive department reorganization, is a career civil servant who worked at the Department of Housing and Urban Development under President Johnson. Deputy director is Philip S. Hughes. Maurice Mann is assistant director for economic affairs. James Schlesinger is assistant director with responsibilities in the national security area.

Despite its size and the quiet way in which it operates, the power of the Budget Bureau is formidable. All budget requests from Federal agencies must be cleared by the Budget Bureau. All legislation proposed by agencies is scanned by the Budget Bureau to make sure it conforms with the President's programs.

The Budget Bureau also conducts efficiency studies of agency operations. It was told by President Johnson to coordinate the conversion by all agencies to the Program-Planning-Budgeting System. Known as PPB, this system was developed by Robert McNamara for the Defense Department. It is an attempt to rationalize the budget process by outlining all options and costing each out.

The power of the Budget Bureau is cited by this statement of a former White House aide: "Without the bureau, the President would be operating in the dark, going by guess and by God. . . . The bureau tells the President the choices available to him, the pros and cons in each case, its own recommendations. How much more influence can you have?"

The Budget Bureau is now housed in two buildings. Director Mayo and half of his staff are in the Executive Office Building just west of the White House. The rest of the staff is in Federal Office Building Number 7, the red brick building near the northeast corner of Seventeenth and Pennsylvania.

As a result of a 1967 reorganization, the Budget Bureau is now divided into six divisions: Human Resources, headed by Rich-

ard Nathan; Natural Resources, headed by Carl H. Schwartz, Jr.; National Security Programs, headed by Ellis H. Veatch; International Programs, headed by James W. Clark; General Government Management, headed by William Pfeiffer; and Economics, Science, and Technology, headed by John D. Young.

These six divisions are the BOB linkage to all Government departments and agencies. Most of the staff members of the six divisions are budget examiners. They review all budget requests, and exert more influence per position than any other people in Government.

In addition to the six divisions, the BOB has four other offices: Budget Review, which puts the budget together after getting all the pieces from the six divisions; Executive Management, which oversees interagency, Federal-state, and Federal-local programs; Statistical Standards, which helps devise Government statistical measurements; and Legislative Reference, which coordinates legislation proposed by departments and agencies.

Of the BOB's 325 professional staff members, 177 are budget examiners in the six divisions. The remaining 148 are supervisory personnel or staffers in the four other offices. The average professional grade is GS-14 (annual salary of \$18,500 to \$24,000). Over half the professional staff has master's degrees. Thirty-two are women. Nine are black. Most are generalists rather than accountants.

Nathan and Schlesinger are two of the more interesting additions to the staff. A Harvard Ph.D. and former associate at the Brookings Institution, Nathan headed the welfare and intergovernmental relations task forces for candidate Nixon. He is both an assistant director and chief of the Human Resources Division; he has been told to tighten up social programs. Schlesinger is Mayo's ace in the hole in his poker game with Melvin Laird. A summa cum laude Harvard graduate, Schlesinger has a Ph. D. in economics and was Director of Strategic Services for the Rand Corporation, an influential think tank operation that does a lot of work for the Government. Schlesinger knows how the Pentagon operates; Mayo wants him to tighten up defense spending.

Schlesinger's operating arm at the Budget Bureau is the National Security Programs Division, which works out of plush carpeted offices on the tenth floor of Federal Office Building Number 7. Division Director Ellis Veatch is considered competent, but not tough or innovative. Schlesinger is clearly the man who will have to rock the boat.

The division, with a staff of twenty-six budget examiners and six supervisory personnel, keeps an eye on \$80 billion a year in defense spending. The division, according to a former examiner, has had a heavy staff turnover. He talked of "winds of discontent" brought about by the division's ineffectiveness. Another Budget Bureau official said he thought National Security Programs Division examiners "are more in bed with the people they work with than the other BOB examiners."

The Defense Department is treated differently. All other agencies and departments are subject to independent BOB review. The Defense Department, however, designates an official of its comptroller's office to work with each BOB examiner. This joint review was put into effect in 1960, as an expediency during the Korean War, and it has never been lifted. Top BOB officials say it is necessary because of the size and complexity of the defense budget BOB Deputy Director Philip S. Hughes says the Defense Department exerts more "muscle" and "power" than other departments, making for a different "climate" in the review of defense spending requests.

During the fall, which is budget season, BOB examiners move from their downtown offices to the Pentagon, where they share an office with their Defense Department counterpart. One examiner says the relationship

is not one of equals; it is one of *primus inter pares*, and the Defense examiners are *primus*. He says if a BOB examiner requests information and his Defense counterpart doesn't want to produce it, the matter is closed. "The Budget Bureau doesn't back up its examiners in requests for information," he says. Another examiner says if the BOB examiner cannot get the information he needs, the examiner is at fault, not the joint review policy. "The Pentagon budget process is highly individual. How effective one is depends on how resourceful he is and how much information he can amass to trade off with his Pentagon counterparts." Another examiner put it this way: "Your position doesn't give you a thing. You have to scratch like hell."

Senator Proxmire and Congressman Moorhead view the C5A matter as an example of weak BOB control of defense spending. At hearings of his House Military Operations Subcommittee, Moorhead—aided by his assistant, Peter Stockton, who had worked at the Budget Bureau—proved that the Air Force had doctored internal reports to cover up a \$2 billion cost overrun on Lockheed production of the \$5.3 billion C5A transport contract. Moorhead had to contend with the protestations of Subcommittee Chairman Chet Holifield, who whispered to Moorhead that he was "a son of a bitch for bringing those documents in here." Holifield told Moorhead, "Now your stooge Nossiter has a story." He was referring to *Washington Post* reporter Bernard D. Nossiter, who assiduously covered the hearings and wrote a series of hard-hitting stories.

The hearings produced evidence that the Defense Department knew that Lockheed's bid on the first fifty-eight C5A planes was low, and that Lockheed might lose heavily on the first run. The losses were to be recouped on the second run of fifty-seven planes. Colonel Kenneth N. Beckman, the Air Force C5A project director, said it was felt that disclosure of the huge C5A losses "might put Lockheed's position in the common (financial) market in jeopardy."

Pentagon sources say the Budget Bureau knew the C5A was over its contract ceiling by early 1967. Yet in March 1968, Air Force Assistant Secretary Alexander Flax told the House Appropriations Committee: "We believe C5A is within the range of target and ceiling at the moment."

The BOB examiner who knew about the C5A overrun in early 1967 was Richard A. Stubbing. His knowledge had zero impact. But in January of this year, Nossiter wrote a story about "The Stubbing Paper."

It turned out that Stubbing, a BOB examiner since 1962, had written the paper in 1968 while at Princeton University's Woodrow Wilson School. The paper exposed information on enormous cost overruns and faulty operation of many aircraft and missile electronic systems. The paper contended that the highest profits often went to the most inefficient firms. BOB press officer Joseph Laitin ruled Stubbing inaccessible to the press. He derided the paper as a "schoolboy thesis" and said Stubbing was "very far down on the totem pole" and "not qualified to talk to the press." A BOB source says he is certain Stubbing gave Nossiter the paper because he was so frustrated at BOB's ineffectiveness.

Both Proxmire and Moorhead think the Budget Bureau needs more examiners looking at defense spending, though Moorhead sardonically says, "For the job it does in Defense, the bureau is overstaffed."

The National Security Programs Division has twenty-six examiners. Ten work on general purpose forces, which include spending for all conventional armed forces, considered the most difficult expenditures to control. Four work on strategic forces, such as the Safeguard ABM and Minuteman. Two work on intelligence and communications, three

on research and development, three on training, medical, and other general personnel activities, one on guard and reserve forces, one on supply and maintenance, one on airlift and sealift, and one on administration and associated activities.

The case is made that not only does the BOB not have enough examiners working on the defense budget, but that the BOB examiners work with the wrong people. Charles Schultze, a hard-nosed pragmatist who was Budget Bureau director from June 1965 to February 1968, says the BOB "tends to get involved too far down the spigot." BOB examiners work with the comptroller's office at the Pentagon. They should work with the Defense Department's systems analysis people. Says Schultze, "BOB should be involved in the formulation of the basic strategic contingencies on which the budget is built."

This lack of outside involvement in strategic decisions allows the Defense Department to justify weapons systems by what the BOB calls "shifting sands" of rationalization. Although the Defense Department insists that it has a "zero base" budget that starts from scratch each year, Schultze contends that once a weapons system gets the green light, it is not evaluated in subsequent years. Schultze points to the plan to convert thirty-one Polaris submarines to carry 496 Poseidon multiple warhead missiles at a cost of \$2.5 billion. The Poseidon was conceived as an answer to the Soviet "Tallinn" anti-missile system, which turned out to be an aircraft defense system rather than anti-missile system. When the threat on which the Poseidon was based turned out to be non-existent, the military developed other reasons for it. Secretary of Defense Laird now says Poseidon is needed as a deterrent against the Soviet SS-9 missile.

The timing of the Federal budget process puts the Budget Bureau at another disadvantage in controlling defense spending. All agencies and departments must have their budgets to BOB by September 15, except for the Defense Department. In December, the defense budget is sent to the President and the Budget Bureau at the same time. Thus the Budget Bureau must petition the President for changes in the defense budget instead of working them out with the Pentagon.

Because the Budget Bureau is an arm of the President, its effectiveness in controlling Government spending in general, and defense spending in particular, depends to a large extent on the attitude of the White House.

Under President Eisenhower, Budget Bureau directors were numbers men—Joseph Dodge, Roland Hughes, Percival Brundage, and Maurice Stans were more interested in bookkeeping than in drawing up options for the President. They were more interested in how many cars an agency had than in evaluating its programs. This narrow budget approach is referred to as "the green eyeshade approach" by BOB staffers.

Presidents Kennedy and Johnson changed all that. Their BOB directors were economists—David Bell, Kermit Gordon, Charles Schultze, and Charles Zwick were interested in evaluating programs and setting up options so that the President could choose between alternatives.

President Eisenhower had kept a relatively tight lid on defense spending. But President Kennedy, on taking office, decided to build up our conventional forces capability and he took the lid off. Ironically, a major influence on Kennedy was a book, *Nuclear Arms and Foreign Policy*, by Henry Kissinger, then a Harvard professor and now President Nixon's adviser on national security. Kissinger argued that the Dulles emphasis on massive nuclear retaliation should be replaced by a more flexible conventional force response. Thus, the military budget which was \$40 billion in 1959 had doubled eight years later.

Under Presidents Kennedy and Johnson, the

Budget Bureau influence on defense spending was diminished by the forceful personality of Secretary of Defense Robert McNamara. In a 1965 statement before the House Armed Services Committee, McNamara made the point this way: "The Bureau of the Budget has absolutely no authority to determine in any way the budget of the Defense Department . . . I can't remember a single instance in which the Bureau of the Budget and I differed on a recommendation in which the President accepted the Bureau of the Budget view."

This inability of the Budget Bureau to exert any influence on defense spending has motivated Congress to probe both defense spending and BOB operations. Defense Secretary Laird says he will cooperate with a General Accounting Office (GAO) study of defense procurement. Many Congressmen are not optimistic about the GAO study, however, because GAO is an agent of Congress and thus subject to pro-Pentagon Congressional pressure.

Again, take the C5A as an example, it is being built in Lockheed's Marietta, Georgia plant. One of the most powerful men in the United States Senate is Senator Richard Russell (D-Georgia), until this year chairman of the Senate Armed Services Committee. He now is head of the Senate Appropriations Committee. On the House side, Congressman Mendel Rivers (D-South Carolina), the chairman of the House Armed Services Committee, has so many military installations in his home city of Charleston, that the situation, once considered faintly amusing, is now viewed on Capitol Hill as a crude absurdity.

Congressional leadership thus would appear to have too much to lose if the full power of the GAO was let loose on the Pentagon. There are indications, however, that public reaction to examples of Pentagon carelessness is being felt on the Hill. In May, Congressman George Mahon (D-Texas), the hawkish chairman of the House Appropriations Committee, tangled publicly with Rivers over military spending after the accidental \$25 million sinking of a nuclear submarine under construction in California.

Budget Bureau officials still hope they will get increasingly more effective control over the Pentagon. More budget examiners with background in systems analysis and defense procurement would be needed. The amount of guts and leadership shown by such Budget Bureau officials as Director Mayo and Assistant Director Schlesinger will be important.

But the critical ingredient is Presidential leadership. The Budget Bureau must have strong White House backing if it is going to stand up to the Secretary of Defense and the Joint Chiefs. As former BOB Director Schultze points out, "Nobody wants the Joint Chiefs to be able to say that you refused to do things needed for the country on budgetary grounds. . . . Most Presidents are unwilling to take on the Joint Chiefs on budgetary grounds."

President Nixon's performance thus far indicates that he will be much tougher on social welfare than on Pentagon spending.

Furthermore, there are indications that President Nixon is pushing the Budget Bureau back toward the role it played under President Eisenhower. The Budget Bureau's Resource Planning Staff, set up in 1967 by Director Schultze in an effort to more effectively set up options and priorities for the President, has been quietly disbanded. According to BOB officials, its functions are being taken over by Presidential Counsellor Arthur Burns at the White House, and Burns is known as a man who tends to keep his hands off military spending. Control of defense spending thus would appear to rest in the hands of President Nixon and Secretary of Defense Laird.

August 5, 1969

CONGRESSIONAL RECORD — SENATE

S 9213

So Bob Mayo may have lost more than round one. He may have already lost the battle for Budget Bureau control of the peace dividend that will come from the end of the Vietnam war.

Mr. FULBRIGHT. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has 3 minutes remaining.

Mr. FULBRIGHT. Mr. President, does the Senator from Mississippi wish me to yield to him?

Mr. STENNIS. Just briefly, for 1 minute, to make a comment. I can get some time later.

Mr. FULBRIGHT. The question I addressed to the Senator was with regard to title IV of the bill now before us. It is in connection with this broad authority that I asked my questions. I assume that later on in his remarks the Senator will comment on it.

Mr. STENNIS. Very well.

Mr. FULBRIGHT. I had not observed that the Senator was in the Chamber.

Mr. STENNIS. I was listening but it was necessary that I leave the Chamber briefly.

Mr. FULBRIGHT. I thought it would be useful if the Senator would give us his comments on the significance of the final section in the bill.

Mr. STENNIS. I thank the Senator.

Mr. FULBRIGHT. Mr. President, I refer to the earlier remarks made by the Senator from New York which interested me very much. Although I had not talked with him about his speech he emphasized very much the same theme I had emphasized.

It is true, of course, as the Senator from Iowa pointed out, that there always remains in the Congress the power to make changes in a program such as this. But I submit to him and the Senator from New York that actual deployment of the ABM has already commenced.

There was an article in the press the other day about the purchase of rights-of-way into sites in Montana. I wrote to the Department of Defense asking about the authority for this action because it seemed to be clearly part of the deployment of the program. It was. The Department said they were using transfer authority and they are already, in effect, proceeding to deploy in the sense of establishing the sites which are in phase I, contemplated by this program.

I think the answer to the questions raised by the Senator from Iowa were properly and effectively answered by the Senator from New York when he said the decision on this matter is to a very great extent a watershed decision. It is not final in the technical sense; Congress could theoretically undo it, but to approve deployment now would start a process that would be irreversible as a practical matter. There would be no coming back and undoing it. Of course, many other matters of equal or greater importance will come before the Congress, but I doubt there will be more hearings comparable to the hearings that have been held this year on this ABM. So as a practical matter, leaving out the technical authority of the Congress to change it, it will not be changed.

The PRESIDING OFFICER. (Mr.

PACKWOOD in the chair). Who yields time?

Mr. STENNIS. Mr. President, I yield 15 minutes to the Senator from Arkansas.

The PRESIDING OFFICER. The Senator from Arkansas is recognized.

Mr. McCLELLAN. Mr. President, tomorrow we will make a decision which could be crucial to our national destiny and to the future peace of the world. The decision of the Senate to proceed or not to proceed with the first stages of deployment of the Safeguard antiballistic-missile system may well be of that import and gravity. Because of this, I feel compelled to state briefly for the record some of the reasons why I shall vote to proceed with further research and development and with the first stages of deployment of the Safeguard system.

Mr. President, I do not seek to influence any other Senator. Each of us, no doubt, by this time has already reached conclusions that have led us to an irrevocable decision. We have done that primarily upon the basis of how we view current international relations and world conditions and upon expert opinion that has been marshaled on both sides of this vital and highly controversial issue. It is not my purpose to attempt to, nor would I be so presumptuous as to think that I could, change anyone's vote. I do not know that I am right in my judgment, and I am equally sure that none of my colleagues—nor anyone else for that matter—can claim infallibility with respect to his judgment on this question. There are simply too many imponderables involved for either side to contend that the arguments they make—in support of or in opposition to deployment—are conclusive and irrefutable. We simply do not know. We can only make an educated guess and hope for the best.

There is sharp disagreement between the proponents and opponents of the ABM system and likewise among the many who are regarded as experts in this field as to whether this system will work—whether it will be effective once it is installed and becomes operational. In its present state of development, some doubts may be justified. But, on the question of whether it can be developed and made to work, I have no serious doubts. I am confident that it can be done. The astronomical technological advances that American ingenuity has achieved during the past few years and our recent successful journey to and safe return from the moon present overwhelming proof which reaffirms our warranted faith that it can be done.

There may be good reason to doubt that an effective operational system can be adequately researched and developed without deployment. I, therefore, think deployment is necessary to permit the testing this system will require to make certain of the efficient coordinated functioning and effectiveness of the various units of which the system is composed.

In a system of this magnitude and complexity, it is, of course, expected that problems—serious problems—will be encountered. I am confident, however, that

they can and will be overcome by American genius, technology, and resolve.

It can be argued that there is a serious risk of failure, that the effort will be costly, and, if unsuccessful, the money and resources we expended in the effort will be wasted. But the overriding consideration is whether this weapon should be added to our defense arsenal. If it is essential to protect our offensive deterrent system and we fail to provide it, we may well have placed in jeopardy both our national security and the future peace of the world.

I believe it is needed, and the greater risk would be in our failure to reinforce and protect our existing deterrent force to the Communist threat of aggression and conquest.

I cannot agree with those who would pursue a course of weakening our defense potential, letting down our guard, and indulging in the vain hope that we can negotiate reliable and satisfactory agreements with Russia on a limitation of armaments and on all vital issues involving war and peace. I am unwilling to put all of our eggs into the negotiating basket or to assume the nonevident good faith of Communist leaders. Their avowed ambitions of expansion, their past record of treachery and deceit, and their invasion and subjugation of smaller and weaker nations by force of arms are forbidding and indefensible. Their record compels suspicion and continued distrust until there is a discernible and demonstrative change in their policy, tactics, and goals.

Since World War II, the United States has entered into bilateral and multilateral agreements for collective defense with 42 countries around the world in both hemispheres. These commitments were not lightly made. I do not necessarily approve of all of them. But, at the time they were made, our Government believed them to be compelling and necessary. Why? because of the threat of Communist aggression. The most noted of these agreements, of course, is NATO, which was established in August 1949, for the purpose of providing for the collective defense and protection of Western Europe.

Mr. President, we have spent hundreds of billions of dollars since World War II in trying to build a fortress against the would-be conquering forces of communism. We are today fighting a war in Vietnam at a cost of billions of dollars and thousands of lives each year. We fought a war in Korea that cost us 33,000 lives and many billions of dollars. We still maintain a military force in Korea of some 56,000 men. We have spent on NATO and the arming of Western Europe many billions of dollars and are still spending some \$8 to \$10 billion annually to maintain 320,000 troops in the NATO forces in Europe.

Mr. President, we have done all this, and more, because we felt compelled to do so in order to deter Russia and other aggressors of the Communist world. Has Russia changed? I see no hard evidence that she has. The Berlin wall still stands, and the recent invasion and occupation of Czechoslovakia is a most eloquent re-

minder of Communist goals of conquest and subjugation.

I submit that this most recent aggression by Russia continues an international trauma of faith-shattering dimensions.

This does not mean that we should be unwilling or refuse to negotiate. It would certainly be a blessing to all the world—to the entire human race—if the United States, Russia, and other world powers could and would enter into an arms limitation binding agreement—one that could be enforced. Let us ever strive to make progress in that direction, but, in doing so, we must not lose sight of reality.

We must guard against any arms agreement that can be converted into a subterfuge and used to shield secret preparations for war. Such an agreement must permit inspection and supervision which will permit all parties to such agreement to get information at any time, to reassure that the treaty or the agreement is not being violated by any signatory thereto.

We must not be lulled into a sense of complacency by exaggerated expectations and false hopes. Our potential enemies are not relaxing their efforts and determinations to achieve that superiority and supremacy which would permit them to impose their will on all other nations by force of arms. There is very little enthusiasm that I observe, Mr. President, manifested by Russia, and certainly none by China, for an arms limitation agreement.

In my judgment, if Russia were ready, sincere, and in good faith about desiring an arms limitation agreement, we could proceed to the conference table on that issue within the next 60 days, and certainly within a few months thereafter have the finished product before us in the form of a treaty for ratification.

Why is that not being done?

Simply because they are not ready. They are unwilling. They do not wish such a treaty or such an agreement, unless it is one of a kind which will deny inspection, one that can be used as a subterfuge, one that can be used as a shield to deny those party to the agreement the opportunity to know what secret preparations in this field are being made behind that agreement.

This is why we do not have an agreement. That is why no progress has been made, or is being made satisfactorily, at least, toward obtaining such an agreement.

Are we to blame for that?

We hear so much today about our country's being to blame, that our country is to blame for this and for that.

Are we to blame for no arms limitation agreement?

The PRESIDING OFFICER. The time of the Senator from Arkansas has expired.

Mr. STENNIS. Mr. President, I yield 5 additional minutes to the Senator from Arkansas.

The PRESIDING OFFICER. The Senator from Arkansas is recognized for 5 additional minutes.

Mr. McCLELLAN. Mr. President, I do not believe that world conditions and the attitude of the two leading Com-

munist powers—their international policies—permit us to let down our guard and cease to maintain a strong military deterrent to their expansion goals—goals which they seek to attain by use of force where necessary. The building and maintaining of such a deterrent has been costly, as I have already illustrated. It will continue to be costly, but its cost, however great, cannot compare with the cost and horrible consequences of the war that it is designed to prevent.

I think we must ask whether our armed might—our military posture—has been a major factor since World War II in preventing a global war and particularly in preventing the invasion and subjugation of Western Europe by the invading armies of communism. If there had been really no threat or danger to Western Europe when NATO was created, then we would be forced to concede that the billions of dollars in expenditures which we have made to provide an armed deterrent for the protection of the NATO countries were wasted and spent in vain. It was prudent and in our national interest for us to provide that deterrent at the time NATO was established. Have conditions then so changed that it is no longer advisable for us to maintain or strengthen it? I find that no such change is evident. Therefore, prudence and our national interest continue to dictate that we act accordingly.

A decision whether to deploy or not to deploy the ABM system involves risks, but consider how different are the risks involved. If we begin deployment and it should turn out that the system will not live up to expectations or that the Soviet and Chinese offensive threats fail to materialize, then we shall have lost money—some hundreds of millions of dollars. But, what is at stake, and what risks are involved if we fail to perfect this ABM system and begin its deployment? If we fail, we will simply be gambling with the needed protection and the continuing availability of our existing ICBM deterrent. This ICBM system, with its ability to deliver the bomb, is the backbone of our deterrent, both to the outbreak of nuclear war and to the use of the threat of nuclear war by Communist powers to bolster their aggressive ambitions. If we do not develop and deploy the ABM, we may well place in jeopardy much of our ICBM striking power.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. STENNIS. Mr. President, I yield the Senator 3 minutes more.

Mr. McCLELLAN. Mr. President, the contention made that our deployment of this strictly defensive weapons system will provoke Russia and thus cause her to escalate the arms race is a weak argument. It is of little persuasion, and it is unacceptable. The ABM system is a weapon of defense that will be used to prevent the destruction or immobilization of armaments already in place and ready for use. If we must make a choice between offending Russia and protecting and preserving the military armaments that we have already deployed, then I think we have no alterna-

tive except to choose the latter. That would be my choice. Russia has already installed an anti-ballistic-missile system which she thought necessary to strengthen her defense, and I am unwilling to sacrifice or compromise my country's right to deploy a like or even better system to protect our arsenal of striking power.

Safeguard is not a provocation, and the Soviet Union cannot legitimately read into Safeguard a turning point in our military strategy. This additional weapon of defense will simply continue to deny to Russia a nuclear first strike, knockout capability against our ICBM system. However, there is a very strong probability that the Soviet Union would interpret a rejection of Safeguard by the Senate, and other current developments in the United States, as a major turning point in American strategy from one of growing strength to one of wishful thinking and weakness.

Defeat of this proposal would encourage both Russia and China to be bolder in their foreign relations and to worry less about the consequences of a military confrontation with the United States. I, therefore, regard it dangerous both to the United States and to the world for us to thus attempt to appease and feed the expansionist dreams of the Communist world conspiracy.

Let us remember that Russia has as much reason to be concerned about attacks from China and other nuclear powers as we. The argument that Safeguard deployment will interfere with arms control talks is untenable. If anything, its proposed deployment will provide us with a better basis and with an instrument of strength upon which to proceed in the important arms limitation negotiations.

That is why, in balancing the risk, I believe it is wiser and safer to proceed now than it is to delay the deployment of the ABM system for another 2 years.

If my judgment is in error, if my decision to support the present development and deployment of the Safeguard system is wrong—and I do not believe it is—then I will be comforted to know that I have erred on the side of national security and in a good-faith desire to protect our country from dangers posed to it by Communist enemies that cannot be trusted.

Mr. JACKSON. Mr. President, will the Senator yield?

Mr. STENNIS. Mr. President, I yield the Senator from Arkansas 2 additional minutes.

Mr. McCLELLAN. I yield to the Senator from Washington.

Mr. JACKSON. I compliment the able and distinguished senior Senator from Arkansas for a well-reasoned speech. I must say it is loaded with commonsense. The able Senator from Arkansas has served a long time on the Defense Appropriations Subcommittee. His knowledge and background in that area have been extremely helpful to those of us who have served with him. Again, I compliment him most highly for his remarks.

Mr. McCLELLAN. I thank the Senator.

August 5, 1969

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. McCLELLAN. I yield.

Mr. ALLOTT. I also wish to join in complimenting the Senator on his speech. All of us who know him know of his dedication to the defense of this country. I am happy to hear him speak in this vein, and with such strength, about the defense of this country rather than indulge in a lot of beliefs which merely consist of words and which have no reason behind them. He is entirely right in everything he said, and I am happy he said it in the way he said it today.

Mr. McCLELLAN. I thank the Senator.

Mr. STENNIS. Mr. President, I yield 1 additional minute.

I compliment the Senator on two points he made with such emphasis and clarity. The only issue here is our own national security for our own people. This is one weapon that is not going to help anyone else. It is not going to be shared with anyone else. We will pay for all of it, whatever its cost. It is solely for the defense of the American people.

Mr. McCLELLAN. It is strictly a defensive weapon.

Mr. STENNIS. And, of course, it is for our defense capacity through ICBM's.

Another point he makes is that, as a practical matter, the ABM system has just reached the place in its progressive life where putting it together for some deployment must be done now if we are going further.

I thank him very much for his contribution to the debate.

I yield 20 minutes to the Senator from North Carolina (Mr. ERVIN).

Mr. ERVIN. Mr. President, as we approach a vote on one proposal to deploy the ABM, let us face with forthrightness the perilous state of the world and the threat which it poses to America. Let us also ponder what America must do to surmount and overcome this threat and preserve her freedom.

Two powerful nations, Russia and Red China, whose people are numbered by the hundreds of millions and whose armies are the largest on earth, are ruled by communism, which is bent upon extinguishing the lights of liberty throughout the earth and enslaving mankind.

If there be those who doubt the validity of this statement, let them observe the liberty-loving peoples of Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, and Rumania, who are held captive behind the Iron Curtain.

One of the countries ruled by communism, Russia, already possesses nuclear weapons of devastating power, and the other, Red China, is on the verge of acquiring them.

For these reasons, America will have to live in a world beset by perils as long as Russia and China harbor the communistic dream of world conquest. This being so, the crucial question of our generation is how can America meet and surmount the perils which confront her. I submit she must do three things.

First, America must keep her heart in courage.

Second, America must keep her heart in patience.

Third, America must lift up her hand in strength.

I shall not elaborate upon the proposition that America must keep her heart in courage. A wise commentator, the late Elmer Davis, said all that needs to be said on this subject when he declared that America "will remain the land of the free only so long as it is the home of the brave."

The perils which confront our country will exist as long as communism dreams of world conquest. Consequently, America must keep its heart in patience as well as in courage until communism relinquishes this dream.

It will not be easy for America to do this. We are an impatient people, who demand immediate solutions of our problems, no matter how difficult and enduring they may be. Besides, many of us are prone to ignore or rationalize unpleasant realities rather than to face them with forthrightness and fortitude. Moreover, the hunger for peace in our time, which sent Chamberlain to Munich and our world to its present unhappy state, still tempts multitudes to conjure up utopias and fantasies.

These weaknesses enhance the danger that our Nation may not heed the warning given it by Benjamin Franklin, the wisest of all Americans, when he said:

Let us beware of being lulled into a dangerous security.

If she is to avoid being lulled into a dangerous security and survive in freedom the perils which beset her, America must have the patient fortitude to face with forthrightness these unpleasant realities:

First, The day has not yet arrived when the nations of earth are willing to beat their swords into plowshares and their spears into pruning hooks.

Second, Even a peace-loving nation cannot live in peace unless it pleases its wicked neighbor.

Third, God grants freedom only to those who love it and have the hardihood to guard and defend it.

It is impossible to overmagnify the danger arising out of our proneness to rationalize rather than to face forthrightly unpleasant realities.

Nowadays some men in positions of authority rationalize in this fashion: War is irrational. Hence, it is not intelligent for us to think that the men in the Kremlin would precipitate a war in which Russia might be virtually destroyed.

It would be well for them to remember the rationalizations made by some Americans when Hitler was climbing to power in Germany. They rationalized then in this manner: It is not rational to think that the Germans would entrust an irrational man like Hitler with powers of leadership, or that an irrational man like Hitler would be so irrational as to provoke a world war even if the Germans were so irrational as to entrust him with powers of leadership.

Despite these rationalizations, history records in letters of blood that those irrationalities came to pass and that in consequence the corpses of untold millions

of men, women, and children were prematurely buried in untimely graves.

After all, it is not what Americans think, but what the men in the Kremlin and the men in Peking think which makes our world so insecure.

Despite the irrationality of war, mankind has expended a major part of his energy, his time, his treasure, and his blood in waging war. And although our country is a peace-loving nation, every generation of Americans has been compelled to go to war. Indeed, America has spent 33 years of its relatively short existence fighting eight wars and 619,553 Americans have died in wars during the past 52 years. It is worthy of note that thousands of those who have died in Korea and South Vietnam have been slain by bullets donated by Russia for that purpose to our enemies.

At the present moment, many persons in authority clamor against the proposal that we deploy an ABM system to protect our retaliatory missiles from destruction by Russian SS-9 missiles. They say, in substance, that unless we leave our retaliatory missiles unprotected, Russia will escalate its production of destructive weapons and refuse to negotiate an enforceable arms-limitation agreement with us.

Like other rationalizations, this rationalization refrains from recognizing unpleasant realities. It ignores the unpleasant reality that Russia has already accelerated its production of destructive weapons to such an extent that it has achieved virtual parity with us. It also ignores the unpleasant reality that since the end of the Second World War, American negotiators have met with Russian negotiators hundreds of times, and that Russia has refused to negotiate an enforceable arms-limitation agreement with us.

I became intrigued with this unpleasant reality, and addressed a communication to the Arms Control and Disarmament Agency, putting to it this question: How many times since the end of the Second World War have representatives of the United States and representatives of Russia met together for the avowed purpose of negotiating a reasonable and enforceable arms limitation agreement?

I received from the U.S. Arms Control and Disarmament Agency a letter to the effect that 1,534 meetings of this nature have taken place between American negotiators and Russian negotiators, since the end of the Second World War.

It takes a more optimistic man than I to believe that we are on the verge of reaching any agreement with Russia on these subjects after these 1,534 fruitless meetings.

Mr. President, I favor peace. Let us pray for peace, let us work for peace, let us negotiate for peace; but let us beware of being lulled into a dangerous security either by the stratagems of our potential enemies or our own rationalizations.

America must keep its heart in courage and patience. It must also be prepared at all times to lift up its hand in strength.

By this I mean that America must maintain sufficient military might to deter any aggression or to defeat any aggressor in case aggression comes.

It will not be easy to keep America militarily strong. This is true because our people may weary of the tremendous expense which an adequate national defense entails, and those in charge of our foreign policy may be beguiled into making an unrealistic and unenforceable arms agreement with those bent upon enslaving the world.

It is to be noted that already some persons in positions of authority insist on the curtailment of defense expenditures in order that our country may be able to finance welfare programs, some of which, I regret to say, are so designed or administered as to reward the indolent for their indolence.

Those who decry the high cost of an adequate national defense should remember that freedom is not free. It was purchased for us with a great price. If we wish to preserve its blessings for ourselves and our posterity, we must pay the cost of so doing, no matter how great it may be. When all is said, General MacArthur was right when he declared:

The inescapable price of liberty is an ability to preserve it from destruction.

The statement of General MacArthur is peculiarly applicable to the question of the deployment of an ABM system, because such system is designed to protect from destruction weapons on which our liberty may ultimately depend.

I claim no originality in asserting that if she is to survive our perilous age in freedom, America must keep her heart in courage and patience and lift up her hand in strength.

All history proclaims that this is the only way in which free men can keep their freedom in a perilous world.

When the German armies drove the valiant, but ill-trained, British force known as Kitchener's Mob back to the English Channel in the early days of the First World War and despair settled upon Britain, Rudyard Kipling enshrined this truth in one of the great poems of history—the poem entitled "For All We Have and Are"—which inspired the British people to forget their despair and carry on. Let me quote this poem:

For all we have and are,
For all our children's fate,
Stand up and take the war,
The Hun is at the gate!
Our world has passed away,
In wantonness o'erthrown,
There is nothing left to-day
But steel and fire and stone!

Though all we knew depart,
The old Commandments stand:—
"In courage keep your heart,
In strength lift up your hand."

Once more we hear the word
That sickened earth of old:—
"No law except the Sword
Unsheathed and uncontrolled."
Once more it knits mankind,
Once more the nations go
To meet and break and bind
A crazed and driven foe.

Comfort, content, delight,
The ages' slow-bought gain,
They shrivelled in a night,
Only ourselves remain
To face the naked days
In silent fortitude,
Through perils and dismays
Renewed and re-renewed.
Though all we knew depart,
The old Commandments stand:—
"In courage keep your heart,
In strength lift up your hand."
No easy hope or lies
Shall bring us to our goal,
But iron sacrifice
Of body, will, and soul.
There is but one task for all—
One life for each to give.
What stands if Freedom fall?
Who dies if England live?

America must keep her heart in courage and patience and lift up her hand in strength.

And the best testimony that the Senate can give concerning the willingness of America to keep her heart in courage and patience and to lift up her hand in strength is to vote in favor of the deployment of the ABM.

Mr. President, I yield the floor.

Mr. STENNIS. Mr. President, how much time do the opponents of the pending amendment have?

The PRESIDING OFFICER. The opponents of the amendment have 67 minutes.

Mr. JAVITS. Mr. President, how much time do the proponents of the amendment have?

The PRESIDING OFFICER. The proponents of the amendment have 20 minutes remaining.

Mr. STENNIS. Mr. President, I had asked the Senator from Kansas (Mr. DOLE) to defer his speech earlier in the afternoon.

Mr. DOLE. Mr. President, I will defer to the Senator from New Jersey.

Mr. JAVITS. Mr. President, I yield 10 minutes to the Senator from New Jersey.

Mr. STENNIS. Mr. President, I yield another 5 minutes to the Senator from New Jersey.

The PRESIDING OFFICER. The Senator from New Jersey is recognized for 15 minutes.

THE ABM AND THE CHANGED STRATEGIC MILITARY BALANCE

Mr. CASE. Mr. President, I have received a letter, dated July 15, from Malcolm E. Smith, Jr., of St. James, N.Y. Mr. Smith was shown as having paid for a full-page advertisement that recently appeared in newspapers all over the country. The ad was headlined "The Real Truth About How Many U.S. Senators Are Being Tricked by Russia."

Mr. Smith has attached to his letter of July 15 a brief digest of a recent American Security Council study entitled "The ABM and the Changed Strategic Military Balance."

I ask unanimous consent that the text of Mr. Smith's letter, of his digest of the American Security Council study, and of a list, also enclosed with his letter, of the 31 outstanding experts who prepared the study be printed in the Record.

There being no objection, the material was ordered to be printed in the Record, as follows:

St. James, N.Y.,
July 15, 1969.

DEAR SENATOR: I have made a short digest of the recent American Security Council study by 31 leading experts especially for your benefit. It gives you the essential facts of the 72 page study in a few minutes reading time. I urge you to read it before you vote on ABM. No responsible authority has disputed the facts this study presents.

Sincerely,

MALCOLM E. SMITH, JR.

THE ABM AND THE CHANGED STRATEGIC MILITARY BALANCE: A SHORT DIGEST OF THE AMERICAN SECURITY COUNCIL STUDY

(Prepared by Malcolm E. Smith, Jr.)

The most important facts and statistics of concern to Senators, Congressmen, News Writers and Citizens.

31 outstanding experts including Dr. Edward Teller, General Nathan F. Twining, Admiral Lewis L. Strauss, General Thomas Power and 27 more have jointly prepared a detailed study on exactly what the Soviet Union has done, is doing, and is continuing to do in the development of offensive missile capability. The study was completed in May, 1969. The facts in this study must be known because, as the American Security Council states, "Not a single political or military authority has been able to offer any reasonable explanation for the current Russian build-up of staggering destructive power except in terms of deliberate, coldly calculated aggressive intentions."

The Most Important Facts and Statistics From The 72 Page ASC Study:

1. The combined total of ICBMs, IR/MRBMs (Intermediate and Medium Range Ballistic Missiles) is now estimated at 2750 for the U.S.S.R. to 1,710 for the U.S.A. p. 10.
2. The U.S.S.R. now has whole families of military (and naval) weapons systems that the United States does not have in its inventory. p. 11.
3. The Soviets presently enjoy a clear lead in space orbital weapons . . . Properly deployed, a significant number, let us say 100, could be in a position to attack the United States in a matter of seconds after the button was pushed in the Kremlin. p. 11.
4. The Soviets have an estimated 1,000 Intermediate and Medium Range missiles which are primarily aimed at Europe and now completely pin Europe down. p. 11.
5. The Soviets have very large 50-100 megaton nuclear weapons which were tested in 1961-62 . . . adapted for missile delivery. p. 11.
6. The Soviets have the Bear Bomber. It is the world's longest range, highest endurance bomber . . . an effective anti-shipping and anti-submarine attack aircraft with air to surface attack missiles on board. p. 11.
7. Furthermore, the Soviet Union has been developing a sophisticated ABM defense system for ten years and now has anti-ballistic missiles deployed around Moscow and in a "Blue Belt" defense line described by Marshal Malinovsky as being "for the de-

August 5, 1969

fense of the entire territory of the Soviet Union." p. 11.

8. In connection with their missile defense program, the Soviets are developing a comprehensive civil defense program . . . spending about ten times as much effort as the United States in providing the Soviet society an adequate civil defense. p. 11.

9. The U.S.S.R. may invest at least \$50 to \$100 billion more in strategic forces between now and 1975 than the United States, unless the relative trends change substantially. p. 24.

10. Whereas many voices in the U.S. call for cuts in the defense budgets and large new expenditures for social reconstruction programs, the Soviet Union is able to devote the lion's share of its economic resources to weapons systems while holding expenditures for the domestic sector to very low levels. p. 31.

11. The U.S. News and World Report (Feb. 6, 1967, p. 34) estimated as a result of their study, that almost 70 percent of the U.S.S.R. military budget was being devoted to strategic forces. p. 23.

12. Former Secretary of Defense Clark Clifford stated in his January 15, 1969 Posture Statement that the United States had 1,054 Intercontinental ballistic missiles (ICBMs) and the Soviets had 900 ICBMs on September 1, 1968. p. 36.

On March 19, Secretary of Defense Laird testified to the Senate Committee on Armed Services: "As of today, the Soviets have in being and under construction more ICBM launchers than the 1,048 possessed by the United States." p. 36.

On April 25, 1969, Secretary Laird reported the Soviet ICBM total as 1,140. This includes 1,000 ICBMs in hardened sites and 140 ICBMs on launching pads. (footnote: This was in New York Times, April 26, 1969, p. 1.) He also said that the Soviets could have 2,500 ICBMs by 1975. p. 36.

13. Of special concern is the Soviet development and deployment of a very heavy intercontinental ballistic missile, the SS-9, which was unknown to the U.S. public until it was disclosed by Secretary Laird in his initial appearance this Spring before the Senate Armed Services Committee. This missile carries a warhead in the range of 20-25 megatons, far larger than anything in the U.S. inventory. Because of its size and its accuracy the SS-9 regarded as a weapon designed to knock out American Minuteman ICBMs. p. 37.

14. The figures indicate that former Secretary of Defense McNamara's assessment in his defense posture statement in 1968 that "the Soviet ICBM force will continue to grow over the next years, but at a considerably smaller rate than in the recent past," was not correct. p. 37.

15. President Nixon emphasized our faulty intelligence estimates when he noted during his press conference on April 18, 1969 that production of SS-9 missiles and nuclear submarines has been 60 percent greater than was estimated in 1967 when the decision was first made to deploy the Sentinel ABM system. p. 40.

16. The present Soviet ICBM force now includes well over 200 SS-9s and this deployment is progressing at a fairly rapid rate—particularly since December, 1968. This is the missile which is projected by the Defense Department to reach possibly 500 by 1975. This missile booster can also be adapted to fire an orbital bombardment warhead. p. 40.

17. In addition to the SS-9, the Soviets are continuing to deploy the SS-11 and the newer SS-13 model ICBMs. These carry smaller warheads than the SS-9, but the SS-13 is the first solid-fueled Soviet ICBM and it can be developed in large numbers. p. 40.

18. The study notes the increasing confidence of Soviet leaders that they can build

up their offensive capabilities with less fear of detection by U.S. space reconnaissance vehicles. p. 40.

19. "Mobile complexes for launching intercontinental hard-fuel missiles are the most important latest features. The complexes have high maneuverability, can be well camouflaged, and therefore, cannot be spotted by the enemy's aerial or space reconnaissance. Some of the latest Soviet rockets are suitable for orbital launching." (quote from TASS quoting Deputy Defense Minister Moskalenko on February 19, 1969) p. 40.

20. The U.S.S.R. has built some eight types of ICBMs in the last 10 years (SS-6 through SS-13). p. 40.

21. "They are also working hard on FOBS . . . also designed to reduce warning time to our bombers so that they will not have sufficient time to become Airborne" (quoting Secretary Laird's testimony of March 20) p. 41.

22. "We know that the Soviets have been moving ahead with a rather active program in producing Polaris-type submarines. They are now in production. They are not yet deployed as far as we know." (quoting Deputy Defense Secretary Packard in his testimony before the Senate Armed Services Committee on March 19) p. 41.

The submarine referred to here (above) is the "Y" class, which went into production in 1968. Seven were commissioned in that year and the Soviets have a production capability now estimated at one per month. The sub carries 16 underwater-launched, 1500 mile range missiles. p. 41.

23. The Georgetown Center for Strategic Studies, in a forthcoming study, estimates total Soviet submarine-launched ballistic missiles at 350. p. 42.

24. In his Congressional testimony, Deputy Secretary Packard indicated that if the Soviets employ their maximum production rate for "Y" class submarines than their Polaris-type missiles alone could exceed the U.S. total of 656 by the end of Fiscal Year 1971. p. 42.

25. The Soviet Navy has more than a 2 to 1 numerical advantage over the U.S. Navy in this area of sea warfare (attack submarines) and this is a matter of concern since the attack submarine is considered to be the most effective weapon against nuclear submarines. p. 42.

26. The U.S. needs to be able to deliver six times as many warheads as would the Russians to achieve destruction "parity" with them (referring to Secretary Laird's testimony to the Senate Foreign Relations Committee). p. 46.

27. The Soviet Union has built a belt (often referred to as the "Blue Belt" defense system) defense ranging from the Baltic Coast and named for one of the anchors in the line—the city of Tallinn, capital of Estonia. Marshal Malinovsky reported the completion of this belt defense system to the 23rd Congress of the Communist Party of the Soviet Union. At that time he described it as being "for the defense of the entire territory of the Soviet Union. p. 49.

28. Recent news accounts indicate there are some 67 P-R-O missile sites around the Russian capital. The Soviet Union officially describes P-R-O's mission as the . . . interception and destruction of enemy missiles or rockets in space, preferably at distant approaches to their objectives and far from national territory." (This quote is from "Troops of National Air Defense (1968), book by Marshall P. F. Batitsky). p. 49.

29. The U.S.S.R. is spending more than twice as much as the United States to build its strategic military strength. The U.S.S.R. is spending about \$18 billion yearly or about 4 to 5 percent of its gross national product on strategic military forces. The U.S. strategic military budget is only \$7.6 billion yearly, or less than 1 percent of its gross national product. p. 62.

30. The Soviet Union is developing its defensive strategic forces at a steady pace which gives every indication that the Soviets are, or soon will be in a position to limit a retaliatory blow which the United States might deliver after absorbing the weight of a Soviet first strike, p. 62.

THE 31 OUTSTANDING EXPERTS WHO PREPARED THE ASC STUDY

Members of this committee are outstanding experts in their fields. They were selected as being the best qualified in different aspects of this complex subject. Their combined qualifications make them the most outstanding independent committee to consider this subject. These men are busy in their professions but took time out and donated their efforts to this study. They include two Nobel prize winning scientists; the developer of the H-bomb; the developer of the over-the-horizon radar; a former chairman of the Joint Chiefs of Staff; the general who headed the development of our own ICBMs; the present head of the A.E.C.'s weapons division at Los Alamos; a former commander of the Strategic Air Command; a former chairman of the Atomic Energy Commission; a former Commander of the Polaris Submarine Fleet; a world renowned diplomat; senior strategists; senior editors of leading American newspapers; leading American businessmen, and other such authorities whose combined knowledge and experience make this study required reading for every concerned citizen.

In two previous studies prepared at the request of the House Armed Services Committee this group accurately predicted the present adverse strategic balance.

COCHAIRMEN

Dr. Willard F. Libby, Director, Institute of Geophysics and Planetary Physics, UCLA.
Dr. William J. Thaler, Chairman, Physics Department, Georgetown University.
Gen. Nathan F. Twining, U.S.A.F. (Ret.), Former Chairman, Joint Chiefs of Staff.

OTHER MEMBERS

Gen. Paul D. Adams, U.S.A. (Ret.), Former Commander in Chief, U.S. Strike Command.
Dr. Harold M. Agnew, University of California, Los Alamos Scientific Laboratory.
Dr. James D. Atkinson, Professor of Government, Georgetown University.
G. Duncan Bauman, Publisher, St. Louis Globe Democrat.
Peter Bruce Clark, President, Publisher, The Detroit News.
Adm. Robert L. Dennison, U.S.N. (Ret.), Former Supreme Commander, Atlantic.
The Honorable Elbridge Durbrow, Retired Career Ambassador.
Adm. H. D. Feldt, U.S.N. (Ret.), Former Commander in Chief, Pacific.
Robert W. Galvin, Chairman of the Board, Motorola, Inc.
Vice Adm. Elton W. Grenfel, U.S.N. (Ret.), Former Commander, Atlantic Submarine Fleet.
Dr. Montgomery Johnson, Chief Scientist, Philco Ford Corp.
Vice Adm. R. E. Libby, U.S.N. (Ret.), Former Deputy Chief of Naval Operations.
Vice Adm. Fitzhugh Lee, U.S.N. (Ret.), Former Commandant, National War College.
Dr. Nicholas Nyaradi, Director, School of International Studies, Bradley University.
Dr. Stefan Possony, Director of International Studies, Hoover Institution, Stanford University.
Gen. Thomas S. Power, U.S.A.F. (Ret.), Former Commander, Strategic Air Command.
Brig. Gen. Robert C. Richardson, U.S.A.F. (Ret.), B. A. Schriever Associates, Inc.
Ira G. Ross, President, American Ordnance Association.
Vice Adm. W. A. Schoech, U.S.N. (Ret.), Former Chief of Naval Material.
Gen. Bernard A. Schriever, U.S.A.F. (Ret.), Former Commander General, Air Force Systems Command.

Adm. Lewis L. Strauss, U.S.N. (Ret.), Former Chairman, U.S. Atomic Energy Commission.

Dr. Kenneth Street, Jr., Professor of Chemistry, University of California (Berkeley).

Dr. A. D. Suttle, Research Scientist.

Dr. Edward Teller, Nuclear Scientist.

Rear Adm. Chester C. Ward, U.S.N. (Ret.), Former Judge Advocate General, U.S.N.

Dr. Kenneth Watson, Professor of Physics, University of California (Berkeley).

Gen. Albert C. Wedemeyer, U.S.A. (Ret.), Chief U.S. Strategist, World War II.

Dr. Eugene P. Wigner, Physicist, Princeton University.

Mr. CASE. Mr. President, I also ask unanimous consent that comments I had prepared on each paragraph in MR. Smith's letter be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

1. "The combined total of ICBM's, IR/MRBM's (Intermediate and Medium Range Ballistic Missiles) is now estimated as 2,750 for the U.S.S.R. to 1,710 for the U.S.A."

Comment: U.S. strategic forces defend against Soviet ICBM's and the small Soviet bomber force. Soviet strategic forces defend against NATO as a whole—that is, against U.S. ICBM's and intercontinental bombers as well as against U.S. medium-range bombers, including U.S. carrier-based bombers, and the tactical nuclear missiles we have in Europe. Yet Mr. Smith's digest reverses the situation. He combines Soviet ICBM's and IR/MRBM's and compares that combined total to U.S. ICBM's and Polaris missiles. He thus ignores our intercontinental bombers and our carrier-based aircraft, as well as the 7,000 or so tactical nuclear weapons in Europe, many of which can hit targets in Warsaw Pact countries. Furthermore, he ignores the program already under way to replace Polaris with Poseidon missiles, which will increase the number of our submarine-launched separately-targetable warheads by a factor of almost ten. Were Mr. Smith to use the more accurate measure of nuclear weapon force loadings he would have had to admit an almost four-to-one superiority on the part of the United States.

2. "The U.S.S.R. now has whole families of military (and naval) weapons systems that the United States does not have in its inventory."

Comment: While the U.S.S.R. has some military and naval weapons systems that the U.S. does not have, the U.S. has some military and naval weapons systems that the Soviet Union does not have. In real terms the United States defense budget has been higher than the Soviet defense budget for at least 20 years. Does Mr. Smith mean to suggest that we should have an even higher defense budget, beyond the present \$80 billion level, or that the United States has not used its defense funds efficiently?

3. "The Soviets presently enjoy a clear lead in space orbital weapons . . . Properly deployed, a significant number, let us say 100, could be in a position to attack the United States in a matter of seconds after the button was pushed in the Kremlin."

Comment: The implication of this paragraph is that the Soviets are on the verge of deploying space orbital weapons. This "fact" is simply not true.

4. "The Soviets have an estimated 1000 Intermediate and Medium Range missiles which are primarily aimed at Europe and now completely pin Europe down."

Comment: While the Soviets have an estimated 1,000 IR/MRBM's aimed at Western Europe, we have about 7,000 tactical nuclear weapons aimed at Eastern Europe, as mentioned above. If their 1,000 weapons "completely pin Europe down," what effect do our 7,000 weapons have? Furthermore, our

ICBM's are targeted on their IRBM's and MRBM's.

5. "The Soviets have very large 50-100 megaton nuclear weapons which were tested in 1961-62 . . . adapted for missile delivery."

Comment: There is no evidence that the Soviets have continued to develop, and certainly not to the point of deployment, the 50-100 megaton nuclear weapons that were tested in 1961-62. The view of U.S. defense authorities has been that it is preferable to have smaller and more accurate nuclear weapons than those of larger megatonnage. If a 50-100 megaton nuclear weapon made sense, it would be perfectly easy for the United States to have one.

6. "The Soviets have the Bear Bomber. It is the world's longest range, highest endurance bomber . . . an effective anti-shipping and anti-submarine attack aircraft with air to surface attack missiles on board."

Comment: The Soviets have a total of about 150 intercontinental bombers while we have 656. I do not believe that any informed expert would be willing to trade our bomber force for theirs.

7. "Furthermore, the Soviet Union has been developing a sophisticated ABM defense system for ten years and now has anti-ballistic missiles deployed around Moscow and in a 'Blue Belt' defense line described by Marshal Malinovsky as being 'for the defense of the entire territory of the Soviet Union.'"

Comment: The Soviet ABM defense system deployed around Moscow is not "sophisticated" by our standards. In the first place, its radar is far less advanced. In the second place, the Soviets are far behind the United States in computer development. And in the third place, the Soviets have deployed only 64 launchers and it would be possible for the United States to saturate this defense, even assuming 100% effectiveness of every interceptor, by targeting 65 warheads on Moscow. The Soviet system has been described as similar to our Nike-Zeus system which we did not deploy because it was decided that the system could not be effective against a Soviet attack. Apparently the Soviets have reached the same conclusion, for originally the Galosh system was to have many more defensive missile launchers.

8. "In connection with their missile defense program, the Soviets are developing a comprehensive civil defense program . . . spending about ten times as much effort as the United States in providing the Soviet society an adequate civil defense."

Comment: The Soviets are far ahead in developing a civil defense program, as are many other European countries who have lived through World War II. Perhaps if we spent less on offensive weapons, and on ineffective defensive weapons, we would be able to devote additional resources to civil defense.

9. "The U.S.S.R. may invest at least \$50 to \$100 billion more in strategic forces between now and 1975 than the United States, unless the relative trends change substantially."

Comment: The ratio of spending on strategic weapons has shifted in favor of the Soviets only recently. The deployment of the major part of the U.S. ballistic missile force occurred much earlier than Soviet deployment. Furthermore, our bomber force was substantially completed in the 1950's and our ballistic missile force by the mid-1960's. In this earlier period, our expenditures were substantially higher than the Soviets and only in the late 1960's, when the Soviets attempted to catch up, has their total spending on strategic weapons begun to exceed ours. We have continued to outspend the Soviets, however, on strategic bombers and ballistic missile submarines. Furthermore, a considerable part of total Soviet spending on strategic weapons has gone for IR/MRBM's, a weapon we have not emphasized since the early 1960's. As far as strategic defense is

concerned, the Soviets have customarily spent more than we have because of their traditional emphasis on defense and the fact that some of the potential threats to them are closer geographically than is true in our case. And with respect to spending on ABM's, if they continue to curtail work on the Galosh system and we increase our spending on Safeguard, the ratio will begin to swing in our favor.

10. "Whereas many voices in the U.S. call for cuts in the defense budgets and large new expenditures for social reconstruction programs, the Soviet Union is able to devote the lion's share of its economic resources to weapons systems while holding expenditures for the domestic sector to very low levels."

Comment: It is true that the Soviet Union holds expenditures for the domestic sector to very low levels and that many voices in the United States call for cuts in defense budgets and for greater expenditures in the domestic sector. This state of affairs argues for a limitation of weapons development and not for such a new development as the Safeguard system.

11. "The U.S. News and World Report (Feb. 6, 1967, p. 94) estimated as a result of their study, that almost 70 percent of the U.S.S.R. military budget was being devoted to strategic forces."

Comment: A large percentage of the Soviet military budget is being devoted to strategic forces because the Soviet inferiority and their wish to gain some sort of parity with the United States.

12. "Former Secretary of Defense Clark Clifford stated in his January 15, 1969 Posture Statement that the United States had 1054 intercontinental ballistic missiles (ICBM's) and the Soviets had 900 ICBM's on September 1, 1968."

"On March 19, Secretary of Defense Laird testified to the Senate Committee on Armed Services: 'As of today, the Soviets have in being and under construction more ICBM launchers than the 1048 possessed by the United States.'"

"On April 25, 1969, Secretary Laird reported the Soviet ICBM total as 1140. This includes 1000 ICBM's in hardened sites and 140 ICBM's on launching pads. (footnote: This was in New York Times, April 26, 1969, p. 1). He also said that the Soviets could have 2500 ICBM's by 1975."

Comment: The fact that the United States and the Soviet Union are presently about equal in the number of ICBM launchers simply means that either country can now destroy the other using only land-based ICBM's. As noted above, the United States is far ahead of the Soviet Union in submarine-launched ballistic missiles, in intercontinental bombers and thus in total nuclear force loadings. We are also far ahead in the development of MIRVs and are on the verge of deploying them while the Soviets have not even tested this weapon. As for Secretary Laird's statement that the Soviets "could have 2,500 ICBM's by 1975" if they continue to deploy ICBM's at the rate at which they were deployed in 1967-68, the intelligence community has estimated that they will not continue to deploy at the same rate and that the number of ICBM's the Soviets will have is far less than 2,500. Furthermore, we will soon be in a position to deploy MIRV's if the Soviet ICBM level increases beyond our estimates and could also deploy additional land-based ICBM's.

13. "Of special concern is the Soviet development and deployment of a very heavy intercontinental ballistic missile, the SS-9, which was unknown to the U.S. public until it was disclosed by Secretary Laird in his initial appearance this Spring before the Senate Armed Services Committee. This missile carries a warhead in the range of 20-25 megatons, far larger than anything in the U.S. inventory. Because of its size and its accuracy the SS-9 (is) regarded as a weapon

August 5, 1969

CONGRESSIONAL RECORD — SENATE

S 9219

designed to knock out American Minuteman ICBM's."

Comment: The SS-9 was unknown to the U.S. public until this spring but has been known to the intelligence community ever since it was first tested. We have also known about deployment since the beginning. It is true that the missile carries a larger warhead than any U.S. missile, but the United States made a conscious decision some years ago not to develop large megaton warhead missiles. Greater effectiveness even against hard targets can be achieved with smaller and more accurate weapons.

14. "The figures indicate that former Secretary of Defense McNamara's assessment in his defense posture statement in 1968 that 'the Soviet ICBM force will continue to grow over the next years, but at a considerably smaller rate than in the recent past,' was not correct."

Comment: Secretary McNamara's assessment in his defense posture statement in 1968 was correct. The peak rates of the Soviet ICBM deployment were several years ago and the Soviet ICBM force is growing at a smaller rate than in the recent past.

15. "President Nixon emphasized our faulty intelligence estimates when he noted during his press conference on April 18, 1969 that production of SS-9 missiles and nuclear submarines has been 60 percent greater than was estimated in 1967 when the decision was first made to deploy the Sentinel ABM system."

Comment: At the time of the President's press conference on April 18, the production and deployment of SS-9 missiles and nuclear submarines was within the range predicted by intelligence estimates in 1968.

16. "The present Soviet ICBM force now includes well over 200 SS-9s and this deployment is progressing at a fairly rapid rate—particularly since December, 1968. This is the missile which is projected by the Defense Department to reach possibly 500 by 1975. This missile booster can also be adapted to fire an orbital bombardment warhead."

Comment: As noted above, the peak years for deployment of the SS-9 have been in the past. The Defense Department keeps changing its estimate of the number of SS-9s which the Soviet Union will have by 1975 but the most recent estimate by the intelligence community, which Secretary Laird confirmed in a hearing before the Committee on June 23, was some 400 SS-9s by 1975, not 500. While it may be possible to adapt the SS-9 missile booster to fire an orbital bombardment warhead, the Soviets have not demonstrated this capability so far. As noted above, the United States is far ahead in the development of MIRVs which have the same effect as an orbital bombardment.

17. "In addition to the SS-9, the Soviets are continuing to deploy the SS-11 and the newer SS-13 model ICBMs. These carry smaller warheads than the SS-9, but the SS-13 is the first solid-fueled Soviet ICBM and it can be developed in large numbers."

Comment: It is true that the Soviets are continuing to deploy the smaller SS-11 and the SS-13 missiles which are similar to our Minuteman in size. The SS-13 is the first solid fuel Soviet ICBM. This fact simply shows that they are behind us in technology, for we gave up solid fueled missiles long ago in favor of the more efficient liquid fueled missiles.

18. "The study notes the increasing confidence of Soviet leaders that they can build up their offensive capabilities with less fear of detection by U.S. space reconnaissance vehicles."

Comment: There is no evidence that Soviet leaders are more confident that they are subject to less detection by U.S. space reconnaissance vehicles. And it is not true. We are ahead in space reconnaissance technology and getting better all the time. The CIA briefings given the Committee show

convincingly that surveillance is more rather than less efficient with every passing year.

19. "Mobile complexes for launching intercontinental hard-fuel missiles are the most important latest features. The complexes have high maneuverability, can be well camouflaged, and therefore, cannot be spotted by the enemy's aerial or space reconnaissance. Some of the latest Soviet rockets are suitable for orbital launching." (quote from TASS quoting Deputy Defense Minister Moskalenko on February 19, 1969)"

Comment: While the Soviets may be developing mobile complexes for launching ICBMs, there is no reason why the United States could not do likewise were we to decide that mobile missile launchers were desirable.

20. "The U.S.S.R. has built some eight types of ICBMs in the last 10 years (SS-6 through SS-13)."

Comment: That the Soviets have built eight types of ICBM's in the last ten years proves nothing except that they are still looking for a satisfactory model. No one would trade our missile force for theirs because ours is superior for any desired purpose.

21. "They are also working hard on FOBS . . . also designed to reduce warning time to our bombers so that they will not have sufficient time to become Airborne." (quoting Secretary Laird's testimony of March 20)."

Comment: There is no evidence that the Soviets have deployed FOBS. A FOBS capability against aircraft would have to be synchronized with the destruction of our ICBM's and submarine-launched ballistic missiles to be effective. Otherwise, an attack on the bombers would provide warning to permit the launching of ICBM's and Polaris/Poseidon missiles.

22. "We know that the Soviets have been moving ahead with a rather active program in producing Polaris-type submarines. They are now in production. They are not yet deployed as far as we know." (quoting Deputy Defense Secretary Packard in his testimony before the Senate Armed Services Committee on March 19)."

"The submarine referred to here (above) is the "Y" class, which went into production in 1968. Seven were commissioned in that year and the Soviets have a production capability now estimated at one per month. The sub carries 16 underwater-launched, 1500 mile range missiles."

Comment: We have 41 Polaris submarines, most of which are deployed on station at all times. The Soviets are producing such submarines but have not yet even deployed them. U.S. superiority is unquestioned. While the Secretary of Defense originally estimated Soviet production capability of "Y" class submarines at one per month he changed that estimate, in his statement on May 22, to eight per year.

23. "The Georgetown Center for Strategic Studies, in a forthcoming study, estimates total Soviet submarine-launched ballistic missiles at 350."

Comment: The Soviets have commissioned only seven to ten submarines to date and each carries 16 missiles. The estimate cited includes many submarine-launched missiles carried on nonnuclear submarines of lesser range. Our sea-based force of missiles is much superior to theirs.

24. "In his Congressional testimony, Deputy Secretary Packard indicated that if the Soviets employ their maximum production rate for "Y" class submarines then their Polaris-type missiles alone could exceed the U.S. total of 656 by the end of Fiscal Year 1971."

Comment: The statement that the Soviets could exceed the U.S. total of Polaris-type missiles by the end of Fiscal Year 1971 completely ignores the fact that we are already converting Polaris submarines to Poseidon missiles so that by the end of Fiscal Year 1971, if the Soviets employ their maximum

production rate but do not improve their missile system on these submarines, we will have almost ten times as many submarine-launched ballistic missiles as they.

25. "The Soviet Navy has more than a 2 to 1 numerical advantage over the U.S. Navy in this area of sea warfare (attack submarines) and this is a matter of concern since the attack submarine is considered to be the most effective weapon against nuclear submarines."

Comment: Attack submarines would have to be able to seek out, find and destroy all U.S. Polaris submarines on station simultaneously and, at the same time, the Soviets would have to be able to destroy our ICBM force and our strategic bombers were they to avoid an annihilating retaliatory strike. The Secretary of the Navy and Mr. Packard have expressed confidence that the Polaris submarines will remain "highly survivable until at least the late 1970's". The Secretary of the Navy has also stated that the Soviets have not been able to detect or track "any" of our Polaris submarines while on station.

26. "The U.S. needs to be able to deliver six times as many warheads as would the Russians to achieve destruction 'parity' with them (referring to Secretary Laird's testimony to the Senate Foreign Relations Committee)."

Comment: The Secretary of Defense's statement regarding the need to deliver six times as many U.S. warheads against the Soviet Union to achieve destruction "parity" has been challenged by many authorities. The fact is that we have more than enough ICBM's to destroy the 50 largest Soviet cities fifty times over. All talk of destruction "parity" is rather inconsequential in the light of such a fact.

27. "The Soviet Union has built a belt (often referred to as the 'Blue Belt' defense system) defense ranging from the Baltic Coast and named for one of the anchors in the line—the city of Tallinn, capital of Estonia. Marshal Malinovsky reported the completion of this belt defense system to the 23rd Congress of the Communist Party of the Soviet Union. At that time he described it as being 'for the defense of the entire territory of the Soviet Union.'"

Comment: The judgment of most intelligence authorities is that the "Blue Belt" defense system, or Tallinn line, is not an ABM system but a defense system against bombers.

28. "Recent news accounts indicate there are some 67 P-R-O missile sites around the Russian capital. The Soviet Union officially describes P-R-O's mission as the . . . interception and destruction of enemy missiles or rockets in space, preferably at distant approaches to their objectives and far from national territory." (This quote is from 'Troops of National Air Defense' (1968), book by Marshall P. F. Batitsky)"

Comment: No matter what news accounts indicate, there are 64, and not 67, Galosh missile sites around Moscow, according to the Secretary of Defense. As noted above, the Galosh is relatively primitive, its deployment has been stopped in mid-stream and it could easily be saturated by American offensive missiles, just as Safeguard could be saturated by Soviet missiles because of the limited number of Sprints and Spartans involved.

29. "The U.S.S.R. is spending more than twice as much as the United States to build its strategic military strength. The U.S.S.R. is spending about \$18 billion yearly or about 4 to 5 percent of its gross national product on strategic military forces. The U.S. strategic military budget is only \$7.6 billion yearly, or less than 1 percent of its gross national product."

Comment: As noted above, Soviet spending on strategic offensive-defensive weapons has recently been higher than that of the United States, but in previous years U.S.

August 5, 1969

spending has been higher. And with new weapons systems presently being planned, U.S. spending could exceed Soviet spending in the next year.

30. "The Soviet Union is developing its defensive strategic forces at a steady pace which gives every indication that the Soviets are, or soon will be in a position to limit a retaliatory blow which the United States might deliver after absorbing the weight of a Soviet first strike."

Comment: There is no indication that the Soviet Galosh system, which is the only Soviet defensive strategic force, could limit a military blow which the United States might deliver. The system does not protect Soviet missiles or even the Soviet population but is designed to protect only Moscow. Furthermore, as noted above, it can easily be saturated.

THE WRONG SYSTEM IN THE WRONG PLACE
AT THE WRONG TIME

Mr. CASE, Mr. President, the Senate debate that is now drawing to a close reflects a profound—and, in my judgment, irreversible—change in our approach to the problem of assuring our survival as a nation.

The American people, I believe, are no longer willing to accept as inevitable the upward spiral of the arms race.

And the Senate clearly is no longer willing to accept as infallible the Pentagon's or even the President's judgment that a particular weapons system is essential to national survival.

This I believe to be true, whether or not a clear majority of the Senate votes to deny the President's request for authority to deploy the Safeguard antiballistic-missile system.

What has already happened, in short, may have much more to do with the shape of the future than the precise outcome of the vote we are approaching.

And because I am concerned about the shape of the future, as are all of my colleagues and as is the President, I think it most important that we understand what has happened and why.

Three years ago the Congress authorized and appropriated more than \$150 million for advance procurement of the Nike X ABM system. The Joint Chiefs of Staff asked for the funds as a first step to deployment, although President Johnson opposed deployment and did not release the money.

Nevertheless, when the matter came before us on August 18, 1966, the Senate, by an overwhelming vote of 73 to 14, rejected an amendment to delete the funds offered by our recent colleague, Senator Clark of Pennsylvania.

I voted against the Clark amendment because I was not so certain that the Nike-X should not be deployed that I was prepared to withhold funds which the President might later decide to release.

A good many other Senators who are here today voted, as I did, for substantially the same reason, I suspect.

The next year, President Johnson took a different approach to the issue. In his budget message of January 24, 1967, he proposed that—

We continue intensive development of Nike-X but take no action now to deploy an antiballistic missile defense; initiate discussions with the Soviet Union on the limitation of ABM deployments; and in the event these discussions prove unsuccessful . . . reconsider our deployment decision.

"To provide for actions that may be required at that time," he asked for an additional \$377 million. And because those of us who shared his view that we must seek to limit the arms race through negotiations found this to be a reasonable approach, no effort was made to withhold the requested funds in 1967.

But only 5 days after these funds cleared Congress, a most remarkable decision was announced by Secretary of Defense McNamara. Speaking in San Francisco on September 18, he concluded a brilliant analysis of the dynamics of the nuclear arms race by finding "marginal grounds" for deploying a thin ABM system against a potential Chinese threat.

So incongruous was this conclusion in the light of all his preceding discussion of ABM systems that many of us recognized a compelling need to study much more thoroughly the underlying technology and assumptions that were involved.

In my own case, that study began in a long discussion with Dr. George Kistiakowsky, who had been science adviser to President Eisenhower and was generally acknowledged to be an eminent authority in the field of nuclear weaponry. Others went about the problem in similar fashion, I am sure.

As we continued into 1968 our study of the proposed Sentinel deployment, some of the major questions came into sharper focus.

The Sentinel system, it will be recalled, was purported to give assurance of protection for most of the country against the kind of attack we were told China might be capable of delivering in the mid-1970's—a "light" and "unsophisticated" attack of from 50 to 100 intercontinental ballistic missiles.

Since the Chinese had just tested their first hydrogen weapon and had yet to deploy any ICBM's, what reason had we to count on them to build an offensive force so patently vulnerable to the claimed defensive capabilities of the Sentinel ABM system?

There was no reason, so far as I could determine, other than the need to make that assumption in order to justify the deployment of an allegedly Chinese-oriented ABM system.

The very thinness of the anti-Chinese rationale underscored the importance of another question.

What reason had we to suppose that the Soviets, from whom we were actively seeking agreement to begin negotiations on strategic arms limitations, would view Sentinel as directed against China and not against the Soviet Union, as the Administration continued to assert?

Again, there was none, so far as I could determine. On the contrary, there was much to suggest that the Soviets would be driven to the worst assumptions about our purposes, since Sentinel was clearly an area-defense system and, once deployed, could be thickened rapidly.

Their reaction to our deployment of Sentinel, I concluded, would most likely duplicate our reaction to the discovery some years ago that the Soviets were deploying a primitive ABM system. The United States immediately gave highest

priority to the development of multiple warheads for our offensive missiles, in order to insure penetration to their targets.

Thus, deployment of Sentinel seemed most likely to hasten Soviet development of larger and more sophisticated offensive missile forces, and further complicate thereby the task of bringing the nuclear arms race to a halt through negotiations.

It was largely for these reasons that I joined with others in opposing deployment of Sentinel in 1968. Our efforts in the Senate centered on an amendment by Senator COOPER and Senator HART to delay deployment for one year. And because some funds for Sentinel deployment were to be authorized or appropriated in four different bills, four votes were taken on the issue.

The first vote came on April 18 when, with more than one-third of the Senate absent, the Cooper-Hart amendment failed, 28 to 31. I then proposed to Senator GORE, as chairman of the Disarmament Subcommittee of the Committee on Foreign Relations, that he hold public hearings on the foreign policy implications of ABM deployment, so that we all might be better informed on the issue prior to further consideration on the floor.

Unfortunately, it was not possible to have those hearings at that time. Our further efforts to forestall Sentinel deployment were all rebuffed: on June 24, by a vote of 34 to 52; on August 1, by a vote of 27 to 46; and, finally, on October 2, by a vote of 25 to 45. At one time or another, 41 Senators had been recorded in opposition to deployment. But our case had yet to prevail.

The pertinent developments of the last 10 months can be summarized quickly.

On the diplomatic front, the Soviet invasion of Czechoslovakia, and the election of a new President properly determined to review national policy, contributed to continued delay in initiating arms talks. That a date has yet to be set is deeply disappointing to me and many others.

On the domestic front, localities selected to play host to Sentinel installations became arenas of great disputation. Upon taking office, the Nixon administration stopped deployment; and 8 weeks after taking office, the President set out a new rationale for deploying ABM around missile sites instead of cities, and a new label—Safeguard—for the same set of components.

On the legislative front, Senators who had questioned the need for Sentinel found themselves impelled to make a still more rigorous examination of Safeguard and, indeed, of the entire cycle of action and reaction that has perpetuated the nuclear arms race.

And this time the Senate went at the job in its most educational and responsible fashion—through open, public hearings before the Disarmament Subcommittee, the Committee on Foreign Relations and—most significantly—the Armed Services Committee.

Those hearings, in their collective impact upon the Senate and the Nation, epitomize the profound change of which I have spoken: We do not accept the inevitability of the arms race and we can-

August 5, 1969

CONGRESSIONAL RECORD — SENATE

S 9221

not abdicate to the Pentagon or even the President our responsibility to make our own decisions on the basic questions of national survival.

Thanks to the help of some of the finest scientific minds in the Nation, too many of us have been exposed to too much about Safeguard that is self-serving, contradictory, or irrational to ever again permit the security of this Nation to turn on a mere appeal for loyalty to serve, to party, or to country. And the sooner that fact is absorbed, the sooner we can get on with the business of taking sensible steps to solve real problems at home and abroad.

It is against this background that, tomorrow, I shall vote for the Cooper-Hart amendment to prohibit deployment of the Safeguard system. The Senate is familiar with the many arguments that have been made for and against deployment. I wish only to make clear my own understanding of the central issue.

It is not, in my judgment, the question of whether deployment will or will not strengthen the President's hand in negotiations or make more or less likely a viable arms control agreement with the Soviets. Those questions are imponderable, I believe.

Nor is the central issue a question as to whether there is something inherently right or wrong about seeking an active defense against ballistic missiles. We have spent \$3 billion on that search in this decade, and I fully expect that we will spend as much or more over the next decade on ABM research and development, for the need is as intractable as the problem is infinitely complex.

Nor is the central issue the question of "national priorities." That concept has served and will continue to serve a useful purpose in focusing attention on the fact that we do not possess unlimited resources and must, therefore, give greater heed to how we use them. And if Safeguard offered any real assurance of adding to the Nation's security, I would give it as much support as I must now deny it.

The central issue is whether Safeguard would do the job the administration says it must and can do.

That job, as we all know, is to provide by the mid-1970's sufficient assurance that a significant portion of our Minuteman force would survive a Soviet attack so that no such attack would be tempting. Such assurance, we have been told, would serve the imperative of deterrence, and without such assurance the credibility of our capacity to respond in kind to a devastating attack would be seriously eroded some years hence.

The question before us is simply this: will Safeguard do the job of deterring an attack on those 350 Minuteman missiles in Montana and North Dakota?

The evidence is overwhelming that the answer must be "No."

It is undisputed that all of the components to be used—the radars to detect and track incoming warheads, the Spartan and Sprint missiles to be fired at them, and the computers to make all this possible within seconds—all were designed for the quite different purpose of meeting a missile attack on our cities.

This is understandable, for since the Army was first given responsibility for ballistic missile defense back in the 1950's, it has concentrated its research efforts on area defense of cities or "soft targets," not on point defense of such "hard targets" as underground Minuteman silos.

And it was to the protection of cities that Sentinel deployment was pointed. But when that was found to be undesirable by the new administration—and I agree with their decision—the very same components of Sentinel were repackaged as Safeguard and assigned the job of hard-point defense.

The trouble with this is that a system which may be well-designed to intercept a few warheads directed at a city turns out to be very poorly designed to intercept many warheads directed against a hardened Minuteman field.

The critically important missile site radar turns out to be far more vulnerable to destruction than the Minuteman the system is asked to defend, and for that reason the most likely target of a first strike.

So the radar itself must be defended by Safeguard's own Spartan and Sprint missiles. But these could easily be exhausted in defending the radar against the Soviet version of our Minuteman—the SS-11.

The radar would then almost certainly be destroyed, leaving the Minuteman themselves defenseless against attack by that much larger Soviet SS-9 missiles.

Safeguard would be, quite simply, the wrong system in the wrong place at the wrong time.

Rather than engage in such needless waste, we should heed the advice of Dr. Wolfgang Panofsky, the eminent physicist who now heads the Stanford Linear Accelerator Center. Here is the way he summarized the problem when he testified before the Armed Services Committee on April 22:

On reviewing the stated purposes of the modified Sentinel system I conclude that the mission of defending the Minuteman force is the only one which may become a valid and important motive in the future. However, the modified Sentinel system which is a simple reconfiguration of components designed for city defense is not a reasonable engineering solution for this problem. A good technical solution for this purpose should involve smaller and less expensive missiles and larger numbers of simpler hardened radars.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. CASE. Mr. President, I ask unanimous consent that I may proceed for 5 additional minutes, and that the time not be charged to either side.

The PRESIDING OFFICER. Who yields time?

Mr. HART. Mr. President, the Senator asked unanimous consent that the time not be charged to either side.

The PRESIDING OFFICER. Is there objection? The Chair hears no objection, and it is so ordered.

Mr. CASE. Mr. President, Dr. Panofsky also testified:

Considering the enormous combined second-strike power of the Polaris and Poseidon fleets, the SAC bombers, Minuteman and

Titan, and the tactical nuclear armed aircraft in Europe, it appears impossible that the Soviet Union can attain a first-strike power by the mid-1970's. For this reason we would well afford the time to develop a properly designed active defense for Minuteman, should it be required.

This strikes me to be so eminently sensible a course that I can only continue to hope the Nixon administration will come around to the same view.

The Cooper-Hart amendment points the way. The bill before us would authorize ample funds for continuing research and development on ballistic missile defense, and the amendment would in no way detract from that effort. And if additional funds were clearly needed to move in the direction proposed by Dr. Panofsky—and by many others—there is no question in my mind that the Senate would agree to supply them.

Tomorrow we shall have another opportunity to affirm our determination as a nation and as an institution to be the masters of our fate. As one who believes deeply in the rationality of man, I look forward to that opportunity with high confidence in the Senate's ability to lead our Nation.

I have one brief additional comment which I would like to make on a point which has been raised over and over again, and that is that the Senate and the Congress must not tie the hands of the President in dealing with this serious matter. I agree that the Senate should not tie the President's hands to any ineffective system of defense whatever and that nothing else should tie his hands. The hands of the President should not be tied specifically to an ineffective ABM which would not do the job he expects it to do.

If deployment of this proposed Safeguard system is once begun, the simple fact is that research and development on a new and effective design will stop and that by deployment of this ineffective system we will have destroyed the President's chance to get a system of ballistic missile defense that will do the job.

Mr. President, those of us who propose that the Cooper-Hart amendment be adopted are, in fact and in real substance, proposing to free the President's hand to do the job in the best way calculated to accomplish this purpose.

Mr. MURPHY. Mr. President, will the Senator yield?

Mr. CASE. I yield.

Mr. MURPHY. Mr. President, I would like to ask if it has been the experience in the past, in fact the entire history of space advance, that once a program has started that all research and development has stopped.

Mr. CASE. The point is we have not deployed anything.

Mr. MURPHY. That is not the question. My question was: Is it not true that we started on the first missile? Let us go back to the little Vanguard. All research and development did not stop with that. It continued and we went on to the Titan. Does not research and development continue in any event?

Mr. CASE. If it were merely a matter of wasting the billions of dollars that

Safeguard would cost, that would be bad enough.

But the point is that once we put it into the ground this enormously soft and vulnerable system of radars and computers, we will have stopped attempting to design the kind of multiple and hardened radars which Dr. Panofsky and others have suggested to do the job that should be done.

If I were not convinced of this I would regard the matter before us as wasting billions of dollars. It is more than that. It is endangering the possibility of getting the kind of defense against ballistic missiles which this country may need.

Mr. STENNIS. I yield 15 minutes to the Senator from Kansas.

IN SUPPORT OF THE PRESIDENT ON THE ABM

Mr. DOLE. Mr. President, almost 50 years ago that great editor from my State, William Allen White, wrote:

This nation will survive, this state will prosper, the orderly business of life will go forward if only men can speak in whatever way given them to utter what their hearts hold . . .

The last few weeks I have heard in this Chamber such heartfelt convictions of men trying to do what they think is right to achieve world order and maintain the security of the United States. We have heard from both sides of the aisle. We have heard from men labeled liberals and those conservatives. We have heard from those who might be labeled "hawks" and those who might be labeled "doves." Throughout the Nation we have also heard opposing views on the subject of our defense system. Equally reputable statesmen, equally distinguished scientists and equally moral and patriotic men have presented differing views.

Spirited debate is inevitable when we are confronted with a problem of such technical magnitude and scientific complexity as our deterrent defense system. The issue does not lend itself to simplistic opinions and easy answers. But whatever position each Senator forms after much consideration and study, he must be guided first and foremost by the desire to bring peace, order, and security to the world. We know that although absolute viewpoints are impossible, absolute values are essential. As a Senator who believes that commitment to such values is his first responsibility I now utter what is in my heart.

PEACE OBJECTIVES

I believe we are on the threshold of achieving some meaningful peace settlements. I believe that we are ready to move from the "era of confrontation to the era of negotiation."

But peace is not going to be won by general statements of intentions; it is going to be won by limited accommodations and treaties. It is not going to be gained suddenly in one settlement, but rather in fragments, treaty by treaty. The nonproliferation treaty or an arms control pact may be the initial steps toward peace. Only by strenuous and often frustrating negotiations can we reach agreements on these sensitive subjects. But such negotiations, however, requires diplomatic and military credibility.

We will have no such credibility unless we maintain strategic force equilibrium. We will have no such credibility unless we can protect our nuclear deterrent power. We will have no such credibility unless we sustain a comparative sufficiency in defense deployment. And without such credibility an America—stripped of necessary bargaining power—would be bargaining uphill when negotiating with the Soviet Union.

NEED FOR DETERRENCE

Today there is no question of our ability to deter an attack from Soviet Russia. Even after an enemy first-strike—our surviving missiles and bombers would be able to inflict unacceptable damage.

Our Polaris missiles at sea would survive. Most of our Minuteman force would survive. Most of our alert bomber force would survive.

Then, if we have such nuclear sufficiency today, why is it necessary to begin developing the Safeguard defense system?

As former President Eisenhower said: Our real problem is not our strength today; it is the vital necessity of our action today to insure our strength tomorrow.

So it is that we should make the Safeguard deployment not because of any present threat to our national security but because of the possibility of a future threat. In 1969 and 1970, we can protect our nuclear striking power. But if we are to continue such protection in 1973, 1974, and 1975, we must make the necessary decisions now. If there can be projected an insufficiency of nuclear defenses at that time, we weaken our bargaining power at the conference table today.

Now why is there concern and doubt about the protection of deterrent strike force in the next 5 or 6 years? Our most authoritative evidence indicates that the Soviet Union is substantially increasing the potential thrust of its missile attack.

SS-9 MISSILE

First, the U.S.S.R. is increasing deployment of the SS-9 missile—a missile larger than Titan II—with tremendous nuclear capacity and impressive accuracy. The more ICBM's Russia can put in the air, the smaller chance our Minuteman missiles and alert bombers will survive and be able to strike back.

Thus, the SS-9 becomes a counter force weapon as it is deployed in large numbers. If the Soviets installed about 50 SS-9's—a force equivalent to our Titan II force—we would simply assume that the Soviets need that number of large missiles to take out that number of large American cities.

Even an SS-9 force of 100 missiles could be viewed by us as an added insurance force with the same objective of destroying our big cities.

But a force of 200, however, requires us to consider the possibility that the SS-9 is not intended for cities but for the hardened Minuteman sites of our nuclear deterrent power.

Second, the Soviet Union is developing midair proliferation of nuclear warheads. By multiple reentry vehicles, Soviets possibly could increase the warheads from 300 to 900, any one of which would be capable of destroying the Minuteman.

Third, our intelligence tells us that the Soviet Union is building Polaris-type submarines at a rapid rate. If missile-bearing submarines came to within a few hundred miles of our shores, the quick flight time of their missiles can substantially shorten the time available for the takeoff of our alert bombers. Since few of our alert bombers could survive such an atomic submarine attack, all the more vital is the protection of our Minuteman striking power.

U.S. ACTION

In the light of these developments, what protective actions should the United States take?

First, we could install more Minuteman missiles. We rejected this because it would escalate the arms race and could push the Soviets to deploy even more weapons than they now plan.

Or we could design a new deterrent missile that could travel about the countryside, always hiding from enemy attack. We are reluctant to have mobile missiles. We believe this would be unacceptable to the American public. It, too, would be stimulation of the arms race.

Or we could build bigger missiles with larger warheads. But this also would accelerate the arms race.

Or we could increase the hardening of Minuteman. We do plan to add further hardening for some Minuteman missiles, but this approach has its limitations. Further hardening can be matched by further increases in Soviet accuracy and warhead size.

Finally, we could provide the protection of our nuclear deterrent striking power against ballistic missiles. Such a defensive deployment would not stimulate the arms race. In fact, since the Russians have already begun developing their own ABM defense system, our defensive parity would help us reach a solid arms control agreement with the Soviet Union.

Safeguard by its selective defense of our Minuteman missile sites both strengthens our deterrent to nuclear aggression and increases our leverage for disarmament negotiations. Its protection of our retaliatory forces against direct attack stops any enemy from launching a first strike war. Yet its unprovocative defensive nature would not stimulate the arms race.

THE ISSUE

There are those who argue against Safeguard or any ABM system with allusions to the sinister influence of the military-industrial complex, are escalation and ultimately nuclear devastation. I am convinced that much of the intense emotion presently directed against the ABM is a result of the widespread disillusionment with the Vietnam war.

However, we all agree that the military should not set our Nation's priorities and goals. Congress must begin to more closely scrutinize both military policies and expenditures.

At the same time, there has been an awakening to the pressing domestic needs of our Nation. The problems of our disadvantaged citizens, our urban growth, and environmental decay require immediate attention. However, these problems must be solved within the context of a safe and secure society.

August 5, 1969

CONGRESSIONAL RECORD — SENATE

But these are not the issues presently before the Senate. All Americans dread a nuclear war and the risks of an escalating arms race. The real issue today is the strategic reality of our defense posture.

We may differ about the implications on the recent Soviet moves in missile deployment. We may differ on the effects of those moves on the future defense of our nuclear deterrent force.

But all of us can agree that if America should lack an effective nuclear deterrent defense, the stability of world order would be shaken, and the chances for a peace settlement broken.

The President has said:

The imperative that our nuclear deterrent remain secure beyond any possible doubt requires that the U.S. must take steps now to insure that our strategic retaliatory forces will not become vulnerable to a Soviet attack.

The time has come when the Senate of the United States either gives the President the tools to bring peace and security, or denies them. This is the issue after all the testimony, after all the debate, after all the speeches, after all the argument.

CONCLUSION

Sixteen years ago another Kansan, Dwight David Eisenhower, came to Washington and uttered what was in his heart:

In pleading our just cause before the bar of history and in pressing our labor for world peace . . . we hold it to be the first task of statesmanship to develop the strength that will deter the forces of aggression and promote the conditions of peace.

Let us in this spirit strengthen the shield of our defenses that deter war and strengthen the hands of those that can negotiate a peace.

Mr. DOMINICK. Mr. President, will the Senator from Kansas yield?

Mr. DOLE. I am happy to yield to the Senator from Colorado.

Mr. DOMINICK. I congratulate the Senator from Kansas on what I think is an excellently reasoned speech. He does not try to go into details of science. He lays it out in cold logic.

It seems to me that this is a productive effort, so far as we are concerned, in trying to preserve our security.

I was intrigued, because he refers to the problems that are being outlined here on the floor as to the rural areas of our cities, where the Senator from Kansas points out that we must have a secure country before we can fix those problems irrevocably. I noticed that the Senator from New York (Mr. JAVRS) talked about the necessity for reallocating resources. The Senator from Louisiana (Mr. ELLENDER) on yesterday said something to the same effect.

It is an interesting fact that as we go through phase 2 of the program on the estimate we now have, it would cost \$10.2 billion. This \$10.2 billion is approximately three and a half months of the Vietnamese war at present expenditures. The \$10.2 billion would be spent from now all the way through 1974. So when we are talking about reallocating resources, we are going to do far better once we get out of our involvement in that war than we

would do by saying we are not going to go ahead with this proposal.

Another feature that I think is important with respect to the amendment that is before us is that it involves only \$345 million. When we look at it in terms of the over \$2 billion a month we are expending in Vietnam, we have another example of the fact that we are not dealing with much money. We are dealing here with a symbolism issue which has arisen, for some unknown reason, in the Senate.

I also listened to the Senator from Arkansas (Mr. FULBRIGHT) today, and I read the speech of the Senator from Louisiana (Mr. ELLENDER). They talk about mirror reaction. The Senator will know that the Soviet Union started deploying its system in 1963, and it is still building it, despite the fact that it is stated the Soviet Union has stopped. That is not a fact. So it seems to me there is no mirror reaction now, in view of the fact that the Soviet started its system in 1963, 6 years ago.

Would the Senator agree with that?

Mr. DOLE. Yes. As I have tried to say many times on the floor, as a junior Member of the Senate I do not question any Member's motives for being for or against anything. I think everyone has a reason for his belief. I think sometimes the public has a certain feeling about the Senate. Members of the public feel that 50 percent are for doing nothing and another 50 percent are for blowing up the world. That is not the issue. I think 95 Senators think we should do something about it, yes, perhaps have research and development, but some of us believe we cannot waste 1 year's or 2 years' time.

I think what the question boils down to is whether or not we want to give the President the tools he needs with which to negotiate. I had faith in President Johnson's request for the Sentinel system and supported it in the House, and I have confidence in the Safeguard system and will support it in the Senate.

Mr. DOMINICK. Mr. President, I ask unanimous consent that a letter to the editor, which was published in the New York Times for today, Tuesday, August 5, 1969, signed by Sanford Aranoff, assistant professor of physics, Rutgers University, dealing with the need of an ABM for defense, be printed in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ABM FOR DEFENSE

To the Editor:

A July 17 editorial criticizing Senator Winston L. Prouty's endorsement of the Safeguard antiballistic missile system, began by stating that the system is untested, and so should not be deployed. This is not an objection. Many of the components have been thoroughly tested, and further testing will continue after deployment.

Much time and money have already been invested in the testing. Let us not belittle American technology by saying the ABM will not work because it is complex. We can build successful complex systems—the Apollo program for example. Of course, it has not been tested under wartime conditions, but the same is true for the enemy's system.

In actual wartime, neither offense nor defense works as well as anticipated. It may be

that our defense will work, while the enemy's offense will not. Even if our defense does not work, the fear that it may, while the offense will not, will deter the enemy.

As to cost, we have been spending far greater sums on air defenses up till now. The Soviets have been spending several times the amount of money that we have for their defenses. Until now, no one has suggested that we dismantle our defenses to save money for our cities. To stop spending for defense is to leave our country open for attack. Why, then, is the issue raised about missile defense? Either we must ignore the question of cost when discussing the ABM, or save money by dismantling our expensive air defenses.

FIRST STRIKE DESTRUCTION

The editorial comments that we can destroy every center in the Communist bloc. This is true if we strike first, or if they strike first, but leave our missiles intact. If you believe that our missile will remain after an attack, you should give your reasons.

You state that the Administration should not press for a vote that can bring marginal victory at best. What is wrong with a "marginal" victory? The Administration feels that it is in the best interests of this country to have a defense against nuclear attack. That many people disagree does not change the objective situation.

We are speaking about defense, not offense. It is sad that the concept of ABM has been distorted by its opponents to mean an offensive system. The missiles of the ABM have a range of less than one thousand miles, and cannot be construed as an offensive weapon against Russia. It is these cities about which we are so concerned that require proper defense.

SANFORD ARANOFF.

NEWARK, July 18, 1969.

Mr. STENNIS. Mr. President, may I commend the Senator from Kansas. I have noted the quality of the speech. As a Member of this body he has always impressed me with the forceful way in which he expresses his logical reasoning. I think in this he has a very sound, commonsense view.

I yield now to the Senator from Nevada.

Mr. BIBLE. Mr. President, I understood the Senator from California wanted to direct an inquiry to the Senator from Kansas.

Mr. MURPHY. Mr. President, does the Senator from Kansas have the floor?

The PRESIDING OFFICER. The time of the Senator from Kansas has expired.

Mr. STENNIS. Mr. President, I yield 3 additional minutes to the Senator from Kansas.

Mr. MURPHY. Mr. President, will the Senator from Kansas yield?

Mr. DOLE. I yield.

Mr. MURPHY. I congratulate the Senator for his realistic approach and the use of figures that are actual figures, and not hypothetical figures.

I also wish to congratulate the Senator from Colorado for pointing out that the amount of money involved is less than \$400 million, which is less than the amount of cost as between deployment and no deployment.

Another feature is involved. I am sure my distinguished colleague knows that embodied in this proposal is the element of constant review, as suggested by the President. So this is no program that, once started, will never be stopped, as is true of so many programs. The President has asked for constant review. The

S 9224

CONGRESSIONAL RECORD — SENATE

August 5, 1969

minute it is not needed, it will be stopped. As long as it is needed, it will continue to be tested.

I congratulate my distinguished colleague for making this very realistic appraisal of an important question, on which may turn the entire future of this Nation.

Mr. DOLE. I thank the Senator from California. I also agree with his statement that this program will be reviewed on an annual basis by the Senate. I think that is one of the real strengths of the program.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. DOLE. I yield.

Mr. TOWER. I also would like to commend the distinguished Senator from Kansas. I think he has performed a fine service in underscoring that what we are doing is projecting ourselves toward the mid-1970's. There has been much talk about the relative postures of the Soviet Union and the United States today, but we must project it into the future and think in terms of what might happen.

I have heard a great deal about the fact that those of us arguing for the system are basing our argument on the fear that the Soviet Union might develop a first-strike capability. That indeed is the reason why we want an ABM system. It is very possible that the Soviet Union will develop a first-strike capability. Certainly, we have no intelligence to the effect that they are not developing a first-strike capability. As a matter of fact, there is indication that they have been building toward it. That being so, I do not see how we can afford not to prepare to put ourselves in a position to defend this country.

It has been said that the Soviets are not going to attack us because they know it would invite certain retaliation. We want that risk to stay there. What we are trying to do is maintain a risk for the Soviet Union so that they will find, in the mid-1970's or in the 1980's, that the odds are too great against their being able to launch a successful first strike with impunity.

Mr. DOLE. I agree with the Senator. I feel very strongly that this system is needed to stabilize the world position. I feel just as strongly about that as do those who take a different view.

The PRESIDING OFFICER. The Senator's additional time has expired.

Mr. STENNIS. Mr. President, I now yield to the Senator from Nevada (Mr. BIBLE). How much time does he want?

Mr. BIBLE. I would think 5 or 10 minutes.

Mr. STENNIS. I yield 10 minutes to the Senator from Nevada.

Mr. BIBLE. I thank the Senator from Mississippi, our distinguished able chairman of the Armed Services Committee.

Mr. President, it occurs to me that practically everything pro and con has been said about this question in the 5 or 6 long weeks of vigorous discussion on the ABM. I do not believe there is anything new that I can contribute at this point. I have attempted, to the best of my ability, to follow the debate closely and to follow what was developed dur-

ing the so-called closed and secret sessions.

After much study, I am convinced that the wisest course is to support the request by the administration, and the majority recommendation of the Armed Services Committee, for phase 1 of the Safeguard ballistic missile defense system.

It seems to me that deployment of the ABM is a prudent and reasonable response to the activity of the Soviet Union in the development of offensive and defensive weapons systems and the advance of Communist China toward a nuclear arsenal. The addition of new offensive Minutemen, without protection, is likely to be more destabilizing, in my view, than the start of an active defense of the Minutemen silos, since adding new offensive vehicles increases the capacity to strike first.

I am not particularly impressed by the divergent views of the scientific community on the practicality of the Safeguard system. Such differences have occurred with every complex weapons system ever considered by the Nation. They have occurred in our space program. They have occurred in our medical research and in other areas of our research and development activities.

Able scientists are found on both sides of the issue. Therefore, it is difficult to accept at face value some scientific claims that this defense system may not work. There were eminent scientists who said the hydrogen bomb would not work; that the ICBM would not work, that the Polaris would not work.

We have heard this issue discussed at length over the past weeks and months.

I have reviewed the record carefully. I am not persuaded that the ABM is unreasonable. I feel the performance of carefully designed and well-engineered defense systems such as Safeguard will be every bit as effective as the performance of our offensive missile systems.

One other argument is constantly made—we have heard it day after day, and it has been met and counter-met and re-met again, on rebuttals and sur-rebuttals—I refer to the argument that approval of the Safeguard will make it harder for this Nation to reach reliable agreements with the Soviets on limitations of nuclear offensive and defensive weapons. It seems to me that in this regard, a telegram received July 17 by the Senator from Mississippi (Mr. STENNIS) and the Senator from Washington (Mr. JACKSON) from a group of distinguished Americans with long experience in negotiating with Moscow was a very useful contribution to our discussion. It read:

In our varied experiences of negotiating with the Soviet Union, nothing suggests that a Congressional decision to authorize President Nixon's Safeguard ABM proposal will in any way hinder the start of strategic arms limitation talks with Moscow or impede the negotiations once they are under way.

It was signed by a number of very distinguished Americans—One could say they comprise a Who's Who in the field of American-Soviet diplomacy. Among them were Dean Acheson, Charles Bohlen, Arthur Dean, Frederick Eaton, Foy Kohler, Robert Murphy, and Herman Phleger.

If my memory serves me well, in the discussion of the Sentinel program last year when it was before the Senate, the argument was made that we should not move forward because to do so would jeopardize our talks with the Soviet Union. I believe it was within a week after the Senate had acted—and had acted adversely to that particular argument—that new talks were started.

I was somewhat impressed with the argument made today by the distinguished Senator from North Carolina (Mr. ERVIN). If I recall correctly, I think he said that since 1946 we have had 1,542 meetings with the Soviets in the field of disarmament.

Taken in its entirety, I believe that record provides a meaningful answer to the constant argument that deployment will show us and probably jeopardize us in our negotiations with the Soviet Union.

Mr. President, it has been our experience in negotiations with Russia that the Soviets bargain vigorously for relative advantage. With this in mind, let us observe that Moscow has deployed an ABM and we have not. Moreover, the Russians are working on an advanced version of the ABM. It is commonsense to me that if we hope to get an agreement with the Soviets on arms limitation, we must be able to deal with them from positions of strength—defensive strength as well as offensive strength. We are certainly not maintaining our overall strength if we unilaterally abandon ABM deployment at a time when the Russians are working to strengthen not only their offensive missile systems, but their already deployed antimissile defenses as well.

Reciprocal, mutually acceptable agreement on both offensive and defensive nuclear systems will be, at best, difficult to achieve. It could take a long time. Meanwhile, I think we must put America in the strongest possible position for the conduct of these crucial negotiations.

It is for that reason that I shall vote against the Cooper-Hart amendment, and I shall support the request for authorization of phase I of the Safeguard ABM system.

Mr. STENNIS. Mr. President, will the Senator yield to me?

Mr. BIBLE. I yield.

Mr. STENNIS. I certainly appreciate the Senator's going to the trouble here, to put his thoughts in writing in so concise a form.

I believe the entire argument can be boiled down to the point the Senator has made. That is the real issue before the Senate.

Mr. BIBLE. Mr. President, I appreciate the statement of the Senator from Mississippi. I have long considered the Senator from Mississippi, the chairman of the Committee on Armed Services, and his able colleague, the Senator from Washington (Mr. JACKSON), as two of the best informed men in America on this particular problem.

Mr. STENNIS. I thank the Senator. He has made great contributions in connection with the appropriations, but, more than that, I like his practical logic.

August 5, 1969

Mr. CHURCH. Mr. President, will the Senator from Michigan yield to me?

Mr. HART. Mr. President, may I inquire as to the time remaining to the proponents?

The PRESIDING OFFICER. The proponents have 10 minutes remaining.

Mr. STENNIS. Mr. President, I shall be happy to yield some time to the Senator.

Mr. CHURCH. I appreciate that. I shall not require more than 15 minutes.

Mr. STENNIS. May I inquire, Mr. President, how much time I have remaining?

The PRESIDING OFFICER. The Senator has 32 minutes.

Mr. STENNIS. I am happy to yield 5 additional minutes to the Senator from Idaho.

Mr. CHURCH. I thank the Senator.

Mr. President, at this late stage in the debate, there is little I can say that would add to the arguments already given, or to the voluminous data already gathered, or to the lengthy testimony already taken on the question soon to be decided, whether or not the Senate should give its consent to the immediate deployment of the Safeguard antiballistic missile system. Accordingly, my statement will be relatively brief.

It is undisputed that the price of an ABM system comes high. The initial phase, limited to the mission of defending two of our Minuteman bases, bears a price tag of at least \$9 billion. Allowing for the anticipated cost overrun for research, development, and procurement, however, the total is much more likely to exceed \$12 billion; and the future enlargement of the system, almost certain to follow once the deployment begins, could easily push the ultimate figure above \$100 billion.

Despite this mammoth cost, I was nonetheless prepared to vote for the immediate construction and deployment of an ABM system if it could be shown by the evidence that the Safeguard proposal could meet three tests: First, the test of reliability in the event of a nuclear attack upon the United States; second, the test of shielding our people if such an attack should occur; and third, the test of lessening the chances of a nuclear exchange between the United States and the Soviet Union.

With these tests in mind, I have closely examined the evidence, weighed the testimony, and followed the debate. And I have been obliged to conclude that the Safeguard proposal appears to be deficient in all three categories.

As to whether the system would work in a showdown, the experts are sharply divided. Those components that give the ABM sight and direction—the radar and computer elements—are themselves the focal point of the doubt. The computer system would be the most complex ever attempted, and, given the present state of the art, there are serious reservations that it can be made operational. At the very least, further research and prior testing would seem to be required.

If the ABM is to successfully intercept incoming enemy missiles, its radar eyes must be at least as good as its computer brain. Few such eyes are contemplated for the Safeguard system, and these few

could be readily blinded. Even the Pentagon's own planners concede that enemy nuclear warheads might be deliberately detonated above the atmosphere to create vast regions of ionized gas to black out the radar. Moreover, it must be expected that any attacker, mindful of the existence of our ABM system, would sow the skies with decoys and chaff, complicating beyond description the problem of swiftly identifying the real targets to be intercepted. Finally, the radar installations themselves, as presently planned, would be highly vulnerable to a concentrated missile attack, leaving our ABM's helpless without sight.

Questions like these concerning the reliability of the ABM under fire have simply not been satisfactorily answered. The experts cannot agree among themselves, with as many maintaining that the system will not work as contending that it will. Again, the prudent course would seem to call for further research and testing.

However, if one were to lean over in favor of the Safeguard proposal and dismiss all doubts about its being a sieve rather than a shield, the next question to be answered is this: Assuming it would work as planned, how many lives would Safeguard save in the event of a nuclear attack upon the United States? The answer to this question is none—or next to none—since the weapon is not to be deployed around population centers, but rather in the empty places which surround our Minuteman sites. Therefore, it just does not figure that the Safeguard ABM will save American lives, unless the very existence of the system itself will somehow lessen the chances of a nuclear war, to the consideration of which I now turn.

Proponents of the ABM argue that its installation will help keep our nuclear deterrent credible by increasing the number of Minuteman missiles which would survive an enemy first strike, thus augmenting our retaliatory capability to inflict unacceptable damage on the attacker. The argument, however, overlooks the fact that, in order for the Soviet Union to achieve a first strike capability, she would have to launch enough accurate attack warheads to knock out all of our offensive forces at the same time. In considering such an improbable undertaking, it should be recalled that each of our separate offensive forces—Minuteman ICBM's, strategic bombers and Polaris submarines—has by itself the capacity to utterly destroy Russia. Even if, by some miracle, all these forces were to be suddenly destroyed—which is far beyond any known or imagined Soviet capability—we would still possess enough medium range missiles in Europe to inflict unacceptable damage on the Soviet Union.

Under these circumstances, I find it impossible to believe that an ABM weapon system needs now to be installed at two of our Minuteman bases, in order to enhance the credibility of our overall deterrent. When it comes to strategic intercontinental nuclear capability, we already have a preponderant lead. Figures supplied by the Department of De-

fense show the United States with a 2-to-1 advantage in delivery vehicles, that is, missiles and bombers—2,356 to 1,227—and a 3½-to-1 advantage in the number of warheads—4,200 to 1,200. Yet the astounding fact is that in an all-out nuclear war the delivery of only 400 one-megaton warheads by the Soviet Union and 500 by the United States would result in 150 million fatalities and the destruction of 75 percent of the industrial capacity of both nations. Considering the number of warheads now available, the United States maintains an overkill ratio of 8½ to 1, while the Russians have an overkill ratio of 2½ to 1.

Obviously, the critical need facing both great nuclear powers is to call a halt to this mad arms race, which merely increases the threshold of danger to each side. As I observed here in the Senate more than a year ago, long before the ABM became a major issue:

After 20 years of the nuclear arms race, the Russian and American people are not the most secure, but the most imperiled people in the world. If the funeral pyre each government has set for the other is ever ignited, both peoples will be laid out upon it.

How, then, will adding a new nuclear weapons system, the ABM, as another tier on the funeral pyre, possibly reduce the chances of its ignition? Since there is presently no need, as we have seen, to bolster the credibility of our overall deterrent, what effect can we expect from the deployment of the ABM at this time? First of all, we must expect such an action on our part to produce a predictable reaction on the part of the Russians. In strategic planning, the "greater than expected risk" is a principle used on both sides, and it leads planners constantly to anticipate action by the other side to compensate for an area of vulnerability or to seek temporary superiority.

As an example of the action-reaction cycle, we need only recall that several years ago the Soviets built the Tallinn defense system near Leningrad in response to our decision to develop a B-70 supersonic long-range bomber. When we discovered Tallinn through our reconnaissance satellites, we assumed it was an anti-ballistic-missile system and proceeded to develop MIRV—multiple warheads with separate targets—as a counterweapon. We later dropped the B-70 program after huge expenditures, but by that time both sides had entered a new stage of strategic arms competition as a result of their mutual misjudgments.

In the same manner, our decision to deploy the ABM will inevitably touch off a Soviet response that can only mean another costly round in the nuclear arms race—on both sides—thus increasing the burden and danger to each country without giving us, in the end, one whit of added advantage over the Russians.

Still, the proponents of the ABM seek to reassure us that our deployment of this new weapon system would not provoke a counter-response from the Russians. They argue that since the ABM is purely defensive, and since the Russians themselves once commenced, though apparently now have halted, the construction of an ABM defense around Moscow,

the Soviet Union would not regard as provocative our decision to go forward with the installation of an ABM system. Yet the very man, Defense Secretary Laird, who makes this argument in one breath, contradicts it in the next. For he cites the possibility that the Soviets may decide in the future to deploy an extensive ABM system as one basis for his conjecture that they might acquire a first strike capability by the mid-seventies. Why would not our ABM arouse the same fears on their part that theirs would arouse on ours?

To compound the error, administration spokesmen also rely on another assertion, which rests upon the very opposite assumption, namely, that the Russians will be so concerned about our ABM that we will be able to use it as a bargaining lever in our upcoming arms control negotiations with the Soviet Union. Now a person looking for a reason to support the ABM could accept the first argument or the second, but it simply is not logically possible to accept both.

However, it is not only possible but eminently reasonable to reject both. All previous experience shows that, far from facilitating agreement, the introduction of a new weapons system by one side invariably provokes the other side into matching or exceeding it.

This can be best perceived by putting the shoe on the other foot. How would we regard the actions of the Kremlin if the situation were reversed? Suppose that we, rather than the Soviet Union, had taken the most recent initiative in proposing arms-control talks. Suppose the Russians had reacted as, in effect, we did, with a "wait-up-a-bit" response. Then, as the talks were about to commence, suppose the Russians began to add a new nuclear weapons system to their already immense arsenal.

Can there be any doubt as to what our reaction would be? Why, we would at once conclude that Russian deeds betrayed their words, that the real Russian purpose was to gain the upper hand in the arms race, rather than to join hands in ending it.

No, though our deployment of an ABM might hamper, it could not enhance our chances for securing agreement on arms control; and, though it might enlarge, it could not diminish the risk of a nuclear war.

So I am forced to conclude that the construction of an ABM system at this time would be a grave mistake. While we still possess a commanding lead in nuclear weapons, let us explore the possibilities for ending this pointless, perilous arms race, thus ushering in a new era of hope for mankind. If this proves impossible, there will be time enough to add an ABM to our vast nuclear arsenal, after further research has perfected the weapon and made it more reliable.

For these reasons, Mr. President, I shall vote in favor of authorizing the money requested to continue the research and development work on the ABM, but I shall vote against the deployment of the weapon this year.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. FULBRIGHT. Mr. President, will the Senator yield?

The PRESIDING OFFICER. All time for today of the proponents of the amendment has expired.

Mr. CHURCH. Mr. President, the distinguished Senator from Mississippi extended 5 minutes of his time to accommodate me, and if that time has not expired, I would like to recognize the Senator from Arkansas and then the Senator from Colorado.

The PRESIDING OFFICER. That time also has expired.

Mr. TOWER. I yield 5 minutes to the Senator from Idaho.

Mr. CHURCH. I thank the Senator.

I yield to the Senator from Arkansas.

Mr. FULBRIGHT. I just wanted to say that I think the Senator has made the case extremely well. He has been very attentive in the hearings and has made a great contribution to the debate on this issue.

A moment ago, in the comments of one of the previous speakers, it was stated that, in the past, many people had said that the ABM would not work or that the Apollo would not work or that the hydrogen bomb would not work, and they have all proved that they could work.

I would ask the Senator if it is not a fact that in most of those cases it was not said that they would not work but it was said that they were of such low priority that they ought not be developed.

As to the allegation, for example, that certain great scientists had opposed the hydrogen bomb, I do not remember that they had opposed it—I do not believe they did—on the ground that it could not be made to work. They opposed it on the ground that we had no need for it and it ought not be developed because it would not contribute to the security of the country.

Is that the Senator's recollection?

Mr. CHURCH. I think the Senator states the case correctly, yes.

Mr. FULBRIGHT. In my opposition to the space program, at the level we have been spending funds for it, it was never because I believed that Apollo could not be made to work. It was because, first, I thought it was a crash program that was unjustified, that it was not so important that we should defer fundamental domestic programs in order to give that money to the space program. I believe the total space program now amounts to approximately \$25 billion. It was simply that I thought it had a lower priority than a number of things such as our cities and education and others.

I think that is true with the ABM. We are not opposing it because we do not think it would not work. I think it is very dubious that it would work under wartime conditions. I think it is very likely the system can be made to work in the sense that it will shoot down a missile that we know is coming from Vandenberg Air Force Base to Kwajalein and we are all set for it. I think they can make a gadget that will shoot it down.

Mr. CHURCH. I agree that in a laboratory test it probably can be made to work, but the experts are in sharp disagreement that it would work under fire.

Mr. FULBRIGHT. Under fire—that is the grave question.

So when we say it will not work, we have to be precise about what is meant. I mean in that sense, even if it worked, I think it would not be worth the money, compared with other needs and alternatives we have.

Mr. CHURCH. I agree with the Senator.

I tried to emphasize in my address this afternoon that even if it were to work, even if one were to dismiss all doubts as to its reliability under fire, still, the best interests of the United States call for a postponement of its deployment until we can ascertain whether progress can be made in arms control talks; for it is in the success of these talks that the real security of the country lies, that the real safety of the American people rests.

For these reasons, I think it would be a grave mistake for us to proceed at this time with the deployment of an ABM system.

Mr. FULBRIGHT. I think the Senator is absolutely correct.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. CHURCH. I yield.

Mr. DOMINICK. I was interested in listening to the speech, and, obviously, I do not draw the same conclusions that the Senator from Idaho does. But one thing really interested me, and that was the hypothetical question of what we would do if we had tried to get arms limitations, and so forth, and then all of a sudden they developed an ABM.

Actually, the Soviets developed their ABM system and started deploying it in 1963. As the Senator knows, we have not deployed anything on this side. We have authorized some funds. We have procured some leadtime parts. But we have not done any more than that over a period of 6 years. So we have not considered this as any kind of a massive threat, except in conjunction with the progressive growth of offensive weapons.

The PRESIDING OFFICER. The additional time allotted to the Senator from Idaho has expired.

Mr. DOMINICK. I yield 2 additional minutes to the Senator.

It seems to me that we should make this clear: An ABM, insofar as being any kind of threat to us, is not, unless it is combined with the capability to develop a first strike. We do not have that and have not made such an option available to ourselves. They have not yet done it, but they have the capability of doing it and are succeeding and are progressing in that direction. This is the only kind of situation I can see in which either side should be concerned about an ABM, which is purely defensive.

Mr. CHURCH. According to the best information I have, the Russians did commence the construction of an ABM system around Moscow, but it now appears that the construction has been stopped.

Mr. DOMINICK. No, it is still going on.

Mr. CHURCH. Perhaps the Senator has better information on that point than I possess.

However, my argument relates to the history of this nuclear arms race, which has been characterized by action and counteraction over the years. I think it

August 5, 1969

is very difficult to argue persuasively that the decision on our part to deploy a very expensive new ABM system would not produce a counter-reaction on the part of the Russians that would carry us into another round of this pointless, perilous arms race; and, in the end, we will find that we have not achieved one whit of added advantage over the Russians.

This history has already proved so discouraging that I think we should now try to see if we can bring a halt to it, on both sides; before we introduce another round.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. STENNIS. If the Senator desires, I can yield time.

Mr. DOMINICK. Will the Senator yield me 3 minutes?

Mr. STENNIS. I yield 3 minutes.

Mr. DOMINICK. I do not want to prolong this discussion unnecessarily, but we had four scientists before us, all of them knowledgeable in Soviet weaponry. Two were against the ABM and two were for it. In the process of doing that, we had a discussion with them on whether the Soviet Union's missile development had been a cyclical reaction; and even the ones who were against the ABM said that they did not see that any of the Russian weaponry had been a cyclical or mirror reaction to what the United States had done.

I could cite example after example. For example, we have not developed an FOBS, and they have. We have not developed an SS-9, and they have. We have not developed an ABM system, and they have. I could go on and on in this way.

The point I am making is that they do what they think is important from their own country's interests and not just in reaction to what we do.

Mr. CHURCH. With that interpretation I wholly disagree, because nobody has suggested that the action-reaction cycle consists of both sides duplicating the exact weapons of the other. The argument is that when one side introduces a new weapons system, the other side finds a counter to that system which may not involve its exact duplication at all.

Mr. DOMINICK. A mirror reaction.

Mr. CHURCH. An action-reaction cycle. I believe it would be very difficult to demonstrate that there has not been this action-reaction cycle during the past 20 years, as both the United States and the Soviet Union have amassed these immense nuclear arsenals which, I might add, are now so large that, if they are ever detonated in anger, the destructive force released would be the equivalent of a thousand pounds of TNT against the temples of every living inhabitant on earth. Is this not enough?

The PRESIDING OFFICER (Mr. ALLEN in the chair). The time of the proponents of the amendment has expired. The opponents of the amendment have 17 minutes remaining.

Mr. STENNIS. I thank the Presiding Officer. Is there anyone who desires to speak?

Mr. HART. The Senator from Indiana has been extremely patient. I wonder if the Senator would yield to him.

Mr. STENNIS. Does anyone wish to speak in opposition to the amendment at this time?

The PRESIDING OFFICER. The opponents have 16 minutes remaining.

Mr. STENNIS. Mr. President, I yield 10 minutes to the Senator from Indiana.

The PRESIDING OFFICER. The Chair recognizes the Senator from Indiana for not to exceed 10 minutes.

Mr. STENNIS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. STENNIS. Mr. President, after the time which each side has is exhausted, if the Senate is still in session, the time will not be controlled. Is that correct?

The PRESIDING OFFICER. After the time under the unanimous-consent agreement has expired, the pending question will be before the Senate with no limitation.

Mr. HART. Mr. President, would it be in order at this point to propound a unanimous-consent request to permit the Senator from Indiana to conclude his speech even though the time yielded to him may have been exhausted prior thereto?

Mr. DOMINICK. Mr. President, reserving the right to object, it is my understanding that when we finish with controlled time, all remaining time is uncontrolled.

Mr. HART. That would be true unless the Chair permitted the Senator from Indiana to proceed.

Mr. BAYH. Mr. President, the distinguished Senator from Mississippi has been most gracious to me. I do not wish to intrude on the time of those who oppose the amendment. If it is more convenient, I will wait.

The PRESIDING OFFICER. If all time is yielded back by the opponents, the matter would be before the Senate.

Mr. STENNIS. Mr. President, I would like to yield back the time. I am trying to protect someone who might come in late and desire time. I am glad to yield 10 minutes to the Senator from Indiana. At the end of that time, we can weigh the situation and perhaps permit the Senator to proceed.

The PRESIDING OFFICER. The Chair recognizes the Senator from Indiana for not to exceed 10 minutes.

DERAILING THE DANGEROUS ARMS RACE

Mr. BAYH. Mr. President, I thank the Senator. It is very considerate of the Senator from Mississippi to delve into his limited reservoir of time so that I can express myself on this critical matter.

Mr. President, the matter presently before the Senate has consumed almost a month of debate. I have listened very carefully to the statements on both sides. The debate has raged back and forth on the question of whether we should authorize funds for the deployment of the Safeguard anti-ballistic-missile system. I think the high quality of the Senate debate reflects on the very critical nature of the decision we are about to make. I have reached a decision only after long and careful study of every bit and piece of information available to me, as I am certain all of my colleagues have done.

As a result, it is my opinion that to authorize the deployment of the Safeguard anti-ballistic-missile system at this time would not be in the best interest of the United States.

It seems to me there are three critical areas of discussion that form the crux of any decision with regard to Safeguard.

First. Is there, in fact, a Soviet first-strike threat to our retaliatory ability?

Second. Is the Safeguard, as designed, technically competent to meet such a threat?

Third. What are the implications of Safeguard deployment for a meaningful arms limitation?

Are the Russians developing first-strike capability that threatens our missile arsenal? Mr. President, in order to fully appreciate Secretary Laird's assumptions about the Soviets, one must examine this concept of first-strike capability. According to the testimony of Dr. Foster, a first-strike capability would involve a decision to launch an all-out nuclear attack against another country with the assurance that 95 percent of the retaliatory power of the attacked nation would be destroyed simultaneously. In other words, the nation attacked would not have the ability to retaliate. Therefore, in any realistic assessment of first-strike capability one must consider not only the Soviet's missile arsenal, but we must weigh it against our own nuclear force.

Secretary Laird's categorical statement that the Soviet Union was, and I quote, "going for a first-strike capability—there is no question about that" has been challenged. In fact, Mr. Laird has since revised his estimate of the Soviet threat.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point an article entitled "Laird Narrows Scope of Warning on Soviet Threat," written by John W. Finney, and published in the New York Times.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LAIRD NARROWS SCOPE OF WARNING ON SOVIET THREAT

(By John W. Finney)

WASHINGTON, June 23—Under critical cross-examination by the Senate Foreign Relations Committee, Defense Secretary Melvin R. Laird retreated today from his statement that the Soviet Union was seeking a missile first-strike capability against the United States.

Testifying three months ago before the committee, Mr. Laird stated that the Soviet Union was "going for a first-strike capability—there is no question about that."

Recalled before the committee at a closed hearing today, he offered a new definition of Soviet intentions that was much narrower than his earlier suggestion that the Soviet Union was seeking to knock out the retaliatory capability of the United States.

In a prolonged argument with committee members that often involved semantics Secretary Laird finally took the position that all he was suggesting was that the Soviet Union was developing a "first strike weapon" with its SS-9 intercontinental missile. This weapon, in turn, he acknowledged, was aimed at only one portion of the United States retaliatory force, the Minuteman Missile.

August 5, 1969

SEE SEMANTIC VICTORY

Senator J. W. Fulbright, the committee chairman, and Senator Albert Gore, chairman of the disarmament subcommittee, immediately seized upon the Laird modification as at least a semantic victory in their battle to block deployment of the Administration's Safeguard missile defense system.

From the start of the anti-ballistic missile debate, Senator Gore observed, a key issue has been whether the Safeguard system was necessary to preserve the integrity of the American nuclear deterrent.

If the Soviet Union was intent on knocking out the American deterrent, as suggested in the earlier Laird "first strike" statement, the Tennessee Democrat said, then a justification could be made for the Safeguard system. But if the Soviet Union is developing only a capability to strike at just one part of the deterrent force, he said, "then the whole justification is pulled out—like Samson pulled out the pillars of the temple."

MOST DIFFICULT SESSION

Mr. Laird testified for nearly five hours before the committee in what Senator Fulbright, an Arkansas Democrat, was to describe as the "most difficult session" in his 25 years in Congress. The purpose of the closed door confrontation was to resolve whether there were differences between the intelligence community and the Pentagon over the Soviet missile threat.

In an unusual move, Secretary Laird insisted that he be accompanied by Richard Helms, the Director of Central Intelligence, a condition reluctantly accepted by the committee.

It was the first time in the memory of Central Intelligence Agency officials that the director had been drawn directly into a policy dispute between a Cabinet official and a Congressional committee. The effect was to silence Mr. Helms, who is known to have reservations about the Laird assessments of the Soviet missile threat.

HAD LITTLE TO SAY

Mr. Helms, according to members, had little to say before the committee and not a word afterward to reporters as he emerged from the committee room with Mr. Laird.

But Secretary Laird was not so reticent. After a brief appearance before television cameras outside the committee room, he hastened back to the Pentagon to hold an impromptu news conference at which he emphasized a new Soviet missile threat.

Following up a point first made by President Nixon at his news conference last week, Mr. Laird said the Soviet Union was testing a multiple warhead for its SS-9 missile that was capable of knocking out three Minuteman missiles simultaneously.

He thus opened a new intelligence dispute with the safeguard opponents. During the hearing, according to both Senators Fulbright and Gore, no evidence was presented indicating that the Soviet Union was testing independently targetable multiple warheads known as MIRV's, for multiple independently targetable re-entry vehicles.

LESS SOPHISTICATED

The presumption, therefore, was that the intelligence community believed the Soviet Union was testing less sophisticated multiple re-entry vehicles, known as MRV's, which fall in a cluster and are not independently targeted.

At his Pentagon news conference, Mr. Laird declined to be drawn into a dispute over the multiple warheads being tested by the Soviet Union were independently guided. The important point, he said, is that the three-part multiple warhead is falling into a variable triangular pattern that coincides with the way Minuteman silos are deployed.

Another semantic difference developed between Mr. Laird and the committee over whether the Pentagon and the intelligence

community disagreed over the Soviet missile threat.

Senator Gore emerged before the hearing was completed to assert before the television cameras that the United States Intelligence Board—the top-level, interagency body that coordinates intelligence estimates—had made no finding supporting Mr. Laird's statement that the Soviet Union was seeking a first-strike capability.

DISAGREEMENT DENIED

An hour later before the cameras, Mr. Laird asserted that there was "no disagreement" within the intelligence community on intelligence "facts" about the Soviet Union and that "there is no question about interpretation" of these facts.

While the Intelligence Board may have not made any findings supporting the Laird conclusions, committee members, when pressed by reporters, acknowledged that the board had not made any findings contradicting the Laird first-strike assessment.

The point was emphasized at the Pentagon by Mr. Laird, who said the board had "never even considered" whether the SS-9 missile was a first-strike weapon or whether the Soviet Union was striving for a first-strike capability.

"They don't get into evaluations such as that," he explained.

Probably the biggest haggles that developed between the committee and Mr. Laird—one that consumed nearly two hours—was over the definition of "first strike," particularly as it was used by the Secretary when he told the committee on March 21 that the Soviet Union was "going for a first-strike capability."

FINDS IT NARROWER

Senators Gore and Fulbright observed that the term "first strike" used to mean the ability to knock out or destroy the retaliatory capability of an opponent. But now, Senator Fulbright said, Mr. Laird is offering an interpretation of first strike that is "much narrower and more restricted than it was originally."

Mr. Laird's new definition, the Senator said, was somewhat confusing because the Secretary offered "variations from minute to minute that were incredible." But as now used by Mr. Laird, he said, the term "first strike" seems to have the relatively restricted meaning that the SS-9 is a weapon that has a capacity to destroy a missile in its silo.

This interpretation seemed to be supported by Mr. Laird after the meeting. Asked by reporters for his definition of first strike, he said it was the difference between a first-strike weapon that can be used against "hardened" targets, such as missile silos, and second-strike weapons that can be used against "soft" targets, such as cities. He then noted that "first-strike weapons can also be used as second strike weapons."

Mr. BAYH. Mr. President, one must wonder whether the first-strike threat originally postulated by the Secretary was not manufactured simply to justify a political decision to deploy Safeguard; witness the periodic leaks of "new, secret information" about Russian missile developments which have, on investigation, turned out to be old information in a new suit of clothes.

First, there was the old bugaboo about Galosh. That bubble was pricked when it was discovered that the Russians had experienced enough difficulties to discontinue deployment with only about 70 missile launchers in place. Next came the "startling revelations" about the SS-9 and the Secretary's projections about Soviet production. Well, the SS-9, as we were later to learn, was known to our

Pentagon planners for some time. Former Assistant Secretary of Defense Enthoven testified that it was always regarded as a second-strike weapon by our defense planners. In fact, the SS-9 was also known to New York Times reporter Andrew Hamilton. In an appropriately entitled article "The Arms Race: Too Much of a Bad Thing" in the New York Times Magazine of October 6, 1968, Mr. Hamilton described the SS-9 as a very large missile with a payload comparable to that of the U.S. Titan II—it is appropriate to note that the United States is planning to phase out its 54 Titan II's—and it is believed to have good accuracy. But, nobody would have ever expected it to have the nearly perfect accuracy attributed to it by Secretary Laird in order to justify his "first strike" assertion; an accuracy, I might point out, that has steadily been improving as the administration is required to answer new questions about the unlikely prospect that the SS-9 force could serve as a "first strike" weapons system. From an original estimate of accuracy for SS-9 of a CEP—circular error probability—of one-half mile, the Secretary has, upon reflection, now attributed to the SS-9 the amazingly accurate CEP of one-quarter mile. This assessment, as far as I can determine, and given the likely state of guidance technology, is extremely unrealistic.

At the recent closed session we debated back and forth the important question of the SS-9's accuracy. Legitimate doubts were raised about the Secretary's assessment, and I want the record to show that. The intelligence community, having studied the SS-9, has offered us a less dangerous assessment of this weapon than the Defense Department.

So much for Russia's own offensive capabilities. Now let us analyze the Secretary's most inflated estimates of that capability in its relationship to the entire U.S. nuclear arsenal.

The PRESIDING OFFICER. The time of the Senator from Indiana has expired.

Mr. STENNIS. Mr. President, may I inquire of the Senator from California (Mr. MURPHY), does he wish time?

Mr. MURPHY. Mr. President, I have been waiting here for some time now, waiting for the controlled time to expire.

The PRESIDING OFFICER. The Chair would advise he Senator from California that the time has not yet expired.

Mr. STENNIS. The Senator from California wishes to speak on another matter.

The PRESIDING OFFICER. The Chair would inform the Senator from Mississippi that he has 6 minutes remaining.

Mr. STENNIS. Mr. President, with the understanding, then, that the Senator from California will be recognized at the end of the remarks of the Senator from Indiana, I yield the remainder of my time to the Senator from Indiana.

Mr. MURPHY. I am perfectly happy to let the Senator from Indiana continue. May I inquire of the Senator from In-

August 5, 1969

diana how much longer he expects to speak?

Mr. BAYH. Not longer than 10 or 15 minutes at the most.

Mr. MURPHY. Mr. President, I am glad to wait. I promise not to elongate the time by any questions.

Mr. BAYH. I will be glad to answer any questions the Senator from California may have.

Mr. President, if we assume that the Soviet first-strike capability is there, then I think we need to look at the targets towards which it would be directed. As I noted earlier, to be successful a Soviet first strike would involve the ability to mount, with the utmost assurance of success, a coordinated attack that would effectively cripple, first, 1,054 land-based ICBM's; second, 645 SAC long-range bombers; third, 41 Polaris/Poseidon submarines carrying a total arsenal of 656 missiles; and fourth, the more than 7,000 tactical nuclear weapons deployed in Europe and with the 7th Fleet. Numerically, such individual components of our nuclear arsenal as the Minuteman force, the Polaris fleet, and our SAC bombers alone are adequate second-strike systems.

If the Soviets are able to destroy all of our Minutemen, we would still have at least two other forces capable of a significant secondary response.

Considered in this light, Mr. President, the statement that Safeguard is needed as protection for our ICBM's against a Soviet first strike appears to be greatly inflated. On a numerical basis alone, as Dr. Ponofsky noted, it is "implausible" that the Russians could launch a successful preemptive attack on our land-based ICBM's and strategic bombers. In addition, I think it is instructive to recall statements of Rear Adm. Levering Smith, director of Navy strategic projects. Admiral Smith was recently quoted as saying, in regard to the assured destructive capability of our sea-based missile force:

I am quite positive that Russian submarines cannot and are not following any of our Polaris submarines underwater. I am also quite positive that the new generation of Russian submarines that are getting close to operational status, that are now being tested, will also not be able to follow our Polaris submarines.

Mr. President, I simply do not believe that the Soviet threat is so precise or realistic that we must react by deploying Safeguard.

But, let us assume though, for the sake of argument, that Secretary Laird's dire predictions are accurate and as we move into the 1970's the Soviet threat to our ICBM's does grow at the projected rate. By January 1975, therefore, we may find that our Minuteman force is vulnerable. If, at the same time, the Safeguard system was operational and could be expected to function perfectly, it is my contention that our Minuteman would be as vulnerable with Safeguard as without it—but only a few months later.

What I mean is, if we build Safeguard, the Soviets would simply increase their offensive capability so as to overwhelm that system.

The precise estimate for overcoming phase I of Safeguard is 3 additional

months of offensive missile production; and 1 year of such production for saturation of a fully completed phase II Safeguard system. That the Soviets would follow such a reasonable and inexpensive course to negate Safeguard is made more plausible by the fact that our own Department of Defense planners have programed a like response to the limited Soviet ABM system known as Galosh. Sheer exhaustion of a maginot line-like defense, therefore, would be the likely reaction to all ill-advised and premature decisions to deploy Safeguard.

Mr. President, having said all this, one must now turn to the question of whether this hybrid ABM system, whose rationale and mission has undergone frequent modifications, would be an appropriate response—appropriate in the sense that it offers us both greater security and at the same time does not escalate the arms race. From all of the scientific evidence available, the only conclusion that one can reach is that Safeguard is not really safe at all.

As the debate draws to a close, both the opponents and the supporters of Safeguard have relied increasingly on the expert testimony of scientists and engineers. For the past 2 weeks or so, we have been deluged by vast amounts of technical information on the workability of Safeguard. It appears to me, Mr. President, that the scientific community opposing Safeguard, including in its ranks, Dr. James Killan, Dr. George Kistiakowsky, Dr. Jerome Welsner, and Dr. Donald Hornig—former science advisers to Presidents Eisenhower, Kennedy, and Johnson—have presented convincing evidence that Safeguard is not defense but delusion. The vulnerability of the missile site radar, the inadequate number of Sprint interceptor missiles, and the difficulties likely to be encountered in the operation of the still-to-be-built world's largest computer have been dismissed with a simple "we will work it out."

Let us look at these important questions that remain unanswered:

First. The vulnerability of missile site radar. The multidirectional faces added to the missile site radar does not alter the fact that the radar system incorporated into Safeguard is identical to the system designed for the Sentinel ABM—despite the fact that the two systems have radically different purposes. The vulnerability of MSR, as the distinguished senior Senator from Missouri has pointed out, results not simply from the softness of the site—it is much softer than an ICBM silo—but from the inadequate number of Sprint interceptors planned as MSR protection. In fact, it is not unlikely that the Soviets would target their SS-11's, not their SS-9's, at the radar sites and thus free the more effective and larger SS-9 for attack on our Minuteman silos. This does not even take into account the likelihood of radar blackout in the event of a nuclear explosion in the atmosphere and the use of penetration aids and decoys to render the radar useless.

Second. The number of Sprint interceptor missiles is inadequate for both MSR cover and interception of the large numbers of offensive weapons that would

be involved in a first strike. This is a critical point because, as Secretary Laird himself has admitted, the long-range Spartan is not considered as a very reliable component of Safeguard. The Secretary has said that Safeguard is primarily based on the Sprint missile backup. Yet, the plan for phase I deployment calls for only 75 Sprints at each of the two Minuteman bases—bases that house approximately 350 ICBM's. It is not unlikely, therefore, that the small number of interceptors could be negated by sheer exhaustion. After all, that is what Dr. Foster has indicated is our own policy in regard to the Galosh.

Third. The functioning of the computer. The Safeguard system relies on a computer whose exact task would remain undefined until an actual attack occurred. The danger in relying on a software system that could never be tested under realistic conditions, and for which we would have no prior programming experience, is that the margin of time is so short that, in reality, the decisionmaking process would rest with the untested computer.

Yet, we have been assured by the administration that the Safeguard's antiballistic missiles would never be activated without the specific approval of very high authorities. At the same time, the administration has continually claimed for the Safeguard an ability to respond to any surprise attack. With total reliance on an untested computer, one must surely wonder how these two requirements can be met simultaneously with any reasonable degree of assurance.

Mr. President, to sum up, it seems to me that the reliability of Safeguard is questionable under the best of circumstances. In the event of a Soviet first strike, as the Senator from Arkansas and the Senator from Idaho have indicated, its effectiveness is more than just suspect.

If the protection of our deterrent is a valid objective, as both sides have claimed, then it is too important a task to be left to blind fate—and that is the promise of Safeguard.

Mr. President, I must confess that whether these technical problems can be solved or not is, to my mind, only one of the central points to be considered. The Safeguard, after all, is not an end in itself. At issue here is a much, much larger question, the question of how to derail the dangerous and spiraling nuclear arms race that threatens to destroy mankind.

I do not think it is an exaggeration to say, Mr. President, that today we stand at a critical juncture in the brief but turbulent history of our nuclear rivalry with the Soviet Union. We are, in fact, on the eve of a new round in the seemingly uncontrollable arms race. Within the past year or so, both superpowers have begun to experiment with a new generation of nuclear weapons. If deployed, these weapons systems—and I count Safeguard among them—will only upset the already precarious strategic balance. Any action involving the deployment of an ABM system surely will produce a Russian reaction. Most likely, the Soviet Union will react by speeding up its MIRV program.

The immediate result will be the collapse of the planned SALT negotiations and continued buildups on both sides. Hopefully, a new strategic balance will be reestablished—but that will only come at a much higher level on the nuclear terror scale and, as Prof. George Rathjens pointed out, this “would simply make a nuclear exchange more probable, more damaging or both.” The end result, therefore, is less security for everyone, and that is the delusion of defense in the nuclear age. Less nuclear weapons, not more, is the key to the survival of mankind.

Mr. President, I ask unanimous consent that at this point in my remarks there be printed in the RECORD an article by the highly respected columnist of the Washington Post, Mr. Marquis Childs, describing the classic action-reaction cycle that deployment of Safeguard will produce.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHANCE OF NUCLEAR RACE PAUSE NOW DIM
IF IT HASN'T VANISHED

(By Marquis Childs)

The seventeenth multiple-warhead test shot will shortly be fired down the Pacific range. For a year now the MIRV (Multiple Independently Targeted Re-entry Vehicle) tests have averaged something more than one a month. The expectation in the Pentagon is that they will continue for at least another year. The average cost of each shot is \$5 million.

What this means is difficult to convey if only because of the extraordinary complexity of these weapons. The questioner comes away with one overpowering impression: The momentum of the technology itself is irresistible. Once put in motion it cannot be stopped.

Therefore, any effort to agree with the Soviets on a moratorium to arrest multiple-warhead development is almost certain to fail. This is the view of the Pentagon technicians directing the MIRV tests.

They may be wrong, these dedicated technicians. They may eventually be overruled. But if they are correct, then the arms limitation talks with the Soviet Union supposedly due to begin in mid-August will have relatively little meaning. They will be a charade which, for differing political reasons, the negotiators on each side of the table will be willing to act out.

The reason, of course, is that once you have locked from three to 10 separate, independently targeted warheads on the top of a Minuteman or a Poseidon missile instead of one warhead, the hope of mutual inspection is gone. A crew of inspectors would have to take off the top of the missile to see how many nuclear shots it contained. The surveillance satellites that now can spot every Minuteman silo and every Russian ICBM would be of no avail.

That kind of on-site inspection the Soviets would never agree to, having in the past rejected any encroachment inside their borders. Nor would this country agree to a violation of secrecy that surrounds the nuclear arsenal from all but those with the highest security clearance.

How did it happen? How did this technology gain such momentum that, if the technicians are correct, there is no stopping it? They trace the start of MIRV and MRV (Multiple Re-entry Vehicles not independently targeted), the latter already deployed on Polaris missiles, back to 1963. It was then that the first substantial evidence of Soviet deployment of the antiballistic missile system around Moscow known as Galosh was

verifiable. The multiple warhead was a move to counter ABM defenses.

Progress was rapid in the early stages, since targeting 10 warheads, each aimed at targets several hundred miles apart, was not essentially different from targeting one warhead. A year of actual testing on Pacific and Atlantic ranges has proved out MIRV. The word in the Pentagon is feasible. It works. The problems remaining in the year or more ahead are largely engineering problems.

This is a classic example of the escalation of the arms race. Galosh, which according to Central Intelligence Agency estimates has never been completed because of doubts that the Soviet ABM is workable, touched off MIRV. And there is reason to believe that rapid American advances on MIRV stimulated the Soviets to step up deployment of the SS-9, the blockbuster missile of up to 25 megatons.

Regardless, however, of what immediately touched off what, MIRV was inherent at the outset in the technology of missilery. This is the inevitability of the weapons revolution, the flow of technological change that seems to the men who work with it to be as unfeeling and relentless as the tides.

They talk in the same way of how impossible it would be to police an agreed moratorium on the development of MIRVs. You would have to, they say, ban all missile shots of whatever kind. For any shot could be a form of cheating. The Joint Chiefs of Staff, it is hardly necessary to add, oppose any effort to get an agreed moratorium on MIRV. And President Nixon has said that the United States will not stop testing unilaterally.

A year ago the broad principles of a negotiating agreement had been initialed by both sides. Secretary of Defense Clark Clifford and the others who worked out those principles expected in the first round of arms limitation talks to call for mutual disclosure of the progress made on multiple warheads. The invasion of Czechoslovakia put an end to that hope. In the year that has passed the United States has made rapid strides in nuclear armaments and so, one must assume, has the Soviet Union. The prospect of mid-August for at least a pause in the race is dim, if not vanishing.

MR. BAYH. Mr. President, what troubles me in looking back over this scenario is the unlikely prospect of ever establishing a new strategic balance once a multiple independently targeted reentry vehicle is perfected. One must even doubt whether mutual deployment of MIRV equipped ICBM's would produce a stable strategic balance. In fact, with relatively equal MIRV deployments, neither nation would have an assured second strike capability and the arms race would soon be on as the two nuclear powers rushed to develop a more mobile missile force. With this emphasis on mobility will come uncertainty, and that is the one factor a stable strategic plan cannot cope with. At present, the relatively stable nature of the arms balance is due, in part, to the relative ease with which missile arsenals can be accurately identified. In the event of MIRV and mobile missile deployments, however, accurate estimates would be extremely difficult and this mutual uncertainty is bound to lead to a continual offensive build-up.

The supporters of Safeguard have argued that, since it is a “defensive system,” it would not provoke the Russians; at least not to the extent that their reaction would destabilize the present strategic arms balance. I might add on this point, Mr. President, that the present strategic arms balance is favorable to

the United States. It would be in our own best interest, therefore, and in the interest of all, to avoid escalating the arms race at this point. As former Secretary of Defense Clark Clifford recently explained:

The hard fact is that we may never again expect to be in as favorable a position as we now enjoy for entry into talks about a freeze in strategic nuclear armaments. Technological developments may well make any arms limitation agreement more difficult to develop and enforce a year from now, or six months from now, than it is today.

The action-reaction cycle likely to be inspired by the deployment of Safeguard, as I noted earlier, will have grave consequences for arms control. The dynamics of the arms race and the history of the action-reaction cycle both point to the inescapable conclusion that the Soviets will feel compelled to increase their offensive capabilities to the full extent of offsetting a Safeguard system that they must judge to work perfectly—whether it will or not. As history shows, it was precisely this type of action-reaction cycle that led the Soviets to proceed with the Tallinn air defense system after it appeared that the U.S. would launch a full-scale B-70 bomber program. And as our own experience shows, the development of penetration aids, the decision to proceed with Minuteman III and Poseidon and, most importantly, the development of a MIRV capability were all responses to the Soviet's partial deployment of an ABM system, the Galosh, around Moscow.

This brings me to the most questionable argument of all being advanced to support the Safeguard; namely, that we must have an ABM system because the Russians have one. The so-called Galosh ABM system that partially rings Moscow, according to all accounts, and that includes the testimony of Secretary Laird and Dr. Foster, is inadequate as a damage limiting defense. In fact, the evidence we have is rather compelling that the Russians have discontinued deployment of this obsolete Nike-Zeus-like ABM system. A similar Nike ABM system for the United States, it will be recalled, had been vetoed by President Eisenhower and President Kennedy.

This misguided notion that what they have, we must have has now been carried one step further, to the point that the pro-Safeguard forces have claimed that the President must have an ABM system to strengthen his hand during the SALT negotiations. But, as I pointed out, at present arms levels we already will be entering these talks from a position of strength. And, in view of the complications surrounding Safeguard, it seems apparent that we would be buying, at a great cost, a false card that would have significantly limited value and would severely complicate the negotiations.

CONCLUSION

Mr. President, those of us who are supporting the Cooper-Hart amendment to defer deployment repeatedly have said that protection of our Minutemen is a necessary objective of our second-strike policy. We believe that the present state of the art is such that deployment of Safeguard, as designed, is premature. We

close proximity to Indian reservations necessary for the education of Indians residing on any such reservation. Any such contract entered into by the Secretary pursuant to this joint resolution shall contain provisions requiring such contracting agency to—

(1) provide Indian students attending such facilities in any school district the same standard of education as provided non-Indian students in such district;

(2) operate such facilities as a part of the public school system and to provide a program of instruction meeting the standards required by such State or local educational agency for other public schools under the jurisdiction or control of such agency; and

(3) meet, with respect to such facilities acquired or constructed pursuant to such contract, the requirements of the State and local building codes, and other building standards set by any such State or local educational agency for other public school facilities under its jurisdiction or control.

Sec. 2. For the purpose of carrying out the provisions of this joint resolution, there is authorized to be appropriated, for the fiscal year commencing July 1, 1970, the sum of \$7,500,000, and for each of the two next succeeding fiscal years, the sum of \$7,500,000, such funds to remain available until expended.

ADDITIONAL COSPONSORS OF BILLS AND JOINT RESOLUTION

S. 410

Mr. MOSS. Mr. President, I ask unanimous consent that at the next printing, the name of the senior Senator from Idaho (Mr. CHURCH) be added as a cosponsor of S. 410, to amend the Tariff Schedules of the United States with respect to the rate of duty on whole skins of mink.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2371

Mr. MOSS. Mr. President, I ask unanimous consent that, at the next printing, the name of the junior Senator from South Carolina (Mr. HOLLINGS) be added as a cosponsor of S. 2371, to provide an equitable system for fixing and adjusting the rates of compensation of wage board employees.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2422

Mr. BAYH. Mr. President, I ask unanimous consent that, at the next printing, the names of the senior Senator from Nevada (Mr. BIBLE), the junior Senator from Nevada (Mr. CANNON), the Senator from Alaska (Mr. GRAVEL), the Senator from Oregon (Mr. PACKWOOD), the Senator from South Carolina (Mr. THURMOND), and the Senator from Ohio (Mr. YOUNG), be added as cosponsors of S. 2422, to amend the Higher Education Act of 1965 to provide that the Secretary of Health, Education, and Welfare shall prescribe the maximum rate of interest for the students insured loan program.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2470

Mr. SCOTT. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from Indiana (Mr. BAYH) be added as a cosponsor of S. 2470 to amend the Food Stamp Act of 1964 to authorize elderly persons to exchange food stamps under certain cir-

cumstances for meals prepared and served by private nonprofit organizations, and for other purposes.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2518

Mr. HARTKE. Mr. President, I ask unanimous consent that, at the next printing, the names of the Senator from Hawaii (Mr. FONG) and the Senator from Tennessee (Mr. BAKER) be added as cosponsors of the S. 2518, to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2721

Mr. JAVITS. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from Iowa (Mr. MILLER) be added as a cosponsor of S. 2721, the Insured Student Loan Emergency Amendments of 1969.

The PRESIDING OFFICER. Without objection, it is so ordered.

S.J. RES. 120

Mr. MOSS. Mr. President, I ask unanimous consent that, at the next printing, the names of the Senator from North Dakota (Mr. BURDICK) and the Senator from Montana (Mr. METCALF) be added as cosponsors of Senate Joint Resolution 120, providing for the preparation and submission to the Congress of a master ground transportation plan for the United States.

The PRESIDING OFFICER. Without objection, it is so ordered.

SENATE RESOLUTIONS 230, 231, 232, 233, 234, 235, 236, 237, AND 238—RESOLUTIONS REPORTED BY THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND, from the Committee on the Judiciary, reported the following original resolutions, which were referred to the Committee on Rules and Administration:

S. RES. 230

Resolved, That Senate Joint Resolution 40, 91st Congress, agreed to February 18, 1969 (authorizing an investigation of antitrust and antimonopoly laws and their administration), is hereby amended on line 5, page 3 by striking out "\$577,500" and inserting in lieu thereof "\$806,300".

S. RES. 231

Resolved, That Senate Resolution 42, Ninety-first Congress, as agreed to February 17, 1969 (authorizing a complete study of any and all matters pertaining to constitutional amendments), is hereby amended by striking out "\$120,000" and inserting in lieu thereof "\$124,000".

S. RES. 232

Resolved, That Senate Resolution 43, Ninety-first Congress, agreed to February 17, 1969 (authorizing a complete study of any and all matters pertaining to constitutional rights), is hereby amended by striking out "\$200,000" and inserting in lieu thereof "\$215,000".

S. RES. 233

Resolved, That Senate Resolution 44, 91st Congress, agreed to February 17, 1969 (authorizing a continuing of the study of criminal laws and procedures), is hereby amended on line 15, page 2, by striking out

\$120,000 and inserting in lieu thereof \$145,000.

S. RES. 234

Resolved, That the limitation of expenditures under Senate Resolution 46, 91st Congress, 1st Session, relating to the internal security of the United States, agreed to February 17, 1969, is hereby increased by \$65,000, and such sum, together with any unexpended balance of sums previously authorized to be expended under such resolution, shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee and covering obligations incurred under such resolution on or before January 31, 1970.

S. RES. 235

Resolved, That Senate Resolution 47, Ninety-first Congress, agreed to February 17, 1967 (authorizing study and examination of the Federal judicial system), is hereby amended on page 2, line 23, by striking out "200,000" and inserting in lieu thereof "\$209,000".

S. RES. 236

Resolved, That section 4 of Senate Resolution 48, Ninety-first Congress, first session, authorizing an investigation of juvenile delinquency in the United States, agreed to February 17, 1969, is amended by striking out "\$225,000" and inserting in lieu thereof "\$250,000".

S. RES. 237

Resolved, That Senate Resolution 51, Ninety-first Congress, as agreed to February 17, 1969 (authorizing a complete study of any and all matters pertaining to revision and codification of the statutes of the United States), is hereby amended by striking out "\$48,900" and inserting in lieu thereof "\$52,900".

S. RES. 238

Resolved, That Senate Resolution 52, Ninety-first Congress, agreed to February 17, 1969 (authorizing a complete study of the separation of powers between the executive, judicial, and legislative branches of Government provided by the Constitution) is hereby amended by striking out "\$95,000" and inserting in lieu thereof "\$105,000".

ADDITIONAL COSPONSOR OF CONCURRENT RESOLUTION

S. CON. RES. 34

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from South Dakota (Mr. MCGOVERN) I ask unanimous consent that, at the next printing, the name of the Senator from Texas (Mr. YARBOROUGH) be added as a cosponsor of Senate Concurrent Resolution 34, to establish a national policy on Indian affairs.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH—AMENDMENTS

AMENDMENTS NOS. 114 THROUGH 116

Mr. NELSON (for himself, Mr. GOOD-ELL, Mr. HUGHES, and Mr. PROXMIER) submitted three amendments, intended to be proposed by them, jointly, to the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels,

and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve for each Reserve component of the Armed Forces, and for other purposes, which were ordered to lie on the table and to be printed.

(The remarks of Mr. NELSON when he submitted the amendments appear earlier in the RECORD under the appropriate heading.)

AMENDMENT NO. 117

Mr. YARBOROUGH (for himself, Mr. PELL, Mr. HUGHES, and Mr. PROXMIRE) submitted an amendment, intended to be proposed by them, jointly, to Senate bill 2546, supra, which was ordered to lie on the table and to be printed.

(The remarks of Mr. YARBOROUGH when he submitted the amendment appear earlier in the RECORD under the appropriate heading.)

AMENDMENTS NOS. 118 AND 119

Mr. HARTKE (for himself, Mr. PROXMIRE, Mr. HUGHES, and Mr. PELL) submitted two amendments, intended to be proposed by them, jointly, to Senate bill 2546, supra, which were ordered to lie on the table and to be printed.

(The remarks of Mr. HARTKE when he submitted the amendments appear earlier in the RECORD under the appropriate heading.)

AMENDMENT NO. 120

Mr. HARTKE (for himself, Mr. PROXMIRE, and Mr. HUGHES) submitted an amendment, intended to be proposed by them, jointly, to Senate bill 2546, supra, which was ordered to lie on the table and to be printed.

(The remarks of Mr. HARTKE when he submitted the amendment appear earlier in the RECORD under the appropriate heading.)

AMENDMENT NO. 121

Mr. PELL (for himself, Mr. HUGHES, and Mr. PROXMIRE) submitted an amendment, intended to be proposed by them, jointly, to Senate bill 2546, supra, which was ordered to lie on the table and to be printed.

(The remarks of Mr. PELL when he submitted the amendment appear earlier in the RECORD under the appropriate heading.)

AMENDMENT NO. 122

Mrs. SMITH submitted an amendment, in the nature of a substitute, intended to be proposed by her to the amendment proposed by Mr. HART (for himself, Mr. COOPER, and others), No. 101, to Senate bill 2546, supra, which was ordered to lie on the table and to be printed.

(The remarks of Mrs. SMITH when she submitted the amendment appear later in the RECORD under the appropriate heading.)

AMENDMENT NO. 123

Mr. PROXMIRE. Mr. President, I submit an amendment to the military procurement authorization bill, pending in the Senate, which would have substantial sums of money and would curtail the Department of Defense trend toward pursuing a policy of disengaging

itself from controlling costs incurred by contractors and being charged under Government contracts. I refer to those efforts involved in what is known as independent research and development, or I.R. & D., bid and proposal, and other technical engineering activities. The costs of these efforts are included in the contractors' overhead and are allocated to the contracts they have with the Government.

The Department of Defense pays to contractors each year over one-half billion dollars for such engineering efforts over which DOD has very little, if any, control. Furthermore, these costs have been steadily increasing at an alarming rate each year. For example, in 1963 DOD paid \$459 million while NASA paid \$57 million; in 1968 DOD paid \$685 million and NASA paid \$131 million. In both years these sums of money were paid to less than 100 major defense contractors. While NASA is not involved in this bill, Mr. President, that agency follows the same policy as DOD, and the combined figures for the two more accurately portray the total picture.

Contractors have a great incentive to incur these costs. The efforts involved provide a basis for developing new and improved products, for selling these products, and otherwise improving the firm's capability to acquire new business. Those contractors that do a large share of their business with DOD are in an exceptionally good position in that they know that DOD will pay a large portion of these costs without controlling the efforts or demanding any share of the benefits obtained by the contractors. Because the contractors know the Government will bear a major portion of the costs, they have little reason to economize in these efforts.

DOD officials do very little reviewing contractors' I.R. & D. programs and, therefore, are in no position to determine their worthiness. In fact, these same officials find it necessary to ask the contractors each year to submit a list of benefits that have resulted from their I.R. & D. programs to provide support for justifying continuance of the program.

DOD's philosophy in not attempting to control I.R. & D. costs is that such costs are a necessary element of doing business, and that the Government should bear its share. DOD has recognized, however, that there is some need to better scrutinize these expenditures by contractors whose work is predominantly or substantially with the Government. Consequently, a system of negotiating advance agreements to define the maximum extent of the Government's liability was developed. However, once an advance agreement has been reached the contractors are free to change the content of their I.R. & D. programs without even making such changes known to DOD.

DOD has recognized that its system needs improvement, but the solution DOD is currently advocating is to completely eliminate any semblance of control by instituting a formula basis for determining the reasonableness of contractors' I.R. & D. and bid and proposal costs. Under this system no contractor, regardless of the degree of business he

does with DOD, would be required to have his proposed programs scrutinized in any way prior to incurring costs that will be reimbursed by the Government.

Mr. President, this amendment is necessary if the taxpayers are to be saved from financing contractors' programs that may be commercially oriented. In these times of economic stress it is necessary that we get the best possible return on every dollar of Government expenditures. In my opinion, this cannot be done by letting contractors decide on their own how they should spend the Government's money.

My amendment would require DOD to review contractors' proposed I.R. & D. programs and select those projects which would appear to benefit the contract work and which, therefore, the Government would be willing to finance. This amendment would eliminate any Government payments for work that would only further the contractors' own private interests.

I ask unanimous consent that the amendment be printed in the RECORD.

The PRESIDING OFFICER. The amendment will be received and printed, and will lie on the table; and, without objection, the amendment will be printed in the RECORD.

The amendment (No. 123) is as follows:

At the end of the bill add a new section as follows:

"Sec. 402. No part of the funds authorized by this Act shall be available for payment, directly or indirectly, to any contractor under a negotiated contract for any research and development work, bid and proposal expense, or other technical effort unless such work, expense, or other effort is specifically authorized under the terms of the contract or unless such work, expense, or effort is determined by the contracting agency to be of direct or indirect benefit to the work being performed under the contract."

AMENDMENT NO. 124

Mr. PROXMIRE. Mr. President, I am submitting today an amendment to the Military Procurement Authorization Bill which would authorize the Comptroller General of the United States to conduct a continuing study and review of the profits made by contractors and subcontractors on contracts entered into by the Department of the Army, the Department of the Navy, the Department of the Air Force, and the National Aeronautics and Space Administration, and on contracts entered into by the Atomic Energy Commission to meet requirements of the Department of Defense.

There has been much discussion of defense profits in recent years. Charges and countercharges have been made on this controversial subject. Critics maintain that defense profits are too high. The Defense Department denies these charges. Last November the Subcommittee on Economy in Government conducted hearings on military procurement problems including defense profits. We found that the Department of Defense cannot accurately ascertain what profits are in defense procurement. The fact is that there is little up-to-date knowledge about this subject. Elmer Staats, Comptroller General, testified that no complete

August 5, 1969

CONGRESSIONAL RECORD—SENATE

S 9141

and comprehensive study on this subject has been made.

In view of the enormous sums of money spent on defense contracts there can be no excuse for not knowing whether defense profits are in fact excessive. The public deserves a better account of what is being done with its money than the Government is now able to provide.

For this reason a comprehensive investigation of defense profits is essential. My bill authorizes the General Accounting Office to conduct such an investigation and to provide this legislative agency with the additional statutory authority to do so.

I ask unanimous consent that the amendment be printed in the RECORD.

The PRESIDING OFFICER. The amendment will be received and printed, and will lie on the table; and, without objection, the amendment will be printed in the RECORD.

The amendment (No. 124) is as follows:

AMENDMENT NO. 124

At the end of the bill add a new section as follows:

"Sec. 402. (a) The Comptroller General of the United States (hereinafter in this section referred to as the 'Comptroller General') is authorized to conduct a continuing study and review of the profits made by contractors and subcontractors on contracts entered into by the Department of the Army, the Department of the Navy, the Department of the Air Force, the Coast Guard, and the National Aeronautics and Space Administration under the authority of chapter 137 of title 10, United States Code, and on contracts entered into by the Atomic Energy Commission to meet requirements of the Department of Defense.

"(b) Any contractor or subcontractor referred to in subsection (a) of this section shall, upon the request of the Comptroller General, prepare and submit to the General Accounting Office such information as the Comptroller General determines necessary or appropriate in conducting the study and review authorized by subsection (a) of this section. Information required under this subsection shall be submitted by a contractor or subcontractor in response to a written request made by the Comptroller General and shall be submitted in such form and detail as the Comptroller General may prescribe and shall be submitted within a reasonable period of time.

"(c) In order to determine the costs, including all types of direct and indirect costs, of performing any contract referred to in subsection (a) of this section, and to determine the profit, if any, realized under any such contract or subcontract, either on a percentage of cost basis or a return on private capital employed basis, the Comptroller General and authorized representatives of the General Accounting Office are authorized to audit and inspect and to make copies of any books, accounts, or other records of any such contractor or subcontractor and to take the sworn statement of any such contractor or subcontractor or of any officer or employee of any such contractor or subcontractor.

"(d) The Comptroller General, or any officer or employee designated by him for such purpose, may hold such hearings, sign and issue subpoenas, administer oaths, examine witnesses, receive evidence, and require by subpoena the attendance and testimony of witnesses and the production of such books, accounts, or other records as may be material to the study and review carried out by the Comptroller General under this section.

"(e) In case of disobedience to a subpoena, the Comptroller General or his designee may invoke the aid of any court of the United States in requiring the attendance and testimony of witnesses and the production of books, accounts, or other records. Any district court of the United States within the jurisdiction in which the contractor or subcontractor or an officer or employee of the contractor or subcontractor is found or resides or in which the contractor or subcontractor transacts business may, in case of contumacy or refusal to obey a subpoena issued to any person, issue an order requiring the person to appear before the Comptroller General, or his designee, or to produce books, accounts, and other records if so ordered, or to give evidence touching any matter pertinent to the study and review; and any failure to obey such order of the court shall be punished by the court as a contempt thereof."

ADDITIONAL COSPONSORS OF AMENDMENTS

AMENDMENT NO. 107

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Wisconsin (Mr. PROXMIRE), I ask unanimous consent that, at the next printing, the name of the Senator from Texas (Mr. YARBOROUGH) be added as a cosponsor of Amendment No. 107 to S. 2546, the military procurement bill. The amendment requires annual disclosure by former high-ranking civilians and military Pentagon employees who leave the Government and go to work for major defense contractors.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT NO. 110

Mr. FULBRIGHT. I ask unanimous consent that, at the next printing of my Amendment No. 110 to S. 2546, authorizing appropriations for fiscal year 1970 for military procurement, research and development, and for the construction of missile test facilities at Kwajalein missile range, and reserve component strength.

The PRESIDING OFFICER. Without objection, it is so ordered.

NOTICE CONCERNING NOMINATION BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nomination has been referred to and is now pending before the Committee on the Judiciary:

Douglas B. Baily, of Alaska, to be U.S. attorney for the district of Alaska for the term of 4 years, vice Richard L. McVeigh, resigned.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in this nomination to file with the committee, in writing, on or before Tuesday, August 12, 1969, any representations or objections they may wish to present concerning the above nomination, with a further statement whether it is their intention to appear at any hearing which may be scheduled.

NOTICE OF HEARINGS ON S. 2624

Mr. TYDINGS. Mr. President, as chairman of the Judiciary Committee's Subcommittee on Improvements in Judicial

Machinery, I announce hearings on S. 2624, a bill to improve the judicial machinery in customs courts by amending the statutory provisions relating to judicial actions and administrative proceedings in customs matters, and for other purposes. The hearings will be held at 10 a.m. on September 8 and 9, 1969, in Room 6226, New Senate Office Building.

Any person who wishes to testify or submit a statement for inclusion in the record should communicate as soon as possible with the Subcommittee on Improvements in Judicial Machinery, Room 6306, New Senate Office Building.

PRIME MINISTER PIERRE ELLIOTT TRUDEAU—A PROFILE

Mr. MANSFIELD. Mr. President, recently the New Yorker magazine published a profile of an interesting and distinguished contemporary political figure. The issue of July 5, 1969, contains a study of Pierre Elliott Trudeau, the 15th Prime Minister of Canada.

The portrait which emerges from this account by Edith Iglauer is that of a very human man of intellectual brilliance with a consummate interest in the public affairs of Canada and the world, and an intense integrity in approaching the problems which beset these affairs. Mr. Trudeau's personal characteristics have been woven—or perhaps to state it more accurately, have blended—into an unorthodox leadership which, according to the profile, is of great effectiveness in Canada's current political life.

It seems to me most important that there should be in the United States a depth of understanding about the operations of the Canadian system of government. I speak now not so much in the textbook sense of comprehending the machinery of that government. Rather, what needs to concern us intensely are the forces now moving within the Canadian political system. These forces are of interest to the United States not only because the Canadians are neighbors closely linked but also because of the comparative value of any new experiences which others may have in dealing with free institutions under a Federal constitutional structure.

It is clear from the profile that Pierre Elliott Trudeau and his political associates are, so to speak, very alive and kicking in current Canadian political processes. It is also clear that they are very much attuned to new social rhythms which have been set in motion largely by the younger generations and which are more often than not worldwide in scope. Edith Iglauer's article makes a distinct contribution to our understanding of recent political phenomena of Canada. I ask unanimous consent that her profile of Pierre Elliott Trudeau be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROFILES: PRIME MINISTER
(By Edith Iglauer)

Pierre Trudeau, the improbably fifteenth Prime Minister of Canada, whose dream is to mold a more nearly perfect government

S9142

CONGRESSIONAL RECORD — SENATE

August 5, 1969

and save his country from dissolving into two separate nations, is a man who likes to have the last word. He has been talking back to people since boyhood. When he is reminded of this, he throws back his head and laughs. "Yes!" he says. "I was impertinent to my father, to my teachers—to everybody. It got me into trouble, but when I was intimidated I had to have the last word. As I became more mature, I would state my case and sit back, which is a form of answering." He has been stating his case since 1950, when, in the first issue of *Cité Libre*, a small, free-spirited French-Canadian magazine he helped to found, he presented his own theory of balanced action between central-government authority and provincial autonomy, in an article entitled "Politique Fonctionnelle." Last year, with characteristic consistency, he stated his case again, in a collection of speeches and essays called "Federalism and the French Canadians." He wants Canada, whose constitution provides for a form of government that unites the qualities of American federalism and British parliamentarianism, to become what he calls "a brilliant prototype" for tomorrow's world, and, as Prime Minister, he is in a position to try to make this particular dream come true.

Trudeau had few listeners until two years ago, when he was appointed Minister of Justice and Attorney General in the Cabinet of Lester B. Pearson, his predecessor as Prime Minister and as leader of the Liberal Party. Until 1965, when Trudeau joined the Liberals—the first time he had joined any party—ran for public office, also for the first time, and was elected a Member of Parliament from a well-to-do suburb of his birthplace, Montreal, he was almost unknown outside the Province of Quebec. Until he became Prime Minister, in 1968, he was not considered sufficiently important to have a listing in the Canadian *Who's Who*. Just a little more than a year ago, when Marc Lalonde, a Montreal lawyer who is now Trudeau's Principal Secretary and administrative Chief of Staff, suggested to Jacques Hébert, a French-Canadian writer and publisher who is one of Trudeau's closest friends, the possibility of Trudeau's becoming Prime Minister, Hébert pronounced the idea "wonderful but crazy." Hébert has said since, "I could see ten years ago that he was perfect for the job, but I thought it not at all possible that in a democracy a man so well prepared as Pierre, so unlike the traditional politician, could be Prime Minister."

The aspect of Trudeau's complex personality that has caught the public imagination is his ability to "swing"—to close the gap between his own age, which is forty-nine, and the long-haired, miniskirted generation. When he was a bachelor Cabinet minister, his personal eccentricities fascinated a country that puts considerable stress on the proprieties. He would go to his office in Ottawa's austere Parliament Buildings in sports jacket, ascot, and sandals; he might stand on his head, walk on his hands, dive into a swimming pool fully clothed, or slide down bannisters in public places; he would drive a motorcycle or the latest-model sports car while wearing a leather coat, perhaps in the company of a ravishing beauty of less than half his age. In his term as Minister of Justice, during which he introduced legislation that has broadened the grounds for divorce, liberalized the laws on abortion, and abolished penalties for homosexual acts between consenting adults, he remarked, "The state has no business in the bedrooms of the nation," and the remark was repeated with delight around the world. After he won the leadership of the Liberal Party, in April, 1968, and succeeded Pearson as Prime Minister, Trudeau called a general election for June, in the hope of obtaining a clear working majority in the House of Commons. In the ensuing campaign, his every quip made the headlines, and he was photographed dancing in the

streets and kissing his way across the country. Kissing is as common a greeting in French Canada as handshaking is elsewhere, yet Trudeau's charm produced a nationwide reaction so powerful that it was given a name of its own—"Trudeaumania." For many Canadians, stirred by the grand-scale celebration the previous year of a century of nationhood, Pierre Trudeau personified the centennial spirit and promised a fresh start for the second century of Canadian history.

The countless facets of Trudeau's personality inspire a wonderful variety of reactions. The view of a political enemy: "Pierre is conservative, but in the campaign he was passed off as having flowers in his mouth. He is one of the best-equipped men intellectually, but this is not enough until the ancient dream of a republic of philosophers is realized. His greatest weakness is aristocratic arrogance tied to no experience. He's a dabbler, a dilettante, an easy-going bachelorette who likes travelling around the world and will soon get fed up with the job."

An official at Liberal Party headquarters: "Mr. Trudeau is a contemporary man, who looks, acts, and thinks the way we all believe a man of the twentieth century should. He is an I.B.M. computer. He is hip. He is thoughtful, worldly, exciting, candid. Somebody's going to say someday, 'Will the real Mr. Trudeau please stand up,' and about fifty-eight people will rise."

A left-wing Member of Parliament: "He is cautious and conservative, with nothing new or exciting to offer but his manner, which some people find exciting. He is a suspended brain, not fed much by the spirit, detached and cold. I think he's warm in personal relationships, but he is not sensitive to the needs and stirrings in the lower strata of society."

A prominent civil servant: "The Prime Minister has the most precise and logical mind I have ever worked with, a brilliant and versatile mind. He's a bundle of contradictions, different from what you would expect. He is mentally fresh and young, a superb companion. You might think he's frivolous, but he is intensely serious—a very hardworking person, who seldom takes time off for recreation."

An old friend: "The playboy image of Pierre reflects one-tenth of one per cent of his activity. Pierre is always challenging, provoking, shocking, so that no one can see what he's really like. He keeps us guessing all the time, which is what he wants. He is arrogant with people who don't know anything, and he himself has a passionate eagerness to know, to see and learn. He respects competence. He is an individualist who is always challenging himself, and who will always be lonely. He has one consistent personality trait, and this may be what some people don't like: to go through with anything he starts, and through to the end."

"My life is one long curve, full of turning points. Like Einstein, I feel that space is curved," Pierre Trudeau said recently to a visitor, in one of his rare moments of relaxation on a working day. The two were sitting at lunch in the three-story rectangular gray stone house at 24 Sussex Drive, Ottawa, that is the official residence of Canada's Prime Ministers. It is a modest house in a lovely setting of lawns and rosebushes and petunia beds, with a crab-apple tree in the garden, and there is a view from the enclosed sun porch in the back across the Ottawa River to the Gatineau Hills, in Quebec Province, and a narrow white church spire in the Quebec town of Hull. The furnishings of the residence are those of a middle-class home: black leather and brown overstuffed chairs in a small, panelled library; chintz couches around a fireplace in a gray-carpeted, gray-walled living room; and, beside a window looking out on the river, a piano, which former Prime Minister Pearson played when he thought nobody could hear him. Mrs. Pearson's taste in interior decorating dom-

inates the rooms; Prime Minister Trudeau has changed nothing but the paintings, on loan from the National Gallery. He shows a marked preference for Abstract Expressionist works by Canadians, and especially for artists who have been his personal friends, among them the late Paul-Emile Borduas, Jean-Paul Lemieux, Alfred Fellan, and Micheline Beauchemin, creator of a handsome tapestry rug that hangs above a curving staircase in the hall.

The Prime Minister had arrived for lunch at one-thirty, half an hour behind schedule, bounding into the room with a broad smile of welcome, looking extremely natty in a well-tailored conservative brown suit, a striped tie, and a blue shirt that exactly matched his eyes. He is a slim, athletic man of medium height. His receding brown hair is just beginning to gray, and there is a small bald patch at the back. His features are pleasantly irregular—high cheekbones, which give his face a faintly Oriental cast; a slightly aquiline nose; and a large mouth with very white, even teeth. His eyes are luminous, and of a blue so brilliant that the effect of his gaze is startling to some people, even a bit frightening. He looks at one with such intensity, seeming to listen with his eyes, that the object of his attention is apt to feel that every word spoken must be significant.

The Prime Minister apologized for his tardiness, and offered his visitor a cocktail. He was delighted when it was refused. "Good!" he said. "Then we can go right in and eat." He sat down at the lunch table and poured chilled dry white wine into small cut-crystal glasses, remarking that he drank very little and didn't smoke at all. "I'm not willing to sacrifice the control of physical and mental ability that drinking and smoking take away for what they give in return," he said. "I used to tell myself that smoking impaired the memory, and in time I believed that it did. I have always thought, Why should I lose even a little bit of my memory, since it is not all that good? Also, in my early boyhood I was frailer than most boys and I thought I had to be more careful. I still have to average eight hours' sleep. I think I just have to have that. I can go for weeks or months on five hours or so of sleep, as I did during the election campaign, but afterward I have to make up for it by sleeping twelve or thirteen hours."

There are many Trudeaus in Canada (more than six hundred are listed in the Montreal phone book), and, according to the Prime Minister, the first Trudeau arrived in Canada from France in either 1628 or 1632. The Prime Minister's father, Charles-Émile, who died in 1935, was a farmer's son who was trained as a lawyer and became a very successful businessman. Pierre Trudeau's mother, who is ill and lives in retirement in Montreal, was Grace Elliot, the daughter of a Scottish father and a French-Canadian mother. Pierre Trudeau grew up speaking both English and French at home, and is totally bilingual, but he believes that he writes with greater precision in French. In conversation, he is soft-spoken in either language, but he is also a superb orator. He speaks vibrantly in French, but in English, when he is tired, his voice can drop to a lifeless monotone.

Trudeau, whose distaste for growing older runs to a vagueness about his birth date, although he is otherwise precise about detail, was born on October 18, 1919. He has an older sister, Suzette—a shy but composed and friendly woman, who is married to a dentist in Montreal and has three children—and a brother, Charles, two and a half years his junior. Charles is quiet and sensitive, and shares with his brother a deep love of the Canadian wilderness. An architect by profession, married but childless, Charles Trudeau is an expert skier and swimmer, and has become absorbed in art, music, and out-

August 5, 1969

CONGRESSIONAL RECORD — SENATE

S 9101

Notwithstanding this progress toward reducing expenditures, however, in June of 1949, Congress, supported by the administration, repealed all controls over Federal employment, and within 30 days after its repeal Federal employment was back to its second highest level.

During the testimony before the congressional committees in support of the repeal of the mandatory ceiling on Federal employment the Secretary of the Treasury told Congress that his Department, as the result of personnel cuts, was losing around \$500 million annually in uncollected revenues. Both the Secretary of the Treasury and the Director of the Budget, while asking for the repeal of this ceiling on Federal employment, failed to point out that under the law enacted in 1968 the Budget Director had unlimited authority to increase employment in any agencies requiring additional personnel. It was the intention of Congress that the offsetting reductions be made in those agencies which would least disrupt essential public service.

But now the law has been repealed, and there is no control over the number of personnel that can be added to the public payroll. What happened?

There were 83,999 extra employees added to the public payroll in June 1969.

Of these, 16,687 were added in the Agriculture Department, 13,556 were added to the Post Office Department, 4,144 employees were added to the Department of Health, Education, and Welfare, 3,964 were added in the Interior Department, 3,568 were added in the Veterans' Administration, and 3,145 in the Transportation Department. The Justice Department added 1,591, Housing and Urban Development added 809, and the Commerce Department added 575 while the Bureau of the Budget and the Treasury, the two Departments making the biggest howl about the lack of personnel, added 40 and 561 respectively.

It can be argued that the June increases reflected not only the regular employment by the major agencies but also the temporary summer employment under the President's youth opportunity program; however, the same explanation was applicable in June of last year, and that still leaves Federal civilian employment now at the second highest level since 1945.

Mr. President, earlier this year when the administration was asking for the repeal of the law which placed a mandatory ceiling on Federal civilian employment I objected and expressed the fear that with its repeal we would see a resumption of the trend toward a padding of the Government payroll. My fears were justified.

I ask unanimous consent that an excerpt from table I appearing in the joint committee's report, giving an itemized breakdown of these increases during the month of June, be printed at this point in the RECORD.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

	Personnel		
	June	May	Increase
Executive departments (except Defense):			
Agriculture.....	125,034	108,347	16,687
Commerce.....	36,471	35,896	575
Health, Education, and Welfare.....	112,524	108,380	4,144
Housing and Urban Development.....	14,964	14,155	809
Interior.....	74,663	70,699	3,964

ABM: A CASE FOR DELAY

Mr. GRAVEL. Mr. President, no issue, save perhaps that of Vietnam, has so preoccupied this Congress as the deployment of an anti-ballistic-missile system. The debate over this question has no precedent. No debate over arms spending in the entire postwar period has been so intense, so closely contested, and so well informed. The questioning of the administration's proposal to deploy the Safeguard has been the most serious review of defense spending in the entire so-called "cold war."

This debate, dealing as it does with the most sensitive questions of U.S. defense policy, has become larger than the sum of its parts.

It raises the question of spending about \$1 billion in fiscal 1970. But it forces us to examine the record of effectiveness of almost \$1 trillion of defense spending over two decades.

It raises the question of defending our Minuteman missiles. But it forces us to examine the security of our entire deterrent force.

It raises the question of strengthening this administration in the arms talks. But it forces us to examine whether strength really contributes to a climate for limiting the arms race.

Twenty-four years ago tomorrow, our minds were numbed by the incredible explosiveness of the atom bomb dropped at Hiroshima from a piston-engine bomber. Today, we are confronted with the reality of the Poseidon weapons system; a submarine capable of launching 16 missiles, each of which can deliver a dozen warheads to separate targets. And each of these warheads is deadlier than the Hiroshima bomb.

The debate over Safeguard has been a historic opportunity to take stock of how this Nation has managed, and how it should continue to manage the grim problems of defense and security.

Before giving my analysis of the issues, I feel impelled to express my satisfaction with the Senate debate thus far. Despite the great sensitivity of the question, the discussion in the Senate has been candid, thorough, and handled with respect for differing views. The Armed Services Committee, under the able leadership of the distinguished junior Senator from Mississippi, Senator STENNIS, heard testimony on both sides of this

issue. The Foreign Relations Committee, led by the distinguished junior Senator from Arkansas, Senator FULLBRIGHT, sought to develop related foreign policy issues. Its Subcommittee on International Organization and Disarmament Affairs, under the distinguished senior Senator from Tennessee, Senator GORE, heard exceedingly useful testimony by leading scientists for and against the ABM. Later, the able junior Senator from Washington State, Senator JACKSON, and the experienced senior Senator from Missouri, Senator SYMINGTON, led a most informative debate in which classified material was presented.

The press has spoken of considerable pressure being brought to bear on Members to sway votes. Certainly, in this instance, I have received as much pressure as any Member. But it has been pressure I consider entirely proper, sincere, and motivated by the highest intentions.

I take this opportunity to assure Americans that the dedication and integrity of the Senate has not been compromised by this debate.

The involvement of citizens groups and other organizations has been a healthy contribution. America needs this kind of informed, direct interaction between broad segments of the public and elected representatives.

Of course, the greatest pressure upon me has been the weight of the testimony presented. This I have studied carefully. This wealth of material is quite sufficient to make a reasoned judgment. But weighing it takes time. That is the principal reason I have waited until the final hour to express my views on this matter.

Also, if debate is to go on, someone should be listening. I have felt that every view should be given an opportunity for expression unburdened by comprehensive polls that seek to prejudge the decision. Finally, I have wanted to give my constituents in Alaska the longest possible period to express themselves to me on this issue.

Waiting has been valuable for me. I am much better prepared and far more confident that my vote will be based upon informed judgment.

In presenting my analysis, I will begin with a few basic comments on our deterrent force. It is composed of about 500 strategic bombers, 1,000 land-based Minuteman missiles, and 41 Polaris submarines.

It is important to observe that the Minuteman force is not the primary element of our deterrent. That role is played by our Polaris submarines.

Our Polaris force of 656 missiles—about half of which are on station at all times—is far less vulnerable than our Minuteman missiles.

Our Polaris force is far more difficult to destroy simultaneously. This force is capable of destroying all the major Soviet cities several times over.

This force is much better designed for delayed and controlled response—an absolutely necessary requirement for a

proper deterrent. Our submarines could wait for some time before responding. They could wait until there is no question of the necessity of launching retaliatory attacks upon cities. Regardless of the size of our Minuteman force, it cannot substitute for Polaris because the exposed Minuteman missiles would be too vulnerable to hold in reserve.

Our Polaris strike force has no fixed geographic coordinates. Enemy missiles cannot be targeted on it as they can in the case of fixed Minuteman silos.

We have 41 nuclear submarines, many of which are armed with Polaris A-3 multiple warheads. Under present planning, 31 of these submarines will be converted to accommodate Poseidon missiles equipped with individually guided warheads.

The nuclear destruction carried by a single Poseidon submarine could devastate the major cities of the Soviet Union. Thus, the firepower of even a single Poseidon submarine remaining after a first strike would be catastrophic to the Soviet Union.

Our Polaris force appears to be in no danger. Our Chief of Naval Operations, Admiral Moorer, testified last year that he had "very high confidence that the invulnerability of Polaris would be maintained."

The Armed Services Committee evidently agrees. If Polaris were becoming vulnerable, we would want to increase the range of its missiles, permitting it a larger area in which to hide. However, after hearing testimony, the Armed Services Committee eliminated from its authorization \$20 million for additional research on ULMS—undersea launched missile system.

Finally, the number of submarines could also be increased before the mid-seventies without taking action this year.

In summary, this element of our deterrent force shows every sign of maintaining, and even improving, its extraordinary effectiveness.

Let me reemphasize—Polaris is our primary retaliatory force. If we had to rely on a single defense no one would choose our bombers and no one would choose our Minuteman. All would choose Polaris. Indeed, if there were no Polaris submarines, I doubt that anyone would now be proposing a missile defense of Minuteman. There would be a search for an entirely new force.

Unfortunately, in the debate over Minuteman, the primary importance of Polaris has been obscured, ironically enough, because it is so secure.

Having placed the problem in what I believe to be the proper perspective, I now want to deal with five questions that go to the core of this debate: First, is Minuteman worth preserving? Second, if so, does the threat to Minuteman require immediate action? Third, is an ABM defense of a small number of our Minuteman silos the most dependable and efficient way of maintaining a secondary strategic force? Fourth, what about missile defense to protect people against accidents or Chinese attacks? Fifth, would approval of Safeguard strengthen the administration position in the stra-

tegic arms limitation talks—SALT? I shall discuss these questions in order.

(1) IS MINUTEMAN WORTH PRESERVING?

The very fact that Minuteman is threatened is not sufficient justification for defending it. Minuteman must have some continuing, vital role in our long-range defense posture to justify any effort to protect it.

At present we have bombers, land-based missiles, and Polaris submarines. How much should we spend to maintain these deterrents? Do we need all three?

Every time a strategic force begins to become vulnerable, we tend to try to maintain it as a secondary force. But just as the bomber age gave way to the missile age, land-based missiles are giving way to sea-based forces. We must recognize that land-based missiles are becoming obsolete as an invulnerable deterrent.

We must face this question squarely. Should we maintain three separate deterrent forces? And should a land-based force be one of them? If it is essential to preserve our land-based missiles then we must ask a second question:

(2) DOES THE THREAT TO MINUTEMAN REQUIRE IMMEDIATE ACTION?

Specifically, is it either urgent or prudent to begin to deploy at this time the proposed missile defense? This defense is designed to protect a few Minutemen in the midseventies. Therefore, the urgency of beginning now depends on two considerations.

First, how great will the threat to Minuteman be by the midseventies? In other words, how far advanced will the Soviet missile buildup be at that time?

Second, how long would it take to protect this force or substitute for it? In other words, how much lead time do alternative solutions require?

The mid-1970 deadline is based on extrapolating the Soviet SS-9 buildup for 6 or 7 years. No missile buildup in the last 20 years of the arms race has gone on at as steady a pace for such a long period as is suggested in this extrapolation.

The acknowledged fact that the Soviet Union built a few more SS-9's in 1968 is not a strong case for such a long extrapolation. Undoubtedly the Soviet Union has not itself decided how long it will build SS-9's; indeed, intelligence reports indicate that overall the SS-9 buildup has slowed rather than increased.

And in the context of the SALT talks, we can expect to have ample opportunity to dissuade the Soviet Union from continuing such a buildup. We can warn them that such decisions on their part would evoke a response from us that would certainly go far beyond defensive weapons.

Therefore, I conclude that the desirability of taking action now is partly generated by alarmist extrapolations.

What about the second factor, that of leadtime? Any urgency of beginning now to meet a deadline in the midseventies stems largely from the long leadtime required to build missile defenses. If we decided upon some other alternative for protecting Minuteman, or substituting

for it, and if that method required fewer years to build, it would not be necessary to begin now.

Some alternatives for maintaining a secondary force are: superhardening the Minuteman sites, that is, protecting them with more concrete; building more Minutemen; building mobile Minutemen; or building a new kind of sea-based force.

Of course, there is also the option of strengthening the primary force, our Polaris submarines, or, for that matter, strengthening our other secondary force, the strategic bombers.

Unfortunately, the administration has not presented the Congress with a serious analysis of all the possible alternatives. Most, if not all of them, would require shorter leadtimes than the ABM.

I can only conclude that the need to take action now is partly self-generated by our choice of this option.

In summary, we seem to have exaggerated the threat by predicting a steady buildup over many years and then announced that we must answer that threat immediately because we have chosen an answer that takes many years to build.

The alternative solutions to the threat also must be considered more particularly with regard to their cost and dependability. Even if we require three strategic forces, and if the threat is urgent, this raises a third question:

(3) IS AN ABM DEFENSE OF A FEW MINUTEMEN OUR MOST DEPENDABLE AND EFFICIENT OPTION?

I am impressed by the fact that all of the alternatives just mentioned are more reliable than the use of the ABM. President Eisenhower's Science Adviser and his Director of Defense Research and Engineering have testified that the missile defense might fail catastrophically at the critical moment.

Of all the possible alternatives, the ABM is the most complicated and the least dependable. Let me restate it—none of the other possible options have been presented to the Senate in any serious study.

In terms of overall reliability, missile defenses are the most controversial weapon we have yet to consider. Many different kinds of penetration aids and tactics—devices such as precursor warheads, decoys, chaff, fireballs, blackout effects, maneuvering warheads, and simultaneously arriving warheads—make a really reliable missile defense almost inconceivable.

Enemy efforts would be focused on destroying our radars. Even if we have interceptors, the Soviet Union can acquire a sufficient number of warheads to exhaust those interceptors—and one additional warhead to knock out our radars. If the radars are destroyed, the system becomes blinded and worthless. We have had much testimony underlining the Rube Goldberg quality of defending many hardened missiles with a few soft radars.

Furthermore, I am impressed with the difficulties that will arise in designing and relying upon Safeguard's computer programs. Safeguard must cope with adversary tactics and tricks, many not yet invented, and with sequences of attacks

August 5, 1969

CONGRESSIONAL RECORD — SENATE

S 9103

no one can predict. We launch Apollo at a predetermined time of our choosing and without enemy efforts to defeat it. But Safeguard must fire at a moment picked by the other side. Safeguard must cope, not only with nature, but with an ingenious human adversary exploiting vulnerabilities.

Mr. FULBRIGHT. Mr. President, will the Senator yield for a question?

Mr. GRAVEL. I yield.

Mr. FULBRIGHT. I think the Senator is making an extremely able and perceptive argument. On the last few points that he has made, particularly with regard to the computer program, very little evidence has been taken with regard to the capability of existing computers to deal with this matter. In fact, I have seen no evidence that is persuasive that the computer technique is at present sufficiently advanced to deal with the problems that would be confronted by ABM.

I saw one article in this field by Prof. John Anderson of the University of Minnesota, I think, in which he said it was estimated that a computer, to deal with the ABM problem, would require about 10 million instructions into the program; and even to program the computer would take, I think it was estimated, 80 years. In other words, he was writing that it was practically impossible at the present time to create a computer to deal with this matter. I think the Senator is quite correct.

I ask unanimous consent to have Professor Anderson's article inserted at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CASE AGAINST SAFEGUARD

(By John Edward Anderson, Ph. D.,*
University of Minnesota)

I. INTRODUCTION

The case against the Safeguard ABM system is devastating. The need for such a system cannot be justified upon the grounds given by President Nixon. Even if it could be so justified, it can be shown on technical grounds that it would be ineffective and dangerous. It is a mistake to believe that scientists in the United States are equally divided on this issue. Never in any of the extensive literature, both pro and con, on this question have I seen the overwhelming technical arguments against the system even rudimentarily answered. The pro argument usually deals with the Communist Threat, as if a strong enough threat will make the system necessary and/or effective.

It is a mistake to believe that the technical success of the Apollo mission means that no task is beyond our technological capability. The differences between Apollo and Safeguard are enormous. The Apollo mission was clearly defined and required observation of only one or two vehicles. Launches could be carried out one at a time, by a single highly trained crew, could be planned far in advance, and delayed as needed with no effect on the basic mission. The Safeguard task, which must be programmed into its computer, will never be clearly defined, as it must deal with an unknown future offensive attack strategy. It requires simultaneous observation of thousands of vehicles moving at speeds up to 7 miles a second, and a sky filled with objects designed to distract the radars. Thousands of crews at remote locations must be on instant alert over a

period of years, ready to fire at a moment's notice, and then the whole attack and defense sequence could be completed in seconds. Complete testing could be accomplished only when and if the moment of truth arrives so that there could be no rational basis for developing confidence in the system.

The second and third of President Nixon's three reasons for Safeguard, i.e., the China argument and the accidental-launch argument have been so effectively answered that they were not even mentioned in the recent majority report on Safeguard by the Senate Armed Services Committee. The first reason, i.e., that Safeguard is needed to protect our deterrent is discussed in Section 2 below, in which we also present a new and more compelling argument against first-strike capability. It is believed that a careful attempt to understand this argument will reassure those who genuinely believe our deterrent is in danger, notwithstanding C.I.A. testimony to the contrary. The author believes this argument is so strong that the Safeguard system is not needed even if it were to work. But the technical arguments against the system per se are so overwhelming that it is a particular irony that such a system should be pushed so hard at a time when the Nation's resources need so badly to be used to solve social problems. These technical arguments are summarized in Section 3.

II. PROTECTION OF OUR LAND-BASED DETERRENT FORCE

The main reason given by President Nixon for Safeguard, and emphasized again in the Senate Armed Services Majority Report, is that our land-based deterrent force may be in danger of attack by the Soviet Union in the mid 70's. As is well known, the implication of this is that the Soviets would be capable of launching so overwhelming a force simultaneously against our 1000 Minuteman missiles, our 41 Polaris submarines, our 650 B52 bombers, our Naval task forces, and our tactical nuclear forces in Europe, that any second strike by us would be weak enough so they would be willing to absorb it.

To carry out such a coordinated attack would require both an overwhelmingly superior attack force, and almost perfect confidence that the attack could be carried out with predetermined high accuracy and split-second timing. If the attacker errs in either his accuracy or in his timing, his society could be destroyed.

Consider the portion of his attack aimed at the U.S. Minuteman force alone. This problem is considered in detail in the Appendix. There it is shown how the number of missiles which must be targeted at each Minuteman depends upon the destruct radius of the bomb, the average accuracy of the attack missiles and their reliability. With 5 megaton warheads and 50% reliable missiles, 14 missiles must be targeted on each of our 1000 Minutemen if the accuracy is $\frac{1}{2}$ mile, or 4 if the accuracy is $\frac{1}{4}$ mile. These figures, which can be readily checked, are much in excess of those given by Dr. John S. Foster of DOD. Since the calculation is so simple and has been checked independently by many scientists, it is apparent that the DOD intended to make the first strike look much more plausible than it actually is. That this should be so is a most sobering conclusion.

The above calculation shows that only if one side attains a numerical superiority in attack missiles many times in excess of the other, would a first strike be possible.

The most important argument, however, is yet to be made. It is given in Section 3 of the Appendix and relates to the disastrous consequences of an incorrect estimate of the missile accuracy. Suppose the attacker calculates the number of missiles he requires based upon the premise that only 50 of the

1000 Minutemen will remain undamaged after the attack. If he is low by a factor of two in his estimate of the accuracy of his own missiles, the number of Minutemen which would remain would not be 50, but 472!

A full appreciation of an error in his accuracy estimate requires understanding of the fact that there is in reality no way to determine the average accuracy of say 5 to 10,000 operational missiles maintained and fired by regular field forces. This is discussed in Section 2 of the appendix. In face of these facts, could any nation ever take the risk of a first strike attempt?

III. THE TECHNICAL ARGUMENTS AGAINST SAFEGUARD

The technical arguments against Safeguard, or against any ABM system consisting of missiles, radars and computers, have been detailed by many eminent scientists in many journals, statements, books, etc. The most comprehensive treatment is given in ABM, An Evaluation of the Decision to Deploy an Antibalistic Missile System, edited by Abram Chayes and Jerome Wiesner. Here, as a quick overview, these arguments are summarized.

Decoys

The Spartan long-range ABM missile attacks above the atmosphere and hence can be rendered completely ineffective by cheap decoys of many kinds. Why it is still even included is a mystery.

Nuclear blast effect

Explosion of a multimegaton bomb over the area of the missile farm would black out the radar for periods of approximately 15 minutes, completely destroying the effectiveness of the system.

Soft radar

Minuteman silos which can withstand overpressures up to 300 psi are to be protected by radars good for 20 psi. This is worse than protecting tanks with squads of infantrymen.

Computer program

It has been estimated that the program will require about 10 million instructions. Based on extensive experience with large programs, about 10,000 instructions per month appears to be the maximum that can be written on a single problem, no matter how many men are assigned. This would imply that about 80 years would be required to program the computer. This essentially means that it could never be programmed because it would always have to be changed as new offensive strategies are discovered.

Reliability

Past experience with large field-deployed systems gives little hope that Safeguard would come close to meeting required operational reliability. Apollo is a totally different type of system and its success bears no implications for Safeguard. Safeguard requires 10's of thousands of missiles and hence 100's of thousands of regular Army men trained as missile crews. Cape Kennedy standards will not be maintained under such circumstances.

Testing

Notwithstanding DOD assertions to the contrary, there is no effective way to test Safeguard under field conditions. Component and simulation testing simply will never give confidence that the system will perform when the moment of truth arrives.

Safety

The requirement for quick firing precludes use of as many safety checks as one would like to prevent accidental firing. The situation here is much worse than with the Minuteman. Since maintenance and check out crews will be continually working near 10's of thousands of missiles, the probability of an accident is high. Fall out from a ground

*Biography on p. S9105.

burst in North Dakota or Montana could kill thousands of people.

Control

The only effective attack on our strategic forces would be a surprise attack. Only 10-15 minutes would be available for a decision to fire in which case the concept of Presidential approval is a farce. Man could only rubber-stamp a decision made by the computer.

Effectiveness

With all this deployment and effort, a few months more production of SS-9's would wipe out the effectiveness of Safeguard even if it would work. If our deterrent were in danger, which it is not, superhardening of the missile silos would be a much cheaper, more effective solution.

Accidental launch

It has been argued that Safeguard is needed to protect against accidental launch of an enemy missile. The Minuteman missiles can be used for this purpose. All that is required is a change in parameters inserted into the Minuteman guidance system. At most, the details would require a small engineering program.

Negotiations

In view of the above arguments, the importance attached to the need for Safeguard as a bargaining tool seems ludicrous indeed. It would be a mistake to believe the Soviets will be unaware of the arguments against the system. My own nine months of experience in the Soviet Union impressed upon me inter alia the closeness with which they follow our discussions on such matters. Not being able to profit in any way from Safeguard, their planners would be in a position to view Safeguard much more objectively than ours.

Why Safeguard?

The Soviet Union is not capable of a first strike nor can it be in the foreseeable future. The Safeguard system is far from being ready for deployment, and it is quite possible that such systems consisting of missiles, radars and computers may never be. We are continually frightened with the possibility that the Soviets may want to attempt a first strike against us. Suppose only ten of our total armament of missiles were left after an attack, that these were targeted on Moscow, and that only one would get through. That one bomb would destroy most of Moscow, its leadership, its main scientific, governmental and cultural centers. Would same men risk such a possibility? Particularly after having lived in Moscow for a month, I think not.

But yet the pressure for Safeguard continues. Why? Can it be out of genuine fear of a Communist Menace, wishful thinking so clouds the minds of intelligent men that they refuse to listen to arguments against the system? Or can it be that the opportunity for monetary profit, the possibility of promotion, or the hope of working on technically exciting systems has a similar effect? My own experience indicates that all of these influences play a role. These tendencies must be controlled or it will be soon too late. This task is now in the hands of the Congress of the United States.

APPENDIX

REQUIREMENT FOR A FIRST STRIKE AGAINST MINUTEMAN SILOS

An attacker seriously planning a first strike against the United States Minuteman missile force must understand very clearly all factors which enter into the computation of his chances of success. As will be shown below, if he is in error by even a moderate amount, the consequences for him would be disastrous.

In this Appendix, we first compute the probability of success of a first strike in terms of the number of missiles that will remain functional after the attack. *Second*,

this calculation depends very critically on the accuracy of the attacking missiles, we discuss the problem of estimating missile accuracy. *Finally*, we estimate the consequences to the attacker if he is wrong in his estimates.

1. REQUIRED NUMBER OF ATTACKING MISSILES

If all systematic errors in the attack missile system have been eliminated, then the probability that a given missile will miss the target by more than a distance of R is

$$P(R) = \frac{1}{2\pi R^2} \quad (1)$$

in which

$$\beta = R/O.E.P. \quad (2)$$

Here, C.E.P. stands for the *Circle of Error Probability*. Its meaning is seen by letting $R = C.E.P.$ Then $B=1$ and $P(C.E.P.) = 1/2$. In other words, if a large number of missiles is fired at a target, half of them will fall outside a circle of radius C.E.P.; $P(R) \times (\text{No. of missiles})$ will fall outside a circle of radius R. Henceforth, we will take R to be the destruct radius, i.e., the largest distance from the Minuteman the attack missile can fall and still destroy the target.

The probability that neither of two missiles fired at the same target will destroy it is simply $P^2(R)$. If n missiles are launched successfully at the same target, the probability that none of them will destroy the target is

$$I^n(R) = \frac{1}{2^n \pi^n R^{2n}} \quad (3)$$

Another way of stating this formula is that if the attacker successfully launches missiles at each of 1000 targets, the number that will remain after the attack is

$$N_R = \frac{1000}{2^n \pi^n R^{2n}} \quad (4)$$

The Department of Defense has suggested that the Soviet Union may contemplate a first strike if it could reduce N_R below 50.

If β is known, we can use Equation (4) to determine the number n of missiles which must be launched successfully at each Minuteman. Solving Equation (4) for n, and substituting for β from Equation (2), we get

$$n = \left(\frac{C.E.P.}{R} \right)^2 \frac{\ln(1000/N_R)}{\ln 2} \quad (5)$$

or if $N_R = 50$,

$$n = 4.3 \left(\frac{C.E.P.}{R} \right)^2 \quad (6)$$

According to Pentagon figures, the present Minuteman silos will be destroyed if subject to overpressures of 300 psi or more. The destruct radius R is the largest distance from the center of the megaton explosion at which this overpressure occurs and varies as the one-third power of the yield of the bomb.* In tabular form

Yield, megatons	Destruct radius R, miles
1	0.2 to 0.3
5	.4 to .5
20	.6 to .8

The range in R in this table indicates uncertainty, and these figures are estimated to give 80% chance of destruction of the silo. In Equation (6), this additional uncertainty was left out, which means that the estimate of n which we will make will be somewhat low.

$$n = 4.3 \left(\frac{.5}{.4} \right)^2 = 6.7 \approx 7 \quad (7)$$

*ABM, *An Evaluation of the Decision To Deploy an Antiballistic Missile System*, Ed. Abram Chayes & Jerome Wiesner, Signet, 1969, p. 276.

vets estimate their C.E.P. to be 1/2 mile. Then from Equation (6)

three 5 megaton warheads and that the Soviet SS-9 missile contains Suppose each Soviet SS-9 missile contains This would be the number of attack missiles successfully launched against each Minuteman. Based upon many published figures, it would be difficult to envision that the Soviets could assign a probability of successful launch any greater than 50%. In this case they would have to target 14 missiles on each Minuteman, or about 5 SS-9's each MIRVed three ways.

Destruction of our Minuteman force of 1000 missiles with 95% certainty (50 left standing) would, under these conditions, require 5000 SS-9 missiles. Thus, only if their offensive force far outbalance ours would we need to worry about a first strike on this basis.

If the C.E.P. figure of 1/4 mile quoted by Dr. John S. Foster were used in Equation (7), the required number of attack missiles per Minuteman would be reduced by a factor of 4, from 14 to 4. This is still far in excess of his estimate. In addition, a C.E.P. of 1/4 mile is unrealistically small, as will be shown from the following discussion.

2. ESTIMATING MISSILE ACCURACY

It is seen from Equation (6) that the number of missiles which must be targeted is strongly dependent upon the C.E.P. Doubling the C.E.P., for example, quadruples the required number of attack missiles. A C.E.P. of 1/2 mile in a 5000-mile missile flight will be caused alone by an azimuth misalignment of only .1 mil, or 20 seconds of arc. Those familiar with the art will recognize that this is very high precision, particularly under field conditions. But the C.E.P. of an ICBM is determined by many separate error sources—errors from gyroscopes, accelerometers, errors in thrust-cut-off time, in the computer, in wind dispersion, in mapping, in the gravitational model of the earth, as well as in initial alignment.

Most of these errors can be estimated from laboratory tests on separate components, and from this data the C.E.P. can be computed. This is, of course, not considered adequate, and therefore test firings of complete missiles are used to verify the accuracy. The number of test firings that is practical is always limited, however, and even with attempts to use randomly chosen production missiles in these tests, the test conditions are invariably different from the operational conditions. With even 5000 attack missiles, the number of men which must be trained to operate in missile crews becomes exceedingly large, and hence will never reach the level of competence of test crews. The crews must be continually checking and maintaining their missiles over a period of years, and then on very short notice be ready to fire. Under these circumstances, an allowance of an unknown amount must be made for deterioration of missile C.E.P. Even if this deterioration were not to take place, it is simply not possible, with any confidence, to predict statistically the C.E.P. of a large number of missiles from a relatively small number of tests.

These considerations lead to the conclusion that the C.E.P. can never be known with any great confidence. To estimate values as small as 1/2 mile, considering the very great precision this requires of many components, is open to serious question.

3. THE CONSEQUENCES OF ERROR IN THE ATTACKER'S ESTIMATES

Suppose that, based upon his best estimates of C.E.P. and destruct radius R, the potential attacker estimates n from Equation (4) so that N_R is say 50, i.e., so that only 50 Minuteman missiles will remain after his attack. Then we ask the question: If he errs in his estimates of C.E.P. and/or of R, how will his error affect the number of missiles N_R that will remain after the attack?

August 5, 1969

CONGRESSIONAL RECORD — SENATE

S 9105

	nB^2	N_R
1.	1	500
2.	$4.3/(2)^2=1.08$	472
3.	$4.3/(1.5)^2=1.91$	263
4.	2	250
5.	3	125
6.	4	63
7.	4.3	50
8.	5	31

We can answer this question from the adjacent tabulation of values. These values are the solution of Equation (4). If, following the D.O.D. judgment, the attacker would proceed with his attack if only 50 of 1000 missiles would remain afterwards, then $N_R=50$, and from line 7 of the table, $nB^2=4.3$. This means that, after determining B from Equation (2), he would compute n so that $nB^2=4.3$ to get $N_R=50$. If the actual C.E.P. during the attack is higher than his estimate by only 50%, i.e., by a factor of 1.5, then nB^2 decreases by a factor of $(1.5)^2=2.25$ and line 3 shows that N_R jumps to 263. If the estimate is low by a factor of 2, line 2 shows that $N_R=472$. Similar errors could occur, of course, if the attacker overestimated the destruct radius. With as many missiles left as indicated, the attacker would have to conclude that his first strike effort would fail, the consequence of which would be the destruction of his entire society. If the leaders of the potential attacking country are thoroughly appraised of the above facts, i.e., of the potentially disastrous effect of *entirely reasonable errors in estimates of C.E.P.*, it is difficult to believe they could ever conclude that a first strike attempt would be less than suicidal.

BIOGRAPHICAL DATA

J. Edward Anderson, Associate Professor, Mechanical Engineering Department, University of Minnesota. Bachelor of Science, Iowa State College, 1949; Master of Science, University of Minnesota, 1955; Doctor of Philosophy, Aeronautics, Massachusetts Institute of Technology, 1962. From 1949-1951, Aeronautical Research Scientist, National Advisory Committee for Aeronautics, Langley Field, Virginia. From 1951-1963, with Honeywell, Inc., Aeronautical Division and Systems and Research Division in Minneapolis; 1951-1953, Work Director, aircraft instrument design; 1953-1956, Senior Research Engineer and Research Project Engineer, analysis and synthesis of autopilots for military aircraft; 1956-1959, Principal Research Engineer and Research Staff Engineer, invented and directed development of inertial guidance systems for aircraft, ICBM's and for the Polaris submarine. 1959-1962, M.I.T. Fellow in Aeronautics; 1962-1963, Manager of Space Systems.

From 1963 to present, with the University of Minnesota, Mechanical Engineering Department, Teaching and research in thermodynamics, heat transfer, magnetohydrodynamics, large-scale computer solution of fluid dynamic problems, system design; consultant to industry. Spent academic year 1967-1968 in the Soviet Union as Exchange Scientists for the National Academy of Sciences.

Virtually all of his professional experiences have involved use and/or design of digital and analog computers of many types. Has written numerous technical papers in his fields, holds six patents, and has written two technical books, both of which have been selected for translation into Russian by Soviet publishers.

Dr. Anderson has been a speaker for the United Fund, is a Past Club President of Toastmasters, Int., was Board Chairman of a Symposium on the Role of Science and Technology in Society, Univ. of Minnesota, April 7-8, 1969; and is on the Board of Directors of HELP, an organization to promote rapid transit.

He is an Associate Fellow of the American Institute of Aeronautics and Astronautics and Chairman of the Twin Cities Section, a member of the American Association for the Advancement of Science, the American Society for Engineering Education, the American Association of University Professors, the American Metric Association, the Citizen's League, Sigma Xi, Tau Beta Pi, Phi Kappa Phi, Pi Tau Sigma and Eta Gamma Tau.

His biography appears in *American Men in Science* and in the forthcoming edition of *Who's Who in the Midwest*. His travel experience includes 8 years in China as the son of missionary parents, three weeks in Western Europe in 1964, eleven months in Europe in 1967-8 including 9½ months in the Soviet Union, and extensive business travel in the United States.

Mr. FULBRIGHT. Mr. President, the other point mentioned is the blackout effect and the fireballs created by the nuclear explosions. I asked the distinguished chairman of the Armed Services Committee the other day if any evidence had been received on this matter at the hearings. At that particular time he said he was not prepared to answer, but he later furnished me with a copy of the hearings in the House Appropriations Committee in which there was a passing reference of less than one full page devoted to the blackout effects upon ABM radars and the communications systems.

We had a hearing in the Foreign Relations Committee on the subject. Unfortunately, the people invited to testify on short notice were not specialists in the field of radar, but they were knowledgeable in communications only.

They professed an inability to testify upon the effect of nuclear explosions on radar. But it is quite clear from their testimony that the radiation effect is quite substantial upon communications because of the electromagnetic waves created by nuclear events. While these explosions may not affect cable communications, the kind of communications that radar must use could well be knocked out, and probably would be knocked out by precursors—nuclear explosions—as the Senator has mentioned, or by radiation from them.

So it is really inconceivable to me, and I think utterly indefensible, to undertake and authorize a program about which so little is known in such very important areas, or in which so little progress had been made in certain areas such as the computers, the hardening of the radars, or in understanding the effect of blackouts or fireballs. There is not any good, substantial, credible evidence in the record of these hearings to justify believing these problems have been faced and overcome.

Proponents say they have made the Sprint explode properly. They have; there is no doubt about it. We have all kinds of missiles that will explode properly; and the Spartan has been tested. But to create the explosion involves only the most primitive and simple parts of the whole program. The most delicate and sensitive parts of this proposed system are the radars and computers, and there has been virtually nothing done on them. Neither the radars nor the computers have been built, much less tested,

at the present time. So I would say the Senator is absolutely correct and sound in stating that these weaknesses would justify at least another year before any deployment is made.

I think the Senator has done a fine job.

Mr. GRAVEL. I thank the Senator for his kind remarks, and compliment him on the work he has done in this area. I certainly thank him for the hearings that have been held before his committee, from which I have learned a great deal.

Mr. FULBRIGHT. I ask the Senator, does he know of any evidence, aside from the hearings I have mentioned, as to the effect of radiation on the radar?

Mr. GRAVEL. I have found no evidence to contradict the Senator. As to the computers, I find quite persuasive the argument that even if they were developed to do just what they are supposed to do, it would seem logical, in my judgment, that computers could be created by the Soviets to confuse the computations of our computers. I can only say to the Senator that I share his views in that regard.

Mr. STEVENS. Mr. President, will the Senator yield?

Mr. GRAVEL. I yield.

Mr. STEVENS. I thank my colleague from Alaska for giving me notice of his intention to present this statement today. I would like to stay and listen to his presentation, but another engagement prevents me from doing so.

As the Senator knows, we are in disagreement on this matter. However, I appreciate the candor with which he has presented his position, and can only hope that, in the long run, he will be able to review the matter further.

I should like to ask the Senator one question, though, if he will permit me to do so: Will he tell me whether he intends to support the appropriation for research and development of the ABM program?

Mr. GRAVEL. Yes. The Cooper-Hart amendment will solve that problem.

Mr. STEVENS. I thank the Senator.

Mr. GRAVEL. I yield to the Senator from Vermont.

Mr. AIKEN. Mr. President, I should like to say that in my opinion the Senator from Alaska is making an excellent speech, in which he points out the effectiveness of the nuclear submarine as a deterrent to war. Apparently the ABM is designed and promoted as a way to protect our retaliatory power; but, I believe it is far more important to stop an enemy missile before it leaves the enemy country than it is to try to intercept the missile on arrival here in the United States.

I must say that my first apprehension over ABM occurred when it became apparent to me that the strongest proponents of the ABM were perfectly willing to downgrade our nuclear submarine fleet over the next few years. I began to wonder then if it was not a question of who got the contracts.

But I commend the Senator from Alaska. I have read his speech, and believe it is excellent and accurate all the way through.

Mr. GRAVEL. I thank the Senator.

S 9106

CONGRESSIONAL RECORD — SENATE

August 5, 1969

Mr. AIKEN. I might add, if I am not robbing the Senator of his time, that Russia is concentrating today on constructing a nuclear submarine fleet superior to our own. Russia already has submarines with a range of 1,500 miles for the missiles fired from the sea. Russia is today constructing submarines which are believed to be speedier than ours, and also more quietly operated. Russia intended to surpass us in the nuclear submarine field, knowing perfectly well that whoever controls the seas will control the overriding question of peace or war.

Mr. GRAVEL. I thank the Senator from Vermont.

Mr. President, I ask unanimous consent that I be permitted to speak until noon.

The PRESIDING OFFICER. Is there objection? Without objection, the Senator from Alaska is granted 15 additional minutes.

Mr. GRAVEL. I thank the Chair.

Finally, the arms race moves swiftly. If this system is deployed 7 years from now, it more than likely will face an entirely new family of threats. This was the case of our air defenses planned in the early 1950's. When the bomber defense began to function in 1960, it faced not just bombers, but missiles also. It had no way of protecting itself against missiles. These could outflank the defense and destroy its ability to defend against bombers. Any new weapon in the mid-1970's that can destroy a few radars will turn Safeguard into billions of dollars of junk.

Even if the ABM were a dependable way of protecting our deterrent, I question whether public confidence could be reestablished in this option after so much controversy. All past Presidential science advisers have been critical of missile defense. Obviously the system can never be realistically tested in a war situation, so public confidence in it can never be reestablished.

In summary, of all our options, the proposed missile defense seems to be the one most likely to fail completely and catastrophically, and the least likely to inspire confidence.

THE POSSIBILITY OF ACCIDENT OR CHINESE ATTACK

My prior analysis has concerned itself with the defense of Minuteman. Now let us turn to two other arguments that have been raised in an attempt to justify deployment of the ABM—the possibility of an attack by China and the possibility of an accidental firing.

The authorization before us does not commit us to build a defense against either contingency. The Senate has not yet been asked to consider these questions. This administration has not asked for a thin defense of the entire country, and in fact rejected one proposed by the previous administration. A favorable vote by Congress and subsequent deployment of the system proposed and before us today will not protect any American city from any missile attack, accidental or on purpose. We are being asked only to protect a small portion of our deterrent.

I emphasize this point because there is a risk that observers outside the country may misinterpret this vote. They may

believe that approval of the administration's proposal would indicate our intention to push ahead with the full phase II defense of the entire country. There has been no such indication.

While this vote does not concern itself with a defense against Chinese missiles, I feel impelled to comment on some of the issues such a defense would raise.

The Chinese are not irrational. China can be deterred in the same way Russia has been deterred. China is the only nuclear power that has asserted it will never use nuclear weapons first. We want to improve our relations with China not turn them into a carbon copy of the United States-Soviet arms race. We want trade with China, not threats. We want to open doors to China, not play into the hands of those who want to keep them closed. We do not want the only exchanges we consider with China to be missile exchanges.

In my opinion, the isolation of China and our ignorance of it, have contributed to these unreal fears. China has enough problems of her own, and so do we. The sooner we put aside talk of mutual threats, the sooner China and America can resume normal relations.

THE RELATIONSHIP OF ABM TO ARMS LIMITATION TALKS

Apart from the technical aspects of ABM, proponents offer the argument that ABM's approval is necessary as a prelude to successful arms limitation talks.

Therefore, the question is, would approval of Safeguard weaken or strengthen the administration's position in these talks.

The trouble is that many people refer to the forthcoming talks as if they were some kind of union-management bargaining. They are not. The arms limitation talks are a search for an accommodation that will satisfy the legitimate security needs of each side. In such a search our hand cannot be "strengthened" or "weakened." But our search can be facilitated or complicated.

For example, even before the talks begin, the administration has already indicated in White House question and answer sheets that it will not negotiate the entire phase II, 12-site thin defense of the United States. This is a way of complicating the arms talks. This thin defense would protect cities and be more modern and 10 times larger than the Soviet defense of Moscow.

What will happen when the Soviet Union insists in the arms discussions on the right to build a missile defense equally large? Then we shall surely insist on maintaining our MIRV warheads to be able to penetrate that defense. Then they will insist on maintaining their MIRV warheads to match us. Then we shall fear that their MIRV warheads can destroy Minuteman. Then this debate will continue. And on and on and on. Each new weapon system triggers development and deployment of another.

When the new director of the Arms Control and Disarmament Agency, Mr. Gerard C. Smith, testified before the Senate Foreign Relations Committee, he suggested that any Soviet response to the Sentinel program was "already in train."

In other words, we are still reconsidering the original proposal at a time when the Russians already have made provisions to counter it. Every signal we emit that we are going ahead with defense of cities will encourage Soviet planners to offset it, just as our planners launched MIRV and other preparations to offset Soviet defenses.

The very Soviet SS-9 procurement of which we are complaining may be the reaction which Director Gerard Smith said was "already in train." It would seem imprudent to give off any more escalatory signals when we have imminent prospects of talking these things over with the Russians. We do not want to be constantly responding to the responses we have ourselves induced.

No amount of U.S. strength can prevent the Soviet Union from building more weapons. For 20 years we have had arms superiority relative to the Soviet Union. For 20 years we have had an arms race. Surely one more weapons system will not provide additional leverage to the President in arms limitation talks. Certainly no one can be advancing as a good argument for the ABM system the fact that it can be torn down.

I can only conclude that approval of this proposal will assist the President in no important way. Indeed it may undermine our hopes for eventual successful negotiation by encouraging the view that the United States has embarked on a major nonnegotiable program of building missile defenses.

ABM AND THE ARMS RACE

In summary then, as I see it, the narrow issue of Safeguard has not been difficult to resolve. Safeguard seems likely to require the longest leadtime, to be the least reliable, and most expensive way of defending a few of the evermore obsolete Minuteman.

The threat against which Safeguard is proposed seems exaggerated.

The other options for resolving that threat seems insufficiently considered.

And since the arms limitation talks are themselves a method of resolving the threat, the timing of Safeguard seems inappropriate. If the talks begin to succeed, Safeguard will be entirely unnecessary.

The Hart-Cooper amendment, which I shall vote for, permits research and development to continue in support of a better missile defense. And it permits a year of arms talks to occur before a deployment decision is made. But there is another reason why this amendment appeals to me. It provides a year in which other alternatives to Safeguard can be analyzed and presented to the Senate by this administration.

I have explained why other alternatives may be cheaper, more dependable and quicker to build. Equally important, these alternatives may also be more acceptable to the Senate. It would be unfortunate indeed if a major national security program were approved by a margin of one or two votes.

This close contest in the Senate cries out for alternatives that can muster broader support. Congress should insist on being presented with options in major national security decisions.

August 5, 1969

CONGRESSIONAL RECORD — SENATE

S 9107

Beyond the question of Safeguard itself, I would like to say a few words about the context in which this debate has taken place. Something is seriously wrong with our approach to national security. Twenty years ago, we were as secure as a nation could be. Ten years ago, if nuclear war occurred, half our population would have been annihilated. Today if nuclear war occurs, virtually every man, woman and child in the United States could be killed.

We have tended to think that our greatest danger is a Soviet surprise attack. But the Russians are not insane. They will not deliberately strike at us in a world filled with hostile nuclear weapons—weapons armed and pointed at all their population centers.

War can happen. There can be a war that is unwanted by both sides—a war by escalation. Our fear of calculated, deliberate Soviet attack has blinded us to the even greater dangers of an unwanted war by escalation.

Our fear of deliberate Soviet attack has caused us to put our main priority on staying ahead of the Soviet Union in the arms race. It has led us to ignore the rising levels of arms that make war even more destructive. And since war can always happen, we have lost irreplaceable security. More arms, in the nuclear era, do not mean more security. This is a situation without parallel in the history of warfare. Gen. Douglas MacArthur summed it up well in 1961 when he said:

Global war has become a Frankenstein to destroy both sides. No longer is it a weapon of adventure—the short cut to international power. If you lose, you are annihilated, if you win, you stand only to lose. No longer does it possess even the chance of the winner of a duel. It contains now only the germs of double suicide.

No missile defense, and no missile, can save us from ever greater threats to our security if the arms race continues. Our own arms efforts only stimulate and encourage Soviet efforts. There is no solution but to stop the Soviet weapon program and this can be done only by negotiating to stop our own.

Agreements are feasible. We now have methods of reconnaissance that can reliably monitor Soviet actions. So we can have agreements with the Soviet Union in which trust plays no role. And we can maintain a deterrent that can reduce risks of calculated deliberate attack to an irreducible minimum. So we can have arms limitations and a deterrent, too. But we cannot try to stay ever further ahead of the Soviet Union, and at the same time ask them to stop trying to catch up.

Unfortunately, the arms race has become business as usual. We accept the risk that one thousand Soviet ICBM's could be fired at us as the result of a disagreement over Berlin or a war in the Middle East. But we measure the risk of arms limitations on a different scale. We ask that agreements for arms limitations be totally without risk.

Today, all the political and strategic elements for an agreement exist. We and they have adequate deterrent forces. We and they have many other problems that encourage arms controls. They have

problems in China and Eastern Europe and with their economy; we have our problems in Vietnam and at home.

Both of us have agreed to talk. And both of us are afraid the other side will do the same two things: build large, expensive ABM's and MIRV's.

These two weapon systems are the very elements about which we and they want to negotiate.

If the Soviet Union does not build MIRV, we will not need Safeguard. If the Soviet Union does not go forward with ABM, we will not need MIRV. Why, under these conditions, is it not prudent to talk to the Russians before buying ABM and MIRV? Otherwise, we will induce them to match us. This will then foreclose any chances we have of stopping deployment of ABM and MIRV by both sides.

The Senate cannot control the SALT negotiations. But Safeguard is something which is before us. The Senate must express itself on the issue of the arms race. And this debate over Safeguard is an opportunity to affirm that new methods and approaches are necessary for national security.

If this administration is overly burdened with the near and medium term risks, then the Senate must be statesmanlike enough to give heavy priority to the long-term risks.

The long-term risks to the survival of this country and our way of life come from a war nobody wants.

The long-term solution lies not in Safeguard, but in taking seriously every opportunity to halt the arms buildup simultaneously both here and in the Soviet Union.

If this historic debate only determines whether we should, or should not, defend a few Minuteman, this debate will have been a failure.

However, in my mind, this debate has catalyzed a new awareness among Americans as to where the dangers to our Nation really are. Mr. President, I believe this debate in the Senate of the United States has fulfilled its promise.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senator may have an additional 20 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. GRAVEL. I yield.

Mr. MANSFIELD. Mr. President, I have waited for some time for the last of the new class of Democratic Senators to make his maiden speech. I have urged our new Members to make an early start in expressing their views. I have urged them not to sit back and remain silent. All the others, in varying degrees, have taken my advice, all except the distinguished Senator from Alaska. However, his judgment has been correct for, if I may say so, this speech has been worth waiting for; well worth waiting for. It is one of the best speeches, if not the best, that I have heard in the Senate, on the issue which now confronts this body, this country and, in effect, the world. It exhibits a good deal of research and study. It goes into a good deal of detail.

On page 2 of his speech, the Senator said:

I take this opportunity to assure Americans that the dedication and integrity of the Senate has not been compromised by this debate.

I express my wholehearted agreement with those remarks. This debate has been, on the whole, statesmanlike. There have been, of course, differences of opinion, not only among Senators but also between Senators and the administration. I do not doubt for one moment the integrity and the beliefs of the administration in their advocacy of this program. Who knows, history may prove them right. But, by the same token, I do not doubt the integrity, the patriotism, or the sincerity of those who oppose the program, because the reasons are many and varied, and all of them have been brought out. Most of them have been carefully analyzed today in the speech of the distinguished Senator from Alaska—who, incidentally, I am happy to say, has a direct tie with the State of Montana through the girl who is his wife.

On page 9 of his speech, the Senator raises this question:

What will happen when the Soviet Union insists in the arms discussions on the right to build a missile defense equally large? Then we shall surely insist on maintaining our MIRV warheads to be able to penetrate that defense. Then they will insist on maintaining their MIRV warheads to match us. Then we shall fear that their MIRV warheads can destroy Minuteman. Then this debate will continue. And on and on and on. Each new weapon system triggers development and deployment of another.

As the Senator has pointed out so well, we are not really talking about an initial deployment of radar, computers, Sprints, and Spartans at two sites in Montana and North Dakota. What we are really talking about is a program which may well go far beyond that and cost not the \$6.3 billion as originally alleged and which has now gone up to \$10.8 billion, but will cost rather tens and tens and tens of billions of dollars on the one hand and tens and tens and tens of billions of rubles on the other. And at the end, we will be just about where we are now.

If I may so, this country has unquestioned nuclear superiority over the Soviet Union at the present time. In the field of the ICBM's we have 1,054—200 of them in my own State of Montana. As of the moment, I would guess that the Soviet Union may have approximately 1,065, and at the end of the year may have 1,075. But that is the only area that approaches comparability.

With respect to the Polaris, for example, we have 41 submarines, each with 16 missiles, or a total of 656 Polaris missiles, compared with the Soviet Union's 45. And that is where the core of defense in this country lies—on the sea.

Let me repeat those figures. Within our Polaris fleet, all 41 of the submarines, there are 656 missiles. The Soviets have 45.

In the field of bombers—the B-52's and the B-58's—we have 646; and so far as Soviet counterparts are concerned—the Bisons and Bears—there are 150. As a matter of fact, that is a

S 9108

CONGRESSIONAL RECORD — SENATE

August 5, 1969

decline of 5 from the Soviet figure of last year.

Those figures should be kept in mind at all times.

There are many further questions I would like to raise. Other Senators wish to speak, however. Indeed, I have seldom seen so many Members turn out to greet the maiden speech of a Senator—for which I am grateful, as—I am sure—is the Senator from Alaska. Therefore I shall not take much more of the distinguished Senator's time, except to say that I am in wholehearted accord with the arguments he has advanced in his most statesmanlike speech; a speech presented, moreover, in a most high level and statesmanlike manner.

I only hope that the way to peace will lie not through arming and rearming, not through acting and reacting, but through negotiations. To that end I hope it will be made definite very soon that the so-called SALT negotiations will get under way—sometime this month—between the Soviet Union and the United States. It hardly needs saying that every effort should be made to see that these negotiations succeed; that there is brought about an arms freeze or arms limitation to the end that the syndrome of acting and reacting will be done with and to the end that less and less will be spent on this type expenditure and more and more spent to face up to the problems that face this Nation at home.

Mr. President, again I extend my sincere congratulations for a great speech by the distinguished junior Senator from Alaska. I am confident that it has marked the beginning of many outstanding contributions hereafter.

Mr. GRAVEL. I thank the Senator. I yield to the Senator from Ohio.

The PRESIDING OFFICER (Mr. BYRD of Virginia in the chair). The Senator from Ohio is recognized.

Mr. YOUNG of Ohio. Mr. President, the address we have just listened to, the maiden address of the distinguished junior Senator from Alaska, has been a very superior and a most convincing speech, and a most devastating speech against the pending proposal of the administration for the ABM.

I think the citizens of the great State of Alaska have every reason to be mighty proud that they are represented here in Washington by the distinguished junior Senator of their State.

He has manifested that he has been most diligent. He has manifested that he is serving his State and the Nation with vitality, zeal, and great industry. His excellent analysis of the problems posed in the proposed deployment of the ABM system has been irrefutable. As the majority leader stated, this is probably the best, and it is certainly one of the best, arguments that have been made on the floor of the Senate expressing opposition to the ABM proposal.

The Senator from Alaska is absolutely correct in stating that our only real defense against the threat of a nuclear attack is the deterrence of our overwhelming offensive forces, primarily the Polaris and the soon-to-be Poseidon submarine force. These nuclear submarines of our Navy are capable of re-

maining underwater for as long as 300 days and nights. Their missiles have presently a maximum range of 2,875 miles. Soon, with the Poseidon, that figure will be more than doubled. No area in the vast land mass of the Soviet Union or Communist China is safe from the devastation from missiles fired from these submarines, as has been so eloquently stated by the Senator from Alaska. Furthermore, in addition to our nuclear submarines, our combined strategic bombers and land-based missile forces assure survival of one or the other from attack.

I agree with the prediction of the Senator from Alaska that, should we proceed to build this system, the leaders of the Soviet Union are almost sure to respond with increases in offensive strength which would negate any advantage from an ABM deployment.

We should continue to seek an understanding with the Soviet Union whereby neither side would expand its defensive facilities beyond the present level. Such an understanding would freeze the strategic situation as it is today with each side depending on its offensive missiles to provide the deterrent. We should be considering arms cutbacks, not increasing arms; we should be encouraging arms limitation negotiations, not a new and accelerated arms race. It is of the utmost importance that the President give top-most priority to winning and achieving a nuclear missile limitation agreement with the Soviet Union.

It is ironic that the first crucial vote on the ABM will occur on the 24th anniversary of the dropping of the atomic bomb on Hiroshima.

I wish to say it is a fine thing not only for the State of Alaska but for the Nation and the world that the distinguished junior Senator from that great State has made his convincing address on the eve of the vote we shall take.

I believe implicitly that the Safeguard proposal must be defeated. I am utterly opposed to the appropriation of taxpayers' money for the ABM. However, I recognize the fact that this proposal may be approved by Congress—I do not believe it will be—and every effort must be made to delay deployment until sanity prevails and until the administration explores the possibility of an arms limitation agreement with the Soviet Union.

Therefore, I intend to vote for the Cooper-Hart amendment which would assure that delay and give us a vital breathing spell to avoid the ramifications of this boondoggle.

Again, I congratulate the distinguished Senator from Alaska.

Mr. CHURCH. Mr. President, will the Senator yield?

Mr. GRAVEL. I yield.

Mr. CHURCH. Mr. President, I wish to join my colleagues in expressing my admiration for the maiden address which has just been delivered by the distinguished junior Senator from Alaska.

I must say this is not just a promising, praiseworthy maiden address; it is unusually and impressively perceptive and profound.

I could not possibly guild the lily by elaborating further, except to say the

Senator has demonstrated on this floor today that he will have a bright future in the Senate. I congratulate him.

Mr. GRAVEL. I thank the Senator.

Mr. CASE. Mr. President, will the Senator yield?

Mr. GRAVEL. I yield.

Mr. CASE. Mr. President, I thank the Senator. I would not want it to be thought that the enthusiasm of our Democratic colleagues which leads them to rise in support of what the Senator from Alaska has said, is attributable in any sense to the fact that they liked it because they are Democrats and he is, too. This has been a great speech in a great cause. As a member of the party which sits on this side of the aisle I join my Democratic colleagues and all our colleagues in congratulating the Senator, and in congratulating his State for sending to the Senate someone who has dealt so well with a matter so vital.

Mr. GRAVEL. I thank the Senator.

Mr. HARRIS. Mr. President, will the Senator yield?

Mr. GRAVEL. I yield.

Mr. HARRIS. Mr. President, I wish to commend the distinguished Senator from Alaska for an outstanding speech on a subject of great import to the country. I listened with great interest and admiration. I do not believe that the Senator could have chosen a more important topic during this session of Congress, and perhaps for several sessions before and after this session, upon which to make his maiden speech.

I think that what the Senate and what the Congress decide to do in regard to this issue, the deployment of the Safeguard ABM missile system, may well determine the direction this country takes for many years to come.

I think the Senator was quite right in pointing out the crucial element of time that is in our favor and which enables us to make this decision on a more careful and more rational basis. We have time because of our tremendous deterrent force. As the distinguished Senator so well outlined, our deterrent force is composed of Polaris missiles, intercontinental ballistic missiles, strategic bombers, and intermediate range ballistic missiles and planes which fly from carriers.

We have time, as the Senator has so well said, to make these and related decisions without having precipitously now to agree to the deployment of the system is untested. A system that has not been completely tested and one which will make more difficult the talks which are upcoming, and which are so important to the security of this country and the stability of the world.

I certainly commend the distinguished Senator for his very fine speech.

Mr. GRAVEL. I thank the Senator from Oklahoma.

The PRESIDING OFFICER. The time of the Senator from Alaska has expired.

Mr. YOUNG of Ohio. Mr. President, I ask unanimous consent that the Senator from Alaska may proceed for 15 additional minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HART. Mr. President, I have never found a word formula on an occa-

August 5, 1969

CONGRESSIONAL RECORD — SENATE

S 9109

sion such as this that could express adequately both sincere admiration and yet avoid the appearance of going through a Senate ritual.

I wish I had a formula that conveys how much we really mean it as we rise to congratulate the Senator from Alaska.

As the able Senator from New Jersey said from across the aisle, it was a great speech in a great cause from one who demonstrates today that he shall be, indeed is, a great Senator.

Mr. GRAVEL. Mr. President, I thank the Senator very much.

Mr. NELSON. Mr. President, there is not much that I can add to what has already been said by our distinguished majority leader and other Senators who followed him in commending the excellent speech of the Senator from Alaska, except to say that I wholeheartedly endorse his comments.

His speech is a most thoughtful contribution to the dialog now going on over the development of a weapons system by this country and Russia.

I join other Senators in congratulating the distinguished Senator from Alaska on an excellent job.

Mr. GRAVEL. I thank the Senator from Wisconsin very much for his comments.

Mr. COOPER. Mr. President, the breadth, quality, and even the calmness of the speech of the distinguished Senator from Alaska reflects his enormous work in the hard process of arriving at a decision, a process which he described so well in the early part of his address.

I agree with the Senator from Wisconsin. I believe that the Senator from Alaska has analyzed as clearly as anyone has, the various weapons systems and their relation to security.

I should like to highlight one reference on the last page of the Senator's speech, in which he states:

THE LONG-TERM RISKS TO THE SURVIVAL OF THIS COUNTRY AND OUR WAY OF LIFE COME FROM A WAR NOBODY WANTS

The long term solution lies not in Safe-guard, but in taking seriously every opportunity to halt the arms buildup simultaneously both here and in the Soviet Union.

I congratulate the Senator from Alaska on his maiden speech. It is a great speech.

Mr. GRAVEL. I thank the Senator from Kentucky.

Mr. FULBRIGHT. Mr. President, when I asked questions of the Senator from Alaska a short time ago, I did not refer to his speech as being a maiden speech. However, I knew that it was when I came into the Chamber.

It reminds me that, 26 years ago, I made my maiden speech in the House of Representatives, but the Senator's was on a much more important subject and a much better speech.

I congratulate the Senator from Alaska once again on producing such a thoughtful and appropriate speech in his maiden effort in the Senate.

I, too, join the majority leader in saying that I agree with the reasoning of the Senator. The Senator from Alaska has obviously interpreted, I believe correctly and thoroughly, the testimony which has

been taken by the various committees of the Senate.

Congratulations to the Senator.

Mr. GRAVEL. I thank the Senator from Arkansas.

Mr. HARTKE. Mr. President, the speech of the distinguished Senator from Alaska is an excellent one, with a most persuasive argument against deployment of the ABM system.

I am not surprised at the depth and intensity of the Senator's remarks, and the way he has expressed himself, because I know him personally. I know that he is a man of intelligence, one who is dedicated to the sincere, best interests of the United States of America.

I know that the State of Alaska is very proud of him, as I know all Senators in this Chamber are proud of the fine work he has performed today.

Mr. GRAVEL. Mr. President, I thank my good friend, the distinguished Senator from Indiana for his kind remarks.

Mr. KENNEDY. Mr. President, I join my colleagues in commending the distinguished Senator from Alaska on his statement to the Senate today.

All of us realize that this is one of the most complicated, involved, and sensitive questions with which the Senate has ever been confronted.

In the Senator's speech, he has shown insight, perceptiveness, and judgment from which all of us can benefit. He is to be commended for his remarks.

The Senator from Alaska renders a valuable service to the Members of this body and to the American people, and I commend him on what he has done today.

Mr. GRAVEL. Mr. President, I thank the Senator from my native State.

Mr. HUGHES. Mr. President, it is with a great deal of pride that the freshman Senator from Iowa rises today to join in the compliments being paid to the freshman Senator from Alaska.

I say a great deal of pride, because I have enjoyed the relationship the two of us have been sharing since coming to the Senate.

I have long waited for the Senator from Alaska to express himself on this issue. I have never heard a more reasoned, a more thorough speech to a subject than was made here today by the Senator from Alaska. I share completely the views he has expressed.

Naturally, a person feels good when he agrees with a man, but I think that the reasoned, the studied, and the intellectual approach which he has made, obviously for weeks and months into research and soul searching on this subject, as well as the patriotism displayed and the best interests of the people of this great Nation considered, could only reflect on the part of this freshman Senator a great pride in the Senator from Alaska.

Certainly, I join all Senators with more years of service than I in saying to the Senator from Alaska what great joy I share in this fine hour on the floor of the Senate.

Mr. GRAVEL. Mr. President, I thank my good friend from Iowa.

Mr. MURPHY. Mr. President, I, too,

should like to congratulate the distinguished Senator from Alaska on his maiden speech.

It is a very thoughtful and very scholarly address. I disagree with much of the logic in it, as he knows, but I think that its preparation and delivery deserve a great measure of the acclaim which has been given him by many of his colleagues today.

Let me ask the Senator one question. Page 8 contains a statement that China is the only nuclear power which has asserted it will never use nuclear weapons first.

I was under the impression that that was the policy of the United States also; is that not true?

Mr. GRAVEL. The only answer I can give to that is that I know of no pronouncement by the United States in that regard. China has repeatedly made that statement.

Mr. MURPHY. I thank my distinguished colleague.

There is one other point I should like to make. Continually in the discussion here, concerning sums of money, I should like to ask my distinguished colleague whether he understands that in the bill before this body the only amount that is within discussion at this particular time—and I understand my distinguished colleague agrees—is that research and development should precede, and that the only objection is to the construction of the building or deployment of the two bases asked for in the bill, and that the amount of money involved is not in the billions of dollars but actually less than \$400 million.

I wonder if my colleague understands that before further expenditures can be made, it must come back to this body. Thus, we have a chance to reassess it, look at it, and decide whether further expenditures possibly are necessary. I assume my colleague knows that.

Mr. GRAVEL. The Senator from California knows the high esteem in which I hold him, but I answer him by asking if that is an argument for the ABM—the fact that it is going to cost only \$400 million.

Mr. MURPHY. No. The argument for ABM is that all seem to agree that we need a defensive system. From all the testimony the Senator from California has listened to in all the Armed Services Committee secret meetings and open meetings, it seems this is the only system available under the state of the art at the present time. Both proponents and opponents on the scientific side agree to that.

It is the feeling of the Senator from California that the President of the United States certainly has carefully considered all the information, and he has asked for this system. He said something which I think is very important. He said we will have a reassessment and review every year.

The Senator from Alaska and the Senator from California—and I am sure every Member of this body is in complete agreement—hope and pray that the coming arms talks will be productive. Experience of the past has taught us that

S 9110

CONGRESSIONAL RECORD — SENATE

August 5, 1969

we must not take too much for granted; that at least one party at the negotiating table has a strange reputation for its manner of negotiating and, later on, the manner in which it stands by its agreements.

The President of the United States, who has the responsibility in this matter, has, at the outset, said he feels the adoption of this proposal will help him at the negotiating table. Others feel it will not help him. I am inclined to believe that perhaps the more he has to deal with in the way of strength, the more the opportunity and the better the chances will be that he will accomplish what we all fervently hope for.

Mr. GRAVEL. I would only add to the comments of the Senator from California that in my mind he reemphasizes the point that no argument is made based on dollar amounts.

Second, I have stated in my remarks that there are alternatives. I believe these alternatives have not been sufficiently studied and they have not been presented to the Congress.

Mr. MURPHY. May I say, in response, I know there are alternatives, but again, as I stated, in discussions with the scientists, who are both for and against the ABM Safeguard system, in answer to direct questions they all agreed that this was the only available system under the present state of the art that is known. There may be a new system later, but—

Mr. GRAVEL. I disagree with the Senator on that. They could, as an alternative possibly expand our primary force. They could harden the sites—

Mr. MURPHY. May I say they were all discussed in the committee?

Mr. GRAVEL. I can only say to the Senator from California that the scientists he has listened to and the opinions I hold, differ.

Mr. MURPHY. As I have explained, I have listened to scientists who were proponents, and also those who were opponents. We went through the matter of hardening. We went through the matter of defense capability and radar and all the other details. The statement has been made that the system will not work. There are just as many, just as capable, who say the system will work. One expert witness said the ABM system which the Russians had already deployed was a "bunch of junk." I do not really think his information on that system is better than the Senator's or mine. I am not sure it is a "bunch of junk." I wish we had one.

I do not think adoption of this proposal will increase the arms race. The Russians have so stated.

So it seems to me that if there is to be a disagreement in a matter of this importance, the point in controversy must be decided in favor of the future security of the United States. At this time, as I pointed out, we are considering in this bill only an amount involving the difference between research and development—which everybody seems to agree should continue—and the building of the two sites, which is less than \$400 million. If it gets into billions, we get into a further consideration. It is a matter which will get back to this body. It must be re-

considered. At that point we hope we can say we do not need it and can cut out the whole thing.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MURPHY. I thank my distinguished colleague for his courtesy.

Mr. YARBOROUGH. Mr. President, will the Senator yield?

Mr. DOLE. Mr. President, will the Senator from Alaska yield to me?

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have 2 additional minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GRAVEL. First I yield to the Senator from Texas (Mr. YARBOROUGH).

Mr. YARBOROUGH. Mr. President, I commend my colleague, the Senator from Alaska, for his very able statement and forceful argument. As he says, it is his maiden speech, but it would be a speech worthy of one who had been in this body for 10 or 20 or 30 years. It is a speech that would be to the credit of any Member of the Senate. His marshaling of the facts has been irrefutable and his marshaling of the arguments unanswerable. It makes me proud that I was the first Senator from the State of Texas who advocated statehood for Alaska.

Mr. GRAVEL. I thank the Senator.

I now yield to the Senator from Kansas.

Mr. DOLE. I commend the Senator from Alaska. I have had an opportunity to read his statement very hurriedly. I am impressed by the statement found on page 11, that it would be unfortunate if a major national security program were approved by a margin of only one or two votes. There is another body in this Congress, whose Members are made up of very patriotic and capable men and women. I would say a vote taken there would be by a margin of two to one. So I would guess there are about 533 Members of the Congress, with a couple of vacancies, and the margin would be much larger than one or two votes. The Senator may be correct as far as this body is concerned.

The Senator is not saying, in essence, that we do nothing; is he? Does the Senator support further research and development?

Mr. GRAVEL. I support the Cooper-Hart amendment.

Mr. PEERCE. Mr. President, the Senator from Alaska (Mr. GRAVEL), in his first formal presentation to this body, has made a significant contribution to the debate on the Safeguard ABM system. I congratulate him on the quality of his argument and the wisdom of his conclusions.

LIMITATION OF STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that statements in relation to the transaction of routine morning business today be limited to 3 minutes, beginning now.

The PRESIDING OFFICER (Mr. Young of Ohio in the chair). Without objection, it is so ordered.

THE WRONG MAN FOR VENEZUELA

Mr. CHURCH. Mr. President, I wish to discuss briefly the pending nomination of Mr. John Hurd to be our new Ambassador to Venezuela.

The President sent this nomination to the Senate June 18. No action has been taken on it by the Foreign Relations Committee, and my purpose today is to urge the President to withdraw it.

I do not know Mr. Hurd. From all accounts, he is an estimable gentleman. If he were nominated to be Ambassador to some Latin American country other than Venezuela, I would have no objection. But I believe it would be a costly blunder to send him to Venezuela; and if the nomination is not withdrawn, I shall do everything I can to oppose its confirmation by the Senate.

The problem is that Mr. Hurd is an ex-president of the Texas Independent Producers and Royalty Owners Association and has served on the imports committee of the Independent Petroleum Association of America where he has been actively engaged in the movement for tighter oil import quotas.

I do not propose here to argue the pros and cons of our import policies. But to send an oil protectionist to Caracas is like sending a Zionist to Cairo. Given our gigantic oil investment in Venezuela, it would be dubious enough to send an oil man there under any circumstances. But to send one who has lobbied for tighter import quotas boggles the imagination.

U.S. oil import policy far overshadows any other issue in United States-Venezuelan relations. Up to this point, our import quotas have not forced a curtailment of Venezuelan exports to the United States. But, at the same time, Venezuelan production and exports are not increasing. This needs to be viewed in the context that:

Oil accounts for 90 percent of Venezuela's foreign exchange;

The Venezuelan Government is strapped for money;

Venezuela is one of the very few Latin American countries that has moved forward in the spirit of the Alliance for Progress and that is making democratic government work; and

Venezuelan oil would have trouble increasing its share of the U.S. market even without import quotas. It is substantially more expensive than Middle Eastern oil—even allowing for transportation differentials.

To send to Caracas as the new American ambassador an American oil man who has lobbied for stricter import quotas would inevitably inflame Venezuelans across the political spectrum; it would be like sending fire to fuel.

I emphasize that my objections to Mr. Hurd apply only to his assignment to Venezuela or to some other important oil-producing country. I have no doubt that he would make a commendable ambassador to a country where oil does not figure so largely in U.S. policy, but I cannot give any advice and consent to sending him to Venezuela.

An interpretive account of the consternation that President Nixon's nomination of John Hurd has caused in Venezuela is contained in an article

August 5, 1969

CONGRESSIONAL RECORD — SENATE

S9111

written by Jeremiah O'Leary, the Latin American correspondent for the Washington Star, which appeared in last Sunday's edition of that newspaper. I ask unanimous consent that the article, entitled "Choice of Hurd To Be U.S. Envoy Jolts Caras," be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHOICE OF HURD TO BE U.S. ENVOY JOLTS CARACAS

(By Jeremiah O'Leary)

Nothing since its last earthquake has rocked Venezuela as much as President Nixon's nomination of controversial Texas oilman John Hurd as ambassador to Caracas.

Hurd, president of the Independent Oil Producers Association and a Nixon campaign fund-raiser, is an avowed enemy of loosening restrictions on foreign petroleum imports. Oil is the life-blood of the Venezuelan economy, and the South American's foreign policy is keyed to obtaining more favorable conditions for marketing its petroleum in the United States.

Veteran observers of Latin-U.S. affairs consider the nomination a blunder in view of Hurd's opposition to imported oil and Washington's desire to improve relations with other countries of the hemisphere.

Hurd is viewed in Venezuela about as favorably as a Ku Klux Klan member would be in Tanzania. Reaction of Venezuelan government officials to the nomination, while publicly correct, has been choleric in private. Venezuelan newspapers have not been so restrained, and they have been swinging freely at the nomination since it was announced June 12.

CALDERA HAS TROUBLES

President Rafael Caldera, a minority election victor still in his first year in office, is having trouble enough governing his turbulent democratic nation without the added tribulation of a U.S. envoy with a record of protectionist oil advocacy. Caldera won election last winter as a candidate of the Social Christian (COPEI) party over the incumbent Democratic Action party but inherited a large deficit and faces restlessness in several quarters.

The youth wing of COPEI, which is considerably to the left of the party main stream, has been stirred up by the Hurd nomination. In addition, Caldera permitted the first July in recent Venezuelan history to pass without promoting any of the army's generals. This could come back to haunt him even though the well-budgeted armed forces are not coup-minded.

Political observers believe Caldera would have withheld Venezuela's placid—the diplomatic agreement to receive an envoy—in the case for Hurd if he had not found it necessary to ask New York's Gov. Nelson A. Rockefeller to skip Venezuela in his fact-finding tour for Nixon. Rejection of both Rockefeller as Nixon's personal emissary of the U.S. President and Hurd as ambassador would have been, or seemed, more provocative than Venezuela cares to be in relation to Washington.

Venezuela's manifest intention, in the event Hurd is confirmed by the Senate, is to receive him with what might charitably be described as restraint. Some Venezuelan officials make no bones about saying Caracas will simply ignore Hurd if he comes as ambassador and attempt to deal with Washington through its envoy here.

HINT OF SECOND THOUGHTS

It is difficult to see how the 54-year-old native of Laredo, Tex., could function as an effective ambassador under these conditions, and there is some evidence that Washington is already having second thoughts about the wisdom of the nomination. Hurd's nomination already has gone six weeks without being

scheduled for a confirmation hearing by the Senate Foreign Relations Committee. Some sources take this as an indication that the nomination may be withdrawn.

There have been hints around Capitol Hill and the State Department that Hurd may be redesignated as ambassador to another country where oil is not an explosive domestic issue.

Hurd was Texas state chairman for the Nixon-Agnew campaign last year. He figured in the news when the Pearson-Anderson column reported Spiro T. Agnew had given a secret pledge to Texas oilmen that a Nixon administration would block a proposed free trade zone at Machiasport, Me. The incident reportedly occurred at a fund-raising affair in the Petroleum Club of Midland, Tex., in October.

Agnew reportedly said, "I assure you any gimmick to get a refinery at Machiasport will be killed."

Hurd was quoted as saying, "I have good news for you. I have talked directly to Mr. Agnew. He has assured me that the Occidental (Petroleum Co.) effort at Machiasport is dead. If he and Nixon are successful, there will be no refinery."

Both Agnew and Hurd denied making the statements but Hurd admitted discussing the hope that the Nixon-Agnew administration would not show favoritism to any part of the oil industry as to import quotas.

ABM
AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH—AMENDMENTS

AMENDMENTS NOS. 114 THROUGH 116

Mr. NELSON. Mr. President, in behalf of the Senator from New York (Mr. GOODELL) and myself, I send to the desk three amendments.

CHEMICAL-BIOLOGICAL WARFARE

Mr. President, it is only recently that we have begun to penetrate the highly secret Pentagon world of the deadly weapons of chemical-biological warfare. So secret is that world that few Members of Congress know what this country is doing in the experimentation, development, stockpiling, and disposal of these weapons. But the magnitude of the threat to the people of this Nation and the world requires the fullest congressional examination and investigation.

Most Congressmen were surprised and shocked recently when the Wall Street Journal revealed that 24 persons had been injured in a nerve gas accident, but in the disclosure that deadly weapons had been secretly moved to the Ryukyu Islands base that is a major jumping off point to the war in Vietnam.

Reacting in its usual manner, the Defense Department denied the accident on Okinawa. A few days later, however, the Pentagon made a vague admission that the accident had occurred and that some chemical agent was involved. The Okinawa incident is one of several that have occurred recently. It is mentioned here as one example of what has been happening. But the Pentagon should not receive all the criticism for keeping all CBW activity in strictest secrecy. Congress has permitted the Pentagon to go its own way without asking for an ac-

counting and it must be obvious to the Nation and the world that Congress has failed to devote sufficient time and energy to debating and reviewing the chemical-biological program.

The seriousness of this failure was emphasized last week in the statement made by Senator ALLEN ELLENDER who said:

As far as the Continental U.S. is concerned, evidence has recently been brought out that tremendous stockpiles of various deadly compounds are on hand at centers throughout the country. Most of this work has been done without the knowledge of the Congress. During my twenty years service on the subcommittee of the Appropriations Committee for Defense, I never have come across any line item for the production of nerve gas.

But in spite of the fact that Senator ELLENDER has not seen a line item for production of nerve gas in his 20 years on the subcommittee, this country is spending approximately \$1 million a day on chemical-biological warfare weapons.

It is well known that these chemical-biological weapons have the frightening capacity of backfiring, especially if the wind happens to change direction. That happened only last year when the winds carried poisonous gasses from a Dugway Proving Grounds test in Utah to an area where livestock was grazing and 6,400 sheep died. Fortunately the wind blew in the direction of animals. Had it blown in another direction the tragedy might well have been to people in nearby Salt Lake City.

Certainly, CBW deserves the same careful attention and scrutiny that Congress is presently giving the question of the deployment of the ABM. Biological weapons, even in the best circumstances, are highly unreliable devices that always carry the threat of epidemic for people all over the world. The threat of these dangers has been discussed by concerned persons everywhere. Just last week Senator THOMAS J. McINTYRE expressed his concern and a concern I am sure many Members of Congress share when he said:

We all share the fervent hope that we won't have to fight again once peace is secured in Southeast Asia. But if ever we must retaliate in the event of a germ warfare attack, I would hope we would use a more effective response than the chaotic dissemination of deadly germs. I think most Americans would agree with me.

That is why this group of Senators has come to the floor today to offer a number of amendments to the military appropriations bill. Senator CHARLES GOODELL is joining me in the sponsorship of three amendments. Senator VANCE HARTKE is sponsoring three others. Senator CLAIBORNE PELL is sponsoring another and cosponsoring one with Senator RALPH YARBOROUGH.

Congress must act now to fulfill its responsibility in discussing a program that has safely escaped careful congressional scrutiny for 50 years. The proposals offered today are not radical; nor do they jeopardize the security of this Nation.

It is our conviction that our proposals, if passed, will offer greater protection to our citizens and will guarantee the right of Congress to review the actions of the executive branch of Government. Perhaps, more importantly, these amend-

S 9112

CONGRESSIONAL RECORD — SENATE

August 5, 1969

ments might be significant contributions toward cooling the spiraling arms race.

The first amendment Senator GOODELL and I will offer prohibits the open air field testing of nerve agents or any other pathogenic biological organism. This amendment does not prohibit the field testing of tear gases, incapacitating gases, chemical simulants, or nonpathogenic biological organisms. It also does not prohibit the testing of agents done within the confines of a laboratory.

The next amendment prohibits any procurement of biological bomblets, biological spray tanks to be attached to aircraft, biological missile warheads, any shells containing nerve agents or a biological toxin, and other devices that could be used to disseminate lethal chemical or pathogenic biological agents in warfare.

The third amendment is twofold: First, to insure that foreign nations are consulted before the United States deploys CBW agents on their soil; and second, to assure that Congress is consulted before the United States deploys CBW agents on those lands outside the United States which are under its jurisdiction and control, such as Okinawa.

Hopefully this last amendment will eliminate the dangerous international repercussions of deployment of such weapons on foreign territory. In addition to the Okinawa incident which threatens our relations with Japan, the West German Government has now revealed that poison gas is being stored in that nation.

The package of CBW amendments offered here today is aimed at answering the question that concerned Congressmen and people all over the world are asking. After the ABM issue is settled, Congress should plan to set aside time for several days of debate and consideration of these amendments and a thorough examination of our total CBW program.

These are modest and very limited amendments which do not reach the much more important issue as to whether we should be developing such a weapons system at all. There are grave practical, political, and moral questions that must be debated and resolved by the Congress and the people of this country. It is my own view that we are developing a chemical and biological monster that cannot be controlled. It will ultimately proliferate into the armaments race of all nations large and small and we will have made it possible because of our own research and development. As the Columnist James J. Kilpatrick put it in a column in the July 31 Washington Evening Star:

The "possible poisoning of whole populations" is a caged monster, dwelling in the dungeons of the unseen hell that men of all nations have fashioned.

On the moral question—I cannot believe that the people of this Nation would ever sanction the use of deadly disease germs and lethal gases on defenseless civilian populations.

These important questions cannot be left for settlement in the military arena; it is in the public forum where such issues must be weighed and resolved.

Mr. President, I ask unanimous consent to have printed in the RECORD an

article entitled "Time To Lift the Veil on Grisly CB Weapons," written by James J. Kilpatrick and published in the Washington Evening Star of Tuesday, July 1, 1969.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TIME TO LIFT THE VEIL ON GRISLY CB WEAPONS

(By James J. Kilpatrick)

For the first time in many years, possibly since the mustard-gas days of World War I, the American people are beginning to think uneasily about the most grisly weapons in contemporary arsenals—the weapons of chemical and biological warfare. It is a subject that cries out for sober discussion.

Several events have served the useful purpose of provoking debate. There was the killing of sheep in Utah last March. In late spring a hullabaloo arose over the army's effort to dispose of obsolete stocks of chemical agents. Then came the row over storage of nerve gas on Okinawa—a row that Secretary of State Rogers has been trying to quiet this week in Japan. A few days ago, Louisiana's Senator Ellender complained publicly that in the 20 years he has served in Congress, the military establishment has kept its CB program a tight secret.

At least some of the secrecy ought to be ripped away. No one reasonably could ask that the Joint Chiefs of Staff make full disclosure of every last detail of research, development, production and storage of its CB agents. At the same time, a thorough ventilation of the nature of these frightful weapons might well lead to stronger covenants against their use.

Contrary to widespread assumption, the United States never ratified a treaty banning the use of poison gas. Such an agreement was signed at Geneva in 1925, but when the Geneva Protocol reached the U.S. Senate the following year, a number of objections were heard. Gen. John J. Pershing, speaking from his own searing knowledge of chemical warfare, did his best to help the agreement along:

"I cannot think it possible that our country should fail to ratify the protocol," Pershing wrote the Foreign Relations Committee. "Scientific research may discover gas so deadly that it will produce instant death. To sanction the use of gas in any form would be to open the way for the use of the most deadly gases and the possible poisoning of whole populations of noncombatant men, women and children. The contemplation of such a result is shocking to the senses. It is unthinkable that civilization should deliberately decide upon such a course."

Unfortunately, the Senate took the unthinkable course. Alone among the powers of the earth, the United States failed to ratify. Meanwhile, in the 43 years that have passed, Pershing's prophecy has come true. The "possible poisoning of whole populations" is a caged monster, dwelling in the dungeons of the unseen hell that men of all nations have fashioned.

In closed-door testimony before a Senate committee last April, Dr. Matthew S. Meselson, professor of biology at Harvard, gave several senators an elementary course in chemical and biological warfare. His statement, carefully sanitized, was released in printed form a few weeks ago. Copies may be obtained from the Foreign Relations Committee.

The U.S. has seven chemical warfare agents. These begin with CN, which is ordinary tear gas. At the next level is CS, a super tear gas used in Vietnam. Slightly stronger is DM, an agent that causes violent sneezing, nausea and vomiting. Little is known of BZ, a "temporary incapacitant that interferes with normal mental and bodily processes." Another incapacitant is

HD, better known as the blistering mustard gas.

The two remaining chemical agents are VX and GB. Both are highly lethal. "A tiny droplet of VX on the skin will cause death," Dr. Meselson said. This was the agent that killed the 6,000 sheep in Utah. As for GB, a nerve gas developed but never used by the Germans in World War II, a single bomber in a single run "might be able to kill most unmasked persons within an area of at least five square miles." This would happen "within a matter of seconds."

The biological agents are more dreadful still: "These pose a threat to the entire human species." Space prevents a description of them here; but these agents exist, and one does not have to be a professional pacifist to raise an alarm about them. As Senator Ellender said, it is high time for the Senate to get concerned.

Mr. NELSON. I ask unanimous consent that the amendments offered in behalf of myself and the Senator from New York (Mr. GOODELL) be printed in the RECORD.

The PRESIDING OFFICER. The amendments will be received and printed, and, without objection, will be printed in the RECORD.

The amendments are as follows:

AMENDMENT No. 114

At the end of the bill add a new section as follows:

SEC. 402. None of the funds authorized to be appropriated by this or any other Act may be used for open air tests of lethal chemical agents or pathogenic biological microorganisms or biological toxins.

AMENDMENT No. 115

At the end of the bill add a new section as follows:

SEC. 402. None of the funds authorized to be appropriated by this or any other Act may be used for the procurement of delivery systems designed to disseminate lethal chemical agents, pathogenic biological microorganisms, or biological toxins, or for the procurement of any part or component of such delivery systems.

AMENDMENT No. 116

At the end of the bill add a new section as follows:

SEC. 402. None of the funds authorized to be appropriated by this or any other Act may be used for the storage or deployment of any lethal chemical agent or any pathogenic biological microorganism or any biological toxin at any place outside the United States, or for the deployment at any place outside the United States of delivery systems designed to disseminate any such agent or microorganism or toxin unless the country exercising jurisdiction over such place has prior notice of such action. In the case of any place outside the United States which is under the jurisdiction or control of the Government of the United States, no such action may be taken unless prior notice of such action has been given to the Committee on Armed Services, the Committee on Foreign Relations, the Committee on Interior and Insular Affairs, and the Committee on Appropriations of the Senate and the Committee on Armed Services, the Committee on Foreign Affairs, the Committee on Interior and Insular Affairs, and the Committee on Appropriations of the House of Representatives. As used in this section the term "United States" means the several States, and the District of Columbia.

Mr. GOODELL. The amendments being offered today by the Senator from Wisconsin (Mr. NELSON) and myself as well as the amendments of other Senators indicate that the period of silence

August 5, 1969

CONGRESSIONAL RECORD — SENATE

S 9113

over gas and germ weapons is over. It is time for open discussion of CBW. What is needed is some plain speaking between Congress and the Pentagon, between our Government and other Governments and between our Government and the American people.

Chemical and biological weapons have long been one of the Pentagon's most closely held secrets.

We, however, have come to know and to think about weapons. As with nuclear weapons, we must come to know and understand chemical and biological weapons. Only in this way, will we be able to consider gas and germ weapons with sustained understanding rather than to react sporadically on impulse and ignorance. Congress and the Nation have a right to know the facts from the Pentagon and to debate the issues of CBW just as we have come to know and debate nuclear weapons.

What we need to consider are the grave moral issues which arise when we stockpile munitions filled with lethal gas and disease-producing bacteria. What is needed is an in-depth examination of the Pentagon's retaliation-in-kind concept used to justify this program.

Peril points do exist in this weapons program. There are dangers that can no longer be ignored or hushed in secrecy.

Consider the peril to the health and safety of the American people unless CBW testing, transportation, stockpiling, and disposal are regulated. Consider the peril to constitutional guarantees of checks and balances unless Congress can review requests and the rationale for an expanded CBW program. Consider the peril to U.S. relations with other countries unless deployment of these weapons is with mutual consent.

Now let us think about the example that our CBW program presents to both nuclear and nonnuclear nations.

One aspect of our program is CBW training for foreign officers from over 35 nations. Does this inspire an appetite for acquisition and proliferation of these weapons throughout the world? What if we receive requests from nations engaged in war for supplies of deadly nerve gas or disease-producing biologicals. Under these circumstances, what would the American people want our Government to do?

Finally, what about arms control? CBW is a driving wedge splitting meaningful action from general disarmament goals?

Let us weigh carefully the horrors in actual use of these insidious weapons of war. Let us weigh the escalation-of-weapons risks to the soldier and to civilian populations if gas and germs are unleashed in war.

The three amendments which I will introduce with Senator NELSEN today aim at limiting the dangers posed by offensive lethal chemical and biological weapons. We hope that our discussion of these amendments will help to answer some of the difficult questions which CBW poses.

The first amendment prohibits the open air field testing of nerve agents or any pathogenic biological organism. This amendment does not prohibit the field testing of tear gases, incapacitating gases, chemical stimulants, or nonpatho-

genic biological organisms. It also does not prohibit the testing of agents done within the confines of a laboratory. Distressing as it may be to have to guard against gas and germ warfare, it is vitally important to continue testing in the laboratory for protective devices aimed at both military and civilian defense.

The next amendment prohibits any procurement of biological bomblets, biological spray tanks to be attached to aircraft, biological missile warheads, any shells containing nerve agents or a biological toxin, and other devices that could be used to disseminate lethal chemical or pathogenic biological agents in warfare. Chemical and biological warheads for the Sergeant have brought CBW to the missile age. Weapons escalation has come a long way since 1944 and the Army's ill-fated scheme to use bats to deliver incendiary bombs.

The third amendment is twofold: First, to insure that foreign nations are consulted before the United States deploys CBW agents on their soil; and, second, to assure that Congress is consulted before the United States deploys CBW agents on those lands outside the United States which are under its jurisdiction and control, such as Okinawa. Hopefully this last amendment will eliminate the dangerous international repercussions of deployment of such weapons on foreign territory. In addition to the Okinawa incident which threatens our relations with Japan, the West German Government has now revealed that poison gas is being stored in that nation.

Mr. President, the possibility of accidental death, contaminated land, or the spread of disease due to outdoor testing is an unacceptable price for adding still more to the vast offensive capability of our CBW arsenal.

Lethal chemical and biological weapons are a menace to life in the outdoor testing stage. Throughout the procurement and deployment stages, CBW designed for offensive military purposes, presents a perilous barrier to meaningful arms control. From the perspective of war strategy, tactical use of lethal chemical weapons is of marginal utility. Moreover, it opens up the question of weapons escalation on the battlefield and threats to civilian population. Tactical use of disease-producing bacteria is simply indefensible. Still, the Pentagon wants to add to its CBW arsenal.

It is time we ask if we must continue up the "balance of terror" ladder with CBW. It is time we ask whether the United States is contributing to an erosion of past anti-CBW restraints by its CBW program.

In chemical and biological weapons funding over the years, we have been guided by the Pentagon's "retaliation-in-kind" argument. Where do we find ourselves now?

We find ourselves now in a near perfect model of weapons escalation. We have witnessed escalation in the potency of CBW agents. In gases: chlorine became more powerful than tear gas, phosgene more so than chlorine and the arsenal expanded with the addition of mustard gas and the nerve gases, GB and VX. In biological agents: micro-biological agents of increased resistance to pro-

TECTIVE treatment are constantly being searched for in our BW laboratories. Our BW effort has now reached a point where it appears to be the world's most ambitious effort to develop deadly germs for offensive military weapons.

There has been escalation in delivery systems and in target potential.

The size of our budget for CBW program development has also been built up. In the last 10 years, our expenditures for a CBW program have increased sevenfold to over \$350 million estimated for fiscal year 1970. Other estimates put CBW funds at double this figure.

Mr. President, what will be in store for future generations if we pursue this course of action? Today our attention is focused on nuclear weapons. The Pentagon is asking for funds to deploy an ABM as a defense against nuclear attack. While this nuclear defense question is before us, I wonder about the future and CBW.

Is the handwriting on the wall? In the years to come, will the Pentagon be asking us for an ACBM, an anti-chemical and biological monitoring system?

Life and death decisions are now being made in the Pentagon's laboratories as well as at test sites. The Pentagon can add or detract from the capabilities of CBW now available.

Yet the issues that gas and germ weapons pose to the military are dwarfed by the policy problems which we must face here in Congress. The American people must face these problems with us.

Precautions can be taken now against the perils of CBW if we have the will to take them.

Many of us have requested that the President send to the Senate the Geneva protocol outlawing the use of chemical and biological warfare. Hopefully, this will be a step taken in the immediate future.

I am hopeful also that Senate consideration of our amendments and those of the Senator from Indiana (Mr. HARTKE), the Senator from Rhode Island (Mr. PELL), and the Senator from Texas (Mr. YARBOROUGH) will lead to better understanding of chemical and biological weapons. The issues which these weapons raise to Congress and the Nation are too serious to let CBW spiral in secrecy any longer. The time of discussion review and hard choice is at hand.

The PRESIDING OFFICER. The amendments will be received and printed, and will lie on the table.

AMENDMENT NO. 117

Mr. YARBOROUGH. Mr. President, the chemical and biological warfare program of the United States raises vital questions in the area of public health and safety. I believe I have a special responsibility to bring these questions to the attention of the Senate because I am chairman of the Labor and Public Welfare Committee and its Health Subcommittee.

The chemical and biological warfare program of the United States costs approximately \$1 million per day. Yet to date, Congress has not devoted sufficient time to analyzing this weapons system and what it means to the domestic health and safety of the country.

S 9114

CONGRESSIONAL RECORD — SENATE

August 5, 1969

The chemical and biological warfare program has already caused great concern throughout the Nation because of the hazards to the public health and safety of our people and their environment, caused by the field testing and transport of CBW agents. In addition, we are concerned with its effect on our relations with other countries. Most recently, we have had to deal with the severe repercussions which resulted from the accidental release of nerve gas on Okinawa.

Pursuant to a request last year by the Special Subcommittee on Science—now the Special Subcommittee on the National Science Foundation—of the Committee on Labor and Public Welfare, the Legislative Reference Service of the Library of Congress prepared a background report on chemical and biological weapons. This background report is the source of much of the discussion which follows.

The U.S. Army defines chemical warfare as the tactics and techniques of conducting warfare by use of toxic chemical agents. Chemical weapons can be designed to cause, first, either death or disability in a man; second, destruction or damage to food, animals and crops; and third, depression or removal of other living things in accordance with a specific military tactic.

Types and effects of the principal chemical agents are as follows:

Nerve gases are the most lethal—or deadly—chemical weapons. Generally odorless and colorless, they cause asphyxiation by paralyzing the human nervous system. As little as one-fiftieth of a drop can kill a man.

Incapacitating agents can produce temporary paralysis, blindness, or deafness.

Harassing agents include mustard gas, which caused many casualties in World War I. Mustard gas causes severe burns to eyes and lungs and blisters the skin. Large amounts can kill.

Defoliants and herbicides are used against vegetation rather than humans; can be sprayed on forests and jungles to expose enemy hiding places, also effective in killing crops in enemy-held territory; may cause eye irritation, stomach upsets, or arsenic poisoning in humans.

Biological warfare is the deliberate introduction of disease-producing organisms into populations of people, animals or plants. The organisms are the same as those found in nature, but can be selected and cultured to be more virulent and resistant than those in nature. Some organisms, and especially bacteria, can be grown so as to be resistant to drugs and antibiotics.

It might also be possible to develop a kind of "super germ" or new strains of germs for which the body has not evolved antibodies and for which vaccines have not been developed. The Hong Kong flu is an example of a virus—evolved by nature—to which we had no serological resistance and for which a vaccine could not be developed until the disease was discovered and the organism isolated.

There are diseases such as influenza which are basically incapacitating and there are others which cripple or kill.

Hundreds of pathogenic organisms are available in nature from which the scientist and military strategist can select those which will serve the planned effect. Among the most effective and most feared BW diseases are the following:

Anthrax is a bacterial disease usually found in animals. Symptoms include high fever, hard breathing, and physical collapse. It can cause death within 24 hours if it affects the lungs.

Brucellosis is a bacterial disease usually found in cattle, goats, and pigs. Also known as undulant fever. Not usually fatal to humans although can cause high fever and chills which may last for months.

Plague is a bacterial disease sometimes carried by rats. Usually fatal within a week. Pneumonic plague affects the lungs, may be transmitted by coughing.

Q-fever is a highly infectious disease usually carried by ticks. Rarely fatal, can cause fever lasting 3 months.

Because biologic agents are invisible, odorless, and tasteless, and usually produce no immediate physiologic damage, their early recognition is often impossible. Another reason for the delay in recognition of a biologic agent lies in the fact that physical detection from samples of air, food, and water might take days and even longer, especially if the organism were foreign to the affected population.

Protection against biologic agents is extremely difficult. For example, the "Emergency Manual Guide on Biological Warfare—1959" states:

Decontamination of extensive areas is not considered practical. Rather, natural decay, assisted by sunlight, temperature and air movement must be relied on.

The population is better protected if it has been immunized actively or passively before biologic attack. Thus far it has been impossible to have available a multitude of vaccines capable of being dispersed and administered to a large population. Also, there are as yet no effective vaccines against certain diseases. It is likely that the young, the elderly and the infirm will be particularly susceptible victims.

Biological weapons systems have potential as a device for mass destruction. This is especially true if the combination of virulent agents and susceptible population, along with other conditions, are suitable to epidemic results. It is a self-replicating weapon—it proliferates itself, not only in the affected individual, but also in the entire population.

Not all diseases are equally contagious, but in one way or another they may spread from those who receive the direct inoculum to those who do not.

Crops are vulnerable to biological attack. Some biological agents are persistent; that is, they have spore forms which resist destruction and may remain in the environment, especially the soil, for tens or even hundreds of years.

Increasing attention is being given by the media to recent accidents and potential for accidents in the testing, development, transportation, and disposal of chemical and biological weapons. The July 25 edition of Medical World News contains an article on this subject, en-

titled "Biological Warfare: Off Limits to Doctors." Most of the following information is from that excellent article, including this quote:

Congressman's Question: What amount of VX nerve gas currently being tested in the open air over Dugway Proving Ground in Utah can kill a man?

Physician's Answer: I don't know.

Congressman's Question: Were you aware that the Army's own maps show a permanent biocontaminated area about 17 miles outside Dugway?

Physician's Answer: Not until I read about it in yesterday's papers.

The doctor who was thus forced to admit ignorance at a recent congressional hearing was the Surgeon General of the United States Public Health Service, William H. Stewart, who becomes chancellor of the Louisiana State University Medical Center next month. "I have primary responsibility within the federal government for the protection of public health," Dr. Stewart noted. To make the paradox more bitter, Dr. Stewart had served as chairman of the blue-ribbon committee set up to determine whether Dugway's testing programs, which killed some 6,000 sheep last year, have safety precautions adequate to protect humans, plants, and animals outside or inside the proving ground.

Much of the information about current U.S. biological warfare programs was apparently off limits to Dr. Stewart, as it is to nearly all other physicians, and to just about everybody else as well. The government, university, and drug industry scientists actively involved in these programs apparently include relatively few physicians. The Army's major bio-war center at Fort Detrick, Maryland, for example, has only 14 MDs on its staff, compared with 120 PhDs. And despite the claim that the U.S. programs are purely defensive, physicians who have tried to find out about possible medical defense measures have had little luck with the Army. In the information that has been made available, there is no evidence of any substantial work on ways of protecting the civilian population against a biological attack, or against an air crash, train wreck, lab explosion, or earthquake involving U.S. research or storage facilities.

I believe it is imperative that the Surgeon General be allowed to exercise primary responsibility within the Federal Government for the protection of public health of the citizens of the United States. Thus, I am offering an amendment to the military procurement authorization bill, S. 2546, so that the Surgeon General may be allowed to exercise his responsibility.

The amendment simply states that the Surgeon General of the Public Health Service must determine that any testing, development, transportation, or disposal of chemical and biological weapons will not present a hazard to the public health before any funds can be used for these purposes.

We must not have other incidents such occurred at the Dugway Proving Ground in Utah. The wind that carried the poison gas which killed 6,000 sheep blew 35 miles to the northeast. But if it had gone 35 miles east to Tooele, or 35 miles north to Highway 40, Dr. Gubler, chief of staff of Tooele Hospital, believes the victims might have been humans as well as sheep.

A witness at committee hearings called by Congressman Reuss, Dr. D. A. Osguthorpe, a Salt Lake City veterinarian,

August 5, 1969

CONGRESSIONAL RECORD — SENATE

S 9115

who had been one of the people instrumental in tracking down the cause of the sheep deaths, hinted that there may have been another accident at Dugway. Asked by Congressman VANDER JAGT:

Have you ever run into diseases that you have been unable to account for?

Dr. Osguthorpe replied:

I have run into a disease in newborn calves in the area. No antibiotic or drug so far has proved to have any therapeutic value. My theory is that this is a toxin, a biological agent.

Congressman RICHARD MCCARTHY has pointed out:

Fort Detrick, the Army Biological Warfare Research Center, has one of the poorest records among major biological institutions for infections. There was 3,300 accidents at Detrick between 1954 and 1962. Half of these occurred in a laboratory, involving broken test tubes and accidental scratches from needles. About 400 men were infected as a result.

Infections among workers at secret installations pose a threat to the entire neighboring community, MCCARTHY states. He has cited the instance of a worker who caught plague at Fort Detrick some years ago:

He also happened to be a lifeguard at a swimming pool and had been in contact with many people. Local residents who might have come into contact with Detrick personnel were not warned of the danger.

Fort Detrick, of course, is only minutes from Washington, D.C.

Recently, there was a furor over the proposed cross-country shipment of some 800 carloads of poison gas stockpiled from World War II. The gas was to be dumped in the Atlantic Ocean.

Congressional hearings unleashed a horde of disturbing questions about hazards of the proposed dumping. Among them: Might a medical disaster be inflicted on the civilian population of our large cities if an accident befell these trains on the roadbeds of our old, rough railways? As a result of the furor, some of the poison gas will probably be burned or chemically decomposed somewhere near the present storage sites, but the problem still has not been solved to everyone's satisfaction.

I think the time is right for the Senate to take action. It is my earnest hope that the Senate will pass my amendment. This amendment is not designed to prevent the testing and development of such agents if it can be done with safety to the civilian population. It is designed to protect the civilian population, not to hamper the Army and the scientists. It is not meant to cripple our defenses; rather, it is meant to protect our people.

I ask unanimous consent to have printed at this point in the Record the article published in Medical World News of July 25, 1969, entitled: "Biological Warfare: Off Limits to Doctors," and the text of the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment will be received and printed, and will lie on the table.

The article is as follows:

[From Medical World News, July 25, 1969] BIOLOGICAL WARFARE: OFF LIMITS TO DOCTORS

Congressman's question: What amount of VX nerve gas currently being tested in the open air over Dugway Proving Ground in Utah can kill a man?

Physician's answer: I don't know.

Congressman's question: Were you aware that the Army's own maps show a "permanent biocontaminated area" about 17 miles outside Dugway?

Physician's answer: Not until I read about it in yesterday's papers.

The doctor who was thus forced to admit ignorance at a recent congressional hearing was the Surgeon General of the U.S. Public Health Service, William H. Stewart, who becomes chancellor of the Louisiana State University Medical Center next month. "I have primary responsibility within the federal government for the protection of public health," Dr. Stewart noted. To make the paradox more bitter, Dr. Stewart had served as chairman of the blue-ribbon committee set up to determine whether Dugway's testing programs, which killed some 6,000 sheep last year, have safety precautions adequate to protect humans, plants, and animals outside or inside the proving ground.

Much of the information about current U.S. biological warfare programs was apparently off limits to Dr. Stewart, as it is to nearly all other physicians, and to just about everybody else as well. The government, university, and drug industry scientists actively involved in these programs apparently include relatively few physicians. The Army's major blower center at Fort Detrick, Md., for example, has only 14 MDs on its staff, compared with 120 PhDs. And despite the claim that the U.S. programs are purely defensive, physicians who have tried to find out about possible medical defense measures have had little luck with the Army. In the information that has been made available, there is no evidence of any substantial work on ways of protecting the civilian population against a biological attack, or against any epidemic that might be set loose by an air crash, train wreck, lab explosion, or earthquake involving U.S. research or storage facilities.

Until recently, the Army's secrecy has kept biological weapons from arousing widespread alarm among physicians and the public at large. This year, however, the blower program, along with many other Pentagon projects, has lost much of its former immunity. Its congressional opposition, sparked by Rep. Richard McCarthy, a Democratic from Buffalo, N.Y., has now expanded to include the usually hawkish Senate Armed Services Committee. President Nixon has ordered a sweeping review of U.S. policies on chemical and biological warfare. A UN committee with representatives from all 13 countries believed to have blower programs has called for unconditional effective biological and chemical disarmament. And physicians who see biological warfare as off limits ethnically to anyone who has taken the Hippocratic oath, and who believes that the medical profession should take the lead in pressing all governments to rid themselves of these weapons, are getting a hearing in an increasing variety of medical organizations.

Only about 15% of blower research is ever published in the open scientific literature. As a result, some significant data reach the light of day via such publications as the *Congressional Record* rather than the more traditional scientific journals.

If Dr. Stewart had looked in the *Record* a few days before his testimony, he would have found a statement by Dr. Matthew S. Meselson, professor of biology at Harvard, about nerve agent VX. "A tiny droplet on the skin will cause death," Dr. Meselson said, citing Swedish research.

Dr. Meselson lists some of the reasons why a sizable group of scientists and physicians is disturbed: "Important military personnel can be equipped and trained to use protective devices far more easily than civilians can. Civilians are the most natural and most vulnerable targets for chemical and biological attack. Field testing of live biological weapons and especially the outbreak of actual biological warfare would be a menace to the entire human species."

Much the same prediction is made in a UN report on chemical and bacteriological weapons completed by consultant experts from 14 countries and just released by Secretary General U Thant. The experts came from Canada, Czechoslovakia, Ethiopia, France, Great Britain, Hungary, India, Japan, Mexico, the Netherlands, Poland, and Sweden as well as the U.S. and USSR. Of these countries only Ethiopia is believed to have abstained so far from blower research.

The UN report says the idea of biological weapons being used to spread disease "generates a sense of horror."

"And anyone who reads the report—as I urge all physicians to do—will see that there is a technical basis for this value judgment," says this country's consultant expert to the UN group, Dr. Ivan L. Bennett, New York University's vice president for medical affairs.

The UN report discusses various biological agents. From its appetizing menu (see box, page 26) an attacker could pick his weapon on the basis of precisely what he hoped to accomplish. For high mortality, anthrax, glanders, melioidosis, and plague (pneumonic) would be the diseases of choice, especially if reinforced by artificial drug resistance as shown on page 23. For fast transmission to areas and individuals who missed out on the first dose, cholera, smallpox, and pneumonic plague would be the best bet. To incapacitate large numbers of people for several weeks or more, one might choose Chikungunya fever, tularemia, typhus, brucellosis, glanders, coccidioidomycosis, Rocky Mountain spotted fever, or an aerosol version of tick-borne encephalitis. And there is no guarantee that an aggressor would use one weapon at a time. Airborne anthrax, for example, would fall far more victims if it were combined with influenza. Both the U.S. and USSR are believed to be working on all, or nearly all, of the agents discussed in the UN report, and to have large stockpiles of the ones their blower scientists consider the most useful.

Perhaps the most frightening characteristic of these weapons is their unpredictability. Bullets and bombs can be aimed; viruses and bacteria cannot. Bullets and bombs, once used, do not reproduce themselves in ever-increasing numbers; specially bred viruses and bacteria may. As the UN committee's experts point out: "Were these weapons ever to be used in a large-scale war, no one could predict how enduring the effect could be, and how they would affect the structure of the society in which we live. This overriding danger would apply as much to the country which had initiated the use of these weapons as to the one which had been attacked, regardless of what protective measures it might have taken."

Another danger comes from the low cost of these weapons. Just about any country that can find enough funds and know-how to operate a small vaccine laboratory or even a large brewery can initiate blower research. Poor countries can pollute the world almost as easily as rich ones.

The weapons themselves may be cheap, but a lot of money can be spent on delivery systems. These systems include planes with spraying devices and missiles with various type of warheads. In this country, the Army alone spends at least \$330 million per year for chemical and biological warfare activities.

S 9116

CONGRESSIONAL RECORD — SENATE

August 5, 1969

This official figure, given by Dr. K. C. Emerson, acting Deputy Assistant Secretary of the Army for Research and Development, has been challenged by congressmen as being too low. Some informed observers place the spending by the Army at roughly double that figure.

Delivery systems need not be elaborate, however. For most biological weapons the preferred form of dispersal is an aerosol. In one field trial cited by the UN report, 200 kg of zinc cadmium sulfide, a harmless powder, was distributed from a ship sailing 160 miles along a coastline while staying ten miles offshore. The resulting aerosol traveled more than 450 miles inland and covered an area of nearly 30,000 square miles.

Because biowar research is closest to medical research, it represents the most intense perversion of the humane aims of science, says Dr. Joshua Lederberg, 1958 recipient of the Nobel Prize in Medicine and now professor of genetics at Stanford.

Dr. Lederberg and his fellow critics argue that apart from enforceable treaties there can be no protection against a biological attack or accident. A less scholarly New York City internist puts the point tersely: "If the Public Health Service can't protect the nation against a flu epidemic with six months' advance warning, how in the hell could they ever protect us against an unknown organism that we have no vaccines against?"

One physician in a good position to speak to this question is Col. Dan Crozier, commanding officer of the U.S. Army Medical Unit at Fort Detrick. To Dr. Crozier, the most important aspect of medical defense is quick etiologic diagnosis. "Times considered acceptable in general medical practice would be totally unacceptable and possible disastrous," he said in *JAMA* (Vol. 175, No. 1). His suggestion: a maximum elapsed time of six hours in the lab.

Despite the limited information available to doctors, biowar defense "is primarily a medical problem and is a responsibility of the medical community," Dr. Crozier said. "The civilian medical profession will bear the brunt of the load. It will not matter that one opposes war or is against the use of microbiological agents as weapons, the problem will be one that must be met. At the present time, definite answers do not exist to many of the problems that would be created by such an attack."

Last year at the American Public Health Association meeting in Detroit, Dr. Crozier added another dimension: "It is no secret that the military forces of the U.S. are interested in biological warfare from the offensive as well as the defensive standpoint." In his current book, *Chemical and Biological Warfare*, Seymour Hersh cites Pentagon papers and Army field manuals in documenting a shift, under the Eisenhower Administration, away from the Roosevelt no-first-use policy.

The Committee for Environmental Information, a group originating at Washington University in St. Louis, is concerned with hazards of uncontrolled testing and careless handling. Official secrecy "is a deadly serious matter," pathology instructor Gustave L. Davis says. "If Congress and the people are to make the vital decisions about the manufacture, testing, and use of these agents, they must have the facts. These decisions may determine the life or death of hundreds of thousands of our people."

This is precisely the point emphasized by a "Speaker's Kit" issued by the Federal Civil Defense Administration in the early 1950s. It lists some "Quotable Quotes on Biological Warfare." Among them is this one, attributed to Millard F. Caldwell, who was then Civil Defense Administrator: "One of our toughest problems is what we could call, for the want of a better term, the panic element. Panics can be most costly; they can cost us more

than atomic bomb damage would. The only way to avoid panic is for the people to know the facts, and to have, in advance, the means of protecting themselves through knowledge of what to do."

A small taste of this panic element burst into the news during the recent furor over proposed cross-country shipment of some 800 carloads of poison gas stockpiled from World War II. The gas was to be dumped into the Atlantic Ocean. Congressional hearings unleashed a horde of disturbing questions about hazards of the proposed dumping. Among them: Might a medical disaster be inflicted on the civilian population of our large cities if an accident befell these trains on the roadbeds of our old, rough railways? As a result of the furor, some of the poison gas will probably be burned or chemically decomposed somewhere near the present storage sites, but the problem still has not been solved to everyone's satisfaction.

Some of the other unanswered questions first came to Representative McCarthy from his slim, blonde, pony-tailed wife, who had watched an NBC-TV program dealing with chemical and biological warfare. Constituents in Buffalo also found the program disturbing.

Attempting to answer his wife and his electorate, Representative McCarthy found himself knocking on closed doors. Some of his questions: Why does this country need a biological and chemical warfare capability? What sort of capability do we have now? Under what circumstances would our government use these weapons? Assuming we don't intend to use them first, could biological weapons ever be a militarily useful response to a biological attack? How much do these activities cost us each year? What safety precautions are taken to protect the public against accident? Are our academic and private institutions being improperly involved in this type of research?

BIOLOGICAL WEAPONS AND POSSIBLE MEDICAL DEFENSES

Disease	Mortality	Infectivity	Antibiotic therapy	Vaccination
Bacteria:				
Anthrax (pulmonary)	Almost invariably fatal	Moderately high	Effective if given very early	Available
Brucellosis	Low (less than 5 percent)	High	Moderately effective	Under development
Cholera	Usually high (up to 80 percent)	Low	do	Available
Glanders	Almost invariably fatal	High	Little effect	None
Melioidosis	Almost 100 percent fatal	do	Moderately effective	Do
Plague (pneumonic)	do	do	Moderately effective if given early	Available
Typhoid fever	Moderately high	Moderately high	Moderately effective	Do
Viruses:				
Chikungunya fever	Very low	Probably high	None	None
Dengue fever	do	High	do	Do
Tick-borne encephalitis	Up to 30 percent	do	do	Under development
Venezuelan equine encephalitis	Low	do	do	Do
Smallpox	Usually high	do	do	Available
Yellow fever	High	do	do	Do
Rickettsiae:				
Epidemic typhus	Usually high (up to 70 percent)	do	Effective	Do
Psittacosis	Moderately high	do	do	None
Q-fever	Low	do	do	Under development
Rocky Mountain spotted fever	Usually high (up to 80 percent)	do	do	Do

Source: U.N. report, July 1969.

McCarthy got some of the brush-offs given to physicians and ordinary citizens. But as a congressman, he had some resources not available to others, and he used them. He asked the Army for a congressional briefing on the subject. The Army complied, but declared that the briefing was classified.

Since the congressman could hardly answer his constituents' questions with classified material, he tried another way to leap over the high wall of bureaucratic secrecy. He submitted some of his policy questions to the Secretary of Defense.

The Defense Department replied—five weeks later. Signing the reply was Dr. John S. Foster, Jr., a physicist. As director of defense research and engineering, Dr. Foster is the Pentagon's top scientist.

One paragraph of Dr. Foster's reply is of particular interest to physicians:

"The U.S. does not maintain large stockpiles of medical supplies such as antibiotics and vaccines against the possibility of biological attack. There is no specific antibiotic therapy available for most biological warfare agents. As for vaccines, there are more than 100 possible biological warfare agents and production and administration of 100 possible biological warfare agents, and production and administration of 100 vaccines to the U.S. population is not practical. There is medical reason to believe that such a program would be generally injurious to health in addition to requiring prohibitive expenditures."

If there is no defense against an attack, what about the defense against accidental infection of our own population? Dr. Foster's letter stated that strict safety practices are

enforced at laboratories conducting research on biological and chemical agents: "Elaborate systems of airtight hoods, air filtration, and waste decontamination are employed. These precautions and procedures are reviewed by the U.S. Public Health Service as well as by Department of Defense safety experts. The equipment and building designs developed at the U.S. Army Biological Laboratories, for example, have been generally accepted throughout the world as the ultimate in safety for the investigation of infectious diseases."

In making the reply public, Congressman McCarthy in effect called its author a liar—an experience which Pentagon officials are finding increasingly common on Capitol Hill this year. McCarthy particularly attacked the over-all biological safety record during the past two decades: "Fort Detrick, the Army's biological warfare research center, has one of the poorest records among major biological institutions for infections. There were 3,300 accidents at Detrick between 1954 and 1962. Half of these occurred in the laboratory involving broken test tubes and accidental scratches from needles. About 400 men were infected as a result."

Infections among workers at secret installations pose a threat to the entire neighboring community, McCarthy charged. He cited the instance of a worker who caught plague at Fort Detrick some years ago: "He also happened to be a lifeguard at a swimming pool and had been in contact with many people. Local residents who might have come into contact with Detrick personnel were not warned of the danger."

August 5, 1969

CONGRESSIONAL RECORD — SENATE

S 9117

Soon other congressmen began to question the Army's veracity in dealing with one spectacular recent chemical warfare accident—the killing of 6,000 Utah sheep by Dugway's poison gas. The Conservation and Natural Resources Subcommittee began hearings on the dangers of open-air testing of persistent lethal chemicals.

Their unrelenting questioning of three Army officials, under oath, established these facts: The Army had first denied testing nerve gas on March 13, 1968, when in fact it had. Even after correcting this, the Army still denied—for 14 solid months—that the gas had anything to do with killing the sheep, even though it had paid their owners \$500,000 in reparations. This misstatement, too, was corrected, but only after the committee spent one entire morning of relentlessly pursuing evasions, hesitations, and disavowals by three Army representatives, including Dr. Mortimer A. Rothenberg, a biochemist who is Dugway's top scientist.

Last year, in reporting the Army's fib about the neurotoxin VX not causing the March sheep kill, *MWN* was the first to catch the brass in a second and more blatant lie—that Army precautions eliminated all peril to humans and indeed were so good that there had never been a single human casualty due to storage or testing of war chemicals at Dugway Proving Ground. Dr. Kelly Gubler, chief of staff at Tooele Hospital in the town of that name 35 miles east of the test site, said he had previously treated Dugway workers for anticholinesterase poisoning such as VX would produce. The wind March 13 blew to the northeast, but if it had gone east to Tooele or north to Highway 40—also 35 miles away—Dr. Gubler believed the victims might have been humans as well as sheep.

MWN's story (April 12, '68), read into the record by the same committee that later grilled Dr. Rothenberg, also trapped the Army in still a third lie—that its tests had gone according to plan on March 13. As Surgeon General Stewart got the Army to admit months later, an airplane had accidentally spewed out VX high above the desert where the winds could take it anywhere, after making a pass at a ground target to test dispersal techniques. The Army eventually promised Dr. Stewart that, in the future, airborne chemicals won't be released above 300 feet and won't cross heavily traveled Highway 40 for at least three hours.

At the hearing, Dr. Rothenberg said he feels secure about the new safety measures. Then Congressman Guy Vander Jagt, Republican of Michigan, asked in a mild voice, "If the Army was wrong about the danger to the sheep, could the Army be wrong about the danger to human beings?"

Vander Jagt did not press for an answer to his question, but committee chairman Henry S. Reuss, Democrat of Wisconsin, did insist on an answer to this one: "Is there Venezuelan equine encephalomyelitis virus in the Dugway storehouse?"

Dr. Rothenberg answered, "That is security information."

"Clear the hearing room," said the congressman, "and we will take your testimony in private."

Few scientists know precisely what is in the Dugway storehouse, but antibodies against VEE virus have been found in cattle in Utah. The only other states in which these antibodies have been found are Florida and Louisiana, where they would be more expected. This virus has been cited as being particularly suitable for biological warfare, because it is so easily spread to humans by inhalation, and because there is little immunity to it in temperate zone nations.

Another witness at the Reuss committee hearings, Dr. D. A. Osguthorpe, a Salt Lake City veterinarian who had been one of the people instrumental in tracking down the cause of the sheep deaths, hinted that there may have been another accident at Dugway.

Asked by Vander Jagt, "Have you ever run into diseases that you have been unable to account for?" Dr. Osguthorpe replied: "I have run into a disease in newborn calves in this area. No antibiotic or drug so far has proved to have any therapeutic value. My theory is that this is a toxin, a biological agent."

All indications are that the debate on biowarfare will continue gathering heat in the months to come. Surveying the situation on both sides of the Atlantic, an editorial in *Nature* (Vol. 218, No. 6) comments wryly: "The point is rapidly arriving when it is as hazardous for a person to carry out research on some aspect of chemical or biological warfare as it is to be a president on a campus torn apart by student power."

There will probably be a substantial rumble at the next meeting of the American Society for Microbiology. "The ASM has long been tied to the biological warfare effort and to the official secrecy shrouding it," says Dr. Richard Novick, a physician who is research assistant professor of microbiology at New York University. "More ASM members are employed at Fort Detrick than at any other institution. Their secrecy is evidently due to a desire to avoid arousing public opinion."

Dr. Novick helped found the microbiologists' Committee on Chemical and Biological Warfare, which seeks U.S. ratification of the Geneva Protocol of 1925, outlawing the use of poison gas and biological agents. They also hope to enlist the aid of microbiologists in other countries—particularly the Soviet Union, England, and France—in outlawing biowarfare.

The American Public Health Association includes a growing list of members opposed to biological weapons. After Fort Detrick's Dr. Crozier reported on biological warfare at last year's APHA meeting, he was challenged to a debate by Dr. Steven Jonas, a physician from Brooklyn. "The session was hastily adjourned when Dr. Crozier indicated he was not prepared to discuss morality," says Dr. Jonas.

The Brooklyn physician then helped organize the Caucus for Peace and Human Rights, which circulated a petition opposing continued development of chemical and biological weapons. "About 200 members signed it, and we mailed it off to the chairman of the APHA executive board. Hopefully, we would like the entire APHA to endorse our position."

For at least two decades, the AMA has virtually ignored the issue. But during the past few months, there have been some stirrings. In *Chemical and Biological Warfare*, Seymour Hersh charges that *JAMA* in recent years has refused to print letters critical of the views presented in *JAMA* by Colonel Crozier and others. Dr. John H. Talbott, *JAMA* editor, says Hersh's charge is easy to make but difficult to prove. Dr. Talbott also says he does not recall rejecting a "thoughtful" letter on the subject, and that he gets a lot of crackpot mail.

As for the ethics of biological warfare, an AMA spokesman says the question has never come up before the Judicial Council. Of the physicians who believe participation is unethical, one of the most articulate is Victor W. Sidel, formerly chief of the community medicine unit at Massachusetts General Hospital and now professor of community health at the Albert Einstein College of Medicine in New York.

To stay ethical, Dr. Sidel says, a military physician must do nothing to contribute to the net increase in disease, disability, or untimely death. "He must also be free to make judgments about his own medical ethics. If the physician becomes a combatant, or unable to make his own ethical judgments, he has stopped functioning as a physician. He may be a good soldier, but he is an unethical doctor."

A civilian physician, Dr. Sidel says, has an

"ethical imperative," stemming directly from the ethical traditions of medicine and from the concept of complicity developed at the Nuremberg Tribunal. "If the physician knows of any unethical activities of other physicians—for example, developing chemical-biological weapons or using medicine for psychological warfare—even if those activities are being performed under the aegis of his government, it is not only his right but his clear duty to make these activities as widely known as he can and to protest against them. In the long run, everyone will gain from this—his profession, his nation, and his species—even though in the short run, the physician himself may suffer from his protests."

Can biological warfare be made off limits to governments—our own and everybody else's—as well as to doctors and other private citizens? A year ago it would have seemed unlikely, but perhaps times have changed.

At the disarmament talks in Geneva, Britain has just proposed a new treaty that would ban production and possession of biological weapons as well as their use. Nixon and Kosygin have voiced interest. And even without any Russian reciprocity, the Senate Armed Services Committee has voted to eliminate all funds for lethal and incapacitating chemical and biological weapons from the U.S. military budget. But cash outlay is one indication of national priorities, and the billions already spent on biological weapons are hardly outweighed by the investment in biological disarmament—which so far consists mainly of Ivan Bennett's plane fare to Geneva.

As a social institution, war is not yet quite ready to follow slavery and human sacrifice onto the list of discarded behavior patterns that no one can any longer regard as part of some unchanging "human nature." But physicians like Drs. Sidel, Novick, Jonas, and Bennett hope that this particular kind of war can be ruled out before it is tried. One Swedish suggestion: Internationalize the entire microbiological profession into an intelligence network with universal diplomatic immunity.

Says Dr. Bennett: "I think things will begin to move. The time is ripe to do something. The problem is to get biological weapons banned by all nations, not by just the U.S. But I do think we are one step further along the way to what we are all after—general disarmament in biological weapons."

The amendment is as follows:

AMENDMENT No. 117

At the end of the bill add a new section as follows:

"SEC. 402. None of the funds authorized by this or any other Act shall be used for the testing, development, transportation, or disposal of any chemical or biological weapon unless the Surgeon General of the Public Health Service determines that such testing, development, transportation, or disposal will not present a hazard to the public health."

Mr. HATFIELD. Mr. President, the mid-July mishap in Okinawa, with the hospitalization of 24 persons exposed to nerve gas in its accidental release, brought to mind the urgency of control of chemical and biological weapons at home and abroad. Last year, reported fatalities from testing were limited in the United States to a flock of 6,400 sheep near the testing site in Utah. This year, it was only loudly voiced repercussions that prevented harm being brought to ocean life and water resources in the halt of disposal of 27,000 tons of chemical and biological agents off the coast of New Jersey. The dangers in testing of CBW agents are indeed grave, and continuation must be carefully weighed

S9118

CONGRESSIONAL RECORD — SENATE

August 5, 1969

against the necessity and desirability of maintaining a CBW arsenal.

Chemical and biological weapons seem to be neither feasible strategic, tactical, or humanitarian weapons. While the need to be aware and updated on developments in the area is realized, I am firmly of the opinion that our stockpiling efforts should be reduced and research limited to a possible defense against the agents.

It has been estimated that the damage chemical and biological weapons could yield could easily surpass that of nuclear bombs in destroying civilian populations. It is even believed that the ecological effects would exceed those disastrous damages that have been attributed to capabilities of nuclear fallout.

The Army recently told Congress that \$350 million is spent annually on CBW research in its various phases—that is, for the development of means of disseminating germs, viruses, and nerve gas to destroy or incapacitate populations. At the same time, Congress is being told of the need for funding and programs to build strong minds and bodies within our Nation and to improve the conditions of our people. In light of these demands for crippling and creative programs, the priorities should be obvious; but only after the problems are recognized can they be given broader evaluation.

Therefore, it is with encouragement that I view the introduction today of several amendments to S. 2546, the military procurement bill, relating specifically to matters of testing, development, and international cooperation with chemical and biological agents. The aim of the amendments is to stimulate needed discussion and to establish a viable military policy for this area of question.

AMENDMENTS NOS. 118 THROUGH 120

CONGRESS NEEDS MORE INFORMATION ON CBW

Mr. HARTKE. Mr. President, the mysteries which surround our chemical and biological warfare program have served to compound and to amplify public doubts and fears about CBW. In the belief that better public information will prevent CBW from developing into a dangerous emotional issue, I am introducing three amendments designed to provide a more complete disclosure of the scope and purposes of our CBW program.

My first amendment will require the Secretary of Defense to furnish semi-annual reports to the Congress on the size and nature of various aspects of our CBW program. Such information is not readily available to the Congress at the present time. A reporting amendment of this nature is listed in a May 1969 Labor and Public Welfare Committee report as one possible approach to reducing the threat and danger of CBW. A similar amendment, introduced by Senator Clark, passed the Senate last year, but was deleted in conference. Since that time, it should have become clear to all of us that CBW deserves closer congressional attention and that the Congress deserves broader access to CBW information.

My second amendment will explicitly prohibit "back door" spending for the

purposes of CBW. Informed private estimates point to an expenditure of funds for CBW far in excess of official statements from the Defense Department. Representative RICHARD D. McCARTHY has also cast doubts on official Pentagon expenditure reports. He noted that a McGraw-Hill investment newsletter has stated that Edgewood Arsenal, only one of our CBW centers, will spend about \$420 million in 1969 for CBW materials, more than \$100 million above the total official program figure of \$300 million.

We are all too familiar with the technique of hiding unpopular program expenditures in the unnoticed budgets of unsuspected agencies—a \$1.2 billion authorization request for ABM warhead development was hidden in the AEC budget for a while this spring. Similar practices may characterize our CBW program as well. The Public Health Service, ironically enough, has a record of close cooperation with the Army's chemical warfare program. In 1960, for example, the PHS received more than \$380,000 in Army funds to bolster ongoing projects in fields in which it has an independent interest. According to a PHS spokesman, the annual transfer of funds measures only a fraction of the real cooperation between the two agencies. My second amendment would make sure that this questionable cooperation would not involve a similar transfer of funds in the opposite direction.

My third amendment was drafted in response to growing public fears about rail shipment of lethal chemical and biological weapons. As chairman of the Surface Transportation Subcommittee of the Commerce Committee, I have become acutely aware of the need to provide maximum safety precautions in the shipment of hazardous materials. My amendment will give the Congress and the civilian agencies advance notice of such shipments, will require strict adherence to established safety standards, and will require detoxification of lethal chemical and biological agents prior to shipment for disposal whenever practicable. In addition to the need for more adequate disclosures with regard to CBW, this amendment deals with the substantive problem of safety. Reports of a casual official attitude toward safety standards make restatement of these standards necessary. And a growing consensus that onsite detoxification is the safest, if not the fastest, way to dispose of unneeded CBW agents, has prompted the other restriction expressed in subsection (b) of this amendment.

Mr. President, my three amendments are modest in appearance, but they can be far reaching in their consequences.

A more complete disclosure of information is little to ask—and in our CBW program, which has never quite emerged from the wartime secrecy of the forties, it is long overdue. In the hope that congressional doubts will be answered, and in the belief that public fears should be eased, I submit these three amendments to the pending military-procurement bill.

The PRESIDING OFFICER. The amendments will be received and printed, and will lie on the table.

AMENDMENT NO. 121

Mr. PELL. Mr. President, as chairman of the Subcommittee on Ocean Space of the Committee on Foreign Relations, I have twice in recent months risen to discuss the international legal implications of the transportation and disposal of obsolete chemical weapons outside of the continental United States. Since that time the attention of the Senate has been brought to another question of equal significance for international law, the disclosure that the United States has been providing nerve gas to West Germany without notifying the Western European Union as required by the Final Act of the Nine Power Conference held in London, September 28, through October 3, 1954. Those events form the backdrop for the amendment which I would like to discuss at this time.

As I have mentioned in my previous floor statements, the dumping of obsolete, but still lethal, chemical weapons beyond our territorial boundaries could be regarded not only an expression of de facto jurisdiction over a portion of the seabed contrary to what the United States has espoused at the United Nations, but, as unilateral actions, those dumpings were most likely violations of the Geneva Convention on the High Seas which requires all states to cooperate with the competent international organizations in taking measures for the prevention of pollution of the seas or air space above, resulting from activities with harmful agents such as lethal chemicals.

In 1954 the United States signed the final act of the Nine Power Conference held in London and agreed that it "would notify the Brussels Treaty Organization of the military aid to be distributed to the continental members of that Organization." The past shipments of nerve gas to West Germany without the agreed upon notification not only may have put the United States in violation of the 1954 protocol, but also, West Germany's storage of that gas may have left it in violation of the protocol's provisions restricting the stockpiling of chemical and biological weapons.

At a time when the United States is faced with criticism for its use of tear gas and defoliants in Vietnam and its failure to ratify the 1925 Geneva Protocol forbidding the use of chemical and biological weapons, I find it particularly unfortunate that the United States has left itself open for further criticism by its apparent disregard of its international obligations with regard to chemical and biological weapons.

For the United States to have dumped pollutants into the Atlantic Ocean after having cosponsored a motion adopted by the U.N. General Assembly stating that "In the use of the deep ocean floor States shall adopt appropriate safeguards so as to minimize pollution of the seas and disturbance of the existing biological, chemical and physical process and balances; (and) shall provide timely announcement of any marine activity that could harmfully interfere with the activities of any other State in the exploration and use of the deep ocean floor," and for the United States to be furnish-

August 5, 1969

CONGRESSIONAL RECORD — SENATE

S 9119

ing nerve gas to West Germany while the 18-Nation Disarmament Conference is considering a proposal by Britain to control chemical and biological weapons programs, would seem to me to be a contradiction of the position the United States presented to the United Nations and a demonstration of lack of faith in the efforts being made in Geneva at the disarmament conference.

If the two events which I have discussed are not disturbing enough, there are reports of other incidents which also have international legal implications.

The United States furnishes nerve gas to a number of allied countries under various arms agreements. A question has arisen whether the United States is permitted to ship VX nerve gas to other nations without the consent of the British who invented it and allow the United States only to manufacture it under special license.

Rear Adm. R. W. Goehring, Chief of Operations of the U.S. Coast Guard, told the House Subcommittee on International Organizations and Movements in June that at least 50 people at the Coast Guard Station at Peale Island in the Pacific had to be removed from that island in April of 1968 after they were struck ill by an airborne toxic irritant. In the surrounding waters dead marine life was observed. Gas masks were used on the island until the wind shifted 3 days later. The subcommittee said it had a report that gas was dumped off the island sometime after World War II. I would note at this point that the Geneva Convention on the High Seas includes pollution of the air above the seas.

There has also been a report in the press that the U.S. Army has been conducting nerve gas tests on an Hawaiian island and tests with bacterial toxins in Micronesia. I would question whether countries whose fishermen might be near those islands have been appraised of the possible dangers of fishing in the surrounding waters.

The existence of the disturbing questions which I have raised may be in part explained by a consideration of the recent hearings held by the House Subcommittee on International Organizations and Movements on the Department of Army's most recent plan to dump obsolete chemical weapons in the Atlantic Ocean.

After Brig. Gen. James A. Hebbeler of the Department of the Army told the subcommittee that previous to the planned dumping being discussed there has been three other dumpings of obsolete chemical weapons and nine dumpings of other weapons into the ocean, John S. Leahy, Office of the Assistant Secretary of State had for Congressional Relations, told the committee that the Department of State had not become aware of the dumpings until 2 days before the House hearings.

Mr. Leahy's statement was confirmed 2 days later by Mr. Herman Pollack, Director of International Scientific and Technological Affairs of the Department of State, when he told the subcommittee that for the 2 years that he has been director, he had not been apprised of the dumpings. The subcommittee also

learned that the Department of State was not notified about the 13th planned dumping until after the decision had been made to send the trains to New Jersey.

The Department of State testified that there were at least 18 treaties and international agreements signed by the United States which should have been considered before the Defense Department undertook to dispose CBW materials outside of the continental United States. I ask unanimous consent to insert that list in the Record. Included in that list is article 25 of the Geneva Convention on the High Seas to which, as I mentioned earlier in my statement, particularly close attention should have been given.

As one person who believes the United States should strictly adhere to its international agreements, I am surprised at the negligence of the Defense Department in not providing proper consideration of those agreements in consultation with the Department of State.

Perhaps the Defense Department's action or, rather no action, is understandable in the light of their attitude toward an agreement on a national CBW policy which was circulated within the executive branch last January. It is reported that, as a result of conversations originating from 1963 among representatives from the Department of Defense, the Department of State, and the Arms Control and Disarmament Agency, a proposed national policy was developed which would have prohibited the first use of chemical and biological weapons, with the exception of herbicides and tear gas, and would have required Presidential authorization for the combat use of chemical and biological weapons. Each of the executive agencies approved the proposed statement except the Department of Defense.

Another telling example of the Defense Department's attitude toward the State Department's concern with the CBW program is revealed, in what I understand is the Defense Department's reported recent refusal of the State Department's request to delay, until the new CBW study is completed, the shipment of 40 kilos of nerve gas to West Germany.

The Department of State has the responsibility and authority for the interpretation of international agreements to which the United States has subscribed. Past events have suggested that the Department of Defense believes that the Department of State's responsibility is extraneous to its movement and disposal of chemical weapons outside of the continental United States.

The Defense Department's independent action within the executive branch in the disposal of chemical weapons in the oceans and in the provisions of nerve gas to West Germany have resulted in a needless disregard of American international obligations and unnecessary embarrassment for the United States abroad.

I believe it is time that the Department of State and the Department of Defense assume and fulfill their appropriate and separate responsibilities.

There must be one policy within the

executive branch with regard to chemical and biological weapons based upon existing international agreements and canons of international law. This coordination will not be possible if the Department of Defense does not recognize the responsibility of the Department of State for interpreting the international obligations of the United States.

I offer an amendment today which, I believe, will insure the proper consideration within the executive branch, of American obligations abroad in the provision, disposal, transportation, and testing of chemical and biological weapons outside of the continental United States.

As undesirable an increment in the arms race as I find the chemical and biological weapons program, I do not offer an amendment to reduce the authorization for that program. I simply offer a moderate amendment asking for the proper consideration for our international responsibilities when elements of that program require the disposal, or movement of chemical and biological weapons outside of the United States.

My amendment would require that the Secretary of State's determinations be reported to the Committee on Foreign Relations in order that the committee will be assured that the United States is fulfilling its obligations under the Geneva Convention on the High Seas and under the other treaties and agreements which have a bearing on chemical and biological weapons. It is also important that the Foreign Relations Committee knows which of our allies are receiving offensive or defensive CBW materials under the various arms agreements if the Foreign Relations Committee is to be able to judge accurately the arms balance in the world. I would also like to say regarding this point that I believe it would be more desirable for the Foreign Relations Committee to be receiving that information on a confidential basis from the executive branch than it would be if the committee was receiving such information, as it has in the past, as a result of exposés by the communication media.

The amendment would also require the Secretary of State to report his determinations to the appropriate international organs if agreements to which the United States have supported demand such notifications. Examples would include notification to the North Atlantic Treaty Organization when the United States furnishes nerve gas to West Germany, and notification of such international organs as the U.N. Inter-Governmental Maritime Consultative Organization and the U.N. Oceanographic Commission, in the instance of the dumping of obsolete chemical weapons in the ocean.

The evidence is clear that there has been inadequate consideration within the executive branch of international responsibilities with regard to chemical and biological weapons. The handling of chemical and biological weapons outside of the continental United States presents serious implications for world peace and understanding. I believe the passage of the amendment I propose is necessary if the United States is to maintain re-

S 9120

CONGRESSIONAL RECORD — SENATE

August 5, 1969

spect abroad as a nation which upholds its international obligations.

Mr. President, I ask unanimous consent to have printed in the RECORD a list of treaties and other international agreements containing antipollution provisions to which the United States is a party.

The PRESIDING OFFICER. The amendment will be received and printed, and will lie on the table; and, without objection, the document will be printed in the RECORD.

The list, presented by Mr. PELL, is as follows:

LIST OF TREATIES AND OTHER INTERNATIONAL AGREEMENTS CONTAINING ANTI-POLLUTION PROVISIONS TO WHICH THE UNITED STATES IS A PARTY

International convention for the prevention of pollution of the sea by oil, done at London May 12, 1954, as amended April 11, 1962.

12 UST 2989; TIAS 4900.

17 UST 1523; TIAS 6109 (amendments).

(Convention sets up prohibited zones around the coasts of all countries into which ships of Governments parties to the convention are prohibited from discharging oil or oily wastes.)

Convention on the high seas, done at Geneva April 29, 1958.

13 UST 2312; TIAS 5200.

(Art. 24 requires States parties to draw up regulations to prevent pollution of the seas by discharge of oil from ships or pipelines or resulting from exploitation and exploration of seabed and its subsoil. Art. 25 requires parties to prevent pollution of seas from dumping of radio-active waste and to cooperate with international organizations in measures for preventing pollution of seas or airspace above, resulting from activities with radio-active or other harmful agents.)

Convention on the Continental Shelf, done at Geneva April 29, 1958.

15 UST 471; TIAS 5578.

(Art. 5, par. 7, requires a coastal State party to undertake, in the safety zones around installations and devices for exploiting and exploring natural resources on its Continental Shelf, all appropriate measures for the protection of the living resources of the sea from harmful agents.)

The Antarctic Treaty done at Washington December 1, 1959.

12 UST 794; TIAS 4780.

(Art. V prohibits nuclear explosions in Antarctica and the disposal there of radio-active waste material.)

Interim guidelines for conservation of fauna and flora, adopted as Recommendation, III-IX under the Antarctic Treaty at Brussels June 2-13, 1964.

17 UST 991; TIAS 6058.

(Provides that each participating Government shall, to the extent feasible, take all reasonable measures towards the alleviation of pollution of the waters adjacent to the coast and ice shelves.)

The treaty banning nuclear weapon tests in the atmosphere, in outer space and under water, done at Moscow August 5, 1963.

14 UST 1313; TIAS 5433.

(Art. I prohibits any nuclear explosion in the atmosphere, outer space or under water and in any other environment if it causes radio-active debris outside its territorial limits.)

Treaty on principles governing the activities of states in the exploration and use of outer space, including the moon and other

bodies, done at Washington, London and Moscow January 27, 1967.

18 UST 2410; TIAS 6347.

(Art. IX requires States parties to avoid harmfully contaminating Outer Space and adversely changing the environment of the earth by introducing extraterrestrial matter.)

Convention on International Civil Aviation, done at Chicago, December 7, 1944.

61 Stat. 1180; TIAS 1591.

(Art. 12 requires contracting States to adopt measures to insure that every aircraft carrying its nationality mark shall comply with rules of the air in force wherever it is. It requires each State to keep its own regulations uniform, to the greatest possible extent, with those established under the Convention, and declares that over the high seas, the rules in force are those established under the Convention. Annex 2 (Rules of the Air) established under the Convention provides in Chapter 3, paragraph 3.1.4 that "Nothing shall be dropped or sprayed from an aircraft in flight except under conditions prescribed by the appropriate authority.")

International sanitary regulations, adopted at Geneva May 25, 1951.

7 UST 2255; TIAS 3625.

(Art. 31 provides that no matter capable of causing any epidemic disease shall be thrown or allowed to fall from an aircraft when it is in flight.)

Treaty relating to boundary waters and questions arising along the boundary between the U.S. and Canada, signed at Washington, January 11, 1909.

36 Stat. 2448; TS 548; III Redmond 2607.

(Art. IV provides that the boundary and waters flowing across the boundary shall not be polluted on either side to the injury of health or property on the other. The International Joint Commission has made a number of recommendations to carry out the provisions of Art. IV of the Boundary Waters Treaty that have been approved by the U.S. and Canada. See "Documents On the Use and Control of the Waters of Interstate and International Streams", H. Doc. 319, 90th Cong., 2d sess., pp. 391-393.)

Convention between the U.S. and Canada concerning operation of smelter at Trail, British Columbia, signed at Ottawa April 15, 1935.

49 Stat. 3245; TS 893; IV Trenwith 5009.

(Provided for payment by Canada to U.S. of \$350,000 in damages caused prior to 1932 by fumes discharged from the smelter of the Consolidated Mining and Smelting Co. at Trail, British Columbia, to property in the State of Washington, in accordance with finding of International Joint Commission pursuant to Art. IX of 1909 Boundary Waters Treaty; submitted to arbitration the U.S. claim of damages after January 1, 1932.)

Convention between the U.S. and Mexico to facilitate the carrying out of the principles contained in the treaty of November 12, 1884, and to avoid the difficulties occasioned by changes which take place in the beds of the Rio Grande and Colorado River, signed at Washington March 1, 1899.

26 Stat. 1512; TS 232; I Malloy 1167.

(Establishes the International Boundary Commission to decide all questions and differences growing out of changes in the rivers, works constructed therein, or any other cause affecting the boundary.)

Treaty between the U.S. and Mexico relating to the utilization of waters of the Colorado and Tijuana Rivers and of the Rio Grande, signed at Washington February 3, 1944.

59 Stat. 1219; TS 994; 3 UNITS 313.

(Renames the Commission as the International Boundary and Water Commission, with a U.S. Section and Mexican Section, and with additional powers and duties. Art. 3 provides that in making provision for joint use of international waters, the Commission shall be guided by the following order of pref-

erences: 1. domestic and municipal uses; 2. agriculture and stockraising; 3. electric power; 4. industrial uses; 5. navigation; 6. fishing and hunting; 7. any other beneficial uses. All of the foregoing uses "shall be subject to any sanitary measures or works which may be mutually agreed upon by the two Governments, which hereby agree to give preferential attention to the solution of all border sanitation problems".)

Recommendations of the International Boundary and Water Commission to improve the quality of water reaching Morelos Dam in Mexico from the U.S., approved by the Presidents of the U.S. and Mexico on March 22, 1965.

52 Dept. of State Bulletin 556 (1965).

(Construction of a drain to permit control of the salinity of water impounded by and diverted from Morelos Dam for irrigation purposes.)

Isthmian canal convention between the U.S. and Panama, signed at Washington November 18, 1903.

33 Stat. 2234; TS 431; II Malloy 1349.

(Under Art. IV Panama grants to the U.S. in perpetuity the right to use the rivers, streams and other water for navigation, water supply, and for maintenance, operation, sanitation and protection of the Canal.)

General treaty of friendship and cooperation between the U.S. and Panama, signed at Washington March 2, 1936.

53 Stat. 1807; TS 945.

(Art. I declares that the 1903 Convention contemplates use, occupation and control by the U.S. of the Canal Zone and additional lands and waters under U.S. jurisdiction for the purposes of "efficient maintenance, operation, sanitation and protection of the Canal and its auxiliary works.")

Agreement for enlargement and use by Canal Zone of sewerage facilities in Colón Free Zone Area, concluded by exchange of notes at Panama March 8 and 25, 1954.

5 UST 782; TIAS 2966.

(Facilities to be constructed at U.S. expense; to be owned by Panama, subject to continuous use by U.S.)

Agreements between the U.S. and other countries providing for desalination studies or projects:

Israel: October 14, 1964 (not printed).

Mexico and the International Atomic Energy Agency: October 7, 1965 (16 UST 1252; TIAS 5874).

Saudi Arabia: November 11 and 19, 1965 (16 UST 1952; TIAS 5932).

Spain: June 25, 1968 (TIAS 6514).

U.S.S.R.: November 18, 1964 (15 UST 2146; TIAS 5897) extended to November 18, 1963 (17 UST 2310; TIAS 6174).

Agreement between the United States and the Union of Soviet Socialist Republics, signed at Washington, February 13, 1967, as amended and extended by the agreement of January 31, 1969:

18 UST 190; TIAS 6218; TIAS 6636.

(Paragraph 7 provides: "Both Governments will take appropriate measures to ensure that, to the extent practicable, waste materials are discharged at sea only in waters deeper than 1000 meters.")

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

REPORT ON DEPARTMENT OF DEFENSE PROCUREMENT FROM SMALL AND OTHER BUSINESS FIRMS

A letter from the Assistant Secretary of Defense, transmitting, pursuant to law, a report on Department of Defense procurement from small and other business firms for the period July 1968 to April 1969 (with an accompanying report); to the Committee on Banking and Currency.

¹ This list does not include general provisions of Treaties bearing upon uses of the seas, such as Article 2 of the Convention on the High Seas, or rules of Customary International Law which may be relevant.

August 4, 1969

of Health, Education, and Welfare, and the present administration, they are not going to be able to get that quality education.

Mr. President, I thank the distinguished Senator from Mississippi very much for yielding to me.

Mr. STENNIS. I thank the distinguished Senator from Alabama for his comments.

Mr. President, I yield the floor.

ABM

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH, AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

Mr. MILLER. Mr. President, I ask unanimous consent that the Senate resume the consideration of the unfinished business.

The PRESIDING OFFICER. The clerk will state the bill by title.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each reserve component of the Armed Forces, and for other purposes.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the bill.

The Senate resumed the consideration of the bill.

IN SUPPORT OF THE PRESIDENT ON THE ABM

Mr. MILLER. Mr. President, the Senate debate on the ABM has been in the finest traditions of a separate, coequal, independent branch of the Government. Everyone has had an ample opportunity to make his points. In my judgment, further debate will change no minds, and I hope we can get on with the voting on this matter and any amendments that may be offered.

I have been pleased that this debate has been free from partisanship, because anything relating to the security of our country certainly should not appear in the partisan political arena. I note, for example, the great leadership among my Democratic colleagues, especially the Senator from Mississippi (Mr. STENNIS) and the Senator from Washington (Mr. JACKSON), in support of the President on this issue.

It is regrettable that a certain amount of emotionalism has entered this controversy—not so much here on the floor of the Senate as among some members of the public. When the national security is involved, it is most inappropriate and unhelpful to suggest that those on either side of the controversy have a premium on morality, good faith, or wisdom. Resort to such extreme tactics, I might add, generally tends to weaken the position of those who follow them, because the natural inference is that a genuinely

strong position would command a confidence which would preclude the use of such tactics.

This is a most complex issue for all of us. None of us is a physicist, and no Member of Congress I know of has had much contact with Soviet or Red Chinese officials, much less has participated in extensive negotiations with them. Accordingly, we are forced to look to those possessing expertise in the fields of physics and diplomacy, supplemented by experts—both civilian and military—in the field of national defense and such knowledge and experience as we individually possess on that subject. Ultimately a judgment factor is involved, and when some of the experts differ among themselves, judgment is more difficult. It is for this reason that I have constantly made the effort to point out that there are good, honest, decent, and conscientious people on both sides of the controversy.

MY CONCLUSION

I do say, however, that my own careful analysis of the evidence, the arguments, and the professional judgments advanced has caused me to conclude in support of the President on this issue. And let me point out that the President's assurance to the Congress that each phrase of the deployment of the ABM will be reviewed to insure that we are doing as much as necessary but no more than that required by the threat existing at that time—this assurance seems most reasonable in light of the anticipated negotiations with the Soviets on the subject of arms control and limitation.

PUTTING COST IN PERSPECTIVE

A great deal has been said about the cost of the ABM, the size of the national defense portion of the budget, and the needs of other areas of Government for money. Interesting as this information is, it seems to me that it is somewhat beside the point. If, indeed, one concludes that the the ABM "won't work," we should not approve it—regardless of how lean or fat the budget may be. If, on the other hand, one concludes that it will work and that it is likely to be necessary to our Nation's security, then it should be approved, and the state of the budget is very secondary.

I appreciate that the Senator from Missouri (Mr. SYMINGTON) is concerned about the size of the defense portion of the budget. So is everyone else. However, the size should be placed in perspective if we are to properly evaluate it. Thus, for example, the \$78 billion defense budget is about 40 percent of the total expenditure budget of \$195 billion. It is estimated that our total GNP for fiscal 1970 will be \$960 billion, so you can see that defense will comprise approximately 8.1 percent of our GNP. If the estimated cost of the war in Vietnam totaling \$28 billion is taken out of the \$78 billion defense budget, this leaves \$50 billion or 5.2 percent of our GNP.

For fiscal 1969, our GNP totaled \$895 billion and Defense Department expenditures \$75.2 billion, or 8.4 percent of our GNP. If the estimated cost of the war in Vietnam totaling \$28 billion is taken out of the \$75.2 billion defense

budget, this leaves \$47.2 billion, or 5.7 percent of our GNP.

These percentages should be compared with 1964—8.1 percent, GNP \$612 billion and defense \$48.9 billion—when the war in Vietnam costs were relatively small; 1959—8.5 percent, GNP \$469 billion and defense \$40 billion; and 1954—9.5 percent, GNP \$362 billion and defense \$34.4 billion.

Compared to 15 years ago, 10 years ago, 5 years ago, and last year, the portion of our gross national product going to all Department of Defense costs for fiscal 1970 is smaller in three and equal in one. And if the costs of the war in Vietnam are taken out, and this should be done to look at the defense budget from the standpoint of "sufficiency" compared to Soviet military power and also to accurately compare 1964, 1959, and 1954, the percentage of GNP for fiscal 1969 and 1970 is greatly less. This is the perspective we should have in evaluating the argument of the Senator from Missouri. Furthermore, it would be well to consider that, with a GNP of only half that of the United States, the Soviets have a military budget equal to ours—exclusive of the costs of the war in Vietnam—so it is clear that the burden on the people of the Soviet Union is very great.

On the money point, which, as I have pointed out, is something of a side issue, it appears that most of the opponents are favorable insofar as strictly research and development costs are concerned. Of the total authorization before us, they only question some \$345 million, which is scheduled for procurement leading to deployment. Of the \$78 billion defense budget, one could hardly argue that \$345 million is a major factor. For those who do not favor even the research and development and think the whole ABM program should be canceled, we are talking of a system which, fully deployed at all sites, would cost an estimated \$10 billion, of which \$9 billion would be spread over the next 7 years. This could hardly be said to be of major significance in the overall Federal budget.

WILL IT WORK?

The first real point to judge on this issue is whether or not the ABM system will work, because, regardless of how lean or fat the budget may be, it would be improvident to spend any money at all for something that will probably not work. Here is where one must look to the scientific community—particularly the physicists. As I pointed out to the Senate on May 1, Prof. Eugene P. Wigner, Nobel Laureate of Princeton University, is preeminent; and his speech of April 29 supporting the ABM before the American Physical Society, which I placed in the RECORD, is most persuasive. Even Prof. Hans Bethe of Cornell University, one of the opponents, concedes that the system could be effective and places his opposition on the matter of timing rather than on the "won't work" theory.

IS IT NEEDED?

The next point is whether it is needed, because, even if it is likely to work, it would be improvident to go ahead on it

if it will not be needed. Here is where so many opponents have so much trouble, because it is necessary to project not only our own capabilities, but those of the Soviets and Red Chinese, many years into the future. It is not a question of our relative strengths today, but rather our relative capabilities in the mid-1970's. The best intelligence information we have indicates that by that time period the Soviets will have sufficient power to seriously threaten our deterrent capability; and the Red Chinese will have sufficient power to hold some of our major cities hostage. What their intentions will be then, no one knows, and there has been too much hair splitting, I think, over whether the Soviets are "going for a first strike capability"—as if it was their intention to follow a first strike strategy—or whether they will have such a capability. It is the capability which poses the threat. Hostile intentions, without the capability, do not pose the threat. Friendly intentions, with the capability for a first strike, do not pose a threat either; but intentions can change. So it is the capability which is of primary importance.

Against this there are those who argue that we should, nevertheless, ignore the capability and stand still. Otherwise, they say, we will escalate the arms race. But who, indeed, has been doing the escalating? Who was the first to deploy an ABM? Who was the first to test it? Who is moving toward a capability of destroying our deterrent power? Who has refused during all of these years to enter into negotiations, much less an agreement, on nuclear arms limitation and control, with effective inspection to prevent cheating? It has not been the United States. I find this argument not only invalid but a dangerous form of unilateral disarmament; because one can have unilateral disarmament by standing still while a potential adversary moves ahead—just as well as by destroying one's weapons while a well-armed adversary stands still. Additionally, as I shall point out later on, the cost considerations make it unlikely that the Soviets would attempt to neutralize our ABM system.

Hopefully, the United States and the Soviet Union—and eventually the Red Chinese—will enter into a meaningful agreement which will put a stop to the arms race. To be meaningful, there will have to be some procedure to prevent cheating, and this means a certain amount of inspection. However, we have been advised that negotiations—even if they prove successful—will be terribly complex and of several years' duration—much longer than those resulting in the Nuclear Nonproliferation Treaty. It would be suicidal to entrust the security of our people meanwhile to mere hopes and trust in the "good faith" of our adversaries.

IS AN ABM THE BEST ANSWER?

The third point is whether, assuming something is needed to counter the capability of the Soviets and Red Chinese, the ABM is the best answer. For example, it is argued that it would be cheaper to simply add more Polaris submarines, or to add more Minuteman

missiles, or to put our missiles in harder sites. There are several insuperable difficulties with such alternatives. For one thing, they do not afford us a capability of protecting a few of our cities which could be threatened by Red Chinese intercontinental ballistic missiles. To the people in those cities, it would be no protection if our only option was massive retaliation against Red China. If a small attack, by accident or design, occurred from the Soviet Union, our President surely should have another option than massive retaliation, which could work a holocaust on both sides. From the standpoint of the Soviets, there is no cause for concern about a purely defensive system, like the ABM, which is designed to protect our deterrent capability and, to the limited extent necessary to guard against a Red Chinese threat, a few of our cities.

TIMING OF "DEPLOYMENT"—UPCOMING TALKS WITH SOVIETS

A fourth point relates to timing of deployment. This is raised by those who say they recognize the first three points; but for the current fiscal year, at least, we should authorize the President merely to engage in further research and development on the ABM. There are three arguments revolving around this point, any or all of which are dominant in the thinking of those who advocate delay in deployment:

First. The design of the ABM system is defective in that the radars are too vulnerable to enemy attack. There are two answers to this: If, indeed, there were an enemy attack of sufficient size to threaten the radars, there would be no choice except massive retaliation—launched before the radars were struck; and, with deployment of both phases of the ABM system not scheduled before the mid-1970's, there will be time to modify the radars or to "harden" them if such action is feasible.

Second. Future action by the Soviet Union in deployment of missiles which would threaten our retaliatory force hopefully may indicate that they are not pursuing a first strike capability. There are two answers to this: If we wait, our hopes may well not be borne out. After all, there is no indication that the Soviets will slow up or stop their deployment of such missile power; all indications are the other way. And if our hopes are not borne out, it could be too late due to the long leadtime required for deployment of an ABM system. This, incidentally, is where I must respectfully disagree with Prof. Hans Bethe. If, indeed, the Soviets slow up, reorient their system to meet a Red Chinese threat, or stop such deployment, we can slow up, reorient, or stop our own ABM deployment in line with the President's assurance to which I have previously referred.

Third. If the Congress authorizes the President to Commence the long lead-time procurement required for deployment by the mid-1970's, this will undercut the arms control and limitation talks which are scheduled to begin late this summer with the Soviets. The point seems to be that the President's bargaining position with the Soviets will be bet-

ter if the Congress refuses the authorization which the President has requested. My reaction is that his position would be undercut by such action by the Congress. This is supported by the recent testimony of former Secretary of State Dean Acheson—June 11, 1969, before the Subcommittee on Economy in Government of the Joint Economic Committee—as follows:

As we add to maintain, and protect our power, we do not in any way diminish the possibility of an agreement with the Soviet Union. In fact, we strengthen it . . . The idea that the Soviet Union will negotiate with us in the sense in which we use that term is quite untrue . . . The Russian conception of negotiation is carrying on of war by other means . . . Therefore, as we strengthen ourselves, we bring about that calculation of forces by the Russians which induces them to make a deal. They are not moved by argument, nor by exhortation, nor by considerations of morality. They are moved only when their calculations lead them to believe that it is more advantageous to make a deal than not to do so.

Mr. Acheson has had considerable experience in negotiating with the Soviets. With the Korean war, one could say that he learned the hard way and, having done so, his viewpoint is even more to be respected.

But there is an even greater deficiency in this argument to limit the President's authority to research and development without deployment. It is that "research and development," in the broad sense, includes service testing, and there cannot be service testing without deployment. It is in the service testing that deficiencies are very often detected on the basis of which modifications are made in a weapons system—be it an aircraft, a tank, a missile, a radar, or an ABM system. Those Members of the Senate who seek to limit deployment to Kwajalein Island rather than to North Dakota and Montana, as the President requests, understand very well that service testing is a part of research and development. Where they err, it seems to me, is that service testing at Kwajalein would have to be followed by final deployment to North Dakota and Montana; whereas deployment for service testing in North Dakota and Montana would be followed by final deployment, with such modifications as service testing indicates should be made, at minimal cost to the taxpayers. I understand informally that at least \$2 billion would be saved by handling the service testing this way, and there seems to be no good reason why this extra cost should be incurred.

POSSIBLE SOVIET RESPONSE

A fifth point to be considered is whether a fully developed ABM system in the mid-1970's could be neutralized by the Soviets simply by increasing the number of their SS-9 missiles. Theoretically this is possible, but as a practical matter it is unlikely because the assured destruction required to preclude us from making a sufficient retaliatory strike would be too costly. In other words, although a large force of SS-9 missiles could destroy most, if not all, of our Minutemen without an ABM protection, with an ABM system there would be enough Minutemen which would survive

August 4, 1969

CONGRESSIONAL RECORD — SENATE

to provide us with a deterrent capability. From that point on, the cost of adding to our ABM system would be much less than the cost of the additional SS-9's required to overcome our deterrent capability.

It is for this reason that William R. Kintner, in his article "The Prudent Case for Safeguard," published last June, concludes that, with the Chinese Communist threat by the 1970's, the most stabilizing system as between the Soviets and the United States is the Safeguard ABM system.

The interesting and informative statement by the Senator from Wisconsin (Mr. PROXMIRE), "Russian Military Power Limited by Economic Weakness," lends support for the conclusion that cost considerations make it unlikely that the Soviet response to Safeguard would be to try to neutralize it. And this holds true even if the Soviets proceed to provide their SS-9's with a MIRV capability.

POSEIDON AND BOMBER FORCE

The so-called "overkill" adherents argue that even if all of our Minutemen were destroyed, we would have sufficient deterrent power left over in our Poseidon submarine force and our strategic bombers. This argument, of course, completely ignores the Red Chinese threat to hold some of our cities hostage unless we have a defensive system. But vis-a-vis the Soviets, it ignores the observations made by Dr. Wigner about the city evacuation program in the Soviet Union. Estimates of fatalities in the Soviet Union which are made by the "overkill" adherents therefore are unrealistic. As Dr. Wigner points out, only 35 to 45 percent of such fatalities could be attributed to Poseidon, and this could be a gross overestimate because the calculation assumes that all our submarine fleet is on station and the people have not evacuated their cities; further, technical developments may negate its effectiveness, so that it would be dangerous to put all our trust in a single type deterrent. The capability of negating the effectiveness of our bomber force is even greater.

The underlying weakness of the "overkill" argument is that it proceeds on the false assumption that our planners are seeking to add to the number of weapons that can be detonated on major targets in the Soviet Union. Rather, what is being attempted is to maintain the number of such weapons we believe required for "assured destruction capability" after—not before—a first strike against us and after—not before—running the gauntlet of Soviet defenses, taking into account also anticipated failures among our strategic weapons. Accordingly, it is invalid to take into account our tactical nuclear weapons, which are designed to deter attack against Western Europe and, because of their short range, cannot be taken into account in calculating assured destruction capability against the Soviet Union.

NAIVETE TOWARD SOVIET LEADERS

Opponents of the Safeguard system are motivated by various arguments, the major ones of which I have sought to rebut. I do not question the good faith behind the arguments, although the logic, assumptions, emotionalism, and side issues must be questioned. But there

is one weakness which, though not representative of the opponents, characterizes the approach of a few of the opponents and concerns me more than all of the questionable arguments. It is a naivete toward the Soviet leaders—an inexplicable tendency to overlook their words and especially their deeds, and to proceed on the basis of hope rather than on the basis of realism in our relations with them.

I am not talking about Red Chinese leaders or Rumanian leaders or Yugoslavian leaders, whose ideological differences demonstrate that there has been a departure from the Communist monolith—one which, in the case of Yugoslavia and Rumania, at least, provides optimism for genuinely friendly relations. All of us hope for genuinely friendly relations with the Soviet leaders, but this hope must be tempered with realism and a willingness to look at things as they are. As former Secretary of State Acheson testified on June 11:

The power of the United States alone blocks the Sino-Soviet ambitions in the world. They may fall out between themselves, they may have difficulties, they may fight with one another in a minor way, but on one matter they are completely and wholly agreed. The United States is the enemy.

He continued:

The idea has been expressed that if we take the step proposed here [authorization of the Safeguard system] it is going to make negotiations much more difficult. It is not going to make it any more difficult. Any negotiation will be difficult to start with. All the problems are very difficult. They are not made any more difficult by adding to our defense. I doubt emphatically that some great transformation of relations with the Soviet Union is about to move us from an era of confrontation to a phase of negotiation. We have been negotiating with the Soviet Union all along. We shall be involved in confrontation into an indeterminate future. The two go hand-in-hand in the Soviet view, and perforce we must see the matter in that perspective. The Soviet Union will come into agreement with us only in the measure that it discerns advantage in doing so and detriment in doing otherwise. I certainly do not oppose such negotiations. I am merely warning against the notion that the Soviet Union is on the verge of a conversion to tractability and accommodation.

It seems to me that the recent Czechoslovakian invasion underscores the realism of the former Secretary's views.

I have always supported negotiations with the Soviets, and I have advocated people-to-people type programs between our two countries as a means of laying a foundation for better relations. We must keep trying for better relations, because these would diminish the possibilities of war and enhance the progress toward a more orderly and peaceful world. But our efforts will not succeed and, indeed, could cause us to go backward if we do not proceed on the basis of things as they are rather than on the basis of what we would like them to be—if we do not maintain a posture of resoluteness and firmness of purpose.

SUPPORT OUR PRESIDENT

Mr. Acheson well summarized the ABM controversy when he said:

Suppose the expenditure is not made, and suppose the choice turns out wrong. The consequences could be disastrous. Turn the

proposition around. Say to yourself that, to be on the safe side, we had better go ahead. Then suppose that the proponents of the ABM turn out to be wrong and that this weapon will not do all that they say it will do. Has anything disastrous happened? Have you wrecked the United States? Have you ruined the internal economy? Certainly not. . . . The responsibilities seem to be wholly different. To reject ABM may mean terrible trouble. To go ahead with it cannot mean terrible trouble. It may indeed bring great assurance. If you lose the whole investment, it is not a very serious loss.

In this perspective, and assuming this is a close decision for some of my colleagues, I believe prudence requires us to support the President of the United States.

Mr. LONG. Mr. President, will the Senator yield?

Mr. MILLER. I yield.

Mr. LONG. Mr. President, I congratulate the Senator on his very intelligent speech, which I think pretty well destroys the arguments I have heard made in this body against proceeding with the ABM.

There are two kinds of waste one can contemplate. One is the kind of waste that we all hope would occur—that we would never have to use these weapons. We should all hope that we would be strong enough to defend this great Nation, and so strong that no one will attack us.

There is an old Spanish saying:

If you would have peace, be prepared for war.

If you would be independent and free, you should be prepared for war. If, by being strong, no one cared to go to war with us, that is the kind of waste we should hope for—possession of the latest weapons which we never have to use, such as the hydrogen bomb. We developed it; we hoped we would never have to use it, and we never have; and may God grant it will never be necessary. That is one way in which we can waste something and hope we would waste it.

The other waste is where you spend a great deal of money for defense, perhaps \$80 billion or more a year, and, having done all that, you fail to provide the essentials, so that when the showdown comes, you cannot save your country. In that event, it all has been wasted; but, in addition, you have lost your country, your lives, and your freedom. There is the supreme waste one should avoid—the failure to have the sophisticated weapons of the future that would assure you that you could fight successfully in the defense and salvation of your Nation and your people, if that should become necessary. That is the fantastic supreme waste, as I see it, that some Members of this body have been advocating, in their folly and poor judgment, although they may be sincere.

The Senator has pretty well answered the argument.

It may well be that one could not develop a successful ABM system, although I cannot see how we could put men in orbit around the earth, then have the vehicle leave the earth's gravity, orbit the moon several times, land on the moon, reenter space outside the pull of the moon's gravity, bring the two vehicles together, then dispose of one, then orbit

August 4, 1969

the earth again and splash down within 3 or 4 miles of a carrier waiting to receive the capsule, and then not be able to shoot down a missile. It seems to me that all the technical problems involved in one would indicate that if one can solve all that, we can shoot down a missile. It might take a great amount of technical expertise. It might take some practice and knowhow. But if those three men can do all that, with the help of a vast army of technicians back them up, then something can be developed to shoot down a missile.

But I should think that if we cannot do it, the Russians cannot do it, either. If it is possible for one to develop it, it would be sad to think that, although we have the technical competence to build the weapons to save this great Nation, there are some in this body who lack the foresight to recognize that this would be the difference between liberty and destruction for this great Nation—when one would try to save a few billion dollars in the hope that the Communists have all of a sudden changed their ways, changed their minds. I cannot buy those arguments.

We have been successful in saving this great Nation by following the logic that the Senator has pursued; and, insofar as the major Communist powers are concerned, we have saved it without going to war with them.

I think the Senator makes an argument that is irrefutable.

Mr. MILLER. I thank the Senator from Louisiana for his kind and gracious comments. I do think that he puts his finger on a very important part of this matter.

It is something like life insurance. We have been carrying life insurance policies for a long time, and somebody could say: "Look at the waste. All those premiums down the drain. Look at what you could have been doing with those premiums—buying some extra things you would like to buy; but you never got them because you put it on insurance, and here you are, still alive."

But I assure the Senator that most of us are carrying life insurance, and we are very pleased that the premiums have been wasted, because they did provide us with the assurance that if something happened, our loved ones would be taken care of.

I hope, with the Senator from Louisiana, that the expenditures made on an ABM system will be a complete and utter waste of the taxpayers' money, in the same sense as life insurance premiums have been a complete and utter waste for those of us who are still around. I hope we will never have to use them. But I do think that prudence requires us to keep strong as a matter of life insurance to the people of our country.

Mr. THURMOND. Mr. President, will the Senator yield?

Mr. MILLER. I yield.

Mr. THURMOND. Mr. President, I commend the able and distinguished Senator from Iowa for the magnificent presentation he has made today on the necessity for going forward with the antiballistic missile. The able Senator was a member of the Committee on Armed

Services for some time, and his experience in the Air Force Reserve as well as the experience in World War II undoubtedly gird him with a lot of information from practical standpoint in military matters. In addition, the Senator from Iowa is a distinguished Reserve general, and he is well informed on military matters.

There is no question in my mind that it would be a fatal mistake for the United States not to go forward with the ABM, and as quickly as possible. If we build the ABM and never have to use it, well and good. If we build the ABM and the enemy sends over a missile to destroy our country, then we will be mighty glad we have it.

For the life of me, I cannot see how anyone would object to building a purely defensive weapon such as the antiballistic missile. This is not the type of missile that would cross the ocean and kill millions of people. This is not the type of missile that would cross the ocean and destroy military installations. This is not the type of weapons that is calculated to kill anybody. This is purely a defensive missile that will destroy the enemy's missiles in the event the enemy sees fit to send its missiles over here to try to destroy us.

To me, it only makes good sense that we can. I think it is a very peaceful weapon. It will help to preserve peace because if we do not have this missile, suppose the Soviets by accident, a pure accident, should send an ICBM across the ocean. Suppose some sergeant misunderstood orders or someone miscalculated through error and sent an ICBM over here. If we had an ABM we could knock that missile down. The exchange could stop there. If we did not have an ABM and an ICBM kills millions of people or destroys much property in this country, or if we feel it might be the beginning of a nuclear war, naturally we would respond and quickly. When we do respond with our ICBMs, the Soviets might feel we intend an all-out war and we might have a nuclear exchange which could result in the loss of millions of lives.

I think it is vital to our country that we go forward and build the ABM, not only from the standpoint of a defensive weapon but also from the standpoint of national security and preserving peace.

Again, I commend the distinguished Senator on his fine argument.

Mr. MILLER. I thank the Senator from South Carolina for his kind remarks.

Mr. President, I might say, as I pointed out in my speech, none of us in the Senate is a physicist and I do not think anyone in the Senate has had very much negotiating experience with Soviet diplomats. Therefore, we have to go outside to the experts, to the physicists and the diplomats. It becomes difficult for all of us when there are experts who disagree. In that event, who is one going to support?

As I pointed out in my remarks several weeks ago, I have put my confidence in Dr. Eugene P. Wigner because he is preeminent in the field. He is the only one of the physicists of the world who

received all the major awards for physicists. He received all of them. Other physicists have received one or two of the awards but Dr. Wigner has them all and to me he is preeminent. That does not mean that there are not other good physicists who disagree with him, because there are. One must make a judgment on which physicist he is going to rely upon. I put my judgment with Dr. Wigner. Further, I must say the logic of his argument to me is almost irrefutable.

In the area of diplomacy, how many people do we find in the United States who have had much experience negotiating with the Soviets? I do not think very many of us, outside of Averell Harriman, have had as much experience as former Secretary of State Dean Acheson. I say that the logic of Dean Acheson's statement is irrefutable. One might say he learned the hard way from the Korean experience. When someone has learned the hard way and takes a position, it is more realistic than someone who did not learn the hard way.

I think on those two points we all have to make up our minds as to where we are going to go and in whom we are going to have confidence.

Then, we get into the fine points such as the one which will be coming up by way of an amendment on Wednesday as to whether or not we are going to go ahead only on research and development, or permit deployment.

The Senator from South Carolina alluded to the fact that I served on the Committee on Armed Services and that I have had a number of years' experience in the Air Force. That experience gave me an opportunity to evaluate the amendment which will be voted on Wednesday, because early in World War II, I was engaged in some research and development activities for the Air Force. Along came a phrase known as service testing. I did not know anything about service testing before, but I do now. Service testing means we have to have deployment for an ABM system. Service testing is a part of the broad concept of research and development. If we were going to consider buying a new fighter aircraft, I can assure the Senator he would find no procurement on it until after it had been deployed for service testing at the proving ground at Eglin Field, Fla.

I am sure the Senator from South Carolina, who has had a great deal of experience in the Army, would say, "You are not going to have the Army procure a tank unless it has been deployed and tested at one of the proving grounds."

This is where the amendment we will be voting on misses the point. They do not appreciate that there must be service testing and that is part of research and development. It is in the service testing phase of research and development when many so-called bugs are worked out. I never heard of an aircraft being sent to Eglin Field that did not have bugs in it during the first testing phase.

Some of our colleagues are opposed to the ABM as it is now. They want to confine the deployment to the Kwajalein Islands. They appreciate the fact that

deployment and the service testing is a part of research and development. Where I part company with them is if it is done that way it will cost the taxpayers \$2 billion more than if it were done at the sites in North Dakota and Montana. I have not heard any argument with respect to incurring that extra expense.

Mr. THURMOND. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. GRAVEL in the chair). Does the Senator yield?

Mr. MILLER. I yield.

Mr. THURMOND. Is it not a fact that all of the component parts of the ABM have been tested except the perimeter acquisition radar, that is, PAR? In other words, the missile site radar, that is, MSR, has been tested. The Spartan that can go 400 miles and knock down a missile has been tested. The Sprint, which would be used in the event the missile gets by the long range Spartan, has been tested. The computers have been tested. Mostly, it is a matter of assembling all these parts and getting them together and deploying this weapon because then undoubtedly there will be some bugs that have to be ironed out and the quicker we do this service testing the quicker we will have a more perfect weapon.

Is it not sensible that we go forward and not delay? Is it not a fact that the Soviets built their system in 1962 and had it deployed in 1963, when the Senator from South Carolina called for a secret session to tell the Senate about it, the dangers of it, and urged then, 6 years ago, that we go forward? Is it not a fact that we are at least 5 years behind the Soviets today? Can we afford not to go forward? Some say this would be provocative. The Soviets have said they do not consider it to be provocative. However, if they believe it to be provocative, they took a provocative step then and they could not blame us for doing it today. If they do blame us is it not our first duty to the American people to protect this country and our national security?

I thank the Senator.

Mr. MILLER. I thank my colleague.

I yield the floor.

DEPLOYMENT OF THE ABM

Mr. MATHIAS. Mr. President, in an earlier speech in the Senate several months ago, prior to any statement of position by the administration, I explained my reasons for opposing deployment of an anti-ballistic-missile system. I emphasized that the relatively imperfect and fleeting protection offered by such a system could not compensate for its large social, economic, and diplomatic impact.

Since expressing those thoughts, I have studied closely the voluminous literature on the subject which accumulates in undiminished quantity each day, perhaps because of our efforts. During this time, of course, the proposed system and its rationale have been significantly revised by the new administration. Improvement was needed. By indicating a U.S. policy of protecting cities through active defense, the Johnson administration's Sentinel proposal implied adop-

tion of an essentially new and open-ended defense policy goal. Not only would we maintain deterrence through secure second-strike forces, we also would advertise to the world that for the first time since the abortive fallout shelter campaign we claimed technical ability to protect our people if deterrence fails.

This new commitment, to the extent it succeeded in achieving credible population defense, seemed to suggest a U.S. resolve to retain the option of a first strike. This option—and this protection—would entail virtually unlimited increases in defense spending, since the United States would have to respond to every anticipated improvement in the Soviet or Chinese offense. Such a policy would accentuate the action-reaction cycle of the arms race.

The Safeguard proposal, on the other hand, seemingly avoids this major new turn in our armaments policy. By focusing on defense of Minuteman missiles—a key part of our second strike forces—the Nixon administration proposal indicated continued dependence on a deterrence strategy. The President courageously accompanied his recommendation with a declaration that population centers could not be protected against major attack.

This new approach was less provocative than Sentinel since it did not envisage a degree of effectiveness that would give us a plausible first strike option. Thus, despite a larger estimated cost, Safeguard is a more limited and sophisticated proposal than its predecessor. It does not commit us to the nearly impossible, and thus egregiously expensive business of protecting population in the midst of nuclear conflagration, a form of combustion, we should remember that naturally occurs on, and consumes, whole stars.

The Safeguard recommendation is also tactically superior to Sentinel in terms of domestic politics. By focusing debate on ABM's technical utility—essentially a scientific question—rather than on its strategic and diplomatic implications which Senators are more qualified to judge, the new proposal seemingly locates the debate on the Pentagon's own ground of expertise. The Pentagon, however, also offers an argument for supporters of the coming disarmament and arms control negotiations. It is alleged that endorsement of ABM would strengthen the President's hand in the talks.

Yet, despite all, I have concluded that I should oppose deployment of Safeguard at this time, as well as Sentinel. In fact, if I may be permitted to use rather blunt and provocative language, I have come to believe that such deployments may weaken the United States just as surely as a program of unilateral disarmament. I believe that under present conditions Safeguard represents a step in the wrong direction in the arms race and actually could be a blow to the national security. Further, I believe that the proposal is based on an overall arms race strategy that has been steadily weakening the United States over the past several years.

I do not believe the Pentagon has won

the technical arguments. But I think Safeguard deployment is unwise even if the system works as well and Soviet capabilities are as great as its proponents claim.

The nature of the arms race has been radically changed by the quickening rate of technological progress. During the last decades, there has been a revolution in the nature of strategic war approximately every 5 years. Bombers have given way to several generations of liquid fueled missiles, which in turn were replaced by solid fueled Minutemen and by mobile Polaris submarines. Strategies relying on instant response to enemy attack preparations have given way to a determination to wait out an attack before retaliating. Now MIRV—assuming its deployment is not arrested—promises yet another overwhelming change in the configuration of the military balance. The Poseidon missile system, submarine based, seems the ultimate in mobile, invulnerable retaliatory power, but in the realm of technological advance, the word ultimate is regarded as an impertinence.

This pace of change means that most existing systems are obsolescent—that is, more effective alternative or countervailing technology is already in prospect. Thus heavy investment in deploying or multiplying present systems is ordinarily uneconomical.

But the Pentagon does not adequately take this reality into account. Its proposals for new bombers, air defense, and other traditional systems mean enormous commitments of resources to strategically obsolescent weapons. These investments greatly reduce our flexibility in responding to unexpected new threats in the future.

Our current propensity to deploy and expand any new system and to retain and elaborate any old system with some utility is partly based on a false notion of national security. Our national security in future years depends on what is going on today not at our missile sites, but in our classrooms. In fact, in a time of such rapid change, our national security, even in the relatively short run, relies at least as much on civilian as on military activity.

It is speaking in these terms that I say ABM is a step backward for the United States. It represents not only an extravagance in the use of resources, but also a grievous failure of strategic imagination. Minutemen in fixed bases are already a technology with predictable obsolescence. For they are ultimately vulnerable to refinements in missile accuracy; ABM, for all its redoubtable intricacy and ingenuity, is also of little usefulness in the strategic environment of the seventies. It is a system of the sixties that we wisely refrained from deploying in different forms earlier in this decade despite repeated demands from the military. The Pentagon, in effect, now is putting together two obsolescing technologies in the hope of getting one useful system. What it gets is futility at compound interest for the taxpayer.

Even if the United States succeeded in creating and deploying a completely effective ABM system—one that hermet-

August 4, 1969

ically sealed our skies from missile attack—we could not expect our adversaries to relinquish their retaliatory ability. They would simply find other ways to visit devastation on our country—whether by exploding nuclear weapons in the ocean off our shores and flooding our coastal cities; or by some unidentifiable low altitude delivery system; through resort to chemical and biological agents; or through some as yet unanticipated mode of destruction. The only thing we can confidently say about future offensive technology—whether Russian or Chinese—is that it will be designed to frustrate any defense in which the United States invests as heavily as ABM would require.

Technologically advanced and strategically retarded, ABM symbolizes the American defense posture. New technology is too often employed not to produce more cost-effective and less provocative systems, but to redeem old modes of thought and obsolescent hardware. We do not sufficiently acknowledge the implications of mutual deterrence in an essentially qualitative arms race at a time of rapid technological change.

In these new conditions, a sure way of losing an arms race is to spend too much money on it. The Vietnam war provides an example of another kind. In Vietnam we are also using expensive new technology in an attempt to make up for strategic and political failure. But despite a spending ratio of 10 to 1 over the Soviet Union, we are not winning. Of course, Vietnam is not directly analogous to other areas of arms competition. But vis-a-vis the Soviet Union, our experience confirms the principle: the race will be won not by the side that most readily deploys its hardware but by the side that most effectively employs its resources.

In supporting the policy of heavy deployment of existing technologies, it is said that we must emphasize the capabilities rather than the intentions of our adversary. But capability is just as problematical and elusive a concept as intention. If we—or the Soviet Union—are willing to sacrifice civilian, economic, and social stability and longer term technical and military goals, either side is capable of mustering a military establishment of incalculable power. Either side can produce a military machine that would boggle the mind. But in the nuclear age, that is all that such a military machine can accomplish: it would boggle the mind, and, by extension, the social and political stability of the country that acquired it. But it would not permit either side to gain a peremptory first-strike position. And it would impair the social, economic, scientific, and educational base on which future security will depend. It would hurt our society without helping our security.

One reason for the futility of an attempt to "win" the arms race in this manner is the advantage possessed by the side that is behind. In a sense one can even win such a competition—that is, achieve one's military goals at lower cost than one's opponents—by staying behind. For the dynamics of technological arms races favor the underdog, if his basic capacity is comparable. Not only is

he relieved of the expensive burden of anticipation but long before a new discovery is translated into an effective and operational weapons system, integrated in the military forces of the leader, it has usually become known to the side that is behind.

Even if the follower cannot determine the particulars of a new development, his knowledge of the general area of experiment which produced it will enable him to concentrate his effort and make similar progress more quickly and cheaply. He may be able to avoid costly experimentation with other methods of acquiring the same weapon or other weapons designed to fulfill a similar function.

Thus the country which is defeated in a race for a particular technological development may be able to save both time and money as a result. Much of the expense for weapons development is directed toward the pursuit of unsuccessful possibilities. The follower in a technological race can eliminate some of these failures.

Examples of this handicapping system abound. It is illustrated by the remarkable achievement of the Soviet Union in closing the enormous gap between herself and the United States at the end of the Second World War. American scientists consistently overestimated the time it would take the Soviet Union to equal American achievements in nuclear technology. That this process also works the other way, to our benefit, may be indicated by the speed with which we closed the presumed Soviet lead in ballistic missile technology after Sputnik. It would appear that qualitative arms races between comparable technologies tend to equalize military forces.

Of course, this does not mean we should allow ourselves to fall behind overall military strength. But the handicap for the underdog does mean that attempts to forge ahead have more to do with national vanity than with national security. In fact, if the Soviet Union did decide to invest everything in deploying new technology it would likely doom itself as a first-class power in coming decades. Already falling behind Western Europe and Japan in economic growth—already stinting on industrial modernization—the Soviet Union would fall back irretrievably if it undertook some futile and extravagant ABM-SS-9 campaign for first-strike supremacy.

In other words, achievement of the ultimate war capability of each side would combine military futility with social and political impoverishment: each side is capable of foundering its ship of state with military ballast. Neither is capable of striking its opponent without suffering devastating retaliation.

Although I do not wish such a disaster on the Soviet people, if I were exclusively concerned with disproving Communist theory with bringing down the Soviet experiment, I would hope that the Soviet leaders would embark on an attempt to fulfill their theoretical military possibilities. But since the attempt would inevitably be accompanied by an enormous aggrandizement of the power of

the Soviet military—and by an expansion of their imperial designs—I shrink from an American military posture that could contribute to such an imbalance in Soviet leadership.

It should not be imagined, however, that the United States can proceed with impunity on its present course. It is sometimes asserted on the left that the American economy benefits from defense expenditures. During the ABM debate, it has been implied that the system's supporters are motivated in part by its impact on employment. This notion only reveals a failure to recognize the changing nature both of defense expenditures and of the American economy since World War II. I can say that spending, such as that proposed for ABM, contravenes most of the urgent economic and social objectives of current U.S. Government policy.

The administration currently declares that its first economic priority is to curb inflation without significantly increasing unemployment or substantially reducing real economic growth. Spending on ABM increases inflation and unemployment without contributing significantly to real economic growth. It is peculiarly inflationary because it generates demand in the economy without providing goods to fulfill it. It increases unemployment because it diverts resources into highly specialized technical industries which hire very few marginal workers who could not easily afford to find a job elsewhere. It impedes economic growth because it employs the most valuably catalytic manpower in the economy. These are technicians and scientists who could make far greater contributions to economic growth in the private sector or in public services which improve our economic infrastructure.

When analyzing the impact of defense spending, it is crucial to consider the benefits we forgo, whether in the public or private sector. I do not deny the enormous amount of employment created by the defense budget. I merely say that the amount of employment and growth generated by a dollar of defense spending is much less than that generated by a dollar of spending in the private sector or on public services.

Strategic defense spending is now concentrated in industries with high, technically specialized labor intensity, and with relatively low capital expenditures and value added per employee. These industries make a relatively small net contribution to the economy. Yet they deprive the private sector of essential expertise for research, which is only partly recovered through military development convertible for civilian use.

I do not exaggerate when I suggest that, in purely economic and social terms, the United States would benefit more from building pyramids than from building missiles.

Mr. FULBRIGHT. Mr. President, will the Senator yield at that point?

Mr. MATHIAS. I am happy to yield to the Senator from Arkansas.

Mr. FULBRIGHT. I have read the Senator's speech, and I wish to congratulate him on the entire speech; but that particular passage he has just read,

August 4, 1969

CONGRESSIONAL RECORD—SENATE

S 9059

in a way, sums up this whole issue. Although the Senator uses the allusion in a way that could be discounted, perhaps, I think there is a great deal of truth in it. At the last hearing the Foreign Relations Committee had with regard to this whole complex of weapons it was urged that the Minuteman itself is becoming obsolete, because it can be destroyed by these more accurate missiles. This means, therefore, we are considering the development of an obsolescent ABM to protect an obsolescent weapons system.

This, I think, makes the Senator's analogy to the pyramids very appropriate indeed. At least the Egyptians did end up with a tourist attraction, which is of use to that country hundreds of years later.

I think the Senator has made a great contribution to this debate. I think his speech is one of the most thoughtful I have read on this subject.

Mr. MATHIAS. I thank the Senator very much for his very kind remarks and his helpful counseling.

I repeat, Mr. President, that I think in economic and social terms the United States would benefit more from building pyramids than from building missiles—since pyramid construction would at least employ people who need work, and, as the distinguished Senator from Arkansas, the chairman of the Committee on Foreign Relations, has pointed out, would at least serve as a tourist attraction. Pyramids aside, the economy would benefit far more, of course, from investments in education, medical care and housing. But even if defense re-trenchments were passed on to taxpayers in tax cuts, the economy would benefit since private demand would be released into areas which employ more marginal workers per dollar of investment or which contribute to real economic growth.

Compared to most other industrial products, moreover, defense items do not have a significant multiplier effect. A missile or a submarine is not serviced, retailed, or otherwise introduced into the catalytic flow of the domestic economy.

The arms race thus is economic insanity. But I contend further that current arms race policies are also irrational in terms of the national security. Our defense budget tends to overreact to current threats, overspend on present technology, and produce a useless overkill capacity, while diverting funds and energies from efforts to reinforce the social foundations of our national strength and stability. It hurts our society without helping our security.

The problem thus is not excessive emphasis on national security in the order of our priorities. In a broader sense, the security of our Nation—considered not as just a geographic or demographic entity but also a spiritual and institutional cause—national security in these terms, which indispensably include military defense, must be the primary concern of Government. The problem is the tendency of Government to identify national security with the immediate demands of the military leadership, which understandably fail to recognize the broader

prerequisites of national preservation. These are popular morale, economic stability and growth, educational progress, balanced technological development and maintenance of broadly supported popular institutions. Vast multiplication of existing systems might be valuable if one planned to initiate nuclear war in the immediate future; but nuclear war is suicide. For the maintenance of our defense over a long period, advanced technology, social progress, and economic growth are imperative. Deployment should be relatively modest until real new threats materialize. We should maintain a continuing reexamination of our strategic assumptions.

This means a new set of criteria for specific defense proposals, emphasizing minimal deployment and maximum commitment to basic research, technological development, education, economic growth, and social progress. All these fields—and particularly science and education—are being deprived today. Although Safeguard is a substantial improvement over Sentinel in these terms, deployment now would nonetheless represent a severe blow to our national security.

Several Senators addressed the Chair.

Mr. MATHIAS. I yield to the Senator from New York.

Mr. JAVITS. Mr. President, I have heard a part of the Senator's speech, and I have read the rest of it. I should like to direct his attention to two points, upon which he might like to comment further.

He says:

It is a system of the sixties that we wisely refrained from deploying in different forms earlier in this decade despite repeated demands from the military.

Is it not true that, except for the fact that the system has caught on more vigorously now, that was also the history of the various Nike series—of which the present system is a variant—and that this has been going on for the last 10 years?

Mr. MATHIAS. The Senator is absolutely correct.

Mr. JAVITS. So, if the technological progress and advance have made a weapons system first designed in the late 1950's obsolescent now, the same thing is much more likely now than when Nike-Zeus was first thought of; is that not correct?

Mr. MATHIAS. The Senator is correct.

Mr. JAVITS. I think it is an extremely valuable point. One of the strongest arguments against deployment of the ABM is that it is just about—because of the history of weaponry—to be overtaken by technological advances. If anything, it is a very late starter, and we would be very much better advised to leapfrog it technologically rather than be locked into an obsolescently conceived system.

Another very important point which the Senator makes in his speech, is:

In fact, if the Soviet Union did decide to invest everything in deploying new technology it would likely doom itself as a first-class power in coming decades. Already falling behind Western Europe and Japan in economic growth—already stunting on industrial modernization—the Soviet Union

would fall back irretrievably if it undertook some futile and extravagant ABM-SS-9 campaign for first strike supremacy.

Is it not a fact that the world should know that it is the United States and the Soviet Union which—because of this enormous defense load—are falling behind in productivity, and even in the longevity of their people? Falling behind, for example, Japan and Germany, the two powers which are the least encumbered by military expenditure?

Mr. MATHIAS. The Senator is correct. Of course, just to look at the trade balances with Japan, for example, illustrates what happens when a nation is free to invest its capital and to use its expertise in the social areas and in the private sector.

Mr. JAVITS. Therefore, it is not a sterile but a very real question to ask if the two superpowers are running themselves into the ground by the nuclear arms race, and in our case by the Vietnam war as well. If we are about to come to grips in terms of seeking an arms agreement, is it not best to leave open—without any real jeopardy to the national security—the greatest, most fertile field for agreement, the greatest consumer of resources that might now be conserved, when the two countries are coming together for the purpose of seeking agreement? Does the Senator feel there is the remotest likelihood that in the next 6 months, because the President says he is going to deploy the ABM at two sites in the northwestern part of the United States, that is going to represent such material change to the Russians that they are going to make agreements which they never would have made before, and that we would have won a game of "nuclear blackmail" because the President is going to deploy this system at these two missile sites?

Mr. MATHIAS. I cannot believe that this policy will bring about all of that fallout which has been claimed.

Mr. DOMINICK. Mr. President, will the Senator yield at that very point?

Mr. JAVITS. I will yield in a moment.

Mr. DOMINICK. I am a little tired of the Senator's saying that we are engaged in nuclear blackmail.

Mr. JAVITS. I am not saying that we are engaged in nuclear blackmail.

Mr. DOMINICK. The Senator just finished stating it.

Mr. JAVITS. Not at all. And the Record will not show that, in my judgment. However, if the Senator will, I should like to finish with my inquiry of the Senator from Maryland.

As a matter of fact, is not the concession that this will make no difference to the Russians any more than what they have done in Moscow and in the SS-9 will make any difference to us, practically yielding the whole point? If it will make no difference, why do it?

Mr. MATHIAS. The Senator is absolutely correct.

Mr. JAVITS. To deal with the point of the overkill, we are not seeking to take advantage of nuclear blackmail. It is not so. Then, why argue that it is or that this will strengthen our hand?

Mr. MATHIAS. Exactly right.

S 9060

CONGRESSIONAL RECORD — SENATE

August 4, 1969

Mr. DOMINICK. Mr. President, will Senator yield?

Mr. MATHIAS. I yield.

Mr. DOMINICK. Mr. President, I do not know whether the Senator from Maryland was present before when the distinguished Senator from Iowa (Mr. MILLER) spoke. The Senator from Iowa had some analyses of the military spending vis-a-vis our gross national product exclusive of the Vietnam war. And he showed that in percentages the proposed budget, exclusive of expenditures for Vietnam, were the same or less in terms of percentages than the budget was for last year, 5 years ago, 10 years ago, and 15 years ago. So, when the Senator speaks of vast military expenditures, I point out that we would all, of course, like to cut them down. Obviously this is what we would all like to do.

As a matter of fact, the committee cut them down by \$2 billion. I think, however, that to leave an impression on the floor that we are engaged in something new and unique at an enormous cost when we are dealing in this particular debate in this particular amendment with \$345 million, is a little bit extravagant.

I was wondering if the Senator had any comment on the percentage figures that the Senator from Iowa placed in the RECORD.

Mr. MATHIAS. I certainly do. I would call to the attention of the distinguished Senator from Colorado the fact that some industrial concerns that want to expand their plants and hire new people and manufacture new goods have to pay an interest rate of 10 or 12 percent to get the money.

I point out that our trade balances with foreign countries are in worse condition today than in recent history.

I point out to the distinguished Senator the fact that it is costing the U.S. Treasury more to borrow money today than it has for a long time, maybe ever in our history.

Mr. DOMINICK. I agree with all of that.

Mr. MATHIAS. I think the Senator must agree with it because it is a fact.

These unhappy facts result in large part from too much defense spending over a long period of time, and the fact that it is down a little now or up a little at another time does not eliminate the fact that over this period there has been too much and that we are suffering for it at this time.

Mr. MILLER. Mr. President, will the Senator yield?

Mr. MATHIAS. I yield.

Mr. MILLER. Mr. President, I think it should be pointed out—and the Senator is talking about our trade balance—that the percentages of gross national product that has been going for national defense was a little higher in 1964 than it was last year or is going to be this year. Yet, if my recollection proves correct, we had a magnificently favorable balance of trade in 1964.

If I may have the attention of the Senator, I should like to make a point because I should like to have a responsive answer.

The Senator talks of a long, sustained period of defense spending. That is ex-

actly why I went back to 1954 and ascertained the percentage of gross national product going for national defense.

I point out to the Senator from Maryland that he will find that the projected defense spending for fiscal year 1970 will be a lesser percentage of our gross national product than it was for 3 years in that period of time—1954, 1959, and 1964. So I must respectfully point out to the Senator that his thesis that this defense spending has ever had a direct bearing or maybe even an indirect bearing on the unfavorable balance of trade simply will not stand scrutiny.

I am concerned about defense spending. In fact, I do not know of anyone who is not. Everyone on both sides of the aisle or on either side of the controversy should be concerned about defense spending and other areas of Government spending.

That does not get us anywhere. We are all equally concerned about it. The question is whether we need something for our national security.

If the ABM will not work, and if we are convinced that it will not work, there is no point in our spending anything regardless of how lean or fat the budget is.

I must say that I think the matter of budget spending is a sort of side issue. I can assure the Senator that if I am persuaded that the ABM will not work, I will not buy it regardless of whether the budget is in good condition or not.

On the other hand, if we need it, then I think the budget condition is very secondary to what we need.

I think it is very important to point out that the defense spending is not involved in our drop in a favorable balance of trade.

Mr. MATHIAS. Since the question of defense spending up and down has been brought into this discussion, and I think very properly so, I refer the Senator from Iowa and the Senator from Colorado to the current issue of Fortune.

There is a very interesting and authoritative article in the Fortune magazine written by Ian Cameron, a splendid and well-informed writer, in which he quotes the Secretary of Defense as saying that even if we are successful in eliminating the war in Vietnam, we will still not come up with a drastically reduced defense budget.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. MATHIAS. I will yield in a moment.

Let me say that if we go ahead with the ABM and MIRV, we can, I think, safely project a continuing expenditure of anywhere from \$20 billion to \$30 billion a year for strategic systems alone for perhaps the next 10 years.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. MATHIAS. I yield.

Mr. DOMINICK. Mr. President, I had the same discussion with the Senator from Maine (Mr. MUSKIE) on Friday. It is in the RECORD.

I pointed out at that time—which I am sure the Senator from Maryland will recognize—that the question of what our defense budget will be after the Vietnam war will depend upon what Congress authorizes and appropriates. It has noth-

ing to do with the question of what the automatic system might be, what Mr. Cameron and the like do, or anything else.

Let me point out that the question of how much we will spend on an ABM and where we will put it is under constant review, as the President pointed out, and that Congress can reduce funds. The Committee on Armed Services has cut out the funds for the Navy version of the F-111, the F-111B, after we had spent a lot of money on research. We have cut out the Cheyenne helicopter and all of these fast deployment logistic ships and a whole variety of weapons.

The statement made is not borne out by history.

Mr. DOLE. Mr. President, will the Senator yield?

Mr. MATHIAS. I yield.

Mr. DOLE. Mr. President, I have listened with great interest to my friend, the Senator from Maryland, say that we should not proceed with the deployment of the Safeguard system.

The Senator recognizes that the Safeguard system is an improvement over the Sentinel system.

I want to clarify the matter. What does the Senator suggest we do as an alternative? Does the Senator suggest more research and development, or does he suggest doing nothing?

Mr. MATHIAS. Mr. President, the distinguished Senator from Kentucky (Mr. COOPER) has suggested in the amendment which we will vote on on Wednesday that we proceed with research and development for a period of time, during which we can satisfy ourselves as to the desirability of going forward.

Mr. DOLE. Mr. President, the reason I ask the question is that I think there may be a feeling or at least a misunderstanding on the part of many Americans that there are 45 or 50 Senators who want to do nothing and 45 or 50 Senators who want to do something. I point out, as I have in the past, that I think it is misreading the tenor of the Senate.

As I understand it, not one Senator says we should do nothing, that we should go backward. Senator COOPER and Senator HARR are advocating what they think to be in the best interests—appropriate the money and do everything but deploy.

I have said many times that perhaps we could have chosen a better word. Perhaps we should have chosen the words "operational development" instead of "deployment," because that is what I really think it is.

But I commend the Senator from Maryland for his remarks. I disagree with his conclusion, but I am in accord with him when he says we must do something. There must be more research; there must be more development; and we must, even in the case of the Cooper-Hart amendment, authorize the money and move ahead with everything except deployment. Is that, in essence, what the Senator suggests?

Mr. MATHIAS. The Senator from Kansas, I think, has the nub of it, as usual, we find ourselves in broad general

August 4, 1969

CONGRESSIONAL RECORD — SENATE

S 9061

agreement on the goals to which we are moving.

Mr. DOLE. Or broad disagreement.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. MATHIAS. I yield.

Mr. COOPER. I appreciate very much the statement by the distinguished Senator from Kansas. He has brought into better focus the purpose of the amendment we propose—what we hope our country will do.

We talk about deployment, about making a decision to deploy. That, of course, connotes that we will be able in this fiscal year to actually emplace some component of the Safeguard system on the two missile sites. Of course, that is absolutely incorrect. There is no component, there is no element of a component, that can be physically placed upon a missile site in the coming fiscal year; I am sure that no proponent of the ABM system will question that statement. It cannot be, and I have that statement from the Department of Defense.

I would point out that the funds requested in the bill are proof that nothing can be done in the fiscal year except in research and development programs. Three hundred forty-five million dollars is asked, supposedly for procurement, but when one searches out the elements of that sum, it is chiefly for preparation for procurement. The antimissile system is admitted to be a research and development program. Compared to the sum of \$345 million, which is characterized as a fund for procurement but which is not at all, \$400 million for research and development is requested.

In addition to the \$400 million, the Department of Defense has transferred from the old Nike X program—which they have given up—an additional \$120 million for research and development. A total of \$520 million plus the carryover from last year for research and development, is available and requested for research and development programs, which we believe proves our point: The Department of Defense has transferred \$120 million in addition to the \$400 million for research and development. It is a part of the record. The Senator from Mississippi (Mr. STENNIS) brought this fact out in the hearings.

We ask that there be no decision to deploy in the future, until in this year, we can determine whether there is any necessity for deployment at all. It might turn out—I hope it will—that the Soviets will not proceed with their program of deploying SS-9's. If they do not, there will be no necessity for spending a vast sum in deployment of the ABM system. If they proceed, we believe that our scientists and engineers will design a system which will be of greater effectiveness than the proposed design of Safeguard.

Above all, we hope that, through agreements in talks or action which indicates tacit agreement, the arms race may be limited. The Senator from Maryland and the Senator from Kansas, Senator DOLE, have correctly brought out our purposes.

I was very interested in reading the testimony of Dr. Foster before the Committee on Armed Services. When asked what we will do about the ABM system

around Moscow, he said, "We will simply overwhelm it." That, I think, is what the Russians would propose to do about a system which a great many people think would be ineffective.

The Senator from Maryland has opened up fields which go far beyond the limited question of the feasibility of this program. As usual, he has made a very enlightened and constructive speech.

Mr. MILLER. Mr. President, will the Senator yield?

Mr. MATHIAS. First, I thank the Senator from Kentucky for his astute observations which, as always, help to illuminate these discussions. I concur in his thanks to the Senator from Kansas for really making a very important point, from the point of view of the general public.

I also thank the Senator from Kentucky for shedding light on the question of the possibility of deployment within the next 12 months. In an earlier colloquy with the Senator from Iowa, it was stated categorically that everything is ready to go; all you have to do is hook it up and turn on the lights and see if it works.

Mr. MILLER. Mr. President, will the Senator yield at that point?

The Senator from Iowa made no such comments.

Mr. MATHIAS. I did not say the Senator from Iowa said that. To keep the Record clear, the Senator from Iowa did not make that statement, but it was said in a colloquy which followed the Senator's remarks. I think the Senator from Kentucky has put the right interpretation on that and has stated to the Senate, frankly and accurately, what the situation is.

I yield to the Senator from Iowa.

Mr. MILLER. I thank my colleague for yielding.

I think the Senator understands that the Senator from Colorado and the Senator from Iowa were trying to illuminate this matter, too.

Mr. MATHIAS. And I appreciate that contribution.

Mr. MILLER. The point I was going to bring out is this: I believe the Senator, in about the last sentence that he read from his speech, said something to the effect that we should not have deployment now. That was the point I wanted to bring out—that deployment now is just not feasible, and the Senator from Kentucky has done a pretty good job of bringing that out.

I think it is wrong for people to get the idea that what we are all fighting about is whether we are going to have deployment 6 months or 12 months from now, rather than, as I understand it, the earliest we could have full deployment, for service testing purposes, not for final purposes, would be some years yet ahead.

Mr. MATHIAS. Yes. But the Senator will recall that that was not the statement with which the Senate was left a few minutes ago. I am not saying the Senator was responsible in any way.

Mr. MILLER. But I do think that when it is said we should not have deployment now, we are not really facing up to the real issue. The Senator from Kentucky has put that in perspective.

However, I do think one thing should

be emphasized, and that is that so long as we cannot possibly have deployment now, I wonder what the real reason is for the amendment on which we are going to vote on Wednesday, which provides we are only going to have research and development and not deployment. If we cannot have deployment what are we arguing about? It seems to me that what is getting across to the public and the people around the world is the fact that we are in danger of going on record as tying the hands of the President. I do not like to see us do that. I well remember some of the amendments that were debated here in earlier years during the terms of the late President Kennedy and former President Johnson. Some amendments would be introduced from this side of the aisle. We would be met with the retort from the other side of the aisle that an amendment should be defeated because it would tie the hands of the President. And it will, indeed, in the eyes of many people around the world. His hands are tied by the very fact we cannot have deployment in the next 12 months, whether we wanted it or not.

However, to go on record and indicate we cannot have procurement with long leadtime, looking forward to deployment—I am not talking about final deployment but service testing—I am afraid will give us the picture in the eyes of the world of tying the hands of the President.

More than anything else, I think that is very unfortunate. I do not think we should be debating here about tying the hands of the President, especially when we are debating about something that is not going to happen because, as the Senator from Kentucky said, Mr. President, you cannot have deployment in the next 12 months.

Mr. COOPER. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. SAXBE in the chair). Does the Senator yield?

Mr. MATHIAS. I yield.

Mr. COOPER. Mr. President, the Senator from Iowa has said:

You cannot have deployment in the next 12 months, so what are we arguing about? What is the purpose of your amendment?

The purpose of the amendment has been expressed so many times on the floor of the Senate. Either we do not do it very well, or it is not understood well enough by others.

Mr. MILLER. It is not lack of good faith.

Mr. COOPER. No, it is not lack of good faith. I point out with respect to deployment that the misunderstanding has arisen because of the statements of the Secretary of Defense. We have to be very frank. He said in his testimony before the Committee on Armed Services and before a committee in the other body that the components have been tested and that we are ready to deploy. He was quoted on television a few days ago, as saying that the components have been tested and that we are ready to deploy.

The impression that the United States is ready to deploy a Safeguard system arises from such statements.

August 4, 1969

Mr. MILLER. Mr. President, will the Senator yield on that point?

Mr. COOPER. I shall yield. We know it has not been tested.

Mr. MILLER. I think we have to be fair to the Secretary of Defense.

Mr. COOPER. I will be fair.

Mr. MILLER. I do not believe the Secretary of Defense, certainly among the sophisticated Members of the Senate, implied we could have deployment of this system much before the mid-1970's even for service testing purposes. Does the Senator remember how long the Secretary said it would be before there would be service testing?

Mr. COOPER. The initial operation date was 1974.

Mr. MILLER. Very well.

Mr. COOPER. But we are talking about an impression that has gone across our land. Some believe we are holding back on the Department of Defense from deploying a system which is needed to protect the Minuteman when in truth it cannot be deployed in fiscal year 1970.

Mr. MILLER. But the Secretary of Defense said it cannot be fully deployed for service testing purposes before 1974, and he was not in the same breath saying that we are ready to have it deployed in 12 months.

Mr. COOPER. I am only saying that when the head of the Department of Defense makes the statement that "we have tested the elements and we are ready to deploy," people will believe the testimony. I do not question his good faith—I speak only of the impression that people have.

Mr. MATHIAS. Mr. President, if I may interrupt the Senator, he is absolutely correct, because that is the statement that was repeated or paraphrased in the Senate just a few moments ago by a Senator who is no longer in the Chamber, and it gives a completely distorted picture. I think words were used here to the effect that every component had been tested and all that had to be done was to hook it up and get the bugs out. That is not the question.

Mr. COOPER. All of us, opponents and proponents, seek to do what is right on this issue and to do what is best for our country. I certainly would not question the good faith and purpose of any Member of this body, although we may form judgments that differ.

However, the statement has been made on the floor of the Senate that we have had enough research and development; let us go ahead and deploy; the impression has gone forth that the Department of Defense is ready to deploy and as a natural consequence some may believe we are endangering the security of the country by opposing deployment of the system. We do not want to lock the hands of the President, and as there can be no deployment we are not locking his hands. If the statement is made that we are opposing a decision to deploy at some time in the future, we are in opposition on that score.

If, in this year, it should be found that the system which is proposed is not an effective system as presently designed—and I believe that inference can be drawn from the fact that the administration is

putting \$520 million into a research program—and if the Department of Defense should procure parts of the system which may be found later to be inadequate, we may become locked in on an ineffective system. This would not contribute to the security of our country.

Finally, my chief reason for opposing a decision to deploy—and I believe it is the chief reason of many who support the amendment—many people believe there is no chance of reaching any agreement with the Soviet Union. I must say I do not know that we can. Perhaps we cannot. But it is my view that we should not make a decision to deploy a new nuclear weapons system just as we enter negotiations whose purpose is to control new weapons systems.

The President can enter the negotiation in a position that is clear and understandable. He can say, "We are not going ahead. We will not start a new weapons system when we seek to control the deployment of additional weapons systems." This is my hope.

Mr. MILLER. Mr. President, will the Senator from Maryland permit me to respond briefly to the Senator from Kentucky. I realize that I have intruded considerably on the Senator's graciousness and time.

Mr. MATHIAS. I am delighted to do so. The Senator from Iowa has not intruded or trespassed in any sense. I appreciate the spirit in which the Senator from Iowa is participating in the discussion. I think his comments have been extremely valuable and helpful, particularly on the point of deployment. I think there is a lot of popular misconception. The Senator from Kentucky and the Senator from Iowa have made extremely valuable contributions by their candor and fairmindedness. I am delighted to yield further to the Senator from Iowa, to continue the discussion.

Mr. MILLER. I thank the Senator from Maryland.

I do appreciate the delineation by my good friend from Kentucky of the rationale behind the amendment. As I understand, he says that no matter what is in the bill, the President cannot deploy in the next 12 months, but that there are possibilities of going ahead with some procurements looking toward a phased-in deployment of the system, which he does not want us to authorize now.

I suggest that if we authorize the President to go ahead with the long lead-time procurements, which may be 2 or 3 years from now, and maybe start to deploy as a part of a system, it may be that additional research will show that the procurements are not calculated to give us the most effective system, assuming at that time that we want to go ahead with it.

My trouble with that reasoning is, as I understand it, that the research and development necessary to determine whether the system, overall, is the best we can achieve within the time frame we are talking about has really been done. There may be a little extra work that can be done, such as with radar, but the system as a whole will be pretty well set. Additional research may be needed to improve some of the things. But over-

all, the system is pretty well set and pretty well set to the extent that the President and the rest of the Defense Establishment think it will work. If we come along and say, in effect, to the President, "Even though you cannot do anything about deployment, we are not going to let you go ahead on these procurements," I suggest, most respectfully, that we are tying the hands of the President of the United States, even though we may not like to think so. Because I just do not believe that the President of the United States would go ahead with these procurements and get locked in. Let us assume that he did, through an honest mistake; and 1 year from now we will be right back in this Chamber, after running the gauntlet of the committees, on this side of the Capitol and on the other side, and I am quite confident that the fact a mistake has been made will be brought out and Congress will certainly be in a position to vote up or down the appropriations to continue or not to continue the locked-in position.

Thus, I cannot quite understand why we are so concerned about denying the President the authority he asks for, which authority cannot be carried out within the next 12 months, but can only begin to be carried out through long leadtime procurements. Congress has a continuing opportunity to vote up or down appropriations; yet, in many respects, we are involved in a tempest in a teapot, even though it is a very big issue in the minds of many people. The difference between research and development and deployment issue is very fine.

Now if the Senator from Kentucky is saying that we do not want any ABM system at all, let us stop all work on it, that there is no point in having an ABM system, that would be one thing; but here we are involved in a very fine delineation between research and development and deployment, in the case of a bill authorizing expenditures which will not give us deployment until 1972, 1973, or 1974.

We are all men of good will, acting in good faith. I most respectfully suggest that whether we think we are tying the hands of the President in the eyes of many people around the world, the President's hands will have been tied by Congress. I think that is most unfortunate impression to leave in the minds of people overseas at this very touchy time in international relations.

Mr. COOPER. If the Senator from Maryland will bear with me a moment—

Mr. MATHIAS. I am delighted to yield further to the Senator from Kentucky.

Mr. COOPER. It has been stated many times by the proponents of the system that it is vital to the security of this country. Awesome pictures of the growing nuclear strength of the Soviet Union have been given in the form of projections and extrapolations. They may turn out to be a reality.

We respect the President of the United States. We know him, many of us have served with him and know the efforts he is making for peaceful solutions. I respect him. The security of this Nation, while it is very much in the hands of the

August 4, 1969

CONGRESSIONAL RECORD — SENATE

President of the United States, is also in the hands of Congress. We have a joint constitutional responsibility. We too represent the people. It is also in the hands of the people. We in the Congress have a special responsibility to make judgments as to whether a process or program is in the best interests of the security of this Nation. We argue about feasibility, about funds, about deployment, and can reasonably disagree about them. But we too have the responsibility to make judgments about the best way to stop the arms race which threatens the ultimate security of the United States.

It is our judgment that it would be better not to make a decision to deploy a new weapons system in the year when we seek to control nuclear weapons, if this can be done, we would agree that the greatest step toward true national security for our country had been taken.

Thus, as we may differ with the President on this issue, it is done honorably and with great respect for him. Our duty is to be responsible to the people as Members of Congress. If deployment is not agreed to, I do not consider, as Senator ARKEN has said, that it will represent a setback for the President of the United States. He is demonstrating every day his leadership on great issues.

Mr. MATHIAS. Mr. President, I appreciate very much participation in this colloquy by the Senator from Kentucky, the Senator from Iowa, and the Senator from Colorado. It has been extremely helpful to clarify some of the questions which do exist.

I particularly want to concur with the Senator from Kentucky when he says that whatever honorable disagreements may exist, they are taken pursuant to our responsibilities as Senators to provide for the common defense of our country, which is the responsibility imposed on us by the Constitution and which we can only discharge in conscience and in no other way.

Mr. DOMINICK. Mr. President, will the Senator from Maryland yield for a unanimous consent request?

Mr. MATHIAS. I yield.

Mr. DOMINICK. Mr. President, I ask unanimous consent to have printed in the RECORD a report entitled, "Good Guys, Bad Guys, and the ABM," written by Albert Wohlstetter of the University of Chicago, which was submitted to the Los Angeles Times for publication Sunday, August 3, and Monday, August 4, 1969, and which has been published as a report by the Committee to Maintain a Prudent Defense Policy.

I have read this. It refers to several participants in this debate, not on today but on previous occasions. It has some good points, and it states them in very readable language. I think it is worthwhile to have them in the RECORD at this point.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

[A report from the Committee to Maintain a Prudent Defense Policy, Washington, D.C.]

GOOD GUYS, BAD GUYS, AND THE ABM

Choices about bombers or missiles or defenses against them are, in the most literal sense, vital. They can mean life or death. Yet making such choices carefully has never been

easy. And least so now when the closing agonies of Vietnam drive us to wish away all problems of national defense. Even thinking about such questions is unpleasant and can make your head hurt. Answers don't come in black and white and mustering vast public sentiments about precise shades of grey is particularly hard. It is much easier then to make believe that the issues are simpler than they are, that the answers are plain to any man of good will, that the issues are in fact between the concerned men of good will and a reckless entrenched malevolent authority. The good guys are against nuclear war, against taking reckless chances on nuclear accidents, against wasting money that might be used to solve our urgent domestic problems, against the "ever accelerating arms race", against the generals and munitions makers, for peace abroad and redressing the inequities at home. The bad guys. . .

The impassioned ABM debate, as the news media tend to picture it, does array the good guys on one side and on the other, the bad. The forces of virtue at last aroused against the forces of evil. ABM, as many of its opponents have said, is a symbol. One trouble with symbols, however, is that they often have little to do with reality. Any close look at the realities of the ABM and the way the debate has developed, blurs this simple picture. In fact, erases it entirely.

Intense controversy blew up suddenly last fall with an alarm sounded by some Argonne physicists about placing Sentinel defense missiles only a few miles outside Chicago's city limits. It was not hard to arouse public interest groups on this subject. It seems that very few Republicans or Democrats favor nuclear accidents. By spring, however, distinguished opponents of ABM like Hans Bethe indicated that the nuclear safety of Sentinel was not really troubling. And by late spring various opponents of ABM were themselves recommending that, rather than use Safeguard ABM to protect our bombers and missiles, we should undertake (a) an emergency dispersal of armed bombers—which would mean landings and takeoffs with nuclear bombs in commercial airports of large cities; (b) an armed air alert—that on a continuing basis might mean an average of a dozen accidents per year involving nuclear weapons; and finally, (c) most amazing, that we try to empty our silos before enemy bombs get to them by immediately launching our Minuteman at Russian cities on the basis of radar indications—which would increase the nightmare possibility not only of a nuclear accident, but of an accidentally started worldwide nuclear holocaust.

Senator Symington asked, "After PAR finds the incoming missiles, why then couldn't you fire the Minuteman on target instead of the Spartan?" And Senator Fulbright engaged in this dialogue, ". . . if the objective is deterrence . . . then . . . this would really concern the Russians to know what you would really do if they sent over a massive attack."

Senator Gore, "Or a light attack."

Senator Fulbright, "Or even a light attack, one that could be detected. . . I would think that is the greatest deterrent you could have, and you are going to release ours before they are destroyed, and you could do it."

Indeed you could. But such a mode of decision risks delegating to a computer the most terrible decision that would ever have been made, the decision for World War III. Recognizing that, our government decided years ago to try to preserve our political decision centers and to protect our forces so that they could ride out an attack and in that way leave time for responsible political decision. A recommendation by the good guys to launch missiles on radar warnings hardly fits the simple picture. Who are the prudent, reflective, good guys and who are the bad guys?

Even given the deserved unpopularity of nuclear accidents, the ease with which indignation was aroused about the local defense of urban population has in it a good many paradoxes. At the very least it knocks down one widespread argument that was being made as recently as last year against an attempt to defend some cities. That, the argument used to run, can only lead to an arms race, since it was certain that the undefended cities would demand defense. Doesn't this vociferous demand not to be defended at the least suggest some flaws in the older theory?

Trying to fit the pieces of the ABM debate about arms race and military budgets and domestic needs into the simple picture yields many insoluble puzzles. Major critics of ABM (for example, Professors Wiesner, Weinberg, Panofsky and Senators Fulbright and Symington) run on about arms races; nonetheless suggest increasing, even doubling, the Minuteman force rather than defending it with ABM. But a doubled Minuteman force could annihilate the projected large number of Soviet ICBMs: it would seriously endanger Russian ability to retaliate. If the Russians, following the policy suggested by the vociferous ABM critics, responded by increasing their force, an accelerating race in strategic budgets and numbers of weapons would then be on in earnest. It has not been on in the past, despite the stereotypes. In the last 10 years our strategic budget did not "accelerate"; it declined by half and precisely because in the 1960s we did not merely multiply strategic vehicles but increased their protection by methods such as blast resistant silos appropriate to the 1960s threat. In the mid and late 1970s improved offense accuracies will make blast protection inadequate and will make ABM an appropriate method for preserving a fixed offensive force. Moreover such active defense of the offense would not provoke a spiral any more than our silos did. It frustrates an adversary's ability to strike first effectively, without removing his ability to strike second, that is, his ability to strike back after attack. Protecting Minuteman doesn't add to our first-strike capacity. Doubling Minuteman does. Just who is thinking prudently about avoiding arms races?

Or about excessive military costs? Doubling the Minuteman force and keeping B-52s steadily aloft in numbers equal to our ground alert would cost several times more than protecting Minuteman and B-52s with ABM; over 20 billion dollars on a 5-year basis, even neglecting the implicit "spiral"! Hardly the way to free resources for urgent domestic needs. Moreover, unlike Safeguard, doubled Minuteman and air alert B-52s would do nothing to protect our national command or to shield our population against even small attacks.

This neglect of the expense of alternatives to ABM is only one example of the casual handling of costs by the critics of ABM. And treating costs in an offhand way turns out to be crucial for their substantive criticism. Today it is plain that these critics were extremely hasty in presenting calculations that purported to show that Minuteman would be safe without extra protection in the mid and late 1960s. And many of them have retreated on this point: they now say Minuteman will be so unsafe as to be obsolete and not worth defending. It is not yet as plain that their treatment of the costs and effectiveness of a Safeguard defense of Minuteman and its alternatives is as faulty as their earlier proofs that Minuteman would be safe. Perhaps I can make it plain. It is an important matter. Central questions that seem unrelated turn on these matters of cost, for example, the questions below.

1. CAN SAFEGUARD BE "EASILY" OVERCOME?

Opponents of ABM support their claim that overcoming Safeguard is easy by referring to a mysterious secret chart showing how

August 4, 1969

the Russians can overwhelm the defenses of Minuteman by adding more of their SS-9 missiles. Such a chart hardly proves their point. Any fixed amount of defense can, of course, be overcome by adding enough to the offense. This is obviously true. It is equally true that any fixed amount of offense can be smothered by adding enough defense. Both these truths are nearly tautological. For adversaries with roughly the same resources, the practical question has to do with how much extra the offense must pay to overcome a given amount of defense and how this compares with the cost of that defense itself. The answer in the case of Safeguard defense of Minuteman is that it would cost the Russians more than twice as much to add offense as it would cost us to add an offsetting number of Sprint missiles with their fair share of the missile site radar expense.

That is why starting to deploy Safeguard is a good way to discourage an adversary from persisting in any attempt to remove our second-strike capability. On the other hand, if we do nothing to protect so large a part of our retaliatory force, we make it relatively cheap and fruitful to get the capability to destroy it. The stereotypes about the arms race talk always of "action-reaction cycles." There are inaction-reaction cycles too. And some positive acts inhibit response by making it fruitless.

How have the critics of ABM missed the point on costs? First, they rarely mention the adversary's costs and never measure the extra cost to the offense to overcome an increment in Safeguard defense. In fact, one distinguished Senator opposing ABM has suggested that the large costs of SS-9s do not concern the Russians since they are not capitalists. Another opposition Senator holds that the Russians are so limited in resources that they will not buy enough SS-9s to destroy Minuteman even if there is no Safeguard to make their resource cost higher. A more reasonable suggestion than either of these two is that expanding the SS-9 involves a serious resource expenditure for the Russians: perhaps worth it if we indicate we have no intention of protecting Minuteman; and not worth it if we can add protection much more cheaply than they can overcome it.

Not only are SS-9 missiles with three 5-MT reentry vehicles expensive, but so are the lower-yield less accurate SS-11s, which have recently been proposed by critics as "cheap defense radar killers." In fact, on a per warhead basis they are more expensive than the SS-9s and much more expensive than the defense missiles that would counter them. Nor would SS-9s with 20-30 low-yield reentry vehicles be cheap radar killers, as recently suggested by Professors Wiesner, Weinberg and Rathjens. They are much more advanced than the SS-9 with three accurate 5 megaton MIRVs. Yet these same critics doubt that the Russians can get the latter. Most important, if one includes the several billion dollars for research and development, getting two dozen missiles especially to kill radar would involve extremely high unit costs, even neglecting the expense of procurement and operation.

The critics not only neglect adversary costs, they inflate the costs of the Safeguard defense of Minuteman. They attribute the entire costs of the Safeguard program to the protection of Minuteman. They include research, development, testing and evaluation costs which both opponents and advocates of Safeguard agree should continue whether or not we start deployment now; these are not properly an extra cost of the decision to deploy Safeguard at the Minuteman sites or anywhere else. Furthermore, they include costs, all or part of which are required for other functions of Safeguard than the defense of Minuteman.

Safeguard is intended also to protect the National Command authority, to defend

manned bombers and to provide a thin shield for population. When the critics of Safeguard want to question the value of the area defense of the bombers and of our population, they may estimate that most of the cost is for area defense and attribute only \$730 million of the entire Safeguard program to the defense of Minuteman. (See Chayes and Wiesner, Eds., *ABM: An Evaluation*.) On the other hand, when they are attacking the use of Safeguard to defend Minuteman, they pile on this function the entire costs of the program including not only research and development, but also expenditures for the purpose of defending National Command, bombers and population. (See Rathjens, Wiesner and Weinberg, "Commentary on Secretary Laird's May 22 Defense of Safeguard.")

In estimating the cost of a defense interception, they neglect a major feature of the Safeguard system, that will permit immediate replacement of defense missiles that fail during or shortly after launch. Since most failures occur within this time period, a reserve of some 15% or 20% assures an extremely high probability of interception. Critics of ABM, by ignoring this, have assumed that some three times more defense missiles are required than the probable number.

This neglect is related to the critics' misunderstanding about the "softness" of the defense radars (MSRs and PARs) and the role of blast resistance in the defense. It is well known that the radars have less than one tenth the blast resistance of the Minuteman silos. They are, however, protected primarily by interceptor missiles, and they are made just blast resistant enough to force an offense warhead to come close and so permit the defense to fire several times at it. If the first or even second Sprint fails, there is time enough for a third to destroy an incoming warhead.

A final major defect in the critics' estimate of the cost of a defense interception comes from ignoring the important strategy for defending an offense force known as "preferential defense." Defending missiles is a very different thing from defending population. If only half the population survived, this would be a catastrophe of unimaginable dimensions. But the survival of fewer than half our missiles may be more than enough to assure retaliation. The defense then can decide which Minuteman silo, or if there is more than one radar, which radar to defend and can decide this at the last minute. The offense cannot know this and therefore must attack all targets as if they were all defended. When the defense doubles the number of interceptors and radars, the offense must multiply its warheads four times.

All these errors in costs add up to a very large mistake about the ease of overcoming Safeguard.

2. WILL SAFEGUARD WORK?

The answer to this question may not seem directly related to the matters of cost we have been discussing. But it is related both to our costs and to those of an adversary. When a critic says Safeguard won't work, it sounds as if he were claiming that when a switch is thrown, there will be a fizzing sound and then merely some smoke coming out of the computers. A closer look at his argument, however, will reveal that he means Safeguard will not work because in an actual war the adversary wouldn't let it work; the adversary will think of all sorts of effective counter-measures.

For the apparent (or smoking computer) meaning, the fact that Safeguard is complicated seems to be crucial. Bell Laboratories, which have technical charge of the Safeguard system design, are most experienced, cautious and successful in engineering complex systems. They are used to making very complicated things work with very high reliability. But if the trouble lies in what an

enemy can do to counter Safeguard or its alternatives, complexity is not the issue at all. Many simple things won't work when a modern adversary won't let it: slingshots, catapults, moderately hardened silos, and even the "cheap" small defense radars and missiles proposed by some of the ABM critics—which unfortunately are very vulnerable to inexpensive counter-measures. The cost of the defense and the cost of offense counter-measures are at the heart of the matter, and it is here that the critics have been weakest.

The components of Safeguard and their interactions have undergone and will undergo very extensive testing. Sometimes the argument is made that this is not enough, that the only realistic test would be an actual nuclear war. This is one test we all want to forego. However, the critics appear unaware of the fact that this is a limitation affecting our certainty as to the performance of our offense also. It applies equally to Russian and American offense and defense. But this limitation does not show that defense is worse off than offense, or that we are worse off than our adversaries.

Finally, the history of the last 25 years suggests that it is hard to take claims about whether a system will work or not work on their face value, especially when there are strong passions involved. When something new is proposed for our side, scientists who oppose it tend to say not only that it would be bad, but that it won't work at all. If they are for it, not only would it be nice, but it works like a dream. So when they were against an emphasis on the offense, the H-bomb wouldn't work. In the late 1940's, when they opposed continental defense as a poor substitute for international control, no defense was possible. In the 1950s when international control was out of the picture and continental defense seemed essential, then an adequate defense was possible. Then in the 1960s, judgments about feasibility were once more reversed to match views on the value of defense.

3. IN CASE DETERRENCE FAILS, IS IT WORTH ATTEMPTING EVEN A LIMITED POPULATION DEFENSE—ONE THAT WORKS AT LEAST AGAINST IRRATIONAL SMALL ATTACKS?

The critics of defense in general hold that there is no need to worry about reducing the damage that would be done in case deterrence fails, because, they say, it is extremely unlikely that it will fail. But they are really of two quite different minds about the possibility of the failure of deterrence, depending on what they are advocating. When they want to forego any attempt to reduce the catastrophe, they are extremely reassuring about the low probability of nuclear war. They say deterrence is stable now and will be in the face of technological change. When they are urging drastic early steps towards disarmament and perhaps risky ones, they say the very opposite. Far from being stable, deterrence is certain to fail. The critics may then even give precise odds on how soon it will fail. The odds are high. The apocalypse, it seems, may be soon.

Take Professor Wiesner. Against the Chinese as against the Russians, he says, "... we must rely on the offensive deterrent... on our known ability to retaliate devastatingly in case of a nuclear attack. Ten percent of our SAC bomber force could kill 200 million Chinese." (*Look*, November 28, 1967.) This is evidently all right, for he also says, "The fantastic power of nuclear weapons provides a high degree of stability. Consequently a few bombs, certain to be delivered, will constitute a powerful deterrent." (*Washington Post*, January 22, 1967.) On the other hand in his apocalyptic mood, Dr. Wiesner has said, "There is an ever-increasing likelihood of war so disastrous that civilization, if not man himself, will be eradicated." (*Daedalus*, Fall 1960.) The probability is not only rising, but apparently it is

August 4, 1969

CONGRESSIONAL RECORD — SENATE

already high. "The odds," he estimated recently, "are in favor of a major war within the next two decades." (*Washington Post*, January 22, 1967.)

Similarly, Senator Fulbright expressed astonishment at recent Hearings that the Department of Defense has sponsored a system for protection against the Chinese, since a Chinese attack would be irrational, suicidal in fact. A system for such a purpose is so far-fetched he suspects an ulterior motive. On the other hand, in an article entitled, "Now Is the Time to Take Great Risks," in which he urges drastic and evidently chancy steps towards disarmament, he explains, "Sooner or later the law of averages will turn against us; an extremist or incompetent will come to power in one major country or another, or a misjudgment will be made by some perfectly competent official, or things will just get out of hand without anyone being precisely responsible as happened in 1914." Under present deterrent arrangements, in short, this suicidal act is in the cards; the apocalypse is certain.

My own view is that the probability of nuclear war, if we are careful, can be kept small. But this requires continuing attention to the protection of strategic forces in the face of technical change. And even then there is always a significant possibility of breakdown and therefore the need for some insurance in the form of defense.

Critics of ABM are strikingly inconsistent in their treatment of the Russians and the Chinese. In saying we don't need to defend Minuteman against Russian attack in the mid or late 1970s, they presume that, 20 years after Sputnik, Russian missiles would not be able to achieve accuracies and other performance characteristics of the Minuteman III and Poseidon missiles that we ourselves are now in the process of deploying. In opposing an area defense of population against Chinese attack, they assume that the Chinese in their first generation ICBMs will be able to deploy penetration aids that took us billions of dollars and many trials and failures, and a dozen years to develop. These are extraordinarily backward Russians and most advanced Chinese.

At a modest extra cost over and above that of defending our offense force, we can manage a very effective defense of our population against a small attack, a defense that can keep us free of substantial damage from the Chinese without our initiating a nuclear attack upon them. Moreover, given the general technological levels in the two societies, we can stay ahead of them for the foreseeable future. Even if Chinese offense technology were at a much higher level, the difference in the resources of the two societies would be decisive. I said earlier that for adversaries with roughly the same resources the practical question has to do with how much extra the offense must pay to overcome a given amount of defense and how this compares with the cost of that defense itself. A relative cost disadvantage to the offense will bear down much harder on an adversary with much smaller resources as is the case for China whose gross national product is less than a tenth and whose per capita income is about 2% of ours.

Those who reject even a thin shield for population manage simultaneously to hold that (1) the shield would have no substantial effect even against a small first generation Chinese attack, but (2) it would be so effective against the massive sophisticated Russian force that the latter could not inflict enough damage on us to deter us, even though (3) it takes only the prospect of a few bombs delivered to deter the Russians. These and other absurdities stem, I believe, from an extreme strategic dogma whose origins go back many years to the French General Staff and to a few members of operational research staffs like the Weapons Systems Evaluation Group of the Joint Chiefs of

Staff. I refer to a doctrine known as "Minimum Deterrence" that holds that any attempt to protect our own civilians will make nuclear war more likely, that we must depend exclusively on a threat to bomb enemy civilians. Not an obviously humane or liberal doctrine. It defies common sense as well as rigorous analysis.

Of course very few of the public interest groups who oppose defense of population are at all aware of the origin of their views. Indeed, they abhor "Think Tanks" like the Weapons Systems Evaluation Group (now a division of IDA, a famous target for the SDS). Yet just as Keynes remarked that the practical man who scoffs at theory is frequently the slave of theorists long defunct, so the ladies in the Women's International League for Peace and Freedom and other similar organizations may say unkind things about Think Tanks, and wear Stop ABM buttons. But the theory behind the button originates from individuals in some of these same Think Tanks.

I would not myself have thought a few years ago that one could organize widespread popular indignation among church groups and mothers on the basis of so extreme and far-fetched a dogma, one that suggests that it is all right to threaten to launch missiles at enemy civilians, but peculiarly heinous to prepare to knock a missile down on its way to destroy millions of our civilians. Clergymen for Bombing Civilians Only? Mothers for the Offense? I'd have thought it would never fly. I was quite wrong. The massive lobbying activity of the last year or two has mustered a plenitude of organizations with names like "Another Mother for Peace," "Womanpower in Action," "The United Methodist Board of Christian Social Concerns." When men and women of good will take it as so obviously right to depend solely on a threat to launch nuclear weapons against cities, we've come a long way from the Spanish Civil War and the world's shocked reaction to the bombing of several thousand civilians at Guernica.

And a long way from the position taken throughout most of the 1950s by the same scientists who now refer to any use of defense as "Maignot Line mentality." "History," quotes the epigraph to the Wiesner-Chayes book on ABM, "is littered with Maignot Lines." The Final Report of the Lincoln Summer Study, in which Drs. Wiesner, Killian, Kaysen and others were prominent, had a whole section on Maignot, replying to the offense enthusiasts of that time. Putting "all our eggs in one basket," they said, is the essence of "Maignot psychology," and it is exemplified by the "great emphasis placed in recent years on the development of an effective retaliatory force." Liberals have forgotten that the key substantive issue that was obscured by the tragic outcome of the Oppenheimer hearings had to do with whether a large enough part of our effort was being devoted to continental air defense. In fact, history tells us less about the relevance of Maignot (a dead Frenchman whose name is too often used to settle deep and complex issues) than it does about the pitiful inadequacy of all slogans about offense and defense. ("Maignot!" "There is a counter to every weapon!" "The offense always gets through!" Etc., etc.)

Indeed, many of these same scientists have turned 180 degrees at least twice since Hiroshima in their slogans about defense. Immediately after the war the American Federation of Scientists printed its "Creed" with the second point in bold face: There is no defense. It was, they said, One World or None. After the Russians turned down the Baruch plan for international control of atomic energy, and it soon became clear that we were not about to have one world, a majority of these articulate scientists looked a bit more closely at whether the alternative really was no world at all. Then it was an-

nounced (e.g., by Ralph Lapp) that the scientists were "rebellious against the military dictum that there is no defense." The rebels lobbied for civil defense and continental air defense; opposed the H-bomb on the grounds that it was infeasible; or if feasible, undeliverable; and in any case, usable only against cities rather than legitimate military targets; and finally clashed bitterly with a minority that favored going ahead with the H-bomb. I myself believe that the opposing factions of scientists tended to caricature each other. It was not really that one side wanted to depend exclusively on offense and the other solely on defense. The genuine differences concerned emphasis and allocation. But the ironic next 180 degree turn at the end of the 1950s saw the majority faction turn once more and adopt almost the caricature of the position it had been most recently opposing. It now calls for a nearly exclusive reliance on offense and the total rejection of defense of population against ballistic missiles. Cities, it seems, are now the only "legitimate" targets and defending cities is a provocation.

But even minimum deterrents who oppose defending population normally believe that we should protect our retaliatory force by concealment, shelter or active defense. The Safeguard ABM which aims to protect bombers and missiles is precisely the kind of thing that Minimum Deterrents would normally support. And in fact, many of them did, at least through March 6 of this year. In testimony before the Senate, Hans Bethe, for example, said quite unequivocally that while he was opposed to the Sentinel defense of cities there was another kind of ballistic missile defense, namely the defense of retaliatory hard points, and that was different; he favored that:

"A completely different concept of ABM is to deploy it around Minuteman silos, and at command and control centers. This application has gone in and out of Defense Department planning. I am in favor of such a scheme."

In fact, he said, the Sprint and MSR are good components for the purpose.

Then on March 14 the President announced the Safeguard program which was primarily directed at the defense of missiles, bombers and the national command authority. This apparently posed something of a dilemma. A tremendous effort had gone into lobbying against ABM when it had been intended mainly to provide a shield for population against light ballistic missile attack. Hundreds of scientists had signed indignant petitions; public interest groups had been mobilized; speeches had been written for now indignant senators; ABM had become a symbol. The push against it gained enormous momentum; Senate hearings were rolling; and, it seems, if you push hard enough against a symbol, you may find you are being pulled. At any rate, a good many of these scientists then said that, nonetheless, even even with the change, they were *still* against it; and some offered extremely hasty calculations to suggest that the missiles and the bombers really required no protection, that Sprints and MSRs wouldn't do it anyway, that it would be better simply to multiply offense forces, or launch them on warning or do almost anything other than defend them.

This sequence of events suggests the folly of transforming a complex substantive issue into a symbol in black and white. I would not turn the simple picture upside down, with the good guys supporting ABM and the bad guys in opposition. I do not represent the Safeguard issue as one that divides the forces of light from those of dark. And

* Mimeographed statement submitted on March 6. The printed version published at the end of the month, added the phrase "at the appropriate time" to the last sentence.

August 4, 1969

neither do temperate opponents of starting deployment this year, like Senator Brooke. Senator Brooke has not been pushed to the rash extreme of calling for launching Minuteman at Russian cities on radar warning or doubling the offense or doing almost anything rather than support the scoundrels advocating ABM. He rejects the first as lunacy and deprecates the second.

Simply for the symbolism of taking Safe-guard out of the country, some Senators propose to build on distant Pacific atolls PAR and MSR radars that could be located in Montana and Dakota protect Minuteman. This would waste billions of dollars just to defeat the bad guys in the Administration. It is such bitter symbolic struggle with shadows that makes reflective choice hard to manage and delays the sober and rigorous examination required both for our defense and domestic needs.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Hackney, one of its reading clerks, announced that the House had agreed to the amendment of the Senate to the bill (H.R. 9951) to provide for the collection of the Federal unemployment tax in quarterly installments during each taxable year; to make status of employer depend on employment during preceding as well as current taxable year; to exclude from the computation of the excess the balance in the employment security administration account as of the close of fiscal years 1970 through 1972; to raise the limitation on the amount authorized to be made available for expenditure out of the employment security administration account by the amounts so excluded; and for other purposes.

The message also announced that the House had passed a bill (H.R. 13111) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1970, and for other purposes, in which it requested the concurrence of the Senate.

HOUSE BILL REFERRED

The bill (H.R. 13111) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1970, and for other purposes, was read twice by its title and referred to the Committee on Appropriations.

GAO STUDY OF B. F. GOODRICH PERFORMANCE ON CONTRACT FOR THE A-7D AIRCRAFT BRAKES

Mr. PROXMIRE. Mr. President, some weeks ago I was given information alleging that B. F. Goodrich delivered brakes that failed to meet specifications to Ling Temco Vought/Vought Aeronautics Division (LTV/VAD) in Dallas, Tex., to be installed on the \$1.2 million A-7D light attack aircraft.

Although the charges were difficult to believe, I was further informed that Goodrich's delivery of defective brakes to LTV for an airplane they are preparing for the Air Force involved highly questionable business practices on the

part of the Goodrich wheel and brake plant in Troy, Ohio.

I was told that in order to deliver brakes that appeared qualified according to military specifications Goodrich officials altered data on the test specification logs and deviated from standard industry and military testing procedures and standards to show that the defective brakes were a qualified component.

On the basis of the allegedly false qualification report the brakes were installed on production models of the A-7D for testing, and the safety of both LTV and Air Force test pilots were endangered.

B. F. GOODRICH EMPLOYEES KNEW OF ERROR

The allegations recited here were brought to my attention by two Goodrich employees: A design engineer, Cyril Lawson, who was involved in the research and design of the A-7D brake, and the Goodrich technical writer, Kermit Vanderveer, who contends he was instructed to write the false qualification report by his superiors at the Troy, Ohio, wheel and brake plant.

The engineer said that a design miscalculation on the brake was made and subsequently discovered during the design phase. But, he explained, by the time it was found out tooling had already begun for the brake and a delivery date had been set. The engineer said he advised his superiors at the plant of the error and assumed that production of the brake would stop immediately, while the Goodrich engineering department developed a new design that would meet the specifications.

Instead of starting a new design, my two informants at Goodrich said, the company ordered qualification tests on the brake continued in the hope that it would perform satisfactorily despite the design error. In the meantime the unqualified brakes were shipped to LTV with the technical writer's inaccurate qualification report.

BRAKES COULD NOT MEET MILITARY SPECIFICATIONS

The Goodrich employees who were responsible for bringing these remarkable accusations to my attention contend that fourteen separate attempts were made to nurse the brake through the required laboratory tests. All ended in complete failure they told me and it was then obvious to the Goodrich engineers working on the A-7D brake project that the brake had no chance of ever meeting the stringent military specifications.

Still, Goodrich neglected to recall the bad design nor did they give any hint that the technical writer's "concocted" qualification report contained erroneous material that showed the brake meeting the military specifications of quality and safety required before flight tests are allowed.

Customary procedure in the brake industry, I am told, is to provide this qualification certification, in writing, with all brakes. The report gives all the details of laboratory tests and supports these details with documentary evidence that all the requirements for the design, manufacture, and testing of the brakes have been met. According to the military specifications covering preproduc-

tion tests for aircraft wheels and brakes, the tests are supposed to be conducted on test articles that are representative of the production items.

TECHNICAL WRITER ADMITS WRITING FALSE REPORT

The technical writer who authored the qualification report has said in writing:

Since there was no evidence that would substantiate any of these claims (i.e. that all requirements for the design, manufacture and testing of the brakes have been met) the only alternative was to write a false qualification report.

Furthermore, he states:

I was ordered to concoct a report that would establish that the brakes had met all the necessary requirements, and to manufacture the documentary evidence to go with it.

The technical writer says:

I flatly refused, and for almost a month, a bitter argument raged between myself and various company officials. Finally, I was ordered to "write the thing" and shut up about it.

According to the technical writer, the brakes were actually never tested as his report claimed. Furthermore, he has presented evidence to my office that appears to show that additional components were added in his words, to "beef up" the brakes during laboratory tests—components that were not actually a part of the production brakes—so the brakes could successfully complete simulated aircraft landings.

ORIGINAL TEST LOGS SHOW FAILURE

In a last minute effort to exonerate himself from writing the false qualification report the technical writer says he noted in the report's conclusion that:

The B. F. Goodrich Part Number 2-1162-3 Brake Assembly does not meet the intent and requirements of the applicable specification documents and therefore is not qualified. When the report was sent to the Air Force the "nots" had been removed from the conclusion by the Technical Writer's superiors.

I have been told that the flight tests on the brake at Edwards Air Force Base, Calif., were a failure. The design engineer has said that on one occasion when the test pilot landed the plane and applied the brakes the wheels locked and the plane went into a skid. He released brake pressure, but the intense heat generated by the faulty brakes caused the brake discs to weld together. The plane continued its high-speed skid down the runway, stopping 1,500 feet later. The plane remained upright and the test pilot was uninjured, but after witnessing the near accident the design engineer said he determined to go to Government authorities before a pilot was killed or injured as a result of the design error that was being hidden from LTV and the Air Force by the false qualification report. Both the technical writer and the design engineer went to the FBI in Dayton, Ohio, with their evidence—the same evidence they later presented to me and which I am relating here today.

GOODRICH REFUSES AIR FORCE INSPECTION

The technical writer has said:

At this time, because of the numerous failures encountered during the flight tests at

August 4, 1969

Mr. President, seldom has a trip abroad by an American President been so successful, seldom have the purposes been so well met and seldom have the American people been so well informed on a day-to-day basis about the results of such a trip.

For this we can all be grateful.

The President has termed his trip "a quest for peace, reflecting the spirit of Apollo."

And truly, there is an apt comparison.

During all man's time on earth he has reached out for the moon. Less than 2 weeks ago he was finally successful.

For equally as long a time man has yearned for peace. And just as surely he can reach that goal—if he will.

That goal is one the President is attempting with all his heart and all his skill to reach. He has charted new courses in two of the world's troubled areas—Southeast Asia and Eastern Europe—courses that give hope for eased tensions and international cooperation, but courses, also, that assure those who stand with us that we will continue to stand with them.

Mr. President, the success of the President's journey is a success that the entire world shares. I am certain my colleagues on both sides of the aisle join with me in congratulating the President for a task well done.

ABM

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each reserve component of the Armed Forces, and for other purposes.

ABM: THE MISBEGOTTEN MISSILE

Mr. McGOVERN. Mr. President, the decision the Senate will soon make regarding deployment of the antiballistic missile will be one of the most fateful in our national history. In economic, political, social and moral terms America will feel the weight of it for many years to come.

The significance of the ABM issue reaches far beyond the system itself; for it will signal the direction of the Nation in the next critical decade. At issue is the central question of whether we shall continue to pour increasing energy, brainpower and wealth into armaments, or into the urgent human needs of our society. Does the route to security and well-being lie in another costly new missile system, or should first priority go to reaching arms limitations among the great powers while we set about the reconstruction of our country and the protection of our environment? Beyond the

enormous financial cost of the ABM is the danger that it contributes to the militarization of our society and the neglect of urgent domestic problems. It may decrease our national security by increasing international tension and with it the possibility of nuclear war. Militarily, it is doubtful that it would contribute to the defense of our country.

At a time when the great powers seem to have reached an understanding that nuclear war means the end of much of mankind, one wonders why this current effort to add a new round of missile construction. Do we really believe that either Russia or China has gone so completely mad that they would invite their own certain destruction by launching a nuclear attack on the United States? Is there evidence that even a \$40 or \$50 billion ABM would add to our security if the adversary had such an act of madness in mind? Is it not more likely, as Senator Muskie has warned so convincingly, that the construction of yet another missile system will only heighten the anxiety and tension that could lead to a nuclear exchange?

It is frequently said of the ABM that it is "a missile in search of a mission." Certainly, the history of the ABM does not suggest that our military planners saw a particular national security need and developed a system to meet it. Rather, the constantly shifting rationalizations of the ABM lead one to wonder if Washington Star columnist Frank Getlein was not justified in observing:

The real point was to spend the money and in order to spend it, the military would cheerfully swear it was needed to save the swan boats on the lagoon at the Jefferson Memorial.

First was the proposal for a \$50 billion "heavy" system. This called for "thin" Spartan area defense of the entire country and for "thick" Sprint point defense of ICBM sites, SAC bomber bases, ABM radars, and 49 major population centers—plus the hometown of the chairman of the House Armed Services Committee, Charleston, S.C.—the 228th largest city in the United States.

The purpose of the heavy defense was to decrease the damage our country would suffer in a heavy Soviet attack. The Johnson administration rejected the heavy system on the grounds that the ABM as presently conceived would not perform this function; that is, there was no way to prevent the Soviet Union from destroying the United States if it were willing to see itself destroyed in return. This was valid reasoning at the time; it is still valid. Barring a fundamental technological breakthrough, which incidentally would make obsolete the system we are now considering, we would be foolish to think that any ABM can really prevent unacceptable devastation in an all-out nuclear war.

Since the heavy anti-Russian system seemed too implausible and too expensive, the ABM proponents turned next to a light ABM to defend against the Chinese. The Chinese, it was argued, would have 10 or 20 ICBM's in a few years and they might go berserk and launch these against our cities even though to do so would be to provoke the total destruction of their society.

We were told a thin Spartan area defense would be sufficient to protect the entire country against a small unsophisticated attack such as China might launch during the 1970's.

Oddly, it was said that this anti-Chinese system could serve as a bargaining counter in arms-reduction talks with the Russians, and abandonment of plans for the anti-Chinese system might be a result of these United States-Soviet talks. It was never clear to me why those who said we needed an ABM system against China were willing to abandon it if the Russians agreed not to build one.

In any event, the anti-Chinese rationale seems conspicuously invalid.

First, it relies entirely on the Spartan missile, which is easily penetrated. It assumes the Chinese will be clever enough to build an ICBM but not clever enough to incorporate simple penetration aids such as chaff. It also assumes they would be so foolish as to neglect to time their missile attack to take advantage of black-out effect.

Second, it assumes the Chinese will not try to circumvent the ABM by using cruise missiles, nuclear torpedoes, or other relatively simple devices. At this very moment, a disguised Chinese merchant ship could be sailing into New York harbor with a hydrogen bomb in its hold. If one is not concerned about size or weight, such a device is cheap and well within the reach of Chinese technology.

Any attempt to establish a dependable nuclear defense is an exercise in futility.

I think the events of the past year indicate that not even our military planners had much interest in a thin anti-Chinese system. If they had—if they had planned a thin national defense using long-range Spartan missiles—they would have purchased land for Sentinel sites in the unpopulated rural areas. Instead, last fall and winter we found that land was being purchased for Sentinel sites adjacent to our major cities. This indicated an intention to escalate Sentinel into a heavy anti-Russian city defense using short-range Sprint missiles.

But then the citizens of Boston, New York, Chicago, and Seattle made their feelings known. They were not pleased to be made links in this electronic maginot line. They did not want nuclear warheads in their backyards, and they began organizing political and legal action to prevent their communities from being used as ABM sites. Once publicized, the issue quickly became a hot political issue.

Conveniently, the ABM proponents then found it was not feasible to defend cities against a heavy attack. Even more conveniently, they suddenly found the Soviet Union was approaching the point where it would be able to destroy our ICBM and bomber forces on the ground. It also claimed the Russians would be able to detect and destroy our missile submarines, although it is not clear how this would be accomplished. Therefore, we were told that, by happy coincidence, military considerations required that the politically dangerous thick defense of the cities be withdrawn in favor of a politically safer thick defense of Minute-man ICBM sites in North Dakota and

August 4, 1969

were also told that, within the Aeronautical Systems Division, the Project Engineer in the Landing Gear and Mechanical Equipment Division, Directorate of Airframe Subsystems Engineering, was responsible for reviewing and recommending approval of the design, development, and testing of the A-7D aircraft landing-gear equipment, including Goodrich's four- and five-rotor brakes.

The Project Engineer stated that he had reviewed and approved LTV/VAD's brake specifications which in his opinion were very good and exceeded the military specifications. The Project Engineer also stated that he had not witnessed any of the qualification tests of the four-rotor brake, and during August 1968 he recommended withholding approval of the qualification report, Q-6031. His recommendation was based on various specific irregularities noted during a review of the qualification report. This recommendation was forwarded by the Chief System Engineer to the Naval Air Systems Command, Washington, D.C.

The Project Engineer stated that he had requested Goodrich to furnish him with the raw data supporting its Q-6031 report during a meeting between Air Force, LTV/VAD, and Goodrich representatives in early October 1968. This request, he advised us, was not honored by Goodrich who claimed that the raw data was proprietary information.

Regarding proprietary information, attachment "E" to LTV/VAD purchase order P-237138 states that Goodrich reiterates it will provide all the data required by the prime contract pursuant to the provision of Armed Services Procurement Regulation 9-203(b). This provision sets forth the Government's "Rights in Technical Data" and provides, in part, for the Government's right of access to technical data resulting from the performance of an element of work specified in a Government contract or sub-contract.

The Project Engineer stated that, during the October 1968 meeting he had advised Goodrich that he would not approve the use of the four-rotor brake assembly on the A-7D aircraft. Subsequently, during another meeting, LTV/VAD informed the Air Force engineers that Goodrich was redesigning the brake assembly and would requalify the new design.

The Project Engineer stated that he closely monitored the qualification testing of the five-rotor brakes, was provided access to the applicable raw data, and reviewed Goodrich's qualification test report, Q-6046, which he found to be satisfactory. However, because of reported problems with brake adjusters the Project Engineer, in April 1969, recommended withholding approval of Q-6046 until satisfactory performance on the aircraft was demonstrated. On June 5, 1969, the Project Engineer stated that he had not yet recommended approval of Q-6046.

SCOPE OF REVIEW

We reviewed records and discussed the performance and qualification testing of the brakes for the A-7D aircraft with officials at contractor locations and military installations associated with the design and manufacture, administration, and testing of these brakes. These locations include The B. F. Goodrich Co., Troy, Ohio; LTV Aerospace Corporation, Vought Aeronautics Division, Dallas, Texas; Naval Air Systems Command, Washington, D.C.; Naval Plant Representative Office, located at LTV/VAD, Dallas, Texas; and the Aeronautical Systems Division of the Air Force Systems Command, located in Washington, D.C., and at Wright-Patterson Air Force Base, Ohio.

In addition, we discussed brake performance with a LTV/VAD test pilot at the contractor's plant and with military test pilots located at Edwards Air Force Base, California, and Patuxent River Naval Air Station, Maryland, and with officials of the Federal Aviation Administration.

EXHIBIT

DESCRIPTION OF THE DISCREPANCY	EXPLANATION BY GOODRICH'S REPRESENTATIVES
Reported data exceeded the basic recorded test results (analog data since digital data was not available).	Normally, digital recorded data exceeds analog readings. Therefore, using one's best judgment, a similar value from an earlier similar test would be used. In this instance, he felt, the reported value had been extrapolated from the preceding and subsequent stop test.
Do.	The basic recorded value was taken from the prior stop test since the stop times were identical. This constitutes a "rationalization of data" or exercise of professional judgment. Not discussed with Goodrich representatives due to the limited time for our review.
Reported data less than the basic recorded test results.	Do.
Data were reported; however, basic recorded tests results were not available.	Do.
Do.	Do.
Reported and digital data in agreement; however, digital data less than analog data.	Do.
Reported data less than basic recorded test results.	Do.
Reported data less than basic recorded test results. We also noted that the reported data were less, and the recorded test results were greater, than requirements of MIL-W-5013G, dated February 20, 1967, which was referenced by LTV/VAD specification number 204-16-37d.	Goodrich personnel could give no explanation.
Reported data less than basic recorded test results. Also, reported and recorded data exceed the requirements of MIL-W-5013BG, dated February 20, 1967.	Goodrich personnel could give no explanation.
Data were reported; however, basic recorded test results were not available.	No reading, due to the reaction of the thermocouple.
Do.	The recorder was not working properly.
Do.	Not discussed with Goodrich representatives due to the limited time for our review.
Reported data less than basic recorded test results.	Goodrich personnel could give no explanation.
Data were reported; however, basic recorded test results were not available.	Goodrich personnel expressed the opinion that the data had been rationalized from tests of another part on which the temperature had been monitored and which was considered comparable to the center stator.
Do.	Do.
Do.	Not discussed with Goodrich representatives due to the limited time for our review.

DATA DISCREPANCIES THAT MAY BE CONSIDERED SIGNIFICANT BETWEEN DATA SHOWN IN TEST REPORT AND DATA SHOWN BY GOODRICH'S TEST INSTRUMENTS

DATA IDENTIFIED IN TEST REPORT

Test description	Stop number	Parameter
Overload brake stops.....	49	Peak temperature of bead seat.
Do.....	49	Peak temperature of rotor.
Do.....	50	Peak temperature of bead seat.
Do.....	50	Peak temperature of tube wall.
Rejected takeoff brake stops.	1	Peak torque.
Do.....	2	Initial temperature of center stator.
Do.....	2	Peak temperature of center stator.
Do.....	2	Peak temperature of rotor. ¹

¹ The Goodrich project manager stated that the peak temperatures reached during rejected takeoff stop tests were academic since the brake is destroyed by heat as the result of the test.

Note: Reported data are the elements set forth in qualification test report Q-6031 on the 4-rotor brake. Basic recorded test results refer to digital data, which are digital printout tapes prepared only on brake pressure and torque parameters, and/or analog data, which are pen recorder strip charts prepared on all parameters.

ORDER FOR ADJOURNMENT FROM WEDNESDAY, AUGUST 6, 1969, TO THURSDAY, AUGUST 7, 1969, AT 11 A.M.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when

the Senate completes its business on Wednesday next, it stand in adjournment until 11 a.m. Thursday morning next.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR HARTKE ON THURSDAY, AUGUST 7, 1969

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, upon the conclusion of the prayer and the disposition of the reading of the Journal on Thursday morning next, the able Senator from Indiana (Mr. HARTKE) be recognized for not to exceed 30 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

PRESIDENT NIXON'S SUCCESSFUL TRIP ABROAD

Mr. DOLE. Mr. President, last night President Nixon returned from his trip to Southeast Asia and Romania.

Today, as a result of that trip the whole world breathes a little easier because war and destruction are perhaps a little further away and peace with honor is perhaps a little closer.

August 4, 1969

CONGRESSIONAL RECORD — SENATE

Montana. These sites are located in relatively unpopulated western areas where the inhabitants have been introduced to nuclear sites years ago.

While politically safer than the earlier city defense, the new hard-point Safeguard defense is somewhat more expensive than the earlier system.

Mr. President, if a heavy city defense is now impossible, was it possible 2 years ago when its advocates tried to get us to spend \$50 billion on it? Was it possible this past winter, when military strategists tried to escalate Sentinel into a heavy city defense? If the proponents were wrong about city defense 6 months ago, why should one believe they are right about hard-point defense now?

Or is the question of whether or not any missile defense is possible of no concern to the ABM advocates? It may be that the convolutions the pro-ABM arguments have undergone result from honest technical reevaluations. Certainly, cities are less defensible than hardened missile sites. But it is hard to avoid the thought that Mr. Getlein may be right—that the main objective is to spend the money, and that rationales are changed purely as a function of what it is believed the public will swallow.

Currently, the public is being asked to accept three arguments for the Safeguard system. This system would consist of thin Spartan defense for the entire country, plus thick Sprint defense for 350 Minuteman ICBM's and about 10 ABM radars scattered around the country.

These are the three current rationales: First, Safeguard is alleged to protect our cities against an accidentally launched Russian missile. Second, it is alleged to protect our nuclear deterrent by guaranteeing the survival of at most 300 Minutemen in the event of a heavy Russian attack. Third, it is hoped that Safeguard can function as a bargaining counter in the coming United States-Soviet arms reduction talks.

In my view, none of these has much validity.

Safeguard would have little chance of protecting our cities against an accidental ICBM unless the latter conformed to highly unlikely restrictions. The ICBM would have to be devoid of all penetration aids, for even the simplest pen-aids render a Spartan umbrella useless. It is difficult to believe the Soviet Union would not respond to any American ABM by installing penetration aids on all or nearly all of its ICBMs and submarine-launched missiles. Furthermore, the more missiles we or the Soviets build—defensive or offensive—the greater is the danger of an accidental launch that could bring on war or the accidental destruction of millions of people.

The second, and most important, rationale is that Safeguard will protect our strategic deterrent.

The Secretary of Defense tells us our deterrent is in jeopardy. He tells us there is a serious possibility that within a few years the Soviet Union will have the power to destroy our Minuteman silos in a first strike, and to detect and destroy our missile submarines. These assumptions are sharply challenged by many of

our most respected scientific experts. Indeed, during his short period as Defense chief, Mr. Laird has shown a tendency to make doubtful assumptions as a basis for doubtful recommendations. For example, his description of the SS-9 as a first-strike weapon is challenged by competent authorities as a piece of guesswork or rationalization. Unless one assumes that Moscow has gone mad, a more likely assumption is that they see their nuclear weapons as a deterrent rather than as a first-strike instrument against the United States.

In May, Mr. Laird told reporters the manned orbiting laboratory was essential to national security; in June, he canceled it. I expect that whether or not the ABM is deployed, it will eventually be admitted by nearly everyone that it never was a very good idea.

There are two facts we must keep in mind as we consider the protection of our strategic deterrent.

First, it is impossible to destroy both our ICBM's and our manned bombers in a first strike. It is conceivable, although extremely unlikely, that the Soviet Union will develop the ICBM ability to take out our Minuteman ICBM's on the ground. But such an attack would give our bombers the 15-minute warning they need to become airborne and safely on their way to destroy the Soviet Union. It is possible, if extremely unlikely, that the Soviet Union will develop the ability to wipe out our bombers on the ground by using orbiting or submarine-launched missiles. These weapons may give us only a 3-minute warning, but lack the accuracy-payload combination necessary for an attack against hardened silos. Hence, such an attack would leave our ICBM's intact. On learning that our SAC bases had been taken out and that Soviet ICBM's had been launched and would strike out Minuteman bases in 10 minutes, the President would certainly launch the Minutemen immediately, thereby destroying the Soviet Union.

Thus, there is no way the Soviets could hope to strike the United States without incurring self-destruction.

Moreover, we have our submarine force, which is a full deterrent in itself. And Adm. Levering Smith, who commands it, tells us this deterrent is not in jeopardy, and will not be in the foreseeable future. I have been puzzled throughout the ABM debate that its advocates so seldom refer to the enormous deterrent we have in 41 submarines, each armed with 16 missile launchers, and each of those capable of devastating a large city.

So, a first strike seems highly unlikely. Second, the entire question of Soviet first strike capability is irrelevant to the ABM debate. It would be relevant only if we had reasonable confidence that ABM could neutralize this ability. We do not have that confidence.

Mr. President, militarily and technically, the crux of the matter is: Will the ABM do the job or will it not? Even if we restrict ourselves to consideration of defense of Minuteman sites, the overwhelming body of evidence suggests that it cannot offer meaningful protection.

I have heard it said "If we can put a man on the moon, then surely we can

build an ABM." But the analogy is not valid. The question is not "Can an effective defense be built against the present offense?" This might be possible, given enough time, although Safeguard does not appear to be such a system. But the real question is: "Can a missile defense be built that will be effective against the improved offense it will have to face by the time it is built?" For both the United States and the Soviet Union, the answer is most likely "No." The people working on offense are just as capable as those working on defense, and they have a very long headstart. In addition, their problems are inherently simpler.

There is no inherent principle that offense must always be stronger than defense. But the evidence is overwhelming that in modern nuclear weaponry, offense is stronger will remain so in the foreseeable future. Penetration aids, decoys, radar jammers, maneuverable warheads, and above all, multiple warheads give the offense an immense advantage.

If the Soviet Union builds up its offense to the point where it can threaten our hardened Minuteman silos, is it not likely that a modest further buildup would neutralize the Safeguard system? If the Russians have a first strike in mind, it is inconceivable that they would not take this further step.

From that point on, every time we built an additional ABM, the Soviets could counter by deploying a few additional MIRV warheads. Even if one assumes that a virtually impossible accuracy would enable each ABM to destroy an incoming attack missile, it would only be necessary to send one more offensive missile to a particular target than there were defensive missiles to defend it.

Of course, our offense enjoys the same advantage over the adversary's defense.

In short, we are being asked to build an ABM that would not work to protect a deterrent that is not threatened.

Mr. President, the antiballistic missile is not a question of national security; it is a question of national judgment. It is said the ABM presents the American people with a choice between butter and guns. It would be more accurate to say we have a choice between butter and a leaky maginot line that may well be obsolete before it can be constructed.

And as construction proceeds, the costs will mount. The ABM advocates would have us believe they will spend \$6 or \$7 billion for Safeguard. But defense contractors have a way of radically underestimating their costs, apparently with the tolerance of the Pentagon. If Safeguard follows the common pattern, it will cost several times the projected figure.

Already we are seeing private estimates of \$11 or \$12 billion. The official estimates went up \$1.2 billion overnight, when it was pointed out that one can't build an ABM system without warheads.

But more importantly, Mr. President, I want to go on record today saying that Safeguard is not an end but a beginning. If this hard-point defense is approved, the Pentagon will then remind us that it is hopeless to try to defend even a compact ICBM site without increasing the number of ABM missiles and radars many times; they will tell us national

August 4, 1969

security demands we triple or quadruple the size of our system. Next will come hard-point defense for all ICBM sites and SAC bases, and finally heavy defense for the cities.

And when we have built all this, we will find ourselves with the complete heavy system the Pentagon has sought for years, we will find ourselves \$50 to \$100 billion poorer, and we will find ourselves less secure than ever.

Mr. President, I predict that if we approve this Safeguard system, we will see the Vietnam pattern repeated. In Vietnam the military strategists always told us they could not win the war unless they got so many thousand additional troops and were allowed to bomb such and such targets. When we gave them the troops and let them bomb the targets, and the war continued as before except for bigger casualty lists, their answer was always to come back with still bigger troop requests and longer target lists.

The fact is that a military solution to Vietnam's problems was never possible. This enabled the generals to claim correctly that their present forces were insufficient.

This is how it is likely to be with the ABM. No matter how much we appropriate, no matter how many ABMs we build, the Pentagon will tell us, quite correctly, that it is not enough. It will never be enough because, barring an unforeseen technological breakthrough, defense against heavy missile attack is and will remain impossible. Like Vietnam, missile defense is a bottomless pit. It will swallow as much as we pour into it with no dependable increase in our security.

And the ABM is like Vietnam in still another respect: its proponents argue that we owe the President as Commander in Chief the benefit of the doubt on such national security issues. But to approve the Safeguard on this basis would constitute a major abdication of congressional power and responsibility. We have had more than enough of that in recent years.

This is not the way to serve either the President or the Nation. For if the ABM is approved, over the years we shall see its cost increase and its ineffectiveness become more apparent. We shall see a bizarre and expensive new cycle of the arms race, and we shall see our neglected domestic needs and problems rise intolerably. And the administration will have to face the electorate encumbered by a costly blunder, just as the previous administration had to face the people encumbered by Vietnam.

As we approach the first major vote on the ABM, we would do well to remember the words of President Eisenhower's last state of the Union address:

Every dollar uselessly spent on military mechanisms decreases our total strength and therefore our security. We must not return to the "crash program" psychology of the past when each new feint by the Communists was responded to in panic. The "bomber gap" of several years ago was always a fiction, and the "missile gap" shows every sign of being the same.

Mr. Eisenhower was right about the "missile gap." The present "security gap" is equally fictitious. We have less cause

to fear what the Soviet Union can do to us than what our own fears may make us do to ourselves.

Mr. TOWER. Mr. President (Mr. Dole in the chair), unfortunately, too often in this debate, the analogy of the ABM with the maginot line has been made. I think it is a false analogy. It conveys an erroneous impression.

What the ABM is designed to do is to protect an offensive system. Everyone knows that when troops go out on offensive operations, when they bivouac at night they draw up a defense perimeter. That can hardly be considered an analogy to the maginot line.

What we propose to do here is to develop and ultimately to deploy a system that will defend an ability to mount an offense.

THE APOLLO 11 MISSION TO THE MOON

Mr. ALLOTT. Mr. President, Milford E. Shields, poet laureate of the State of Colorado, has written a poem with respect to the men on Apollo 11 and their great achievement in landing on the moon.

The poem has a rare quality which I believe commends itself to the attention of every Senator, and I therefore ask unanimous consent to have the poem, entitled "He Walks With God," printed in the Record.

There being no objection, the poem was ordered to be printed in the Record, as follows:

HE WALKS WITH GOD

He walked with God, his name was man,
He left his tracks upon the moon;
He walked in love and showed the plan
Where men could walk and move in tune.

He walked in joy, he walked in peace,
He walked in hope, he walked in truth;
His walk has made all men increase,
His walk has brought a buoyant youth.

His tracks are pointed for the stars
As he unfolds the greater plan
Where mankind walks on tranquil bars—
He walks with God, his name is Man.
MILFORD E. SHIELDS.

JOSEPH McCAFFREY'S 25TH ANNIVERSARY

Mr. MATHIAS. Mr. President, what is the measure of the passage of time in a man's life?

We mark the passing of time with clocks, calendars, and anniversaries, but they do not truly measure what effect time has on a man and his contributions to the world.

Not long ago, someone reminded me that "time is life itself." Thus, it seems, it is not the passage of years that is worth commemorating but, rather, what those years have continued in the way of effort, aspiration, and achievement.

For some man, a silver anniversary may represent only a wastebasket full of old calendars. But this year, we are fortunate in celebrating a 25th anniversary which has meaning in the finest and fullest sense.

I am referring, of course, to Joe McCaffrey's 25th year of broadcasting, of broadcasting news from Washington to the American people.

During that quarter of a century, Joe McCaffrey has won the greatest reward that any profession can offer; namely, the confidence of the people.

When Joe McCaffrey reports it, the people know that it is so.

This is more than a personal reward. As we know in the Senate, the news media are a vital and integral part of modern, representative, democratic government.

Without reporters of Government affairs in whom the people have confidence, our American Republic would not be what it is today.

Thus, in joining many others who have congratulated Joe McCaffrey on his 25 years of service, I also want to thank him for the important part that he plays every day in the successful operation of his Government, and of the institutions which support it.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. MATHIAS in the chair). Without objection, it is so ordered.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Bartlett, one of its reading clerks, announced that the House had passed the bill (S. 912) to provide for the establishment of the Florissant Fossil Beds National Monument in the State of Colorado, with an amendment, in which it requested the concurrence of the Senate.

ENROLLED BILL SIGNED

The message also announced that the Speaker had affixed his signature to the enrolled bill (H.R. 9951) to provide for the collection of the Federal unemployment tax in quarterly installments during each taxable year; to make status of employer depend on employment during preceding as well as current taxable year; to exclude from the computation of the excess the balance in the employment security administration account as of the close of fiscal years 1970 through 1972; to raise the limitation on the amount authorized to be made administration account by the amounts so excluded; and for other purposes, and it was signed by the President pro tempore.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appro-

August 4, 1969

priations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

NEED FOR CONTINUED ABM RESEARCH BEFORE
DEPLOYMENT

Mr. ELLENDER. Mr. President, I have for months made it publicly known that I oppose congressional authorization for deployment of the Safeguard ABM system which has been recommended by the administration.

I wish to make it crystal clear at the outset that I do not oppose more research into the feasibility and workability of Safeguard or of any other ABM concepts. I intend to support either the so-called Cooper-Hart amendment or some provision similar to it which authorizes continued research and development of the Safeguard system.

Mr. President, before proceeding to outline the demerits of the ABM, I thought I would ask the indulgence of the Senate to say a few words about the various deterrents that we now have to protect our country against a surprise nuclear attack. To hear some persons talk, it would seem that without the ABM we will be defenseless against the world.

I can well remember when, 13 or 14 years ago, we built the DEW line. That line was established notwithstanding the fact that at the time there was evidence to indicate that the Russians were more or less giving up the manufacture of long-range bombers.

The DEW line cost us \$1.6 billion. Although it is obsolescent, it is still being used. In order to operate this facility, in order to protect against bombers, we spend \$38.9 million yearly on the DEW line alone.

It is operated, of course, by the Air Force. Outside of civilian employees, it requires 34 officers and 19 enlisted men.

In addition to the so-called DEW line, we have the ballistic missile early warning system, known as BMEWS. The cost of operating that warning system is \$55.3 million a year. Over the years, it has cost the taxpayers \$1.6 billion. That system is operated by the Air Force. Aside from the civilian employees, 134 officers and 734 enlisted men are used.

Aside from these, Mr. President, we have a variety of other facilities in what is called the SAGE system, costing 220.2 million annually. That system includes five types of facilities: combat centers, direction centers, BUIC centers, surveillance radars, and communications to integrate the above facilities.

To operate the combat centers, that I previously described, requires 67 officers and 340 enlisted men.

The second phase—that is, the direction centers—requires 859 officers and 3,040 enlisted men. That does not include the civilians who are employed at those centers.

The third system, the BUIC—the backup interceptor control—requires 260 officers and 818 enlisted men.

The surveillance radars require 616 officers and 10,988 enlisted men. They are aside from the civilians who are employed at the various areas.

To operate the communications which integrate these facilities—part of the NORAD system—we spend each year \$30.3 million.

In addition, we have the NORAD Operations Center, which connects all of the facilities I have just mentioned to a central command post located somewhere in the Rocky Mountains near Denver. To connect and coordinate these various facilities, we have spent a total of \$191.6 million, with an additional \$36.6 million budgeted for fiscal 1970.

I am not quarreling at all about the amounts of money or the number of people who are employed to administer the various facilities; I simply want to show that the Department of Defense has been for many years doing a thorough job of looking into and testing a multitude of warning systems which enable our offensive deterrent forces to maintain their credibility.

In addition to that, Mr. President, we have the over-the-horizon radar system, by which we are able to detect immediately a missile launch from Russia.

We also have several other warning devices which I am not privileged to mention.

The cost of the facilities I have mentioned aggregates almost \$8.6 billion, with an additional \$371 million budgeted for fiscal 1970.

So, Mr. President, we have not been timid. The Defense Department has not been timid in providing us with all that it desired for protection by warning.

In the event that these warning systems ever give advance notice that we are under bomber or missile attack, we have the awesome power of our Minuteman and Polaris missiles, together with the SAC bombers to retaliate against any aggressor.

Mr. President, there seems to be no end to the research that we are capable of doing to improve these systems and to develop new ones. I am for that. I am very hopeful that some day we shall be able to find some one kind of instrumentality that will take the place of all these we now have. It is possible. Serving on the committee that passes on the research money, I can say that, aside from the ABM research funds that are being provided in the pending measure, we have approved, in another appropriation bill, a small sum, not too large—only \$50 million—to carry on further research on one aspect of the ABM.

Mr. President, we have in another portion of the bill a sum which is not very large, only \$60 million, in order to find ways and means of hardening the silos into which we put our Minuteman.

Mr. President, aside from the land-based and the sub-launched missiles and all of the warning systems, we have 528 bombers, 78 of which are medium, and 450 of which are heavy bombers. In addition,

there are hundreds of carrier-based fighter bombers capable of carrying nuclear payloads against anyone who might attack us.

I point this out so as to dispel the notion that to delay deployment of Safeguard will leave us defenseless against nuclear attack. On the contrary, we have a variety of deadly systems spread around the world and representing an investment of hundreds of billions of dollars which, in my opinion, give us the advantage of not having to take the desperate and extravagant risk of deploying an unproven ABM system.

The vast amount of "overkill" represented by all of these systems which have been built up over the past two decades should serve to give us breathing room for further testing and research into the concept of Safeguard before we talk in terms of actual deployment.

Mr. President, before I turn to my prepared statement, I should like to read from the 1970 defense budget and defense program which was issued just before Secretary of Defense Clark M. Clifford was succeeded by Mr. Laird. On page 50 of that document, after reciting things that had been done along the same lines I have been speaking of, Mr. Clifford states:

Thus, by any definition of the term, our "Assured Destruction" capability now and over the next several years should be fully adequate even against the highest expected threat projected in the most recent NIE (National Intelligence Estimate).

Mr. Clifford indicated that we were well protected. And there is no doubt in my mind, from what I have heard, that with the weapons we now have at hand, we could destroy every city in Russia. In fact, I do not doubt that we could destroy the whole world if we were to use all the nuclear warheads in our arsenal.

With this background in mind, I would therefore like to discuss some of my reasons for opposing immediate deployment of the Safeguard system in the hope that my observations will have some constructive effect on the great debate which has evolved, not only in the Congress, but also throughout the land, regarding the fiscal, the strategic, the military, the psychological, the political, and the scientific aspects of this most complex issue.

As a further prelude to my remarks, may I point out that my observations as to fiscal aspects of the ABM program are made from the viewpoint of a fiscal conservative.

I have long carried on a campaign—sometimes a one-man campaign—to cut nonessential Federal spending wherever possible. I am sorry to observe that many of my fellow fiscal conservatives who, like me, are appalled at waste and non-essential spending in the broad spectrum of bureaucratic social programs, refuse now to apply their fiscal conservatism to the Military Establishment in evaluating the benefit-cost ratio of Safeguard.

I, for one, do not intend to exempt the Military Establishment from my motion that the wild spiral of Federal spending must be curbed where it involves nonessential and wasteful programs. I would suggest, therefore, that opposition

to this ABM proposal is a noble cause for those on both sides of the aisle who, like me, have for years been fighting against nonessential Federal spending, against waste, against the resultant unbalanced Federal budget, and against an ever-increasing national debt.

May I point out further that my observations as to the military aspects of this debate are not those of a casual onlooker, but are those of a long-time member of the Senate's Subcommittee on Defense Appropriations who has attempted for years to be a conscientious student of our Nation's military operation.

Nor are my comments the remarks of a "dove" insofar as that term has been used vis-a-vis the Vietnam conflict, for I believe that we must see that conflict through to the sort of honorable and meaningful conclusion which will deny the North Vietnamese the intended fruits of their aggression upon neighboring countries.

Neither are my words those of one who ascribes to the unrealistic arguments that some propose for massive unilateral disarmament. Unfortunately, the kind of world we live in demands that we remain, as President Nixon said in his inaugural address, "as strong as we need to be for as long as we need to be."

With these basic considerations in mind, I shall now list several points which seem, to me, to argue against deployment of the ABM system which has been proposed by Mr. Nixon.

First, there is a very substantial doubt within our scientific community that Safeguard will function properly once its seven component parts are put together and are called on to interreact as a system. This evaluation seems to be based in part on suspected inadequacies of the system itself, which is fantastically complicated and which cannot be fully tested except in the event of nuclear war.

Each of the major components presents a very difficult engineering and development project in itself. The Spartan missile, the Sprint missile, the Parimeter Acquisition Radar, the Missile Site Radar, the Master Computer, the Command and Control system, and the atomic warheads—all are at varying stages of development, and none have been perfected or tried out in conjunction with all of the other parts.

As an example of the technical problems involved in deploying and keeping such a system in working order, capable of firing many missiles at a minute's notice any time of any day or night, I cite the rather embarrassing experience we have had recently with one of our supposedly well tested, highly reliable Minuteman missiles.

The Minuteman case involved a test scheduled for October 1966, which failed and had to be rescheduled for later that same year, only to fail again. It was attempted again—and failed again—late last year, and only a few weeks ago failed for the fourth consecutive time. First, there was trouble with a resistor, then with a capacitor, then with a pin in a connector, and finally with some other faulty component. In a way, each

of these was a minor malfunction, but each was quite enough to disable the missile and prevent its launch—even after lengthy and highly elaborate preparations had been made in each case to insure a successful launch. I am speaking of the Minuteman.

I cite this incident not to embarrass the military or to belittle our ICBM program but to stress the point that in such a fantastically complex operation, involving literally millions of electronic components, we are foolishly optimistic to presume that even a relatively simple, fully proven offensive missile such as Minuteman will work reliably on a moment's notice.

The Safeguard system presents problems which are far more staggering than those of the Minuteman system, particularly when we consider that, unlike our Minuteman, Polaris, and other offensive missiles, it will have to operate on a "hair" trigger for weeks, months, and years at a time.

I contend that with such a complicated system, we should, by all means, be sure of what we are doing, rather than take a chance. That is exactly what we will be doing if we deploy the present system. It was known as the Nike-Zeus at one time, then as the Nike X, and then the Sentinel—all the same system.

I can well remember that President Eisenhower refused to go along with the Nike-Zeus. There has been very little added to that system since that time.

As the minority report of the Armed Services Committee so ably explains:

Safeguard is the most complicated technological development ever planned for operation by man. The system consists of three major component parts: (1) missiles (2) radars (3) computers.

Although we have had a long and therefore disturbing series of failures in missile testing, including another Minuteman failure only last week, there is no reason to conclude that the two Safeguard missiles, the Spartan and the Sprint, will not work. But there is reason to doubt that the long-range radar (PAR) and the short-range radar (MSR) parts of which have not been built, let alone tested, will operate successfully together in that almost instantaneous manner which would be necessary in case of sudden attack; and there is even more reason to doubt that the computer, which has been neither built nor tested, and which is admittedly far more complicated than any computer ever yet attempted, will operate properly when called upon to do so.

Finally, it is logical to consider whether, even if these three separate components would operate properly as separate units, would they so operate when combined? For obvious reasons, the testing of any joint operation has not been possible.

Second, and also on the technical question, is the contention by many experts that it is relatively easy to take counter-ABM measures, either by disrupting the radar and guidance components of the system, by flooding the system with the decoy missiles, or by sending in a very heavy overkill of actual warheads.

In other words, even if the Safeguard system does not fail of its own innate disabilities—as the Minuteman missile did on four successive occasions as reported by me earlier—then there are a multitude of tactics that the enemy can take

to overwhelm and bypass its capacity to handle incoming missiles.

In this regard, I know that our own Department of Defense and our own ICBM experts are entirely confident that they can penetrate the ABM system which the U.S.S.R. has deployed in a limited fashion around Moscow. There are apparently five or six offensive maneuvers or tactics available to us, any one of which will probably foil the Soviet ABM and the combination of which will surely do so.

Basically, what I am contending in this second argument is that offensive missile technology has a fundamental and perhaps insurmountable advantage over defensive missile technology. If that is, indeed, the case we should all want to see a system fully proven and fully tested before we go forward on the bold assumption that it can overcome the built-in handicap it faces in trying to knock down a swarm of incoming warheads.

As defensive technology advances, so will offensive weapons technology and so will the sheer force of numbers of deliverable warheads. All of this, I feel, is certain to result in continued confidence on both sides in our respective offensive nuclear forces and continued doubt as to the reliability of the present generation—and indeed the present concept—of ABM forces.

On this point, I have just this week viewed a classified film produced by the General Electric Co. before the ABM question became such a heated national issue and while GE was promoting the notion that we should expand our offensive rather than our defensive missile systems. The film makes a very convincing demonstration of obvious, fundamental, and perhaps insurmountable advantage which offensive missile technology has over defensive missile technology. I stress the word "missile" because in a later point I will suggest that there may be alternatives to the very concept of missile versus missile.

Third, there is a closely related point which is perhaps technical in nature but which really involves nothing more than a bit of simple grade-school arithmetic. It has to do with the number of ABM missiles our system would have, compared to the number of ICBM missiles it would be guarding against.

As now proposed, by 1974, the Safeguard system would have 100 missiles at most, ready to be launched at incoming warheads. As I understand it, about half of these would be the long-range Spartan and half the short-range Sprint missiles.

For the sake of demonstrating my point, let us use this round figure of 100 ABM missiles deployed in 1974. We could use any number, as far as that is concerned. We could use 1,000 or 2,000.

The scientists—both opponents and proponents of Safeguard—seem to agree that an 80 percent reliability factor in such a set of missiles would be the very upper limit of what could be expected. In other words—assuming that there is no catastrophic failure with the whole system in which case no missiles would fire at all—everyone would be highly pleased if 80 of these 100 missiles got off the

August 4, 1969

CONGRESSIONAL RECORD — SENATE

S 9079

ground when the proverbial red button is pressed.

Judging from the recent record of the Minuteman tests, this is being extremely generous; but for the sake of the argument, let us assume an 80-percent reliability.

The next step is to estimate the degree of effectiveness of each of these missiles which does succeed in getting off the ground. In this regard, the experts seem to agree that it would be highly satisfactory if half of these were to find their target. This would mean that one out of every two Safeguard missiles would destroy an incoming warhead—and effectiveness factor of 50 percent.

When we apply this generous figure to the 80 Safeguard missiles which get off the ground, we find that they are able to knock out a maximum of 40 incoming warheads. By the proponents' own standards of performance, this is the result which could be expected in 1975 if the system works. My question is: Even if Safeguard works, does it give us anything really worth having and, if not, should not we be looking elsewhere for the kind of protection that is worth having.

As I read the figures which have been offered by the proponents, the U.S.S.R. will have about 2,500 ICBM's by 1975. I think that is the precise figure used by Secretary Laird on April 25 of this year. In addition, the proponents estimate that the Soviets will have at least 1,000 sub-launched missiles by 1975. This is a grand total of 3,500 missiles. Judging from "scare" statements to which we were subjected in the executive session on July 17, those estimates may now be substantially higher.

If we then assume that by 1975 a respectable number of these have MIRV potential, the number of warheads may well be 5,000, 6,000, or 7,000. And how many will we be able to knock down? Forty at most—and even this pittance assumes many excellent performance characteristics for Safeguard which the system might not have and probably does not have.

What we will have is a 1- or 2- or 3-percent return on an investment in which a 95 percent return would still leave us devastated. Of course the long-range plan is that we will then have to deploy more and more Spartan and Sprint missiles so as to get a better return, but I say that no matter how many we deploy, the same basic arithmetic will apply.

If, for instance, we spend \$50 or \$100 billion to expand Safeguard 10 times over to deploy not 100 but 1,000 missiles by 1980, the Soviets by that time will probably have in excess of 5,000 missiles with perhaps 15,000 warheads. We would be at even greater disadvantage than in 1975. If 800 of our 1,000 ABM missiles get off the ground and if half of these were effective, we would knock down only 400 incoming warheads among a possible 10, 12, or 15 thousand. The exact number is really unimportant because all it would take to devastate this country is about 100 well-placed warheads.

In my judgment, it is for this very reason that the Soviets have stopped deploying ABM sites around Moscow.

Their system, which is probably less sophisticated than Safeguard and similar to our 1960 Nike-Zeus system, is subject to the arithmetic I described above. The Russians have apparently done their homework and have seen the pointlessness of trying to defend Moscow from the kind of attack which we are capable of launching.

It is basic logic that the more big-bad-wolf stories the proponents tell about how rapidly the U.S.S.R. is deploying ICBM's and launching missile submarines, the more useless and preposterous becomes the plan to defend against them by means of the Safeguard system—even one that has 10 or 20 times the number of sites and missiles now envisioned.

It is this undeniable ability to overwhelm the enemy's ABM system, to kill him and to devastate his cities and his industry several times over which we refer to as "overkill." In considering this subject we should remind ourselves that a one megaton bomb is 50 times the power of the Hiroshima bomb and that by the time the Safeguard system is proposed to be operational as a deterrent to a Soviet attack, our varied offensive systems could conceivably deliver as much as 5,000 megatons on the Soviet Union in a total nuclear exchange.

That would be the equivalent of 250 thousand times the destructive force of the Hiroshima bomb. If we related that awful power to the 100,000 casualties at Hiroshima, this amount of megatonnage would inflict 25 billion casualties—seven times the population of the earth.

To anticipate all of the contingencies which might be raised by the proponents, let me put it in ultra-conservative terms. If only one-tenth of our megatonnage got through and if that megatonnage caused only one-tenth the relative number of casualties inflicted at Hiroshima, they would still result in 250 million casualties—equal to the entire population of the U.S.S.R.

By the same token, the Soviets could dump and would dump enough megatonnage on this country and do just as thorough a job of extermination on us. If the nuclear blasts did not do the job instantaneously, the radiation, the long-term fallout and the chemical and germ warfare which would follow would certainly complete the job.

Fourth. As a logical extension of my observations relative to "overkill," I wish to challenge and to discredit the line of reasoning engaged in by the proponents of Safeguard that the Soviet Union is scrambling to achieve a nuclear superiority with the view of attacking the United States as soon as it can inflict substantially more damage on us than we can on them.

In essence, this is the fear tactic which is being exploited when the proponents of Safeguard raise the first-strike argument. They seem to preach the notion, and indeed the presumption, that if the U.S.S.R. ever attains nuclear superiority, she will attack us on the theory that we will get the worst of a nuclear exchange and that nuclear war would, therefore, be in the Soviet's best interests. Their presumption is ill founded.

In the most basic and most frightful of terms, there are three great presumptions—each of them highly unlikely, if not impossible—which the U.S.S.R. would have to make in order to attack us first with the expectation of being able to survive our counterattack.

First. They would have to presume that as a result of their attack and as a result of whatever ABM defense they might have, not enough of our nuclear warheads would get through to cause them an unacceptable level of immediate physical damage.

Second. Along with the first highly unlikely condition they would also have to presume that the plant, animal, and human life in their country and indeed in the Northern Hemisphere could survive the fallout and radiation effects of the several thousand nuclear explosions which would occur in an all-out war—no matter over whose territory the most bursts occurred.

Third, they would finally have to presume that we would not resort to bacteriological and chemical warfare of a sort that can and probably would exterminate mankind from this planet. They would even have to be sure that whatever germ or chemical they released on us would not eventually drift around to their side of the world and exterminate them too.

The "first-strike" argument of the proponents is so short-sighted, so uneducated and so narrow-minded that it casts the Soviets in the role of a raving madman who has neither any intelligence nor any will to survive. A sane man could not and would not stake his life on any of these presumptions, much less on all three.

Believe what else you care about the Soviets—they are intelligent, they do want to survive, and they do not want the kind of war about which I have been talking.

In addition, the very concept of "first strike" and its attendant risks of complete devastation and annihilation are at total variance with the Communist view of history. A basic tenet of the Communist "religion" is the fundamental belief that communism will prevail over capitalism as a matter of fate, as a matter of history. They are woefully wrong in this belief, but they do most deeply believe it; and to risk their own nuclear extermination for a goal which they firmly believe can be won merely by waiting and by pursuing tactics of less catastrophic potential.

In this regard, let me quote one of the most respected military leaders in our country's history to support my belief that the Soviets fear us just as much as we fear them and that neither has the intention of picking a nuclear war with the other.

Gen. Douglas MacArthur once said that world tensions were kept at a fever pitch by two great illusions:

The one a complete belief on the part of the Soviet world that the capitalistic countries are preparing to attack them, and the other, a complete belief on the part of the capitalistic countries that the Soviets are preparing to attack us; both are wrong.

In so far as nuclear warfare is concerned, General MacArthur was absolutely right; and when they speak of "first-strike," proponents are resorting to fear rather than to reason in a desperate attempt to promote the cause of the Safeguard system.

Fifth, there is the convincing and ironic argument offered by many of the experts that such an ABM system will actually backfire by causing the U.S.S.R. to multiply its offensive nuclear weaponry far beyond what it would if we had no ABM.

I respect that argument because I know that is precisely what we are doing in response to the alleged deployment of a Soviet ABM system around Moscow. To counter the effect of an enemy's ABM system, the military strategists simply program two or three or 10 times the number of warheads that would otherwise be required to do the job on a given target. The result is obvious. If ABM fails of its own disabilities or is out-manuevered by the enemy, the supposedly protected target suffers two or three or 10 times the destruction it might otherwise have received.

As one of the experts on the subject has explained in very mild, reasoned and restrained language—almost to the point of understatement:

If our potential enemy takes no steps to compensate for the deployment of ABM, some damage and casualty reduction could be expected. But the assumption that such steps would not be taken appears highly improbable if the adversary is the Soviet Union which has the means to take them and will feel compelled to do so to preserve its secure deterrence posture. In fact, over-reaction as judged by the past, would be the norm, particularly when the uncertainties about performance are as great as with the ABM system. The probable responses include increases in the numbers of offensive missiles and the deployment of MIRV's with their destabilizing effect. The development of the latter we ourselves decided to undertake upon learning of the start of the deployment of the Soviet ABM. These steps induce obvious counteractions by the other super-power and the net result could easily be another major expansion of offensive missile forces and an accompanying uncertainty about the security of our deterrent.

Under this sort of logic—and I think it is eminently sound logic—this ABM system could be less than useless. It could be highly counterproductive, and at a cost of untold billions of dollars.

To those who contend that the Soviets will continue to manufacture and to deploy missiles at a rapid pace regardless of what we do on the Safeguard question, I say, "It ain't necessarily so."

From my many travels to the U.S.S.R. and my hundreds of conversations with officials at all levels of their government, I know that they, too, are constantly engaged in an internal tug-of-war over military policy and military priorities.

I say that there is a group within the Soviet Government which would like to cool down the arms race, free their country of the back-breaking burdens of an uncontrolled missile race. They would prefer to put the country's emphasis on agriculture, on consumer goods, on housing, and on modernization of Russian industry at all levels. They know that these are the areas which, if neglected

for too long, can bring the Russian people terrible hardship and could even result in civil unrest.

But what happens when these moderate elements attempt to steer the U.S.S.R. away from the arms race by leveling off missile systems development and deployment? I will tell you what happens:

The super hawks and the militarists plow them under with scare stories about Safeguard, Poseidon, Minuteman III, MIRV, AMSA, and so forth. They point out how the combination of all of these mighty American systems will give the "friendship militarists" of the Pentagon a "first-strike" capability by 1975, unless the Soviet military effort is redoubled, unless hundreds more of the SS-9 missiles are deployed, unless 50 more missile subs are launched—unless, unless, unless.

It seems to me that we have an opportunity to strike a blow for the growth of this moderate element within the Soviet leadership by delaying deployment of what is really an unworkable ABM system anyway, and giving them the elbow room to point out that in the absence of an American ABM system, Russia does not really need quite as many SS-9's, MIRV's and missile subs and that the resources of the country ought to be diverted elsewhere.

This sort of change of pace would not occur overnight in the U.S.S.R. I am not so unrealistic as to think that. But I do know that heavy Soviet expenditures on these expensive weapons programs are seriously retarding the Russian economy. In the long run, their natural tendency would be to put more emphasis there, rather than on limitless expansion of missile forces. All that I am saying is that we should hasten this process by avoiding deployment of a system that is really useless to us but whose mere existence can easily be used by the super-hawk group within the U.S.S.R. as a pretense for further escalating the arms race.

Here is our chance, perhaps, to break the action-reaction cycle on which the arms race feeds itself. Even if it is an outside chance we should take it, particularly, since we can do so without endangering our own security. All we would have to do, for the present at least, is to limit ourselves to testing a system which in the final analysis we may find does not work well enough to deploy anyway.

Sixth, I wish to raise the issue of the fiscal and budgetary impact of the Safeguard ABM proposal. As a longtime member of the Defense Appropriations Subcommittee, I know from experience that the "six or seven billion dollars" estimate of the cost of the "thin" ABM system will, in my opinion, escalate to a sum several times that amount.

Once deployed, this system's substantial and obvious inadequacy will almost certainly result in the gradual evolution of a "thick" system whose cost could run from \$60 or \$80 billion to the \$400 billion which has been projected by Senator STUART SYMINGTON, a former Secretary of the Air Force.

As one who has always tried to be a watchdog against excessive, unwise and nonessential spending, I see the Safeguard ABM as a bottomless pit for my

constituents' hard-earned tax dollars. As such, I view it as an incurable sore on the efforts that some of us are making to balance our budget, reduce the tax load and return to fiscal responsibility.

As I stated in my introductory remarks, I find it disappointing that most of my fellow fiscal conservatives who, like me, are constantly using the paring knife on wasteful social programs refuse now to apply their fiscal conservatism and good sense to the military establishment.

We are now spending \$80 billion a year—\$220 million a day—on military programs, and in my opinion, the Safeguard system could very quickly expand this sum beyond the \$100-billion-a-year level. As a fiscal conservative, I fear that when combined with ever-increasing demands for medical, welfare, and "social" programs in general, this level of military spending will eventually wreck our economy.

This is the sort of development which might well bear out the prediction of one of the founders of the Soviet Communist State who predicted that the capitalist nations would eventually "spend themselves to death." Once the system is deployed, it will serve as a bottomless pit for countless billions of dollars which our over-burdened budget, and our over-burdened taxpayers, cannot afford.

In this regard, I know that once Safeguard is deployed, it will be increasingly difficult for this body to pass objective judgment on its workability. In such a heated legislative battle as this—in which the President, the Pentagon, and so many proponents are putting their reputations and their sacred honor on the line, insisting that Safeguard will work—there will be a great, politically-inspired reluctance on the part of many to admit at some time in the future that they were wrong and that Safeguard is, indeed, an Edsel.

The tendency, I fear, will be to pyramid a mountain of fundamentally unworkable, unproductive, and extremely expensive ABM hardware rather than admit error and waste. In face of such a possibility, we must take a "go-slow" attitude about deployment—until we know for certain that we do want to deploy this particular system.

Another example, in which I made unheeded recommendations to "go slow," involves our Polaris submarine fleet which has been expanded at a maximum rate over the several years and which is now having to be converted to handle the larger Poseidon missile rather than the Polaris missile. We have known for several years that Poseidon was on its way and that Polaris would soon be "obsolescent" by today's standards.

Of course, it would have been a mistake to build no Polaris subs at all while waiting for the perfection and deployment of Poseidon; but by the same token, a great savings to the economy and to military spending could have been realized by going slow on the Polaris-type subs and waiting to put our money into the Poseidon-type sub which we knew was coming.

Instead, we went full speed ahead with the Polaris subs and we are now having to spend \$50 to \$60 million apiece to con-

August 4, 1969

CONGRESSIONAL RECORD — SENATE

S 9081

vert 31 Polaris submarines to the Poseidon system. This conversion plan alone will cost \$2 billion—a huge sum which could be spent instead to purchase a number of new Poseidon-type subs.

I can easily visualize "secret" memorandums floating around the Pentagon in 1979 which suggest that the best thing to do with Safeguard is to sink it in the ocean—the solution proposed in 1969 for our older Polaris submarines—rather than be saddled with its huge and pointless costs of operation and maintenance.

It is the old question of "haste makes waste" and in my opinion we must not make that mistake vis-a-vis the gigantic Safeguard program. If we do, we are likely to find ourselves with an outrageously expensive white elephant on our hands which is not convertible to anything at all—at a great and damaging cost to our economy.

Seventh. In discussing research and development, I find a most disturbing aspect to the manner in which the Safeguard system is being handled vis-a-vis the normal procedure of developing, testing, procuring, and deploying major weapons systems.

As a member of the Defense Appropriations Subcommittee, I learned long ago that there is a set procedure by which a weapons system must grow from the status of an obscure scientific concept to the status of deployment. Experience has proven that the more complicated the system, the more vital it is not to skip or not to violate any of these successive steps.

In a nutshell, these stages of R. & D. are: Basic research, exploratory development, advanced development, engineering development, operational systems development, and management and support.

With all its priority, costing, and rushing ahead, even the Manhattan project followed the five R. & D. steps with the rather special exception that there was only the one Alamogordo Trinity Testing. If this test had not been near fully successful, the two flights from Tinian would almost certainly not have left as they did.

The nuclear sub project of Admiral Rickover, and the Polaris missile project of Admiral Raborn similarly followed the five R. & D. steps carefully. The dangers involved made it natural that none of the five steps were omitted, although clearly the project work was rushed. An untried reactor would never have been considered by Admiral Rickover for procurement and deployment. An untested Polaris missile would never have been approved for massive procurement by Admiral Raborn. Yet, this is just the sort of hop-skip-jump procedure which the Defense Department is following with regard to the infinitely more complex Safeguard system.

The only cases of which I have been aware of successful attempts to by-pass any of the normal five R. & D. steps involve the B-29 program, the Russian T-34 tank development program in the early 1940's, and the British "Mark I Star" radar system.

All other systems which have attempted to violate the five R. & D. steps

in one or more ways, instead of saving time, have become grossly expensive or completely unworkable, or both. Some celebrated cases today involve the M-16 rifle and the TFX aircraft. But the worst current example is probably the combustible casing for the Sheridan tank. As a result of faulty R. & D. procedures, we now have a billion-dollar tank without an artillery shell that can safely be fired from its gun.

In the case of the Safeguard system, my observations are that the system has proceeded only to the third stage of development, which, according to armed services procurement regulations is called advanced development, a stage which is not far enough along the line to permit procurement or deployment of hardware for service use.

Mr. President, I ask that certain excerpts from part 2, title 4, section 201 of the Armed Forces procurement regulations be printed in the RECORD at this point in my remarks so that I might then refer to some of the language contained therein.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

4-201 DEFINITIONS

(a) The following definitions of the term "research and development" are those set forth by the Department of Defense for the reporting of research, development, and engineering program information, and are primarily designed for program control. To enable procurement personnel to understand the meaning of these words as used by research and development personnel, the definitions are set forth here for information purposes. As the term "research and development" is used in this Regulation, it ordinarily encompasses only the first four of the categories set forth below. The definition set forth in (5) and (6) are not likely to coincide with the meaning of "research and development" as that term is used for procurement purposes. For example, "military construction of a general nature unrelated to specific programs", as included in (6) below would not be within "research and development" for procurement purposes in the case of construction of recreation facilities at an installation used exclusively for research and development. The facts of a particular case, however, may be such that (5) and (6) below would include a procurement which satisfies the procurement meaning of the term research and development.

(1) *Research*—Includes all effort directed toward increased knowledge of natural phenomena and environment and efforts directed toward the solution of problems in the physical, behavioral and social sciences that have no clear direct military application. It would thus, by definition, include all basic research and, in addition, that applied research directed toward the expansion of knowledge in various scientific areas. It does not include efforts directed to prove the feasibility of solutions of problems of immediate military importance or time-oriented investigations and developments.

(2) *Exploratory Development*—Includes all effort directed toward the solution of specific military problems, short of major development projects. This type of effort may vary from fairly fundamental applied research to quite sophisticated bread-board hardware, study, programming and planning efforts. It would thus include studies, investigations and minor development effort. The dominant characteristic of this category of effort is that it be pointed toward specific military problem areas with a view toward

developing and evaluating the feasibility and practicability of proposed solutions and determining their parameters.

(3) *Advanced Development*—Includes all effort directed toward projects which have moved into the development of hardware for experimental or operational test. It is characterized by line item projects and program control is exercised on a project basis. A further descriptive characteristic lies in the design of such items being directed toward hardware for test or experimentation as opposed to items designed and engineered for eventual Service use.

SPECIAL TYPES AND METHODS OF PROCUREMENT

(4) *Engineering Development*—Includes all effort directed toward those development programs being engineered for Service use but which have not yet been approved for procurement or operation. This area is characterized by major line item projects and program control will be exercised by review of individual projects.

(5) *Operational System Development*—Includes all effort directed toward development, engineering and test of systems, support programs, vehicles and weapons that have been approved for production and Service deployment. This area is included for convenience in considering all RDT&E projects. All items in this area are major line item projects which appear as RDT&E Costs of Weapons Systems Elements in other Program control will thus be exercised by review of the individual research and development effort in each Weapon System Element.

(6) *Management and Support*—Includes all effort directed toward support of installations or operations required for general research and development use. Included would be military construction of a general nature unrelated to specific programs, maintenance support of laboratories, operation and maintenance of test ranges, and maintenance of test aircraft and ships. Costs of laboratory personnel, either in-house or contract-operated, would be assigned to appropriate projects or as a line item in the Research Exploratory Development, or Advanced Development Program areas, as appropriate. Military construction costs directly related to a major development program will be included in the appropriate element.

Mr. ELLENDER. Mr. President, I note that according to the DOD's own standards and regulations, under point No. 3, known as advanced development:

A further descriptive characteristic lies in the design of such items being directed toward hardware for test or experimentation as opposed to items designed and engineered for eventual service use.

Since in the case of Safeguard, many of the parts of the various component systems have not even been built in prototype form, much less tested in conjunction with the other major components, it is basic logic to conclude that Safeguard as a weapons system is certainly not beyond stage 3. In some regards, it has not even reached stage 3 and should, therefore, be considered far removed from stage 5, which is the first point at which the regulations speak of "deployment" in any sense of the word.

Although I am no expert in the matter, it seems that we might be able to give some sort of rating, between Nos. 1 and 6, to each of the major components of Safeguard. Then we might reason from these the relative stage of development of the system as a whole.

August 4, 1969

Since this is too technical an issue to explore in detail at this moment, I shall merely express my interpretation of the matter and check the RECORD in the days to come to see if proponents can prove by facts and figures that the various major components of Safeguard have, in fact, advanced farther than the levels of R.D.T. & E. which I attribute to them. If a component is in the early stage of a certain step I will use the term "minus" and if in the late stage the term "plus."

First. The Spartan missile—Step 4.

Second. The Spartan guidance and control system—Step 3 plus.

Third. The Sprint missile—Step 3 plus.

Fourth. The Sprint guidance and control system—Step 3 minus.

Fifth. The PAR—long-range radar—Step 4.

Sixth. The MSR—short-range radar—Step 3.

Seventh. The master computer—Step 3 minus.

Eighth. The master command and control system—Step 3 minus.

Ninth. The warheads—Step 4.

For the simplest reasons of logic, the workability of such a complex system cannot be glibly presumed. Without bringing each of the component parts through the whole R.D.T. & E. procedure we would be deploying Safeguard on little more than a fanciful presumption. The burden of proof of Safeguard's workability has not been satisfactorily borne by proponents who recommend the expenditure of billions for deployment of an unproven system.

Eighth, and in the same vein, I feel that deployment of the Safeguard ABM system could have a highly counterproductive effect of diverting research and resources away from programs which might someday produce a truly workable ABM system. Such a system might be based on laser beams, on other high-intensity sources of sound or light or on force fields of some sort that are unknown to us at present. Who knows what system or what concept is waiting to be discovered which does not suffer from the foibles which so many of our scientists feel are inherent to a projectile system such as the Safeguard.

In this regard, I wish to make it very plain that I am not an opponent of ABM per se, for I would be the first to want a protective shield over this great country that I knew would work. Though I do not feel that the U.S.S.R. intends to risk nuclear war with us now or in the foreseeable future, no one knows what the threat might be 5 or 10 or 20 years from now—either Russia, or more likely China or even from some other nation not now a nuclear power.

I actively support efforts to continue ABM research and view deployment of Safeguard as a threat to this research and a waste of precious resources on a system that will bog down of its own weight. A striking parallel can be seen in the history of the Nike-Zeus program for which many of Safeguard's proponents were clamouring a decade ago.

As one expert told the story so clearly:

It is interesting to contemplate that, had the deployment of Nike-Zeus been authorized in 1960-61, we would have just about now had the full system in operational readiness, after spending what was then estimated as \$20 billion and could have been, judging by analogy with other large weapon systems, twice as much. Considering the current numbers and sophistication of offensive missiles now being deployed by the super-powers it is technically certain that the Nike-Zeus ABM system would now be of little value.

Full deployment of Nike-Zeus would certainly have been a stumbling block to the improved—but still inadequate and obsolescent—Safeguard ABM system. And if Safeguard is deployed now, it will have serious and perhaps deadly effect on development and eventual deployment of a truly effective ABM system, if indeed such a device can ever be created.

Ninth, and in connection with this matter of ABM research, let me raise the spectre of a frightful possibility that has not yet been considered by the Senate. Since there has been a great deal of "fright peddling" by the proponents, I feel at liberty to put the shoe on the other foot and peddle a bit of fear and uncertainty on behalf of the opponents. Maybe as a result of what I am going to say, some of my colleagues will benefit by a balance of fear within their analytical processes and will then be able to look at the Safeguard more objectively than if their appetite for fear is being whetted only by proponents' frightful hypotheses of what the Russians might do to us if we do not install an ABM umbrella over our heads.

My countercharge is this: What if, while we are deploying expanding and pyramiding a system which—for the many reasons I have stated—will not work, the Soviets are in the meantime putting all of their resources into research and development of a new concept which 10, 12, or 15 years from now does work.

Visualize, if you can, the situation in 1985 when we might have 10,000 improved Spartan and Sprint missiles blanketing the country, feebly facing perhaps 30,000 Soviet warheads. The arithmetic of the situation will still carry the inescapable conclusion that this is no defense at all against the U.S.S.R. if she should decide like a mad dog to attack us. This would be true even if our missiles are 100 percent reliable and 100 percent effective, which they would not be, of course.

But what if, by contrast, the Russians have spent the time and the resources between 1969 and 1985 not in burdening themselves with a white elephant but rather in finding and perfecting a system which really does work.

As I indicated earlier, there are already indications that they have stopped deploying their Golash ABM system around Moscow and are looking for something that will work. They have, no doubt, done their arithmetic and realize that—similar to the figures which apply to our Safeguard—even a 50-percent effectiveness from a system that is 80 percent reliable will still do them no good at all in the event of nuclear war.

So, apparently, they have found the good sense to stop kicking their dead

horse and to go out looking for a better one. If by their commonsense efforts in this regard they jump ahead of us during the next decade—while massive deployment of Safeguard detracts from realistic R. & D. efforts into other concepts of ABM—then it is the proponents of Safeguard who will have deprived us of whatever ABM protection we might need in years to come.

I am one who wants to see this country spend whatever money is necessary in research either to prove or, more likely, to disprove the feasibility of Safeguard and then to get on to looking for something better, if such a thing exists.

Tenth, as a further matter of military strategy and programming, I fear that deployment of a hugely expensive ABM system could very easily squeeze out or seriously undermine other important military programs and place our total military posture out of balance.

If, as I have contended, nuclear war will not be chanced by the nuclear powers, then I am sorry to say that there will likely be other types of wars and conflicts of various descriptions which fall short of nuclear holocaust. I personally shall oppose such involvement wherever possible, but I am practical enough to realize that they will most probably occur from time to time.

The type of war we are fighting in Vietnam, the one we are constantly in danger of having to fight again in Korea, the ones we are "secretly" fighting in Laos and Thailand, the conflict that is festering in the Middle East, the unsettled situation throughout Latin America—all give evidence that for a long time to come we shall have to be spending large sums on "brushfire" wars. And, too, it is a well-accepted principle that the best way to avoid such conflicts is to be eminently well prepared for them. The fiscal impact of Safeguard will certainly detract from our ability to maintain preparedness in this respect.

With the growing sentiment in Congress and in the country for a ceiling or a basic reduction in military spending, the deployment of a very expensive ABM system of very doubtful reliability would seem to me to gobble up a topheavy share of total military spending.

My educated guess is that there are many military men who would like to speak out against ABM on the grounds that it presents a clear and present danger to all military programs that are designed to assure preparedness for conventional warfare and for the necessary maintenance, modernization, and perfection of our offensive deterrent forces.

As a practical military man, I think I would be more interested, for example, in spending the necessary time, effort, and money in making sure our Minute-man system as a whole is not in the inoperative condition of the missile that failed to launch on four successive occasions. What we need here is a bit more horsensense thinking, more first things first in terms of military priorities.

Eleventh, I have come to feel a certain cynicism and disgust for the whole controversy surrounding the Safeguard proposal, because I find that it was in the beginning—and is becoming more

August 4, 1969

CONGRESSIONAL RECORD — SENATE

S 9083

and more—oriented toward politics than toward considerations of national security. Frankly, I feel that the Nixon administration made its initial recommendation for deployment because it was politically afraid not to do so. I think it was afraid to approach either the 1970 congressional elections or the 1972 national elections subject to charges of having allowed an "ABM gap" to develop.

I am sure that President Nixon has vivid memories of the "missile gap" psychosis employed so effectively by President John Kennedy to defeat him for the Presidency in 1960. President Nixon needed political insurance against any similar occurrence in 1970 and 1972 and in my opinion rested his decision heavily on political grounds.

To use a modern phrase, this sort of self-serving political motivation "turns me off." I frankly do not want to vote for a program that will cost billions, that is of dubious reliability, and that may hurt rather than promote our national security, when my careful observations tell me that this program is being proposed for reasons which are basically political.

In making this point, I do not mean to be totally critical of the President and the administration. Mr. Nixon and his advisers are victims of a situation which has built up over a period of years, and in a very real sense I feel sorry for them that they find themselves locked into a position of having to propose deployment of an ABM system which they know is defective and ineffective by its very nature. I know the President wishes he had the political breathing room to do otherwise.

Twelfth, I wish to challenge the argument offered by proponents that they must test the Safeguard system on the site on which it will eventually be deployed—rather than out in the Pacific Ocean—in order, first, to obtain a realistic idea of its performance at that location and, second, in order to save money by having it already installed on the proper site if it does prove to be workable.

I shall try to demonstrate, Mr. President, that these are hollow and faulty arguments. They actually constitute a "nonthink" position for the proponents in view of the real-life situation to be faced when we talk about testing such a system and proving that it will work.

In the first place, I take the position that before we make a final judgment on an ABM system we should see all of its component parts function as a unit under conditions which simulate as closely as possible the attack against which it is designed to protect.

In the case of Safeguard, this "final judgement" of which I speak would be the foundation upon which this country might proceed to invest tens or even hundreds of billions of dollars in ABM sites and hardware in the years to come. So, it should be a realistic test which leads us to the final decision. Otherwise, we run the risk of total waste.

The charge I make is that we cannot stage such tests in Montana and North Dakota. To be certain of whether we do

not have a white elephant on our hands, we would have to deploy a number of Spartan and Sprint missiles at a site, hook them into both the long-range and short-range radar systems, tie those systems into the master computers and the command apparatus and then tell the Safeguard operators something like this:

"At any time during the next 6 months, day or night, you must be prepared to defend against surprise attack from Minuteman, Polaris, Poseidon, and whatever other missiles we see fit to launch, including MIRV. The direction from which the attacks are launched, the time of attack, the decoy techniques and the numbers of missiles will constitute an attempt to stimulate a Soviet 'first-strike' attack. Only the nuclear warheads will be lacking."

Then, on some unannounced day or night, within the confines of an hour or two, we would then actually have to launch at least two dozen ICBM's and SLM's from varying distances at targets within the guarded area to see how many of those could be "killed" by a similar number of Spartan and Sprint missiles actually launched at the incoming dummy warheads. The "kills" would, of course, have to be judged on the basis of the distance by which each unarmed ABM missile missed its target. Since simulation would be at a maximum, the results of the test would contain enough realistic data on which to base a valid judgement.

This would not be true of the sort of testing that could or would be done in North Dakota or Montana. ICBM's and SLM's would not actually be fired at the sites under protection, and ABM missiles would not be fired at the incoming dummy warheads. The reason is obvious; political risk and public opinion would not allow it; there would be too much danger of stray missiles falling into towns, cities, or other populated areas.

Instead, the whole routine of "testing" would be to run tapes through the computers to simulate incoming warheads and other tapes to simulate Safeguard and Sprint launching—with the result that we would still not know whether the system really works under stress.

In effect, proponents want us to adopt a plan which by its very nature would preclude realistic testing. They will then come back next year and in succeeding years, ad infinitum, asking for additional authorization and money to deploy additional sites—always without any hard proof that the many component parts of Safeguard will work as a system under battle-like conditions.

Under these circumstances, we might be victimized by Safeguard in the same way as we were in the infamous case of the torpedoes the Navy tried to use against the Japanese in the early stages of World War II. After launching these torpedoes against Japanese ships, our submarine crews could hear them thump against the sides of the target vessels; but no explosions and no sinking of enemy tonnage ever occurred.

The fact is that a simple torpedo, which had been fully "lab tested" by the experts, regularly failed to detonate.

These experts, in their haste to deploy a torpedo, had felt that if they could make their weapon work on the drawing board and if the bench-model prototype seemed to work as designed, then the real weapon would work, too.

But it did not work, and under different circumstances this result of fuzzy R. & D. thinking and hasty deployment might have cost us the war.

So, I implore my colleagues, let us not chance the same mistake. Let us not allow proponents to argue unchallenged the faulty proposition that paper testing and simulated prototype testing in Montana is an acceptable substitute for realistic testing at the Kwajalein test site in the Pacific—where real Spartan and Sprint missiles can be launched against a surprise attack of ICBM's and SLM's, lacking only the nuclear warheads which we hope will never have to be used. Let us bear in mind that Safeguard is a supercomplex interconnection of at least seven major components, not one of which—as I explained in point No. 7 of these remarks—has yet been proven acceptable for deployment under the normal rules of R.D.T. & E.

To me, these commonsense observations relative to testing make short shrift of the "economy" argument which proponents offer for deploying prototypes on the spot where eventual permanent deployment is anticipated. As explained, proper and realistic testing cannot and will not be conducted at those sites. This kills any argument for economy because it allows for the strong possibility that the entire system will be totally unworkable and thus total uneconomic.

Thirteenth, I would like briefly to take issue with those who argue that "Because we were able to put men on the moon, we can certainly build the Safeguard ABM system in a way that will work."

As I have explained in previous arguments, this may well be so; but we should test and prove it out as a technological fact before deploying. Also, as I have said, even if it "works" in the technical sense, Safeguard may not be capable of doing the job in terms of the numbers of warheads potentially involved in a nuclear exchange. Furthermore, as stated, the Safeguard program may be the very factor that diverts our scientists from developing a system that will work.

Be that as it may, it is a fallacy to presume that Safeguard will work because we are as capable of making it work as we are of putting men on the moon.

The manned missions which NASA has handled so masterfully involve only one missile launch at a time. Each of these rockets is specially prepared and individually installed on the launch pad several weeks before blastoff. Each then receives the almost undivided attention of the entire multibillion-dollar worldwide NASA complex, with its tens of thousands of scientists and technicians. Finally, each rocket is subject to a highly elaborate countdown of 190 hours—with several built-in "hold" periods—before it is launched.

I say that it is not good thinking to draw general comparisons and hold presumptions from the admittedly spectac-

August 4, 1969

lar successes of the NASA manned space programs and apply them to a system which, by contrast, would involve literally hundreds of highly sophisticated rockets, each one attuned to a hair-trigger where the mere concepts of "count-down" and a "hold" is totally self-defeating.

Fourteenth. I take issue with the argument of those who suggest that although Safeguard may be useless against a Soviet first strike, it is nonetheless a good investment against the possibility of a Red Chinese first strike.

The military and strategic facts of life do not support this sort of logic. In the first place a Chinese attack would be a "madman" attack, conducted with the knowledge that massive retaliation on China would result. In such a situation, the Chinese would not have the capacity to diminish our retaliatory capacity to any significant extent, if at all, and would instead try to devastate as much of our population, our industry and our commerce as possible.

That kind of attack would be launched at our coastal areas where most of our large cities are situated and where huge amounts of our industry and commerce is to be found. The attack would come not from a handful of ICBM's that are projected for the Chinese arsenal in the mid-1970's but from a handful of submarines or even freighters or fishing vessels—or a combination of all three—stationed right off our coasts in international waters.

In such a situation, even obsolete or obsolescent subsonic, short-ranged missiles could be used with virtually no warning at all. Under these conditions, Safeguard would be totally useless. There might be some other defense against such a sea-based coastal attack; but whatever that may be, it has nothing to do with Safeguard. Since this system cannot be linked realistically to the kind of attack that we might logically expect from the Red Chinese, proponents should not be allowed to justify it on that basis.

May I point out, parenthetically, that one of the factors which originally caused me to question the feasibility of the Safeguard system was the apparent inability of its proponents to state clearly the kind of attack against which it is supposed to protect and by precisely whom this attack is to be launched. The illogic of linking Safeguard to a Red Chinese attack describes eloquently the illogic of Safeguard itself.

Finally, I want to comment on the cold war aspects of the ABM program. I make these observations in view of the urgent need I see for slowing down the arms race and for cooling down world tensions, the alternative to which is an intensification of the cold war and a further polarization of the peoples of the world into hostile camps bent on mutual destruction.

As I have tried to indicate at several points in this address, I feel that both we and the U.S.S.R. have developed nuclear forces of such fearful potential that neither of us will now or in the foreseeable future risk atomic war.

If this is a correct conclusion, then the contest between the free world and

the Communist world will be won—or lost—in the battle for men's minds—on the battlefields of ideas, of economics, of internal progress, and of fiscal stability.

As I see it, we cannot hope to defeat communism militarily because to do so would be to invite our own destruction as well. That being the case, we should look for nonmilitary means of winning this competition.

On five different occasions in recent years, I have visited Russia and have seen in the Russian people the best bet for our success over the Soviet system. Despite the fact that the U.S.S.R. remains a dictatorship, it is not and cannot be completely unresponsive to the thinking of the Russian people. They are the only ones who can—and will, if we help them—change the face of the Soviet communism and help make the world a safer place in which to live.

I am not one of those who believes that communism will never change and that the U.S.S.R. will forever be the same society over which Stalin presided. My five visits to Russia since 1955 have proved to me that there has indeed been great change.

I know, too, that there is potential for much more change among a people only 5 percent of whom are members of the Communism Party, almost all of whom are educated, and most of whom—(like their restless neighbors in Eastern Europe—are enough like us in their human characteristics and aspirations to be our potential allies—if we will only find some way to bring them into the mainstream of Western civilization and show them the superior system we have in comparison to the one under which they now exist.

In these circumstances, the real battle against communism will not be won by ABM systems or by how much more "overkill" we can develop. It will be won or lost—on the battlefield of ideas, of economics, of internal progress, and development and of fiscal stability. If in the process of chasing the dream—the perhaps impossible dream of nuclear invulnerability—we wreck our economy, unbalance our overall military posture, and distract ourselves from the true nature of the competition, then communism may well win by default over the forces of individual liberty, of free enterprise, and of self-determination.

In conclusion, the argument I am making is that there is a point at which the proliferation of nuclear weaponry becomes useless at best and counterproductive at worst. I explained earlier how ABM systems will have a tendency to multiply offensive weapons deployment beyond all reason, thus adding to the dilemma rather than detracting from it. I would, therefore, like to see more of our attention directed toward the non-military aspects of the competition with the U.S.S.R., for that is where our real strength lies—and where the real Soviet weakness lies.

As strong as Russia is militarily, her Communist government could probably not survive the effects of a few weeks or months of a free press or freedom of speech as we know it; yet we are spending no money, no time, and no effort

on strategy aimed at promoting the growth of a free press or of free speech in Russia. Perhaps such an effort would not be fruitful; but in terms of the potential benefits, it would be at least worth an effort. At least it would point us in the right direction in our efforts to undo communism, rather than up the blind alley which is being suggested by proponents of Safeguard.

As many nuclear bombs as the Soviets have, their whole economic system could be transformed by increased demands by their people for a broad system of work incentives; yet we are doing next to nothing, either in terms of brain power or money, to encourage this movement within the U.S.S.R. What is happening there in the line of economic transformation seems almost to occur despite us rather than as a result of our encouragement.

As challenging as the U.S.S.R. has become politically, scientifically, and economically, we fail to recognize and to act on the one major flaw by which the whole system might be made to crumble. That flaw is the flaw of communism itself; namely, its incapacity to offer freedom, civil liberties, and the rights of self-determination to the people without bringing about its own destruction.

If, indeed, there is such a vulnerable spot in the Soviet armor, we must direct our efforts, our talents, and our energies toward that spot. We must somehow create an atmosphere in which we can show the Russian people the benefits of our free-world institutions—material, spiritual, social, economic, and governmental and they in turn will defeat communism for us, not by revolution, but by the constant pressure of gradual demands which, when answered, will cause Russia to outgrow her Communist system and diminish her threat to our way of life.

Contrary to popular notions of the professional anti-Communists, I picture such a development as not only possible but almost inevitable in a basically wealthy and educated nation such as Russia, if we will only stoke the fires of freedom and human rights that already reside in the hearts of the people.

Mr. President, I should like to add at this point that in my visits to Russia on 5 different occasions, I could note the differences that have accrued from year to year.

When Stalin grew to power, he grew in the midst of ignorance, want, and poverty; but that situation no longer exists in Russia. Today I would say that 95 percent, or perhaps more, of Russian adults can read and write; and they are becoming curious. They want to know what we are doing, and why it is that they do not prosper as much as we do.

As I have stated, that situation is going to continue to evolve to our advantage, and all we need to do is encourage it. I sincerely believe that the Russian people, on the whole, do not want war any more than we do. I heard on the radio awhile ago that President Nixon used almost the identical words I have been using now for the past 10 or 12 years as to the possibilities of our

living side by side with the Russians, without in any manner embracing any part of their system.

It should be clear from what I have said here that my opposition to deployment of Safeguard is not intended as an appeasement of communism. I abhor it and want to see it extinguished from this planet. Actually, what I am searching for is a more effective and more realistic sort of anticommunism than "ABM-ism" or "overkill-ism."

My complaint is that the narrow, unimaginative, type of anticommunism we practice today fails even to take into account the essential nature of the cold war; namely, the fact that it is a "battle for men's minds." We not only lack a positive policy for winning the minds and the sentiments of the Russian people, but we seem to follow policies at times which deliberately and needlessly tend to drive them into the arms of their Soviet masters by isolating them and alienating them from the influences of Western civilization and current events.

As long as we limit ourselves to a narrow policy of military confrontation and arms competition with the U.S.S.R., the best we can hope for is a frustrating, costly, and highly dangerous "coexistence" with communism. At a cost of \$80 to \$100 billion a year this sort of perpetual coexistence with communism will mean the eventual downfall of the American economy and the American morale.

In the 25 years since the end of World War II, we have spent approximately a trillion dollars to build up our military might and to protect our territory and the territory of our allies from attack by the Communists. I feel that the tremendous overkill we now possess in the form of more than 10,000 nuclear warheads which can be delivered from submarines, aircraft carriers, underground ICBM missile silos, mobile missile carriers, and by supersonic bombers and rocket bases scattered all around the world is sufficient to insure us against a first-strike attack by anyone but an absolute madman.

Since the Safeguard ABM system is no deterrent to a madman, it does not, in my opinion, add meaningfully to the deterrent effect of the vast array of armaments I mentioned above. We should not upset our economy to set up an imaginary defense against a madman who probably does not exist—and who, if he does exist, cannot be defended against by present concepts of ABM.

THE H-BOMB CONTROVERSY AND THE ABM CONTROVERSY: AN ANALOGY AND THE LESSONS

Mr. DODD. Mr. President, more than one observer has made the point that there is a remarkable analogy between the debate surrounding the ABM decision today and the debate that raged inside the administration around the decision to build the hydrogen bomb in 1949-50.

For example, columnist Joseph Alsop has pointed out that in the debate over the development of the H-bomb in the late forties:

The prime arguments against the H-bomb that were used by Dr. J. Robert Oppenheimer were precisely the arguments now being used by the ABM's scientist-opponents. Oppen-

heimer said: (a) that the H-bomb would not work; (b) that it would be inordinately expensive to develop; (c) that development would only increase the instability of the world balance of power. . . . As anyone can now see, he was nonetheless dead wrong on all three points. Later he admitted as much.

Alsop later asked Oppenheimer why he has been so wrong in saying that the H-bomb would not work, and Oppenheimer replied:

I guess I concluded it wouldn't work because I wanted it so much not to work.

In the recent ABM book which they edited and to which they contributed, Dr. Jerome Wiesner and Mr. Abram Chayes denied that there was any basic analogy between the ABM controversy and the H-bomb controversy. This is what they said:

It is necessary to be clear about the kind of question here involved. Some people have thought it analogous to the technical issues surrounding the decision to go forward with the development of the hydrogen bomb. In that instance, it is pointed out, a substantial and respected portion of the scientific community opposed a high-priority effort to develop the H-bomb. But in the hydrogen bomb controversy the scientific issue was whether a specific design concept could in principle ever be developed into a workable weapon. That question could be and was resolved by additional theoretical calculations; and, in fact, though this is not generally appreciated, the original concept was demonstrated to be unworkable.

Because I thought it important to determine whether there is a valid analogy between the ABM and H-bomb controversies, I wrote parallel letters to Dr. Wiesner and Mr. Chayes, in which I posed the following question:

Could you give me the source or sources for your statement that there was little scientific controversy over the program for production and deployment of hydrogen weapons, and that the real issue in the controversy was "whether a specific design concept could in principle ever be developed into a workable weapon"?

In addition to writing to Messrs. Wiesner and Chayes, I also wrote letters to Dr. Edward Teller and Adm. Lewis Strauss, former Chairman of the Atomic Energy Commission, asking them for their comments on the statement made by Chayes and Wiesner, on the question of whether or not there exists an analogy, in their judgment, between the ABM debate and the H-bomb debate.

I also checked back through the record of the Atomic Energy Commission and through the literature dealing with the story of the H-bomb.

My research and the replies I received convinced me that the parallel between the arguments offered against the H-bomb in the late forties and the arguments today being advanced against the deployment of the Safeguard ABM system is even more marked than Mr. Alsop indicated in his column.

Among other things, it was argued:

First, that our development of the H-bomb would escalate the arms race by encouraging the Soviets to match our development;

Second, that it would make it more difficult to achieve any meaningful agreement with the Russians on arms control;

Third, that it would make nuclear war more likely rather than less likely;

Fourth, that we should delay embarking on the H-bomb program while we sounded out the Russians on arms control; and

Fifth, that, in any case, 1 or 2 years' delay would not make any serious difference.

One need only substitute the word ABM for H-bomb to realize the amazing and frightening similarity between today's catalog of anti-ABM arguments and the 1949 catalog of anti-H-bomb arguments.

The five-page joint letter which I received from Messrs. Wiesner and Chayes in my reply to my query made no concessions, however, to the existence of an analogy between the H-bomb controversy and the ABM controversy.

Instead, they repeated their statement that "in the hydrogen bomb controversy the scientific issue was whether a specific design concept could ever be developed into a workable weapon."

They further stated that the October 29, 1949, report of the General Advisory Committee on the Atomic Energy Commission "only opposed—partly on extra-scientific grounds—a crash program for the development of the 'super,' based on the design concept then available."

The statement by Dr. Wiesner and Mr. Chayes that the central issue in the hydrogen bomb controversy had to do with the feasibility of the design concept originally proposed, is in such flagrant contradiction with the public record that it is hard to believe their error was a product of simple ignorance.

I leave it to others to draw their own conclusions from the facts and the documents I shall here set forth.

One can only hope that they were somewhat less reckless with their facts where the facts are not a matter of unchallengeable public record.

THE REAL HISTORY OF THE H-BOMB CONTROVERSY

In his reply to my letter, Admiral Strauss asserted:

There are striking parallels between the debate on the ABM and the debate on the fusion bomb ten years ago.

Recapitulating, point by point, the arguments that were made against the H-bomb program by the General Advisory Committee scientists, Admiral Strauss added:

These points are not in accord with the emphasis in the book [the Wiesner-Chayes book] that "the scientific issue" concerns only the feasibility of an initial design concept. Another design concept proved feasible, but it would not have been found or, if found, would not have been developed, had the opponents of the hydrogen bomb succeeded in persuading the President to declare against it as a weapon. The principle which clearly guided him—that the United States could not afford to be less well armed than a potential enemy—has a modern corollary. We cannot afford to be less well defended than a potential enemy.

Dr. Teller in his reply to me confirmed that there had been some differences over design. He said that, while it was correct that a new concept had been proposed and was eventually demon-

strated to be workable, it was "an oversimplification to state, as the Wiesner-Chayes report does, that "the original concept was demonstrated to be unworkable."

Dr. Teller's letter made it clear, however, that the vigorous debate in the nuclear community during the latter part of 1949, had to do essentially with the question of whether or not we should make an effort to produce the H-bomb.

That the accounts given by Admiral Strauss and Dr. Teller are basically accurate is established by the now-public record of the historic meeting of the General Advisory Committee of the Atomic Energy Commission on October 29, 1949.

The report adopted unanimously at this meeting—Dr. Seaborg was absent—agreed that "an imaginative and concerted attack on the problem has a better than even chance of producing the weapons." The GAC members, however, opposed the effort to develop the H-bomb on essentially moral grounds.

We all hope—

Read the report—

that by one means or another, the development of these weapons can be avoided. We are all reluctant to see the United States take the initiative in precipitating this development. We are all agreed that it would be wrong at the present moment to commit ourselves to an all-out effort toward its development.

That the members of the General Advisory Committee were moved far more by moral and ethical considerations than by any scientific considerations, was further emphasized in two supplementary statements to the main report, one signed by five of the members of the Committee and the other one by two of them.

The majority supplement said in part:

In determining not to proceed to develop the Super-bomb, we see a unique opportunity of providing by example some limitation on the totality of war and thus eliminating the fear and arousing the hopes of mankind.

The language of the minority supplement was even more imperative. Let me quote one paragraph from it:

The fact that no limits exist to the destructiveness of this weapon makes its very existence and the knowledge of its construction a danger to humanity as a whole. It is necessarily an evil thing considered in any light. For these reasons, we believe it important for the President of the U.S. to tell the American public and the world we think it wrong on fundamental ethical principles to initiate the development of such a weapon.

Fortunately, for the free world, the attitude of the General Advisory Committee was not shared by Dr. Edward Teller, Dr. Ernest Lawrence, and a handful of other scientists. They carried their arguments to the Atomic Energy Commission and to Joint Committee on Atomic Energy and to President Truman himself.

Their viewpoint was supported in the Atomic Energy Commission initially only by Adm. Lewis Strauss and by Gordon Dean. It was only toward the very end that they were able to enlist the support of David Lilienthal, the chairman of the Commission.

Senator Brian McMahon, of Connecticut, the Chairman of the Joint Committee on Atomic Energy, was one of the first to accept the imperative logic of the argument that we could not afford to let the Russians beat us to the H-bomb without gravely imperiling our own security. In this view, he was joined by other members of the Joint Committee.

I might say parenthetically at this point that my knowledge of the H-bomb conflict is not based entirely on the historical documentation. Both Brian McMahon and Gordon Dean were old personal friends: McMahon and I had served together in the Department of Justice, while Dean had been with me at the Nuremberg trials. And on more than one occasion when I came to Washington in 1949, McMahon and Dean discussed the matter with me and told me of their concern and of the problems they were having.

Even at the Pentagon, Secretary of Defense Louis Johnson was still disposed to question whether the Soviet Union had really exploded an A-bomb in September 1949; and Johnson, too, until the last minute, argued against the effort to make the H-bomb.

Within the State Department a battle also raged.

George Kennan, director of the policy planning staff, led the forces opposed to the H-bomb project. In a 128-page memorandum which he submitted to the Secretary of State on December 15, 1949, he argued that the Soviet Union would not deliberately initiate atomic war, and he thought the Soviet Union would not proceed with thermonuclear weapons program if we did not.

It is interesting to note, parenthetically, that Kennan had offered a quite different estimate of the Soviets in 1945, when he opposed sharing atomic energy knowledge with them. According to his memoirs, he wrote the following dispatch in December of 1945:

There is nothing—I repeat nothing—in the history of the Soviet regime which would justify us in assuming that the men who are now in power in Russia . . . would hesitate for a moment to apply this power against us if by so doing they thought that they would materially improve their own power position in the world.

Kennan's appraisal and that of the General Advisory Committee of the Atomic Energy Commission was opposed within the Department by Secretary of State Dean Acheson, Paul Nitze, and several other key officials.

At Acheson's request, a report was prepared which concluded that we should proceed to test the feasibility of developing an H-bomb because our national security would be gravely imperiled if we did not do so. The report called for a continued effort to achieve agreement on the international control of atomic energy. But it warned:

The necessary negotiations probably could not be completed in less than a year and a half to two years. . . . to delay an accelerated program of development for such a period in the absence of adequate assurance that work in the Soviet Union has been similarly delayed, would measurably increase the prospect of prior Soviet possession of thermonuclear weapons.

On January 27, 1950, the counselor of the British Embassy asked for an urgent meeting with Undersecretary Robert Murphy, and informed him that Dr. Klaus Fuchs, who had worked at Los Alamos from 1942 to 1946, and who possessed complete knowledge of all our thermonuclear research during that time, had admitted that he had for many years been a Soviet spy.

Against this background, on January 31, Acheson, now joined by Johnson and, reluctantly, by Lilienthal, presented to President Truman a recommendation that the United States proceed with work on the H-bomb.

This report culminated the work of a special committee of the National Security Council created nearly a year earlier under Acheson's chairmanship to consider nuclear policy.

Mr. TOWER. Mr. President, will the Senator yield for an observation?

Mr. DODD. Yes; I am happy to yield to the distinguished Senator from Texas.

Mr. TOWER. I commend the distinguished Senator from Connecticut for his historical recitation. I think it is vitally pertinent to this debate. I express, with him, the hope that all Senators will read these remarks in the Record. I think they give us cause for serious reflection.

Mr. DODD. I thank the Senator from Texas for his remarks. They please me very much. I have noticed that he has been listening carefully to what I have said. In my limited way, I have tried to spread on the Record some facts which I think ought to be called to the attention of every Senator.

There is no Member of this body who is more capable of handling facts than the Senator from Texas (Mr. TOWER). I am pleased that he has taken note of what I have said.

To come back to my historical recitation, it was fortunate that President Truman was a leader who was singularly free of fuzzy thinking about Communist intentions. Rejecting the unanimous advice of the General Advisory Committee, and knowing that his decision would be opposed by a majority of the scientific community, Truman decided to accept the recommendation of the final Acheson-Lilienthal-Johnson paper, and to proceed immediately with the effort to produce the H-bomb.

In retrospect it is frightening to think of what might have happened if the opinion of the General Advisory Committee of the Atomic Energy Commission and of the majority of the scientific community had prevailed. For then the Soviets might have beat us to the H-bomb by as much as 3 or 4 years.

Even with President Truman's fearless and timely decision to proceed, our H-bomb was perfected and added to our deterrent arsenal only in the nick of time.

The common impression is that the United States got the H-bomb before the Soviet Union. Actually, this is not entirely accurate.

The United States exploded its first hydrogen test device on November 1, 1952, in Operation Ivy. But this was not a deliverable device.

August 4, 1969

CONGRESSIONAL RECORD — SENATE

Our first deliverable weapon was not exploded until March 1, 1954, in Operation Castle.

Meanwhile, in early August 1953, the Soviets had staged their first thermonuclear explosion, which, according to our intelligence, did involve a weapon capable of delivery.

It was thanks only to a massive effort and to the inherent superiority of American technology that we were able to pull ahead of the Soviets in thermonuclear weapons over the following years.

It is also frightening to think of what might have happened had the decision to build the H-bomb been subjected to the prolonged emotional discussion in Congress and in public that has characterized the debate of the decision to deploy Safeguard.

Hundreds of thousands of letters, I am certain, would have descended on Congress urging them not to escalate the arms race and not to squander our national resources on additional weapons of mass destruction.

Many an honorable Member of Congress, unquestionably, would have been impressed by the arguments of the distinguished scientists who composed the General Advisory Committee and would have taken the floor to argue that we should heed the advice of the majority of our scientific community.

And no one can say for certain what the outcome of such an emotionally charged debate would have been.

I do not argue against public debate. I am all in favor of it.

But I do believe that the public debate we are today conducting would be enormously enhanced in quality if, in making our decisions for the future, we stopped to examine the lessons of the past.

That is why I have considered it important to recount the H-bomb history, with a view to determining just how much analogy there is between today's debate on the ABM and the debate that took place almost exactly 20 years ago over the decision to build the hydrogen bomb.

I believe that this review of the essential issues in the H-bomb controversy has more than passing significance in the controversy over the ABM system.

What the H-bomb controversy established is that many of the most distinguished members of our scientific community, out of the most laudable ethical motivations, are disposed to close their eyes to the harsh realities of the cold war, to credit the Soviets with a far greater degree of good faith than any reading of the record would warrant, and to persist in the dogma that restraint on our side will inevitably result in parallel restraint on the Soviet side.

The dogmatic nature of this trustfulness vis-a-vis the Soviets is amply illustrated by a statement made by Dr. Hans Bethe in an Atlantic Monthly article dealing with the Geneva test ban negotiations. Dr. Bethe said:

I had the doubtful honor of presenting the theory of the big hole to the Russians at Geneva in November, 1959. I felt deeply embarrassed in so doing, because it implied that we considered the Russians capable of cheating on a massive scale. I think that they

would have been quite justified if they had considered this an insult and had walked out of the negotiations in disgust.

This statement came from a man whose credentials include a Nobel Prize for physics and the position of chief scientific adviser to the President, a man who was a vocal opponent of the H-bomb project and who has in recent years been just as vocal in his opposition to the ABM.

To justify their naive political and ethical dogmas, scientists like Oppenheimer and Bethe frequently invoked scientific rationalizations which, in retrospect, certainly did not reflect credit on their judgment.

About the H-bomb, for example, it is reported that Hans Bethe once said:

It cannot be made and should not be made.

It appears that, having decided that the H-bomb "should not be made," he deduced from this moral proposition the scientific conclusion that it "could not be made."

America has every reason to be proud of the accomplishments of its scientific community and of the countless benefits their collective efforts have conferred on mankind. But when scientists assume that their expertise in their own field of specialization automatically qualifies them as experts in the field of politics, they more often than not wind up by making themselves look ridiculous or, worse still, by damaging the cause they honestly desire to serve.

At the height of the debate over the H-bomb, my good friend, Senator Brian McMahon, once said to me that in his opinion Oppenheimer and his associates had gone far beyond their area of scientific competence in opposing the H-bomb on moral and political grounds. For this transgression, he said, they would suffer in the judgment of history.

McMahon's opinion turned out to be prophetic.

One of the chief lessons to be learned from the H-bomb controversy is encompassed in the two rules to which I referred in my statement of last Friday.

These are the rules:

Rule No. 1: In assessing the potential of any important new field of technology involving new processes or systems—*half the scientists, or at least a large fraction, are usually wrong.*

Rule No. 2: If a significant percentage of scientists agree, or sometimes if only one or two agree, that something new can be done—*it can be.*

In my statement on the ABM controversy Friday and today, I have not engaged in any numbers games or presumed to make technological evaluations. I do not feel competent to do so. But based on past experience, I believe that if 50 percent of the experts say that the ABM will not work, and the other 50 percent say it will work, then the odds are heavily in favor of the group of experts who say it will work.

With this, I rest my case.

Mr. President, I ask unanimous consent to insert in the Record at this point my exchange of correspondence with Messrs. Wiesner and Chayes, Adm. Lewis Strauss, and Dr. Edward Teller.

I also ask unanimous consent to insert

in the Record the complete text of an article which appeared in Life magazine for September 6, 1954, under the caption, "Dr. Edward Teller's Magnificent Obession."

There being no objection, the material was ordered to be printed in the Record, as follows:

MAY 20, 1969.

Dr. JEROME B. WIESNER,
*Massachusetts Institute of Technology,
Cambridge, Mass.*

DEAR DR. WIESNER: In the study of the ABM which you and Mr. Abram Chayes prepared at the request of Senator Kennedy, the opening overview makes the point that there is no real analogy between the ABM debate and the H-bomb controversy of the late forties. This point is made in the following passage of your study, which appears on page 14:

"It is necessary to be clear about the kind of question here involved. Some people have thought it analogous to the technical issues surrounding the decision to go forward with the development of the hydrogen bomb. In that instance, it is pointed out, a substantial and respected portion of the scientific community opposed a high-priority effort to develop the H-bomb. But in the hydrogen bomb controversy the scientific issue was whether a specific design concept could in principle ever be developed into a workable weapon. That question could be and was resolved by additional theoretical calculations; and in fact, though this is not generally appreciated, the original concept was demonstrated to be unworkable. As a result of this subsequent analysis, a new approach was developed which was found to be feasible, first by theoretical and laboratory studies and ultimately by test explosions. The program for production and deployment of hydrogen weapons, about which there was little scientific controversy, did not go forward until these theoretical issues had been resolved."

Because I think it is important to determine whether or not there is a valid analogy between the ABM controversy and the H-bomb controversy, I had planned to ask certain questions of you and Dr. Teller during the course of last week's hearing. As matters turned out, there was not time for these questions.

I am now, therefore, taking the liberty of addressing to you by letter the basic question which I planned to ask of you at the hearing: "Could you give me the source or sources for your statement that there was little scientific controversy over the program for production and deployment of hydrogen weapons, and that the real issue in the controversy was 'whether a specific design concept could in principle ever be developed into a workable weapon?'"

I would be grateful if you could let me have your reply to this question by immediate return mail.

Sincerely yours,

THOMAS J. DODD.

(NOTE.—Parallel letter sent to Mr. Abram Chayes.)

LAW SCHOOL OF HARVARD UNIVERSITY,
Cambridge, Mass., May 26, 1969.

Senator THOMAS J. DODD,
*Senate Office Building,
Washington, D.C.*

DEAR SENATOR DODD: This is in reply to your letters of May 20, 1969 to both of us. You ask for the sources of the remarks on the hydrogen bomb controversy in our recent study of the ABM. We are glad to learn of your interest in this matter, and will reply in this joint letter.

One source for our remarks was our own general information. Also, the contrast between the present controversy with respect

August 4, 1969

to the Safeguard deployment and that concerning the H-bomb 20 years ago was illuminated for us by Dr. I. I. Rabi. He drew our attention to his testimony, as published in the A.E.C. publication "In the Matter of J. Robert Oppenheimer," transcript of hearing before the Personnel Security Board, April 12 through May 6, 1954, [Referred to below as JRO]. These hearings, together with the article "Thermonuclear Devices" by S. M. Ulam, in "Perspectives in Modern Physics" (John Wiley, Inc., New York, 1966), provide the necessary technical background for our remarks. To be specific,

(1) With regard to our statement in the hydrogen bomb controversy the scientific issue was whether a specific design concept could ever be developed into a workable weapon: Gordon Dean testifies at p. 302 of JRO that "The only thing which we knew about in this field at that time [autumn 1949] was one method of approach, which unfortunately if it is to remain classified, I cannot describe . . ." Oppenheimer testifies at p. 78 of JRO that "We had in mind, but I don't think we had clearly enough in mind, that we were talking about a single design, which was in its essence frozen, and that the possibility did not occur to us very strongly that there might be quite other ways of going about it. Our report [the A.E.C. General Advisory Committee report of October 29, 1949] had a single structure in mind—or almost a single structure. . . ." For further background, see the testimony of Rabi, Norris Bradbury, and Oppenheimer on pages 454-455, 487, and 952 of JRO. It must be noted here that the GAC report only opposed (partly on extra-scientific grounds) a crash program for the development of the "super", based on the design concept then available. It did not predict that no hydrogen bomb could ever be produced; quite the reverse, it said that "an imaginative and concerted attack on the problem has a better than even chance of producing the weapon within 5 years."

(2) With regard to our statement that the original concept was demonstrated to be unworkable; Ulam's article states at p. 596 that even before the directive of President Truman in January 1950 to proceed with the planning and construction of an H-bomb, "certain doubts had arisen about the practicability of the schemes outlined during the war and elaborated in subsequent work. A very detailed and comprehensive calculation was planned to be performed on the newly available electronic computing machines of the whole course of the ignition process of the thermonuclear reaction and its subsequent course. . . . Quite independently, however, the present writer, in collaboration with C. J. Everett, had undertaken the calculation of the ignition process and the following course of the thermonuclear reaction by using numerous simplifications and guesses as to the values of certain multidimensional integrals defining the distribution of neutrons, and the products of reaction during the changing geometry of the mass of the active material. These calculations were performed with the aid of computers working by hand (i.e., with tables and desk computers). The results of this work (which are described in several reports—still classified) showed a very "weak" process. The mechanism of ignition, as considered in the existing schemata, was submarginal and led to disappointingly weak initial conditions, and, after a time, to decreasing rates of reactions. Shortly after that time, a calculation was similarly performed by Fermi and the present writer; we considered the 'next' problem: Assuming that in some way an ignition of the mass of deuterium—perhaps supplemented by quantities of tritium, how would the subsequent reaction proceed in a volume of deuterium? . . . The result of this work was again quite negative in the sense of showing that, most likely, even if the initial reac-

tions were established, as in the scheme proposed, it would not continue and go anywhere near to completion or even sizable burning of the remaining material. Shortly afterward, the calculations which were proceeding in the meantime on the electronic computing machines, and in which some of our intuitive arguments were replaced by a full numerical work, were completed; and the results confirmed those of the above work."

Also, Rabi testifies at p. 456 of JRO that "The subject we discussed in the 1949 meeting, that particular thing has never been made and probably never will be made, and we still don't know to this day whether something like that will function." For further background, see Oppenheimer's letter, and the testimony of Oppenheimer, Dean, and Hans Bethe, on pages 20, 251, 305, and 330 of JRO.

(3) With regard to our statement that there was little scientific controversy about the program for production and deployment that went forward after the theoretical issues were resolved: Ulam's article describes the resolution of these issues at p. 597:

"Some new combinations of ideas had to appear before the successful thermonuclear device could be designed. A Los Alamos report by Teller and the present writer outlined a new approach. The theoretical estimates and the subsequent calculations based on this scheme were far more promising; and, as is well known, successful H-bomb designs were produced and tested quite soon after the appearance of these new ideas, thanks to energetic and imaginative teamwork of a whole group of Los Alamos physicists. Subsequently, numerous technical improvements in sizes, weights, etc., were made by scientists at both Los Alamos and at Livermore."

We do not know of anyone who, after these developments, doubted on scientific grounds that a workable thermonuclear weapon could be produced and deployed. Indeed, Oppenheimer testifies at p. 248 of JRO that even before the Eniwetok test, he had informed the President that "although you could not be certain of the performance of any one design, it was virtually assured that this (a thermonuclear explosion based on the Ulam-Teller concept) could be done." For further background, see the Oppenheimer letter and testimony by T. K. Glennan and Dean on page 19, 255, and 304-305 of JRO.

We should perhaps emphasize that by "scientific controversy" we mean controversy on technical scientific issues. Scientists, like other citizens, have had and expressed a wide range of opinions on the political, ethical, economical, and strategic implications of the hydrogen bomb and other military systems. We do not think it is fruitful to speculate on possible analogies among the positions that scientists have taken on such non-scientific issues.

It may be useful if we state again our views on why there is no real analogy between the scientific or technical aspects of the H-bomb and the ABM controversies. There was a fundamental uncertainty about the H-bomb in 1949 and 1950. Oppenheimer expressed these doubts in a letter to J. B. Conant on October 21, 1949 (printed at p. 242-3 of JRO) as follows: "I am not sure that the miserable thing will work, nor that it can be gotten to a target except by ox-cart." And Rabi testifies at p. 454 of JRO that "We didn't even know (in October 1949) whether this thing contradicted the laws of physics. . . . It could have been altogether impossible." However, once calculations showed that an H-bomb could be made to work and could be carried in an airplane, there was no doubt of its military effectiveness.

In contrast, there is no fundamental scientific uncertainty about the individual components of the Safeguard system. We know that an ABM missile can intercept and de-

stroy a single re-entry vehicle fired under test conditions. As far as workability is concerned, the technical issues that the Congress must consider in its deliberations is of a far more practical nature: Can an ABM system, consisting of large numbers of missiles, radars, and advanced computers, and manned by military personnel, protect us with high reliability against a surprise attack of many ballistic missiles, using unforeseeable penetration tactics, in an environment complicated by offensive and defensive nuclear explosions? As our report shows, there is very grave doubt that it can.

We would be happy to discuss these matters further with you in Washington, at your convenience.

Very truly yours,

ABRAM CHAYES
JEROME B. WIESNER.

MAY 20, 1969.

DR. EDWARD TELLER,
Livermore Laboratory,
Livermore, Calif.

DEAR DR. TELLER: Because I think it is important to know whether or not a valid analogy can be made between the ABM controversy today and the H-bomb controversy of the late forties, I had planned to ask questions on this point of you and Dr. Wiesner during the course of last week's hearings. As matters turned out, there was no time for these questions.

I am now, therefore, talking the liberty of addressing to you by letter the basic questions which I planned to ask of you at the hearing.

In the study of the ABM which Dr. Jerome Wiesner and Mr. Abram Chayes prepared at the request of Senator Kennedy, the opening overview makes the point that there is no real analogy between the ABM debate and the H-bomb controversy of the late forties. This point is made in the following passage of the study, which appears on page 14:

"It is necessary to be clear about the kind of question here involved. Some people have thought it analogous to the technical issues surrounding the decision to go forward with the development of the hydrogen bomb. In that instance, it is pointed out, a substantial and respected portion of the scientific community opposed a high-priority effort to develop the H-bomb. But in the hydrogen bomb controversy the scientific issue was whether a specific design concept could in principle ever be developed into a workable weapon. That question could be and was resolved by additional theoretical calculations; and in fact, though this is not generally appreciated, the original concept was demonstrated to be unworkable. As a result of this subsequent analysis, a new approach was developed which was found to be feasible, first by theoretical and laboratory studies and ultimately by test explosions. The program for production and deployment of hydrogen weapons, about which there was little scientific controversy, did not go forward until these theoretical issues had been resolved."

Does the above quotation in your opinion constitute an accurate description of what was involved in the H-bomb controversy? If it does not, I would be grateful if you could provide me with your own account of the H-bomb controversy.

I would also like to ask whether you see any analogies between the current debate over the ABM in the scientific community and the previous controversy over the H-bomb within the scientific community in the late forties.

I would be grateful if you could let me have your reply to these questions by immediate return mail.

Sincerely yours,

THOMAS J. DODD.
(NOTE.—Parallel letter sent to Admiral Lewis L. Strauss.)

August 4, 1969

CONGRESSIONAL RECORD — SENATE

UNIVERSITY OF CALIFORNIA,
Livermore, Calif., May 22, 1969.

Hon. THOMAS J. DODD,
U.S. Senate,
Washington, D.C.

DEAR SENATOR DODD: Thank you for your letter of May 20. Your questions are put in that kind of clear language which makes it relatively easy to give an answer, even though the subject is somewhat involved and even though secrecy restrictions still prevail.

The statement which Wiesner and Chayes make concerning the development of the hydrogen bomb on the 14th page of their ABM study, is much too short to bring out all relevant points of that story. A somewhat more complete description is the following.

At the end of 1949, after the first successful Russian test of an atomic explosion, a question was raised in the General Advisory Committee of the Atomic Energy Commission whether or not great emphasis should be placed on the development of a thermonuclear explosive. The General Advisory Committee, whose members at that time were familiar with the plans for the hydrogen bomb, made a negative recommendation based on the argument that there was no need for further increase of the explosive power of our nuclear weapons, and also based on the argument that decision of an accelerated development on our part would have the effect of stimulating a corresponding Russian development. In the fall of 1949 the General Advisory Committee did not express any clear doubt concerning the feasibility of the hydrogen bomb.

In early 1950 President Truman decided in a manner contrary to the recommendation of the AEC, which in turn was based on the recommendation of the General Advisory Committee. President Truman issued the instruction to proceed with the completion of the work on the hydrogen bomb. Unfortunately, this instruction gave the erroneous impression that all basic problems concerning the hydrogen bomb had been resolved at that time.

After President Truman's decision, members of the General Advisory Committee, together with many other scientists, started to raise questions concerning the feasibility of the hydrogen bomb. These questions were justified insofar as serious doubts indeed remained as to the possible functioning of the original design.

In the course of the next year confidence in the original design continued to decline. Security does not permit me to give you a complete story but I may state that the words used in the Wiesner and Chayes report "the original concept was demonstrated to be unworkable" is an oversimplification.

It is correct to state that a new concept was proposed and was eventually demonstrated to be workable.

It is of some interest to state that a short period before the actual test in 1952 some of the most influential opponents of the hydrogen bomb, who had agreed that the new concept was probably feasible, proposed that the test be cancelled. They hoped for an agreement with Russia to renounce a test of the thermonuclear bomb. It should be also recalled that the first Russian big thermonuclear explosion occurred in 1953, less than one year after our own test.

Finally, it must be remembered that the success of the hydrogen bomb contributed to the interest in the development of the intercontinental ballistic missile since it became possible to expect that such missiles could become effective even if they were not very accurate. I understand that in the considerations of the von Neumann Committee which led to our first effective plans on ICBM development, Dr. Wiesner participated. I believe that Dr. Wiesner is correct in stating that there was little controversy concerning the production and deployment of hydrogen bombs.

With this historical review in mind I can now turn to the second question, whether I see any analogy between the current debate over the ABM in the scientific community and the previous controversy over the hydrogen bomb.

Analogies are always incomplete. However, it appears to me that some analogies do exist. In the first place, the original recommendation of the General Advisory Committee which stressed that a U.S. development may trigger a Russian effort, appears to be analogous to present claims that our ABM deployment would stimulate the arms race. This analogous approach on the part of some scientists is reinforced by the proposal of 1952 to abstain from the testing of hydrogen explosives by mutual agreement.

The analogy is less clear as far as the objective situation is concerned. In the hydrogen controversy the Russian development lagged behind the U.S. work by so short a period that one can hardly claim that the Russians would have abstained from the development had we withheld our own effort. In the case of the ABM debate it is known that the Russians have already deployed some ABM defenses. A claim made by Drs. Wiesner and Chayes that the Russian deployment is imitative can hardly be maintained, since so far we have not deployed a defensive system. The analogy therefore holds insofar as in both cases the assertion that American abstention would have prevented a Russian effort is incorrect. The analogy is incomplete, however, since in the case of the hydrogen controversy the Russians followed us in a short time period, while in the ABM deployment they appear to be ahead of us.

Wiesner and Chayes are correct in claiming that the analogy is far from complete, in that during the hydrogen bomb controversy the question could be answered on the basis of calculations followed by a test, while in the ABM case the functioning of a much more complicated system is in question. This circumstance emphasizes the point that the ABM debate may indeed be less easily resolved on the basis of conclusive evidence.

On the other hand, I seem to notice some analogy in the fact that in the ABM case a major portion of the scientific community is assuming that a technical development is not feasible, while a smaller number of scientists who are more closely connected with the actual problems have a more positive view of future technical possibilities. Whether or not the negative judgment of numerous scientists is connected with their wishes to limit the competitive development of arms is a question where any statement will probably be based on opinion rather than on proof.

I hope that you will find the discussion given above responsive.

I also should like to express my sincere gratitude for having created the opportunity for me to appear before Senator Gore's Committee. I share your regret that the discussion before this committee was cut short.

Sincerely yours,

EDWARD TELLER.

WASHINGTON, D.C.,
June 3, 1969.

Hon. THOMAS J. DODD,
U.S. Senate,
Washington, D.C.

DEAR SENATOR DODD: This is in reply to your letter of May 22nd concerning the ABM hearings and, more particularly, the book by Professors Wiesner and Chayes, written at the suggestion of Senator Edward Kennedy. The book attacks the proposal to deploy a specific system designed to afford a measure of defense against ballistic missiles.

In their preface, the authors state their conclusion that there is no need to deploy the system "at this time". For what could be the fatal significance of these three words, see sub-paragraph (j) below.

There are striking parallels between the current debate on the ABM and the debate on the fusion bomb ten years ago. The authors state that "For far too long they [presumably decisions in such matters] have been made largely behind closed doors." Most certainly, this was not true of the fusion bomb issue which was vigorously debated in the press as well as before the President. The argument by the opponents of the fusion bomb development was heavily weighted, in numbers of speakers and writers and was well organized, just as in the case of the opposition to the ABM today. The debate continued into the period after President Truman's decision on January 31, 1950, with the effect of persuading some men not to work on the project.

Professors Wiesner and Chayes contend that "... in the hydrogen bomb controversy the scientific issue was whether, a specific design concept could *in principle* ever be developed into a workable weapon."

Thus stated, they have speciously narrowed the issue to design. In fact, the arguments advanced by scientists opposed included "workability" (i.e., the design concept) and other scientific issues as well as military and political differences of opinion in the scientific community.

In preparing this letter, I have reviewed the Report made by the General Advisory Committee to the Atomic Energy Commission and statements of its members as individuals plus the views of other prominent scientists of the day. As you know, the Report of the General Advisory Committee was not unanimous in opposing the development, although the Commission was informed that it was. An absent member had expressed his opinion in a letter written in 1949 which remained unknown to the Commission until revealed five years later.

The reports and statements have not been declassified although participants have publicly discussed them with some freedom over the years so that it is possible to say that the following issues concerning the fusion bomb, in opposition to its development, were presented by a number of members of the scientific community:

(a) The statement above-mentioned by Professors Wiesner and Chayes that the original concept was unworkable.

(b) The strategic military value of such a weapon was questioned.

(c) The economical alternative to fission weapons was questioned.

(d) The "ethical principle" that a fusion bomb was morally worse than a fission bomb was asserted. [On the moral issue, the late Senator Brien McMahon of Connecticut, then Chairman of the Joint Congressional Committee on Atomic Energy, stated that he could see no moral dividing line between a big explosion causing heavy damage and many smaller explosions causing equal or greater damage.]

(e) It was stated that there was no foreseeable non-military applications of fusion. [Beneficial spin-off is frequently cited today as a result of research into unexplored areas, e.g., our Space program. Our new ability to make harbors, canals, reservoirs, and other engineering works with little or no objectionable radioactivity is due to the development of fusion explosives.]

(f) The danger of global pollution was cited. Some opponents of the fusion bomb asserted that the detonation of a small number, "perhaps 10", might pollute the earth's atmosphere. [The estimate was subsequently raised to 500 to 50,000.]

(g) Doubt was expressed that the Russians could produce an H-bomb within a decade, which was to say, not before 1959. [We now know from Kurchatov's biography that the Soviets were at work on the fusion bomb at least as early as we were. They had their own very competent scientists and the advantage of espionage by Fuchs and other

traitors in our laboratories. The best evidence is that they tested an H-bomb in August of 1953.]

(h) The pseudo-military judgment was expressed that if the Soviets should ever make and use the fusion bomb against us, our large stock of fission bombs would be adequate reprisal.

(i) The statement that it was quite likely that through leaks, our own research and development would stimulate and materially assist a corresponding Russian development.

(j) And finally, that our overall national position would be weakened, not strengthened, by committing ourselves to such a program "at this time." This phrase, which also appears in the Wiesner-Chayes preface, is worthy of note for, as matters turned out, there was no time left in 1949-50. Had the President not made the decision to proceed with the development of the H-bomb, the Soviets, being well on their way to it, would have had it ahead of us. Had they then, relying on our unilateral renunciation, decided not to reveal their hand (as has been their custom with other developments) by refraining from testing or by testing only to prove a small hydrogen component, we would have known nothing of their success and their qualitative superiority until a possible collision. By that time, it would have been too late for us. "At this time" would have been a policy of fatal procrastination.

These points are not in accord with the emphasis in the book that "the scientific issue" concerns only the feasibility of an initial design concept. Another design concept proved feasible, but it would not have been found or, if found, would not have been developed had the opponents of the hydrogen bomb succeeded in persuading the President to declare against it as a weapon. The principle which clearly guided him—that the United States could not afford to be less well armed than a potential enemy—has a modern corollary. We cannot afford to be less well defended than a potential enemy.

Faithfully yours,

LEWIS L. STRAUSS.

DR. EDWARD TELLER'S MAGNIFICENT OBSESSION; STORY BEHIND THE H-BOMB IS ONE OF A DEDICATED, PATRIOTIC MAN OVERCOMING HIGH-LEVEL OPPOSITION

(By Robert Coughlan)

From the testimony in *The Matter of J. Robert Oppenheimer* and the miles of comment on it in the press, it is well known that at the end of 1949 a great secret debate occurred in the government and among the atomic scientists about whether this country should try to build the hydrogen, or "super" bomb; that Dr. Oppenheimer and the strong faction he led opposed and temporarily prevented it; and that another, smaller faction defeated them with the result that the H-bomb was achieved in 1952—barely nine months before the Russians fired a hydrogen device of their own.

Yet throughout these critical events, with the world balance of power and perhaps the political fate of mankind hinging on the outcome, the leading protagonist remained mostly invisible. Lately, it is true, Dr. Edward Teller's name has been in the papers; he is even recognized, although perhaps still not very widely, as "the father of the H-bomb." But as to who he is, where he came from and how he happened to achieve this extraordinary paternity—few even of the other actors in the drama could give a very full answer.

There have been good reasons for this. National security has required that his work be surrounded by secrecy. For reasons of his own Teller has welcomed anonymity. He still would very much prefer it. But now that the H-bomb is an accomplished fact, and now that the Oppenheimer affair has dragged

Teller from the wings to a share of the spotlight, neither set of reasons is as valid as before. He has therefore given his cooperation during the preparation of this article—with the request that he not be given too much credit.

Very well: it can be said at once that many people at Los Alamos and Washington deserve a substantial share of it. Teller's role nevertheless was unique, indispensable and decisive. Without it the chances are quite strong that the U.S. would not have the H-bomb in deliverable form today. In that event, in the well-informed judgment of President Eisenhower, "Soviet power would today be on the march in every quarter of the globe." Teller not only produced the brilliant idea which converted the H-bomb from a monstrous "gadget" to a versatile weapon. He also, by an almost fanatic determination, kept the idea of an H-bomb from dying of pure neglect.

And among all the improbable events that led to this improbable creation, Teller's obsessiveness has struck some people as the most farfetched. An old friend said a few weeks ago, "I still don't understand it. Edward's monomania about the H-bomb simply leaves me mystified—it was so out of character with everything he had been. He was always so interested in everything. His trouble was lack of concentration on any one problem. Then this thing hit him and he seemingly couldn't let loose of it."

Teller's obsession, as it became fully developed, was fed from many sources: by his childhood and youth in Europe, by his personal philosophy, his political beliefs and by innate traits of character. A different mixture would have produced a different result: The key ingredient of the H-bomb is not, therefore, a certain unmentionable combination of ingredients. It is, instead, the even more complex compound comprising Edward Teller. He cannot be defined, but at least he can be described.

Physically and temperamentally he has little in common with the popular image of the calm, detached, essentially impersonal Great Scientist. His angular face is animated and his large blue eyes, under massive and expressive eyebrows, are alert, intent and often twinkling with humor. He is cheerfully pragmatic and eloquently witty, with an unabashed appreciation of his own jokes. His laughter begins from deep inside, shaking him as if he were in an incipient fit, and rises in a series of choking, half-shattered yelps until everyone within a hundred yards is made aware that Teller has just said or heard something entertaining. He is also a pianist, a poker player, a rhymer, a raconteur, a mathematician, and an avid ping-pong player and mountain hiker despite the loss of his right foot. This occurred when he was 20 and, as a student in Munich, was competing in the local sport of jumping off moving streetcars; he slipped under a wheel, and the foot had to be amputated. His limp is on the order of his accent—only enough to add novelty—and is no impediment as he lopes along with his air of purposeful energy, his dark hair and eclectic clothing always a little disarranged, emanating a diffused human warmth and an attentive interest in whomever he meets.

By common agreement among his colleagues he is a genius. He not only knows a tremendous amount, seeming to remember everything he has ever learned, but is able to correlate his information on the run. Dr. Maria Mayer, a physicist and a personal friend of long standing, recalls the first time she was ever really awed by Teller's mind. She had joined the Manhattan District and was asked to calculate the chemical properties of a certain substance. But this required knowing the mechanical properties of its molecules. "They could be measured, but that would have taken several months. So someone said, 'Let's get Teller in and make him guess the data.' We got him into a room and

locked the door, so no one else could get at him, and he asked questions and did some figuring at the blackboard. He got the answer in about two hours, not entirely accurately, of course, but—as we found out when we got around to verifying them—close enough for the purpose." "There is no one who equals him for sheer speed of thought," Dr. James Arnold of Chicago says. "There may be better scientists, but none more brilliant. You always find him a thousand feet ahead of you."

Teller's mental atheletism, although the flashiest part of his equipment as a practicing genius, is far from being the most important part. Most of his calculations are not quite accurate—not because he lacks respect for accuracy but because he lacks the patience to spend his own time rounding off the figures. A friend says, "What Edward can't carry in his head and solve in his head, he doesn't want to bother with." He dislikes routine and method whether they affect him personally or professionally. He is unhappy and ill at ease under any imposed disciplines. This maverick streak, combined with intense gregariousness and even more intense intellectual curiosity, has given his genius some striking twists and some extra dimensions.

For instance, although Teller is one of the world's greatest theoretical physicists, he has published nearly all of his many scientific papers with collaborators. Dr. Frederic de Hoffmann, who has been his deputy and closest associate at Los Alamos, has described how this works: "Edward isn't the cloistered kind of scientist. He gets his ideas in conversation and develops them by trying them out on people. We were coming back from Europe on the *Ile de France* and I was standing in the ship's nightclub when he came up and said, 'Freddie, I think I have an idea.' It was something he'd just thought of about magnetohydrodynamics. I was a bachelor then and I'd located several good-looking girls on the ship, but I knew what I had to do, so I disappeared and started working on the calculations. I'd get something finished and start prowling on the deck again when Edward would turn up out of the night and we'd walk the deck together while he talked and I was the brick wall he was bouncing these things off of. By the end of the trip we had a paper. He'd had the ideas, and I'd done some solving of equations. But he insisted that we sign in alphabetical order, which put my name first."

De Hoffmann's account is overly modest—he is a brilliant physicist in his own right—but the episode illustrates Teller's general method. He is a conceptual thinker, or, as Dr. Luis Alvarez of the University of California says, "an 'order of magnitude' man. That's his language. He's like the architect who likes to make the big drawing, the broad sketch, and not worry himself about the plumbing details."

This kind of thinking almost defines the traditional and proper role of theoretical physics, as distinguished from experimental and applied physics. The theoreticians, a small aristocracy of dealing purely in ideas, tend to regard the toilers in the latter fields as exceptionally well-educated engineers; or sometimes as mere "gadgetsers." Teller is by trade and at heart a theoretician and takes the universe for his province. But at the same time he has strong gadgeteering instincts. The result is that he is interested in everything. He has a faculty for entertaining many ideas, consequential and otherwise, at the same time, and for being almost equally fascinated by all of them. He is intellectually insatiable: as a friend has said, "All anybody has to say to Edward is, 'We've got a problem here, we need you,' and—zip! he's into it. It's helpfulness, plus maybe vanity, but mostly just curiosity."

Not all—in fact, not even most—of Teller's ideas are good, and he is often the first to recognize their flaws, interrupting himself in mid-flight to strike himself on the forehead

CONGRESSIONAL RECORD — SENATE

S 9021

and exclaim, "No! No! I'm an idiot!" But mistakes do not inhibit him. He likes to quote the dictum of Niels Bohr, the great Danish physicist, that, "An expert is a person who has found out by his own painful experience all the mistakes that one can make in a very narrow field." Teller succeeds, not only by the high average level of his ideas, but by producing them in unparalleled volume, thereby making his mistakes rapidly and becoming more and more expert. But until he or someone else can demonstrate that an idea is wrong he is infatuated with it. He is, moreover, intellectually aggressive, stubborn, and competitive. An idea is, for him, a personal antagonist which he conquers with an almost physical satisfaction.

His personal absorption in a problem or idea has a way of enveloping everyone with whom he happens to be, carrying them along, sometimes reluctantly, in the torrent of his enthusiasm. At the University of Chicago, where he taught for several years, his fellow physicists now measure enthusiasm in "Tellers," with Teller himself, of course, being the basic criterion comparable to the velocity of light. Degrees of enthusiasm are measured in millionths of "Tellers," called "micro-Tellers."

Teller is at the same time a philosopher, a moral and thoughtful man all of whose characteristics are subordinated ultimately to an attempt to understand the universe and man's position on the speck of it he occupies. But as a philosopher, as well as a scientist, he is an activist. As a human being faced with a moral or political choice, he not only makes the choice but reinforces it, if he can, with concrete effort. More than once this habit of acting on conviction has involved him in struggles with his colleagues and has made him unpopular.

All of these aspects of Teller's nature were important in making him "the father of the H-bomb." But the crucial ingredient was his attachment to the concepts of Western democracy, specifically those of the U.S., and conversely a fear that they would be destroyed; together with, perhaps, an inner, deeper and unarticulated fear of a more personal nature. His childhood and youth in Budapest, where he was born in 1908, were lived under several varieties of political tyranny, including the Communism of Bela Kun and the facism and Admiral Horthy. The sight of dead men, the insecurity of life from week to week, became an accepted part of existence. Being Jewish, the Teller family had to bear the complex malice of anti-Semitism as well. Edward Teller remembers that, by the time he was 10, he fully understood from family conversations that someday he would have to emigrate from Hungary and make his life in a politically different climate. He understood also that "the only way I'd be able to get along would be that I should be smarter than somebody else."

It was easy for him to be smarter than somebody else in mathematics, for which he showed a precocious gift. He remembers, at the age of about 6, lying awake in bed amusing himself before sleep by such exercises as calculating the number of seconds in a year. His father, a prosperous lawyer, and his mother, the daughter of a leading banker of a nearby smaller city, were part of a polished and intellectually eager upper middle class society in which one's position reflected mental and artistic attainment. So they applauded him when, for instance, at dinner one evening his father mentioned the figure "10,000," and young Edward piped, "That's 100 times 100, isn't it?" However, pleased though he was with this sign of talent, his father felt that mathematics was not practical as a life's work and urged him to compromise on something useful such as chemistry. Consequently Edward went in 1926 to the Institute of Technology at Karlsruhe and took a degree in chemical engineering, keeping mathematics as an avo-

cation. Meantime, also in 1926, had come the discovery known as quantum mechanics, a system of mathematically formulated principles which can be used to calculate the behavior of atomic particles. This, Teller says, "suddenly explained almost everything—in physics, chemistry, almost everything in the world that we had wondered about could be interpreted." He began applying it to the problems of chemistry, from which he was led naturally (the two sciences being inseparable) into physics. He became hybridized: a specialist in physical chemistry. He went on to Munich and thence to Leipzig for his Ph. D., to Copenhagen for further study under Niels Bohr and to Göttingen to teach. At this point the Nazis took power in Germany.

A STRATEGIC TIME

In the ironic way that evil sometimes begets good, the tyranny of Hitlerism was indirectly responsible for strengthening democracy, for it drove many of Germany's leading physicists to the West. Teller went to England and from there, with a U.S. Rockefeller grant—and newly married to his childhood sweetheart, Maria Augusta ("Mici") Harkanyi, the younger sister of his best boyhood friend in Budapest—back to Denmark to work again under Bohr. Meantime he had become friends with Dr. George Gamow, the Russian-born physicist, and when Gamow went to George Washington University at Washington, D.C., he got Teller the offer of a job as visiting professor there. Thus it happened that the Tellers arrived in this country in 1935: a strategic time in the history of physics. It was only three years later that atomic fission was discovered in Germany, and only four years before the famous "Einstein letter" to President Roosevelt which launched this country on the development of the atom bomb.

Teller, then 27, had already developed many of the characteristics that were to amaze, charm and sometimes dismay his friends in later years. Maria Mayer, who had known him in Germany, was struck even then by his "intuitive" grasp of complex problems. He was facile, gay ("pure fun," she remembers), inquisitive and restless. Instead of settling sensibly into his chair, Teller at once began to seek out other physicists for companionable argument, trained minds against which to test his teeming ideas. And it is from these years—1935 to 1941—that the earliest origins of the conceptions that went into the H-bomb can be dated. Gamow was interested in the energy production of stars, a phenomenon thermonuclear in character. He discussed it with his brilliant young friend, and together they worked out formulas for these stellar reactions. As soon as the explosive possibilities of the atom were realized, Teller's mind took a "quantum jump" to the stars: for the heat that could be released by atomic fission would be comparable to the heat in the interior of the sun itself, and conceivably this heat might be concentrated long enough to bring about the fusion of some of the very light elements, just as hydrogen is fused in the sun to form helium and in the process gives off tremendous energy. There would be no theoretical limit to the size of such an explosion.

In simplest terms this is the theory that led to the hydrogen bomb. It was not original with Teller. As a theoretical possibility it was obvious and occurred to many physicists. But for some reason no more explicable than an unusual taste in food, it aroused an intense, specific curiosity in Teller and he never stopped thinking about it. He discussed it with Gamow and his other friends in Washington, and with Enrico Fermi, the great Italian physicist—"The Pope," as he is known—who was teaching at Columbia. The monomania of the following years had begun to take root.

Yet when he was asked to join the A-bomb project—the success of which was essential to any future H-bomb development—he hesitated for a long time. Was weaponizing the proper business of science? He thought not. Was it morally right to help create such a monster? He did not know.

On May 10, 1940, the day the Nazis invaded the Low Countries, President Roosevelt spoke before the American Scientific Congress in Washington. Teller had never heard him in person and attended out of curiosity. The President said, in part, "You who are scientists may have been told that you are, in part, responsible for the debacle of today . . . but I assure you that it is not the scientists . . . who are responsible. . . . Surely it is time for our republics . . . to use every knowledge, every science that we possess . . . You and I . . . will act together to protect and defend by every means . . . our science, our culture, our American freedom and our civilization." As the President talked, Teller began to feel that Roosevelt was speaking directly to him, answering all the questions that had been troubling him. He left George Washington the following year to join Fermi at Columbia and, when the uranium pile project that Fermi supervised was moved to Chicago, he moved with it. Later on he went to the University of California at Berkeley, where a well-known physicist of about his own age, Dr. J. Robert Oppenheimer, was assembling a group to do theoretical studies on the A-bomb. He returned to Chicago briefly and then, when Oppenheimer had established the central laboratory at Los Alamos, was among the first to join him there.

During his first conversations with Oppenheimer they had talked about the possibilities of a thermonuclear weapon, and Oppenheimer had seemed as interested by the idea as Teller himself. At Berkeley the theoretical group did preliminary studies on fusion and, as Oppenheimer has testified, "it excited us, and it seemed to make even more necessary that we understand what this was all about." Accordingly Teller went into the Manhattan District with the impression that the "super bomb," as it soon was called, would be given a high priority. And actually some of the first installations at Los Alamos were for the benefit of further studies on it. However, as Oppenheimer has said, there was "the very immediate job of getting some weapons into the places where they [were] needed," and until the A-bomb problem could be solved, few but Teller were inclined to give much attention to the more formidable problem of the super. Teller at first tried to suppress his impatience but could not. The result was the first of what became a series of fission-fusion reactions between him and his colleagues.

He had been assigned to Los Alamos' theoretical division, headed by his friend Dr. Hans Bethe, Cornell's great physicist, as Bethe has testified, ". . . I hoped to rely very heavily on him to help our work in theoretical physics. It turned out that he did not want to cooperate. He did not want to work on the agreed line of research. . . . He always suggested new things, new deviations. So that in the end there was no choice but to relieve him of any work in the general line of the development of Los Alamos, and to permit him to pursue his own ideas entirely unrelated to the World War II work. . . ."

Teller was transferred to the F Division where Enrico Fermi presided over "advanced development." There, with Dr. Emil Konopinski and a few others, he devoted himself during the rest of the war to the super—to "my baby," as he had begun to call it. And by the end of the war he and his group had succeeded in working out some of its most intricate problems. He believed—as he was to testify later—that a concerted effort on the part of the other senior scientists could

August 4, 1969

dispose of the rest by 1947. He had been led to suppose that this would occur: that once the A-bomb had been tested successfully, the great human and technical facilities of Los Alamos would converge on the super.

Instead, to his great dismay, after Hiroshima he found the laboratory disintegrating. One Los Alamos scientist remembers, "I was away for several months and got back after Hiroshima. There was a terrible sense of shock. I didn't recognize anybody. Everyone was wrapped up in petitions for world government, disarmament, internationalizing of the atom, and so forth." To this emotion, which Teller to some degree shared, there was, of course, added the normal reaction that affected scientists as well as GIs: the feeling that the war was over and it was time to get back home and pick up the threads of old lives. Teller appealed to Oppenheimer for help, but he was among the most eager to leave. At last, with great reluctance, Teller decided to join the exodus himself.

THIS FABULOUS MONSTER, RUSSIA

Early in 1946 he called a meeting of the leading members of the Los Alamos staff to summarize for them all that he and his associates had learned—a meeting known as "The Final Conference on the Super." Then, with Miel and their young son Paul, he drove to the University of Chicago, where he had been offered a job at the new Institute for Nuclear Studies. Fermi and many of his other old friends were there. The atmosphere was personally and scientifically congenial, and Teller tried hard to adapt himself to the peaceable pursuits of teaching and pure science.

For a while he succeeded. Additional "new things, new devotions" kept him embroiled in a self-renewing welter of projects, each requiring a collaborator or two, so that he was always enormously busy. With equal energy he plunged into the extracurricular aim of all the scientists who had contributed to the A-bomb; to make the atom peaceable and productive and—it was still possible then to hope—to use it as a foundation on which to raise a supernational authority, the beginnings of a real world government. Teller was a leading member of Union Now and Atlantic Union and a prolific contributor to the *Bulletin of the Atomic Scientists*, published in a basement room at the university. He endorsed the Acheson-Lilienthal report (written largely by Oppenheimer) who, became the basis of the so-called "Baruch Plan" by which this country attempted to bring the atom under international control. And in mid-1948 he wrote, "I believe that we should cease to be infatuated with the menace of this fabulous monster, Russia. . . . We must work for something. We must work for world government. . . . [and] concentrate for the time being on establishing common government with our friends and potential allies."

Nevertheless, the optimism he professed was qualified with private fears. Even during the war he had mistrusted the Russians. There were stories his parents told of oceans of men sweeping across the frontier during World War I, dying and endlessly replaced. The native prejudice faded when he grew up and traveled in the world, and, he recalls, he regarded Soviet Communism as "an experiment of interest and possibly of some merit." But the purge trials disillusioned him.

He believed in the ideals that were occupying so many of his colleagues, but he saw their attainment becoming increasingly unlikely while war became increasingly likely. It seemed to him that the way to prevent war was to arm this country beyond challenges with A-bombs and, if possible, with the H-bomb. The latter would deprive the Communist nations of their only advantage, their huge manpower, by making it impossible for them to mass their troops for "hu-

man sea" breakthroughs. Possibly it would mean the end of all mass armies, conceivably even the end of major wars. The result of this introspection led him to return to Los Alamos—"to do something I knew about"—at first for short periods as a consultant and finally on a leave of absence. This was 1949.

The same intuitive, synthesizing grasp of complexities that made Teller a genius in his profession seems to have been operating this time in his comprehension of world affairs. For 1949 was a decisive point in modern times. That summer the Russians exploded an atomic bomb, shattering the U.S. monopoly on which the security of the Western world was largely built.

"THE REASONS MADE ME MAD"

President Truman, reporting the Russian achievement—which had not been expected for years—to the National Security Council, finished with the simple but comprehensive question, "What do we do now?" The answer in part, was to junk the "economic budget" and put the nation "in situations of strength" throughout the world. But another part of the answer lay in the super. Could it be built? If so, should it be? And at this point the sense which had haunted the atomic scientists ever since Hiroshima asserted itself in one of the most startling decisions ever made by a sovereign and threatened government. The AEC's General Advisory Committee, made up mostly of leading physicists and chaired by Dr. Oppenheimer, recommended that then and during an indefinite future there should be no program on the super; partly because of technical difficulties but chiefly because they felt that the super would be an immoral weapon. And as for the Russians? Their atomic science "imitated" ours, so the reasoning went, and if we did not develop it, neither would they. The AEC commissioner supported these views of their Advisory Committee: not once, but twice they rejected the super.

The decision was, of course, a very heavy blow to Teller. Then his disappointment turned to pugnacity. "The reasons they gave just made me mad," he says. The technical difficulties seemed to him to be no different in kind or much different in degree from the normal routine of scientific effort. "A scientific invention," he says, "consists of six (or some number) ideas, five of which are absurd but which, with the addition of the sixth and enough rearrangement of the combinations, results in something no one has thought of before." He felt that the way to solve the technical problems of the super was to work on them, that sooner or later the missing "sixth idea" would emerge. As for the moral argument, Teller was as deeply conscious as anyone of the terrible possibilities of the H-bomb, but he felt that moral and political judgements were not properly the concern of science. "The important thing in any science," he has said, "is to do the things that can be done. Scientists naturally have a right and a duty to have opinions. But their science gives them no special insight into public affairs. There is a time for scientists and movie stars and people who have flown the Atlantic to restrain their opinions lest they be taken more seriously than they should be." However, Teller could do very little to make his own opinions effective. The decision had been made in Washington and it would have to be unmade there.

Lewis Strauss, who had been the only dissenter from the decision in the AEC, and Senator Brien McMahon, chairman of the Joint Committee on Atomic Energy, together set about unmaking it. McMahon wrote to the President outlining fully the case for the super and called on him for personal argument. Among some members of McMahon's committee there was talk of bringing impeachment proceedings if the final decision

was negative. The President appointed a special subcommittee of the National Security Council, made up of Secretaries Acheson and Johnson and AEC Chairman Lilienthal, to advise him what to do. Strauss, who had been equally busy, became so discouraged at one point that he went to a bungalow his mother-in-law leased at the Beverly Hills Hotel and amidst the incongruous glitter of this Hollywood showpiece searched his conscience during the Christmas season. One night he received a call from the hotel lobby. It was Senator McMahon, who had come to assure him that he was right. Strauss had laboriously reached the same conclusion: they made plans to carry on the fight in Washington with even more vigor.

Their battle came to an abrupt end a few weeks later, but from a sickeningly unexpected cause. On Jan. 27, 1950 Dr. Klaus Fuchs confessed that he had been spying on behalf of the Russians since 1942. Fuchs had been a member of the British scientific mission to Los Alamos toward the end of the war. Moreover he had attended the "Final Conference on the Super" called by Teller in 1946. It thus could be assumed that the Russians not only knew all the wartime A-bomb "secrets," but also knew most of the progress that had been made by this country on the H-bomb.

The President's special subcommittee met and voted two to one for a crash program on the super, with Lilienthal in dissent. They took their decision to the White House, where President Truman concurred and released the announcement that afternoon.

Thus "Edward's monomania" found official sanction. Yet, at this stage, his and his allies' triumph was mainly theoretical. The work itself still had to be done, and Teller set out to enlist other physicists to help. He had already asked Oppenheimer once and been refused; now again he asked him, and was again refused, although one time Oppenheimer volunteered the names of people at Princeton who he thought could be useful. Teller tried them; all turned him down. Almost everywhere he encountered either indifference or active hostility. Early in February, at a meeting of the American Physical Society in New York, 12 of the most distinguished members issued a joint statement: "We believe that no nation has the right to use such a bomb, no matter how righteous its use. . . . Its use would be a betrayal of all standards of morality and of Christian civilization itself. . . . we urge that the United States, through its elected government, make a solemn declaration that we shall never use this bomb first. This denunciation was soon followed by one from Dr. Einstein who warned that ". . . annihilation of any life on earth has been brought within the range of technical possibilities. . . . In the end there beckons more and more clearly general annihilation." Hans Bethe wrote in the *Bulletin* that use of the H-bomb could be "compared to the warfare of Genghis Khan who ruthlessly killed every last inhabitant of Persia."

In an article called "Back to the Laboratories" in the March 1950 issue of the *Bulletin*, Teller pleaded with his colleagues: ". . . To my mind we are in a situation not less dangerous than the one we were facing in 1939, and it is of the greatest importance that we realize it. . . . we must realize that democracy will not be saved by ideals alone. . . . The primary responsibility for action lies with the groups directing the policy and foreign relations of our country. To the scientist, at least, it should be clear that he can make a contribution by making the country strong. . . ."

Actually only three leading men joined him, John Wheeler of Princeton, John von Neumann of the Institute for Advanced Study, and Lothar Nordheim of Duke University. (Later, after Korea, Bethe and others turned up.) For the rest of his team he

CONGRESSIONAL RECORD — SENATE

S 9093

relied mainly on talented younger men. There were technical discouragements too: some of the earlier calculations were repeated more thoroughly and put the whole project in doubt. Even a year later, when the first "thermonuclear device" was approaching the test stage and someone asked Teller, "Will it work?" he had to admit that he didn't know. "But you didn't know that five years ago," the questioner pointed out. "True," Teller answered, "but now we don't know on much better grounds."

Moreover, even if this "device" worked, there was no way in sight of developing it into a really practicable weapon. Ordinary hydrogen atoms, although they fuse in the sun, cannot be made to do so under any conditions attainable on earth. Teller's calculations involved the use of special "heavy" forms of hydrogen called deuterium and tritium, and these had to be kept liquefied by means of cumbersome refrigeration equipment. The result was less a bomb than a "contraption," as Oppenheimer has called it, which could be carried in a ship's hold and thus conceivably be used against enemy ports, but which was too big to be carried in any airplane built or planned.

During the latter part of 1950 Dr. Stan Ulam, a Los Alamos mathematical physicist, was working on a paper on certain theories indirectly related to this problem. Teller got into a conversation with Ulam about it. Not long afterward something they had discussed touched a spark. That evening, as he and Frederic de Hoffmann were leaving the office, Teller said absently, "I think I have an idea." De Hoffmann recalls that he thought nothing of this at the time, "because, after all, Edward is always having an idea. But the next morning he came in to me and said, 'Fred, I think I really have something. Stick some figures into it.' He told me about it and I started to work with my desk calculator. The answer came out right."

What Teller had thus casually and undramatically thought of was the missing "sixth idea" for his invention: an idea which disposed of all the technical and manufacturing difficulties and converted the "contraption" into a deliverable bomb as versatile as the A-bomb.

For technical reasons it was still desirable to go ahead with the test of the original device and this was done in May 1951. The next month the AEC called a meeting at Princeton, at which Oppenheimer presided, to examine Teller's "new concept." The result was general enthusiasm in which Oppenheimer joined, and it was decided to push ahead with a full-scale test as soon as possible.

Therein, however, as it turned out, lay an ambiguity which led to a fresh crisis in Teller's relations with his colleagues. Dr. Norris Bradbury, director of Los Alamos, and his division heads adopted a production schedule for "Mike," as the new device was code-named, which to them seemed efficient but to Teller seemed much too conservative. In the ensuing and growing disagreement, tempers were rubbed raw. Finally there was a definitive showdown in which Teller demanded that the target date for the test be moved ahead. Bradbury refused, and Teller thereupon resigned, "This is not a crash program," he commented bitterly to a friend. "They don't need me—I'm leaving."

Not only did he leave but, with the backing of his Washington allies, he persuaded the AEC to set up a new weapons laboratory especially designed for thermonuclear research. This was established the following year at Livermore, Calif., as an adjunct to the University of California Radiation Laboratory, which was under the direction of Teller's friend, Dr. E. O. Lawrence. The new lab contributed nothing to Mike, which was completed at Los Alamos and tested successfully at Elugelab in November 1952—by then the place barely existed as a going concern. However, to Teller that fact was unimpor-

tant. "There are three ways to encourage initiative," he has said. "One is to cut off people's heads as they do in Russia. Another is to subject people to public criticism which is impossible in such secret work as this. A third way is to set up competition. This is Livermore's most valuable function: simply to be a competitor."

At the time of the Mike blast, Teller was too busy helping at the birth of the new laboratory to attend in person, and he "saw" the explosion instead on the seismograph of the University of California. (His comment was, "That's very nice.") As for his being "the father of the H-bomb," he has said, "It is true that I am the father in the biological sense that I performed a necessary function and let nature take its course. After that a child had to be born. It might be robust or it might be stillborn, but something had to be born. The process of conception was by no means a pleasure: it was filled with difficulty and anxiety for both parties. My act—and my leaving—aroused the emotions usually associated with such behavior."

Teller's fission from Los Alamos was not final or complete. He made himself available for advice when it was wanted and returned from time to time for consultations, as he still does. Relations between the two laboratories are good, and there is full exchange of information and considerable visiting back and forth by staff members. Following the success of Mike, there was an effort mainly at Los Alamos, to simplify its construction still more and to develop it into a family of weapons comparable to the A-bomb family. This has been entirely successful.

Teller's work was complete. He had added in a fantastic measure to the power and security of the U.S. It had been for him a process filled with discouragements, anxieties and many painful experiences, but which at the same time stimulated his mind and emotions fully and carried with it, in the end, a deep personal satisfaction. But the story was to have a sequel which would bring him no satisfaction at all and disturb him more than almost any experience of his life. He was called upon to testify in the Gray board hearings "In the Matter of J. Robert Oppenheimer."

His emotions were extremely complex. He did not believe, in the first place, that the questions that had arisen about Oppenheimer were properly a matter for a "security" hearing which would carry with it connotations of disloyalty. On the other hand he had been increasingly disturbed by decisions and advice which Oppenheimer had given in his official capacities, which were so widely distributed as to give him a dominating position in atomic matters and U.S. physics generally. Again and again, and not merely on the H-bomb development, he had thought Oppenheimer wrong, until at last he had begun to have very grave doubts about his judgment, not his motives. If asked, it would be his duty to say as much; but the idea was repellent to him. He knew that his own prestige was now so great that his testimony would be given much weight. To contribute to Oppenheimer's possible ruin was antipathetic to his nature, a nature which, where other human beings are concerned, is extremely compassionate.

Last April 28, in the small room at the Atomic Energy Commission building where the hearings were being held, Teller took his place as witness. Behind him, sitting on a leather davenport, was Oppenheimer, his old antagonist, a man he now deeply pitied. Teller paid tribute to Oppenheimer's talents, especially his "very outstanding achievement" as the wartime organizer and director of Los Alamos. He said moreover, "I have always assumed, and I now assume, that he is loyal to the United States. I believe this, and I shall believe it until I see very conclusive proof to the opposite." But he added in reply

to the next question, ". . . I thoroughly disagreed with him in numerous issues and his actions frankly appeared to me confused and complicated. To this extent I feel that I would like to see the vital interests of this country in hands which I understand better, and therefore trust more." He also recounted the history of the H-bomb and gave his opinion that if Oppenheimer had thrown his prestige behind it the success could have been achieved years earlier. He went on to say, most damagingly, that ". . . if it is a question of wisdom and judgment, as demonstrated by actions since 1945, then I would say one would be wiser not to grant clearance."

At the close of his testimony he rose and turned to meet Oppenheimer's eyes. He stepped forward and said, "I'm sorry."

Oppenheimer answered, "You only did your duty."

They shook hands, and Teller said, "Good luck."

Oppenheimer looked at him oddly and answered, "After what you've just said, I don't know what you mean."

"And the terrible thing," Teller says in remembrance, "was that I don't think he did know what I meant." He turned away, his shoulders heavy, and limped slowly from the room.

Teller today, in the summer of 1954, is a man physically and emotionally depleted. He has worked beyond the limits of common sense, and his resiliency, although still exceptional, shows its diminution in the effortful, almost dragging quality with which he forces himself on. The emotional drain of nearly a dozen years' conflict was capped by the Oppenheimer case; only to be capped again by its aftermath. Nearly the whole community of physical scientists rallied behind Oppenheimer, attacked the recommendations made by the Gray board and the AEC, and inferentially and sometimes directly denounced those who, as Teller did, had denounced him. Some of Teller's old friends are charitably puzzled; others are bitter.

Teller, who has spent a gregarious life among the physical scientists and who has always cherished his friendships with them, has found this animosity very hard to bear. But what is more serious is the pressure of his own conscience; was he being morally and intellectually honest when he in effect condemned Oppenheimer because, he said, "his actions . . . appeared to me confused and complicated"? Had he inadvertently been guilty of endorsing what he himself feared most: intolerance, the limitation of debate, the punishment of a man for what was an honest mistake? Teller was immensely relieved when the AEC commissioners, in their review of the Gray board recommendation against reinstating Oppenheimer's security clearance, dismissed Oppenheimer's lack of "enthusiasm" for the H-bomb as immaterial. But Teller's own role in the case has continued to trouble him.

Tired of controversy, duty and anxiety, Teller is perhaps most of all tired of weaponizing. At 46, long past the age when most men make their important contributions to physics if they have any to make, he realizes that he has been away from "basic physics" almost since he first became qualified to enter it. Sitting in his room recently at Los Alamos, where he was spending a fortnight helping on still more and newer weapons problems, he discussed what he hoped could be his future. "Everybody now wants to discover universal laws which will explain the structure and behavior of the nucleus of the atom. But actually our knowledge of the elementary particles that make up the nucleus is tiny. The situation calls for more modesty. We should first try to discover more about these elementary particles and about their laws. Then it will be the time for the major synthesis of what we really know, and the formulation of the universal law."

S 9094

CONGRESSIONAL RECORD — SENATE

August 4, 1969

"It is like the difference between a specialist and a philosopher. A specialist is someone who knows more and more about less and less until at last he knows everything about nothing. A philosopher is someone who knows less and less about more and more until at last he knows nothing about everything. Physics is now too philosophical. In my work I would like to reverse the process, and to try to limit the things to be found out and to make some discoveries which may later be useful."

"This unpretentious ambition is consistent with Teller's personal philosophy. He has no religious convictions; regarding the comprehension of God which is equally the goal of philosophy and physics, he has said, 'I try to make a point not to talk about things I don't understand—at least the things I do not understand at all.' But he is guided in ethics by the same pragmatism he brings to science: 'We know a lot because we as a species have lived and behaved a lot.' He finds himself most in tune with that very modest philosopher, Lao-tse. 'He is not dogmatic, and he does not go in for big, universal ideas. For instance, I like what he says about failure and success, 'Failure is the foundation of success and the means by which it is achieved. Success is the lurking place of failure; but who can tell when the turning point will come!'"

ABM

THE ANTI-BALLISTIC-MISSILE SYSTEM AND THE DEFENSE OF THE AMERICAN PEOPLE

Mr. BYRD of West Virginia. Mr. President, whatever the outcome of the vote on the ABM in the Senate, it must be recognized that both the proponents and the opponents have made valuable contributions to the overall illumination of the critical problems of defense in the nuclear-missile age.

THE IMPORTANCE OF THE ABM DEBATE IN THE SENATE

The importance of extensive debate on national problems, both pro and con, was long ago recognized by the Founding Fathers of this country. In the *Federalist* No. 62, for example, which deals with the role of the Senate in our form of government, it is pointed out:

A good government implies two things: first, fidelity to the object of government, which is the happiness of the people; secondly, a knowledge of the means by which that object can be best obtained.

It is here, in this extended debate on the deployment of an anti-ballistic-missile system, that men of good will, Senators who both defend and who oppose the ABM, seek to carry out the promise of the *Federalist*, by searching for "a knowledge of the means by which" the object of good government, "the happiness of the people," may be served.

The authors of the *Federalist* were also well aware that in world politics we Americans might have to deal with nations which had rising aspirations of world power. Wisely they understood that only power can check power. Their grasp of this basic and unchanged fact was stated clearly in the *Federalist* No. 4:

We are not to expect that they [i.e., other nations] should regard our advancement in union, in power and consequence by land and by sea, with an eye of indifference and composure. The people of America are aware that inducements to war may arise out of these circumstances, as well as from others not so obvious at present, and that whenever such inducements may find fit time and op-

portunity for operation, pretences to color and justify them will not be found wanting.

How, then, should the United States "provide for the common defense" as mentioned in the Constitution's preamble, and avoid war? Again, the authors of the *Federalist* in paper No. 4 had an answer which seems, with a prophetic prevision, to apply to the complicated problems of defense in these, our own times. Their answer as to how best to prevent the scourge of war from reaching into the homeland of America was for the Congress to provide a situation that "consists in the best possible state of defence."

So, Mr. President, we come to the question before the Senate. What action will promote the "best possible state of defense"? I believe the answer lies in supporting the President's proposed Safeguard ABM system.

COMPARATIVE UNITED STATES-SOVIET STRATEGIC MILITARY STRENGTH

Former Secretary of Defense Clark Clifford stated in his January 15, 1969, posture statement that the United States had 1,054 intercontinental ballistic missiles—ICBM's—and the Soviets had 900 ICBM's on September 1, 1968.

On March 19, Secretary of Defense Laird testified to the Senate Committee on Armed Services:

As of today, the Soviets have in being and under construction more ICBM launchers than the 1,048 possessed by the United States.

On April 25, 1969, Secretary Laird reported the Soviet ICBM total was 1,140. This includes 1,000 ICBM's in hardened sites and 140 ICBM's on launching pads. He also said that the Soviets could have 2,500 ICBM's by 1975.

The *New York Times*, in an analysis of Soviet weaponry, April 14, 1969, said:

Qualified sources say that the new evidence gathered by high-flying satellites shows that the Soviet Union has about 1,200 intercontinental ballistic missiles in place or rapidly going into place, roughly 150 more land-based ICBM's than the United States.

On April 10, 1969, the Institute for Strategic Studies, London, released a study which concluded:

The Soviet Union must now be treated as a full equal in terms both of strategic power and of her ability to control conflict in the developing world.

Deputy Secretary of Defense David Packard, in testimony before the Senate Armed Services Committee March 20, 1969, stated:

One of the things that impressed me very much in the studies that I have made is that we have a good deal of evidence, quite hard evidence, that the Soviet ICBM deployment and development is continuing. It was this that caused us to take another hard look as to what we should do about this ABM capability.

Fundamental to the understanding of this dramatic increase in Soviet missile is the erroneous assumption of U.S. policymakers in recent years that the Soviet Union would not seek a superior offensive capability but would only seek parity. This error imposed American assumptions on our vision of Soviet strategy. As a result the Soviets now

enjoy a widening advantage. This was underlined by Deputy Secretary Packard on March 20 when he told the Senate Armed Services Committee, in analyzing charts of Soviet missile strength:

As you can see, parity has been reached. The smaller Soviet missiles represented in this area of the chart make up the larger part of the totals. Those large missiles that have the accuracy and yield to be a threat to our Minuteman forces are projected on the larger part of the figure. They became operational in 1966 and their inventory has grown. . . . These are the large missiles on which the Soviets have flown multiple warheads. Thus, the force potentially represents a severe threat to our Minuteman.

Of special concern is the Soviet development and deployment of a very heavy intercontinental ballistic missile, the SS-9, which was unknown to the U.S. public until it was disclosed by Secretary Laird in his initial appearance this spring before the Senate Armed Services Committee. This missile carries a warhead in the range of 20 to 25 megatons, far larger than anything in the U.S. inventory. Because of its size and its accuracy, the SS-9 is regarded as a weapon designed to knock out American Minuteman ICBM's.

The present Soviet ICBM force now includes well over 200 SS-9s, and this deployment is progressing at a fairly rapid rate—particularly since December 1968. This is the missile which is projected by the Defense Department to reach possibly 500 by 1975. This missile booster can also be adapted to fire an orbital bombardment warhead. It can also be adapted to carry a multiple warhead, which the Soviets are known to have been testing.

With reference to Soviet testing, it is noteworthy that one such Soviet test into the Pacific Ocean was made public by Secretary of State Rogers on April 12, 1969. He stated that the Soviet Union had tested the multiple warhead before but that this recent test was a "longer shot."

In addition to the SS-9, the Soviets are continuing to deploy the SS-11 and the newer SS-13 model ICBM's. These carry smaller warheads than the SS-9, but the SS-13 is the first solid-fueled Soviet ICBM, and it can be developed and deployed in large numbers.

This surge in Soviet ICBM's is one of the most direct reasons for the Nixon administration's decision to proceed with the Safeguard ABM.

Then, too, the Soviets presently enjoy a clear lead in space orbital weapons. Mr. McNamara released information in 1967 that the U.S.S.R. was developing a fractional orbital bombardment system. Mr. Laird confirmed that the Soviets were very likely deploying this system. He said:

They are also working hard on FOBS . . . also designed to reduce warning time to our bombers so that they will not have sufficient time to become airborne. (testimony March 20)

I am told that, if these vehicles were launched into near-earth orbit on approximately 70 to 75 degrees inclination, they would bracket the United States periodically. They would then be known as orbital bombardment systems rather

August 4, 1969

CONGRESSIONAL RECORD — SENATE

S 9095

than FOBS. Properly deployed, a significant number, for example 100, could be in a position to attack the United States in a matter of seconds after the button was pushed in the Kremlin. This would add enormously to a credible Soviet capability to deliver a first strike against the United States.

Furthermore, in his testimony before the Senate Armed Services Committee on March 19, Deputy Defense Secretary Packard commented on Soviet submarine launched missiles:

We know that the Soviets have been moving ahead with a rather active program in producing Polaris-type submarines. They are now in production. They are not yet deployed as far as we know. But this gives the Soviets the possibility of launching missiles from locations close to our shores, and we are very much concerned about this threat which could reduce the ability of our bombing force to get off.

The submarine referred to here is the "Y" class, which went into production in 1968. Seven were commissioned in that year. This sub carries 16 underwater-launched, 1,500-mile range missiles. Secretary of the Navy Chafee, in his testimony to the Senate committee, referred to it when he declared:

The Soviets are modernizing their submarine force, the world's largest. Following a period of large-scale shipyard expansion, new classes of ballistic missile submarine and nuclear attack boats are becoming operational. More of these new types have been launched than foreseen a year ago.

The Institute for Strategic Studies, London, recently pointed out that the Soviet undersea fleet now exceeds in numbers all the submarines in the fleets of the United States and other NATO nations.

The situation regarding attack submarines is critical and rapidly deteriorating. The Soviet Navy has more than a 2-to-1 numerical advantage over the U.S. Navy in this area of sea warfare, and this is a matter of concern since the attack submarine is considered to be the most effective weapon against a nuclear submarine.

The U.S. position is worsened by the age of many of the attack boats. Forty-five of the 105 attack submarines in the U.S. Navy are of World War II construction. On the other hand, I am advised that almost all of the Soviet attack submarines have been built within the last 14 years. It is these submarines that pose a direct threat to the U.S. ballistic missile-firing submarines.

Moreover, former Secretary of Defense Clark M. Clifford did not include the medium and intermediate range Soviet ballistic missiles in his 1969 posture statement assessment of the U.S.S.R. strategic inventory. The United States has no such weapons deployed against Soviet targets, whereas the Soviets have their missiles targeted against our NATO allies. Clifford credited the U.S.S.R. with 700 operational MRBM/IRBM launchers, some in hardened sites. He said:

Evidence is accumulating that the Soviets have embarked on the development of solid-fuel missiles for medium and intermediate as well as intercontinental ranges.

British Defense Minister Dennis Healy recently estimated that the So-

viet MRBM/IRBM force now approximates 1,000 missiles.

As to bomber strength, the United States continues to lead the Soviet Union in heavy bombers—B-52's and B-58's versus Soviet Bisons and Bears—but Department of Defense figures show the United States ahead overall in bomber strength only because the Soviet Badger and Blinder medium range bombers are not credited with a strategic role. Both their threat to Western Europe and their threat to the continental United States—they are air refuelable—makes them strategic bombers.

Hence, Mr. President, not only has the military power of the Soviet Union grown more rapidly than that of the United States, but it has also rapidly overtaken the forces of the United States in new concepts and new weapons systems.

The U.S.S.R. now, for example, has whole families of military—and naval—weapons systems that the United States does not have in its inventory. Let us consider the following:

First. The large IRBM and MRBM force—1,000—is such a family of weapon systems. This force is primarily aimed at Europe and now completely pins Europe down. Generals of the U.S.S.R. have stated "we now hold Europe as a hostage."

Second. Very large—50 to 100 megaton—nuclear weapons which were tested in 1961-62 and which, it is generally conceded in unclassified literature, have been adapted for missile delivery. The United States not only has no such weapons in its inventory it has not even tested them and can only speculate as to the unique effects they may produce.

In this connection, it should be noted that the Proton satellite, according to Soviet releases, weighed some 40,000 pounds. The Proton booster, therefore, could launch very large ICBM warheads—50 megaton—or large warhead orbital bombardment systems.

Third. The Bear bomber is unique. It is the world's longest range, highest endurance bomber. It is an effective anti-shiping and antisubmarine attack aircraft with air-to-surface attack missiles on board.

Fourth. The ABM development and deployment in Russia is an innovation.

Fifth. The orbital bombardment system, of which the United States has no counterpart. The United States respects the treaty forbidding the use of space for weapons of mass destruction.

So, Mr. President, it is apparent that the Soviets have jumped into the lead in overall strategic missile strength. They have made optimum use of a much smaller economic base than the United States—in effect, they have been and are operating on a war economy basis.

The combined total of ICBM's, IR/MRBM's and SLM's is now estimated as 2,750 for the U.S.S.R., to 1,710 for the United States.

Meanwhile, the four-to-one U.S. lead in individually targeted warheads, which was long used by the Defense Department as a source of reassurance to the American public, was discarded by Air Force Secretary, Dr. Robert C. Seamans, Jr., in his testimony to the Senate Armed Services Committee on April 16, 1969:

The much-quoted figure of a 4-to-1 U.S. advantage in individually targetable warheads may not be too reassuring. The 4-to-1 figure stems mainly from the bomber portion of the forces, since missile forces are rapidly approaching a 1-to-1 relationship. It was arrived at by omitting the Soviet medium bomber force from the calculations, while counting several bombs on each of our own bombers. The inclusion of Soviet medium bombers, medium-range missiles, and cruise missile submarines would bring the ratio of individually targeted warheads close to 1-to-1 with a payload advantage somewhat in favor of the Soviets.

I might add that it is not enough to argue that these ratios involve relatively higher numbers—about 4,000 weapons on each side at the present time—and that only a few hundred weapons would be needed to destroy the Soviet Union. The critical factor here is not how many total weapons we have, but how many would survive a Soviet attack, and, of these, how many would penetrate Soviet defenses.

It should also be considered that Secretary Laird told the Senate Foreign Relations Committee that because of geography and the location of major centers of population and industry in Russia, as compared with the United States, the United States needs to be able to deliver six times as many warheads as would the Russians to achieve destruction "parity" with them.

It would take, Laird reported, some 1,200 one-megaton warheads to destroy 45 percent of the total population of Russia while the Soviet Union would need only 200 warheads of identical size to wipe out 55 percent of our population.

THE SOVIET STRATEGIC DEFENSE

Mr. President, the Soviets always have devoted great attention to active defense as a key component of their military policy. As Dr. D. G. Brennan, Director of the Hudson Institute, has pointed out—page 12 Adelpia Papers, November 1967:

This heavy doctrinal bias in favor of defense can probably be traced to Russian military experience at least as far back as Napoleon. It is the Soviets who initiated ballistic missile defense deployment.

Against this background of Soviet thinking one can trace the manner in which the Soviet Union has developed strategic defense forces.

While the United States conducts a national debate over deployment of the Safeguard antimissile system, it is worthwhile noting that the genesis of the Soviet ABM system dates back from the early 1950's. With three generations of ABM weapons already developed, and a fourth undergoing tests, the Soviets are now in a position to deal with the far more sophisticated problems of defense against space weapons. Even if the Safeguard ABM system is approved by Congress, the Soviet Union still will enjoy a sizable lead in strategic defense.

From the first, the Soviets have given strategic defense the command recognition it deserves in the nuclear era.

In April of this year, a new book, "Fifty Years of the Armed Forces of the U.S.S.R.," arrived in the United States for registration at the U.S. Library of Congress.

Published last year, it was written by Marshall M. V. Zakharov, Chief of the

General Staff of the Soviet Armed Forces. In it, he states:

The creation of ballistic missiles and space vehicles required a modern air defense system to respond not only against the aircraft threat, but also—and first of all—to provide anti-missile and anti-space (specifically, in Russian) anti-cosmic defense.

The Soviets are developing a new surface-to-air missile roughly every year to 18 months.

This means that the U.S.S.R. has made consistent and steady investments in research and development forces to create ABM systems.

So, if the present Galosh and Tallinn systems are not wholly effective in the judgment of the U.S.S.R., new systems will undoubtedly appear which will improve the effectiveness of the overall Soviet ABM system.

THE ABM

On March 14, 1969, President Nixon announced that his administration planned to modify the Sentinel missile defense system approved by Congress under the Johnson administration by using it first to defend some U.S. retaliatory missiles rather than to defend cities. This modification was named the Safeguard system.

According to the President, this measured deployment is designed to fulfill three objectives:

1. Protection of our land-based retaliatory forces against a direct attack by the Soviet Union.
2. Defense of the American people against the kind of nuclear attack which Communist China is likely to be able to mount within the decade.
3. Protection against the possibility of accidental attacks from any source.

President Richard Nixon, at his press conference on April 18, 1969, said:

I believe it (the Safeguard ABM system) is absolutely essential for the security of the country . . . I do not want to see an American President in the future, in the event of a crisis, to have his diplomatic credibility be so impaired because the United States was in a second class or inferior position. We saw what it meant to the Soviets when they were second. I don't want that position to be the United States' in the event of a future diplomatic crisis.

Two American Presidents, representing our two major political parties, have now recommended to the American people that the United States needs a missile defense system.

The issue now squarely before the country is the Safeguard system. Unlike Sentinel, Safeguard has been modified so that its defensive intent is unmistakable. The first deployment is to cover only two missile sites, the first of which will not be completed before 1973. The President has asked for it in order that he or his successors hopefully will not be placed in a position where they can be blackmailed by our self-proclaimed Communist enemies. I do not want to see President Nixon or any other U.S. President ever placed in a position where he would be subject to blackmail by either the Soviet Union or Red China.

The opponents of Safeguard generally base their arguments on one or more of the following grounds:

First. It will not work.

One of the leading arguments advanced against the deployment of the ABM system is that the complicated array of radar and computer systems required to operate it are of such an involved nature that they will break down in face of an enemy attack.

Much testimony from scientific analysts who support the deployment of the ABM could be adduced against this argument. But perhaps the most graphic argument has just been shown on television screens across the Nation. That is the magnificent—and most highly complicated—American landing of men on the surface of the moon.

But little more than 8 years ago, the vision—and the belief in the scientific and technological capability of the American people—of President John F. Kennedy put in motion the work of going to the moon. At that time, too, there were many skeptics who argued that the thing could not be done, and that further years of research should precede any attempts at actual operational development and deployment of equipment. It is necessary to recall that the exotic array of radars, of computers, of electronic equipment which made the manned moon landing such a success will also constitute the basis for the radar array, the computers, and the sensitive electronic equipment which will go into the ABM system. These systems, too, will work if they are deployed, that is, if the ABM is made an operational system instead of being kept a theoretical, continuing research system.

Can anyone doubt that this vast, this extremely complicated American venture to the moon could ever have been made a reality if we had continued to study the matter, to research it for year after year rather than moving forward vigorously with actual development and deployment of the systems which made this entire great enterprise possible?

The "won't work" argument is seriously flawed on both specific and general grounds. Both the Spartan and Sprint missiles—the prime ingredients of the proposed Safeguard system—already have been successfully flown. These, in turn, are successors to the Nike series of missiles which were successfully employed to knock down other missiles. The prototype missile radar is in test operation at the present time. The initial deployment of the Safeguard missile defense is now necessary to give us further technical, engineering, production, and testing experience to improve the system. We learn by doing.

Safeguard will "work" in the sense it is intended to work. It is a "point" defense. A point defense is easier to achieve than an area defense since the enemy warhead can be usefully engaged at much closer proximity to its target. This, in turn, increases the time allowed the defense to track and react and greatly facilitates the separating out of decoys from the live warheads. Some people may feel that since all missiles may not be destroyed, the system is a failure. They say, "You may knock down nine, but the tenth will get through." But even if this is so, the enemy is forced to greatly multiply his arsenal with highly sophis-

ticated missiles before he would dare to attack. This enormously complicates his offensive problem and adds immeasurably to the deterrent effectiveness of our own offensive missiles.

In a larger sense, however, the United States has amply demonstrated its capacity to produce and operate the most complex communications, electronic, and nuclear warfare systems. It is well to remember that some people declared the hydrogen bomb was impossible or that ICBM's and Polaris missile systems would not work. Moreover, the astonishing technical capacity revealed in the successful Apollo moon program—as I have already indicated—and in the Telstar communications satellites is evidence of what the United States can accomplish.

Throughout the history of warfare, every offense has produced a corresponding defense. To argue that no defense can ever be possible against missiles is to fly in the face of historical precedent. And it is to fly in the face of the opposite conclusions already reached by the Soviet Union. It is doubtful that the Soviets would have devoted the resources they have to ABM if they had concluded that it "won't work."

Second. The scientific critics of the system.

Some of the scientific critics of the ABM system may be compared to the past critics of what could be accomplished in space—an area, of course, intimately related to missile defense. This is brought out very cogently in the July 18, 1969, issue of the London Daily Telegraph which devotes a great amount of space to the American moon landing achievement. States the Daily Telegraph:

It is only 13 years since Britain's Astronomer Royal described talk of space travel as "utter bilge."

Third. Safeguard is "too costly."

There are two broad subcategories of this argument. One is the technical one relating to the relative costs of defensive systems, and the corresponding offensive weapons needed to penetrate them. The other is that the Nation cannot "afford" missile defense because of the overriding priority of domestic social and economic programs.

On the first point, there are indications that the relative cost-ratios of offense-defense may be approaching parity. For example, D. G. Brennan, former president of the Hudson Institute, made this recent observation:

Several years ago, it was widely believed that missile defenses were easy to penetrate—so easy that offensive increments costing only one or a few percent of the cost of opposing defense would serve to nullify it. In recent years, however, it has become apparent that cheap forms of decoys and other penetration aids cannot be relied upon to nullify modern defense techniques. A good defense can be overcome, but it is difficult. This is reflected in the fact that cost exchange ratios for a good defense are now believed to be in the region of one to one—perhaps one-third or two, but not one-tenth or ten. Thus, it is about as expensive to nullify a good defense as to build it.

Even if we accept an estimate that missile defense may be two or three times more expensive than the offsetting attack, appropriate limited deployment

August 4, 1969

CONGRESSIONAL RECORD — SENATE

could still force the attacker into greater expenditures than have been spent on defense. It is, therefore, of the utmost importance to find out whether effective defense can indeed be established for an expenditure which we can afford. This question cannot be answered by research alone. A limited deployment which may also be considered as a pilot operation is needed.

In weighing the second aspect of the cost question—the matter of national priorities—the American people would do well to consider the ultimate worth of the system which is measured in the safety of millions and the survival of the Nation. Without survival there will be no ghetto to rehabilitate. If we surrender as an independent nation to Soviet nuclear blackmail, it will be Soviet "welfare" programs we will live under and not our own.

Certainly, foes of the Safeguard ABM system should not underestimate the economic capacity of the United States. This capacity is far greater than many people realize. The Soviets have an advantage in the apparent lack of self-confidence among Americans in their own capacity to meet all of the Nation's needs.

Fourth. ABM is unnecessary: Deterrence is assured because U.S. retaliatory power will always be sufficient to destroy the Soviet Union if she attacks us.

The Soviets are serious people and they have long since rejected the hypothesis that a strong offense alone will guarantee deterrence. Their military policy is to create a balance of offensive and defensive power. How each will develop in relation to the other over future years is impossible to judge, they say. I think they make sense. If we counter Soviet ABM progress only by increasing our own offensive missiles, we would be gambling on the assumption that defense technology will not eventually overcome offensive weapons systems.

Additionally, the greater the number and the diversity of offensive and defensive systems the United States has in being at any time, the more difficult it will be for an aggressor to assess the probable effectiveness of a first strike and hence the more effective our deterrent becomes.

Fifth. Development of a U.S. ABM will only stimulate the arms race.

Will the Soviets now cease any further augmentation of their offensive striking power if the United States unilaterally refrains from missile defense? Will they cease their own ABM efforts? The burden of proof for such contentions falls heavily on its advocates. We know that the Soviets have not ceased offensive missile production, even though they have drawn past the United States—they are still building at a rapid rate. And we know from their statements that the Soviet leadership holds that active defense constitutes a vital component of the Nation's military capabilities. It seems only reasonable, then, to conclude that the Soviet leaders would regard U.S. failure to develop an ABM either as a sign of deficient military thinking—one that should be exploited, not followed—or as an indication that we lack the will or the technical ability to go forward with development and deployment.

Sixth. The argument that an American ABM will offend the Russians, that the Russians will consider it to be "provocative" and that it will thus prevent an arms-control agreement.

This argument rests on the thesis that the restoration of nuclear symmetry, through a U.S. ABM to match that of the Soviets, would be more destabilizing than the present asymmetrical situation which is developing between a balanced offensive-defensive U.S.S.R. force and an offensive-only U.S. posture.

To the extent that Safeguard is designed primarily as a defense of our retaliatory forces and not of our people it cannot be construed as indicative of a U.S. intention to attack the Soviets. The "provocative" argument also neglects the fact that the Soviets have deployed their ABM around cities—thus supporting a possible first strike intention—without worrying that this might be "provocative" to the United States.

While it may be true that Dr. Wiesner and Dr. York in the report attributed to them do not believe that an ABM system will work, the Russians most certainly do. Not only that, but they have been stating for the past 2 years or more that it will work, that it is a purely defensive system.

Thus, as long ago as February 23, 1967, Marshal of the Soviet Union Malinovsky, in a key speech in the official Soviet Communist paper Pravda, stated:

New and highly efficient antiaircraft rocket systems and aviation complexes have been deployed and accepted for armament. The various means of combat available to our antiaircraft defense troops insure the reliable destruction of any aircraft and of many rockets of the enemy.¹

And Soviet Prime Minister Kosygin has said flatly that the Soviet ABM system is purely a defensive system, that it is not provocative, and that even though it might be expensive, it will save lives. In developing the concept that the deployment of the Soviet ABM would decrease tensions rather than raise tensions, the interview given by the Soviet Prime Minister deserves to be quoted at some length. Kosygin said:

Which weapon can be termed a factor of tension: An offensive or defensive weapon? I think that defense systems warning against attacks do not cause armament contests, but constitute a factor preventing the killing of people. Certain people—

Kosygin obviously thought of Johnson and McNamara—think along the following lines: Which is cheaper? Offensive weapons which can destroy cities and entire States, or a defensive weapon which can prevent destruction?

The Chairman of the Soviet Government also replied to the question of "cheapness":

It is possible that an antimissile system costs more than an aggressive one, but it is destined to protect human lives.²

Seventh. There should be a moratorium on U.S. ABM deployment while we try negotiations with the U.S.S.R.

¹ Pravda, as quoted by Radio Moscow, February 23, 1967.

² Interview given in Moscow by Prime Minister Kosygin to the Czech Communist Party newspaper *Rude Pravo* and published February 22, 1967.

The difficulty with this argument is that it concedes to our adversaries the precious commodity of time. The Soviets would stretch out the talks and continue to develop their ABM system while our development of the ABM would be at a standstill. We are probably ahead of the Soviets in the level of our antimissile technology, but how long can we expect this to continue, since Soviet military research and development expenditures are running at a greater rate than ours?

It is unlikely that a U.S. ABM moratorium would be respected by the Soviet Union because, first, the Soviets are committed doctrinally to ABM no matter what the United States does; and, second, there is the complicating factor of Communist China. There are some indicators that the Soviet ABM system is being deployed partially against the potential Chinese threat to the U.S.S.R. If this is so, we cannot in any case expect the Soviets to dismantle or halt their ABM deployment because of any possible agreement with the United States. But if they continue to deploy and perfect their system—even if we were to concede that it was directed entirely against Red China—which is not the case—the Soviets would be in possession of a weapons system which could just as easily be used to neutralize U.S. retaliatory missile forces.

Eighth. The argument that, even though the Soviets have deployed an ABM, their most recent statements, such as that of Foreign Minister Gromyko, indicate a changed attitude.

Gromyko's foreign policy speech of July 10 might, at first glance, have appeared sweetly reasonable. But a more careful analysis indicates that he gave no slightest indication of any flexibility which would help to quiet the troubled situation in the Middle East. Furthermore, actions speak louder than words. What are some recent Soviet actions as opposed to words:

First. From March 1969 onward, the Soviet practice of jamming Voice of America broadcasts to the Soviet Union has been stepped up. In the past, this has been a sign of Soviet hostility.

Second. For the first time in history a Soviet naval squadron is visiting Cuba in an obvious show of force close to American shores. In addition, the Associated Press reported July 31 that this Soviet naval squadron was conducting exercises in the Gulf of Mexico. Further, the press reported on August 1 that the squadron contained a nuclear submarine.

Third. Further hard-line Soviet activities in Czechoslovakia are reported. The London Daily Telegraph, on July 4, 1969, stated that Czech leader Husak reported that all "opposition to his tough pro-Russian policies had collapsed." The Daily Telegraph went on to say:

Czech newspapermen voted to make the Press, radio and television into "warriors" for the cause of Communism and to encourage friendship with the Russian occupation troops. They declared themselves to be "Communists first and newsmen afterwards."

Fourth. And a very recent issue of the Daily Telegraph, on July 16, 1969, warns: Soviet naval activity in the Indian Ocean adds up to a significant display of power politics.

S 9098

CONGRESSIONAL RECORD — SENATE

August 4, 1969

Fifth. Soviet Minister of Defense Andrei Grechko made a sharp attack on the United States about "continued aggression by the United States in Vietnam" and he further announced that the Soviet Union would continue "raising the military might of the army and navy" as reported by the Washington Post on July 28, 1969.

In view of these actions as compared to honeyed words, we may well say a prayer of thanks that the Founding Fathers warned the yet unborn generations of Americans that the most effective deterrence of attack against the American homeland "consists in the best possible state of defence."

THE URGENCY OF THE SAFEGUARD MISSILE DEFENSE SYSTEM

I believe that President Nixon was entirely correct when he said during his campaign for the Presidency:

At this time I do not believe that the United States can afford to accept the concept of parity with the Soviet Union. I believe that we face a potentially dangerous situation . . . to negotiate a de-escalation of trouble points around the world, whether in the Mideast or Vietnam or Western Europe or what have you, if the next President of the United States goes into those conferences with the possibility that the Soviet Union rather than the United States is in a stronger power position. I think that we would not be able to effectively reach the goals that we want to reach. . . . And at any kind of negotiation when one side wants to expand and the other side wants to defend, make sure that the side in that negotiation which is in the defensive position has more strength than the other side. That is why I would restore the strength of the United States, keep it at a proper level at this point, so that we would not be afraid to negotiate.

In the present situation, Mr. President, I believe that there cannot be any substitute for the maintenance of U.S. strategic military superiority. This superiority must be substantial because U.S. policies have always permitted the enemy the first blow. In a nuclear war, an enemy might wipe out a very large percentage of our weaponry—and population—in a first strike. Unless we have enough military strength to survive a first strike and still strike back decisively, the risk of a nuclear war increases.

Avoidance of nuclear war requires that the United States maintain overall nuclear superiority, rather than acceptance of any kind of "sufficiency" which can only be ephemeral and inherently unstable.

For more than two decades, the heart and core of America's strategy has been deterrence of Soviet aggression. This deterrence has been accomplished by establishing and maintaining a nuclear retaliatory strike force that could survive a surprise attack and still retain the capacity to inflict unacceptable damages on the Soviet Union.

If the United States is to continue as a viable and independent society, we should, as a first step, create a missile defense system to protect our nuclear deterrent. Such a system will not, by itself, restore the military superiority which we have now lost. But this essential first step is necessary if we are to reverse the sharp shift—adverse to the United States—now taking place in the world's power balance.

Protecting our retaliatory missiles is important because the United States has no intent of striking the first blow in a global conflict.

Thus, the refusal of the United States to consider a first strike makes it all the more important that our retaliatory force be protected against a Soviet attack. And it is to this end that a Safeguard anti-ballistic-missile system has been recommended by the President of the United States.

In addition, the Safeguard system is designed—as was the earlier Sentinel concept—to afford defense—of heavily populated areas—against the type of attack Communist China is likely to be able to mount sometime in the 1970's.

From the time the Chinese Communists exploded their first H-bomb—June 17, 1967—their progress in nuclear weapons development has been rapid. Hence, it may well be that they will develop a nuclear ICBM delivery capability sooner than the mid-1970's, the time phase generally estimated by Western analysts.

In this context it may be well to consider the thoughtful words of Secretary of Defense Laird. He testified on May 22, 1969, with reference to the Chinese Communist threat:

The effectiveness of option 2C [of the U.S. ABM] against the Chinese ICBM threat is expected to be very high. If the Chinese deploy a force of only 30 ICBM's on launchers by mid-1976, they could inflict about 15 million fatalities on us—if we had no ABM defense. With option 2C deployed, fatalities could be held to less than 1 million. And, even if they were to deploy as many as 75 ICBM's on launchers by the end of the decade, fatalities could still be held to less than 1 million, particularly if the improved Spartan is deployed. Here again, the deployment of Safeguard would have a very large payoff if the Chinese ICBM threat should, in fact, emerge.

Mr. President, a cursory reading of the press or a casual glance at the television programs might give the impression that the vast mass of the academic community in the United States is enlisted heart and soul on the side of the opposition to the deployment of an ABM defense. It is, of course, quite true that many distinguished scholars are opposed to the ABM. It is right and proper that, living as they do in the country offering the greatest amount of freedom anywhere in the world, these academics should be quite free to form their opinions on the ABM and to write and present freely their views in opposition to the ABM.

It is, however, equally true that a number of distinguished academicians have written cogent arguments in favor of deploying the ABM, among whom are two representatives from among our oldest and most distinguished universities, such as Princeton University and Georgetown University. These men are the outstanding physicists and Nobel Prize winner in Physics, Dr. Eugene P. Wigner of Princeton, and Dr. James D. Atkinson, professor of government at Georgetown and member of the British Institute for Strategic Studies. And there are other distinguished scholars and scientists who have written and spoken in support of the ABM.

Mr. President, the underlying logic of the ABM concept is that an enemy is unlikely to launch a nuclear attack on

the United States, or credibly threaten such an attack, if he knows that U.S. retaliatory forces will survive—forces that would result in his own destruction.

ABM is a method of deterrence which will save lives and not destroy them.

I firmly believe that an American ABM system is the soundest insurance for peace and against nuclear war that the United States can buy in 1969 for the 1970's. Far from being an offensive weapon, the ABM is, in reality, insurance against war. It may well be, in fact, the single most important step the United States can take toward peace at this moment in nuclear history.

ORDER FOR RECESS FROM TOMORROW UNTIL WEDNESDAY, AUGUST 6, 1969, at 11 A.M.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when the Senate completes its business tomorrow, it stand in recess until 11 a.m. on Wednesday, August 6, 1969.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADJOURNMENT UNTIL TOMORROW AT 11 A.M.

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, under the previous order, that the Senate stand in adjournment until 11 o'clock a.m. tomorrow morning.

The motion was agreed to; and (at 6 o'clock and 29 minutes p.m.) the Senate adjourned until tomorrow, Tuesday, August 5, 1969, at 11 a.m.

CONFIRMATIONS

Executive nominations confirmed by the Senate August 4, 1969:

NATIONAL BUREAU OF STANDARDS

Lewis M. Branscomb, of Colorado, to be Director of the National Bureau of Standards.

ST. LAWRENCE SEAWAY DEVELOPMENT CORPORATION

David W. Oberlin, of Minnesota, to be Administrator of the St. Lawrence Seaway Development Corporation.

The following-named persons to be members of the Advisory Board of the St. Lawrence Seaway Development Corporation:

Jacob L. Bernheim, of Wisconsin.

Foster S. Brown, of New York.

William W. Knight, Jr., of Ohio.

Miles F. McKee, of Michigan.

Joseph N. Thomas, of Indiana.

IN THE ENVIRONMENTAL SCIENCE SERVICES ADMINISTRATION

The nominations beginning David M. Wilson, to be lieutenant, and ending John E. Thomasson, to be ensign, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on July 14, 1969; and

The nominations beginning Philip J. Taetz, to be commander, and ending Michael E. Wagner, to be ensign, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on July 18, 1969.

IN THE COAST GUARD

The nominations beginning George A. Blann, to be lieutenant (junior grade), and ending Marcus L. Lowe, to be lieutenant, which nominations were received by the Senate and appeared in the CONGRESSIONAL

August 4, 1969

of the United States as employees of the United States Senate) whose compensation is increased by section 214(a) of the Federal Salary Act of 1967 (81 Stat. 634, Public Law 90-206) and the Order of the President pro tempore of June 29, 1968, is hereby increased by 10.05 per centum; and

That (b) for the purpose of arriving at the "annual rate of gross compensation" on which the increase of 10.05 per centum is to be applied, (these employees being compensated on a weekly, rather than an annual, basis), the weekly gross rates of compensation shall be converted for the purpose of this Order, to appropriate annual gross rates.

RICHARD B. RUSSELL,
President pro tempore, U.S. Senate.

CONTRACT COMPLIANCE AND THE "PHILADELPHIA PLAN"

Mr. BROOKE. Mr. President, one of the most serious problems which this country faces is that of improving employment opportunities for our minority citizens. Despite the passage of a great deal of equal employment legislation, there is still far too much "token compliance," particularly in the various construction industries.

It was to counter this problem that the city of Philadelphia established a program under the direction of an area coordinator for contract compliance designed to go beyond paper compliance to the adoption and implementation of specific goals of numerical standards in certain critical crafts.

This valuable program is now under serious consideration by the city of Boston in my own State of Massachusetts. I am most hopeful that an area coordinator for contract compliance may soon be approved for the New England area, and I have written to Secretary of Labor George Shultz in this regard. I ask unanimous consent that the text of my letter to Secretary Shultz be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JULY 30, 1969.

HON. GEORGE P. SHULTZ,
Secretary of Labor,
Department of Labor,
Washington, D.C.

DEAR MR. SECRETARY: I have just met with the Massachusetts State Advisory Committee of the United States Civil Rights Commission, which I understand has also conferred with Assistant Secretary Fletcher. The Committee has just completed a review of federal contract compliance in the Boston construction industry and, as they indicated to Mr. Fletcher, have urgently recommended the adoption of a plan for Boston comparable to that being implemented in Philadelphia.

I fully agree with the Committee that this is a matter of the highest priority. In particular, the appointment of an area coordinator to insure effective contract compliance is a fundamental necessity. I hope you will act immediately to appoint such a coordinator, perhaps as part of the consolidation of federal regional offices in Boston.

Your efforts to breach the barriers of discrimination in the construction industry are among the most encouraging initiatives taken by the Administration. I respectfully urge you to carry that effort forward by taking these steps in the Boston area.

With best personal regards, I am,
Sincerely yours,

EDWARD W. BROOKE.

AMERICAN PRISONERS OF WAR

Mr. BAYH. Mr. President, there are many ramifications to the conflict in Vietnam, but one of the most disturbing aspects of this tragic war is the fact that American prisoners of war are not being treated in accord with the Geneva Convention. More than 120 nations, including the United States and North Vietnam, have expressed their deep concern that personnel captured in wartime be treated humanely by endorsing the Geneva Convention of 1949.

Not only are more than 1,300 U.S. servicemen classified by the services as either prisoners of war or missing in action, but also, according to the Department of State, more than 40 American civilians are missing in South Vietnam plus more than 400 military personnel listed as missing, many of whom have been captured and are being held in South Vietnam. Of the total of 1,303 men being held captive or missing in action, over 200 have been held captive over 3½ years and over 500 have been held more than 2 years.

There is reason to believe that many of these listed as missing in action are being held captive by the North Vietnamese, but the families of these men do not even know if their loved ones are dead or alive because Hanoi refuses to provide even a list of those being held captive. This is truly the epitome of barbarism.

The State Department and the Department of Defense have been thwarted at every turn because Hanoi refuses to identify the U.S. prisoners held captive; they refuse to permit neutral inspection; they refuse to release the sick and wounded captives; they refuse to permit the regular flow of mail; in essence, Hanoi refuses to act in a civilized, humane manner. This callousness is absolutely inexcusable.

When Defense Secretary Melvin Laird demanded a full list of the prisoners held by the Republic of Vietnam on May 19, North Vietnamese negotiator Xuan Thuy replied:

He might as well know that so long as the United States has not ceased its aggressive war in Vietnam and withdrawn its troops from Vietnam, he will never have such a list.

It is my contention, Mr. President, that the United States has demonstrated its desire for peace. At present, our troops are being withdrawn from South Vietnam and we have modified our policy of "maximum military pressure." The United States has demonstrated its sincerity to end this conflict. How can we believe that Hanoi is sincere when it refuses to comply with a simple request? The total lack of reciprocity is appalling. However, my main concern is that the North Vietnamese abide by the requirements of the Geneva Convention which they endorsed in 1957. Specifically, I call for the adherence to the Convention which requires the release of names of prisoners held, the immediate release of sick and wounded soldiers, regular flow of mail, proper treatment of all prisoners, and the impartial inspection of prisoner-of-war facilities.

I urge that our negotiators in Paris

do everything in their power to influence Hanoi to abide by the Geneva Convention. I urge all foreign governments, including the Soviet Union and all regimes closely associated with Hanoi, to lend their assistance to the demands of the United States. I urge that the American public voice its cries louder than ever in demanding that the North Vietnamese behave and react in a civilized humane manner. And I appeal directly to North Vietnam and the Vietcong to terminate this lack of concern for the many families in the United States who are living in uncertainty and to respect the humane rights of those whom they hold prisoners of war. Why is it that the United Nations has not exerted itself and fulfilled its responsibilities on this matter?

How can it possibly harm the enemy to release the names of its prisoners? Think what a response to such a simple request would mean to the hundreds of wives, parents, and children who live in anguish, not knowing whether their husbands, sons, or fathers are being detained in a prisoner camp. I urge the State Department and the Defense Department to continue their efforts to obtain the release of those prisoners who are sick or wounded, to do everything humanely possible to obtain a list of names from Hanoi, and to work for the prompt release of all prisoners.

The United States has abided by the Geneva Convention in regard to prisoners of war. These North Vietnamese and Vietcong forces captured in South Vietnam are taken to prisoner of war camps which are inspected regularly by the International Committee of the Red Cross. Prisoners who are sick and wounded have been repatriated to North Vietnam. The United States, in essence, has responded in a humanitarian way. Now it is time that the enemy reciprocate and that the United States strongly demand that its servicemen be treated properly.

Needless to say, everyone has been shocked by Hanoi's uncivilized attitude and response. Hopefully, the entire civilized world will exert influence to end such flagrant violation of international law.

Mr. President, by coincidence, an excellent editorial pertaining to the families whose loved ones are being held by the North Vietnamese was published in the Washington Post this morning. It is evident that all Americans are concerned about servicemen who are missing in action and being held captive. Because of the editorial's relevance and timeliness, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington (D.C.) Post, Aug. 4, 1969]

KEPT IN THE DARK

The letters come in every day, in big and little batches from Santa Fe and Monterey, from Aberdeen, South Dakota, and Purdy, Missouri, from Richmond, Virginia and Lake Lure, North Carolina, from Downers Grove, Illinois and Finville, Michigan. Some are hand-scrawled and some typewritten and they all speak pignantly of the suffering of mothers and fathers and wives and sons

August 4, 1969

ABM

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH—AMENDMENT

AMENDMENT NO. 113

Mr. TYDINGS. Mr. President, it is a fundamental principle of our system of government that only with congressional approval may the executive branch spend the billions of dollars that make up the Federal budget. We have developed a system of authorization and appropriation of funds in order to give Congress an opportunity to examine each of the competing claims on our Nation's resources, and to demand that each program for which funds are allocated be thoroughly justified.

A singular exception to this principle occurs in the area of national defense. Maintaining an adequate and everready military capability requires that our defense establishment have some degree of fiscal flexibility in order to pursue unexpected technological breakthroughs and to meet unexpected problems and threats. But precisely because such fiscal flexibility results in erosion of the principle of congressional control of Government spending, and inevitably poses a threat to the principle of fiscal responsibility, flexibility in military spending must be limited to the minimum amount necessary to maintain sound national defense.

One of the devices available to the Defense Department to provide for fiscal flexibility is the defense emergency fund. Established during the Korean war, the emergency fund may be used at the discretion of the Secretary of Defense "for research, development, test, and evaluation, or procurement or production related thereto." In recent years most of the money appropriated to the fund has been used to solve Vietnam-related problems.

Although in each of the last 3 years the amount of money allocated to the emergency fund has been reduced, in fiscal year 1969 Congress still approved the substantial sum of \$50 million for the fund. This same amount was requested last January by the Defense Department for fiscal year 1970. On the basis of a revised DOD request, however, the defense authorization bill, S. 2546, which is now before the Senate, authorizes \$100 million for the defense emergency fund, double the amount received last year.

Fifty million dollars is a remarkably large amount of money for a discretionary fund over which Congress has no control. There is no justification whatsoever for allocating an additional \$50 million to the fund.

Therefore, with Senators EAGLETON, FULBRIGHT, HARRIS, HART, HATFIELD, JAVITS, MONDALE, MOSS, PACKWOOD, and PROXMIRE, I am submitting an amendment to S. 2546 to reduce the emergency fund authorization to the \$50 million level of last year.

There has been no demonstration that the need for the emergency fund has in-

creased. Last year was a period of heavy fighting in Vietnam, but even with this burden on our fighting men, and the identification of many military problem areas, the emergency fund was not fully exhausted until the end of the fiscal year. With the experience of last year behind them, the Defense Department had initially determined that no increase in the emergency fund was needed for this year. And the prolonged lull in the Vietnam war, coupled with plans for troop withdrawal, indicate that the number of Vietnam-related problems may actually decrease.

It has been argued, however, that the additional \$50 million for the emergency fund is needed to insure adequate financial flexibility within the Defense Department. But the Defense Department already has more than enough fiscal flexibility and independence. Much flexibility results from the authority granted the Secretary of Defense to use up to \$150 million in funds from congressionally approved programs for other projects. The usefulness of this transfer authority is not seriously impaired by the reduction in total research and development funds available this year, since the amount of money authorized in this year's bill is a full 95 percent of last year's amount. But even assuming that the R. & D. reductions have made the transfer authority somewhat less useful, by increasing the emergency fund, their effect is largely vitiated; we would be replacing programs which must be presented to Congress for approval with a fund over which Congress has no control.

Additional flexibility comes from other funds within the Defense budget which serve the same purpose as does the emergency fund. For instance, last year the military was initially authorized to spend a total of \$522 million for research and development on Vietnam problems—in addition to funds used from the emergency fund and transfer authority. In addition, there are contingency funds for specific purposes, such as the \$25 million requested this year for the defense agencies military construction contingency fund, which provides for military construction anywhere in the world necessitated by unforeseen circumstances. And, finally, to meet any additional needs, the Secretary of Defense has a separate \$10 million contingency fund which has even fewer restrictions than the emergency fund.

With so many budgetary devices to insure flexibility, and so much money allocated to unspecified uses, the Defense Department already has more than enough fiscal independence.

In short, we cannot afford to double the defense emergency fund by authorizing a total of \$100 million for fiscal year 1970—because the increase is unjustified on its face, because the increase purports to serve the purpose of flexibility already accomplished by other means, and because the increase represents an unwarranted incursion on the principle of congressional control of Federal spending.

To paraphrase Shakespeare, there comes a time when the representatives of the taxpayer must cry "Enough"—and there has already been enough mon-

ey wasted by the military, and enough fiscal independence in the Defense Department. Fifty million dollars is enough for the defense emergency fund, and I, therefore, urge that S. 2546 be amended to limit the emergency fund authorization to that amount.

The PRESIDENT pro tempore. The amendment will be received and printed, and will lie on the table.

MEETING SCHEDULE OF COMMITTEE ON INTERIOR AND INSULAR AFFAIRS

Mr. JACKSON. Mr. President, I wish to announce for the information of the Senate that because of the pending vote on Wednesday, the Committee on Interior and Insular Affairs will not meet as scheduled on S. 1830, to provide for the settlement of certain land claims of Alaska natives. This hearing will be postponed until 10:30 a.m. on Thursday, August 7. The executive session of the full committee previously scheduled for 10 a.m. on August 7, will now be held at 9 a.m. to be followed by the hearing on the Alaska native claims.

DIRECTIVES AFFECTING SALARIES OF MANAGEMENT-OFFICE EMPLOYEES OF SENATE RESTAURANT

Mr. ALLEN. Mr. President, under the Federal Salary Act of 1967, the President pro tempore of the U.S. Senate is authorized and directed to issue certain directives in implementation of the salary comparability policy set forth in the law.

I ask unanimous consent that a directive affecting the salary of management-office employees of the Senate restaurant, dated June 26, 1969, and certain related correspondence, be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

ARCHITECT OF THE CAPITOL,
Washington, D.C., July 29, 1969.

HON. JAMES B. ALLEN,
Chairman, Subcommittee on the Restaurant,
Committee on Rules and Administration,
U.S. Senate.

DEAR MR. CHAIRMAN: I am enclosing, herewith, copy of order dated June 26, 1969, issued by the President Pro Tempore of the Senate upon my recommendation and with your concurrence, providing for an increase in the compensation of management-office employees of the Senate Restaurants as required by Section 212 of the Federal Salary Act of 1967.

I would appreciate your having this document inserted in the Congressional Record in order that it might be a matter of record.

Sincerely yours,

J. GEORGE STEWART,
Architect of the Capitol.

ORDER PROVIDING FOR INCREASE IN COMPENSATION OF MANAGEMENT-OFFICE EMPLOYEES OF THE SENATE RESTAURANTS EFFECTIVE JULY 13, 1969

JUNE 26, 1969.

By virtue of the authority vested in me by section 212 of the Federal Salary Act of 1967 (81 Stat. 634), it is hereby

Ordered, That (a) effective July 13, 1969, the annual rate of gross compensation of each management-office employee of the Senate Restaurants (such employees having been recognized by the Comptroller General

944

stimulating. They will be incisive; sometimes they will be trenchant; sometimes they will carry a few barbs. But we will understand fully that all that will come out of the expertise, the wisdom, and the background that Jack Bell accumulated from the time he was in the Senate Gallery. So I wish him well.

We think often that a man retires to the bliss of retirement, but that will not be the case with him. He leaves one employer; but I have an idea that in assembling information and material for his column, he is going to be infinitely busier than he ever was before.

I discovered, when they wished a column off on me—partly at the instance of the Senator from Arizona (Mr. FANNIN)—that I got into the toils of the Los Angeles Times syndicate; and I know what it is to sit around and drool and puzzle and look at a blank wall, wondering what the column would be for that week.

So Mr. Bell, if he is going to do a daily column, is going to be thinking long and loud about the things that ought to go into it. Perhaps here and now I ought to make a public offer to him that if he gets into difficulties, he can weep on my shoulder, as a fellow columnist, and perhaps I can give him a few ideas. I wish him well.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. DODD. I yield.

Mr. STENNIS. Mr. President, I wish to join in the compliments that have been paid to Jack Bell with respect to his professional capacity, professional integrity, and fine qualities. He certainly has been of service to the Senate, to Congress, and to the people.

ABM

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH, AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The ACTING PRESIDENT pro tempore. The Chair lays before the Senate the unfinished business, which will be stated.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, the Chair recognizes the Senator from Connecticut (Mr. DODD) for not to exceed 1 hour.

MORALITY, ARMS CONTROL AND THE NATIONAL SECURITY: THE CASE FOR THE ABM

Mr. DODD. Mr. President, over the past 6 months there has taken place in our country an historic debate on defense policy.

The specific question at issue is whether or not we should deploy the Safeguard antimissile defense system proposed by the President.

This debate takes place under the shadow of the so-called "balance of terror" which has been spawned by the nuclear era.

Winston Churchill described this balance of terror in these dramatic terms in a speech which he made in the House of Commons in 1953 as follows:

I have sometimes the odd thought that the annihilating character of these agencies may bring an utterly unforeseeable security to mankind. It may be . . . that when the advance of destructive weapons enables everyone to kill everybody else, nobody will want to kill anyone at all.

It is a commentary on the awful time we live in that the peace of the world has become dependent on the state of mutual nuclear terror which has characterized Soviet-American relations for the past 15 years or more.

We are obliged to rely on this balance of terror as the surest guarantee against annihilation, until that distant day in the future when agreements are reached abolishing these weapons of mass destruction.

There is general agreement that the peace of the world would become far less secure if this balance were ever to become unbalanced as a result of a major technological breakthrough by one side, in either offensive or defensive weapons.

This, essentially, is what the debate over the Safeguard ABM system is all about.

The Soviets have for more than 5 years now been deploying an ABM system around Moscow, and are carrying on an intensive program of continuing research in this area.

And the question has quite naturally arisen whether the United States can afford to be any less well defended than the Soviet Union.

The issue of whether or not the United States should deploy an antimissile defense system has been debated not only by Congress, both in committees and on the floor, but in the columns of our press, in the academic community, in our high schools, and even in our elementary schools.

It is questionable whether any issue of public policy has ever been discussed by so many people and with such intensity.

In a statement issued on April 7, 1969, the Public Affairs Committee of Freedom House in New York warned that "there is a grave danger that the debate over the ABM may become primarily emotionalized or politicized . . ."

From the mail that I have received in my office, I am afraid that the condition against which Freedom House warned has become very widespread. Attitudes have become set.

Minds have become closed. The process of rational discourse seems to have ground to a halt.

Instead, many of the participants in the debate display a disturbing tendency to assume that their side has a monopoly of knowledge, wisdom, and integrity, and that the other side is acting out of some sinister motivation.

Among other things, an effort has been made in certain quarters to characterize the debate on the ABM as a conflict between conservatives and liberals.

Nothing could be further from the truth.

The fact is that there are conservatives and liberals on both sides of this question; and to pretend otherwise only serves to confuse the issue.

It is my hope that the excesses which have characterized the ABM debate in the public domain will not be reflected in the closing debate in the Senate of the United States.

For all of us know that, like so many other problems of our time, the ABM is an issue over which men of equal intelligence and integrity can sharply disagree.

And no matter how committed Senators are at this stage of the discussion, they will, I hope, examine the record of all the testimony and all the debate, conscious of the grave importance of the decision.

Much of the argument is highly technical. This is so particularly in the case of the arguments over the possible effectiveness of the ABM, the possible effectiveness of confusion devices, and whether or not the Soviets can achieve a first-strike capability by the mid-1970's.

When men who have devoted their lives to science and technology can disagree so profoundly on these issues, I feel that it would be presumptuous for a layman to pretend to any final opinion.

Indeed, I feel that the entire debate has been bedeviled, on the one hand, because of the tendency of politicians and laymen to speak like scientists, and, on the other hand, because of a tendency on the part of our scientists to speak like political experts.

The 17th century English scientist, Robert Hooke, once admonished his fellow natural scientists that they should strive to—

Improve the knowledge of all natural things . . . by Experiment, not meddling with Divinity, Metaphysics, Moralls, Politics, Grammar, Rhetoric, or Logick.

But Robert Hooke notwithstanding, many of our scientists today seem to feel that the discipline to which they submitted themselves in achieving expertise in their own specialties somehow qualifies them to also act as political experts.

I have not been able to find a counterpart of Robert Hooke's admonition, addressed to politicians playing the role of scientists.

But I must say I have been impressed by the dauntless confidence with which so many of my lay friends have banded about technical estimates and calculations, and offered summary conclusions

Senate

FRIDAY, AUGUST 1, 1969

(Legislative day of Wednesday, July 30, 1969)

The Senate met at 11 o'clock a.m., on the expiration of the recess, and was called to order by Hon. JAMES B. ALLEN, a Senator from the State of Alabama.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Hear and help us, Eternal Father, to appropriate the promise of Thy word: "They that wait upon the Lord shall renew their strength." When times are tense and nerves are taut, when the body is weary and the going is hard, help us to know that "the Eternal God is our refuge and underneath are the everlasting arms." So may we lean upon the arms which support and strengthen us hour by hour that we may love Thee and serve Thee, and by loving and serving Thee minister to the needs of this Republic. May the words of our mouths, the meditations of our hearts, and the motives determining our deeds be acceptable in Thy sight, O Lord, our strength and our Redeemer. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., August 1, 1969.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. JAMES B. ALLEN, a Senator from the State of Alabama, to perform the duties of the Chair during my absence.

RICHARD B. RUSSELL,
President pro tempore.

Mr. ALLEN thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Journal of the proceedings of Thursday, July 31, 1969, be approved.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that, at the conclusion of the remarks of the distinguished Senator from Connecticut (Mr. Dodd), there be a brief period for the transaction of routine morning business, with statements therein limited to 3 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

AUTHORIZATION TO PRINT IN THE RECORD QUORUM CALL NO. 57

Mr. MANSFIELD. Mr. President, if the distinguished Senator from Connecticut will allow me a minute or so, I ask unanimous consent that Quorum Call No. 57, which was taken on July 17, 1969, during the closed session of the Senate, be printed in the Record of today, for the convenience of those who keep records of attendance and voting records of Senators. No question of security appears to be involved in revealing the names of Senators who were present. This request has been cleared with the minority leader and the Senator from Mississippi (Mr. STENNIS), as well as the President pro tempore.

There being no objection, the quorum call was ordered to be printed in the Record, as follows:

[No. 57 Leg.]

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

JACK BELL, WASHINGTON NEWSMAN

Mr. MANSFIELD. Mr. President, I should like to express my regret at the passing, in a sense, of Jack Bell, from the Washington political scene. He is not going away; he is just shifting from one base of operations to another. It is my

understanding that he is going to become a columnist for the Gannett newspapers. I am delighted with the news. I hope that his columns will extend far beyond that initial endeavor.

Jack has been a newspaperman's newspaperman. He has been analytical, he has been cynical, he has been critical, he has been kind, and he has been understanding—and that combination makes a good newsman.

So to Jack we bid a fond farewell from his present position as the chief political writer for the Associated Press on the Hill, and a fond hello to him on the basis of the new position he is going to undertake and the new responsibilities which will be his.

He is a great and a good newsman. I am delighted that he is not leaving us and is staying close at hand. I wish him well in his many years ahead.

Of his successor, Walter Mears, I want to say that a fine newsman has been chosen to succeed Jack Bell. I am delighted that Walter is going to head the political bureau in Washington. In assuming this position he stands in his own shoes. But, I must say there is a good deal of Jack Bell in Walter Mears, too. So to Walter Mears, congratulations and hello.

Mr. DIRKSEN. Mr. President, will the Senator yield.

Mr. MANSFIELD. I yield.

Mr. DIRKSEN. Mr. President, Jack Bell is really a student of our form of government and a student of the American political system, in the broadest sense of the word. He found time away from his duties as a top man with Associated Press to do a very excellent, scholarly book that he called "Splendid Misery." He took the title from a statement that was once made by Thomas Jefferson about the Presidency. Jefferson referred to it as the "splendid misery." Mr. Bell's book dealt with the Chief Executive and with that office, and it was a tremendous contribution to the literature in that field.

He has been an equally keen observer of the legislative scene over a long period of years and undertook, of course, to call them as he saw them. I always enjoyed the banter that I had with him, day after day and year after year, at the meetings in the Press Gallery which followed the minority part luncheon on Tuesday every week. To me, that was at once an informative, a delightful, and a rather challenging experience; and there I think I got to know Jack Bell better than I had at any other time.

He is in every sense a great reporter, and he goes to an excellent newspaper setup—namely, that of the Gannett chain. I am sure his columns will be

Aug 1, 1969

CONGRESSIONAL RECORD — SENATE

on highly complex matters where the experts themselves are split down the middle.

I intend to confine my own argument to certain observations that are not dependent on technical expertise, and on certain basic estimates in the field of foreign policy where my personal experience over the years does qualify me, I believe, to speak with some competence.

After weighing all of the evidence, I have arrived at the conclusion that the Safeguard ABM system should be supported.

It should be supported in the interest of peace, because a limited ABM system on both sides will make peace more secure by giving both sides the ability to protect themselves against accidental firings or attacks by any new nuclear powers.

It should be supported in the interest of arms control because the mutual possession of anti-missile-defense systems would create a climate more conducive to agreements limiting the number of weapons of mass destruction.

It should be supported in the interest of our national security because the protection of our deterrent force protects the American people in the most basic way by reducing the possibility of thermonuclear war.

It should be supported for political reasons, because the entire course of Soviet conduct, especially in recent years, including the massive buildup of thermonuclear weapons by the Kremlin, points to the conclusion that we are entering a period of continuing crisis in which the lack of an ABM system could only serve to encourage Soviet challenges and adventures.

Above all, it should be supported on moral grounds because it is infinitely better to build defensive weapons, designed to protect and save life, than it is to build aggressive weapons, designed to harm and destroy life.

THE SOVIET ATTITUDE TOWARD ABM

There is absolutely nothing in the Soviet literature that would bear out the charges of the critics that the deployment of Safeguard would be regarded by the U.S.S.R. leaders as an escalation of the arms race.

On the contrary, the Soviets, because they believe in a balanced mix of offensive and defensive weapons, have a much more rational attitude toward antimissile defense than we do.

Essentially they take the stand that defensive systems are not provocative and that they are stabilizing, not destabilizing. Indeed, Soviet spokesmen have made some of the most effective arguments for the ABM.

When Prime Minister Aleksei Kosygin at a London news conference in February of 1967 was asked if the Soviets' antimissile system was not a new step in the arms race, he replied:

It seems to me that the system that protects against an attack is not a factor in the arms race. On the contrary, it is a factor that reduces the possibility of the destruction of the people.

This position has been spelled out in much more detail by other spokesmen for the Soviet viewpoint. For example, an

article written several years ago by a Soviet strategic writer, Maj. Gen. N. Talensky, said.

Antimissile systems are defensive weapons in the full sense of the word: by their technical nature they go into action only when the rockets of the attacking side take their flight paths, that is, when the act of aggression has been started. The advantage of antimissile systems in the political and international law context is that their use is caused by an act of aggression, and they will simply not work unless an aggressor's rocket makes its appearance in flight over a given area. There will be no difficulty at all in deciding who is the aggressor and who the attacked.

It is obvious that the creation of an antimissile defense merely serves to build up the security of the peaceable, non-aggressive states. The creation of an effective antimissile defense system by a country which is a potential target for aggression merely serves to increase the deterrent effect and so helps to avert aggression. It is said that the international strategic situation cannot be stable where both sides simultaneously strive for deterrence through nuclear rocket power and the creation of defensive antimissile systems. I cannot agree with this statement either. From the viewpoint of strategy, powerful deterrent forces and effective antimissile defense system, when taken together, substantially increase the stability of mutual deterrence.

Such statements, together with the fact that the Soviet Union has been developing its own antimissile system for more than 5 years now, effectively demolishes the argument that the Soviets would regard the building of an ABM on our side as a provocation.

I note, parenthetically, that none of the critics has yet suggested that the Soviets would be willing to dismantle their own ABM system if we should decide not to deploy one of our own.

In fact, unless I have missed something, none of them has even suggested that we raise this point in the forthcoming arms control negotiations with the Soviet Union.

Indeed, it would be difficult to think of any approach more calculated to get the Russians to put up their backs.

For such a proposal would really wreck any conference on the limitation of nuclear arms.

And it is not just that the Soviets would insist that the ABM is a purely defensive antiaggressive device, which the Americans need not fear and on which there can be no compromise.

Even if the Soviet leaders were completely satisfied about American intentions, they would still want their ABM system as a protection against Red China. And for this they certainly cannot be blamed.

Before going on to deal with some of the more controversial aspects of the ABM and with some of the other arguments that have been made against it, it would be useful to review certain things which the Safeguard system could almost certainly do or which it would have a very good chance of doing.

THE ABM AND ACCIDENTAL MISSILE FIRINGS

The Safeguard ABM and an equivalent installation in Russia would reduce the danger of accidental thermonuclear war by giving both sides the capability to deal with an accidental missile firing.

The probability of an accidental mis-

sile firing or of a firing by unnerved or psychotic commanders on either side is low.

Some of the critics of ABM have argued that the chances of an accidental firing are indeed so negligible that we can ignore this possibility altogether. I do not agree with them.

No one knows for certain whether the chance of an accidental missile firing through technological failure is one in a million or one in 50 million each year. But it is a disturbing thought that, if there is a one in a million chance that there will be an accidental firing in any given year, then, over a 20-year period, the odds would be reduced to one in 50,000. And if the number of existing missiles, worldwide, were to be doubled or tripled over the coming decade, then the odds would be reduced by just that much again.

We take fire insurance on our houses on the basis of odds that are not very dissimilar from this.

Besides, there would probably be a much higher chance of an accidental missile firing by Red China or some other new nuclear power, because it is unlikely that such powers will build into their offensive missiles the highly sophisticated and very expensive safety controls that are built into American and Soviet missiles.

Moreover, the danger of an accidental missile firing due to human failure is even greater than the danger of an accidental firing due to technological failure.

Consider a situation in which there has been a continuing crisis between the two superpowers, and both sides have for months had their nuclear forces in a state of maximum alert.

Such a situation would inevitably produce a cumulative nervous strain on both sides; and under such a strain it is conceivable that even the most rational and carefully selected group of commanders might crack and act without authorization. So let no one say that we can completely ignore the possibility of an accidental firing.

If, one day, Kosygin were to call the President on the hot line to say that there had been a terrible accident and that an SS-9 was headed toward New York City, the President of the United States, in the absence of a Safeguard system, would have only two choices:

First, he could let the missile destroy New York City without retaliation, writing the affair off as an accident; or

Second, he could order a retaliatory strike against Moscow—which would almost certainly result in all-out thermonuclear war.

What a dreadful position the President of the United States would be in if these were the only choices open to him. But the choice need not be this limited.

For, if we had the Safeguard system, then the President would have a third option: He could simply order the missile shot down.

Even the harshest critics of the Safeguard system do not deny its technical capability to deal with a single incoming missile or with a small salvo of missiles.

The challenge of the critics relates to Safeguard's ability to deal with a saturation attack.

August 1969

If the Safeguard system could accomplish nothing more than this one thing, that is, protecting the world against the possibility of thermonuclear war by accident, the system would be worth every penny of what it costs.

And so long as offensive thermonuclear missiles exist, it is clear that the world will be a much safer place if both sides carry this kind of insurance for themselves.

As the senior Senator from South Dakota pointed out in his very able statement in support of Safeguard deployment, the cost of this insurance over the coming year would average out to roughly \$4 per year for every man, woman, and child in the United States. In terms of what it insures us against, the Safeguard system is just about the cheapest insurance buy on record.

SAFEGUARD AND RED CHINA OR OTHER NUCLEAR POWERS

The Safeguard system, and its equivalent in the Soviet Union would provide a high degree of protection against the possibility of an attack by Red China or by some new nuclear power, or "nth" nation, as it is called in the jargon of nuclear politics.

Just about everyone is prepared to agree that the Chinese Communist leaders are aggressive, irrational, and unpredictable, and that their anticipated missile arsenal could constitute a danger, for ourselves and for the Soviet Union, by the midseventies. By that time, it is estimated, the Chinese Communists will have some 15 to 20 ICBM's.

Moreover, we cannot rule out the possibility of some other psychotic dictator somewhere in the world secretly or openly developing a few nuclear weapons for use against us or other nations.

Besides, there would probably be a much higher chance of an accidental missile firing by Red China or some other new nuclear power because it is unlikely that such powers will build into their offensive missiles the highly sophisticated and very expensive safety controls that are built into American and Soviet missiles.

Many scenarios have been written by strategic experts on the possibility of a Red Chinese nuclear confrontation with the United States.

In one of these scenarios, several missile-carrying submarines, which the Chinese are known to be building, surface off the American west coast and fire a demonstration missile, either against an unpopulated target or else against a small city.

This is accompanied by an ultimatum: Either we agree to withdraw all support from Taiwan, South Vietnam, Thailand, and Korea, and withdraw all air and naval units from the Far East at once, or else Chinese missiles will annihilate Los Angeles, San Francisco, Portland, San Diego, and other major population centers on the west coast.

The ultimatum would also say that the Chinese missiles would fire immediately if American missiles were directed against the Chinese mainland or against their submarines.

Now it is true that we have the power to wipe out Red China, or at least to wipe out all of its major population centers.

But would a President of the United States want to invoke this power, knowing that it would result in some ten to 20 million American dead and the devastation of half a dozen major American cities?

Without Safeguard, the President would have no alternatives but to accept the Chinese Communist terms or to press the thermonuclear button.

With Safeguard, the President would have a choice which would enable him to reject such an ultimatum.

There is another scenario involving the Chinese nuclear capability that has been drawn by experts on the area.

Technologically, the Chinese Communists will almost certainly be capable of striking, or threatening to strike, their neighbors in Asia, and even the U.S.S.R., before they are capable of attacking or threatening the United States.

Our main problem, therefore, may turn out to be whether or not we will honor the nuclear guarantee implicit in the Nonproliferation Treaty if New Delhi or Tokyo should receive a Chinese Communist ultimatum to "do so and so or we'll blast your cities off the map."

If both the United States and the Soviet Union possess missile defense systems, they would be in a far stronger position, psychologically and diplomatically, to deal jointly or separately with any such aggressive action in Asia by Red China.

SAFEGUARD AND THE POSSIBILITY OF AN UNIDENTIFIED ATTACK

There is a special type of "nth" nation attack that must also be a reason for concern and that is the possibility of an attack from an unidentified source.

Such an attack could take the form of a short-range missile launched from the ocean bed or from a submarine or a ship.

Clearly, if a missile of unidentified origin impacted on an American city, it would create an immediate danger of war.

The President would have no way of knowing for certain whether the missile was fired by the Soviet Union or Red China or Castro Cuba or some other anti-American dictatorship.

But meanwhile, the destruction of one of our metropolitan centers would put him under tremendous pressure to take some action.

The Russians, even if they had not fired the missile, would inevitably develop a nervous trigger finger because, in the uncertain situation thus created, they would have to fear a possible retaliatory strike by the United States.

In such a situation, the possibility of thermonuclear war between the Soviet Union and the United States could not be ruled out.

This scenario may seem rather far-fetched. But the experts are agreed that it is a possibility that we cannot ignore.

It is, for example, not inconceivable that the Chinese Communists might seek to launch such an unidentified missile

attack on the United States for the purpose of promoting a crisis between ourselves and the Soviet Union.

Here again, if we had Safeguard, we would at least have a good chance of dealing with an unidentified attack by one or several missiles from an offshore position.

Without it, we would have to sit by passively and take the blow, or strike back with massive retaliation, perhaps against the wrong country.

THE ABM AND ARMS CONTROL

By stabilizing the situation as described above, the possession of a limited antimissile defense by both sides would also create a climate more conducive to the negotiation of effective agreements in the field of arms control and disarmament.

There is an additional reason for believing the antimissile defense systems on both sides would be good for future arms control and disarmament talks.

The arms control talks of the 1970's will turn largely around the question of limiting or reducing the number of offensive missiles.

If we achieve an agreement, we will always have to worry about Soviet cheating: First, because it can be taken for granted that they will never agree to inspection, and, second, because of the unbroken record of Soviet cheating and violation of treaties.

If the Soviets were to cheat on such an agreement and get away with it, it could lead to disaster.

If, for example, both sides were to agree to cut back to 100 missiles, but if the Soviets in fact only cut back to 500, this would put us at an almost fatal disadvantage in any confrontation.

If, on the other hand, we had a Safeguard ABM system in existence to protect our arsenal of 100 missiles, we would still have to worry about Soviet cheating, but we would not have to worry as much.

The Soviets, on their side, would have no reason to worry about American cheating, no matter how much they might pretend to do so.

They know that it is virtually impossible for us to cheat because ours is an open society; while they have been able to develop the art of cheating to an all-time high because theirs is a completely closed society.

In the absence of antimissile defense systems, arms control measures by the two superpowers might be risky and destabilizing.

With missile defense, the same arms control measures would be less risky and, to that degree, more acceptable to both sides, and stabilizing.

WILL SAFEGUARD WORK?

As I have said, I would consider it presumptuous to attempt a technical evaluation of the ABM's effectiveness in dealing with a saturation attack. However, I do agree with two commonsense rules for laymen outlined by one of our top defense experts, Mr. Robert C. Sprague, in his testimony on the ABM before the Senate Armed Services Committee.

August 1, 1969

CONGRESSIONAL RECORD — SENATE

S 8947

These are the rules:

Rule No. 1: In assessing the potential of any important new field of technology involving new processes or systems—*half the scientists, or at least a large fraction, are usually wrong.*

Rule No. 2: If a significant percentage of scientists agree, or sometimes if only one or two agree, that something new can be done—it can be.

The validity of these rules have been borne out repeatedly in the postwar period.

The many scientists who said an H-bomb could not be built were wrong, while the minority who said that it could be built were proved right.

In this connection, I note that Dr. Jerome Wiesner, the chief scientific critic of the Safeguard program, was also one of the most vocal critics of our moon program.

According to a recent article in the Washington press, a former NASA Administrator, James E. Webb, was so disturbed by the vehemence of Wiesner's opposition that in July 1962 he called in his assistant, Joe Shea, and said to him:

Jerry Wiesner's in a highly emotional state. He thinks Lunar Orbital Rendezvous is the worst mistake in the world. We'll be risking the lives of the astronauts—everything. Get over there and see him.

The article said:

Shea whipped over to the White House and found Wiesner "screwed up into the ceiling." Shea talked for almost 2 hours, but at the end of it all found Wiesner still completely unconvinced.

It has been claimed that we will never know if the Safeguard will really work against a saturation attack, because it is obviously impossible to conduct a test simulating a saturation nuclear missile attack.

On this point they are completely right. For that matter, we have never tested our Minuteman or Polaris missiles systems under battle conditions.

But the important thing is that the Kremlin, too, will have no way of knowing just how effective the Safeguard system would prove against a Soviet surprise attack.

American technological opinion may be divided on the ultimate workability of the Safeguard system. But the Soviet planners, apart from the fact that they tend to have an enormous respect for American technology, would have to err on the side of crediting the Safeguard system with a higher rather than a lower capability.

Because Safeguard would complicate Soviet calculations, because it would inevitably raise further questions in their minds about the feasibility and the advisability of a first strike, to this extent Safeguard would act as an additional deterrent to the possibility of thermonuclear war.

Although no one can know for certain how effectively Safeguard would function if it were ever put to the final operational test against a saturation attack, there can be no doubt about its political and psychological effectiveness.

In this vital sense, Safeguard would work.

It would not by itself constitute a guarantee against nuclear war or against a Soviet first strike. But it would substantially reduce the possibility.

THE SAFEGUARD SYSTEM AND OUR RESPONSE TO A SOVIET FIRST STRIKE

President Kennedy, in his message to Congress of March 28, 1961, clearly repudiated a first strike by the United States:

Our arms will never be used to strike the first blow in any attack. We are not creating forces for a first strike against any other nation. We shall never threaten, provoke or initiate aggression—but if aggression should come, our response will be swift and effective.

I believe that no free democratic nation will ever engage in a first strike with nuclear weapons against another nation because of the moral and political restraints that govern the action of democratic leaders.

We cannot be so certain, however, about the restraints that govern the actions of the rulers of imperialistic, totalitarian societies. Nor can we be certain about the restraints that will govern the actions of the various psychotic dictators who are bound to hold power or come to power in a certain number of other nations over the coming decades.

Nor is there any reassurance to be found in a reading of Soviet military doctrine, because the fact is that their military doctrine, with its emphasis on flexibility, devotes serious attention to all possible options, including the option of a first strike.

Soviet military writings do not actually employ the term "first strike." Instead, they discuss the first strike in Aesopian terms. One commonly used formula talks about "frustrating the designs of the imperialists," before they can launch their missiles.

I want to make it clear that I do not say that the Soviets are planning a first strike against the United States.

But I do contend that this is a possibility which cannot be ruled out.

This much is conceded by some of the severest critics of the Safeguard project.

For example, Dr. George W. Rathjens of MIT, a leading opponent of the ABM, said on June 22:

I have never denied that by the late 1970's the Soviet Union could, if it wished, have a capability to destroy nearly all of our Minuteman force in a pre-emptive attack.

There is general agreement between the experts that if a first strike ever comes, it will take the form of an all-out attack designed to destroy or virtually destroy our Minuteman force, our Polaris submarines as well as our bombers. It would make no sense for the Soviets to launch a first strike against our cities and leave our deterrent missile force intact, because if they did so, they would be inviting a response that would completely obliterate all of their population centers.

Since the possibility of a Soviet first strike cannot be ruled out, it is also important to consider what options would be open to the President of the United

States if he one day received an emergency call informing him that 500 Soviet SS-9's had taken off for the United States, targeted against the ICBM complexes in the Midwest.

If we had no ABM system defending his deterrent force, the President would have only two options in the case of such an attack. He could either sit back and let the Soviet missiles obliterate our Minuteman ICBM's, perhaps hoping that our Polaris submarines will be able to survive; or else he could empty his missile silos in a retaliatory strike against Soviet cities as soon as he received the first radar warning that the Soviet missiles are in flight.

A decision to empty our missile silos before the Soviet first-strike salvo reached its targets would, of course, automatically bring a second wave of Soviet missiles directed against American cities; and the mutual holocaust which we seek to avoid would be upon us.

If he had a Safeguard ABM system, however, the President would have an alternative to the holocaust button. And this would be true even if 50 percent of our missiles were knocked out, because 500 American ICBM's would be more than enough to devastate the Soviet Union. In fact, the consensus of the experts is that it would be suicidal for any nation to attempt the first strike unless it was certain that it could knock out roughly 90-95 percent of its adversary's strategic missile force.

Coming back to our scenario, if the President had a Safeguard ABM system, he could then decide to wait out the Soviet strike, until he received information on which Soviet silos have fired their missiles and which Soviet missiles remained in reserve. Then, when he ordered our missiles launched, he could target them not against Soviet population centers but against the enemy's remaining strategic forces.

If we could succeed in destroying or largely destroying the enemy's strategic reserve, a mutual holocaust would have been avoided and the stage would be set for negotiations that would, at the very worst, assure us of a draw.

In contemplating the contingency of a Soviet first strike, therefore, it is of the greatest importance that we provide the President of the United States with some alternative other than surrender or the holocaust button.

To date, the Safeguard system is the only alternative that has been suggested which makes sense.

THE ALTERNATIVES TO SAFEGUARD DEPLOYMENT

A number of alternatives to the initial Safeguard deployment proposed by the administration have been suggested in the course of the present debate.

None of them make any sense to me.

For example, it has been suggested that instead of deploying an ABM system we could, if the Soviet buildup warrants it, deploy more Minuteman or more Polaris missiles. Some have even suggested the possibility of doubling our strategic strike force.

I am opposed to this proposal, because I think we have somehow got to bring

an end to the piling up on both sides of these terrible aggressive weapons of mass destruction.

I am also opposed to it because I believe that such a step would really be provocative and would therefore increase the danger of thermonuclear war.

It has also been proposed, that, as an alternative to Safeguard, we empty our missile silos against Soviet cities at the first sign of attack.

I find this proposal even more appalling than the proposal that we increase our ICBM force. In fact, it smacks frighteningly of Dr. Strangelove.

This is not a formula for defending the United States; it is a formula for mutual annihilation.

Another proposal which has been submitted in amendment form is that we limit the Safeguard program to research, development, and testing; and that, rather than installing any radars now at the projected operational sites in North Dakota and Montana, we instead build certain prototype radars at our Kwajalein test range. This amendment is currently before us for consideration.

I am opposed to this proposal on three grounds.

First, it would result in greatly increased costs if we ever decide to deploy Safeguard, because then our entire additional investment in the Kwajalein installation would be wasted.

Second, according to knowledgeable estimates, it would result in a delay of almost two years in the deployment of Safeguard, and time now is so precious that we cannot afford to squander it in this wanton manner.

Third, as Prof. Albert Wohlstetter, one of this country's leading strategic experts, has pointed out, a satisfactory testing of the entire system could not be carried out at Kwajalein.

In order to test the effective operation of Safeguard, we not only have to test interactions among the many components of the ABM system but also between the Safeguard system itself and other elements of our national defense.

This can only be done by deploying the various components in their intended environment in Montana and North Dakota.

In his testimony before the Subcommittee on International Organization and Disarmament Affairs, and in subsequent conversations which I had with him, Dr. Edward Teller hammered away at the essential argument that only by a comprehensive test of the entire Safeguard system with its various components and in its intended environment, would we be able to iron out the bugs in the system and determine just how effective Safeguard can be made.

In the absence of such an initial deployment, Dr. Teller holds, we will be voting for ignorance in an area where we cannot afford to be ignorant.

The Russians, he points out, do not suffer from the handicap of ignorance.

Dr. Teller further pointed out that in the period before the limited test ban treaty, the Russians tested an ABM with a live nuclear warhead against an incoming missile.

Since then, they have deployed an extensive ABM system around Moscow.

Furthermore, they are pursuing a vigorous program of refinement with a third generation of ABM missiles which have a "loitering" capability.

Now Dr. Teller is a man whose testimony deserves some attention because it was thanks to him, more than to any other single person, that we were able to run a neck-and-neck race with the Soviets in the development of the H-bomb.

The United States exploded its first hydrogen test device on November 1, 1952, in "Operation Ivy." But this was not a deliverable device.

Our first deliverable weapon was not exploded until March 1, 1954, in "Operation Castle."

Meanwhile, in early August, 1953, the Soviets had staged their first thermonuclear explosion, which, according to our intelligence, did involve a weapon capable of delivery.

It was thanks only to a massive effort and to the inherent superiority of American technology that we were able to pull ahead of the Soviets in thermonuclear weapons over the following years.

As we approach a decision on ABM, let us not forget what might have happened if the Russians had beaten us to the H-bomb.

THE POLITICAL CONTEXT

The distinguished junior Senator from Washington (Mr. JACKSON) has made the point that it is impossible to reach sound judgments on ABM or on other aspects of the national defense budget if we do not have a clear conception of the nature of our Soviet adversary.

The Senator's argument on this point is unchallengeable. Without such an understanding, we would be attempting to make our judgments in a political and intellectual vacuum.

The Senator from Washington was responsible for a remarkably profound article on the subject of Soviet policy which appeared in the June issue of Reader's Digest. He added to this presentation in the speech which he made in support of the ABM of July 9 on the floor of the Senate.

The conclusions to which he has come coincide completely with my own.

As Senators know, I have addressed myself in this Chamber repeatedly to the subject of Soviet policy.

I believe that the achievement of a true detente, involving a total cessation of cold war activities, should be a prime objective of our foreign policy.

I cannot, however, accept the judgment of those who hold that such a detente has already been achieved.

I have pointed out that if a detente really did exist, one should be able to find some evidence of this in the record of Soviet pronouncements and actions, but that the evidence is nowhere to be found.

I have also said that it makes no sense to talk about the existence of a detente in a decade that has witnessed the suppression of the Hungarian revolution; Khrushchev's Berlin ultimatum; the Communist seizure of Cuba; the

Cuban missile crisis; and Soviet involvement in the Laotian uprising of 1961-62, in the Vietnam war, and in the Tricontinental Conference of Revolutionary Parties in Havana.

Nor does it make sense to talk about a detente against the immediate background of the Soviet invasion and occupation of Czechoslovakia and the promulgation of the Brezhnev doctrine, under which the Kremlin has claimed the right to intervene in any so-called Socialist country if the Communist dictatorship there is threatened.

THE STRATEGIC BALANCE

Nor are prospects for the future rendered any more reassuring by the record of Soviet reaction to the unilateral limitations which we placed on our strategic arms in the mid-1960's.

Acting on the advice of some of the ivory-towered scientists who now are in the forefront of the fight against the ABM, we closed down a number of our nuclear weapons reactors, froze the number of our Polaris submarines at 41 and the number of ICBM's at 1,054, decided not to proceed with a new heavy bomber, and deliberately refrained from deploying a ballistic missile defense.

At that time it was taken as a matter of dogma that the Soviets simply desired to achieve nuclear parity with the United States and that it would be in our national interest if the Soviet Union achieved an "assured destruction capability" because this would reduce the Kremlin's concern over American intentions and make for a more stable situation.

The chief prophet of this policy was Dr. Jerome Wiesner, and his chief disciple was former Secretary of Defense McNamara.

When Wiesner and McNamara spoke about parity, they appeared to have in mind numerical parity in strategic weapons.

However, "parity" is a complex concept that does not lend itself to simple definition.

As Secretary Laird has pointed out, the relative size, or megatonnage, of the weapons on both sides is also a matter that has to be taken into consideration; and here the Soviets have a distinct edge over us.

Population concentration is another factor that should be considered in any calculation of "parity." And here, because of our much greater concentrations, we are at a distinct disadvantage compared to the Soviets. In fact, as Secretary Laird stated, 200 Soviet missiles would take just as heavy a death toll in this country as 1,200 American missiles would exact in the Soviet Union.

In terms of their ability to inflict damage on the United States, the Soviets unquestionably passed the point of parity a long time ago.

The achievement of numerical parity by the Soviets would, in fact, give them an enormous strategic advantage instead of simply strategic parity.

This is something that should have been obvious all along, even to the untutored layman. But, despite this, Wiesner and McNamara held to their belief in

August 1, 1969

the protective potential of numerical parity in strategic weapons.

It was also taken as a matter of dogma that once the Soviet Union achieved "parity" it would automatically taper off its missile production, and the stage would thus be set for meaningful talks on arms limitations. This is not happening.

The Weisner-McNamara doctrine will be recorded historically as a double tribute to the good intentions of its originators and to their capacity for self-delusion.

Three years ago, in July 1966, when our own ICBM strength had already been frozen at the arbitrary figure of 1,054, the Soviet Union had 250 ICBM's.

Today, according to hard intelligence, the U.S.S.R. has some 1,250 ICBM's in addition to a force of 700 medium-range ballistic missiles and some 550 sea-launched missiles.

No one in the United States and no one in our intelligence community and no one in the Pentagon ventured to predict in 1966 that the Soviets would add 1,000 ICBM's to their missile force over the ensuing 3-year period.

Had anyone ventured such a prediction at the time, he would have been assailed as an extremist kook or a warmonger by the apostles of the myth of the detente.

THE INTELLIGENCE GAP

Our satellite reconnaissance enables us to know how many missiles the Soviets have deployed or are deploying at any given time. But when we attempt to determine at what rate the Soviet missile assembly lines are operating or what their production quotas are for the coming period, uncertainties inevitably arise.

I know that Secretary of Defense Laird ran into a lot of flack when he suggested that the Soviets might have a force of 2,500 ICBM's by the midseventies.

But if the Soviets continue to produce ICBM's at the 1966-69 rate, then simple arithmetic points to the conclusion that 4 years hence their ICBM force will in fact total 2,500.

Conceivably an order may come through from the Kremlin to close down the lines because the Soviet leaders now feel that they have "a sufficiency" of nuclear weapons.

On the basis of past experience, however, I consider it far more likely that the Soviet missile assembly lines and armament factories and shipyards and submarine yards will continue to function at the high level of recent years, until the Kremlin has achieved the marked and unmistakable superiority in offensive weapons which is their proclaimed goal.

There has been a lot of loose talk about the so-called "intelligence gap"; that is, about the gap that supposedly exists between the intelligence estimates presented by Secretary Laird and those officially prepared by the Board of National Estimates.

My own reading of the record is that, despite the very sharp questioning to which Secretary Laird and Mr. Richard Helms were subjected in their joint appearance before the Foreign Relations

Committee, their testimony failed to disclose the existence of any basic conflict.

Certainly, there was no conflict of any kind over the rapid buildup of Soviet strategic strength, because this is something that is based on "hard" intelligence.

When it comes to estimates of Soviet intentions, however, there is admittedly a lot of guesswork involved. In this area there is apt to be a difference of emphasis between those responsible for gathering intelligence and those responsible for defense policy, for the simple reason that our policymakers must prepare for the worst contingency rather than for the best contingency.

I think it pertinent to point out in this connection that our intelligence community has erred far more frequently on the conservative side than otherwise in their estimates of Soviet capabilities and intentions.

In fact, the American intelligence community, although it has performed well in certain situations, has not been impressive when estimating the intentions and plans of our adversaries.

It failed to warn our Government of the impending North Korean Communist attack on South Korea; and, at a slightly later stage, it failed to warn General MacArthur of the impending invasion of Korea by 1 million Chinese.

It failed to predict accurately either the Soviet A-bomb or the Soviet H-bomb. In both cases the estimates were that it would take the Soviets much longer to develop these weapons than actually proved the case.

In 1956, it failed to alert us to the Soviet invasion of Hungary.

In 1957, it was completely without advance information on the Soviet Sputnik.

Over the ensuing years, our intelligence community lapsed into one of its very rare periods of overstatement when it advised the Eisenhower administration that there was a massive missile gap between the Soviet Union and ourselves.

Today it has been documented that the so-called missile gap was a Soviet-engineered hoax, and that our intelligence community fell for phony information put out by Khrushchev for the purpose of intimidating us.

In more recent years, conversely, its estimates of Soviet intentions regarding the size of Soviet ICBM forces have turned out to be woefully conservative.

In the period immediately before the Cuban missile crisis, the advance consensus of the intelligence professionals was that the Soviets would not tempt the fates by deploying nuclear missiles in Cuba. And, despite warning signs which many of our lay experts took seriously, they were also disposed to discount the possibility that the Red Army would invade Czechoslovakia to depose the Dubcek regime.

The late Senator Robert F. Kennedy, in his book, "Thirteen Days," had this to say about the performance of our intelligence community during the Cuban missile crisis:

No one had expected or anticipated that the Russians would deploy surface-to-surface ballistic missiles in Cuba.

No official within the government had ever

suggested to President Kennedy that the Russian build-up in Cuba would include missiles . . . The intelligence community, in its national estimate of the future course of events, had advised him—on each of the four occasions in 1962 when they furnished him with official reports on Cuba and the Caribbean—that the Russians would not make offensive weapons available to Cuba. The last estimate before our meeting of the 16th of October was dated the 19th of September, and it advised the President that without reservation the U.S. Intelligence Board, after consideration and examination, had concluded that the Soviet Union would not make Cuba a strategic base.

It pointed out that the Soviet Union had not taken this kind of step with any of its satellites in the past and would feel the risk of retaliation from the United States to be too great to take the risk in this case.

This estimate of September 19, I want to note, was after the first missiles had already been landed in Cuba.

All this is not so much a matter of criticism as it is a lament.

But I dwell on this point because, on the record, it is demonstrably true that our intelligence community has not been realistic, much less extremist in its appraisals of the intentions and capabilities of our adversaries.

I know, too, that it is an exceedingly difficult task to gather intelligence having to do with the policy and intentions and future production schedules of a closed totalitarian society.

And it is better that our intelligence community shun alarmism and concentrate on hard information rather than speculating over Soviet intentions.

Nevertheless, in attempting to weigh the contingencies that may confront us over the coming years, it would be well to bear in mind that, over and over again, the Soviet performance in the field of armaments has either surprised us completely or substantially surpassed our estimates.

There seems to be some difference between our experts over whether or not the Soviets have already achieved nuclear parity with the United States. What is certain, is that if the Soviets continue to build up their nuclear forces at the rate of recent years while the United States stands still, the Soviet Union at a very early date is bound to achieve a substantial numerical superiority in nuclear missiles, on top of the marked superiority they already enjoy in total megatonnage.

THE JUSTIFICATION FOR PESSIMISM

If my own outlook is on the pessimistic side, it is because pessimism is indicated by the entire history of the postwar period.

The one lesson that emerges from this record, as I read it, is that if one assumes the worst about Soviet intentions, he will almost never go wrong.

In applying this rule of thumb, I have on a number of occasions found myself taking stands that were considered unpopular and which brought me a good deal of adverse editorial comment at the time. But almost invariably and unfortunately it has turned out that my apprehensions were right.

I do not like to talk about myself. I do so only because I know of no other way of making this point.

When Castro took over Cuba, there was a widespread tendency in our press and in our State Department and in Congress to regard him as some kind of non-Communist agrarian reformer, or Robin Hood, with whom we could and should continue to do business. Editorial brickbats flew when in mid-1959 I said that the evidence pointed to the conclusion that Castro was bent on establishing a total Communist dictatorship in Cuba and converting Cuba into bastion of Soviet power in the Caribbean.

But then Castro announced to the world that he was, in fact, a Communist; and a short while later our blundering and naivete were rewarded by the Cuban missile crisis.

When we entered into the moratorium on nuclear testing with the Soviet Union, I took the floor of the Senate repeatedly to warn that the moratorium was a trap because we were, in effect, giving the Soviet Union a total test ban treaty without inspection of any kind.

I referred to the moratorium on several occasions as "the most egregious act of bipartisan folly in American history."

It was a solitary and unpopular stand.

But then, in August 1961, with our own nuclear technology completely inactivated, the Soviets resumed atmospheric testing. And when the analysis of these tests were completed, it turned out that we had lost the estimated 3-to-4 year lead in nuclear technology which we had previously enjoyed.

The Soviet action was denounced as a betrayal of trust by the President, by Congress, by the press.

But it still amazes me that anyone expected the Soviet Government to behave any differently than they did behave in this situation.

More recently, I recall that I was one of the handful of people in Congress or out of Congress, who, last summer, warned that the Soviets were getting ready to invade Czechoslovakia.

The view was considered an alarmist one at the time. But in this situation, unfortunately, the alarmist view again turned out to be the correct one.

So let us be careful this time.

THE OUTLOOK FOR THE FUTURE

Let me now venture another prediction.

I do not hold that limited agreements with the Soviet Union are impossible.

On the contrary, I believe strongly that, despite all the difficulties, we must continue to seek agreements, no matter how limited, in the field of arms control and in every other area.

I supported the partial test ban treaty, and it pleases me to know that my resolution of May 27, 1963, which was co-sponsored by 33 other Senators, has been widely credited with having played a role in encouraging this new approach to the test ban treaty.

But, while holding to the conviction that we must always be prepared to walk the extra mile, and more, in the difficult quest for peace, I fear that the coming decade will be one of grave and recurring crises. It will be an era during which the Soviets will continue to expand their challenge to the free world and to extend their power and their influence in North

and Central Africa, in Latin America, and in Asia, and the massive Soviet missile and arms buildup of recent years will continue. Indeed, within a few years at the most, the unchallengeable evidence will persuade even the most wishful thinkers that the Soviets have achieved their goal of strategic weapons superiority.

When that day comes, many a Senator who will vote against the Safeguard ABM system at the close of the current debate, will have cause to rethink his vote.

It is impossible not to be alarmed by the prospect of having to deal with the Soviets in future crisis situations where they enjoy either parity, or worse still, a distinct superiority in nuclear weapons.

We were able to stand up to Khrushchev's Berlin ultimatum of November 1958, despite the flagrant manner in which he rattled his nuclear missiles, because we knew, and the Russians knew, that we possessed massive overall nuclear superiority.

In the Cuban missile crisis of 1962, President Kennedy, in effect, delivered an ultimatum to the Soviet and Cuban Governments. He told them that if the Soviet missiles were not removed from Cuba, the United States would take the necessary measures in its own self-defense.

The Soviet government was also informed that we would not permit the delivery of any more nuclear missiles to Cuba, and that if a nuclear missile were fired from Cuba at the United States, we would respond to such an attack in precisely the same way that we would respond to an attack from the territory of Soviet Union itself.

Confronted with this ultimatum, the Soviet leaders backed away from the brink and the Cuban missile crisis came to an end.

But we have to ask ourselves whether the Soviets would have backed down and whether President Kennedy would have dared to take the same brave line if it had not been for our very substantial nuclear superiority at the time of the crisis.

Since the Soviets played a very rough game of nuclear blackmail, even in the years when we had a marked nuclear superiority, there is every reason to believe that the Kremlin will use nuclear blackmail as a political instrument even more frequently and more brutally at the point where it achieves parity or superiority in nuclear weapons.

THE QUESTION OF COST

The question of cost is important, but it is not central to the problem before us.

If the peace of the world and the survival of our Nation are at stake, then, clearly, cost is a matter of secondary importance.

But this does not mean that we can forget about cost.

Everyone is worried about the heavy costs of our defense programs. A tightening up of procurement and management procedure is long overdue. Hopefully, the blue-ribbon panel which has now been set up will bring about a great improvement in these procedures and practices.

To those who fear that Safeguard may wind up costing us astronomical sums

of money, let it be remembered that what is involved in the bill now before us is the price of a 1-year deployment, costing some \$800 million. And this is a small sum, compared with our overall defense budget.

And we will not be locking ourselves in to an entire program. For it will be reviewed at every stage, from the standpoints of cost and effectiveness and of the international situation.

And it makes no sense to say that, once committed to a program, we cannot cancel it. It is only necessary to recall the recent cancellation of the F-111 program on the basis of its disappointing performance and its excessive costs.

Where national survival is at stake, it is better to err on the side of over-insurance than on the side of under-insurance.

Today I have set forth the reasons which have led me, after careful thought, to strongly favor the deployment of the Safeguard antimissile defense system.

To summarize, I believe that the ABM should be supported because it is a moral weapon, a weapon for peace, a weapon that would greatly increase the chances of bringing an end to the arms race and of instituting some meaningful limitation on offensive nuclear weapons.

There is an unfathomable mystery to the rationale of those who call upon us to refrain from deploying an antimissile defense system in the interest of future arms-control talks.

It would make much more sense for us in any arms control talks not merely to accept the right of the Soviet Union to deploy an ABM system of its own, but to actually encourage the development of defensive systems as a preliminary to limiting the deployment of city-destroying missiles and MIRV's.

Rather than calling on the United States to abstain from deploying Safeguard, all those who seriously believe in arms control should be focusing their attack on reducing the awesome arsenals of offensive thermonuclear missiles.

Up to now, the Soviets have been a fearsome problem, as they have overwhelmed one country after another.

At this very hour, the Soviets lie in political siege of several free but weak non-Communist countries.

If the past is any guidepost for the future, then there is more trouble in the offing.

We face dark and troublesome days ahead.

Our very freedom is at stake; our very survival is in peril.

Let us remain strong and secure so that we will be free to lead the way to real disarmament and peace.

I take it for granted that every Senator will reweigh the evidence with the utmost care before casting his vote, knowing that the quality of our life and the quality of our national security and the maintenance of world peace are heavily involved in the outcome of this vote.

So I say we should give the President of the United States an alternative to pushing the holocaust button.

August 1, 1969

CONGRESSIONAL RECORD — SENATE

Obviously, the Safeguard ABM is not a perfect weapon. But it is the best our people have been able to devise.

What we have to do is to look at our adversaries in the world. They put up a defense system of their own; and it makes sense to me, sitting here with their missile pointed at us, for us to have a missile defense system of our own.

I earnestly hope that we will not vote the ABM down, for if we do, we may live to regret it. I hope that we will vote, instead, to be strong and safe, and secure.

Mr. BYRD of West Virginia. Mr. President, will the Senator from Connecticut yield?

Mr. DODD. I yield.

Mr. BYRD of West Virginia. Were there not some scientists who said that the hydrogen bomb was impossible to build?

Mr. DODD. Yes; it was on this same basis that they opposed the H-bomb, saying that it was impossible to build. There were also many members of the administration and of Congress who said that the hydrogen bomb could not be built. Of course, they were dead wrong.

Some of the same scientists now, on the same basis, are telling us that the Safeguard ABM cannot be made to work and that it should not be deployed.

Of course there were a minority of scientists who said that the hydrogen bomb could be built and they were proven to be right.

There were scientists, I remind the Senator from West Virginia, who said that the Polaris submarine system was technologically impossible. Not very long ago they were telling us that. And they were wrong, too. Thank God we went ahead, and that we now have a Polaris system to protect us.

The incredible success of the recent moon mission is pertinent here also.

As the Senator from West Virginia knows, I serve on the Aeronautical and Space Sciences Subcommittee, where we were told that the Apollo program was impossible, that we were throwing our money away, that it could not possibly succeed, that we would never put a man on the moon, that the whole thing was ridiculous.

I am talking about scientists who took this stand. Now they are telling us the Safeguard ABM cannot be made to work.

Mr. BYRD of West Virginia. Let me ask the Senator, what would be our situation now if we had continued only with research on the hydrogen bomb, if we had continued only with research on the Polaris submarine, if we had continued only with research in connection with the moon shot?

Mr. DODD. Well, with respect to the hydrogen bomb, I shudder to think of what would have happened if we had not succeeded in developing it at the time we did. As it turned out, we beat the Soviet Union to it by only about 6 months.

If we had not developed the Polaris submarine system, I shudder again to think of what might have happened to us during those years.

With respect to the moon shot, I am confident that, if our adversaries had gone ahead and gotten there first, they would turn their accomplishments into

some military advantage, to our great disadvantage.

The questions the Senator asks are well taken.

MESSAGE FROM THE HOUSE—ENROLLED BILL AND JOINT RESOLUTION SIGNED

A message from the House of Representatives by Mr. Bartlett, one of its reading clerks, announced that the Speaker had affixed his signature to the following enrolled bill and joint resolution, and they were signed by the Acting President pro tempore:

H.R. 13079. An act to continue for a temporary period the existing interest equalization tax; and

S.J. Res. 85. Joint resolution to provide for the designation of the period from August 26, 1969, through September 1, 1969, as "National Archery Week".

TRANSACTION OF ROUTINE MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, the Senate will now proceed to the consideration of routine morning business.

The Chair recognizes the Senator from Ohio (Mr. YOUNG).

DAVE McNALLY TIES AMERICAN LEAGUE PITCHING MARK

Mr. MANSFIELD. Mr. President, for some time I have been intending to take the floor to express my commendation to a fellow Montanan, a young man by the name of Dave McNally, from Billings, Mont. Dave has been pitching for the Baltimore Orioles for a few years, and lately he completed his 15th victory for this season, with no defeats. If we add his two straight victories at the end of last season, Dave has a record of 17-0, which I believe is the way the baseball fraternity would refer to it.

Dave McNally is feeling no pressure. He is feeling no pain. But in his own words, he is feeling very lucky. What the 26-year-old Baltimore left-hander must be wondering, after running his record to 15-0, with a 4-2 victory over Kansas City on Wednesday night, is, "Just how lucky can I be, and just how long can this last?"

To use Dave's words:

No, I don't feel any pressure. I think probably I would feel it if I had pitched well in every game, but that hasn't been the case. I pitched badly enough to lose in six or seven games.

I know it has to end sometime, but I'm very happy to get this far, and I'm enjoying it. I'd rather be winning like this than losing but it's taken a lot of luck to do it.

McNally's number 15 put him in the American League record book alongside Johnny Allen of Cleveland. McNally, with two victories at the end of the 1968 season, tied Allen's mark of 17 consecutive triumphs over two seasons, set in 1936-37, and Allen's record of 15 straight victories at the start of a season, 1937.

Dave McNally is just one triumph away from the league mark of 16 successive victories in one season, set by four pitchers.

I know Dave McNally very well; I know his family extremely well. Those of us who come from Montana are very proud of what Dave McNally has been doing since first starting out in American Legion baseball and then graduating to the Baltimore Orioles. We want him to know that we are following every game with trepidation. We are hoping that his unbroken string of wins will continue through the entire season, because we know that even if Dave is lucky on occasion, he is an outstanding man in his own right.

We look upon him as a great Montanan. I look upon him as a close personal friend.

If Dave ever gets word of this, I just want him to know that there are a lot of us who may not see him at the stadium but who, nevertheless, are watching his every effort and wishing him every success.

AMERICANS SHOULD NOT BE DECEIVED

Mr. YOUNG of Ohio. Mr. President, Americans are entitled to know the facts regarding the much ballyhooed return of 25,000 of our combat troops from South Vietnam.

It would give me pleasure to report not only that 25,000 men of our Armed Forces had been returned home from Vietnam but also that at least 75,000 more combat troops would be returned to the United States from Vietnam before next December. Such a report would be contrary to the facts.

Furthermore, in view of President Nixon's recent statements in Thailand and Saigon, Americans have every reason to be gravely concerned that our fearful combat casualties in that undeclared, immoral, unpopular war in Vietnam will go on and on for many months. President Nixon should be reminded that he was elected because of his oft-repeated campaign statement that he had a secret plan to end the war in Vietnam. That plan is still his secret.

I am regretfully reporting the facts. On January 19, 1969, 2 days before Richard Nixon was inaugurated as President of the United States, there were 532,000 men of our Army, Navy, Marines, Air Force, and Coast Guard in Vietnam. Now, Mr. President, in view of reports issued from the Pentagon and from the White House, Americans have been led to believe that at this time the total men of our Armed Forces in Vietnam, 6 months following the time President Nixon was inaugurated, would be approximately 507,500. The fact is that on July 19, 1969, there were more men of our Armed Forces in Vietnam than at the time Richard Nixon became President. The total number of men in our Army, Navy, Marines, Air Force, and Coast Guard in Vietnam on July 19, 1969, was 535,500, whereas it had been 532,000 on the day before he was inaugurated.

On June 10, 1969, at the time President Nixon announced the withdrawal of 25,000 troops from Vietnam, the total number of men in our Army, Navy, Marines, Air Force, and Coast Guard in Vietnam was 537,500. On July 19, 1969,

the total number was 535,000, or only 2,000 less.

Incidentally, I report that on the day President Lyndon Johnson left the White House January 20, 1969, the total of American Armed Forces in Vietnam, off the coast of Vietnam and in Thailand was 613,200. From that date to June 10, 1969, 2 days after President Nixon announced that 25,000 troops would be withdrawn from Vietnam, this total had been increased to 621,200. On July 19, 1969, more than a month after the announced withdrawal and after 6 months of the administration of President Nixon, 618,600 American servicemen remain in Southeast Asia.

It is with a feeling of sadness, Mr. President, that I make this factually correct report.

I am sure I express the feelings of many millions of Americans who are profoundly disappointed over the failure of this administration to make a sincere effort to withdraw at least 100,000 young Americans from the Vietnam quagmire.

Mr. President, during the week July 19 to 26 Americans killed and wounded in combat numbered 2,926; during that same period South Vietnam friendly forces—too friendly to fight—2,339.

ENROLLED BILLS SIGNED

The ACTING PRESIDENT pro tempore announced that on today, August 1, 1969, he signed the following enrolled bills, which had previously been signed by the Speaker of the House of Representatives:

S. 38. An act to consent to the upper Niobrara River Compact between the States of Wyoming and Nebraska; and

S. 1590. An act to amend the National Commission on Product Safety Act in order to extend the life of the Commission so that it may complete its assigned task.

EXECUTIVE COMMUNICATIONS, ETC.

The ACTING PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

REPORTS OF COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the administration and effectiveness of work experience and training project under title V of the Economic Opportunity Act of 1964, Wayne County, Mich., Department of Health, Education and Welfare, dated July 31, 1969 (with an accompanying report); to the Committee on Government Operations.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the effectiveness and administration of the Community Action Program under title II of the Economic Opportunity Act of 1964, Lake County, Ind., Office of Economic Opportunity, dated August 1, 1969 (with an accompanying report); to the Committee on Government Operations.

REPORTS OF A COMMITTEE

The following reports of a committee were submitted:

By Mr. MCGEE, from the Committee on Post Office and Civil Service, without amendment:

S. 2754. A bill to amend subchapter III of chapter 83 of title 5, United States Code, relating to civil service retirement, and for other purposes (Rept. No. 91-339).

By Mr. MCGEE, from the Committee on Post Office and Civil Service, without amendment:

H.R. 9825. An act to amend subchapter III of chapter 83 of title 5, United States Code, relating to civil service retirement, and for other purposes.

EXECUTIVE REPORTS OF A COMMITTEE

As in executive session, the following favorable reports of nominations were submitted:

By Mr. MAGNUSON, from the Committee on Commerce:

Lewis M. Branscomb, of Colorado, to be Director of the National Bureau of Standards;

Davie W. Oberlin, of Minnesota, to be Administrator of the St. Lawrence Seaway Development Corporation; and

Jacob L. Bernheim, of Wisconsin, Foster S. Brown, of New York, William W. Knight, Jr., of Ohio, Miles F. McKee, of Michigan, and Joseph N. Thomas, of Indiana, to be members of the Advisory Board of the St. Lawrence Seaway Development Corporation.

Mr. MAGNUSON. Mr. President, from the Committee on Commerce, I also report favorably sundry nominations in the Environmental Science Services Administration and the Coast Guard. Since these names have previously appeared in the CONGRESSIONAL RECORD, in order to save the expense of printing them on the Executive Calendar, I ask unanimous consent that they be ordered to lie on the Secretary's desk for the information of any Senator.

The PRESIDING OFFICER. Without objection, it is so ordered.

The nominations, ordered to lie on the desk, are as follows:

David M. Wilson, and sundry other persons, for permanent appointment in the Environmental Science Services Administration;

Philip J. Taetz, and sundry other persons, for permanent appointment in the Environmental Science Services Administration;

George A. Blann, and sundry other officers, to be permanent commissioned officers of the Coast Guard;

Dominic A. Calicchio, and sundry other Reserve officers, to be permanent commissioned officers in the Coast Guard;

Herman J. Lentz, to be a permanent commissioned warrant officer in the Coast Guard; and

George A. Blann, and sundry other officers, for promotion in the Coast Guard.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. MCGEE:

S. 2754. A bill to amend subchapter III of chapter 83 of title 5, United States Code, relating to civil service retirement, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. BIBLE:

S. 2755. A bill for the relief of Donal N. Callaghan; to the Committee on the Judiciary.

By Mr. McCLELLAN:

S. 2756. A bill for the general revision of the Patent Laws, title 35 of the United States Code, and for other purposes; to the Committee on the Judiciary.

(The remarks of Mr. McCLELLAN when he introduced the bill appear later in the RECORD under an appropriate heading.)

By Mr. NELSON:

S. 2757. A bill to provide for the control and prevention of pollution, deterioration of water quality, and damage to lands and waters resulting from erosion to the roadbeds and rights-of-way of existing State, county, and other rural roads and highways, and for other purposes; to the Committee on Public Works.

(The remarks of Mr. NELSON when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. MONDALE:

S. 2758. A bill to amend section 312 of the Housing Act of 1964 to eliminate the provision which presently limits eligibility for residential rehabilitation loans thereunder to persons whose income is within the limits prescribed for below-market-interest-rate mortgages insured under section 221(d)(3) of the National Housing Act; to the Committee on Banking and Currency.

(The remarks of Mr. MONDALE when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. DODD:

S. 2759. A bill for the relief of Francesco Daniele; to the Committee on the Judiciary.

By Mr. STEVENS:

S. 2760. A bill to amend the Internal Revenue Code of 1954 to remove the limitations on the deductibility of expenses for care of dependents incurred to enable a taxpayer to be gainfully employed; to the Committee on Finance.

(The remarks of Mr. STEVENS when he introduced the bill appear later in the RECORD under the appropriate heading.)

S. 2756—INTRODUCTION OF A BILL FOR THE GENERAL REVISION OF THE PATENT LAWS

Mr. McCLELLAN. Mr. President, I introduce, for appropriate reference, a bill to provide for the general revision of the patent laws, title 35 of the United States Code.

On February 28 I introduced S. 1246 for the general revision of the patent laws. That bill incorporated the best features of several patent revision bills considered by the Subcommittee on Patents, Trademarks, and Copyrights during the 90th Congress. It also reflected a number of suggestions made during and subsequent to the subcommittee's hearings on patent law revision. Although the public hearings were completed last year, the subcommittee delayed action on this legislation at the request of the patent bar. Last winter, I indicated that if President Nixon determined that he wished to select a new Commissioner of Patents, I would further delay the reporting of a bill by the subcommittee until such time as the new Commissioner could review the various legislative proposals. The President did nominate a new Commissioner of Patents and I have met with him. Many suggestions made by the Commissioner have been included in the revised patent bill which I am introducing today.

This legislation has had a long history and can be traced back to a series of 30 studies on the patent system that were commissioned and published by the Subcommittee on Patents, Trademarks, and Copyrights. Following this review, the subcommittee concluded that "The objectives of the patent system are as valid today as at its inception," but

cial fruit-crop growers in California (the villains of the current United Farm Workers Organizing Committee confrontation with the California pesticide regulatory program), and the cotton producers in Mississippi and Texas. Together, they account for almost one-half of the acreage treated by pesticides annually in the US.

Federal and state governments subsidize the organo phosphor business through secret military chemical and biological warfare research, agricultural pesticide research and bio-chemical research. In fiscal 1967, a total of \$70 million in unclassified pesticides research was funded by the Department of Agriculture and the Public Health Service. An equal amount is estimated to be spent on pesticide chemical research by private industry and state universities. Only \$5 million is currently allocated for the support of research into the occupational and environmental health hazards of pesticides by the PHS.

In the legislative lexicon, pesticides are called "economic poisons," a euphemism devised by Congress and the Agriculture Department to distinguish between the purportedly beneficial nature of the potentially lethal stuff and "hazardous materials" generally. In fact, the "economic poisons" are specifically exempted from coverage under the Federal Hazardous Materials Act.

With well over 60,000 trade names of pesticides in existence, the job of industry surveillance and compliance with existing pesticide manufacturing and applications standards is virtually impossible. The response of the Johnson administration after the submission of the Scientific Advisory Council report on pesticides in 1965 was effectively to hobble the federal regulatory program.

Surveillance and regulatory functions were split between the Public Health Service and the Agricultural Research Service. The PHS Office of Pesticide Research has responsibility for conducting basic research on human and environmental health hazards of pesticide use and is also responsible for inspecting establishments involved with the formulation of pesticide chemicals. If that were not enough, the PHS is supposed to monitor areas of concentrated pesticide use in major commercial agricultural centers in this country. However, the fine Byzantine hand of the agricultural interests has made sure that the PHS cannot issue cease and desist orders. Violations are to be turned over to the Agricultural Research Service for disposition and prosecution. But the ARS hasn't filed a major violation prosecution with the Justice Department in the 13 year history of the Federal "rat and bugs chemicals" act.

That law contains some neat provisions to dissuade investigators from digging into the pesticide chemicals industry. Information on the production of synthetic organic compound pesticides is compiled by the US Tariff Commission, not Agricultural Research or Public Health. Further, information on the exact ingredients of specific formulations are not permitted to be disclosed by law, to protect "trade secrets."

SURTAX

Mr. BYRD of West Virginia. Mr. President, I voted against the surtax for the same reason that I voted against the surtax last year. I am against saddling the hardpressed taxpayer with this heavy burden while the Federal Government continues to spend and spend and spend. It is not right to take extra money away from the people and then pump it into questionable programs which can be trimmed. In other words, I am against collecting more money just to spend more.

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

SAFEGUARD AND NATIONAL PRIORITIES

Mr. MUSKIE. Mr. President, we are engaged in a debate, as we consider the Safeguard proposal, over national security—our capacity to prevent or survive an enemy attack—and national vitality—our ability to create opportunities for a more meaningful, rewarding, and healthy life for each of our citizens. The Safeguard system must be tested against each of these considerations if we are to make an intelligent decision on the deployment question.

We face this decision at a time when our instincts, both prudent and humane, point toward the need to stem the decay of American society and to reconcile the differences among us. For more than a generation, external challenges have sapped our energies and diverted our resources from building America, while the accumulation of grievances, dramatic social change, and rising aspirations have made our needs ever greater.

As a result, public facilities are outmoded and overwhelmed, the effort to help the poor and the desperate has faltered, and patience is wearing thin. The agony of continuing sacrifice in Vietnam has brought our people to the greatest national anxiety and discord any of us has known.

These considerations are an important influence in this debate. They create pressures which prompt many Senators, of both parties, to differ from the administration on such an important matter of national security. The American people look to the Senate to provide balance and prudence in national security policies which have so heavy an impact upon the resources which are available for all our urgent tasks.

In the period immediately following President Nixon's announcement, I expressed my doubts about the Safeguard system—doubts about the scope of the program, its justification, its feasibility, and its consequences for future strategic arms races and impending arms negotiations.

Those doubts have not been resolved in the course of this debate.

A question which finds the Senate so closely divided must, I suppose, be considered a close question.

Honorable and able Americans—with in and outside the Senate—find themselves in disagreement on every critical issue which has been raised in this debate: Will the system work? Is it vulnerable? What is the thrust of Soviet weapons development? What are Soviet intentions? Which result in the Senate will contribute most favorably to the prospect of favorable negotiations with the Russians to limit nuclear weapons? What are the security risks associated with an "aye" vote? With a "nay" vote?

Each Senator, I am sure, has carefully considered each of these questions. Each Senator, I am sure, has concluded that the answers to these questions support the position he has taken. This Senator has found that the answers require a careful balancing of the arguments and available information.

Although the division in the Senate appears to be close, there appears to be much broader agreement on the wisdom of continued development toward a reasonable system to protect us against missile attacks. When and if it is needed.

Much of the debate over the ABM, therefore, has revolved around whether the nature of the foreseeable threat from the Soviet Union justifies going ahead now with deployment of this weapons system in its present form.

Though the weight of the evidence leads me to doubt that such circumstances are at hand, I believe most Senators are prepared to vote for authorization upon a proper showing of need.

For now, however, an impressive array of scientific skepticism about the Safeguard proposal, persuades me that it would be a mistake to go ahead with this program, at this time, and in this form. If there is well-founded doubt that the system can function effectively—while it distracts our efforts from other, more appropriate steps and provokes our adversaries to a defensive escalation of the arms race—deployment would be a serious mistake.

Safeguard is billed as a defense against a Soviet first-strike attack, but it depends on untested subsystems for logic and computing functions that may well fail against a massive sophisticated attack. Moreover, Safeguard's radars are critically susceptible to spoofing and its "eyes"—unshielded missile-site radars—"MSR"—could be blinded by a concentrated strike, leaving the Minutemen missiles wholly unprotected.

These questions raise doubts about the ultimate justification of Safeguard's technical worth and the wisdom of deploying the system in the light of such doubts. The committee resolves both questions in these words:

It is prudent that any doubt on this question (its ultimate feasibility) be resolved in favor of confidence in the system.

In my judgment, such a "benefit-of-the-doubt" resolution does not give proper weight to the risk that deployment will provoke a Soviet response based not upon

August 1, 1969

CONGRESSIONAL RECORD — SENATE

S 8965

year old girl sampled the can, which her older brother had opened. She died in twenty minutes.

Because of readily available supplies of pesticides for both commercial and private use, suicide and accidental deaths from pesticide poisoning is an increasing problem. While only 13 percent of pesticides are used in the home for pest control, 50 percent of all accidental deaths and suicides, traced to pesticide deaths, are from non-agricultural uses of pesticides. For example, in just one of Florida's 67 counties there were eight accidental and five suicidal deaths from phosphate pesticide poisoning in 1963 alone.

California is better than most states in the regulation and use of pesticides; but the form of regulation leads to abuses by special interest groups that have severely weakened the national pesticide regulatory program and have blocked efforts to seek increased protection of farm workers.

The four-part regulatory structure consists of: a) registration or licensing of pesticide products; b) licensing of agricultural pest control operators; c) the registration and use, by permit, of injurious materials such as the highly toxic phosphate ester pesticide family; d) sampling of crops for pesticide residue inspection. As in the federal program and some other state programs, the responsibility for regulation of pesticides is in the hands of the Department of Agriculture and, in the case of California, the County Agricultural Commissioner.

GOVERNMENT IGNORES MOST PESTICIDE VIOLATIONS

With the exception of registration, testing and evaluation of specific pesticide products, the California program is effectively run by the County Agricultural Commissioner. For example, an agricultural pest control operator must register with the Commissioner in each county in which he does business and supply a monthly report of his operations in the county. The Commissioner also issues licenses for agricultural aircraft operators and administers special examinations for agricultural aircraft pilots. Most important, the Commissioner issues permits for the use by farm operators of chemicals registered by the California Department of Agriculture as injurious materials. These include the toxic phosphate ester family of pesticides and 14 other pesticides.

The State Department of Agriculture, to ensure quality control over application of pesticides, inspects and analyzes samples of fruits, produce and meats in wholesale marketing distribution facilities to check on pesticide residues on food offered for sale in the State. The U.S. Food and Drug Administration does the same thing in interstate traffic. Tolerances for pesticide residues used in California are the same as those developed by the Federal Food and Drug Administration.

These tolerance levels are set for the particular crop and practically none are developed for the foliage on which the crop is grown. The outbreak of pesticide poisoning among the 95 peach harvesters in California in 1963 was traced to excessive application of parathion on the foliage, but not the crop.

The effectiveness of this program of regulation by state and federal agricultural authorities has come under serious attack recently in a salient area—registration, evaluation and testing of pesticide products. Under the Federal Insecticide, Fungicide and Rodenticide Act, the U.S. Agricultural Research Service can take action to remove products from the market, cancel the registration of products and prosecute those who ship products that violate the law.

The GAO report last September detailed that Research Service's concept of "law and order" is for the benefit of pesticide industry. The report went on to show that of 2,751 samples of products tested and re-

viewed during fiscal 1966, 750 were found to be in violation of the law. Of these, 70 percent or 520 were in "major" violation of the law. In 1967, of 4,958 samples taken 23 percent or 1,147 were found in violation.

Part of the reason for the situation is the old complaint of fiscal starvation and bureaucratic passivity toward vested interests. The pesticides regulation division has a staff of about 150 of which 26 are field supervisors and 5 are supervisory inspectors. In fiscal 1968 the total budget of the agency was \$3.8 million. By way of contrast, the California State Assembly appropriated and spent \$20 million last year for agricultural research support for its state university and college system.

Obviously, federal and state agricultural agencies are oriented towards maximizing the productivity-increasing features of agricultural chemicals, generally, and pesticides, specifically. The fact that no research in the U.S. is currently conducted into the occupational health hazards of agricultural and industrial chemicals is indicative of the general lack of concern in the regulatory organization for worker interests.

A portent of the future direction of public policy in this area is the fact that the budget of the Bureau of Occupational Health of the California State Department of Public Health was cut by one-third as part of Governor Reagan's attempt to bring "efficiency" into government operations.

If a severe budget cut were not enough, the Bureau of Occupational Health was also in jeopardy of being legislated out of existence. The chief legislative analyst of the California State Assembly, Alan Post, uncovered the fact that the Bureau's existence was subject to legislative approval. Recently legislation has been introduced into the Assembly to rectify the anomaly before the Bureau's existence becomes an object of lobby pressure. This may seem like just another administrative oversight, but the Bureau is practically the only source of information on occupational disease and health hazards among farm workers for the United States. (California is the only state in the country where injuries among farm workers are counted and where farm workers are also covered by Workmen's Compensation.)

California is one of the few states to have developed safety standards for agricultural operations. The standards are administered by the Division of Industrial Safety of the State Department of Industrial Relations. Safety orders for injurious materials (as defined in Section 2461 of Title 3 of the California Administrative Code) cover four areas: first, the provision of medical services by an employer engaged in commercial operation who uses toxic pesticides; second, decontamination of equipment; third, precautions for aircraft crop dusting and spraying; and fourth, standards for equipment used in both ground and air application of pesticides and other injurious agricultural chemicals. By far the most important of these for protection of the farm worker is the standard of medical supervision over application of pesticides. Even this is weakened, since control over recommendations and reports filed with the Division of Industrial Safety covering the determination of restricted activities for employees exposed to injurious materials, is under the employer.

Part of the pesticide problem comes from our failure to recognize that a problem really exists. Dr. Irma West, a leading champion of pesticide control among environmental health specialists, writing in *California Medicine* has summarized the issues involved clearly:

"Man has manipulated his environment so large a scale that he has inadvertently invented and produced a multitude of the most complicated new problems ever to confront the health professions. Unfortunately,

we have been slow to realize that plans for health and safety should be built into technological advances in the planning stages. By the time technical tools are in operation and their use results in undesirable and unexpected effects upon people and their environment, the best opportunity to minimize these effects efficiently and humanely is largely lost."

DEATH STALKS THE GARDEN

Thousands of home-gardeners have suffered peculiar "flu" symptoms after spraying their flowers and shrubs with a common form of pesticide. They rarely learn that they have been mildly "poisoned" by an organo phosphor compound. In more lethal strengths, the same chemical agent is used in "nerve gas," and can wipe out huge populations of men or animals in a few minutes. But despite the obvious hazards, very little is being done to control the widespread foreign and domestic sale of highly toxic pesticides; beyond that, the Army is continuing its secret tests of nerve gas as a weapon of mass annihilation.

Army experimenters had an unexpected windfall of data from the accidental exposure of several thousand sheep to air-sprayed nerve gas near Dugway, Utah. The chemical that killed these sheep also goes into the organo phosphors pesticides—such as the widely distributed garden product called Parathion. Until the end of World War II, Parathion itself was the favorite candidate for the standard nerve gas in the Army Chemical Corps' arsenal. Then the Army "liberated" the secret German nerve gas, "GB," and it won out over Parathion, for two reasons: it was easier to disseminate, and it would not so readily arouse public fears as would the use of a common pesticide like Parathion. "GB" was saved for people and Parathion relegated to weeds.

Both agents have the same toxicity: 2 milligrams per kilogram of body weight. Both use the same "kill mechanism": they prevent the manufacture of enzymes which carry body "messages" controlling respiration. In other words, victims simply suffocate. Early symptoms (the whole process can take less than five minutes) include pinpointing of eye pupils, tightness in the chest, convulsions, paralysis, and finally respiratory failure. If the dose is less than lethal, the symptoms resemble the onslaught of an attack of the flu.

Current hearings in Wisconsin into the environmental hazards of the chlorinated family of insecticides—the most notable of which is DDT—focus concern about the chemical "synergy" of simultaneous and continued exposure to different pesticides: there is some evidence that since both the organic phosphor pesticides and the chlorinated insecticides accumulate in the fatty body tissues, under certain conditions (such as malnutrition stress), genetic damage could occur.

In 1966 alone, over 55 million lbs. of organic phosphor pesticides were manufactured for use in US agri-business. The passage of the Federal Insecticide, Fungicide and Rodenticide Act and the public disclosures of pesticide abuses had indicated that some reduction or stabilization in manufacture and use would occur. But there has been a growth of 188 percent in the production of organic phosphor pesticides over the period from 1950 to 1966, as compared to an increase of 25 percent in the production of all classes of pesticides over the same period. Effective substitutes exist, such as the pesticide Malathion with 1/2,000 of the toxicity of the organic phosphors, and the price differential between the two is nominal.

In 1968 alone, US manufacturers exported 59 million lbs. of organo phosphor pesticides to users overseas, the largest consumers being Canada and Mexico. Within domestic agri-business the big users are the commer-

August 1, 1969

our doubts but upon the assumption of maximum effectiveness of our system.

Moreover, such a benefit of the doubt resolution may freeze us into a technological solution to the problem which is not the best answer.

But, even if the system achieves the limits of its planned effectiveness, I am persuaded that the simple mathematics of United States-Soviet confrontation may make the effort futile; the Soviet Union could negate the incremental protection of Safeguard with a few months' production of offensive missiles.

It is possible, Mr. President, that at some time in the future, developments in the threat may make an ABM essential to protect our retaliatory forces. It is also possible that a limited deployment of ABM's could become an element of practical and stable big-power arms limitations.

And it is certainly possible that a credible and effective ABM can be developed, applying lessons our scientists are learning today.

It is for these reasons that I welcome the initiative of Senators HART and COOPER to authorize research and development of an ABM program that can work when and if it is needed, but that will not, because it is deployed prematurely, embroil the American people in costs and consequences we will regret. I intend to support their amendment, and I commend their effort to put ABM development in a posture consistent with the Nation's long-term needs, a program the majority of the American people can sensibly support.

ii

There is what could be a tragic irony in the way in which the Safeguard program has been presented to the American people.

As cast by the administration, the ABM would serve to "safeguard" our Minuteman retaliatory forces. If the need were clear and this role could be assured, I feel confident that the Senate would not hesitate to follow the President's lead. But reality is far more complex than the administration's assurance would suggest, and the Senate must ultimately judge the strategic impact of the Safeguard system in the broader context of its effects in combination with other pending weapons systems.

The Soviet Union will see our ABM deployment in this perspective, and will make decisions about its own future weapons developments and the forthcoming arms negotiations in the light of how it perceives America's true intentions in the field of strategic armaments. The mysterious efforts of the Soviet's lunar vehicle to dog the heels of our Apollo 11 may well be fresh evidence that they do not take all our declarations at face value.

It is in this context—the role Safeguard will play in the overall strategic posture of the United States and the threatening direction our adversaries must perceive emerging in our strategic forces—that I find the administration's proposal constitutes, not a Safeguard, but a provocative and possibly dangerous game. It is notable that while the word "provocative" is the President's own

term, the denial of such intent in Safeguard deployment cannot escape being taken by others as a thin mask for profoundly disturbing threats to the balance of mutual deterrence.

In assessing the overall capabilities of our strategic forces, the Soviet Union will give attention not only to the Safeguard, but also to our ongoing programs for equipping retaliatory forces with multiple independent reentry vehicles—MIRV's.

The linkage between Safeguard and the MIRV's leads to a stark fact: by deploying a vastly expanded, hard point strike capability along with an ABM area defense system, American retaliatory nuclear forces could be converted into a system suitable for launching a first-strike attack upon the Soviet Union, while minimizing retaliatory damage to the United States. I understand that that is not our intention.

I understand that is not our intention, and the Senate and the American people do not so regard our nuclear weapons development. Of course the President would deny that this is our intention—as he should—but, Mr. President, the Soviet military planners cannot escape looking at our weapons development in that way.

Specifically, with the expansion in the number of deliverable nuclear warheads and the significant improvements in accuracy of delivery stated as the objectives of MIRV programs, the United States could, barring significant expansion in the number of Soviet strategic targets, achieve the capability to wipe out a significant portion of the Soviet Union's nuclear strike forces. Meanwhile, although the Safeguard has been billed primarily as a local defense of U.S. Minuteman silos, it also is designed with a degree of area defense capability—pointedly described by Secretary Laird in his statement to the Armed Services Committee as "defense of the continental United States against the kind of attack which the Chinese Communists may be able to launch in the mid-1970's." This area defense would, by the same token, also serve to defend the United States against the weak retaliatory effort of the Soviet might be capable of mounting after receiving a first-strike American attack.

I need not emphasize, Mr. President, the rather simple fact that the technical problems faced by an ABM in the role of back-up to a first strike are far simpler than those the same system would face in meeting a sophisticated adversary's surprise attack. Safeguard's credibility in a first strike role, I regret to say, is far greater than its credibility as a protection for our defense forces.

In terms of what we all believe American intentions to be, the foregoing might seem hypothetical and far-fetched; but in terms of what the Soviets may logically fear our intentions to be, the threat of an impending American first-strike capability, based on Safeguard and MIRV, could seem terrifyingly real.

The linkage between these two systems in the American weapons arsenal is by no means casual. On March 19, in his statement to the Armed Services Committee

justifying Safeguard expenditures, Secretary Laird also sought funds for a significant acceleration in the development of the Poseidon, a submarine-launched MIRV-carrying missile, for the express purpose of "enhancing its effectiveness against hard targets."

He said, at page 32 of his prepared statement:

The increase of \$12.4 million for the development of an improved guidance system for the Poseidon missile, will advance the IOC ("Initial Operating Capability") of the system by about six months. This development was started in FY 1968. The IOC, however, was slipped by about one year in connection with the FY 1969 expenditure reduction effort, and the level of funding provided in the original FY 1970 budget, \$33.5 million, would have slipped it further. This is an important program since it promises to improve significantly the accuracy of the Poseidon missile, thus enhancing its effectiveness against hard targets.

Surely, Mr. President, we cannot expect the Soviets to ignore that development as it undertakes to evaluate the thrust of our weapons development.

In the Poseidon program, 31 submarines will each carry 16 missiles, each in turn carrying as many as 10 warheads, for a total of almost 5,000 deliverable weapons, from the Poseidon boats alone. These and other offensive systems available to the United States, including the more than 1,000 Minutemen we may also equip with MIRV's, would be more than a match for the 1,200 to 1,300 ICBM's the Soviets are anticipated to have deployed during the next few years.

In this context, Mr. President, the Safeguard is a destabilizing weapon, raising the risk of nuclear war rather than diminishing it. As the American MIRV nears perfection and the Safeguard nears deployment, we are reaching for a point of no return in the arms race. If the Senate authorizes the deployment of Safeguard, we may well be stepping across that point of no return.

iii

On April 3, I noted the following dimension of the administration's Safeguard proposal:

It is altogether possible, on the other hand, that the Administration is not, in fact, taken in by its own reassurance as to Soviet reactions. It may be that the Safeguard proposal is intended as a blunt challenge to the Soviets to come to the bargaining table and negotiate over strategic weapons, or else the United States will heat up the arms race, counting on our own superior technology to protect us if negotiations fail.

I submit, Mr. President, that this interpretation of our intentions is the logical one from the Soviet point of view, and interpreted as this kind of bluster, it has no rational justification.

One need not dwell on the lack of good faith such an American bargaining strategy would entail with respect to the forthcoming strategic weapons negotiations to which we and the Russians are both committed. What is more important is the lack of realism in assuming that negotiations with a proud and powerful country such as the Soviet Union might ever yield success when undertaken under the gun of crude threats, a lesson we should have learned in every arms con-

trol negotiation from the Baruch plan to the present.

For the Russians as for ourselves, national and ideological motivations and the high stakes of international competition compel the continuing commitment of resources to weapons developments at whatever level is thought necessary to insure national security and at whatever level a prudent estimate of the intentions of the other may indicate. As a result, if the talks fail, the prospects for negotiated arms controls will dim, unbridled arms competition will resume, and the stability of mutual deterrence will be destroyed.

It is equally unrealistic to assume that any reasonable purpose could be served by locking the Soviets into another round of fantastic spending competition for armaments. Ever since arms competition with the Soviets began in earnest 20 years ago, the superior resources and technological advancement of the United States, coupled with the geographical encirclement of the Soviet Union, have combined to keep the Soviets on the defensive in any arms competition.

But the fact that in years past we could afford more weapons than the Soviet Union and that we could build them with less strain on our resources is not relevant to future competitions. The demands on our energies and resources are now too great, and the costs of the phenomenal weapons systems of which Safeguard is the precursor are too high, to warrant the conclusion that the American people can afford future strategic arms races.

Mr. President, the needs of the American people are too urgent and too demanding to bank our future as a nation on the casual economic dividends that high and rising levels of defense spending have come to mean. We must recognize that in future arms races—even if we manage to keep the Soviets and all our other adversaries at bay without incinerating the world in the process—the costs and sacrifices the competition will entail are such that we, not they, will be the losers.

IV

To recognize the futility and the risk inherent in adventurous weapons development is only the beginning of the necessary effort to forge security policies that serve the Nation's best interests in a time of strain and transition, at home and abroad.

Arms sufficiency is the new watchword, and arms sufficiency is an apt watchword, but one that requires careful judgment. Together the President, the Congress, and the country must find ways in the months and years ahead to substitute good sense and prudence for uncontrollable gambits that lead only to blind and dangerous alleys. As we strive to end the war in Vietnam, we must never forget the lessons on the need for restraint that unhappy conflict teaches.

At the same time, we must also be mindful of the urgency and the extent of the Nation's domestic needs—needs which can overwhelm us just as surely as the threat of external aggression,

unless we can find the wherewithal, the ingenuity, and the spirit equal to the challenges.

The grim chain of urban sprawl and rural decline, of individual poverty and social disorganization, of wasted resources and hostile environments will not be broken by a government which is indifferent, or a private sector which is inactive—or preoccupied with hunting the next arms contract.

The chain can be broken only if we set priorities, if we make a commitment to meet them, and if we organize ourselves to fulfill our commitments. I have indicated the priorities I would establish, and they are not the priorities of a fortress America. The priorities I would set are the priorities of men and women and children who have a right to enjoy for themselves the fruits of this world and to help insure the same right for others. The priorities we must set recognize the interrelationship of jobs, income, education, health care, housing, transportation, public facilities, recreation, and environmental protection in the balanced development of urban and rural communities.

These priorities will never be set or achieved so long as the United States is being bled by the continuing hemorrhage of spending on strategic armaments.

Mr. President, much attention is now being given to the consequences ending the Vietnam war will have on the funds which will be available for domestic programs. It has become common to speak for planning purposes of the revenue surplus resulting from the lessening of hostilities as a "fiscal dividend"—the measure of the flexibility in the Federal budget that would be available for other national needs as the result of the termination of special Vietnam costs.

In March 1967, President Johnson appointed the Cabinet Coordinating Committee on Economic Planning for the End of Vietnam Hostilities. Their report appears as an annex to this year's report of the Council of Economic Advisers. The committee, assuming early cessation of hostilities, forecast annual fiscal dividends rising to \$22 billion in fiscal year 1972—funds available for spending on other priority programs or for tax reduction. While the calculation assumed the continuation of existing authorized military programs—including the Johnson administration Sentinel ABM—that \$22 billion sum, less amounts returned to taxpayers in tax cuts, represents a basic ceiling in funds available for expansion of all Federal programs, military and domestic.

To the extent that new weapons systems are authorized, or existing authorized systems exceed their anticipated costs, the funds available for domestic program expansion will be further reduced. Thus while \$22 billion represents a basic maximum for domestic public purposes, a tax cut, weapon cost overruns, and additional weapons procurements will all squeeze that sum far below the maximum. If the costs of the war do not soon recede, of course, virtually no lessening of the budget squeeze can be

anticipated. On the other hand, reduction of non-Vietnam military cost including the cancellations of all ABM deployment, would cause the fiscal dividend to be increased. There will be no fiscal dividend at all.

The fiscal dividend forecast by the committee, even assuming maximum availability, does not begin to match urgent demands for the rehabilitation and improvement of our society. For example, the report notes a \$6 billion gap existing now between amounts the Congress authorized for fiscal year 1969 and the amounts the Congress has funded for domestic purposes. I ask unanimous consent that the table from the Coordinating Committee's report be printed at this point in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Agricultural conservation and adjustment.....	.5

Source: Bureau of the Budget.

Mr. MUSKIE. The group also compiled a list of new programs "prominently and generally discussed recently as desirable to meet the needs of the Nation during the next several years," calculating their annual costs for fiscal year 1972—the year of the projected dividend. In many instances, the committee assigned dollar amounts far below the recommendations of the task forces or study groups from whose studies the programs were drawn. Even then, recognizing the list to be incomplete and inadequate, the Coordinating Committee reached a conservative total of almost \$40 billion for these urgent needs, nearly double the maximum fiscal dividend estimated to be available. I ask unanimous consent that the committee's table, with explanatory footnotes, be printed at this point in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Foreign economic aid	1.0

NOTES

Education. The preschool program, an extension of Head Start, would provide full-time preschool education for about 500,000 children. The elementary and secondary education funds would about double the Federal support in that area. The funds proposed for higher education would more than double current Federal support. The vocational education funds would raise Federal support about halfway toward the recommendation of the 1968 Advisory Council on Vocational Education.

Health. The "kiddle-care" proposal would provide health care for needy mothers and infants. Medicare offered to beneficiaries of social security disability insurance on a contributory basis would potentially reach 2.2 million persons in 1972. About 350 additional comprehensive neighborhood health care centers a year could be established for the amount shown. The added funds for health facilities would enable the Federal Government to double the rate of output of such facilities, in line with estimates of national needs.

Nutrition. Nutritional supplements for needy pregnant women, nursing mothers, and small infants account for about \$200 million, while the remainder would allow a doubling of existing food assistance programs.

Community service programs. This would provide for expanded daycare centers for children of needy working mothers and for expansion of coordinated services through neighborhood centers.

Jobs and manpower. The funds for jobs in the public sector would permit expansion of about 500,000 jobs to provide public service employment for the chronically disadvantaged: this program would reinforce expansion in education, health services, and urban and area redevelopment. The increase in MDTA training would support expansion of the Jobs program and would reinforce efforts to lower unemployment while improving the Nation's price performance. It would also provide trained manpower for construction. The growth in employment service operations envisions strengthening, decentralizing, and computerizing manpower activities; developing a rural manpower service; and enlarging services to the disadvantaged.

Social security and income support. The unemployment insurance funds would provide for higher benefits, extended benefits during recessions, and aid to the unemployed through retraining and mobility assistance. The public assistance funds could permit revision of benefit standards and extended coverage, or the adoption of a modest new program of income aid with objective standards. The added expenditure could fill as much as 40 percent of the current poverty income gap. Expansion of the WIN program would provide more job and training opportunities for welfare recipients. The social security expenditure could pro-

vide a higher minimum benefit for those dependent on social insurance benefits as the main source of income, and liberalization of eligibility requirements for disability insurance, as well as some general improvement in benefit levels.

Veterans. The higher priority recommendations made by the Veterans' Advisory Commission in March 1968 could be instituted with these funds.

Economic, area, and other special development programs. The entrepreneurial assistance program could help minority groups—so-called "black capitalism." Area redevelopment programs would assist growth centers in less populated areas, while rural redevelopment programs would concentrate on small communities, providing community facility development, special housing, and family farm assistance.

Crime, delinquency, and riots. Federal aid to State and local governments could be provided to help prevent violence and riots and permit a higher degree of Federal readiness to cope with such emergencies. The safe streets program funds would be used to work towards the objectives of the National Crime Commission with respect to strengthening the police and courts. Rehabilitation of offenders and delinquents would be pursued by intensive retraining and other services.

Quality of environment. Federal funds for pollution abatement may be required to enforce standards, investigate claims, or abate pollution caused by government or not readily attributable to particular private individuals. Assistance in expanding the Nation's water supply system would provide a small fraction of the \$2.5 billion annual requirement over the next 10 years. Provision of more recreational areas near population centers would be made possible.

Natural resource development and utilization. Department of the Interior, Corps of Engineers, and Department of Agriculture programs relating to land, mineral, energy, forest, recreational, and other fields have large backlogs of useful projects, many already planned and authorized but held back for budgetary reasons.

Urban development. Metropolitan development assistance would support improved planning and coordinated advance land acquisition. Each of these programs emphasizes these requirements, whether in new communities, suburbs, or older central cities. The allowances represent only a fractional contribution to the reconstruction and development of the cities.

Transportation. Such expanded investments in the improvement of the principal elements of the Nation's transportation system would serve the objectives of economic development, safety, and national defense.

Science and space exploration. The allowances would permit the science and space agencies to fund some of the research opportunities not covered in the stringent budgets of recent years.

Foreign economic aid. This additional amount would help to meet growth targets in Southeast Asia and under the Alliance for Progress as well as to cover other aid requirements. Even this increase would leave our foreign assistance program below levels of a few years back.

Source: Bureau of the Budget.

Mr. MUSKIE. Even this conservative calculation of the additional resources we will need to spend at home does not provide much leeway in making a major dent in the problems of the poor, such as a negative income tax preserving adequate incentives, which the committee noted might require between \$15 and \$20 billion a year, or in providing sufficient employment to make a significant reduc-

tion in the numbers of Americans who cannot find jobs. Nor does it encompass steps to assist States and localities in meeting their mounting revenue needs from their increasingly inadequate tax bases—for which a revenue-sharing program of between \$5 to \$10 billion a year has been considered appropriate.

Mr. President, these are not small sums. They do not reflect small problems we can ignore. Together, these estimates, whether or not one agrees with them in detail, represent a conscientious effort to determine a level of "sufficiency" for a comprehensive approach to the nonmilitary problems facing America, a level of sufficiency which we must attain if we are to preserve our viability as a nation.

By contrast, the \$6 to \$7 billion pricetag assigned by the administration to the Safeguard system represents a far more valid measure of the relative significance of the ABM program, even assuming those systems costs have been fairly estimated, which many Members of the Senate have strong reason to doubt.

The true measure of the ultimate significance of the administration's Safeguard proposal lies in the likelihood of forcing the United States and the Soviet Union to higher and higher levels of arms competition, for which the costs forecast by Secretary Laird are only a very small downpayment. The cost of such an adventure must be counted in tens or even hundreds of billions of dollars, which the United States can ill afford to spend on engines of destruction.

I think these great figures estimating our domestic needs, and estimating the cost of an unrestricted arms escalation, pose the problem which faces us on the ABM issue in its stark magnitude. We cannot do both. At least, we cannot do both without the exercise of discriminating judgment. We cannot do both without exercising restraint, geared to a careful evaluation of the risks involved with any subjects which we consider in the development of weapons for our arsenal.

We must somehow take a reasonable risk to protect our national security abroad. However, we must do more than we now are doing—to eliminate the risks to our national security here at home.

Mr. PEARSON. Mr. President, will the Senator yield?

Mr. MUSKIE. I yield.

Mr. PEARSON. Mr. President, I commend the Senator from Maine for a reasoned discussion and speech today in support of the pending amendment. He developed at some length the effect that construction and deployment of ABM would have on the forthcoming arms limitation negotiations with the Soviet Union. And in that regard the administration, particularly the Secretary of Defense, strongly made the point that the decision to go ahead at this time is essential to their position as a bargaining point as they enter the negotiations.

I have constantly failed to understand really this point in the particular argument, because we have, as I understand the figures after hearings and the debate and otherwise, a superiority in strategic force levels. For instance, in ICBM's, we

have about 1,054 to approximately 1,000 on the part of the Soviet Union.

With respect to the Polaris missile, in round figures we have an estimated number of about 656 or 660 to perhaps 77 by the the Soviet Union.

With respect to the intercontinental bombers, we have in round figures about 650 to 150 operated by the Soviet Union.

In deliverable warheads, we have some 4,200 as against 1,200 by the Soviet Union.

We have superiority in numbers in all of these fields. They must know of our industrial might measured against theirs. They must have some appreciation of our technical skill, for in the time frame of 1 week we succeeded in putting a man on the moon, whereas they failed with an unmanned moon vehicle.

We are ahead of them in the testing of MIRV's today.

With our superiority in all of these fields, does the Senator agree with me that the argument that we must have an ABM simply because the other side has an ABM to be in a proper bargaining point in negotiations?

Mr. MUSKIE. Mr. President, I think the Senator has made a very excellent point. I agree thoroughly.

I would like to add an observation. It seems to me that one can speculate prudently or prooflessly about what the Soviet position may be at the negotiating table and what we might do to influence it favorable toward arms limitation.

We have concentrated, as we have debated what will be a strong negotiating position, upon the need to demonstrate to the Soviet Union that we have the strength because of our deployment of the ABM to caution them against permitting a continuation of the arms race.

It seems that what we need, if we are to negotiate successfully, is to convince them that we want a stabilization of the arms race, that we want to roll back the growing risk to the survival of mankind.

It seems to me, in other words, that the situation is something like this, there are two great military powers—we and the Soviet Union. Only if one of the two takes the initiative to move the other way from escalation of arms, do we have any chance to achieve that objective.

One of these two powers must take the initiative. One must be induced by the other.

It seems to me that the best way to make that initiative credible from the point of view of the other side is to take an initiative which carries some risks for us.

The road we seem to be choosing is to find a way to strengthen our arms to a point which will deter the Russians from trying to match it. I think we should try to encourage them to match us in taking risks in reducing arms. Of the two powers, the one most likely to take this kind of initiative historically, in the light of its belief in the tradition of humanism, is the United States of America.

I do not think delaying the deployment of an ABM system is an unacceptable risk. That there are risks or that there are considered to be risks is evident from the debate on the floor. So, to the extent that there are, our initia-

tive in refusing to deploy an ABM to me would add credibility to our recommendations to the Soviet Union that we mutually deescalate the nuclear arms race.

So, I agree with the Senator's argument, and I add this one of my own.

Mr. PEARSON. Mr. President, I thank the Senator. I notice also that the Senator dwelt at some length about the response on the part of the Soviet Union.

It is my understanding that the rules of the war planners, and rightly so, involve these concepts. The Senator from Virginia (Mr. BYRD) is in the Chamber today. He has sat with me in the Armed Services Committee and heard the same words and concepts spelled out. We always plan on a greater than expected risk. We always plan—and these are the rules by which our war planners govern themselves—on the worst possible case.

We always plan on the basis that our systems will not work as well as we expect and that the enemy's will work better than we anticipate.

We always plan on the basis of long lapse time between conception and deployment of a modern weapons system taking about 10 years.

Does the Senator suppose that the rules we apply are any different than those applied by the Soviet Union war planners, and that this in and of itself has an inherent action or reaction cycle which is more accelerated when we get a defensive—offensive switch back and forth?

Mr. MUSKIE. The Senator is right, of course. This involves one of the principal arguments in my remarks.

We have a tendency to think that if the enemy looks at us, he must, of course, recognize that our purposes are innocent, that we would never launch a first-strike attack and do not mean him harm. Unfortunately, that is not the way they read us. They are just as suspicious of our intentions as we are suspicious of their intentions. It will continue.

We are going to limit arms not because the other fellow thinks that we are nice guys, but because we are able to define the area of mutual interest which each decides is in his national interest.

The Senator is eminently right.

Mr. PEARSON. Mr. President, one other point. I note that the distinguished Senator from Wisconsin (Mr. PROXMIRE) wishes to join in the colloquy.

The Senator from Maine raises some question about reliability.

Aside from the reliability of the components, computers which have not yet been built, and the radars which have some vulnerability under attack—the Senator has been a student of this debate and of the RECORD—does he recall that at any time in the very excellent presentations made on both sides, any explanation has been made of how effectively we can deal with the subject of decoys, balloons, chaff, saturation problems, blackout problem, and the electronic jamming problem? Does the Senator find answers to those questions any place in the debate or any place in the RECORD before the Senate?

Mr. MUSKIE. I do not recall seeing it, and the answer has not been provided in any portion of the debate to which I

August-1, 1969

have listened on the floor, either in closed session or in open session; nor has it been answered in any of the literature I have read which has been made available to me, rather generously, from both sides in this debate. I have not had a chance to read it word for word, but I have searched for that answer.

I understand, of course, the argument that has been made, I think very eloquently, by the distinguished Senator from Rhode Island (Mr. PASTORE), that at some point in the development of new technology you have to start putting the technology together and research the unanswered problems as you go along. I understand that.

Nevertheless, I think the Senator is absolutely right in the implication of the question he has put to me, that there are many unresolved technical problems seriously bearing upon its feasibility and its effectiveness which have not yet been answered. I think the supporters of the ABM proposition concede that.

Mr. PEARSON. I thank the Senator for a very valuable contribution at this time.

Mr. MUSKIE. I thank the distinguished Senator from Kansas.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. MUSKIE. I yield.

Mr. STENNIS. On the question the Senator has brought up about the blackouts, the jamming, and decoys, I can say with firm assurance, as far as I can go, that that is a problem that always shows up. It is a part of the picture concerning any kind of method involving a weapon, offensive or defensive. If we never had built the ICBM's—offensive weapons—until we were certain that we had all the problems solved that go with it in the same field, in reverse, we never would have one. If we are going to wait until all the problems are solved and everything is known with reference to an ABM, a defensive weapon—in that field, particularly—we will never have one, and no one else will. It is all a part of the process.

I do not pose as an expert in this field, but I have been on a subcommittee of the Committee on Armed Services and chairman of the Subcommittee on Military Construction during all the years that these missiles have been in process. The military construction came in in this way: You have to have those sites, and you have to have the research and development that involves those sites. Sometimes it is handled in a special way in that bill. We got this back in the days of the Nike-Ajax. That was the first little ground-to-air missile we had. We also got into the space field when Sputnik went up, and all those problems that went with it.

I know that uniformly we have these problems. I opposed the deployment of the ABM—what is now the ABM—years ago. We had a secret session. We have had many sessions in the committee over the years. The Senator from Kansas was a member of the committee for some time, and a very valuable member. I had always opposed the deployment until I was convinced that we had gone about as far as we could go, and I believe as far as we can go, with a weapon of this kind, until we really get down to the nub of

things and take some steps forward that this very modest program now contemplates.

That brought me to the proposition as the Senator from Rhode Island has expressed it. He is the former chairman of the Joint Committee on Atomic Energy, and he really does know a great deal about this. We must make a start. It has been amazing, in the case of other missiles, how many problems have been overcome after the start, has been made. Men are surprised, and then they are disappointed, too, on the same subject of the many different missiles. I refer to men such as Dr. Wernher von Braun and others who are really capable.

I am glad to give the Senator a résumé of my experience in that field, without getting into the scientific part of it, because I do not try to master that.

Mr. MUSKIE. I appreciate the Senator's comments, and I will respond briefly myself, but first I yield to the Senator from Kansas.

Mr. PEARSON. Let me say to the distinguished chairman of the committee, the Senator from Mississippi, that I understand and agree that many of these problems today, scientific and otherwise, which are talked about as deficiencies of the system, probably will be cured in time.

As a matter of fact, the great advance we have been making in computers really gave great credibility to the so-called Sentinel-Safeguard, as distinguished from the other systems.

But some other scientific problems are involved here, which I am not qualified to discuss, which have nothing to do with the ability of American scientists to conquer problems, and they deal fundamentally with the laws of nature and the laws of physics. The very efficiency of the radar makes it susceptible to chaff which may be spread across the sky. The better the radar, the better it can be fooled by that particular device.

Blackout, as I understand it, is a result of an explosion or high or low yield atomic blast within the atmosphere, which creates—as its name implies—enormous blackout, perhaps with a diameter of 100 miles, lasting as long as 5 minutes.

These are things, it seems to me, to which even the genius of the American scientific community has not found an answer. As a matter of fact, some of the very efficiency of our own system gives us back greater problems.

I do appreciate the response of the chairman of the Committee on Armed Services. I know of no one who knows more about this field or who embraces it and brings it to the Senate with a greater degree of honesty and sincerity than my former chairman.

Mr. MUSKIE. Mr. President, may I add this to the comments made by the distinguished Senator from Mississippi.

First, I agree with the comments that have just been made by the Senator from Kansas. I do not know of a Senator who would bring a question to the floor more conscientiously, more thoroughly, and with more thoughtful judgment, than the Senator from Mississippi. I want him to know that.

But what is involved here is not simply the question of whether, having decided to build a piece of technology—something it is a weapons system or something else—we have reached the point where we can start putting it together and work out additional bugs from there on. If that were the only question, I would say, "Yes," let us start, and let us start the business of working on a piece of hardware as we undertake to answer the unanswered questions. But, in addition, these other questions are involved, which are not susceptible to precise measure: the effect of our deployment upon the arms race, the effect of our deployment upon the Soviet evaluation of the thrust of our weapons development, and the effect of our deployment on negotiations.

Then, there is my own fundamental belief that if we want really to put together a credible negotiating posture from the point of view of the Russians, I think it is more important to convince them that we want to roll back in weapons development than it is to convince them if they will not agree with us that we have the capacity to deploy an ABM. I think the first conviction is more likely to be persuasive upon them than the second conviction.

I can see that honest men can disagree on this matter, as they obviously do, and we appear to be divided about 50-50 here. However, it is my conviction that we must take an initiative that is clearly recognized and identified by the Russians as an initiative toward peace.

Mr. PROXMIRE and Mr. DOMINICK addressed the Chair.

Mr. MUSKIE. The Senator from Wisconsin has been waiting to be recognized for quite a while. I yield to the Senator from Wisconsin.

Mr. PROXMIRE. Mr. President, I wish to commend the distinguished Senator from Maine for a superlative speech. I am especially impressed by his presentation because I think we in the Senate, and I think people around the country during the last year or so, have recognized that he is a very careful man, very measured, and responsible, and unusually so.

For example, he indicated we are taking a risk in not going ahead with the ABM. Many of us might not share that feeling because we may be more impulsive and feel we are convinced on the basis of what we have seen and heard that the ABM will not work, that it is a waste, and that the decision is, therefore, easier. But the Senator from Maine was very careful in not taking that position. He said that it may work and that we may be mistaken in not going along with it, but that we have to take certain risks.

I think the Senator makes an extremely strong case in arguing on the basis of his own assumptions about the Soviet Union that they are more likely to negotiate an arms limitation if we do not go ahead than if we do.

Mr. MUSKIE. I wish to say something on that point which the Senator has brought out. The Senator has said "more likely." This is something more than agreeing to go to the negotiating table. When I speak of the likelihood, I am talking about the substance of an agree-

S 8972

CONGRESSIONAL RECORD — SENATE

August 7, 1969

ment. We have to be concerned with that, too.

It was argued on the floor of the Senate that last year when we voted on deployment, the Russians indicated they were willing to go to the negotiating table. That is not the whole story. What is their attitude when they get to the negotiating table? It would take a crystal ball to foresee what their attitude would be, and I do not know or claim to know what that situation would be.

Mr. PROXMIRE. I thank the Senator. The Senator's observation goes to the heart of the matter.

The other point I wish to make is one that I think has been overlooked in this debate and I refer to the question of recognizing priorities, and that we have to make these hard choices; that when we go ahead with ABM it has an effect on what we can do with regard to our domestic problems which are so pressing and urgent.

I think no Senator has been more concerned and done more constructive work in preventing pollution or has made a greater contribution in connection with the Federal-State relationship than the Senator from Maine. I think he is eminently qualified to recognize the urgency of those priorities. It is always difficult to say we will not move for a marginal weapons system at this time because certain domestic situations must be met. I think the Senator from Maine, in posing this problem with respect to priorities and reminding us we cannot have everything we want, has made a real contribution today.

Mr. MUSKIE. I thank the Senator.

Mr. President, I yield to the Senator from Colorado.

Mr. DOMINICK. Mr. President, I did not have the pleasure of listening to the entire speech of the Senator from Maine. However, I did enter the Chamber during the process of his colloquy. I wish to make a few comments in this regard.

First, with respect to the point made by the Senator from Kansas about technical difficulties that are involved, I wish to point out that a panel of four very fine scientists appeared before the Committee on Armed Services in a public hearing. I am not sure the Senator from Mississippi brought out this point. I know he has in the past. Two of these scientists were against the ABM system and two were for it. Each of them, in response to direct questions, said this was the very best available technical mechanism for a defense of this kind that had been or could be developed under present technology. That statement was agreed to whether they were for or against the ABM. All four of them said that.

With regard to the blackout situation, and I do not wish to get into a technical discussion on the situation, the system of arrangements of radar which has been contemplated under this system would avoid that particular problem and a great deal of work has been done in connection with it. So I would think that although there are problems, and no one doubts that there are problems, under the present meth-

ods of deploying the system most of the problems that have been brought out, or a good many of them, have already been foreseen and circumvented by the planners who worked on the system.

With respect to the comment by the Senator from Maine on the need to convince the Soviets that we want meaningful arms limitations, I do not think anybody in the Senate or anybody in the Congress would disagree with the Senator. I think we all agree on that point. I cannot think of a happier situation than a viable arms limitation agreement which is properly supervised. I think it would be enormously fruitful for the Russians, for us, and for the entire world.

However, I wish to recount a few things along this line.

In connection with the test ban treaty, or moratorium—it was not a treaty—we followed through and said we would not do any more high-altitude testing. The Soviets said the same thing, but when it became in their interest to do it in 1960 and 1961, they unilaterally violated this moratorium and put themselves in a technical situation which, having gone forward, they had an earlier start or solution on some of the technical problems the Senator from Kansas has been talking about.

Mr. MUSKIE. That did not involve an agreement.

Mr. DOMINICK. That did not involve an agreement. It was a joint unwritten moratorium by verbal acquiescence.

Mr. MUSKIE. The Senator mentioned "verbal acquiescence." What does the Senator mean?

Mr. DOMINICK. We had gone along for a period of 18 months under a statement publicly made by the President of the United States that we would not make any more high-altitude tests as long as the Russians did not, and they did not. As a matter of fact, when they broke this unwritten agreement—

Mr. MUSKIE. The President said something. Did the Russians respond in kind?

Mr. DOMINICK. Yes. There were verbal assurances from the Soviets at that time that they had no intention of going ahead with this either as long as we did not.

Mr. MUSKIE. I think the language is important. I do not know if the Senator is paraphrasing the Russian attitude or position. An intention not to go forward is different than an agreement not to go forward unless there is a unilateral intention not to do something or a bilateral agreement with somebody not to do something.

Mr. DOMINICK. We tried to convince them of the fact that we did not intend to go forward with any more of these testings and we would not do so even though it was important to all kinds of applications, space and otherwise, if we had gone forward with it. We said we would not do it. I am sure the Senator from Maine remembers that well.

Mr. MUSKIE. I do.

Mr. DOMINICK. The time they violated this agreement was when they were before the so-called Belgrade group, saying again that they were not going to do

anything in the way of disturbing what was going on, while at that very time they sent up the high altitude missile.

Mr. MUSKIE. I understand. Whether we thought that hope was documented by a binding agreement may be another question, but I am sure we all hoped, by the coincidence of two unilateral actions taken by the two governments involved, that we had achieved an end of testing in the atmosphere. I am sure there are clearer illustrations in history of violations of agreements by the Russians. I understand that. The question is whether, now, we are so inhibited by history and documentation from trying again to work out an understanding with the Russians.

Mr. DOMINICK. We were never inhibited by that, we should not be, and I hope that we never will be. That was the point. The point I am making is that the United States, over a period of time, has tried again and again to impress upon the Soviets that we are not happy with our arms buildup, that we are ready to limit it; that it looks as though we are getting somewhere, and then, all of a sudden, we shoot off on a tangent again.

Let me illustrate the particular situation that we are faced with on the ABM. The United States has proposed not to build any more land-based ICBM's. We have a gigantic number of launchers, which the Russians know about. We have not built any more. We have not built any more Polaris submarines. We have a large number of submarines, and we have not increased them or replaced them or replaced them as they get older. We have a declining number of manned bombers. We had hoped—against experience, I might say—but we had hoped that in recognition of this, the Soviets would also level off their production, but they have not done so in any one of those fields.

This would indicate to me that we have done our best to impress on them we would like to get to an agreement on arms limitation and reduction just as rapidly as we can, that we do not want a proliferation of our weaponry. If we could reach such an agreement we would be delighted to do so.

Mr. MUSKIE. May I ask, in response, How do we identify a point where it is clear to both sides that the reaction of one side on continuing an activity is not a reaction to what the other side did earlier? If we are going to look for the point, because each side has unilaterally taken such clear steps to limit its arms that the other side can be sure that there is no risk of escalation, then we will not need an agreement.

We had Polaris submarines long before the Russians, and they are now engaged in producing their own. I cannot recall at the moment whether the dates of the beginning of construction of their Polaris program were at the time we were developing the MIRV program, but it is conceivable, unless the dates suggest otherwise. I do not have them. Their Polaris program was a response to our MIRV program. Thus, we can debate this until the cows come home.

August 1, 1969

The other point I make is that the Senator may be right. It may be that what we have already done to stabilize our own nuclear weapons development will be sufficient evidence to the Russians of the credibility of our initiative to work out a meaningful agreement. But it may not, as well.

We have to decide this question, not after we understand what the Russians' willingness may be, but now.

I must say that I regard the debate to be on the Senator's side of this question of MIRV, that development and deployment of the ABM is more meaningful in respect to our defense posture vis-a-vis the Russians than the addition of more Minutemen, because the Senator has told us that the additional Minutemen are offensive missiles and are not the answer to the Russian threat. It is argued that the ABM is the answer. The Senator from Washington (Mr. JACKSON) made an eloquent speech to that effect in this Chamber that few of us were privileged to hear. So that I think with respect to evaluating the attitude of the Russians, what we do about the ABM may be more persuasive than what we have done to discontinue production of more Minutemen.

Mr. DOMINICK. The interesting fact about that is that Kosygin himself and other Soviet leaders have said they consider the ABM a purely defensive weapon, for the purpose of protecting their own citizens and our citizens from being killed, and not as a threat to the other side.

Mr. MUSKIE. I do not know why we should take their word on that, when we do not take their word on other things when it seems to suit our purpose.

Mr. DOMINICK. They have already deployed their ABM.

Mr. MUSKIE. I understood that they had discontinued it.

Mr. DOMINICK. That is not so. I had some colloquy on that with the Senator from Tennessee (Mr. GORE) just the other day.

Mr. MUSKIE. I would be happy to get the facts.

Mr. DOMINICK. I brought up the fact that they are continuing the construction of their ABM system. They are modernizing their present system and are also developing a new one.

Mr. DOMINICK. Mr. President, I ask unanimous consent to have printed in the RECORD an article published in the Chicago Tribune dated July 27, 1969.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WORDS UNRELATED TO ACTIONS

All indications are that the Nixon administration and the Soviet Union are getting ready for negotiations, including a summit conference, on a broad range of problems, including strategic arms limitations.

Andrei Gromyko, Moscow's foreign minister, coupled a scathing attack on Red China with an appeal for "friendly relations" with the United States in his recent address to the supreme soviet. Recalling President Nixon's statement in his inaugural address that we are moving from a period of confrontation to a period of negotiation with the Russians, Gromyko said his government favored

"wide-ranging" negotiations with the Nixon administration.

Hubert Humphrey, in Moscow, said Premier Alexei Kosygin talked to him "in some detail and with complete and utter frankness and candor" about world problems and urged him to tell President Nixon and the American people how much the Soviet Union desires "to work with the United States in the cause of Peace." Humphrey was almost as rapturous about Kosygin as the egregious Ambassador Joseph E. Davies was about Stalin in World War II.

This sudden access of euphoria, so soon after the recent tragic events in Czechoslovakia, is disturbing. It is reminiscent of the "spirit of Geneva" in 1955, only a year before Russian tanks crushed the Hungarians; of the "spirit of Camp David" in 1959, only a year before Khrushchev insulted President Eisenhower and torpedoed the Paris summit conference and three years before he put nuclear-tipped missiles in Cuba; and of the "spirit of Glassboro" in 1967, only a year before the Russian invasion of Czechoslovakia.

With recurring armed clashes on their frontiers with Red China, which could lead to a major war, the Russians naturally would like some temporary accommodation with the United States that would assure its benevolent neutrality. Having bamboozled the United States with a so-called gentlemen's agreement against atmospheric nuclear tests, which they broke by testing monster warheads, and with a test-ban treaty which now forbids us to test similar weapons; having jumped into the lead in over-all offensive missile strength, and having deployed an anti-ballistic missile system, the Russians now would like to bind the United States with an arms limitation treaty that would prevent us from catching up.

We hope President Nixon will keep these considerations in mind when he enters into negotiations with the Russians. There is danger that they will be persuaded, by all the unreciprocated concessions we have made to the Communists in our efforts to end the war in Viet Nam, that we want peace at any price and can be pushed around.

Dean Acheson, former secretary of state, was a high priest of the "trust Stalin" cult during and after World War II, but he was disenchanted by bitter experience. He learned, as he has written, that the Russians use conferences and the forms of negotiation as "an instrument of war."

Acheson, as quoted in a recent Senate report on the soviet approach to negotiations, says the notion that "there is no alternative to negotiations with the Russians . . . is, of course, silly. For if there is no alternative, and if the Russians will only negotiate, as is now the case, on their own terms, then there is no alternative to surrender. But plainly there is an alternative, which is by action to change the attitude of the other party. . . . Action is often the best form of negotiation."

The soviet concept of diplomacy was best expressed by Stalin: "Words must have no relation to actions—otherwise, what kind of diplomacy is it? Words are one thing, actions another. Sincere diplomacy is no more possible than dry water or wooden iron."

O, but the present Russian leaders are different, it is said. Robert Conquest, a distinguished English author and student of Russian affairs answers that argument in the same Senate report:

"Russia is now ruled by a faceless group, almost all of whom took the first moves in their careers in the great purge of 1936-38. Kosygin went up in four steps, from shop manager in a Leningrad factory to minister, in about two years. This was at a time when the Leningrad Communists were being slaughtered on an even larger scale than else-

where. And so it was with Brezhnev and Kirilenko in the Ukraine, where there was three survivors of the 102-man local central committee."

To have been promoted in those days was a sign of active complicity in Stalin's crimes. Conquest writes. He describes the Lenin-Stalin-Malenkov-Khrushchev-Brezhnev succession as a "dynastic disaster." And in the last two years, he adds, "we have seen an increasingly swift process of re-Stalinization." Even the long-discredited "short course" history of the Communist party, an embodiment of the Stalin myth, has been rehabilitated by the Brezhnev-Kosygin regime.

Such is the character of the present Russian rulers, who are so anxious, we are told, to work with the United States in the cause of peace.

Mr. PEARSON. Mr. President, will the Senator from Maine yield, so that I may address a question to the distinguished Senator from Colorado?

Mr. MUSKIE. I am happy to yield.

Mr. PEARSON. As the Senator has returned to the Chamber, recognizing that he has been here all during the session, we were debating and discussing the point made by the able Secretary of Defense as to authorizing the construction and deployment of the ABM system as a bargaining point as we enter into the talks that are contemplated with the Soviet Union.

Does the Senator from Colorado hold a similar view as to the ABM and say that it is essential as a bargaining point to go ahead with it at this time?

Mr. DOMINICK. I do not know that I would want to put it in those words. I should say that it is an important bargaining point; I do not say it is an essential bargaining point, no.

Mr. PEARSON. I asked the Senator that question because a point has been made and developed a number of times that we must have an ABM because the Russians have an ABM. The Secretary of Defense, in his own words, made it an essential bargaining point. The reason I address this question to the Senator from Colorado is that it was the distinguished Senator himself who first warned about and watched and studied the Russian deployment of a FOB system. Long before it was announced, the Senator from Colorado was doing some studying in this field. The testing of the fractional orbiting bombardment system did go forward, and the Russians have such a system today.

Mr. DOMINICK. That is correct.

Mr. PEARSON. It has been our judgment that the United States should not build or construct or deploy a FOB system. Does the Senator think that the United States should perhaps build an FOB system today because the Soviet Union has one, because if we do not have one and we enter discussions with the Russians, perhaps we would be in a weakened position?

Mr. DOMINICK. No, I do not think so at all. I hope we will never develop a FOB system.

The PRESIDING OFFICER (Mr. EAGLETON in the chair). Does the Senator from Maine yield the floor?

Mr. MUSKIE. Yes.

THE PRESIDING OFFICER. The Chair recognizes the Senator from Colorado.

Mr. DOMINICK. Mr. President, I merely wish to finish the colloquy.

It seems to be that the FOB system which has been developed by the Soviets is designed either to attack our airfields, which can also be done with submarine launchers, or by air bombers; or for use as a city destroyer, which is something that gives me cold chills. I hope the United States will never develop a weapon which is aimed to strike against cities only.

Mr. PEARSON. Would the Senator from Colorado agree that perhaps the Soviet utilization of that system would be to negate any effectiveness that an ABM system would have?

Mr. DOMINICK. No, I would not. I have a deep reluctance to have us forego the deployment of an ABM system, if for no other reason than to give the President another button to save us from an accidental or an unauthorized launch in the middle 1970's, whether it be by the Soviet Union, the Chinese, the Egyptians, or whoever it might be at that point. I just cannot see putting ourselves in a position where the only alternative we would have would be to wreak a holocaust.

Mr. PEARSON. I thank the Senator from Colorado.

WORLD REFUGEE PROBLEMS

Mr. KENNEDY. Mr. President, refugee problems seldom dominate the headlines but the troubles of our time are taking a growing toll in the flight of people from conflict and oppression. All over the world, people are on the move.

In a recent series of nine articles, the Christian Science Monitor described today's vast movement of the homeless, the many governmental and private efforts being made to help them, and the continuing need for even greater efforts in behalf of our suffering fellowman. Because I feel these articles will be of considerable interest to Members of Congress and others, I ask unanimous consent that they be printed at this point in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor, Apr. 23, 1969]

HELPING HOMELESS: WORLD DOES CARE

(NOTE.—The world's refugee problem is one of the biggest stories of the space age. Millions of people are either on the move or leading restricted lives in camps. A vast proportion have little if any idea of the future. This account, the first of a nine-part series on the world's refugees, sets the scene as viewed from Geneva.)

(By Carlyle Morgan)

GENEVA.—Suddenly by thousands, or gradually a few at a time—that is the way political refugees come about.

Right now, nearly 20 years after leading governments thought the post-World War II refugee problem was all but finished, there are still 2½ million such people settling out, awaiting further directions midway in their journeys, or being repatriated or resettled.

Though confined to this planet, this is one of the space age's biggest stories.

"We need not wait for an invisible invasion from outer space. Our environment is already being changed by a sort of invisible invasion from within."

The speaker is an "old hand" at one of the world's oldest yet newest problems—the burden that millions of homeless, stateless refugees place on the world's conscience.

In scope and even in essence the problem of political refugees has recently been changing, almost unnoticed. Certain of their needs remain the same. But areas of concentration and major currents of refugee movements across the world have altered radically from what they were only a few years ago.

The awakening to the long-term need, and the international efforts to aid the refugees, have built up to a cause on earth that is as big as the conquest of outer space.

The crux is a spacious regard for the rights of men, women, and children to be safe from political, religious, or racial persecution.

This right is being buttressed by international agreements and accepted as a duty of national governments and international organizations.

It promises to be a powerful and enduring force. This appears certain because of the scope of the problem—and because emerging new nations and the demands for change in older ones have been generating refugees as fast as or faster than they can be resettled or repatriated.

Two and a half million—that is as many refugees as there were 10 years ago.

They inhabit boxlike houses and frail tents in refugee camps. Or, with their families, the more fortunate ones crowd ships for far-away places, board chartered airplanes for their old homelands—or perhaps for new ones.

WHO ARE THEY?

Their names pack the files of offices scattered over a large part of the world, where experts record where to, where from, skills, languages, backgrounds, and causes of displacement.

But who are the refugees?

Certainly in this century they have had remarkable origins. The movement included a million Russians fleeing from the 1917 revolution into Western Europe or wandering from Siberia into China, Mongolia, and Manchuria.

Soon afterward Armenians were fleeing the Turks—and many Turks sought resettlement within new national borders when their birthplaces were placed under Greek control.

Jews in the 1930's sought safety from their wouldbe exterminators in the Nazi Reich.

After World War II southeastern Europeans waited in Paris for restoration of freedom in their homelands.

In 1948 the emergence of Israel heralded hundreds of thousands of new refugees. There the problem is a great as ever.

Farther east there has been the steady post-1949 stream of Chinese fleeing the mainland to Hong Kong and Macao.

Then there was the 1956 Hungarian crisis and the Algerian turmoil of the late 1950's and early '60's—both producing refugees.

To the dismay of an astonished world came the flight of many Czechoslovaks following the 1968 Soviet invasion.

And in Africa today there are thousands on the move from one country to another. But the hapless caught in the Nigerian-Biafran conflict are not classified as refugees in an international sense since they are confined to their country.

For international experts the word "refugee" has acquired a distinct meaning. It is defined as a person forced to leave his own country for a political, racial, religious, or some other social reason not judged to be criminal.

Felix Schnyder, former United Nations High Commissioner for Refugees, said of the problem:

STANDING ARRANGEMENTS FOR AID

"Of all the various types of evil which man inflicts on man, the suffering of refugees persecuted for reasons of race, religion, nationality, or political opinion has, through-

out history, been among the most cruel and persistent . . . reaching a monumental and tragic climax in our own 20th century."

A leading UN legal specialist on refugees, Dr. Paul Weis, has pointed out that "while the refugee problem is as old as history, international action for refugees started only after the first world war when the Bolshevik Revolution brought in its train a problem of refugees numbering 1 million persons."

This action has established the rights of refugees in international practice and has provided food and shelter for them.

Today a network of verbal and tacit international agreements makes the world a safer place for refugees. It helps to give them legal and social status.

The UN has made strides from League of Nations days. The league's refugee operations were undertaken for specific problems, such as the Russian refugees and those fleeing Nazi Germany.

Except for the Middle East problem, the UN has been able largely to generalize its approach to refugees.

Wherever refugees originate they are covered by standing UN arrangements for aid. The UN has also been able to "depoliticize" the aid. It help carries with it no judgment on the policies of states which produce the refugees. The states have begun to understand this and are becoming increasingly cooperative.

This trust is part of the basis for today's worldwide movements of refugees. But it follows from this that detailed accounts of their odysseys are usually sheltered from unnecessary publicity.

Privacy regarding countries of origin and of destination is dictated by political and diplomatic need. And it helps to ensure the personal safety of individual refugees and families.

The rights of refugees—the willingness of governments to let them go from their homelands and of others to receive them in transit or as permanent residents—have developed slowly.

To give wide publicity to the name of a country from which refugees are moving, for example, could cause that country to close its borders to the outflow. East Germany did so when it built the Berlin wall.

MIGRATIONS REPORTED IN GENERAL

Also risky is to name the countries receiving refugees. It can give the appearance that the countries are critical of policies in countries from which the refugees fled. In extreme cases this could lead to charges that receiving countries were conniving with agitators.

One of the vital rights of refugees is that presenting themselves at borders of neighboring states without fear of being turned back. For thousands this can mean the difference between life and death, authorities say, or between freedom and unjust and indefinite imprisonment.

Despite the need for official discretion about today's migrations, these can be reported and charted in general terms. Their most striking feature is the recent, little-known shift in the refugee problem from Europe to Africa, while the Middle East refugee situation remains much as it has for the past 20 years.

In the Middle East 1½ million Palestinian Arabs are still living (some observers say virtually "rotting") in refugee camps. Authorities who care for these refugees provide food, shelter, clothing, some education, and work training. But in the Middle East the refugees are "caught." They are waiting for a political solution of the Arab-Israeli crisis to return them to normal living.

Africa is the next largest—and newest—problem. There some 850,000 are on the move. The number, however, does not include those fleeing from the dangers of war in Nigeria.

The concentrations seen in Europe after World War II no longer exist. Millions have

CONGRESSIONAL RECORD — SENATE

August 1, 1969

ment of Justice in the fight against organized crime;

Now therefore be it resolved that the 63rd Annual Meeting of the National Association of Attorneys General in St. Thomas, Virgin Islands reassert its interest and concern in the continuing fight in the field of organized crime; that we work with all levels of government and all branches of law enforcement in creating a total effort; and

Be it further resolved that the members of this Association, jointly and severally exchange information of desirable legislation to control organized crime, and that the members and the Association offer vigorous support to the efforts of the Department of Justice in their field.

ABM

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research development test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each reserve component of the Armed Forces, and for other purposes.

Mr. ALLEN. Mr. President, the basic information necessary to a decision on deployment of the Safeguard antiballistic missile system has been before Congress for many months. It is true, of course, that much additional testimony from many sources has since been submitted, most of it in the form of opinion—some of it informed, some ideological and speculative, some simply conjectural, and much of it contradictory.

However, I have been impressed by the fact that arguments pro and con seem to derive not so much from disagreement on hard facts and reasoned opinions as from contrary assumptions and premises to which the facts and opinions are related.

Accordingly, few Senators seem to have been influenced to change their minds on the wisdom of deployment of the ABM. This fact would seem to indicate that the decision before us may hinge not so much on data as on basic assumptions respecting national power, ideology, national intentions, and the ultimate determinate factor of national will in shaping defense policies of our Nation.

As the time approaches for final decision on funding deployment of the ABM, I find myself more persuaded than ever that the risks involved are extremely grave, that the security of the free world is at stake, and that the consequences of inaction could be catastrophic not alone for our Nation but for the free world.

These considerations influenced my original decision. Since then no new facts have been presented and no new arguments have been adduced to alter my

original conclusions which, in abbreviated form, are as follows:

In the present contest between two great world powers, all of the idealistic good intentions in the world cannot be substituted for the integrity and therefore the credibility of our deterrent capability.

We believe that our deterrent is today a critical factor in the security of our Nation and of Western Europe, the Middle East and the Far East, and that it is essential to continued confidence in our leadership on the part of uncommitted and undeveloped nations of the world.

I am convinced that an effective ABM Safeguard System is scientifically and technologically feasible; that it can be developed to provide a satisfactory measure of defense of our land-based deterrent; and that the cost is not disproportionate to the defense afforded.

Furthermore, I do not believe that the limited deployment of the ABM will result in escalation of the arms race nor that it should or would impede arms control negotiations with Russia.

In addition to these conclusions, Mr. President, undisputed facts show that Russia has continued from 1962 till now with successive improvements of their ABM System. It must be clear that an effective ABM protection of Russian cities would necessarily diminish our deterrent capability. On the other hand, Russia's deterrent remains unimpaired by reason of continued vulnerability of our cities. To permit Russia to enhance its deterrent by continued vulnerability of our cities and at the same time voluntarily accept vulnerability of our ICBM sites is to invite an unstable world situation which I find unrealistic and dangerously intolerable.

Mr. President, I earnestly hope that the nuclear arms race may be ended. But I have found no reasonable ground to believe that a negotiated agreement with Russia can be reached which would not be to the further advantage of Russia, nor am I aware of any evidence or of any argument that would convince us that unilateral abandonment of a defense of our strategic armament would alone induce the Soviet Union to cease its own efforts to achieve and maintain strategic superiority over us.

In this connection, it is my judgment that the power essential to our survival in today's world is our power of deterrent. Today we have that power. The question is, do we have the will to maintain it?

Mr. President, it is my sincere hope that we will defend our deterrent and protect our national security.

I support ABM.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield for two unanimous-consent requests?

Mr. PROXMIRE. I yield.

ORDER FOR ADJOURNMENT UNTIL MONDAY, AUGUST 4, 1969

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when the Senate completes its business

today, it stand in adjournment until 12 o'clock noon on Monday next.

The PRESIDING OFFICER. Without objection, it is so ordered.

FORTUNE'S EXCELLENT ANALYSIS OF THE AMERICAN MILITARY PROBLEM

Mr. PROXMIRE. Mr. President, for years Fortune magazine has been recognized as a publication that has brought remarkable competence to reporting on American industry.

In their August issue they have done one of the best jobs I have seen of analyzing the defense spending problem that so concerns all Members of Congress.

This issue is specially pertinent to Congress right now, when we are in the midst of debate on the military procurement authorization bill.

Mr. President, there are two articles in this issue that are so pertinent and informative that I ask unanimous consent that they be printed in the Record following my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered. (See exhibits 1 and 2.)

Mr. PROXMIRE. One is entitled: "The Case for Cutting Defense Spending," the other is "Where Military Contracts Go."

In addition, Mr. President, I am going to read in full to the Senate the lead editorial in the August issue of Fortune, entitled: "It's Time To Audit the Defense Department."

As I read this remarkable editorial, keep in mind that this is not the expression of an impulsive critic of the so-called "military-industrial complex." Fortune has consistently hailed American industry and understands and deeply respects the reasons for America's industrial excellence.

This is not the expression of an advocate or polemicist for arms control or disarmament, or of a publication that underestimates the very real threat posed by Soviet military power. Indeed, in that connection, I invite Senators to read another article entitled "Military-Industrial Complex, Russian Style" in this same August issue of Fortune.

Here is an editorial from a publication that highly values American security and that fully and intelligently understands why it must meet whatever challenge may develop.

Mr. President, this is the editorial:

IT'S TIME TO AUDIT THE DEFENSE DEPARTMENT

The U.S. is in the grip of a costly, escalating pattern of military expenditure that could well keep rising even after Vietnam. As reported in a special defense section of this issue, evidence multiplies that this expenditure has come to live a life of its own—neither soundly based on our commitments nor, indeed, properly responding to the very real potential of the U.S.S.R. Appropriately, the Nixon Administration has begun a thoroughgoing review of the threats facing the U.S. and the defense structure needed to cope with them. The reassessment is urgently needed.

At staggering cost, the military has repeatedly bought weapons and deployed forces in ways that have added only marginally to national security. Moreover, in the procure-

August 1, 1969

CONGRESSIONAL RECORD — SENATE

S 8993

William Cahn, a Long Island district attorney, told SIC:

"I interviewed John Dioguardi in the summer of 1963, shortly after his release from prison (for tax evasion).

"He told me he was a hard-working kosher frankfurter salesman who left his home in Point Lookout every morning at 4 and drove to Sullivan County to sell his products, and that he received \$250 a week for these efforts. "Our investigation disclosed his meteoric rise from a \$250-a-week salesman to a reputed \$250,000-a-year income from the Kosher meat business.

"This commission is aware of John Dioguardi's close association with powerful leaders in the Teamsters, in particular, James R. Hoffa (now in federal prison).

"A reliable confidential informant advised my office that Dioguardi's success was due to the fact that the supermarket chains accepted his product to insure they would continue to have labor peace.

"This informant advised that the principals of these large chains would refuse to cooperate with our investigation because of the fear of union troubles. This lack of cooperation became a reality and thwarted our investigation.

"Dioguardi's instant success is not the realization of the 'American dream' but a continuation of his successful activities as a labor fixer, extortionist and important member of syndicated organized crime."

One witness at the hearing was "Mr. A," who prevailed on SIC not to disclose his real name. "Mr. A" was sales manager of a firm that began to hit the skids after Dio emerged as a "salesman" for the competition.

(Actually, says SIC sources, Dio became the owner of the rival company. Under the McClellan-Hruska Bill, this company could be dissolved by a court order or Dio could be forced to surrender his interest in it, providing certain facts were proved.)

"Mr. A" was asked how many supermarket chains switched from his organization to Dio's. He replied:

"Seven or eight. It wasn't over a particular time. It was over a period of months."

The next witness was Moe Steinman, director of labor relations for a large supermarket chain. Steinman said that he had seen Dio "50 to 75" times over the last three or four years.

But they never conversed about unions; Steinman insisted.

Here are excerpts from the Steinman testimony:

Q. You are not business associates and you are not social friends and you sit down to have dinner together. What do you talk about?

A. Very good question. Just in general speaking of life in general.

Q. Would you talk about how your business was doing?

A. How our chains were doing? He would ask the questions. I said to him, in fact, "Last year was a little better than the year before."

Q. Did he ever tell you how Mizrach was doing?

A. No, he never brought that out.

Q. You seem to give the impression that you never meet Mr. Dio except accidentally when you stumble into him. Have you ever made appointments to meet with him for dinner?

A. I said I did. He was at my house once or twice.

Q. Were there any other occasions when you made appointments?

A. I don't recall. I would be lying, you know, if I said no or yes.

Similar testimony was taken from Aaron Freedman, vice president of a chain of 78 stores.

SIC counsel Paul D. Kelly asked:

Q. "Has Mr. Dio ever been to your home?"

A. Yes . . . I got a call that he was in the neighborhood, would I mind if he came over

to see me? . . . I found out that he wanted to sell me pins, primarily these types of pins that we give out to our employes after . . . a number of years of service.

Q. Is that the first time that Mr. Dio has ever requested you to purchase something from him?

A. Yes.

Q. He has never mentioned Mizrach Provisions in your presence?

A. No, sir . . .

Q. Have you ever had occasion to ask Mr. Dio for help with respect to labor contracts?

A. No, sir . . .

Q. Were you curious enough at any time to ask Mr. Dio what his connections were with the kosher meat industry?

A. I wasn't that close enough to ask him those questions.

Dio is under a five-year sentence for bankruptcy fraud in connection with the failure of Consumer Kosher Provisions, Inc., a forerunner of Mizrach and the first company in that field to become a vehicle for Dio.

Immediate successor to Consumer Kosher (and also a forerunner of Mizrach) was First National Kosher Provisions. In this firm Dio was neither an officer nor a shareholder of record, although he organized the firm and illegally shifted Consumers' inventory to it.

The racketeer is appealing his sentence.

But whether Dio himself ultimately goes to jail because of his conviction under existing laws is not as important, say federal officials, as the mob's future in the industry.

President Nixon, in his crime message to Congress April 23, explained why an anti-trust-type bill such as the McClellan-Hruska measure was needed.

"The arrest, conviction and imprisonment of a Mafia lieutenant can curtail operations," Nixon said, "but does not put the syndicate out of business.

"As long as the property of organized crime remains, new leaders will step forward to take the place of those we jail.

RESOLUTION ON ORGANIZED CRIME ADOPTED BY NATIONAL ASSOCIATION OF ATTORNEYS GENERAL

Mr. McCLELLAN. Mr. President, the Subcommittee on Criminal Laws and Procedures, which I am privileged to chair, is presently in the process of studying and revising a number of bills dealing primarily with the control of organized crime. We are now obtaining the last comments of the Department of Justice on these proposals, and we hope soon to begin reporting out a comprehensive legislative program in this area. The major bills include:

First. S. 30, which comprehensively revises and strengthens the evidence-gathering process in organized crime cases;

Second. S. 974, which creates within the Department of Justice the position of Assistant Attorney General for Organized Crime;

Third. S. 976, which provides for increased sentences for certain persons who are being sentenced for a felony as part of a continuing criminal activity in concert with one or more persons;

Fourth. S. 1623, which prohibits the investment of certain illegally gained income in any business enterprise affecting interstate or foreign commerce;

Fifth. S. 1624, which would amend the Internal Revenue Code of 1954 and facilitate the collection of wagering taxes;

Sixth. S. 1861, which would prohibit the infiltration of legitimate organiza-

tions by racketeers or the proceeds of racketeering activity where interstate or foreign commerce is affected;

Seventh. S. 2022, which would make gambling affecting interstate commerce or operated by corruption a Federal crime; and

Eighth. S. 2122, a general immunity statute.

The subcommittee has been fortunate in having been able to obtain the critical comments and suggestions of a number of distinguished witnesses during three hearing sessions. Several of their suggestions have been incorporated into tentative markup drafts of the proposals. I stated at the beginning of hearings on these proposals that I was not committed or wedded to the exact language contained in any of them and that I hoped that they could be improved and strengthened. This has certainly been the case. Several of these bills have indeed, in my opinion, been much strengthened as a result of the hearing process.

Hopefully, the enactment of a number of these bills will mark the beginning of a sustained war against the forces of organized crime. These measures, along with several of the titles from last year's omnibus crime bill should give law enforcement some badly needed, and long overdue tools, in their fight against the large criminal cartels. Any effort in this direction, however, must include all levels of law enforcement: Federal, State, and local. I was, therefore, very gratified to learn that the recent annual meeting of the National Association of Attorneys General that organization passed a resolution manifesting its concern in the continuing fight against organized crime.

Mr. President, the public and law-enforcement agencies everywhere are becoming increasingly aware of the many faceted activities of organized crime and are becoming educated to the fact that organized crime, in one way or another, affects each of us. It will soon be time for the Congress to act to meet its responsibilities, too. The time for effective legislation against organized criminals is imminent. In concluding, I use the same words the President's Crime Commission used to close its chapter on organized crime:

The extraordinary thing about organized crime is that America has tolerated it for so long.

I ask unanimous consent to have a copy of the Attorneys General resolution inserted in the Record immediately following my remarks.

There being no objection, the resolution was ordered to be printed in the Record, as follows:

ORGANIZED CRIME

Whereas the members of this Association are directly involved in curbing the efforts of organized crime to expand its income, and its influence and control over legitimate business; and

Whereas this Association recognizes the need for all levels of government, whether local, state or federal, to join together and to cooperate in ferreting out and destroying the sources of income of organized crime; and

Whereas this Association recognizes and appreciates the concerted action underway and planned by the United States Depart-

S 8888

CONGRESSIONAL RECORD — SENATE

July 31, 1969

Mr. JAVITS. Of course, I would not dream of being so irresponsible as that to seek to block this legislation but I do want to get abreast of how it will work. That is why I asked for the information I did. I have no objection, of course.

Mr. LONG. I will cooperate with the Senator to that end.

The bill was ordered to a third reading, was read the third time, and passed.

Mr. LONG. Mr. President, I move that the vote by which the bill was passed be reconsidered.

Mr. MANSFIELD. Mr. President, I move that the motion to reconsider be laid on the table.

The motion to lay on the table was agreed to.

LEGISLATIVE PROGRAM

Mr. SCOTT. Mr. President, I rise to inquire of the distinguished majority leader whether he expects any votes tomorrow.

Mr. MANSFIELD. Mr. President, responding to the question raised by the distinguished acting minority leader, I cannot give an unequivocal answer but to the best of my knowledge, it does not appear that there will be any votes tomorrow.

Mr. SCOTT. I do thank the Senator from Montana.

ABM

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The PRESIDING OFFICER (Mr. SAXBE in the chair). The Chair lays before the Senate the unfinished business which the clerk will state.

The LEGISLATIVE CLERK. S. 2546, to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each reserve component of the Armed Forces, and for other purposes.

The Senate resumed consideration of the bill.

AMENDMENT NO. 111

Mr. FULBRIGHT. Mr. President, I submit an amendment to the pending bill. It is a simple amendment which I would like to explain briefly.

The amendment would require the Secretary of Defense to make available to a congressional committee, upon request, any study or report prepared outside the Department of Defense which was financed in whole or in part by the Department. The purpose is to insure that the Congress is given access to research studies performed by the so-called "think tanks," the universities, or individuals whose work is paid for by the taxpayers. The amendment recognizes the issue of executive privilege and carefully specifies that the mandate applies

only to work performed outside the Department of Defense.

This amendment is the outgrowth of an effort by the Committee on Foreign Relations to obtain a study prepared by the Institute for Defense Analysis relating to the Gulf of Tonkin incident. It is my understanding that the study contains a review of what happened in the Gulf of Tonkin, how communications were handled, and in general how decisions were made. The purpose of the study, I was informed, was to determine what lessons could be learned for future crisis situations. I think that my colleagues will agree that there is much that all of us can learn from that incident and its aftermath. The committee has attempted several times to obtain this study from the Department of Defense, but has been refused each time.

The Institute for Defense Analysis receives virtually all its funds from the Department of Defense. In fiscal year 1969 this organization received \$10,898,000 from the Department of Defense, and the Department proposes to give it \$11,150,000 in 1970.

I believe that the Congress, which imposes the taxes on the public to finance this organization, and which authorizes and appropriates the money for it, should have the right to see how that money is being spent. The issue here is far more important than this one study—it is a question of whether the Congress has the power to obtain information, prepared outside the Government with tax money, for which no claim of executive privilege has been made.

The Senate is beginning, at long last, to reassert its constitutional prerogatives and to restore the proper balance to our system. Passage of this amendment will be one small, but positive step in that direction.

In that connection, I wish to simply observe that today I believe is the first—perhaps the second—time in my 25 years in the Senate in which all 100 Senators were present and voting on pending measures—which again I think is also a demonstration of the Senate's taking its responsibilities more seriously.

Mr. CASE. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield.

Mr. CASE. Are there any cosponsors of the Senator's amendment?

Mr. FULBRIGHT. There are none, but I am always glad to have cosponsors.

Mr. CASE. Will the Senator request that I be made a cosponsor?

Mr. FULBRIGHT. Mr. President, I ask unanimous consent that the name of the Senator from New Jersey (Mr. CASE) be added as a cosponsor of the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JAVITS. Mr. President, will the Senator do the same for me?

Mr. FULBRIGHT. Mr. President, I ask unanimous consent that the name of the Senator from New York (Mr. JAVITS) be added as a cosponsor of the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment will be received and printed, and will lie on the table.

COLLECTION OF FEDERAL UNEMPLOYMENT TAX—AMENDMENT (NO. 110)

Mr. FULBRIGHT. Mr. President, I also submit another amendment to the pending bill, and I should like to discuss it briefly.

The amendment and the purpose are simple. It would reduce the authorization for research, development, test, and evaluation by a total of \$45,614,000. This represents a 7-percent reduction in funds for the "military sciences" research category for each of the three services and the Department of Defense, plus a 20-percent reduction in the authorization for the Defense Department's overseas research program, Project Agile, which is funded under a category labeled "Other equipment." The proposed reductions, by service, are: Army \$11,893,000; Navy \$10,157,000; Air Force \$9,989,000; and the Department of Defense \$13,575,000. The purpose is to make a modest cutback in the Department's funding of Federal contract research centers—the so-called "think tanks"—other social and behavioral science research, foreign research, the Department's aid-to-education program, Project Themis, and research on counterinsurgency matters. The intent is to have the \$45 million reduction applied roughly as follows:

First, reduce the funding of the Federal contract research centers by 10 percent, or \$27 million;

Second, reduce research in foreign institutions—colleges and universities, primarily—by \$2 million, or approximately one-third the program proposed;

Third, reduce counterinsurgency research, Project Agile, by 20 percent, or \$5 million;

Fourth, cut other social science research, performed by organizations such as the Hudson Institute, by the remaining \$3 million; and

Fifth, hold the line on new starts under Project Themis by reducing the request by \$8 million—a 25 percent reduction.

The committee has recommended an 8 percent cut in the military sciences item, the funding source for most of the programs I listed. This is but a slap on the wrist, and I think that the circumstances call for a more meaningful reduction in non-essential research activities. I propose that the Senate cut this category by an additional 7 percent, to, in effect, impose a 15 percent surtax on the research programs I have listed. My amendment would also reduce by \$5 million the funds for Project Agile, the overseas research which is funded under the "Other equipment" category.

It cannot be said that the amendment ties the hands of the Defense Department since each service will be left with considerable flexibility to distribute the cutback within these general areas. I might add that, under provisions of this bill, the Department of Defense will still have a \$100 million emergency fund to play with, double last year's contingency fund.

It is time that the Senate took a hard look at what the taxpayers' money is being spent for in the Defense research program. This amendment is but a small

July 31, 1969

CONGRESSIONAL RECORD — SENATE

S 8887

cooperative in it. I believe it represents a fine consensus which will accommodate the entire membership of the Senate.

Mr. COOPER. Mr. President, in view of the proper addition that was made to the request dealing with any amendments that might be offered to the Cooper-Hart amendment, it will be necessary to strike from the original request I made that we shall vote at 3 o'clock; because if amendments are offered, of course, we could not have both 4 hours of debate and still vote at 3 o'clock.

Mr. MURPHY. Mr. President, will the Senator yield?

Mr. COOPER. I yield.

Mr. MURPHY. Does the Senator wish to limit the time on the amendment?

UNANIMOUS-CONSENT AGREEMENT

Mr. COOPER. Mr. President, I shall state the agreement again, as modified.

We ask unanimous consent that on Wednesday, August 6, 1969, but not before 3 p.m., the Senate shall vote on the amendment proposed by the Senator from Michigan (Mr. HARR) and myself to S. 2546.

We ask unanimous consent that on Tuesday next, after the morning hour, there be 4 hours of debate on the amendment, equally divided between the proponents and opponents; that on Wednesday the Senate will convene at 11 a.m.; that there will be no morning hour; that there will be 4 hours of debate on the Cooper-Hart amendment, equally divided between the opponents and proponents; that if there be further amendments to the Cooper-Hart amendment, the time will be limited to 1 hour on such amendments, to be equally divided between the proponents and the sponsors of the Cooper-Hart amendment.

The PRESIDING OFFICER. Is there objection to the unanimous-consent request? The Chair hears no objection, and the agreement is entered into.

Do Senators yield back their time?

Mr. DIRKSEN. I yield back my time.

Mr. MANSFIELD. I yield back my time.

The PRESIDING OFFICER. All time has been yielded back. The question is, Shall the bill pass? On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The bill clerk called the roll.

The result was announced—yeas 70, nays 30, as follows:

[No. 63 Leg.]
YEAS—70

Aiken	Gravel	Mundt
Allott	Griffin	Murphy
Anderson	Gurney	Muskie
Bellmon	Hansen	Packwood

Church	Metcalf	Williams, N.J.
Cook	Montoya	Yarborough
Cotton	Moss	Young, Ohio

So the bill (H.R. 9951) was passed.
Mr. LONG. Mr. President, I move that the vote by which the bill was passed be reconsidered.

Mr. JAVITS. Mr. President, I move that the motion to reconsider be laid on the table.

The motion to lay on the table was agreed to.

Mr. LONG. Mr. President, I am not going to make a request for the conferees at this point, because we only had one amendment, which is the same language as that in the House, and so would hope that the House would take it as an amendment. If they want conferees, we will be glad to accommodate them, but it is important that we act on the interest equalization tax, which expires tonight, which bill is now at the desk.

Mr. MANSFIELD. Mr. President, as the votes on this measure today indicate, no particular point of view can claim victory or, for that matter, defeat. If there was a victory attached to it, it was a victory for the Senate as a whole, the administration, and, hopefully, the American people.

I am happy that we were able to reach, on a bipartisan basis, a reasonable accommodation after a very lengthy exchange of views and collection of conferences, and I want it clearly understood that any credit which inures for the measure which has just passed the Senate belongs to all of us and not to the leadership on either side, or to any individual Senator. In that action, the administration has also played a very worthwhile and responsible part.

No particular interest can claim credit or rejection. Rather than these proceedings have indicated above all is that the Senate as a whole can be proud of an accomplishment attained in the spirit of accommodation and responsibility. The only winners are the people.

The able chairman of the Finance Committee, the distinguished Senator from Louisiana (Mr. LONG) once again displayed his remarkable ability in his expert handling of this very important measure. And the minority leader offered his characteristic cooperation and full support. Their participation was indispensable in effecting a meeting of the minds on all sides of the issue, thus making possible the responsible action taken by the Senate today.

Working also so indispensably to accomplish the responsible end obtained were the capable senior Senator from Delaware (Mr. WILLIAMS) and the able Senator from South Dakota (Mr. MUNDT). Their views were expressed with the deep understanding and wisdom that have characterized all of their efforts in the past. I might say that it is most difficult to express in words my esteem and gratitude for their splendid contribution.

To say it simply: Senator DIRKSEN, Senator WILLIAMS, and Senator MUNDT all deserve our deepest appreciation for their tireless efforts to resolve this matter reasonably. They happen to serve on the other side of the aisle, but I might say that in the interest of accommodation and unity in the Senate, their services rise above partisanship.

May I say, also, that I think the entire Senate is to be commended on that score. The close attention and support during the discussions today and the splendid cooperation displayed by all certainly credits this body immeasurably. It was imperative that all views be heard and considered. I am proud to say they were. I thank each and every Senator. We may all be proud.

CONTINUATION FOR A TEMPORARY PERIOD OF THE INTEREST EQUALIZATION TAX

Mr. LONG. Mr. President, I ask that the Chair lay before the Senate a message from the House of Representatives on H.R. 13079.

The PRESIDING OFFICER laid before the Senate H.R. 13079, an act to continue for a temporary period the existing interest equalization tax, which was read twice by its title.

Mr. LONG. Mr. President, I ask unanimous consent that the Senate proceed to its immediate consideration.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. LONG. Mr. President, this is a mere 30-day extension of the existing equalization tax, so that we can get the bill considered.

Mr. JAVITS. Mr. President, will the Senator from Louisiana yield?

Mr. LONG. I yield.

Mr. JAVITS. Mr. President, this is an important bill, which has a widespread interest, especially today. I understand that it is only a 30-day extension but I should like to ask the Senator from Louisiana whether there are any facts or figures available as to how it is operating today, both in terms of our balance of payments problems, for which it was originally devised, and in terms of the high interest rate we have not only in this country but also the very high interest rates now being paid by our banks with regard to Eurodollar borrowings abroad. I should like to ask the Senator whether the Finance Committee is going to look into the general network of questions which are involved so that when we do come to act in a definitive way, we will have that body of information.

Mr. LONG. Mr. President, I shall seek to obtain that, and any other information the Senator wants, if he will just let us know. Unfortunately, I cannot provide all of that for the Senator today, as he is well aware of, I am sure. I am merely told by the Treasury Department that if we do not do this, a large amount of money might flow out of the country which would create some problems for us in this country.

July 30, 1969

Many of these trails are really automobile routes that follow in the footsteps of the pioneers or explorers, thus providing an easy way of exploring history. One of these, for instance, is the Lewis and Clark Trail—1,000 miles of good roads from St. Louis, Mo. to Fort Clatsop on the Pacific Ocean.

There are also waterway trails that can be followed utilizing transportation ranging from houseboats to canoes.

And there are wilderness trails, such as those designated in the National Trails System which the 90th Congress established only last year.

The details of this expanding outdoor recreation opportunity is best told by the National Park Service, Mr. President, and I ask unanimous consent that its press release be printed in the RECORD.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

**LAND AND WATER TRAILS EASY WAY TO
EXPLORE AMERICA**

Many Americans are taking to the trails this summer.

This doesn't mean they're necessarily following a winding footpath through the forest, but that they've discovered the scores of land and water trails that are available for vacationers.

Whether by houseboat or canoe, on foot or in an automobile following a regional trail can be a great experience for the whole family.

One of the easiest ways of exploring history, and enjoying outdoor recreation at the same time, is by following one of the many regional automobile trails crisscrossing the country. These are modern highways specifically designated to follow a historic or scenic route and, generally, marked with an identifying symbol. They're designed for moderately high speed automobile traffic, not foot travel.

The Dixie Trail, with a distinctive marker of a silhouetted Southern belle, takes you through the famous Bluegrass state of Kentucky into areas of Tennessee and North Carolina and the panoramic countryside of South Carolina and Georgia.

The Lewis and Clark Trail winds over 1,000 miles of good roads from St. Louis, Missouri to Fort Clatsop on the Pacific Ocean. You can be a Modern explorer on this trail that passes through 11 states, closely paralleling the original route. This is a great trip for historical sightseeing, but there are many recreational opportunities along the way and cities such as Kansas City and Portland are included.

The Old West Trail steers you through the five states of Nebraska, North and South Dakota, Montana and Wyoming. Along this adventuresome route, you can visit historic museums, stop at an Indian pow-wow, or camp out for a few days of hiking, fishing, hunting, or mountain climbing.

The Hiawatha Pioneer Trail travels through Iowa, Illinois, Wisconsin and Minnesota. You'll have a chance to sample the history, agriculture, culture and recreation of America's mid-west region along this trail.

The Ozark Frontier Trail is a memorable loop from St. Louis across Missouri and Kansas, down into Oklahoma and east to Arkansas.

The Lincoln Heritage Trail, starting in Illinois and continuing into Indiana and north central Kentucky encompasses many highlights of the boyhood and career of your 16th president.

New England's Heritage Trail begins in New York, Connecticut, and meanders through the six northeastern states. Early American history will mean more to you when you've

stopped at such places as Mystic Seaport with its Waterfront Village, and Cape Cod, famous for its quaint fishing villages and beautiful seashore. There's even a Freedom Trail Walking Tour of Boston available on this route.

To make sure you don't miss important local points of interest, many states and even some cities have inaugurated their own automobile trail systems. The George Washington Trail, for instance, takes you through the coastal section of South Carolina; The Charter Oak Trail begins at Hartford and continues through the state of Connecticut; the Liberty Trail covers the five southeastern counties of Pennsylvania and includes a ride on a scenic railroad along the way; and the Hill Country Trail is one of ten new automobile trails in Texas.

For more information on any of these state or regional trails, write to the tourist office of the state you'd like to visit and ask for their free brochures on automobile tours of their areas. Tourist directors are located in the state capitals.

Regional trails aren't limited to land, however. If you'd like to vacation on water, there are many river and stream trails that provide great fishing, swimming, and boating fun. Houseboats are available for rent in many parts of the country and canoe or float trips are possible, also. Check your state Travel Office or Game and Fish Department for established rental agencies.

Following a trail into the wilderness can be an exciting experience too, but it needn't be a difficult one. Several organizations have set up guided trips into remote regions in various parts of the country.

The Wilderness Society, for instance, offers 45 expeditions this year, including 14 horseback pack trips, 16 walking trips, nine backpacking expeditions, three waterway trips, two ski outings and an Alaska tundra trek. The trips are planned to take into account the inexperienced wilderness travelers as well as the seasoned outdoor enthusiasts. Local outfitters provide most of the equipment and make complete arrangements from the time you arrive at the starting point until the trip is over. You don't have to be a member to take part.

For a listing of available expeditions and fact sheets on the individual trips, write The Wilderness Society, 5850 Jewell Avenue, Denver, Colorado 80222.

Other organizations that promote hiking and outdoor tours are the Appalachian Mountain Club, 5 Joy Street, Boston, Massachusetts 02108; the American Forestry Association, 919 17th Street, N.W., Washington, D.C. 20006; and the Sierra Club, P.O. Box 3471, Rincon Annex, San Francisco, California 94120. For information on hiking and biking trips, contact the local branch of the American Youth Hostels, or the national headquarters at 535 West End Avenue, New York, New York 10024.

One of the most famous regional trails in the country is the Appalachian National Scenic Trail—a beautiful hiking trail that extends 2,000 miles from Maine to Georgia. The route, marked by an identifying symbol can be picked up at any place and you can hike for as little or as long as you'd like. If you're planning an extended hike, you should write for the guidebooks and maps to The Appalachian Trail Conference, 1718 N Street, N.W., Washington, D.C. 20036. Prices are nominal.

Whether you want to canoe in Wisconsin, drive through Maine, hike through North Carolina, backpack in Colorado, or fish in Oregon, regional trails will make traveling easier for you. Look for the identifying marker on whatever route you're following. You'll find it will add greatly to your enjoyment of the countryside, and, probably, lead you to some sights you might have missed.

**CONCLUSION OF MORNING
BUSINESS**

Mr. BYRD of West Virginia. Mr. President, is there further morning business? The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

ABM

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of the unfinished business.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Chair recognizes the Senator from Oregon.

Mr. HATFIELD. Mr. President, on March 14 the President announced his decision to deploy the Safeguard antiballistic-missile system. At that time, the administration gave three reasons justifying its need:

1. Protection of our land-based retaliatory forces against a direct attack by the Soviet Union;
2. Defense of the American people against the kind of nuclear attack which Communist China is likely to be able to mount within a decade;
3. Protection against the possibility of accidental attacks from any source.

Originally, the proponents of this system seemed to give greatest emphasis to the possible threat posed to our deterrent forces by the Soviet SS-9 missile development. But, many have effectively questioned whether the Soviets have either the intention or the capability to develop a first-strike force. Such questioning appears to have had an impact of those supporting the ABM. Now,

July 30, 1969

CONGRESSIONAL RECORD — SENATE

S 8819

than 80 witnesses appearing before the Committee, only 19 could be considered as being ecologically oriented.

As the editorial clearly pointed out:

The majority, therefore, came to this assignment with the self-assurance that chemical pesticides are "good" since they have helped increase agricultural production.

It is apparent that the effect of persistent pesticides on the ecological balance within our environment was not uppermost on the minds of most of the committee members and its witnesses.

As the Audubon Society puts it so well:

We have a right to expect more from the National Academy of Sciences—at least the recognition that given our contemporary illiteracy in ecology, this twenty-year pesticide controversy will not yield to consensus.

I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE ACADEMY OF SCIENCES LAYS ANOTHER THIN-SHELLED EGG

In November 1966, the U.S. Department of Agriculture asked those scientific advisors to the nation, the National Academy of Sciences/National Research Council, to appoint a special Committee on Persistent Pesticides to help review the rising challenge to the use of these chemicals mounted by conservationists and a growing segment of the scientific community. The eleven-member committee heard testimony from more than 80 witnesses and issued a report on May 27th, 1969.

The report illustrates the characteristic, difficult, and dangerous conflicts of interest that beset our new technoscientific civilization. It recognizes that controlling the long-lived residues of DDT and other similar chemicals in the world environment will require regulation by all nations. It also recognizes that DDT has had an unfair economic advantage over other more acceptable insecticides, and that worldwide environmental contamination by DDT is serious, but that unless (and until) governmental regulations eliminate the present advantage of cheapness that makes DDT so popular, it will continue in general use.

Despite this, the committee, speaking for the National Academy of Sciences, failed to recommend a ban on DDT!

In 1963 another special committee of the academy failed utterly to come to grips with the problem of persistent pesticide contamination, and the academy's staff recognized the failure. Why did it fail again?

A thorough analysis of the false philosophical assumptions that beset the academy and all of us may be necessary to answer this question fully, but it may suffice to suggest here that too many of the tools and techniques we have so proudly and naively developed are simply beyond our current ability to use wisely. The technologist has become the sorcerer's apprentice! Chemists, engineers, and economists, who make most of the decisions to loose these inventions on the landscape, are unfortunately the least qualified to judge their possible effects.

The academy's Committee on Persistent Pesticides should have been an ecological board, since the pest control problem and pesticide pollution are both ecological problems. But only two of the eleven members were so oriented. Eight others, including the chairman, had backgrounds and philosophical commitments close to the agricultural community; two were from the chemical industry. Even though all these men were highly qualified and respected specialists, most of them were ecologically incompetent.

The majority, therefore, came to this assignment with the self-assurance that chemical pesticides are "good" since they have helped increase agricultural production; this too is "good" because our growing population requires it. The "problem" they were asked to analyze simply called for examining present pesticide use policy to see where it might be perfected to minimize formerly unrecognized conflicts, and to assure the public that its interests are being well taken care of by experts, both those on the committee, others in the academy, and all those thousands of experts who have implemented the vast technical programs of modern agriculture.

This is a case where we suffer from the democratic notion that majority opinion is right per se, with "public relations" substituting for education. This stumbling block is evident in the makeup of the persons interviewed by the committee: nineteen more or less ecologically oriented witnesses were exactly counterbalanced by nineteen industry spokesmen whose job has been to produce and sell the technology that has gotten us into trouble. The other testimony came from three people in food processing, fourteen in public health (as yet an unecological field), and twenty-eight from agriculture, men who planned and directed our commitment to DDT!

This report does mark at least one important advance. Though its recommendations are altogether vacuous, it does recognize the damning evidence—but carefully buries it deep in the text, where few will read it. More research is called for, of course, which is always a good way to put off action; in this Age of Science, research is like absolutism to medieval man. If we stopped poisoning we could research more important things, and save life too, perhaps more than we know.

The other reliable roadblock to restrictive action is to insist, as this report does, that there are yet no satisfactory alternatives to DDT. It does not specify what it is that cannot be controlled by other means, or how important it is to control at all. Confront any man and he will be against sin—until the next time he wants to sin. And so we are all now, perforce, against pollution—except when it is profitable to pollute, whether with pesticides, oil, or what have you.

We have a right to expect more from the National Academy of Sciences—at least the recognition that given our contemporary illiteracy in ecology, this twenty-year pesticide controversy will not yield to consensus. Someone has to lead, to educate, to hold the mirror up to man.

WHERE RESPONSIBILITY LIES

Mr. HATFIELD. Mr. President, as common as the human tendency to pass the blame for wrongs is the human proclivity to pass the buck for the curing of ills. Such is often the case among the private and public sectors of our Nation.

Jack Sugg, president of the Associated Oregon Industries, recently brought this problem to light as it relates to the relationship between private business and Government regulation.

In his compelling commentary in the July issue of News Digest, Mr. Sugg reiterated the free enterprise approach to problems of and with industry and the practical approach to Government's role—as other than the cure-all and end-all of the problems of business and consumers.

It is with encouragement and with admiration for Mr. Sugg's appraisal of where responsibility lies that I ask unan-

imous consent that "We, Not They" be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WE, NOT THEY
(By Jack Sugg)

It seems popular these days to look to government at all levels to remedy problems or dissatisfactions of the people. Government is the "they" in "They should do something," and the oft-sighed "There ought to be a law" wishes that "they" would act.

Most measures aimed at so-called consumer protection follow such lines of reasoning. Though contrary to the basis of our free market economy, they represent a limp-wristed desire of many people to substitute distrust and regulation of business for free choice and individual moxie.

It's always refreshing, therefore, to see examples of business constructively policing itself. Such an instance is found in "The Right Thing to Do," a comprehensive code of ethics recently endorsed by the National Association of Direct Selling Companies and the National Better Business Bureau, Inc. Sub-titled "A Credo of Business Responsibility," the principles apply to direct selling, verbal representations and advertising of commodities or services sold at people's homes or other places not on the premises of the supplier or seller. Faithful compliance, say the sponsors, "will increase public confidence in the direct selling industry and thereby help to protect the consumer and legitimate business from unfair and deceptive practices.

Listed under 16 headings, the standards demand accuracy, bona fide offers with adequate supplies to back them up, truthful advertising illustrations, and that customers receive copies of completed contracts and written orders or receipts showing the name and address and the seller. Contract cancellation is called for in case of fraud, misrepresentation or undue influence.

Guarantees must be explained fully as to scope, limitations and conditions, according to the code. Customers should be told whether price savings are compared to previous prices or to prices of other sellers, and when a contract may be sold or assigned to a financial institution.

The standards discourage use of "list" prices, "lifetime" guarantees, "free offer" gimmicks, superlative claims unless backed by fact. They urge that multi-level sales plans conform to existing law and avoid exaggerated earnings possibilities, and that salesmen refrain from attacking competitors or disparaging their products. And they prohibit pre-ticketing items with phony "original" prices, deceptive offers, chain referral selling, asking persons to sign blank contracts, and using false or misleading advertising in recruiting salespeople.

Such ethical standards, of course, always have been used by successful salesmen, for their success has depended upon goodwill and repeat customers. Despite popular sentiment that a vague government "they" should do something, the fact remains that a responsible free choice, free market system is the consumer's best watchdog.

"We" in business must preserve the trust that makes this a fact.

TRAILS EASY WAY TO EXPLORE
AMERICA

Mr. JACKSON. Mr. President, the National Park Service of the Department of the Interior on July 13 issued a press release pointing out that increasing numbers of Americans are following land and water trails this summer.

CONGRESSIONAL RECORD — SENATE

July 30, 1969

the first-strike threat seems to be given less emphasis and the role of Safeguard in protecting our population against an accidental missile launch and a Chinese attack have been given greater attention.

I would like to discuss all three aspects of this issue: first, alternatives to Safeguard for the purpose of assuring the viability of our deterrent; second, the Chinese threat; and, third, the role of Safeguard in protecting against accidents.

Let me emphasize that the ABM advocates have presented no plausible evidence that the Soviets have the ability or intention to deploy strategic forces which could threaten the viability of our deterrent. A Soviet commitment to achieve meaningful strategic superiority over the entire array of our massive deterrent force would be the most costly, unrealistic, and misguided strategic decision they could make; and I believe they know this to be the case. But, even if prudence counsels one to accept the administration's dubious assertions that the Soviets are seeking a first-strike capability, the proposed Safeguard system seems to be a wholly inappropriate response. Alternatives to Safeguard exist which are less costly and more reliable. Most important, they can be implemented far more rapidly, thus allowing us to determine whether the Soviets are interested in reaching arms control agreements or in pursuing the arms race.

Thus, additional missiles might be deployed. Our land-based missiles might be placed in silos with greater resistance to the effects of a nuclear detonation. Bombers might be more widely dispersed and placed on air alert. A greater fraction of the Navy might be assigned the role of protecting our Polaris submarines. We might place Polaris missiles on the surface ships in a fashion which had only recently been advocated for the multilateral force and claimed as being strategically effective. We could even consider phasing out the supposedly vulnerable Minutemen while adding to the highly invulnerable Polaris submarine fleet.

The very great advantage of these alternatives is that no action is required now. We would be permitted time to gather definitive, certain evidence concerning Soviet intentions. We would avoid committing ourselves to a system of questionable reliability and great cost built as a response to an unproven highly speculative assertion. We would, at least, have attempted to forestall the expansion of the arms race which is quite certain to result from the Safeguard's deployment—deployment, which in conjunction with our MIRV program, could appear to the Soviets as an attempt by us to develop a first-strike capability against them.

The first alternative to Safeguard, procurement of additional missiles, is said by the administration to be provocative. My answer is that we can wait until 1971 before making a procurement decision. In the interim we can assess efforts to achieve arms control agreements and observe the trend of Soviet missile procurement.

Dr. Herbert York has testified that Minuteman missiles can be deployed on 2 years notice. Therefore, if in 1971 we make the decision to deploy Minuteman, even at the 1962 rate of one missile per day, we could have approximately 700 additional missiles, with 2,100 warheads operational by 1975.

If we decided to wait beyond 1971 to determine whether a threat were going to materialize in 1975, we could at a much later time implement a substantial airborne alert. Also, we could degrade any emergency threat to our Polaris submarines on very short notice by assigning a greater fraction of our surface fleet to their protection. Further, we can embark upon an intensive program to make our present land-based missiles less vulnerable to attack by constructing silos with more blast resistance. This would certainly be nonprovocative.

Therefore, even if one grants the administration's underlying presupposition that the Soviets are developing a first-strike strategy, there are responses other than Safeguard which better protect our security, which are far more economical, and which pose no danger to the progress of the forthcoming arms control efforts.

The administration also claims Safeguard is required to protect us against an irrational attack by the Chinese. This justification for the Safeguard system reveals how our ignorance, emotional bias, and lack of understanding of the Chinese prohibit truly responsible strategic planning. Gripped with the picture of millions of Chinese dutifully reciting incantations from the little red book that seem ludicrous to our analytical Western minds, we are quick to conclude that the Chinese are "irrational." Possibly possessing 20 to 30 ICBM's by the mid-1970's, they might launch them against us, we are told, knowing full well of our assured ability to destroy their country. The full force of our retaliatory power would leave no societal life there worth mentioning. It has been estimated that a mere 10 percent of our bomber force, for instance, could destroy 200 million Chinese. Yet, we are told that the Chinese would invite total retaliation since they seem to be thinking and acting in ways that are so unfamiliar and puzzling to us.

Even if one were to accept the administration's psychological diagnosis of the Chinese, the case for Safeguard is still not convincing. If the Chinese did possess such suicidal tendencies and were willing to inflict damage upon us, regardless of the cost to themselves, they would probably be able to do so whether we had an ABM or not. It is possible that the Chinese will have developed penetration aids for their ICBM's which would be effective in exhausting a portion of the area defense component of our ABM, allowing for some of their missiles to reach our cities. Furthermore, means other than missiles could be utilized for delivering nuclear bombs to several of our urban areas—means requiring much less sophisticated technology.

But, the central issue is that our "irrational", suicidal characterization of the Chinese is not justified. It is true

that the Chinese are gripped by an ideologically and idolatry that seem totally alien to our own patterns of thought. But all man has the instinct of self-preservation, including the Chinese. They understand the meaning of deterrence, and that is our only truly reliable defense against them—just as the administration admits it to be our only defense against the Soviets.

In all candor, the proposed ABM system will be viewed by the Chinese as our attempt to preserve our option of using nuclear weapons against them at will, without a fear of any successful retaliation. This is a first-strike capability, and the Safeguard is an attempt to maintain it against the Chinese. Whether this would in fact be a strategic certainty seems highly doubtful, as I have indicated. But the Chinese, spurred by their tendency to interpret all our actions as provocative and threatening, will conclude that the ABM is an attempt to preserve our undeterred ability to destroy them whenever we believed we were justified in doing so. This development would confirm in their eyes our belligerent, aggressive power and desire for dominance. Safeguard will deepen the tension, suspicion, and hostility between our country and China, denying the credibility of any overtures we may make for new patterns in our relations.

I reiterate that if the Chinese were suicidal they would be able to cause great destruction in the United States in spite of any defensive systems we deployed. Our devastating deterrent force is our protection against the Chinese; it is reliable, for it recognizes the Chinese will not willingly seek their complete destruction.

Moreover, if we believe ABM is vital to our security will not the Japanese, or other Asian nations, believe they too should have ABM systems? Such other nations might legitimately feel they were more threatened than we. If they become convinced of the desirability of their own ABM's, I venture to say that our attempt to prevent the spread of nuclear weapons is doomed—with predictably dire consequences.

Finally, I would like to consider the role of Safeguard in providing protection against accidents. First, I believe it is important to recognize that a system which offers protection against accidents must cover the entire country. It is virtually the same system which the previous administration called Sentinel. It is phase 2 of the system now called Safeguard. It is a system whose cost will be far in excess of \$10 billion. But if phase 2 deployment is required for protection against Chinese and accidental attack, how does Safeguard offer, in Mr. Laird's words, "added incentive for productive arms control talks?" Is the implication that in the absence of successful talks, we might go beyond phase 2 to build a heavy ABM system? Or is it that we recognize that even phase 2, in conjunction with our MIRV's, threaten the Soviet second-strike capability? Do they consider the claimed protection against a Chinese and accidental attack really a pretext for defense of populations against the current Soviet forces? The record is

ambiguous as to whether the administration would agree and stop deployment of the total system as part of an arms control agreement with the Soviets.

I would emphasize that an accidental missile launch is exceedingly unlikely. We are assured that one of our missiles could not be launched by accident and there is no reason to believe that other nuclear powers will be less careful.

Nevertheless, we should consider the kinds of accidents which could conceivably occur. First, there is the category wherein a single missile is accidentally fired. If this missile did not have penetration aids which allowed it to defeat the Safeguard system, if the system were in a sufficient state of readiness, and if Safeguard performed according to design, then the accidentally launched missile might very well be destroyed in flight. I, however, do not believe that there is sufficient probability of an accident of this type and that all—and I emphasize all—conditions for successful interception would be fulfilled to warrant deployment.

But even if the ABM would protect us against a single missile launched by accident, it is extremely unlikely to provide protection against other types of accidents. Suppose, for instance, many missiles were launched through a failure of the control system. Since the administration admits that Safeguard is not designed to protect our population centers against complex attacks, it is apparent that such a multimissile accident would penetrate the defense.

It is clear, then, that if we begin to construe unlikely accidents against which Safeguard might afford possible protection, we can also construe other equally implausible situations in which Safeguard would leave us defenseless.

Moreover, the likelihood of an accident is certainly related to the level of armaments. Since Safeguard is almost certain to stimulate the arms race, its mere existence will heighten the probability of an accident. The most effective way to limit the growth of the arms race.

Furthermore, we could work for an agreement to share information on safety procedures with other nuclear powers. Why would it not be possible, for instance, for all nuclear powers to install detonating devices which would prematurely destroy any missile in the event of accidental launch?

Should we construct the Safeguard system at a minimum cost of \$10 billion to provide highly questionable protection against a very limited number of improbable accidents? Or should we protect against all possible accidents by immediately implementing even more reliable precautions that could prevent them? The latter course would provide far greater safety for only a minute fraction of Safeguard's expense.

The thin shield required for protection against accidents is much like the Sentinel. Besides the cost being potentially enormous, our relations with China, as I explained, would be further strained, and our arms race with the Soviets would be provoked. Therefore, this final justification also fails to compel my support of the system.

Every Senator who has spoken in this debate has made clear his commitment to safeguarding our national security. We all share in this pledge. But what is the meaning of this much used term? What are the qualities that make us truly secure? From where are the threats that may jeopardize our security?

Throughout our postwar history, the apostles of national security planning constantly have alerted us to potential threats emanating from outside our borders. Turmoil, uprisings, and rebellions throughout the world often are interpreted as direct threats to the security of our country. Our Nation has equipped itself with the ideology and armed capacity to intervene in such conflict situations. This has required the devotion of a growing, excessive portion of our budget to defense expenditures, prohibiting sufficient funds, and resources for use to meet our domestic needs. Thus, conditions at home have deteriorated. Now we witness turmoil, uprisings, and rebellions in our own land. Obsessed with fighting revolutions in distant countries, we have spawned a revolution inside our own shores.

The turbulent events destroying the sinew of our Nation are far more direct and grave threats to our security than the remote contingencies in foreign lands that never cease to alarm our national security bureaucracy.

Threats to our internal security can be met only with a policy of "sufficiency"—that is, devoting a sufficient portion of our resources to meet the underlying causes of our social unrest, ferment, and alienation.

We face a revolutionary situation in our land. The question is whether this revolution will be channeled into peaceful avenues of constructive change or whether it will assume a more violent character. That, in my judgment, is of greatest relevance to the security and welfare of our Nation.

It is tragic that we define our security in exclusive terms of military protection, believing that building more weapons of destruction is the only way to insure our safety.

The late President Eisenhower once said:

Every addition to defense expenditures does not automatically increase military security. Because security is based upon moral and economic strength, as well as military strength, a point can be reached at which additional funds for arms, far from bolstering security, may weaken it.

Where are we placing our trust? The temptation is to believe that our armies are the ultimate guarantee of our livelihood, both as individuals and as a nation. Disruptive threats, many believe, must be quelled only through armed force, whether at home or abroad. Yet, it is this exclusive trust in the instrumentality of armed force that often deepens the tensions of conflict and leads to further violence.

The Old Testament Prophet Hosea spoke with profound insight into precisely this problem thousands of years ago. Speaking to the people of Israel he warned:

Because you have trusted in your chariots and the multitude of your warriors, therefore, shall a tumult arise among your people.

Those prophetic words have the same relevance to our people today. Excessive, exclusive trust in the instrumentalities of war leads us to war.

Our attitudes, beliefs, and faith, then, have a direct effect on our actions, as well as those of our potential adversaries. We must realize that our interpretation of intentions and future events is a primary force that actually shapes those events. Particularly in military and strategic matters, when speculative, prejudiced, and unfounded prophecies become the basis for our policies and actions, they can cause a reaction from the opponent that fulfills our predictions or creates further strategic tensions.

Let me illustrate. When the Soviets first began to build their limited ABM system, it was claimed they were commencing a major sophisticated effort to protect their population against attack. In response, we began deployment of our MIRV system. Since then, the Soviet ABM has not continued as expected and even former Secretary of Defense Clark Clifford questioned its significance in his posture statement of last January. But, nevertheless, our MIRV has still progressed. This will certainly produce a Soviet response as another step in the arms race.

If we choose to believe the worst about the Soviet intention, and conclude they are commencing on a first-strike strategy, our proposed ABM will only motivate the Soviets to further increase their missile production. Secretary Laird could then cite this as proof for the accuracy of his apocalyptic predictions.

Likewise, if we conclude that the Chinese are irrational and erect our ABM in part to preserve our first-strike capability against them, they will see proof of our assertive dominance and continue with their unmitigated rhetorical hostility. And, we will say we were right about them after all.

In Vietnam, when General Wheeler counsels that the month lull is not a peace sign from the North, but only preparation for further offensives, we may then continue with our maximum military pressure. When the enemy finally does respond to such intransigence on the battlefield with renewed operations, General Wheeler will say he was right.

Thus, our mere interpretation of the world actually shapes the world. Overpredicting and overreacting in national security affairs actually can erode, rather than further protect our security. Believing the most dire, threatening, and apocalyptic interpretation of events, and then overreacting to such fateful perceptions is not simply "erring on the side of strength." It is erring on the side of cataclysm.

There was a time when contemplating and planning matters of nuclear strategy was called "thinking about the unthinkable. As we are forced to indulge in the discussions of "overkill" and to calculate the number of millions of deaths it would take to cripple an-

July 30, 1969

CONGRESSIONAL RECORD — SENATE

other nation, the actual horror—the unbelievable tragedy and holocaust that would result from a nuclear exchange—these somehow are no longer so vivid in our consciousness. In the process we can easily lose respect for the sacred worth of every individual human life. Today, the likelihood of peace may actually be increased by simply thinking and planning for it more.

Only a few days ago mankind lifted himself off his global home. As man stepped down onto a new world, we all experienced the wonder of stepping out from the confines of our planet.

With the universe now before us, perhaps we can gain a truer understanding of our earthly condition; perhaps we can realize our finitude, comprehend how provincial our perspective has been, and gain a new vision of what kind of world we should create.

What does one see when he looks back upon this earth from a quarter million miles away? Our world appears as a blue, tranquil sphere gliding peacefully through space.

But on the planet, 500 million people live in a state of constant hunger. Ten thousand die each day from starvation—not because the planet lacks sufficient food, but because all its inhabitants cannot partake in the plentiful food-producing capacity.

As the inhabitants of that planet increase at such rapid rates, the disparity grows between a few, living in one part of the globe, who have most of the food, wealth, and knowledge, and the many, living in another part, who suffer escalating hunger, poverty, and ignorance.

Yet, those who live on this beautiful blue sphere suspended in the universe have produced the means to destroy all human life. They have created what equals 15 tons of TNT for every living person. And, what is more, the privileged segments of those who live there keep increasing their ability to annihilate all humanity several times over.

That is the vision of our world from outside ourselves. It is, perhaps, even akin to the way our Creator sees us.

There have been those, including Secretary Laird, who have suggested that our success in placing a man on the moon is somehow further reason for proceeding with the ABM. I believe quite the opposite.

For the first time in his history, man has left his globe and now can see better than ever before the folly of his failure on earth.

As our Nation led in freeing man from his confinement, it can also now lead in freeing man from his fear.

To that end, we must reject the sterile, senseless search for security that relies only on technically innovative weapons systems as symbolized by the ABM.

We must discard the idea that security results from devoting ever-increasing portions of our resources to perfecting weapons of destruction while the deprivation and suffering of the majority of mankind continues to escalate.

It is the time to build a world that will serve man's needs rather than threaten his life. That, fundamentally, is the issue before us, and that is why I take my stand in opposition to the ABM.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. HATFIELD. I am happy to yield to the Senator from New York.

Mr. JAVITS. I was not privileged to hear all of the Senator's address, but I have been briefed on it by the Senator from Kentucky (Mr. COOPER), who has been here all the while. I did hear the concluding portion of it, and I appreciate very much the support which the Senator is giving to this side of the debate, considering his longstanding and very intelligent participation in these matters of armaments and arms control, and his very well known deep feeling for the future of our planet in terms of the encouragement of life rather than death.

I should like to ask the Senator a question which the general tone of his address inspires in me.

There is often an effort made to try to characterize those on this side of the ABM debate, either expressly or by implication, as "unilateral disarmers:" people who would naively relinquish the power which our own technology and our own resources give us, in some blind trust that the Kremlin's leaders will "see the light" and join us in freeing man from the dreadful overweening fear of the destructive power of the atom and hydrogen bombs.

I ask the Senator—since he is probably as likely as anyone on this side of the aisle to be subjected to that charge—two questions.

First, is this approach postulated upon any such theory as I have articulated, as the devil's advocate, so to speak?

Second, what does the Senator desire to accomplish with respect to the security of the United States, in adhering to his opposition to the Safeguard ABM request?

Let us, for the moment, lay aside the idealistic conception of freeing man, and let us be just as hardheaded as the pro-ABMers. I ask the Senator to tell me what he, as the Senator from Oregon, thinks he is doing in terms of enhancing the security of our country by the position he takes.

Mr. HATFIELD. Mr. President, in response to the questions of the distinguished Senator from New York, first, I do not predicate my comments upon a belief in unilateral disarmament. I do not support that proposition. I have no sympathy for the basis upon which unilateral disarmament is advocated.

Second, as far as what are the hard and cold facts of dealing with reality rather than theory, philosophy, or idealism, I would say, first, again based upon the very eloquent words of President Eisenhower, that we have to look to assess the total strength of this Nation—I mean the real strength of this Nation, as made up of its people.

Any nation's ultimate strength is in its people, not necessarily in its arms. I do not ask for abandonment of arms, nor do I ask for abandonment of continued research on the ABM. All I ask is for better balance, and recognition that the true strength of America is measured by the strength of its people: their physical strength, their moral strength, and their economic strength.

When I see the number of people who

have become increasingly disenchanted with the so-called American system, because they have not been permitted into the mainstream of American life, perhaps due somewhat to their own deficiencies, but to other forces as well, I say this is weakening the very heart and the very future of this country.

I would like to see a better balance. I do not call for the abandonment of any of the research projects. In fact, as the Senator knows, I headed a committee to study the whole program of military spending. We recommended, in our report, the continuation of funds requested for research and development. I support that, as to both the ABM and other weapons systems. But as the Senator from New York knows, because I have heard him say it many times, when we make a commitment to expend the people's resources in the name of security or any other name, we ought to have compelling and overwhelming evidence that there is going to be a return on that investment.

We have had experience with other weapons systems and specific items of military spending, where we have gone to great expenditures, and then have had to abandon them, because there had not been sufficient research to establish their merit or guarantee their production effectiveness.

These are the things I am asking for, and I think they are the things most of those on this side of the question have asked for: Not abandonment, but balance in terms of our resources, and recognition that America's true strength, real defense, and real security must be based upon healthy people—healthy because they have the necessary protein in their food, and because their medical needs are met; because they have adequate housing and adequate opportunities for education and jobs.

That is the kind of strength we are seeking to build in asking for a delay in actual deployment of the ABM and a further guarantee of its actual effectiveness through continued research and development.

Mr. JAVITS. One further question. I would assume that the Senator feels able to take this position because he is convinced that we are, in relation to the Soviet Union, in possession of sufficient deterrent strength so that the time required to fully explore the possibilities of negotiation to freeze this arms race where it is, is available to us without material jeopardy to our security.

Mr. HATFIELD. I would agree with that, and would add the further point that we have, according to the Defense Department's figures, 4,200 deliverable warheads. This places us in a ratio of three to four times that of the deliverable warheads of the Soviet Union, and in a superior position to that extent.

We hear about the need to go to the conference table to discuss arms limitations with strength, and from a powerful position. I say that we have that position now. We have diversity, with our Polaris submarines, our intercontinental bombers, and our other nuclear weapons in Europe. We have that kind of superiority now. We have the ability to deal from strength. We are not endangering our national security.

I fought in World War II, as many other people have fought. I am not a pacifist. I believe in the role of the military. I am willing to see our military used as it should be used, to defend our Nation. But what I am saying is that there is a point at which we should seek to find balance in meeting our other needs on the domestic front, the needs of our people. I think we have reached that place in our spending policies at this time.

I did not need to recite the well-known statistics that, when President Eisenhower left office, our national defense budget was at \$40 billion, and it is now approaching \$80 billion.

We hear terms that are not defined, as the Senator from New York knows, such as "adequacy" or "sufficiency." What do they mean by that? We have not heard those terms clearly defined, and until we do, I am not persuaded that this additional expenditure and commitment at this time is one we should make.

Mr. GOLDWATER. Mr. President, may I ask a question for clarification? The Senator from Oregon has correctly quoted the size of the military budget, and correctly compared it with the budget in the year President Eisenhower left office. But if we take the slightly over \$30 billion that the Vietnam war is costing us—which is not an Eisenhower war—from that figure, we are actually spending less than we have spent since World War II on the military.

The figure of \$78.5 billion roughly is occasioned by \$2.6 billion a month plus the \$44 billion or \$45 billion we have to spend for housekeeping.

Mr. HATFIELD. That is a very good point that the Senator makes. I would respond by saying that the very fact we are in Vietnam has been used in many instances as an argument in support of the escalation of our military spending and new, additional weapons, even if we were to end the war in Vietnam today.

There is a shopping list in the Pentagon, with which I am sure the Senator from Arizona is quite familiar, of new weapons that are being held in reserve as far as funds are concerned that would far exceed 30 billion.

It is not purely a question of the 80 billion. I think that our whole policy of military spending is in question here. I think there is no question that once the war ended, we would find the Pentagon coming forth with a number of requests that they have been holding back on until the war was concluded.

Mr. GOLDWATER. Mr. President, the inventory of the military because of the war in Vietnam is very sadly depleted. We are looking at a loss of 6,000 aircraft that some day we will have to decide whether we will replace.

Frankly, if we can reduce the Armed Forces by 1 million men as a result of ending the war in Vietnam, we are looking at a saving of \$10 billion.

I say as a member of the Armed Services Committee that there will be tremendous savings, savings in the nature of \$20 billion or \$25 billion for quite a few years after the war in Vietnam ends.

I think the Senator should feel quite pleased with the efforts of the Armed Services Committee this year in that they have already cut \$2 billion off the already reduced budget we received from President Nixon.

I feel quite confident that we can cut more from the budget in fields that we have not even discussed as yet.

Mr. HATFIELD. I am very grateful to the Senator from Arizona for this effort. I think it is a step in the right direction. At the same time we are not jeopardizing our security as far as military spending is concerned.

I do feel, however, that the ABM in question here would encourage and have an effect on other expenditures in our military budget, making it very difficult for the Armed Services Committee or other committees to make cuts even if the war in Vietnam were to end.

I think we are committing ourselves down the road to something far more than the budget for this year or for next year once we embark upon the deployment of the ABM at this time.

Mr. JAVITS. Mr. President, I would not wish to abort that branch of the discussion except to point out that I think one of the big issues at stake in the ABM debate is the determination of many Members of the Senate to really interest themselves in substantive evaluation of our whole defense and security posture.

I join with the Senator from Oregon in saying to the Senator from Arizona that we, of course, appreciate the common purpose of the members of the Armed Services Committee. We add to that an additional purpose, that each of us intends to perform his own responsibility in a way in which we have not performed it before, by coming to an individual and independent judgment, uninhibited but impressed by the recommendations of our military authorities as to what is really proper, not just desirable, for the security of our Nation in terms of weapons systems and of the pattern of organization and deployment.

Mr. President, I should like to ask the Senator one other question on which it occurs to me he might have an interesting view.

The opponents of the ABM are told, "What do you fellows really beat your breasts about? The President has asked for Safeguard. He must want to succeed in the SALT negotiations—the negotiations for the limitation of nuclear armament—as much as any Senator wishes who is aligned with the Senator from Kentucky (Mr. COOPER), the Senator from Michigan (Mr. HART), the Senator from Oregon (Mr. HATFIELD), and I. That is one side of the negotiations. So, if the President says he wants the Safeguard and he wants to succeed as much as any Senators do in respect of the negotiations, then he must know what he is doing. And why not give it to him?"

Then, they point to the Russians and they say, "The Russians have made it very clear that they are not going to refrain from negotiating because we deploy Safeguard. They will go right ahead with the negotiations. Indeed, for all we know, they might even revive the Golash sys-

tem or might move up their MIRV or MRV capability or accelerate work on their SS-9. And we are not going to refuse to negotiate on that ground. So, as long as everybody has his hand in the cookie jar with respect to increasing armaments, what are you fellows arguing about?"

I would greatly appreciate the view of the Senator on that matter, because I hold to one proposition that it is not just the leaders who will negotiate. It will be the whole world and the people of both countries that will be bringing their impact on them. And they may not appreciate themselves what agreement they are capable of coming to with that kind of pressure, rather than if they are left in the conventional pattern in which we deploy Safeguard and the Russians go ahead and do something else to keep pace with us.

Can the Senator comment on that point?

Mr. HATFIELD. Mr. President, I think the Senator from New York has certainly raised a very pertinent question.

I would say in reference to the second part of the question that the Senator is actually posing a question as to whether America should lead or react.

We have great problems in the world, and they are problems in need of solution. I feel that the United States has been, you might call it, on the defensive and reacting on many of these issues rather than analyzing them and trying to do what is best for our Nation and for what we consider to be the cause, the ideals and principles we are committed to. Then, with respect to that leadership which may not be easy to define or find within the present environment, but which is what all humanity is calling for because there is tremendous need, we could stay in the same cookie jar, as the Senator remarks, and out-produce the Russians or some other country on arms. However, at what point do we come to the realization that here are these millions of people who are hungry and in need, and recognize history tells us that revolutions are not born out of passion for bloodletting, but are born out of impatience with injustice and misery?

We can either take the leadership in trying to get at the causes of these great international differences—injustice, poverty, and ignorance—or kid ourselves and say that we will only deal with the results of these forces and use force to suppress or quell or control.

It is a question of leadership or reaction.

I think the United States has to take the leadership. Second, there is a question of how we put the priorities with respect to our production. We have the resources to double our arms production. However, in so doing, we have to realize that we are neglecting the other areas of needs, to which I referred earlier—housing, education, food, medicine, and so forth—and that in the long run by producing more guns we are weakening America by not producing more houses, schools, and hospitals.

I prefer to think that the leaders are contributing far more to our general

July 30, 1969

CONGRESSIONAL RECORD—SENATE

S 8825

security and to the security of the world when we show this leadership—a leadership of inspiration and new priorities.

On the second part of the Senator's question as to President Nixon, the Senator knows that I am not a mindreader. I do not know how to respond to the question except to say that I believe the President of the United States is a very sincere man. I think he is totally and without reservation committed to his position on the basis of sincerity. But I also believe that people can be sincerely wrong, and I take the position on the ABM question that the President is wrong. We might say, "Doesn't he have more expertise and more great authorities on these military needs than we in Congress?" But the Senator from New York has been in the Senate a sufficient number of years to have seen instances in which administrations and the Pentagon and agencies of the Government, as well as Congresses, have been wrong. We are still elected by the people to make judgments and evaluations and to weigh evidence.

I think one of the great things out of this ABM debate is the very thing the Senator from New York has pointed out—that we have brought ourselves to the point where we are personally responsible to make independent, individual judgments on these military expenditures. I think the weight of the evidence that I have heard in the debate and have read in the military committee reports, and from those who serve on the military committees, indicates that there is sufficient doubt; and when we consider the vote, which was very close in the two major committees that have been dealing with this subject, I do not believe all the expertise is on one side.

Mr. JAVITS. Finally, does the Senator feel himself any less a loyal Republican because he opposes the ABM than if he favored it? And does not the Senator feel that it is just as much the duty of a loyal member of his party to keep the President from making a mistake as it is to support him in what he wishes to do?

Mr. HATFIELD. To my very good friend I would say, having known the Senator for many years, he would join me in saying that I am concerned about being a loyal American and doing the things which I believe are far more important to my country as a whole than necessarily just to my party; but there does not necessarily have to be a conflict.

In this instance, I feel a staunch and strong loyalty to both my country and to my party in taking this position. Furthermore, I would base it upon the outstanding example of the President of the United States, Mr. Nixon, when he was Vice President of the United States during the Eisenhower administration. The Senator will recall that there were instances when Mr. Nixon, as the Vice President felt, through his own convictions and judgments, that he had to take issue and was on the other side of a question with the President of the United States, with whom he was a more intimate associate than we, as Members

of the Senate, are with the executive branch.

So I think there is ample evidence in the great annuals of American history to show that there can be loyalty to party, loyalty to country—which is more important—and still have differences of opinion within as well as between the parties.

Mr. JAVITS. I thank my colleague. I think he has answered in a manner which all of us know to be highly characteristic of him throughout his service to the people of his State and to the Nation.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. HATFIELD. I yield.

Mr. COOPER. Mr. President, it has been said by some proponents of the ABM in the last week that the debate is valueless, that all of us are repeating old arguments. But I should like to say, for all of us who have heard the Senator from Oregon today, that he has made a most valuable contribution to this debate. His analysis of the main elements of this complex issue, and his appeal to the Senate and to the country to use their gift of reason to come to a judgment—a judgment that must be made by the Congress and the people.

The Senator has pointed out correctly, and as clearly as anyone else has, that the central purpose of those who oppose deployment is to determine if it is possible to reach an agreement with the Soviet Union, either formally or tacitly, which will limit and control the arms race rather than expand it.

Is that not the chief purpose of those who oppose the decision to deploy at this time?

Mr. HATFIELD. The Senator is correct.

Mr. COOPER. In a very informed way, one which I believe is unanswerable, the Senator also has shown that in the event we are not able to reach an agreement and the Soviet Union continues to build and to deploy weapons which might threaten our security, there is ample time for us to take countermeasures to protect this country. I do not believe the Senator can be answered in the arguments he has made. The best intelligence this country has obtained, supports his analysis.

The Senator from Oregon quoted President Eisenhower. I recall that President Eisenhower spoke, in one of his speeches, about the necessity to control nuclear weapons. "We should never cease in this attempt," he said. It was in a speech delivered in a radio address on May 25, 1960. President Eisenhower then said, and it is applicable today:

All of us know that, whether started deliberately or accidentally global war would leave civilization in a shambles. This is as true of the Soviet System as of all others. In a nuclear war there can be no victors—only losers. Even despots recognize this. Mr. Khrushchev stated last week that he well realizes that general nuclear war would bring catastrophe for both sides. Recognition of this mutual destruction capability is the basic reality of our present relations. Most assuredly, however, this does not mean that we shall ever give up trying to build a more safe and

hopeful reality—a better foundation for our common relations.

The substance of his whole statement was that we were not doomed to inevitably and inexorably bring about our own destruction and the destruction of life and civilization. Rather that reason could prevail. That is the position that we who oppose the development of the ABM at this time have taken.

I think one of the great contributions the Senator from Oregon has made today has been to call the attention of the Senate and of the country to the higher purpose at this moment in history—to see if, in reason, in a rational way, we can find the means to halt and to control this oppressive and dangerous nuclear arms race. We have now an opportunity to resist unfounded fears and unreasoned beliefs that we have to build more and more nuclear weapons systems to protect ourselves, when in fact they are not now necessary nor would they add to our security.

Mr. HATFIELD. Mr. President, I thank the Senators from New York, Kentucky, and Arizona for this colloquy. I yield the floor.

The PRESIDING OFFICER (Mr. HOLLINGS in the chair). What is the pleasure of the Senate?

Mr. MONTROYA. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MONTROYA. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ARM: EFFECTIVE DETERRENCE OR BILLIONS FOR INSECURITY?

Mr. MONTROYA. Mr. President, I have heard the observations made by the Senator from Oregon, and I have heard him articulate his position on this very vital issue. I express my congratulations to him for the viewpoints upon which he has expounded and which he has so ably conveyed to the Senate.

We are debating this very important issue in the Senate, and we have had testimony presented as well as expert opinion on both sides of the matter. At the outset, I wish to say that I do not question the motives of the proponents or the opponents, because I believe they are sincere individuals who are trying to convey their true viewpoints and are trying to do things, in their espousal or their opposition, in the way which will best serve the interests of the country in their opinion, as the case may be.

Mr. President, today I wish to offer my comments on the decision of the administration to deploy the Safeguard anti-ballistic-missile system (ABM). In the past few weeks I have listened to and read the testimony of many of my colleagues in the Senate, read numerous articles, studied several scientific papers, both pro and con, on the subject of whether or not to deploy an ABM system.

Never before has a Pentagon budget request been so carefully scrutinized.

S 8826

CONGRESSIONAL RECORD — SENATE

July 30, 1969

During my lifetime and for the first time in the history of the nuclear age the heretofore "untouchable" military budget, bearing the label of "national security," has been seriously questioned.

My colleague, the Senator from Missouri (Mr. SYMINGTON) has pointed out that more than \$23 billion in Government expenditures have gone for missile systems development that quickly became obsolete, and in many instances were never even operative. Thus, our past failure to carefully examine and evaluate defense spending has permitted an incredibly large amount of taxpayers money to be wasted.

Mr. President, I believe we are witnessing the beginnings of a new era of congressional responsibility. Whatever the vote on the ABM, the debates and testimony of the past weeks have renewed the prerogatives vested in us by our Founding Fathers. In the future our very grave constitutional responsibilities as guardians of the taxpayer's money must be exercised, in this instance by and a careful review of all budget requests for defense programs should be conducted. No longer can we afford the luxury of a dole to our Pentagon strategists. I do want to make it very clear that I am not suggesting we lower the importance of defense spending for our national security. On the contrary, in this age of the nuclear warhead, it becomes even more important to protect the American people from attack by seeking the counsel and advice of scientists and diplomats. To this end we should continue to support research programs designed to shed additional light on sophisticated weapons systems capabilities. Only in this manner can we decide wisely.

Because of the advent of the nuclear age, however, a new dimension has been added to our strategy of defense. And this is that beyond a certain point in our arms buildup additional military expenditures for sound military defense purposes may not necessarily improve our national security posture. Instead, it may create a serious escalation in the arms race and place America in the tragic and paradoxical position of increasing the uncertainty of the balance of nuclear power in the world. Arms control talks between the Soviet Union and the United States depend largely upon the ability of nations to calculate the missile strength of the other. By deploying the ABM and provoking the Soviets into developing their own multiple independently targeted reentry vehicle—MIRV—we will only increase uncertainty—further provoking each side to develop more and more missiles, and thereby creating an endless and dangerous world military instability that can only heighten the future prospects for a nuclear holocaust.

Much has been said in the Congress recently about the Pentagon's principal reasons for wanting to deploy the Safeguard system. I would like to recount briefly the Pentagon's reasons and offer some of my own thoughts on why I believe the ABM system should not be deployed.

The Pentagon has said there are three principal reasons for deploying the Safeguard. They are as follows:

First, to protect land-based deterrent forces—ICBM's and strategic bombers—from a Soviet first strike.

Second, to protect the entire United States against a possible Chinese attack.

Third, to protect the entire United States from the accidental or irrational launching of a small number of nuclear warheads by any nation.

The Pentagon has also indicated what the ABM is not supposed to accomplish.

First, it is not to provoke the Soviet Union into reacting, and thereby escalating the arms race.

Second, it is not intended to undermine in any manner our chances of reaching an agreement with the Soviet Union on arms control and limitation.

Third, it is not a defense for American cities against an all-out attack, for this is beyond our present technological capabilities.

Let us examine first what defense officials say the ABM will not do. As I have said previously, any increase in our missile program will create an uncertainty about the balance of nuclear power and will certainly provoke an escalation in the arms race. A key factor controlling the arms race is the knowledge held by the countries concerned that there is in fact a balance. The statement by the Defense Department that ABM will not undermine the chances of an arms control agreement is nonsense. How can one negotiate for arms control while at the same time promoting the deployment of additional missiles? Could we expect the Soviet Union to respond favorably to an arms control proposal? The answer is "No."

Another contention by the Defense Department—that the ABM is not to be a defense of our cities—has some very serious implications. If the Russians and/or Chinese chose to attack us they would go after our major cities, and not the Minuteman sites the Pentagon wants to protect in Montana and North Dakota. Even if all the proposed ABM sites were deployed as proposed they would still not be able to protect our major population centers. Knowledgeable scientists contend that it would be a relatively easy matter to decoy the Spartan missiles and render them ineffective against a nuclear attack. Sprint, the other major component of ABM, would not protect adequately the population because the proposed sites are entirely outside their range. To me this evidence suggests the critical lack of defense capability—and therefore ABM as a deterrent.

There are those proponents of ABM who contend that the system is designed to guard against a first strike threat by the Soviet Union. This position is highly questionable.

First, the national intelligence estimate—a consensus view of the intelligence community—is that the Soviets are not planning for a first-strike capability. Second, the Soviets know they do not have the capacity to destroy our retaliatory ICBM's. Even if the U.S.S.R.

did launch a massive first strike it is inconceivable that we would rely solely on the Sprint defense to protect the Minuteman missile sites. Secretary Laird said the ABM was needed in the event of a surprise attack when the President of the United States did not have sufficient time to order a retaliatory attack. It is very hard to believe our present retaliation system is so slow that we would allow 100 or 1,000 Russian nuclear warheads to land on U.S. soil before clearing the Minuteman silos.

The third major reason for the Pentagon's desire to deploy the ABM system is to guard against accidental or irrational nuclear attacks. I believe the possibilities of this occurring are unfortunately very real. However, the deployment of ABM for this reason is open to several serious questions. First, any Soviet attack at the United States would be suicidal on their part. Our retaliation would so annihilate the Soviet Union or any nation that only an all-out effort by an enemy nation would be a more likely reality. If, however, there was an irrational small attack, the only city potentially protected by Sprint would be Washington, D.C. The Spartan, dubious in capability at best, would not be the primary protection in the event a missile was launched toward a U.S. city by accident.

A critical question in the debate over deployment of the ABM system is whether the proposed system will in fact work. Will the ABM disarm or render ineffective enemy missiles? The last five science advisers to the President and the President's Science Advisory Committee have raised very serious doubts as to ABM's ability to do what its supporters say it can do. The questions they raise are still unanswered. Also, most scientists concede we could render any Soviet ABM system ineffective. If that is true, it is reasonable to assume that the Soviets and eventually the Chinese would develop similar countermeasures to our ABM system. That would leave the United States with a billion dollar boondoggle of the most tragic proportions, an even larger defense budget, an escalated arms race, and millions of disenfranchised American citizens.

Mr. FULBRIGHT. Mr. President, will the Senator from New Mexico yield at that point?

Mr. MONTROYA. I am happy to yield to the Senator from Arkansas.

Mr. FULBRIGHT. First, I congratulate the Senator on a most perceptive statement. I was not intending to interrupt until that paragraph, which I think emphasizes a point which many of us who are opposed to the ABM have not been, perhaps, so alert to make as the Senator is making it, when he says how ineffective it is and even if we build it, it would merely leave us with a billion-dollar boondoggle.

I have heard all the testimony before our committee by some of the best scientists we have. They do not say that in peacetime conditions, under laboratory conditions, where there is no war, that we could not make a system work that would shoot down a missile which was

July 30, 1969

CONGRESSIONAL RECORD — SENATE

S 8827

anticipated coming, in any case, under ideal conditions. I think we can make it. Thus, it makes it difficult to say that we cannot make a system that will cut a missile down.

However, under wartime conditions, unexpectedly, where a missile would come in unexpectedly and we would not know where it could come from, or when, or whether there would be a precursory explosion, or whether there would be any attempt to jam the radars, under those conditions, I think that the Senator is absolutely correct. There is very little evidence that this would work under those circumstances. So, when I said that I do not think they would work without proper qualifications, I was immediately attacked by some of our colleagues who said that if we can go to the moon, we can build an ABM system. I think we could build an ABM system that would function under the conditions of going to the moon—that is, with no opposition; no opposition other than from nature herself. But the Senator is quite right, a very important point is that it cannot be made, I do not believe, to work, under the circumstances which we anticipate.

One other point I will say to the Senator is that we are having, this afternoon, at 4:30, a hearing in the Committee on Foreign Relations—a briefing, I should say, in which a movie made by the General Electric Co. will be shown to prove how easy it is to overcome an ABM system with MIRV's. I invite the Senator to come, if he has time.

Mr. MONTROYA. I will be looking forward to doing that.

Mr. FULBRIGHT. It will, I believe, support what the Senator is saying here. I believe that the Senator has presented very concisely and very persuasively the most significant aspects of this problem.

Mr. MONTROYA. I thank the Senator from Arkansas.

Mr. LONG. Mr. President, will the Senator from New Mexico yield?

Mr. MONTROYA. I am happy to yield to the Senator from Louisiana.

Mr. LONG. May I ask the Senator this: What difference does it make whether an ABM can overcome a MIRV, or the MIRV overcome an ABM if we do not have either one and the enemy has both? If we feel that way, we would never have had a hydrogen bomb, we would never have had the atom bomb, or the ABM, or an MIRV. All we would have now would be the bow and arrow.

I ask the Senator, What difference does it make whether MIRV can overcome the ABM or the ABM can overcome the MIRV? What the Senator is saying, in effect, is that he wants us to be absolutely defenseless; that there will be no war because we will not be able to fight. So why not send a message to the Soviet Union and say, "Come and take our country in peace. Not a shot will be fired to defend it." That is the logical conclusion to such an argument.

Mr. MONTROYA. My answer to the statement just made by my good friend from Louisiana is—

Mr. LONG. Is the Senator for the MIRV?

Mr. MONTROYA. I might state to the Senator from Louisiana that I do not think there is one Senator in this body who is against providing an adequate defense to promote the security of this country. Most of those who oppose the ABM feel that we should be meditative in our research and our development and not plunge into an expenditure of billions of dollars, such as expenditures which have been made on other parallel missile situations, which have been rendered obsolescent or useless. I think that is the main thrust of the opposition in this particular debate, that we should proceed methodically with adequate research and planning, geared toward coming out with an ABM system that will protect us. If it is resolved that it will not protect us adequately to justify the investment in such a system, then we can abort our progress in that particular field and go into something else.

Mr. LONG. Let me answer the Senator. Let us see if I can understand his position. We must have either a MIRV or the ABM if we are going to wage war successfully against what they have. He says if we can defend ourselves against what they have, we still would not be able to defend ourselves against something they might develop. As I understand it, the Senator is against defending ourselves against what they do have or will have in the future. If I understand the Senator's position, he is saying he is against defending ourselves against what they have even now.

Is the Senator in favor of developing something so that we can destroy them if they decide to destroy us?

Is the Senator in favor of having no defense, just leaving us to their mercy?

Mr. MONTROYA. I think that I have made—

Mr. LONG. Not to me.

Mr. MONTROYA. I think that I have made my position clear to the Senator, that the main thrust of the opposition is that we should provide the funding for continued research and development but not for deployment until we are in a position to know that we can adequately safeguard the security of this Nation.

Mr. LONG. May I say this: If we proceeded on that basis, we would never have had an atomic bomb, we would never have had a supersonic bomber, or a bomber that could break the sound barrier, either because many people did not think it would work or for fear that it might be objectionable to a potential aggressor.

I served in World War II, the Senator from New Mexico did also. With some of the guns we were given we could not hit anything at first. After we had been shooting for a while, we improved so that we could hit the targets—airplanes—pretty well, after we had learned how to use them.

Is the Senator in favor of unilateral disarmament? Is the Senator in favor of giving everything away, so that we cannot win? Is that the Senator's program?

Mr. MONTROYA. I should like to answer that question by asking the Senator another one: Does not the Senator

know about all the missiles which have become obsolete in the past? I recall another ABM system, in 1956, the Nike-Zeus—

Mr. LONG. That has certainly not become obsolete.

Mr. MONTROYA. Yes, it has.

Mr. LONG. My answer to the Senator is that it has not become obsolete.

Mr. MONTROYA. After we spent \$1½ billion on it.

Mr. LONG. I have in mind the latest missiles in use by both sides. The 1956 missiles were not obsolete in 1956 just as the 1969 missiles are not obsolete in 1969 altho they will probably be obsolete in 1989. By that time we should have something better, unless Congress refuses to provide it.

Someone said that the atomic tests rendered the defense impotent. That was probably because the transistors were subject to radiation. Today we have better transistors the ones we are using on ABM systems are to be far superior to the early ones. That is one reason why, after they had tried them out, we went to work to improve on them.

Put yourself in the position of developing a missile that can shoot down MIRV and by that time the Russians may have a MIRV.

Hopefully you should have by that time both a better defense missile and a better offense. As I understand it, the Senator wants to fix it up so that we cannot defend ourselves while they can defend themselves. Therefore, I presume the Senator is what I would call a pacifist in saying that we will do nothing to offend the Soviet Union because it might mean war.

Would the Senator agree with Mr. Goodwin's argument when he said the mistake President Kennedy made was to permit the Army to acquire the ability to fight a conventional war because had it not been for that, there would have been no war in Vietnam? The same man is against us acquiring the ability to fight any other kind of war. That is pacifist philosophy. Why does not the Senator take a white flag to Moscow and say, "Here we are boys. Come and take our country. There will be no resistance."

Mr. MONTROYA. Let me say to my good friend from Louisiana that I have served in Congress for 14 years, and I have voted for every appropriation that was geared to build up the security of this Nation. I have voted for materiel for our GI's in Vietnam and all over the world. I have done everything possible as a patriotic American, and I certainly look with disfavor upon the Senator's trying to cast reflection upon my patriotism and what I have done to promote the security of this Nation.

Mr. LONG. What I would like to know is, Senator, what are you for? You tell us that we cannot defend ourselves against MIRV.

In fact, I think the Senator is saying we cannot defend ourselves against what they have now, and he is against defending ourselves against what they have now and even trying to defend ourselves against MIRV or building MIRV's so we strike back even if we cannot defend our-

S 8828

CONGRESSIONAL RECORD — SENATE

July 30, 1969

selves against an attack by them. What is the Senator for? Surrendering?

Mr. MONTROYA. Mr. President, I will continue with my statement. I think the Senator and I have had enough dialog to reveal our divergent viewpoints.

Mr. LONG. Or is the Senator in favor of giving it away, like foreign aid, without ever appropriating for defense?

The PRESIDING OFFICER. The Senator from New Mexico refuses to yield to the Senator from Louisiana.

Mr. MONTROYA. Mr. President, the basic issue is whether or not Safeguard is necessary to deter a massive Russian first strike at the United States. I believe the evidence shows conclusively the answer is "No." Our deterrence depends on the unquestioned ability to retaliate on a massive scale. We now have that ability.

Mr. LONG. Mr. President, will the Senator yield?

Mr. MONTROYA. I refuse to yield, Mr. President. Some 645 strategic bombers, 41 missile-launching submarines carrying a total of 656 weapons, and 1,054 land-based ICBM's are now part of our operational defense. Each one of these forces can inflict devastating damage on the Soviet Union or China. Approximately 22 of the 41 Polaris submarines are stationed in different parts of the world within striking distance of the U.S.S.R. Twenty-four hours a day, every day of the year the giant Strategic Air Command—SAC—bombers are on full alert, ready to take off on a moment's notice to defend our Nation. Day and night, long-range, early-warning radar systems scan the skies for the first indications of an enemy attack.

Why does not the Soviet Union attack us? The answer is because of a certain knowledge—deterrent knowledge—of the ability of the United States to inflict a fatal blow to their country. The Russians have this ability also, and hence the balance is there. The ABM system threatens to alter this balance drastically; it threatens to escalate the arms race to a point where we would be contributing to instability in the world instead of working toward arms control and world peace.

Any government or business endeavor costs money, and the ABM system is no exception. If the ABM deployment caused the expected Soviet military reaction—we would have to expand into an even more expensive, and heavier Safeguard system. The estimated \$7 billion initial cost would run into the hundreds of billions of dollars. The prospects for even higher taxes and additional inflationary trends would be increased. Mr. President, this would be an unnecessary burden on the already overburdened taxpayer. Our dollar continues to lose its buying power, domestic social ills mount, and the poverty and hunger in America that so urgently requires our attention will continue to be neglected—a pawn to the overblown defense budget. Eventually our own internal disorder and neglected domestic social ills will act as a measure of national insecurity.

Today a measure of our tax dollars should definitely be for defense; however, only when the defense programs

planned show evidence that they will work and they will contribute to our national security, and not insecurity.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. MONTROYA. I yield.

Mr. FULBRIGHT. I do not like to interrupt the Senator too much, but I wish to refer to some comments that have been made. Neither the Senator from New Mexico, nor I, nor the Senator from Tennessee, nor any other Senator, is proposing anything like what the Senator from Louisiana suggests—unilateral disarmament, and so forth. The evidence is very clear that this country possesses today a substantially greater number of nuclear weapons and a substantially greater number of weapons that are necessary to destroy the Soviet Union completely, all of its major cities, and so forth.

The issues the Senator from Louisiana raised are not the issues at all, in my opinion. We have plenty of defense. This testimony comes from the Department of Defense, from the highest officials both in the military and in the intelligence community. So I think the comments of the Senator from Louisiana were completely irrelevant to the point the Senator from New Mexico is making.

I do not want to interrupt the Senator further, but I want to compliment him. I think he especially deserves a compliment because his State happens to be the State in which the development of some of our missiles have taken place. It is my understanding that the principal proving ground for the Sprint missile is in New Mexico, if I am informed correctly.

Mr. MONTROYA. That is correct.

Mr. FULBRIGHT. So the Senator, in my view, is not only exercising discriminating judgment in seeking to bring the great military establishment back under some degree of supervision by the civilian branch of government, more particularly the Senate; I think he has performed a great service to the Senate and to his people. I congratulate him on his political courage and on his discrimination in taking the position he has.

Mr. MONTROYA. I thank my good friend from Arkansas. May I state that I did not arrive at my position lightly. I attended many briefings at the Pentagon. I have read a great deal on the subject. I have read the testimony of others. I have read and listened to the scientists on both sides of the issue. I arrived at my decision because I felt that this is the position that I should take in good conscience.

Mr. FULBRIGHT. If the Senator will yield further, I am quite certain that is true. When the Senator, at the very beginning of his speech, stated that one of the principal issues in this debate and concerning the ABM is whether or not the Senate of the United States is capable of exercising a degree of supervision, a degree of examination and criticism of a military budget, I point out that it has not been done since I have been here on the floor of the Senate. I do not mean to criticize the committee. I am sure the committee has gone over that. But never before in 25 years—I believe the Senator

from New Mexico has been here 12 years—have I ever seen a debate like this. I thank the Senator for the great service he has rendered.

Mr. MONTROYA. I would like to add further that because the Senate has decided to assert its right of deliberation and decide its prerogative of surveillance over national defense expenditures, the country is now well informed on this issue and it can support any judgment made by any Member of this body.

Mr. GORE. Mr. President, will the Senator yield?

Mr. MONTROYA. Yes, I yield to the Senator from Tennessee.

Mr. GORE. I have listened intently to the address of the distinguished Senator from New Mexico. In my opinion, he has delivered and is delivering one of the most learned addresses on this subject that this great debate has afforded in the Senate. He has demonstrated a degree of study and acquaintance with the basic problems and the scientific principles involved that few have shown. I wish to express my gratitude and my admiration for the speech and to him for having made it.

In the context of security and who is for the security of the country and who is for surrender—I regret the terms that have been introduced into the debate—to return to the question of security, is not the goal of every Senator, in the view of the junior Senator from New Mexico, the security of the United States?

Mr. MONTROYA. There is no question about that. As I stated at the beginning of my talk, I did not question the motives of Senators here who were on either side of the issue with respect to whether or not they were for or against the security of our Nation or for or against maintaining it. I believe every one of them is motivated in the same direction.

Mr. GORE. True; and those of us who sincerely reached the conclusion that the deployment of the ABM system as proposed would lessen rather than increase the security of our country are entitled to respect for our judgments.

Again with respect to security, is not the security which we seek the avoidance of nuclear war?

Mr. MONTROYA. That is the greatest security that we seek.

Mr. GORE. And with two nations, great and powerful as they are, each with the power to destroy the other several times over, is not the real security for us, as well as for them, avoidance of war; and if avoidance of war is the goal, and our strategy in trying to avoid war is one of deterrence, is it not axiomatic that if ABM missiles were necessary to use to try to combat a nuclear attack upon the United States, then the strategy of deterrence itself would have failed, and the security that we seek in the avoidance of nuclear war would indeed have been breached? Does the Senator agree with that?

Mr. MONTROYA. Yes; I agree with the Senator from Tennessee on that point.

Mr. GORE. So if what we are really seeking here is a formula of security to avoid a nuclear war, then the question is, Will deployment of an antiballistic

July 30, 1969

CONGRESSIONAL RECORD — SENATE

S 8829

missile nuclear weapons system lessen or increase our security?

I submit that the real measure of security is avoidance of nuclear war, and that avoidance of nuclear war can best be achieved by an understanding between the United States and Russia on the limitation of the deployment and the use of nuclear weapons.

If that be true, then the question is, Will deployment of the ABM system make it easier to achieve such an understanding, or more difficult to achieve such an understanding?

I have reached the conclusion that it would make it more difficult; indeed, it might make an understanding impossible; and I think I am entitled to reach that conclusion without being accused of waving a white flag of surrender.

I thank the Senator. I recognize him as one of the patriots and one of the able men in the U.S. Senate. He is making a very learned address, to which respect is due and attention is directed.

Mr. MONTOYA. I thank the Senator from Tennessee.

Mr. STENNIS. Mr. President, is it convenient for the Senator to yield to me briefly on one point?

Mr. MONTOYA. I yield to the Senator from Mississippi.

Mr. STENNIS. I appreciate the Senator's yielding to me particularly at this time, because I have a pending matter, and I shall be quite brief.

If I may point it out, on page 1 of the Senator's talk, which I have before me, the Senator made the following reference:

My colleague the Senator from Missouri (Mr. SYMMINGTON) has pointed out that more than 23 million dollars in government expenditures have gone for missile systems development that quickly became obsolete, and in many instances were never even operative. Thus, our past failure to carefully examine and evaluate Defense spending has permitted an incredibly large amount of taxpayers money to be wasted.

Mr. President, first a wish to say to the Senator that I think he has made a splendid presentation here on this subject matter, and that it is an important contribution to the debate. I know he is sincere, and I do not believe that anyone accuses the Senator from New Mexico, or any other Senator, of being otherwise.

Mr. MONTOYA. Mr. President, may I also say to my good friend from Mississippi that I have listened carefully to his many presentations on this subject, and I have nothing but great respect for him, even though we differ in viewpoint on this matter.

I wish to say that I do not question his motivation or his sincerity, because I know he is a sincere man and a conscientious man, and I respect his position on the vital issue before us.

Mr. STENNIS. I thank the Senator very much, and look forward to working with him in the future.

On this \$23 billion item, I call to the attention of the Senator from New Mexico and other Senators that on July 2, just as soon as we got this bill written up, I undertook to answer 5 or 6 months of charges of various kinds that had been leveled against that same \$23 billion,

and, in a presentation to the Senate beginning on page S7466, I gave what might be called a speech—it is really a documentation—of all the major items that go to make up that \$23 billion.

I respectfully call it to the Senator's attention, and hope that he will look at it, and, if I may, I shall just briefly refer to a few of these items that are alleged by some, though not the Senator from New Mexico, to have been waste, but alleged by him to be items that "quickly became obsolete and in many instances were never operative."

First, as to those that were never operative, there is a list on this page that I have already referred to of these various missiles, in which those that never became operative are listed first, and they total \$4.1 billion. That list goes back as far as 1945, or perhaps earlier, on through the year 1965, and represents a large number of efforts to get missiles—many of them small missiles—that never did come through, so to speak. They never were perfected, due to various wrong starts or misconceptions of the proper starts.

Many of them, however, without going into details, became really the original, first generation of those that were later highly successful.

I refer to one here, the mobile Minuteman, charged here with \$108.4 million. One principal sponsor of that item was none other than Dr. Wernher von Braun. I remember hearing his testimony about how our bombers put him out of business so many times in World War II, and he thought it made a very great difference. He had to keep on the run all the time. He wanted a mobile Minuteman. I think that is the first type that we envisioned and merely, in effect, authorized the research on; but it did not turn out that way. It developed in another direction, and the Minuteman became our first major solid fuel weapon. I hear a rumor every once in a while that they may want to go back and try to make it mobile again, but that was years and years ago, that that decision was made.

I refer to another item. Here is the Skybolt. That was one thing that was quite hopeful at first, and it turned out that it got mixed up in some bad company, maybe, or they got into a hassle about it some way. Anyway, it was finally cancelled out, but we learned a great deal from it, and it has been displaced by other families of weapons now.

Now dropping down to the ones I consider to have been outstandingly successful, in this other list, we have the old Redstone. That was one of the most successful missiles we have ever had—not one of the larger ones, but when we were thrashing around, looking for something to try to put up a little Sputnik, when we were on the small end of things, it was this old Redstone missile that we finally turned to put that little old pellet, more or less, in size, in orbit; and it was the standby, for a long time, as one of the most important missiles of the Army.

Here is the Polaris, listed as now no longer deployed, with an investment of \$1.132 million. Waste? Let us see what its history is.

By the way, there was no missiles sys-

tem that was more unpromising, in the beginning, than the Polaris.

I remember going down to Florida because I had doubt and disbelief. When I looked over what they had then, I had more disbelief. It blossomed, however, into the most successful one we perhaps have ever had—Polaris I and Polaris II, the next generation.

We are now going into the Poseidon. We have these submarines on the seven seas, as the Senator knows, with those marvelous weapons. That goes with it. It is all based upon the basic concept of Polaris I. However, in some way that item got thrown in here and has been charged to waste. The Senator made reference to that.

Atlas D, E, and F cost \$5 billion of that \$23 billion the Senator mentioned.

The old Atlas stood there with all of its might and was the only thing we had for years to span that gap when we were threatened.

The Titan would still be our principal defense in this way had we not perfected the Poseidon and the Minuteman that we think are better. Even today, we still have the old Titan missile. The Titan I is listed here as being one of those that were of questionable value and is now no longer deployed.

I will not detain the Senator any more. I appreciate his yielding to me.

Here is a list of what I believe has a full explanation of all the major items on the list.

Mr. MONTOYA. Mr. President, I appreciate that the Senator from Mississippi has furnished me with that list. I failed to find the list heretofore. I did ask for a breakdown of the \$23 billion, and I was unable to get it up to the last minute. However, as the Senator knows, I ascribed this \$23 billion figure to the Senator from Missouri (Mr. SYMMINGTON), who mentioned it on the floor.

Mr. STENNIS. I am not blaming the Senator.

Mr. MONTOYA. Mr. President, I should also like to add to the list, if the Senator does not have it on the list, the following reference with respect to the other missile development.

I mentioned a few minutes ago the development of an ABM system beginning in 1956 with the Nike-Zeus. This program terminated in 1965, after we had spent \$1.4 billion.

Secretary McNamara said in 1967 that if the Nike-Zeus had been completed and deployed, it would have cost about \$13 billion to \$14 billion and that most of it would have been torn down and replaced by new missiles of the Nike X system long before it became operational.

The Nike X system was begun and was modified as research and development progressed. That missile was replaced by Spartan. The investment cost in research and development, according to McNamara, would have amounted to \$16 billion.

In 1966 Secretary McNamara estimated that it would be around \$24 billion over a 5-year period. By 1969 the estimate was up to \$40 billion.

Significantly, Secretary McNamara argued against its deployment because it

S 8830

CONGRESSIONAL RECORD — SENATE

July 30, 1969

could easily be rendered ineffective at that time in his opinion.

Mr. STENNIS. Mr. President, the \$40 billion was an estimate. That was not an expenditure.

Mr. MONTOYA. The Senator is correct. I did say that.

Mr. STENNIS. There is a long history behind this effort by Soviet Russia and the United States of America. This has not been an easy, primrose path.

I remember that the old Nike program began with Ajax and Hercules. We are still using them. We finally went into the Zeus. However, that did not work out well. Therefore, it was dropped as such.

I would have added this explanation, but getting together the bill and the hearings kept all of us very busy. I wanted the matter to be fully researched.

May I refer to one other item. The Senator referred here, on page 2, to the question about the chances of arms control and the fact that the ABM is just nonsense, and he argued that it does not have a place here.

With all due deference to the Senator, I have come to the belief that perhaps the best hope against a nuclear war is for the Soviet Union and the United States of America both to have an effective weapon and for each to know that the other has it.

That will be the greatest achievement, I believe, in avoiding a nuclear war. And I am awfully concerned that if one ever starts, it will be too late.

Mr. MONTOYA. I think that is where an equal division of Senators occurs, on whether it would accomplish that objective.

Mr. STENNIS. I think that if we both had something that was effective and each knew the other had it, that would come close to stopping trouble.

Mr. MONTOYA. Mr. President, I believe, because of what I have said, that my position on the ABM is sound. I believe, however, that there should continue to be a vigorous and carefully planned research and development program to answer the many scientific and technological questions still unanswered about the ABM. The amendment offered by Senators COOPER and HART—S. 2546—and amended in a joint statement on July 23, 1969, offers a constructive alternative to deployment, and I intend to support their measure. Under this amendment none of the funds could be used for deployment of any component or element of the proposed Safeguard system at any proposed deployment site. There should be no premature and dangerous commitment to deploy anti-ballistic missiles, and we should pass legislation to insure that.

In summary, Mr. President, I will vote against the deployment of the ABM missile system, but intend to support continued scientific and technological research in this area.

Mr. HART. Mr. President, will the Senator yield?

Mr. MONTOYA. I yield.

Mr. HART. Mr. President, I rise simply to join the other Senators in thanking the Senator from New Mexico for the soundly reasoned comments he has voiced. I believe the Senator to be right.

I hope that none of us doubt the desire on the part of each of us to be right. And I am delighted that the Senator from New Mexico came to the conclusion he did.

Mr. MONTOYA. I thank the Senator from Michigan.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. MONTOYA. I yield.

Mr. MANSFIELD. Mr. President, I had an opportunity, thanks to the distinguished Senator from New Mexico, not only to hear part of the speech, but also to read it in its entirety.

I join with the distinguished chairman of the Committee on Armed Services, the senior Senator from Mississippi (Mr. STENNIS), and all others who have spoken on the floor this afternoon in commending the Senator from New Mexico for the thoughtfulness and the study and the detail into which he has gone to explain his position on this most important question. It is perhaps the most important question which may come before this particular Congress, because so much hinges on it in so many ways.

I have known the Senator since he served in the House of Representatives on the House Appropriations Committee and since he came to the Senate, where he now serves on the Committee on Appropriations and I believe on some committees which have to do with defense matters.

I wanted the Senator to know that I thought his speech was statesmanlike. I commend him for the care which went into it and assure him that it was a pleasure for me to listen to the Senator make arguments that I would have been honored to join him in making.

It was a statesmanlike speech. I commend the Senator.

Mr. LONG. Mr. President, will the Senator yield?

Mr. MONTOYA. I yield.

Mr. LONG. Mr. President, may I point out to my good friend, the Senator from New Mexico, that the point he makes about waste brings me back to something I heard when I first came to the Senate about 20 years ago.

At that time we were trying to defend ourselves against Russian aggression. We were talking about whether we were satisfied that these expenditures to beef up our defense would be wise expenditures or would be wasteful.

As one military officer said to me at that time, "Senator, you ought to hope that every nickel you spend on the defense of this Nation will be wasted. You ought to hope you will never have to use any of those weapons to defend our country. You ought to hope that every cent of it will be wasted."

However, I cannot for the life of me see that we would be wise to rely in the future upon weapons that by that time will become obsolete, because they all become obsolete in time if better weapons are developed to save this country, when a competitor is developing better weapons and more sophisticated weapons which can totally destroy the weapons which are today modern weapons.

For that reason, I find myself believ-

ing that, in defense of a great nation such as this, we must be at least as good, and hopefully better, with the best of weapons, particularly when confronting countries that outnumber us by as much as 4 to 1 in population. They will proceed with the development of the most sophisticated weapons. There is no way to keep them from doing it.

It seems to me that the money spent on research would be wasted unless you are going to go ahead and build the weapons. Even when you build them, you never know how good they are until you have tried them, but for that matter neither will your adversary.

The Senator has used the illustration of our supreme achievement, putting a man on the moon. We put a man in space and then a man orbited the earth several times. We then put several men in space and they orbited the earth, and then we proved we could orbit and dock the orbiting missiles together.

After that, we proved that we could reach the moon, that we could orbit the moon, that we could put two vehicles up there, separate them, and bring them together again. So we proved everything before the final stage of landing and re-entry from the moon.

I am certain the Senator saw the supreme achievement of this country, which is the pride of our generation. I think it is the finest technical achievement of our time. It was done step by step.

For the life of me, I cannot see how one could hope to improve on his way of doing business unless he first went into business. We have developed the capacity to build the best missiles, make supreme achievements to outcompete the other fellow. But if we do not begin to build missiles and to follow through with it and to prove that they will work, how can the Senator hope, by merely doing research on something and not building it, ever to be able to defend, when the other fellow not only is doing the research but also is building them and trying them out under field conditions? How can one go into business 20 years behind the other fellow and hope to overcome him on the day of going into business?

For example, trying to shoot down incoming missiles requires several things. First, it requires the electronics, it requires the missile, and it requires somebody who knows how to aim it. If he never has tried it, he will not be a very good shot. Compare that to a hunter shooting ducks. If he has never tried it before, he will not be a very good duck hunter.

You have to try it in order to find out where you fail and where you succeed. If you never build the thing, never put it into place, never begin to implement it and improve on it, how would you know whether you have achieved anything? How does one know he cannot succeed unless he tries it?

Mr. MONTOYA. I do not think the Cooper amendment discourages that.

Mr. LONG. The Senator says he would not put anything in place; he would not start building the defense. If an enemy knows you have no defense and he wants to attack you, he knows he can do that pretty much with impunity, because you

July 30, 1969

CONGRESSIONAL RECORD — SENATE

S 8831

have no defense. If you have a defense, at least he is taking a chance. Your defense might work and you are striving to improve it.

I have not followed the entire debate. Some of it was not very enlightening and some of it made a lot of good sense. I read a newspaper story the other day in which someone said that on an atomic test, for 800 miles the defenses would not work. I assume that would be because at that particular time we did not—at that time—have a transistor which could resist radioactivity. We have that now, so we have overcome it. That problem, I believe, has been solved. We will move on to the next problem.

Mr. MONTROYA. Is the Senator aware that under the Cooper amendment, research, development, and testing would be permitted?

Mr. LONG. I understand that, but the point is that there would not be anything with which to defend ourselves.

Mr. MONTROYA. The Cooper amendment really is designed to prevent deployment and prohibit the expenditure of money for hardware until the research, development, and testing indicate to Congress that it would be a sound investment.

Mr. LONG. To me, it would be like saying, "Please, mother, may I go out to swim?" and receiving the reply, "Yes, but don't go near the water."

If a man is coming at you with a loaded rifle and you have a beautiful rifle on the drawing board, what good are those blueprints going to do you when the other fellow is using a rifle on you?

I recall my own experiences—sometimes one is prejudiced by that—back in the days when we were trying to defend ourselves against enemy aircraft. We were very poor to begin with. After a while we got so that we were bringing a lot of them down. Suddenly our side developed a projectile that had a proximity fuse on it. At that time, our anti-aircraft fire was absolutely brutal murder on the German airplanes. They had no chance.

One may develop something which leaves something to be desired, but we never can tell what day someone will come up with the final solution.

Let us compare it with what the North Vietnamese have done to our airplanes. When they first put their SAM missiles against our planes, they were very ineffectual. But as they used them and gained more experience and overcame the defects, they became very effective. That is what our planes will be competing with if they try to invade the Soviet Union—all the experience of Russian missiles employed against our planes, with Russian advisers, with North Vietnamese at the trigger. They are very effective, but they were not effective at first.

If you never build the hardware, it will never do you any good. Sometimes all you need is a few technical changes to make the thing work.

It seems to me that the Russians are a great deal ahead of us in missile defense. It is dangerous to permit them to get any further ahead unless one takes the view that some take—which the great White House adviser Richard Goodwin

seems to have—that there will be no war if we are not able to defend ourselves. I do not think the Senator shares that view.

Mr. MONTROYA. I do not subscribe to that view, because in this case we have the Safeguard and the deterrent of having the SAC bombers on alert and the Polaris submarine with the Poseidon missile—we will have it—with the multiple warhead. I do not think Russia would ever risk sending an offensive missile to destroy our cities or to do harm to our landscape, for fear that our effective retaliation would be set in motion.

Mr. LONG. All these things become obsolete as the enemy improves his defense. It can be compared to any game, whether it is football, baseball, or anything else. As the other fellow improves his defense, your attack becomes ineffective unless you improve your attack. Any team or any army which can attack but cannot defend cannot win a war against an army which can do both effectively.

In view of that, for the life of me, I cannot see how we could hope, by failing to have a good missile defense, to advance this national interest.

I believe we have wasted a great deal of money in some instances. I once served on the Committee on Foreign Relations. Hearings against this missile are being developed by that committee. Having served on that committee, I must say that in the past we have spent a great deal of money and have given our resources away to foreign nations, without getting anything in return. Much of this was utter waste, and we have no hope of ever getting anything in return, except perhaps some good will. In many instances, the countries hate us now, despite all the money they have received from us. This country has been strong enough to defend itself and to remain at peace with all the major powers. Admittedly, we have had to contest our position with some of the minor powers.

But we have never had to fight a major war because they knew we were strong and we knew they were strong; we respected one another for what we were.

Mr. President, I think the Senator made a statesmanlike presentation but I hope he considers the feeling of some of us that we must defend our Nation effectively.

Mr. MONTROYA. Mr. President, I want the Senator from Louisiana to know that I thoroughly respect his position on this matter. I have never questioned his position and I have never questioned his motives. I stand on that.

Mr. LONG. Mr. President, the same compliment goes both ways. I thank the Senator.

Mr. MONTROYA. I yield the floor.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Bartlett, one of its reading clerks, announced that the House had passed a bill (H.R. 13080) to continue for an additional 15 days the existing rates of income tax withheld at source, in which it requested the concurrence of the Senate.

EXTENSION OF THE SURTAX

Mr. MANSFIELD addressed the Chair. The PRESIDING OFFICER (Mr. GURNEY in the chair). The Senator from Montana is recognized.

Mr. MANSFIELD. Mr. President, what is the status of the bill from the House of Representatives which is at the desk?

The PRESIDING OFFICER. The message has just been received from the House of Representatives and is at the desk.

Mr. MANSFIELD. Mr. President, what is the next move?

The PRESIDING OFFICER. It can be referred or a Senator could ask that it be laid before the Senate for its first reading.

Mr. DIRKSEN. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. DIRKSEN. Normally, Mr. President, we could have first reading; but after the second reading I think that would be the appropriate place to ask that it go on the calendar.

The PRESIDING OFFICER. The Chair can lay it before the Senate and have first reading under the rule, but a second reading has to be requested by the Senate.

Mr. MANSFIELD. Mr. President, has first reading been had?

The PRESIDING OFFICER. The Chair lays before the Senate a message from the House of Representatives, which the clerk will read.

The ASSISTANT LEGISLATIVE CLERK. A bill (H.R. 13080) to continue for an additional 15 days the existing rates of income tax withheld at source.

Mr. MANSFIELD. Mr. President, to keep the record straight, have we now had first reading?

The PRESIDING OFFICER. We have had first reading.

Mr. MANSFIELD. Mr. President, after discussing the matter with the Senator from Louisiana (Mr. LONG) and others, we would have no objection to having the bill placed on the Calendar in the ordinary course of events rather than to delay action by endeavoring to refer it to the Committee on Finance, or by entering an objection which would force the measure to lay over for a day, which in turn would place it on the Calendar tomorrow, but by the same token would not make it available for consideration until the next legislative day. That would take us beyond midnight tomorrow, the time at which the present surtax law expires.

The position of the Democratic Policy Committee and the Democratic members of the Committee on Finance has not changed one bit, but in an effort to further accommodate those who are so desirous that this matter be rushed into, we have decided that this would be the best way to face up to it.

Mr. DIRKSEN. Mr. President, to reserve all rights, I would normally, I think, interpose an objection after the second reading. Then, the bill would go to the calendar. But before I do so—

The PRESIDING OFFICER. It would have to wait until after—

Mr. DIRKSEN. That is correct. I understand.

The PRESIDING OFFICER. Does the Senator from Illinois ask for a second reading now?

Mr. DIRKSEN. I could ask for it, but I shall withhold now because I do wish to address an inquiry to the distinguished majority leader.

Normally, they had in mind that the bill go to the Committee on Finance for further consideration. In that event, it would have to be reported back. My whole hope was to have immediate consideration and if that were appropriate I could ask for immediate consideration of the proposal that is now before us. I would anticipate there might be objection, but if it is in order to make that request at the moment, I think I shall do so. I do not know whether that comes after the second reading or before.

The PRESIDING OFFICER. The Chair advises the Senator he could ask for second reading or he could ask unanimous consent that the bill be considered immediately.

Mr. DIRKSEN. I make the latter request.

Mr. MANSFIELD. I object.

The PRESIDING OFFICER. Objection is heard. Does the Senator from Illinois wish the bill to be read a second time?

Mr. DIRKSEN. Yes.

The PRESIDING OFFICER. The bill will be read the second time.

The ASSISTANT LEGISLATIVE CLERK. A bill (H.R. 13080) to continue for an additional 15 days the existing rates of income tax withheld at the source.

Mr. MANSFIELD. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. MANSFIELD. Mr. President, does this mean that the bill now goes on the calendar?

The PRESIDING OFFICER. If there is an objection to further proceedings then, yes, it would go on the calendar under the rule.

Mr. DIRKSEN. I would have to make that objection.

The PRESIDING OFFICER. Objection is heard. Under rule XIV, paragraph 4, the bill will be placed on the calendar.

Mr. MANSFIELD. Now, Mr. President, before that bill will become liable for action on the part of the Senate it would have to lay over 1 legislative day. Is that correct?

The PRESIDING OFFICER. The Senator is correct.

Mr. MANSFIELD. And that on tomorrow it does become liable for some action.

The PRESIDING OFFICER. It would be in order to take it up tomorrow.

Mr. MANSFIELD. Mr. President, in explanation to the Senate, may I say that even in the field of accommodation one can go too far, and that was the reason I had to most respectfully and reluctantly object to the unanimous-consent request of the distinguished Senator from Illinois.

Mr. DIRKSEN. I understand the position of the majority leader. At the same time I would like to make abundantly clear the problem that confronts us and the administration.

I thought I made it abundantly clear on yesterday, in pursuance of the memorandum that was submitted by the majority members of the Committee on Finance and the Majority Policy Committee that there would be acceptability of a 5-month extension of the surtax, provided the administration accepted and provided that the majority leadership accept it.

Last night some time after 8 o'clock the President was contacted in Asia. The telephone call was made by the Vice President. I was not privy to that conversation. Therefore, I do not know in what detail they discussed the matter. But in any event, on the basis of the President's reply a statement was made this morning to the effect that it was not acceptable to the President; and he had hoped that perhaps the Senate would proceed with H.R. 12290, presently on the calendar, which came out of the House on the 30th of June and which came out of the Committee on Finance of the Senate on July 17. That is the five-package bill, taking care of those at the impoverished levels, taking care of the excise taxes, the surtax, the investment tax credit, and I think one other item.

We have gone through that lesson book and we could very well call up H.R. 12290 and satisfy the administration by discussing and disposing of the bill, because that is quite consonant and quite in line with the request the administration made in its tax message to the Congress.

Now, today, by a 3-to-1 vote, the House of Representatives has passed the so-called 15-day extension. However, it deals only with the question of withholding rates and nothing more. Fifteen days takes it, roughly, about to the point of the agreed midsummer recess which begins on August 13. At that point, of course, the extension bill is then payable. From then on, the complications develop for industry, business, and for every other enterprise in the country.

I mentioned only a little while ago that not the least of the headaches, of course, will be in the case of employees on whom withholdings have been made where probably not enough was withheld, in which event, at the end of the calendar year, they would be owing a larger sum of money, provided the surtax was finally continued. That would be an unhappy state of affairs, and they would be grouching all over the place.

But I see a greater crisis and a greater danger, Mr. President, than all that. Those are probably the inconveniences of the moment. What frightens me a little, first, are the gyrations of the market which reflect not only domestic thinking but also the thinking abroad. We have a tendency to forget that there are \$40 billion in money and in short-term securities mainly in the hands of European bankers. Our gold supply is only about \$10 billion and there are \$40 billion in obligations abroad. Every time the Chairman of the Federal Reserve Board, every time the Secretary of the Treasury in this and prior administrations went abroad and undertook to get a report, it was the same old story.

Always and always those who were the stewards of the fiscal welfare of these countries on the other side of the Atlantic have constantly said to us, "Are you going to face up to your responsibility, or aren't you?"

Now that followed a policy of restraint and is causing us no undue difficulty up to this point; but if, on the other hand, they decide that this body in its entirety—and I have to include the House—will not face up to this problem in the terms and under the conditions prescribed by the administration, then what?

Suppose they undertake a massive liquidation. Who do we think will get hurt? We are going to get hurt. We shall be hurt in a great big way before we get through. That is what bothers me.

Thus, I had hoped that we could go along and probably extend that surtax a little longer.

I should observe that one objection I had to the November 30 cutoff date was merely that they tell me from a practical standpoint it does become too operable. I presume by that they mean the administrative difficulties that somehow ensue.

I pretend to be no expert in that field. I am content to rely upon the observations of others who have some knowledge of it as to whether it is really operable without undue inconvenience. They say, "No." I am content to abide by their judgment. That is the reason I took exception to it. I did say yesterday—and I was quoted correctly—that it was an old rule with me that if we cannot get a whole loaf of bread, then let us take whatever bread we can get because we cannot always be a chooser in this world.

Had this been extended to December 31, I think, because of the fiscal year indication as well as the calendar year indication, it would have been easier than it is now. But evidently at least there has been no indication that this will be done. Had an amendment been offered or had this proposal submitted by the joint Finance and Majority Policy Committees been offered, let us say, either as a substitute or as an amendment to the 15-day extension bill, we probably could have made something of it.

I think there is an inclination toward restraint here in not loading up the measure that came along with extraneous or even germane amendments, in the hope that action can be had. But there is no hint, there is no clue, that that will be the case.

I allude to only one other thing, that there has been such a passionate expression about tax reform—meaningful tax reform—comprehensive tax reform. I think it was a disposition to believe that it was one of those vague and nebulous things that was in the offing somewhere. I am advised now, this afternoon, that the tax reform bill will be filed in the House of Representatives this afternoon. It means that the Ways and Means Committee in that body have certainly been diligent. They are about 10 days ahead of their timetable.

In view of that fact, that tax reform is on the threshold, is there any reason

Subcommittee of the Committee on Labor and Public Welfare, I announce hearings on S. 2453, a bill to further promote equal employment opportunities for American workers. The hearings will be held at 10 a.m., on August 11 and 12, 1969, in room 4232, New Senate Office Building.

Any person who wishes to testify or submit a statement for inclusion in the hearing record, should communicate as soon as possible with the Labor Subcommittee, room G-237, New Senate Office Building.

NOTICE OF RESCHEDULING OF HEARINGS ON VETERANS EDUCATION, TRAINING, AND MANPOWER BILLS BEFORE THE VETERANS' AFFAIRS SUBCOMMITTEE

Mr. CRANSTON. Mr. President, on July 23, 1969, I announced that the Veterans' Affairs Subcommittee, of which I am chairman, of the Labor and Public Welfare Committee would be holding hearings on July 30 and 31 on four bills pertaining to veterans education, training, and manpower. Unfortunately, I find that these hearings must unavoidably be postponed.

I am therefore announcing at this time, for the information of Senators, that the Veterans' Affairs Subcommittee will hold hearings on S. 1088, S. 2506, and a proposed amendment to it, S. 2668, and S. 2700 on August 8 and 12 at 9:30 a.m.

AGM

RADAR—THE ACHILLES HEEL IN THE SAFEGUARD SYSTEM

Mr. SYMINGTON. Mr. President, recently, my office received a brochure from the Committee To Maintain a Prudent Defense Policy, an organization with headquarters here in Washington, entitled "Safeguard: Does the Supposed 'Softness' of the Radars Render Safeguard Vulnerable?" This pamphlet is indeed an extraordinary document.

Yesterday, on the floor, I stated that Mr. Clifford J. Hynning was the author. I now find that is not accurate. The report was prepared by an unidentified "individual committee or staff member," and I hasten to make this correction.

I ask unanimous consent that this pamphlet in its entirety be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. SYMINGTON. Mr. President, now let me present to the Senate why I believe the information contained in this pamphlet with respect to the radars is wrong.

The author opens his remarks by stating:

Many opponents of Safeguard hold the view that the system is inordinately vulnerable because its radar is less than one-tenth as hard as the missile silos it is designed to protect.

As one of the "opponents" I share this view, but my objections are based on four additional criticisms which pertain to the radar of the Safeguard. These are as follows:

First. There is only one radar to protect an "entire site" of more than 100 missiles.

Second. The MSR radar is exceedingly expensive—between \$150 and \$200 million each—many times as much as that of each of the Minutemen it defends.

Third. The total number of interceptor missiles protecting the site is "exceedingly small."

Fourth. Only a fraction of even this small number of interceptor missiles protecting each Minuteman site has enough range to protect the radar.

The author claims that since the Sprint missiles defend the radar, the fact that it is soft does not matter. This is only true if the defense was "infinitely reliable" and if there were an "unlimited number" of interceptor missiles deployed for defending the radar.

It is the essence of the deterrent role of Minuteman that even if some silos are destroyed the rest are available to retaliate. By basing the entire defense on a single radar we make sure that if this one radar is hit the entire defense will collapse. All the enemy has to do is to dedicate a few of his missiles to exhaust that fraction of interceptors which defend the radar—then the entire Safeguard system is dead; and all Senators who have studied the classified information know how small is the number of interceptors.

Moreover, in order to destroy the radars, the Soviets would not have to use the SS-9's, those missiles which the proponents say are of sufficient power and accuracy to endanger Minuteman. We know they could either exhaust, or penetrate, the protection around the radars by using their smaller and less accurate SS-11 missiles, of which the Soviets now have some 800.

Here then the question of the "softness" of the radar comes in, because on this basis the destruction of the radar would not necessarily even subtract from any of those missiles which some estimate the Soviets are building in order to threaten Minuteman.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. SYMINGTON. Mr. President, I ask unanimous consent to proceed for 3 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SYMINGTON. In fact, and based on this extraordinary pamphlet, it would appear that the writer has not really examined the Safeguard system, because he says:

The radars are hardened to the efficient level required to give an extremely high probability that an incoming warhead will be intercepted and are located so that a single warhead could not destroy more than one of them.

Does not he know there is only one radar per missile site?

A radar supporting the defense of Minuteman would not have to be as hard as the Minuteman silos if first there were many such radars—say one radar per only a few Minuteman silos, and second, if these radars were less expensive than the missiles they defend.

In that case the radars need only be sufficiently hard so that if one radar were

destroyed the neighboring one would not suffer; and as a consequence the price of admission for a Soviet attacker would be greatly raised if the cost per silo defended is low enough.

Experts in this field hope that such a system can be developed, and developed quickly, by deploying many more, and less complicated, radars.

Actually the Safeguard radar meets very few of the requirements which one would hope to have in effort to achieve "a proper defense" of hardened silos.

The remarks made in this brochure would appear to reflect a Magnot Line philosophy, about which I have already expressed my deep apprehension. It is proposed to employ exactly one radar as the eyes of the entire system; and then defend that one radar to the hilt.

If this defense is too thin, however, or has even the slightest flaw to the point where one enemy missile "leaks" through, the entire defense system then collapses; and in this connection, we know just how thin the Sprint coverage is—would this information be made public—and how few things in this world are perfect.

I agree with the sentiment that, in the long run, increased hardening of silos will not assure their survival against the increasing accuracy and number of attacking warheads. Sooner or later, therefore, our fixed land-based missiles will become obsolete unless either:

First. We defend them with a system of multiple small radars and interceptors designed as proper for the job, or

Second. Replace them by a land-mobile system along with reliance on our moving Polaris submarine fleet, or

Third. Reach some "meaningful agreement" so as to halt the destructive race of military technology toward increased accuracy and multiple nuclear warheads.

In summary, Mr. President, we will never prevent obsolescence of the Minuteman force by protecting it with a defense which can be defeated before it is even built.

EXHIBIT 1

PAPER NO. 2—SAFEGUARD: DOES THE SUPPOSED "SOFTNESS" OF THE RADARS RENDER SAFEGUARD VULNERABLE?

(By the Committee To Maintain a Prudent Defense Policy; with the compliments of Dean Acheson)

Does the supposed "softness" of the radars render Safeguard vulnerable?

No. Many opponents of Safeguard hold the view that the system is inordinately vulnerable because its radar is less than one-tenth as hard¹ as the missile silos it is designed to protect. This view, while having a certain surface plausibility, reflects a fundamental misunderstanding.

That there is a difference in the hardness of the silos and radars is undeniable. That this difference is critical to the defense of the radar, however, is not true, and overlooks the central fact that the radar is defended primarily by interceptor missiles.

To say that a target is soft or only moderately hard is not the same as saying that a target can be easily destroyed.

(1) The radars in the Safeguard system are, in fact, hardened to a considerable degree.

(2) The radars are also actively defended by Sprint missiles.

¹ "Hardness" is the term used to indicate relative blast resistance and is generally measured in terms of overpressure (PSI).

July 29, 1969

CONGRESSIONAL RECORD — SENATE

S 8721

amendment to \$50 a month for single persons and \$75 for couples.

Section 3, repeals the \$105 a month limitation on a wife's benefits.

Section 4, amends the retirement test to provide (a) a \$2400 annual exempt amount, and (b) a \$200 monthly exempt amount, and (c) a \$1 reduction in benefits for each \$2 in earnings above \$2400.

Section 5, modifies prohibition on payments for routine physical examinations to permit one comprehensive physical examination each year for each enrollee.

Section 6, repeals provisions preventing payments for eye care (including glasses) dental care (including dentures) and hearing aids (including examinations for hearing aids).

Section 7, provides that beneficiary shall pay 1/3 of the cost of Medicare provision and government shall pay 2/3.

Section 8(a), provides that when the CPI rises by at least 2 per cent over the index for January 1970 benefits for the third month following the month in which the 2 per cent rise occurred, and for subsequent months, shall be increased by an amount equal to the percentage rise in the CPI. Only 1 increase may take effect in a 12 month period.

(b) The increase is applicable to all persons on the benefit rolls in the month in which the increased benefits are first payable.

(c) Requires the Secretary of HEW to report to the Congress whenever a cost-of-living increase is to be made, its effect on the actuarial status of the trust funds, and recommendations for meeting the cost of the increase.

Section 9, provides general tax revenues to be used in social security benefit payments.

General revenues will be contributed as a percentage of all social security taxes collected each year, on the following bases: (a) 6% for fiscal year 1970, (b) 12% for fiscal year 1971, (c) 18% for fiscal year 1972, (d) 20% for fiscal year 1973, (e) 25% for fiscal year 1974 and each year thereafter.

Section 10, extends Medicare provisions to include payment for prescription drugs. Establishes a Formulary Committee to determine for which drugs and biologicals reimbursement is to be made.

Reimbursement is to be based on lowest priced generic drug available, consistent with high standards.

Formulary Committee shall disseminate, once a year, to doctors and pharmacists, an alphabetical list of each drug or biological by established names, and include listing of brand name equivalents with prices.

Applicable only to prescription drugs.

ADDITIONAL COSPONSORS OF BILLS

S. 1781

Mr. BYRD of West Virginia. Mr. President, at the request of the Senator from West Virginia (Mr. RANDOLPH), I ask unanimous consent that, at the next printing, the name of the Senator from Wyoming (Mr. MCGEE) be added as a cosponsor of S. 1781, to amend title II of the Social Security Act to eliminate the reduction in disability insurance benefits which is presently required in the case of an individual receiving workmen's compensation benefits.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2518

Mr. HARTKE. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from California (Mr. CRANSTON) be added as a

cosponsor of S. 2518, to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive insurance benefits thereunder.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2674

Mr. BYRD of West Virginia. Mr. President, in behalf of the Senator from Hawaii (Mr. INOUYE), I ask unanimous consent that, at the next printing, the names of the Senator from North Carolina (Mr. ERVIN), the Senator from New York (Mr. GOODELL), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Rhode Island (Mr. PELL), and the Senator from Alaska (Mr. STEVENS) be added as cosponsors of S. 2674, to amend title 37, United States Code, to provide for the procurement and retention of judge advocates and law specialist officers for the Armed Forces.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2689

Mr. BYRD of West Virginia. Mr. President, at the request of the Senator from Hawaii (Mr. INOUYE) I ask unanimous consent that, at the next printing, the names of the Senator from Nevada (Mr. BIBLE), the Senator from Oregon (Mr. MATFIELD), the Senator from Washington (Mr. JACKSON), the Senator from New York (Mr. JAVITS), and the Senator from Alaska (Mr. STEVENS), be added as cosponsors of S. 2689, to amend the Internal Revenue Code of 1954 to provide the same tax exemption for servicemen in and around Korea as is presently provided for those in Vietnam.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2691

Mr. PROXMIRE. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from Indiana (Mr. HARTKE) be added as a cosponsor of S. 2691, to amend Public Law 87-849, approved October 23, 1962, to strengthen provisions relating to disqualification of former Federal officers and employees in matters connected with former duties and official responsibilities, and for other purposes.

The PRESIDING OFFICER. Without objection, it is so ordered.

SENATE RESOLUTION 226—RESOLUTION TO EXTEND THE AUTHORITY OF THE COMMITTEE ON LABOR AND PUBLIC WELFARE TO INVESTIGATE PROBLEMS OF EDUCATION OF AMERICAN INDIANS

Mr. MONDALE, from the Committee on Labor and Public Welfare, reported an original resolution (S. Res. 226) to extend the authority of the Committee on Labor and Public Welfare to investigate problems of education of American Indians, which was considered and agreed to.

(The remarks of Mr. MONDALE when he reported the resolution appear later in the RECORD under the appropriate heading.)

SENATE RESOLUTION 227—RESOLUTION TO AUTHORIZE THE EXPENDITURE OF FUNDS BY THE COMMITTEE ON LABOR AND PUBLIC WELFARE—REPORT OF A COMMITTEE

Mr. MONDALE, from the Committee on Labor and Public Welfare, reported an original resolution (S. Res. 227); which was referred to the Committee on Rules and Administration, as follows:

S. RES. 227

Resolved, That the Committee on Labor and Public Welfare hereby is authorized to expend from the contingent fund of the Senate, during the Ninetieth Congress, \$1,500, in addition to the amounts, and for the same purposes, specified in section 134(a) of the Legislative Reorganization Act, approved August 2, 1946, Senate Resolution 141, agreed to July 17, 1967, and Senate Resolution 276, agreed to May 9, 1968.

Sec. 2. Section 4 of Senate Resolution 80, agreed to February 17, 1969 is hereby amended by striking out "\$72,000" where it appears therein and inserting in lieu thereof "\$93,000".

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH—AMENDMENTS

AMENDMENT NO. 108

Mr. PROXMIRE submitted amendments, intended to be proposed by him, to the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes, which were ordered to lie on the table and to be printed.

(The remarks of Mr. PROXMIRE when he submitted the amendments appear later in the RECORD under the appropriate heading.)

ADDITIONAL COSPONSOR OF AMENDMENT NO. 107

Mr. PROXMIRE. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from Montana (Mr. METCALF) be added as a cosponsor of amendment No. 107 to S. 1782, the military procurement bill.

The amendment calls for annual disclosure of high ranking former civilian and military Pentagon officials who go to work for the major defense contractors.

The PRESIDING OFFICER. Without objection, it is so ordered.

NOTICE OF HEARINGS ON S. 2453

Mr. WILLIAMS of New Jersey. Mr. President, as chairman of the Labor

July 29, 1969

CONGRESSIONAL RECORD — SENATE

S 8723

Whether they are sufficiently hardened so that active defense of them will give us high enough confidence that they will survive an enemy attack is the critical question. They are in fact hard enough, and making them harder in the face of the improvements in missile accuracy expected in the 1970's would incur considerable costs without corresponding benefits in the form of a higher probability of survival under attack. With such missile accuracies, the offense can destroy with a high probability, either radars or silos if there is no active defense to stop it.

The chosen hardening is the modest level necessary to enable the defense to intercept an incoming warhead at relatively close range in order to get more than one shot at an incoming warhead. If the first Sprint fired at an incoming warhead should fail, there is sufficient time to fire another and even a third. Were the radars softer than they are, such a tactic—which has the effect of dramatically increasing the probability that interception will succeed—would not be possible. If, on the other hand, the radars were hardened beyond their planned level, no such improvement in the likelihood of interception would result. The critical point is that the radars rely for their defense not solely on hardening (which is a losing proposition in this period of rapidly improving accuracies) but on active intercept by Sprint and Spartan missiles.

While hardening alone is no longer adequate for the protection of our land-based missiles, it does play an important role in conjunction with the active defense provided by the Safeguard system. The missile silos are hardened so that a single enemy missile cannot destroy more than one Minuteman. The radars are hardened to the efficient level required to give an extremely high probability that an incoming warhead will be intercepted, and are located so that a single warhead could not destroy more than one of them.

THE COMMITTEE TO MAINTAIN A PRUDENT DEFENSE POLICY

Chairman, Dean Acheson; Vice-Chairman,² Albert Wohlstetter; Treasurer, Clifford J. Hynning.

Original members, Prof. Armen Alchian, Gordon Arneson, Max Ascoli, Ross N. Berkes, Amb. Charles Bohlen, Dr. Donald G. Brennan, Dr. Peter Clark, Dr. Joseph Cropsey, Dr. Paul Davis, Hon. Arthur Dean, Dr. Michael J. Deutsch, Dr. Freeman J. Dyson, Hon. Fredrick Eaton, Hon. Henry H. Fowler, Prof. Harry Gelber, Prof. William Griffith, Dean Edmund A. Gullion, Christian A. Herter, Jr., Dr. Charles M. Herzfeld, Prof. Jack Hirschleifer, Prof. Morton Kaplan, Lawrence R. Kegan, Amb. Foy Kohler, Irvin Kristol, and Dr. Harold Lampert.

Ernest Lefever, Dr. Willard F. Libby, Dr. David A. Little, Hon. Robert A. Lovett, Prof. Gordon MacDonald, Prof. C. Burton Marshall, Prof. William G. McMillan, Amb. Livingston Merchant, Dr. Lawrence H. O'Neill, Franz Oppenheimer, Prof. Paul Ramsey, Prof. Richard N. Rosecrance, Prof. Robert Scalapino, Prof. Paul Seabury, Dr. Frederick Seltz, Prof. Harold Smith, Philip Sporn, Robert Sprague, Sr., Dr. Kenneth Watson, Dr. John A. Wheeler, Frederick Bernays Wiener, Prof. Eugene P. Wigner, Prof. Aaron Wildavsky, and Prof. Ciro Zoppo.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. SYMINGTON. I yield to the distinguished Senator from Arkansas.

Mr. FULBRIGHT. I want to ask the Senator, who is a member of the Armed Services Committee, what is the explanation of why there was almost no

² Paul H. Nitze withdrew from active service as vice-chairman of the Committee, effective June 26, when he was appointed consultant to the Department of Defense on SALT.

evidence taken, as far as I can find, with regard to the blackout effect of a radar by an atomic explosion in the vicinity—in other words, not having to hit the radar establishment itself? Why was there no evidence as to the blackout? I have heard before that this is a very important matter. I think I read in the press that in some of the tests over Kwajalein the communication system was out for quite a long time following an atomic explosion. I was wondering why there was no evidence taken on that point by the Armed Services Committee.

Mr. SYMINGTON. I know the Senator wants me to be frank. Without any implied criticism of anybody, I honestly do not know the answer to the question.

Mr. FULBRIGHT. It is inconceivable to me that a committee which is proposing a system which could run into \$10 or \$20 billion or more did not take any substantial evidence on the question of what would be the effect of an explosion in the vicinity of a radar. Our radars, as I understand, depend upon electromagnetic impulses for their operation. There is no wire. It is in the nature of radio.

Mr. SYMINGTON. Speaking in terms of electricity, it is a flux, not a current—a wave would be a better characterization.

Mr. FULBRIGHT. If blackout is a substantial problem, I cannot imagine why no testimony was taken on it.

Mr. SYMINGTON. My apprehension about this system has to do primarily with the working of the five major components; their working together after they are put together; and even more, the two chief objections I have to deploying it now instead of developing it further are, first, nobody has put up any logical argument of any kind that this radar which was designed for the Sentinel system, is the right radar for the Safeguard system. Second, nobody has answered the fact that a relatively small addition to the production of Soviet missiles would nullify almost in entirety any defense protection the United States would obtain from the Safeguard, even if the system worked perfectly.

Mr. FULBRIGHT. Tomorrow afternoon the Committee on Foreign Relations will hold a hearing which is intended to go into this matter. I am not at all certain that it will be as thorough as it should be, but it will seek some information about the effect of a blackout or of radioactivity upon communications, and will also include a briefing on the ease with which an ABM system can be knocked out by multiple weapons.

The PRESIDING OFFICER. The time of the Senator from Missouri has expired.

Mr. GORE. Mr. President, I ask unanimous consent that the Senator from Missouri may proceed for an additional 3 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GORE. Mr. President, will the Senator yield?

Mr. SYMINGTON. I am glad to yield to the able Senator from Tennessee.

Mr. GORE. Mr. President, tomorrow morning at 9:30 the Subcommittee on

Disarmament will examine some classified reports that have recently become available. I do not propose to suggest a secret session of the Senate to discuss this material, but I do take this opportunity to invite any Senator either to sit in on the examination of the reports tomorrow morning or to come later to the committee room, where he will be permitted to take from the vault the reports and the colloquy and examine them to his own satisfaction.

Mr. President, will the Senator yield once more?

Mr. SYMINGTON. I am glad to yield.

Mr. GORE. In addition to the facts cited by the distinguished junior Senator from Arkansas that electronic and radio communication was knocked out for a period of hours in an area of some 800 miles in diameter as a result of tests in Eniwetok, one other matter to which Senators might wish to give some consideration is that test animals placed on ships at varying distances from the center of the explosion suffered some dire consequences. Rabbits on a ship 200 miles away were blinded. When we consider defending or undertaking to defend America by exploding nuclear bombs over our heads, we are considering matters having dire consequences.

On this question of possible first strike capability or first strike attempt, I wonder if the able senior Senator from Missouri has contemplated the effects of westerly wind currents and the possible danger to all other nations in the Northern Hemisphere from an all-out attack upon the United States, from fallout.

Mr. SYMINGTON. Mr. President, the distinguished senior Senator from Tennessee is a member of the Joint Committee on Atomic Energy, and therefore an expert on this subject. To be frank, it is not a subject that I feel competent to discuss. I presented today facts with respect to this extraordinary statement issued by one of the various groups organized in favor of the Safeguard, because I believe I do understand the radar aspects of the situation, and because it was explained to us what would happen if the Soviets increased slightly their production of missiles. On this particular subject of the effects of atomic blast the Senator—and I hope he will develop it to his satisfaction and that of the Senate—is a far better expert than I.

The PRESIDING OFFICER. The Senator's time has expired. The Senator from Rhode Island is recognized.

Mr. PELL. Mr. President, in connection with the last exchange, the Senator from Tennessee may recall that a panel of scientists before his subcommittee agreed that the Northern Hemisphere would be uninhabitable by man if there were any full exchange of nuclear weapons.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Hackney, one of its reading clerks, announced that the House had passed the following bills and joint resolutions, in which it requested the concurrence of the Senate:

H.R. 2. An act to amend the Federal Credit Union Act so as to provide for an independ-

ent Federal agency for the supervision of federally chartered credit unions, and for other purposes;

H.R. 6947. An act to amend the Act of October 13, 1964, to regulate the location of chanceries and other business offices of foreign governments in the District of Columbia;

H.R. 9551. An act to amend the act of July 11, 1947, to authorize members of the District of Columbia Fire Department, the U.S. Park Police force, and the White House Police force to participate in the Metropolitan Police Department Band, and for other purposes;

H.R. 9553. An act to amend the District of Columbia Minimum Wage Act to authorize the computation of overtime compensation for hospital employees on the basis of a fourteen-day work period;

H.R. 12671. An act to amend the act of May 29, 1928, to facilitate and encourage the employment of minors in the District of Columbia between the ages of 14 and 16 during the summer and other school vacation periods, and for other purposes;

H.J. Res. 236. A joint resolution authorizing and requesting the President of the United States to issue a proclamation designating the week of August 1 through August 7 as "National Clown Week"; and

H.J. Res. 614. A joint resolution authorizing the President to proclaim the week of September 28, 1969, through October 4, 1969, as "National Adult-Youth Communications Week."

HOUSE BILLS AND JOINT RESOLUTIONS REFERRED

The following bills and joint resolutions were severally read twice by their titles and referred, as indicated:

H.R. 2. An act to amend the Federal Credit Union Act so as to provide for an independent Federal agency for the supervision of federally chartered credit unions, and for other purposes; to the Committee on Banking and Currency.

H.R. 6947. An act to amend the act of October 13, 1964, to regulate the location of chanceries and other business offices of foreign governments in the District of Columbia;

H.R. 9551. An act to amend the act of July 11, 1947, to authorize members of the District of Columbia Fire Department, the U.S. Park Police force, and the White House Police force to participate in the Metropolitan Police Department Band, and for other purposes;

H.R. 9553. An act to amend the District of Columbia Minimum Wage Act to authorize the computation of overtime compensation for hospital employees on the basis of a 14-day work period; and

H.R. 12671. An act to amend the act of May 29, 1928, to facilitate and encourage the employment of minors in the District of Columbia between the ages of 14 and 16 during the summer and other school vacation periods, and for other purposes; to the Committee on the District of Columbia.

H.J. Res. 236. A joint resolution authorizing and requesting the President of the United States to issue a proclamation designating the week of August 1 through August 7 as "National Clown Week"; and

H.J. Res. 614. A joint resolution authorizing the President to proclaim the week of September 28, 1969, through October 4, 1969, as "National Adult-Youth Communications Week"; to the Committee on the Judiciary.

SENATOR KENNEDY

Mr. PELL. Mr. President, I rise at this time to publicly express my belief that the senior Senator from Massachusetts should not resign. And my advice to the

citizens of that great Commonwealth would be to do my best to urge Senator KENNEDY not to consider resigning.

In speaking as a friend of his and as a Member of this body, I would add that the sooner he returns, the better off I think we are. I believe he is needed and wanted right here.

NIXON FUMBLES IN BANGKOK

Mr. PELL. Mr. President, I am disturbed at the tenor of our President's remarks made in Bangkok as he accepted the key to the city.

I ask unanimous consent that his remarks be inserted in the RECORD at this point.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

[From the New York Times, July 29, 1969]

EXCERPTS FROM NIXON'S TALKS

(NOTE.—Following are statements made by President Nixon shortly after his arrival in Bangkok today. The first is an excerpt from extemporaneous remarks made by the President as he accepted a key to the city. The second is the text of a statement prepared by the traveling White House on the flight to Thailand and distributed here in the President's name.)

As we drove in through the streets from the airport and saw the thousands of people gathered there, including many of the schoolchildren, we were reminded again of the association between the American people and the Thai people, association in war and association in peace.

We were reminded too of that when we came by the SEATO treaty building, and realized that the SEATO organization has its offices here. That leads me to say that everyone knows that Thailand and the United States are signatories of that treaty. We are bound together by that treaty.

A treaty can have many meanings. It can be just a scrap of paper with no meaning at all. But as far as Thailand and the United States are concerned, a treaty means far more because we share common ideals.

What we want for Asia and the world is the right of freedom which Thailand enjoys for all peoples here.

The treaty that we have with Thailand means that it is not just another treaty, not just another piece of paper, but that it is one that has a significance far beyond that—a significance which I have indicated time and again in public statements, and I indicate today in my first public statement as I visit Bangkok and this country.

We will honor our obligations under that treaty. We will honor them not simply because we have to, because of paper, but because we believe in those words, and particularly believe in them in the association that we have with a proud and a strong people—the people of Thailand.

We have been together in the past, we are together at the present and the United States will stand proudly with Thailand against those who might threaten it from abroad or from within.

Mr. PELL. I am concerned for two reasons. First, I do not believe that any treaty should ever be referred to as "just another treaty" or "just another piece of paper." Any treaty to which the United States adheres should have greater meaning than that.

Second and more important from the viewpoint of our national interest, is President Nixon's statement that the United States "will stand proudly with

Thailand against those who might threaten it from abroad or from within."

The most careful reading of the SEATO treaty gives no support to the views that, beyond consultation we have any obligation whatsoever to defend Thailand from enemies within. The most meticulous, careful, precise and, yes, Russian interpretation of the treaty would not give support to this thesis. Accordingly, what the statement of our President has done I believe, is, either to have enunciated a new policy for the United States in pledging protection of the Government of Thailand from domestic insurgency or to have publicly stated support for a private commitment that has already been made to this effect.

I deeply hope neither of these eventualities is true.

Even more important, so that those around the world may not misinterpret what our policies are—and, misinterpretation is more often the cause of crisis and war than is correct interpretation—I hope the President will straighten out the record in this regard.

He can do this either by saying he overspoke. Or he can say we indeed have such a newly visible policy vis-a-vis Thailand, in which case I would urge my colleagues to do all that we can to dissuade our Chief Executive from such a policy and seek to change it. It is certainly a policy inconsistent with the Senate commitment resolution passed a few weeks ago and with the words of President Nixon in Guam last week.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PELL. I yield.

Mr. GORE. Perhaps it would be well for the RECORD of the Senate's proceedings today to show that the U.S. Senate has not approved the secret agreement between the United States and Thailand.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. PELL. I ask unanimous consent that I may have 3 additional minutes to yield to the Senator from Tennessee.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GORE. This secret agreement was entered into between Thailand and the United States by the previous administration. It was not approved by the Senate or by Congress during the previous administration. This secret agreement was reaffirmed by Secretary Rogers earlier this year on his trip to Thailand. Such reaffirmation has not been approved by the elected representatives of the people. The President, past or present, is without the power or authority to make a binding agreement upon the United States without the approval of the representatives of the people, the U.S. Senate.

The insurgency in Thailand is not a new political phenomenon. It has existed for more than a decade. I do not wish the insurgency well, but I am not sure that it is proper for the United States to intervene in a domestic insurgency, in civil strife within a small country. This is, indeed, primarily what we did in Vietnam. What President Nixon has done in Thailand is to invite another Vietnamese situation for the United States, and I

CONGRESSIONAL RECORD — SENATE

S 8755

ABM

burst of conservation legislation that emerged from Congress during the Johnson years. The Wilderness Act was only one of dozens that reflected an increasing environmental uneasiness—the scenic rivers bill, antipollution laws, establishment of new parks and others.

In the courts as well, the values of wilderness have begun to get a hearing. A federal appeals court ruled in 1966 that scenic, historic and recreational values had to be taken into account by the Consolidated Edison Company in its proposal to build a nuclear power plant on the Hudson River. A 1967 U.S. Supreme Court decision on the Hells Canyon dam issue introduced the same ideas into an order remanding the question to the Federal Power Commission, where it remains.

Industry itself has begun to show some long-absent sensitivity to conservation. Public relations men go to elaborate lengths to avoid offending the wind-kissers. Some firms have subsidized conservation studies, others have donated parks or wild land to local governments. This kind of thing cuts no ice with Brower, however. He calls it "cosmetics for rape." He is, of course, incorrigible.

Along with the growing power of the conservationists has come a change in the character of the movement. The wind-kissers, in fact, are in decline. The scientists, more specifically the ecologists, are increasingly important. Nowadays a stand of trees or a piece of sageland is worth preserving not necessarily for its beauty or its opportunity for solitude; it is more likely defended as vital to the balance of nature, the "chain of life" in a given area, or as a natural laboratory containing potentially valuable secrets. The ecologists talk less about the romance of wilderness and more about "ecosystems," distinctive networks of relationships between land and water, vegetation and wildlife.

This has led to some peculiar gyrations. Some scientists are trying to "quantify," in the good new American way, the values of wilderness. This is a ploy born in desperation. For decades developers have been able to show, in dreary charts of "cost-benefit ratios," what *specifically* might be gained from whatever project they have in mind—read: dollars. In reply the conservationists have fiddled with their fingernails and talked about beauty. Now they are groping for figures to fight the developers on their own terms; hence graphs that measure "scale of valley character" and assign numerical values to a view of a mountain or the presence of a bear.

"What it comes down to is this," says Brower. "If you can't measure a thing, measure it anyway for those who won't know anything about it unless you do."

The ecologists are running the palace, all right, but the troubadours are still skulking around outside in the high grass, practicing birdsongs, comparing backpacks, listening, frowning when they hear an airplane. Udall thinks the two sides, conservationists and developers, now have "a kind of parity of influence," but most conservationists disagree. "There's very little conservation legislation coming forward these days," says one congressman. "The logging and power interests are still damned strong. I'm pessimistic."

The one huge, dark fact dominating the entire question of land preservation is continued population growth. Any question of conserving space leads ultimately to a question of limiting the people with claims on that space. Most defenders of the wilderness are, at bottom, pessimistic about their chances, and spiraling population is the reason. It seems the final, ironic fruition of the "more is better" philosophy—to simply outgrow our resources. Nothing riles conservationists more than the celebration of growth for its own sake—ceremonies saluting

the arrival of the 200 millionth American, the National Park Service's breathless releases on rising attendance figures. A Sierra Club poster is only about 20% facetious when it suggests that man, like the bald eagle or the flamingo, is now an "endangered species."

Another dark shadow on the future of wilderness is the state of public ignorance. Despite the growth of interest in the outdoors, most Americans remain urban, motorized and oblivious to the physical and spiritual wonders of the wild. The major recreation phenomenon of the past few years is the growth of trailers and camper trucks, motel rooms on wheels with names like Tear-drop, Week-N-Der, Six-Pac, Rolls Royal and CharAkee. Most camper drivers get no closer to the wild than a national park campground.

On the other hand, though most Americans may personally feel no urge to tramp the back country, they are enchanted by the idea of its existence. The camper truck may become an outdoors teaser: as he sees a little of raw, splendid America, the driver may want to see more; he may even recognize that the easiest way is not necessarily the best way—but that's getting giddy.

For the men who draw up "master plans" and "long-range policy," then, there is this difficult series of questions: what does the majority want, open country or scenic overlooks? Do you strike a balance between tourist development and wilderness preservation and, if so, how? Is *everything* that remains worth saving, or just some of it? (When conservation pioneer Bob Marshall was asked how much wilderness was enough, he replied, "How many Brahms symphonies are enough?" He was incorrigible too.) How do we develop an ecological conscience in America? Through education, but why haven't we done so? Why aren't children taught to respect all living things? Wilderness is peculiar among American possessions in that it is not susceptible to compromise. To take some wilderness is still to take wilderness. Roads cannot be unbuilt.

The men who worry about these questions have come up with a few suggestions. (No ideas or initiatives have come from the new Administration, except for the President's creation of an Environmental Quality Council. "We're trying to steer clear of the controversial ones right at the start," says a high Interior Department official.) Here are the proposals:

The National Park Service is considering eliminating cars from some parks and operating campgrounds on a reservation system, as opposed to the present first-come, first-served method.

Some conservationists have urged that tax relief be granted to encourage the preservation of open space. Pay landowners, in effect, not to develop their land.

Udall suggests that "environmental mediators" could arbitrate disputes between developers and conservationists in the manner of labor mediators.

Brower would like to see a sort of Fair Conservation Practices Commission, an independent nongovernmental agency with authority to review projects before and after construction.

Biologist Garrett Hardin proposes that access to wilderness be limited to those "of great physical vigor," willing and able to walk and to take the risks of the wild, and that wilderness and park areas be established at graded levels of difficulty according to ability.

Hardin's intriguing idea recognizes the final paradox: as more people learn to know and appreciate wilderness, more will want to experience it. Ultimately, their numbers might destroy it just as effectively as would highways or snack bars. It could be cherished to death.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The PRESIDING OFFICER. The time for morning business having expired, the Chair lays before the Senate the unfinished business, which will be stated.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

The Senate proceeded to consider the bill.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McCARTHY. Mr. President, I commend the efforts of the Senator from Michigan (Mr. HART) and the Senator from Kentucky (Mr. COOPER) and those who have worked with them over the last year in carrying the issue of the antiballistic-missile system to the Senate, and, beyond that, to the American people.

The matter of antiballistic missiles is one that has been before the country and before the Senate for nearly 10 years. Presidents Eisenhower and Kennedy both considered anti-ballistic-missile systems. They both decided against the deployment of the Nike-Zeus, although subsequently President Kennedy initiated development of the Nike-X system, which was never recommended for deployment, but from it developed the Sentinel and, more recently, what is called the Safeguard system.

Nearly 2 years ago, in September 1967, former Defense Secretary McNamara announced that the United States would deploy an anti-ballistic-missile system. Since the September 1967 announcement, the reasons given for the deployment have continually been changed.

At one time, in the first presentation by Secretary McNamara, we were told that we needed it because of the Chinese threat. Secretary of Defense Laird, the current Secretary, now stresses the Russian threat.

The Defense Department's public report of a new and expanded Russian threat followed the decision to deploy the ABM rather than preceded it. We were told, also, that it would provide protection in case of an accidental

S 8756

CONGRESSIONAL RECORD — SENATE

July 29, 1969

launch of missiles, and other incidental arguments were given.

It was also argued that deployment would not have a significant impact on the strategic arms race with the Soviet Union or upon our efforts to control that race. This was in 1967. Now we are told that deployment would have a significant effect upon the effort to bring about some kind of disarmament, in almost direct contradiction to the arguments which were made roughly 2 years ago, when the first presentation was made.

We have also changed the name of the system. The Nixon administration, having concluded that the Sentinel evidently was unacceptable, revised the name, changed its mission to some extent and offered it to us again as the Safeguard system. But, it is pretty much a matter of old wine in new bottles and old programs under new titles.

As I see it, the case against the deployment of this system is based on at least four points, all of which have been discussed at some length in recent debate in the Senate and, of course, developed over the years.

The first is the scientific and technical challenge. Repeatedly, scientific and technical witnesses have challenged the capability of the Safeguard system to perform under attack or, indeed, of any ABM system to add very much to our security. The best examination of this point that I have seen is that of Prof. Robert Axelrod, of the University of California at Berkeley, who raises these three points:

First, he says the argument that the Soviet's deployment of the new SS-9 missile is a threat to American security is only true if the worst of a range of possibilities comes true on each of seven factors. These factors are the size of the payload of the SS-9, the accuracy of the missile, the yield/weight ratios the Soviets can achieve, the number of warheads on each booster, the number of boosters deployed, the Soviet political intent, and the vulnerability of both the Polaris system and our B-52 force. He says that if any of these factors are not as bad as Secretary Laird has been assuming, then the SS-9 is not a serious threat, and its existence and deployment would not justify the deployment of the ABM system. Professor Axelrod states:

I believe none of them are probably as bad as he has been supposing they just possibly might be.

Second, Professor Axelrod says that the Safeguard system in its first stage of deployment is meant to protect Minute-man missiles from a sophisticated attack. Yet, the components of the system were specifically designed to protect cities against an unsophisticated Chinese attack. At least, this was the explanation 2 years ago. As far as we know, the major components, such as the Spartan missile and the radar, have not been changed, and therefore we must assume that, if what we were told 2 years ago was true and accurate, they are not suitable to the new and sophisticated mission for which or against which they supposedly are now directed.

The third point he raises is that the second phase of the Safeguard system is meant to protect cities. If this mission is to be taken seriously, extensive civil defense preparations would have to be undertaken to protect against fallout. The Defense Department has chosen to tell Congress and the public about this need later rather than sooner, and no significant effort is being recommended or carried out in the area of civil defense.

The second general consideration, I think, is an economic one and one which should be considered as we attempt to deal with the question of the surtax. This has now become the great point at issue, through which inflation is to be controlled and the economy put back in balance.

The fact is that we anticipate a \$2 billion surplus in the Federal budget, but that is not particularly important; it is not a question of a balanced budget or a \$1 or \$2 billion difference but, rather, a question of whether or not Government expenditures are for productive purposes. We could raise another \$9 billion and have the surplus run to \$10 or \$11 billion; but if we are going to spend \$30 or \$40 billion on wasteful military expenditures which contribute nothing to the balance in the economy between consumption and production, pouring purchasing power in through salaries and payments on contracts, but do not produce anything on the other side to meet that real and effective demand, then we are going to have inflation and we are going to have, along with it, a kind of depression.

So to say that the surtax is the great issue relating to stability of the economy in this country, without taking into account the actual purposes of Federal expenditures, is, it seems to me, to oversimplify greatly the judgments that have to be made with reference to our economy.

In the last few years we have seen a kind of maturity in our own economic and capitalistic system. The old idea that Marx pronounced, that you had to have war in order to stimulate economic growth, is no longer true in this country. Every time there is now a rumor of peace, the stock market improves and all the indicators tend to lead up; whereas, if there is a rumor of expansion of the war—which was not true in Korea, in World War I, or in World War II—the indicators all go down.

In 1967 we had the automobile strike. It used to be that if you had an automobile strike, the stock market would drop, but in that case it went up. The only explanation is that the automobile industry was competing for the same materials, the same financing, and the same manpower that the war was competing for. I suppose if Marx were to write another book, he would add a chapter in which he would say that to keep the economy going, you have to have either war or the automobile industry; and from the economic point of view, there would be some substance to it.

We need to look, therefore, not only at the military aspect, which is subject to

severe question, but also at the economic aspect of the ABM.

Dr. George Kistiakowsky of Harvard pointed out to the Foreign Relations Subcommittee chaired by Senator Gore: . . . had the deployment of the Nike-Zeus been authorized in 1960-61, we would have just about now the full system in operational readiness, after spending what was then estimated as \$20 billion and could have been, judging by analogy with other large weapon systems, twice as much.

I think his projection was on the conservative side.

Considering the current numbers and sophistication of offensive missiles now being deployed by the super powers, it is technically certain that the Nike-Zeus ABM system would now be of little value. It would be obsolescent or even obsolete, judging by the fact that the probably somewhat more modern Soviet ABM defenses around Moscow are rated of little value to the Soviet Union by our competent military experts.

The eventual cost of a "thick" ABM system has been estimated, for example by Dr. Herbert York, former member of President Eisenhower's Science Advisory Committee, at up to \$100 billion.

The third consideration is psychological. To seek to deter aggression and at the same time prepare to limit damage at home is inconsistent. As Dr. George Rathjens of Massachusetts Institute of Technology stated in the April 1969 issue of *Scientific American*:

To the extent that one accepts the action-reaction view of the arms race, one is forced to conclude that virtually anything we might attempt in order to reduce damage to ourselves in the event of war is likely to provoke an escalation in the race. Moreover, many of the choices we might make with damage-limitation in mind are likely to make preemptive attack more attractive and war therefore more probable. The concurrent development of MIRV's and ABM systems is a particularly good example. . . . Hard choices must be made between attempting to minimize the chance of war's occurring in a time of crisis and attempting to minimize the consequences if it does occur.

The danger of the action-reaction phenomenon and the chain of escalation it produces has, in my judgment, been repeatedly demonstrated. For example, when the United States thought that the Soviet Union was going to install some 70 ABM's, even though they had not yet done so, we made the decision to proceed with MIRV's which, if continued, will give us some 7,000 warheads.

We are witnessing today, in the case being made for the ABM system, a demonstration of the rule that when one thinks defensively the threat always rises to the level of the deterrent and then surpasses it.

One observer has said that we are the first nation to have a Department of Defense. It might be better to call it the War Department. Or perhaps we might have two platoons, the Department of Offense and the Department of Defense. However, once you begin to think about the limits needed to be secure, a situation is arrived at where no matter how many preparations are made, it is like the Kafka animal in the burrow that is always apprehensive because he hears the scratching sound.

y 29, 1969

CONGRESSIONAL RECORD — SENATE

S 8757

Secretary Laird says that our military policies and programs should not be based on what our intelligence indicates the enemy is doing, but should be designed to offset their capacity to do all that they can do. The next step, of course, would be to build a defense of sufficient strength not only to offset all that they can do, but to offset all they would do if they could. Thus we are approaching a complete reversal of the classical Clausewitz theory that war is an extension of politics, and in its place we will have a theory that politics is an extension of military program.

Finally, the argument comes down to the diplomatic and political which I think is most important and it is that aspect I wish to emphasize today.

No matter what the technicians or scientists may say about how good or bad the ABM system would be—it might be better if it did not work, and that might be the best argument for it. But whether it does or does not work, the diplomatic consideration is most important.

We have been told that we must approve the Safeguard system because the President needs it for a "card in his hand" in any forthcoming arms limitation talks with the Soviet Union. We are told that we must go into such talks with strength if they are to be successful.

But the whole history of arms control negotiations since World War II refutes this claim. The Soviet Union has never been willing to enter into discussions, much less agreements, except in a situation of approximate equality. As far back as the days of the Baruch plan, when we alone had nuclear weapons and were willing to give them up if agreements could be reached, the Russians were unwilling to talk. They agreed to meet only when they, too, had developed nuclear weapons.

There has never been any evidence that the Soviet Union could be forced to the conference table or to agreements by the superiority of our force. In fact, the contrary appears to be the case. We tried, for example, to initiate strategic arms limitation talks with the Soviet Union at the end of 1966, at which time we had a considerable superiority in weaponry over the Russians. They agreed to talk only in July 1968, when they had reached a position of relative equality. The idea of "superiority" is meaningless in a situation where each side has the capacity to destroy the other several times over.

In connection with the Soviet agreement to enter the arms limitation talks, it has been claimed several times that the vote in the Senate last year on the Sentinel system influenced the Soviet decision. This is unproven and, in my judgment, unprovable. The joint U.S.-U.S.S.R. announcement was made 3 days after the Senate vote, but we are all aware that joint announcements by the United States and the Soviet Union do not materialize overnight. The joint announcement had actually been the subject of discussion for some time prior to the Senate vote and, although the fact was not yet public, it was known during the debate that the Russians were willing to go into talks.

Finally, we cannot ignore the evidence from the history of the arms race that it is much more difficult to stop a development once it is started than to head it off. It seems clear that ABM deployment by the United States now, as well as continued MIRV development, will make it much more difficult to reach any worthwhile agreement with the Soviet Union on arms control.

Rather than Safeguard being helpful to the President, I believe that the President would be much more free to negotiate if we do not agree to deploy the ABM system.

I, therefore, hope that the Senate will vote against the deployment of this system and support the amendment offered by the Senate from Michigan (Mr. HART) and the Senator from Kentucky (Mr. COOPER).

(A this point Mr. HUGHES assumed the chair.)

Mr. HART. Mr. President, will the Senator yield?

Mr. McCARTHY. I yield.

Mr. HART. Mr. President, this is my first opportunity to state on the Record my regret that my seatmate and good friend has concluded he will not seek to return to the Senate at the conclusion of his term. Let me get that on the Record first.

His remarks this afternoon, I think, are an indication of why I am sure all of us have that feeling of disappointment. He is talking about a rather technical subject, and yet he has been able in the course of a very few minutes to highlight some of the arguments that I have heard made before in a fashion and style that have distinguished him and brought him to the attention of the Nation.

He commented, as an example, that Safeguard is old wine in a new bottle. My impression has always been that old wine is good wine. Is that correct? That is not necessarily correct? My impression is that somehow or other old wine in new bottles is as good as old wine in an old bottle. It was good wine, whether in a new bottle or old, it would not hurt it. The point I make is that—

Mr. McCARTHY. We will straighten that out later. [Laughter.]

Mr. HART. What I mean is that it would not work in an old bottle labeled "Sentinel."

Mr. McCARTHY. That is right.

Mr. HART. Or in a new bottle labeled "Safeguard." The only thing we could be sure of is that it will cost an awful lot of money, whichever bottle is used.

In the style of the Senator from Minnesota, he has made that point so vividly that I rise to thank him.

Mr. STENNIS. Mr. President, will the Senator from Minnesota yield?

Mr. McCARTHY. I yield.

Mr. STENNIS. Mr. President, with reference to the observation made by the Senator from Michigan about the recently announced intentions of the Senator from Minnesota—

Mr. McCARTHY. I think I should warn the Senator that he does not want to say too many good things about me because I might have to reconsider and I may use anything said about me, but

with restraint, of course. I am glad to yield to him on that basis.

Mr. STENNIS. I was going to say that I am not happy about that announcement. It does recall some very pleasant and delightful experiences that I have had with the Senator from Minnesota, as well as the valuable counsel, advice, and assistance which he has given me over the years. I am glad to tell him again that I appreciate it.

Mr. McCARTHY. I thank the Senator very much.

Mr. STENNIS. Wait a minute now—just yield to me a little further now—[laughter]—with all deference to the two Senators and their allusion to the biblical quotation, I do not want to make any had suggestions but I hope that the Senators are not so tangled up regarding the missiles and the ABM as they were on that quotation. I know that the Senators from Michigan and Minnesota are experts in this field or they would not have ventured out into it.

Mr. McCARTHY. The question is whether new wine in old bottles is any worse than old wine in new bottles. It all depends on the wine.

Mr. STENNIS. Anyway, the reference here that the Senator makes, in all sincerity, I know, to the diplomatic or to the international implications of the ABM, the exclusion or the inclusion of the items in the bill, I do think that is a highly important point. It seems to me just the commonsense of it and the ordinary reasoning, that if the President of the United States—having determined that he wants this defensive weapon in his arsenal, and having determined that he is going to negotiate about the whole subject matter of arms—is sent over there stripped of one of his main positions, with his left hand at least tied behind him—

Mr. McCARTHY. I hope that the whole box of—

Mr. STENNIS. It would decrease his effectiveness and his position at that conference. I may be wrong. Will the Senator point out where I am wrong?

Mr. McCARTHY. I would hope that the whole box of moon rocks which the President is taking with him would be more helpful to him than the missiles, would not the Senator think? We would have to see how effective they are. The President has promised one to President Suharto in Indonesia. Apparently, he is going to give them out as he goes about his trip. This is a new weapon in the arsenal that he did not have when he proposed the Safeguard. He might use them to negotiate with the Russians.

Mr. STENNIS. I venture to say that the best thing that could happen to both the Soviets and the United States is to have an effective ABM system. If each country knew the other had it, they would come nearer to the stage—

Mr. McCARTHY. I think I quite agree. If we were to develop an effective ABM system and give it to the Russians, we would both have an effective ABM system. Then we would both have Maginot Lines and we could be certain that we were at about the same level. The projection of it now is that it would give us an advantage, since the Russians could not be effective against us. That seems

to me to create a continuing imbalance which could only make the Russians suspicious and intensify both their defensive effort and their offensive effort.

As I recently have been challenging the President, I have some reservations about how much power Presidents should have. In another 3 or 4 months, I may have that same respect for the executive department that the Senator from Mississippi has just spoken of. I am in a transition phase right now.

Mr. STENNIS. I thank the Senator for yielding to me and appreciate his further discussion of this subject.

Mr. GORE. Mr. President, will the Senator from Minnesota yield?

Mr. McCARTHY. I yield.

Mr. GORE. Does not the Senator recall how quick the Pentagon was to give assurance to the Senate, upon learning that the Soviets were deploying an ABM system around Moscow, that they could quickly saturate it, that it provided no real defense of Moscow and no major interference with the offensive capability?

Mr. McCARTHY. I recall that.

Mr. GORE. Or could it be that the Russians have stopped deployment of the ABM around Moscow because they, too, have discovered that it could easily be saturated and was really ineffective?

Mr. McCARTHY. I think that is quite possible.

Mr. GORE. Could it be that the French would have saved themselves from a false sense of security and an ineffective defense system had they realized that the maginot line could be flanked?

Mr. McCARTHY. There is no question.

Mr. DOMINICK. Mr. President, will the Senator from Minnesota yield on the point the Senator from Tennessee just brought up again?

Mr. McCARTHY. I yield.

Mr. DOMINICK. I think that we have already shown, both in the closed session and the open session which is not secret, that the Soviets have not stopped the construction of their ABM system, but they are still continuing. I think that point should be made clear.

Mr. GORE. Mr. President, will the Senator from Minnesota yield?

Mr. McCARTHY. I yield.

Mr. GORE. I invite the Senator from Colorado to come to the committee room of the Foreign Relations Committee, and I will be glad to go with him and show him the testimony.

Mr. DOMINICK. I have already seen the testimony in our own Armed Services Committee.

Mr. HART. Mr. President, I notice that the Senator from Mississippi has left the Chamber for a moment. I wanted to ask the Senator from Minnesota to develop a little more fully his theory with respect to the suggestion that the Senator from Mississippi made; namely, that the President of the United States has told us he wants this system. In addressing the Senator from Minnesota, the Senator from Mississippi made that point. It occurred to me that, for the record, either now or later, all of us would be benefited by having the thoughts of the Senator from Minnesota with respect to the infallibility of Presidents.

Mr. McCARTHY. I did, in somewhat an indirect and theoretical way, talk about this in the course of the campaign last year, not just about military weapons but other powers. It is necessary to have a proper distribution of these powers and some control over all the powers of Government that the Constitution attempts to distribute among the three branches of Government. They are at least reasonably well distributed. Congress, and the Senate generally, accepts that we should not give the President everything he wants in the domestic field. For example, there is no real disposition to say that we should give him whatever tax program he wants, but we should review it. There is no disposition that we should give him whatever he wants in the way of a foreign aid program. All of these are instruments of administrative and Presidential power, to some extent, but are shared with the Senate and with the House.

It seems to me that when we move into the important area of military action and defense, it is even more important. It involves the largest item in the budget and actions which are likely to have the greatest bearing on the welfare of this country and its influence on the world. At that point we ought to do even more and be more restrictive and harsher in our judgments of the President's requests which come to us and also more willing to fulfill our responsibility under the Constitution.

I think in the case of the ABM we have what is not really a basic military question; it is a question not as much of military policy as it is a question of diplomatic or foreign policy. It is a question of how we want to deal with other nations in the world.

For those reasons, leaving out all considerations of science and technology, the Senate ought to put a "hold" on this by its action in the next few weeks.

CONGRESS MUST RECONCILE MILITARY SPENDING WITH DOMESTIC NEEDS

Mr. PROXMIRE. Mr. President, the great concern over the size of the military budget has at least reached the level of a full-fledged congressional debate. Most encouraging is the fact that the discussions are being conducted in the context of competing nonmilitary priorities. I consider this to be the most significant debate of public policy in my career as a U.S. Senator.

For years the shibboleth of "national security" has served to obscure the real military needs of this country while at the same time sacrificing its domestic needs. The common assumption has been that any increase in military spending represented an increase in national security. The enormous size of the military budget today—almost \$80 billion—is a testament to the success of the purveyors of this assumption. Yet recent disclosures suggest that we would have more national security if we spent less on defense.

MILITARY INEFFICIENCY

For one thing, we have learned about the enormous inefficiencies within the

military establishment. There is inefficiency in procurement, in the purchase of weapons systems. There is inefficiency in defense production. There is inefficiency in the management of Government-owned property. There is inefficiency in the use of manpower. Many are asking why these inefficiencies should be allowed to continue.

Why should the taxpayer have to foot the bill for huge cost overruns such as the \$2-billion overrun on the C-5A and the more than \$3-billion overrun on the Minuteman program? Why should we be spending billions of dollars on weapons systems which are canceled before they are ever deployed because they do not work or for other reasons? The Manned Orbiting Lab is only the most recent example of this kind of boondoggle. Why is the military allowed to spend \$1.2 billion on the Sheridan/Shillelagh tank, hundreds of which are now in storage because they are defective?

Mr. TOWER. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. TOWER. The Senator is aware, is he not, that NASA has announced it is going to orbit a laboratory, and therefore there might have been duplication in that effort? Probably the NASA-sponsored effort would accomplish the same thing. I am sure the technology gained is of some value to NASA.

Mr. PROXMIRE. I presume that proposal by NASA will be reviewed by the Congress. I hope we look it over very carefully.

Mr. TOWER. I meant to say "proposal."

Mr. PROXMIRE. No doubt there are many benefits from any kind of proposal by NASA or the Defense Department, but we have to put it in the context of other demands, including our economy and the inflated budget and that we need to cut back spending wherever we can without serious consequences. I think this is one area where we can and should.

In addition, serious questions have been raised about the basic assumptions underlying our military policy. These questions range from the definition of American vital interests and the nature of our foreign commitments, to the size of our general purpose forces, to the need for individual weapons systems. Perhaps the most basic of all assumptions now being questioned is the assumption that this Nation must be prepared to fight in two major wars and one minor war simultaneously. This is the so-called 2½-war contingency, and I must say, judging from discussions with my colleagues, the very existence of this assumption came as a revelation to some of the most distinguished and knowledgeable Members of the Senate when it was first discussed publicly a few months ago. Obviously, the 2½-war contingency has tremendous budgetary implications.

NO CHALLENGE OF MILITARY SPENDING

The unhappy fact is, however, that while inefficiencies and military policies are being questioned today, they have been allowed to develop in the past without serious challenge from those outside the Military Establishment.

July 29, 1969

CONGRESSIONAL RECORD — SENATE

tion, the Treasury Department has added further recommendations. The distinguished chairman of the House Ways and Means Committee (Mr. MILLS) and the next ranking majority member of the committee and majority whip (Mr. BOGGS) and the ranking minority member of the committee (Mr. BYRNES) have given their assurances that a tax reform bill would be before the House before the August recess. The committee has taken testimony from over 600 witnesses to date on tax reform proposals. It has been meeting almost daily in executive session and has reached tentative agreement on many difficult and far-reaching amendments to present tax laws. I note that the Ways and Means Committee plans to have its tax reform bill completed by Friday of this week and to bring the bill before the House the following Wednesday, August 6.

I know from mail and from talks with constituents that there is a strong opinion in my State and in the country that our tax laws should be reformed and made more equitable and that Congress must act this year to do so. I have no doubt that Congress will act and act responsibly.

EXTENSION OF AUTHORITY OF THE COMMITTEE ON LABOR AND PUBLIC WELFARE TO INVESTIGATE PROBLEMS OF EDUCATION OF AMERICAN INDIANS

Mr. MONDALE. Mr. President, I am sending to the desk an original Senate resolution unanimously reported from the Committee on Labor and Public Welfare this morning which would extend the authority of the Committee on Labor and Public Welfare to investigate problems of education of American Indians, and ask unanimous consent for its immediate consideration.

I have cleared this matter with the majority and minority leaders and with the distinguished chairman of the Committee on Interior and Insular Affairs (Mr. JACKSON) and the Committee on Rules and Administration (Mr. JORDAN of North Carolina).

The PRESIDING OFFICER. The resolution will be stated.

Mr. MONDALE. Mr. President, I ask unanimous consent that the reading of the resolution be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered. Is there objection to the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

Mr. MONDALE. Mr. President, this resolution will allow the Indian Education Subcommittee an additional 3 months within which to file its final report, and will allow the continued expenditure of the funds for the work of this subcommittee which have been previously authorized. This time is needed so that the Senators on the committee may themselves have the opportunity to fully consider and evaluate the record of hearings which have been held by the subcommittee and to arrive at such recommendations as may be appropriate to bring before the Senate.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution (S. Res. 226) was agreed to, as follows:

S. RES. 226

Resolved, That Senate Resolution 80, Ninety-first Congress, approved February 17, 1969, is amended as follows:

- (1) In section 2, strike "July 31, 1969" and insert in lieu thereof "November 1, 1969".
- (2) In section 3, strike "July 31, 1969" and insert in lieu thereof "November 1, 1969".

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, I had expected to be engaged in a colloquy at this time, but events over which I have no control have intervened; so I yield to the distinguished Senator from Colorado, and express the hope that when he completes his remarks, we can get underway.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

Mr. ALLOTT. Mr. President, there will be one virtue in my remarks. They will be on the subject which is the matter of debate on the Senate floor, the Safeguard anti-ballistic-missile system.

Mr. President, as with most Senators who are charged with the responsibility of making the final decision regarding the wisdom of deploying an ABM system at this time, I try to follow the debate as closely as I can here on the floor. When other responsibilities have kept me from the floor I read the RECORD of each day's debate with the closest of attention in order to fully inform myself with regard to the progress of the information which is being imparted for the benefit of the Senate, indeed, of the country.

Thus, it was with a great deal of interest that I read the statements contained in the colloquy between the Senator from Arkansas (Mr. FULBRIGHT) and the distinguished chairman of the Armed Services Committee on Friday, July 25, beginning at page S8600 and continuing over to S8601 in the CONGRESSIONAL RECORD. I noticed that the subject was mentioned again in yesterday's RECORD. They alluded to the possible effects of radiation upon radars, electrical communication systems, computers, and their mutual interaction in fulfilling the command and control function for Safeguard.

I believe that the distinguished Senator from Arkansas was referring to the effects of the electromagnetic pulse or, EMP. EMP is created when gamma rays and X-rays from an exploding thermonuclear warhead strike electrons in the air, causing them to rapidly move away from the burst. The overall effect is somewhat like that caused by a flow of electrons accelerating in only one direction.

I should like to point out that this phenomenon is not unique to the ABM. It is, in fact, probably much more relevant to offensive ICBM's and it relies on the same basic mechanism by which the Spartan missile neutralizes incoming warheads.

For many years the effects of radiation on missile systems have been openly discussed in the technical and nontechnical literature. For instance, the January 2, 1967 issue of Technology Week states:

Growing concern over the vulnerability of U.S. missiles to X-rays from nuclear warheads of anti-missile missiles is leading to new specifications for ICBM guidance systems.

The May 26, 1967 issue of Time magazine stated:

Nearly 80% of the energy released by the explosion of the new warheads, believed to be in the one-megaton range, is in the form of high-energy X-rays.

This article continues:

Even if the shock wave fails to set off the warhead's conventional explosive, it can damage electronic components or cause sufficient changes in the critical shape of internal cavities within the warhead to prevent a nuclear explosion.

In addition to these radiation effects which are now well known, weapons designers recognized some time ago that they had to contend with the EMP phenomenon. Although EMP has not received the notoriety that has been accorded to X-rays, neutrons, and some other effects of thermonuclear explosions, it is extremely important. In its issue dated November 29, 1968, Time magazine stated further:

EMP produces powerful currents in any electrical conductor it crosses . . . these induced currents are strong enough to blow fuses or melt wiring and other metallic components in ground installations and aircraft. They would probably have the same effect on the missile and guidance firing systems.

This article goes on to point out that electronic defenses and offensive missiles are susceptible to EMP.

Mr. President, I believe the Senator from Arkansas referred to the fact that under the Nuclear Test Ban Treaty, "it is not easy to conduct a nuclear explosion in the air to test its effect upon communications."

This is manifestly apparent, of course. As Senators will recall prior to the ratification of the nuclear Test Ban Treaty the Russians detonated their so-called superbomb with a yield in the neighborhood of 100 kilotons. The argument was made then, not without a great deal of merit, I believe, that the United States should postpone ratification of the Test Ban Treaty until this country has had a chance to detonate a similar high-yield nuclear device. Such a detonation was

S 8774

CONGRESSIONAL RECORD — SENATE

July 29, 1969

suggested merely for the purpose of studying the myriad phenomena of such a high-yield nuclear explosion, including, of course, the EMP phenomenon.

Those Senators who argued against such a postponement carried the day, the treaty was ratified, and the United States has since been precluded from studying the radiation and EMP effects in an atmospheric environment.

Thus, Mr. President, it is not inconceivable to this Senator that the Russians may have learned a great deal more than we now know with regard to this EMP problem. It must be pointed out, of course, that our Minuteman sites and ICBM forces in their present silos depend on communications systems which were developed and tested 10 years ago, long before the EMP phenomenon was clearly understood. Perhaps this is not the case, but if it is a matter which is of an unclassified nature, I would like to have the Senate informed on this question. But, clearly the EMP problem raises some serious questions with regard to our assured second-strike capability.

Recognizing this danger to our missiles, the United States has developed large machines in order to realistically simulate the phenomena induced by electromagnetic radiation. It is well known from unclassified sources that the Defense Atomic Support Agency—DASA—views this as a critical problem about which more information is needed.

In summary, EMP is undoubtedly an important problem. It is not a new one; it is not one which has suddenly appeared with the ABM. It is probably most important, however, in its potential to degrade the second-strike capability of our offensive, land-based ICBM's. This is because many of our offensive missiles were deployed before the full importance of EMP was recognized and because there are many more offensive missiles than planned defensive ABM's. Last year Senator HENRY JACKSON stated that despite 5 years of research, EMP still poses a serious problem to the Nation's communications, radar, and the missile systems. I believe this, rather than mitigating against ABM deployment, furnishes additional reasons for approval of Safeguard. Safeguard gives the defense one more option in keeping a credible second-strike capability, by providing one more way of protecting our missile sites from the EMP produced by thermonuclear explosions.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, I understand that the distinguished Senator from New York (Mr. JAVITS) desires to speak for not to exceed 2 or 3 minutes.

ABM

PETITION FROM AD HOC COMMITTEE OF NEW YORKERS AGAINST ABM

Mr. JAVITS. Mr. President, there was presented to me today by Representative REMP, of Westchester County, N.Y., and by Representative BINGHAM, of Bronx County, N.Y., a petition signed by 10,000 individuals throughout the State of New York, expressing from the depths of their being their conviction on the deployment of the anti-ballistic-missile system. It is so spontaneous a movement, so individual in its character and so profound in its conviction, that I wish to call it to the attention of the Senate. The petition, which is signed by these thousands of individuals, reads as follows:

We the undersigned citizens, protest the Administration's recent decision to deploy an Anti-Ballistic Missile System for the following reasons:

1. Such deployment would waste many billions of dollars of the taxpayers money;
2. The ABM system is of unproven effectiveness. Most scientific testimony indicates that it probably would not work;
3. Deployment of the ABM would accelerate the nuclear arms race;
4. Deployment of the ABM would seriously endanger nuclear disarmament talks between the United States and Russia.

We urge the Congress to take appropriate measures to insure that this unfortunate decision is not implemented.

The petition, signed with the names and addresses of 10,000 persons from all over the State of New York, was gathered by a highly responsible committee. Any Senator is invited to examine the petition.

Mr. GORE. Mr. President, will the Senator yield.

Mr. JAVITS. I yield.

Mr. GORE. Mr. President, I have not had the pleasure of examining the petition. It is indeed voluminous. The voice, through the signature of 10,000 citizens of the State of New York, is eloquent indeed.

I note that the petition expresses doubt as to the workability of the ABM, even if deployed and even if needed. Would not the senior Senator from New York agree that in the event that it should become necessary to detonate ABM's in an attempt to defend against incoming nuclear missiles, it would indicate our policy of deterrence would have already failed?

Mr. JAVITS. The Senator is correct. I think that is the deep feeling from their hearts that these thousands have expressed.

Mr. GORE. So the question of its workability, however fraught with doubt that is, is a secondary matter indeed. The real question for the country is what action it can take that would most likely lead to an agreement on nuclear arms limitation. This is true, because the only measure of security between the two major nuclear powers, each possessing the power to destroy the other, is the avoidance of nuclear war.

So the first question is whether ABM

is necessary, whether it will contribute to an arms limitation agreement, or, conversely, whether it will interfere, hinder, make more difficult the achievement of an arms limitation.

Mr. JAVITS. I agree with the Senator.

Without imposing on the time so graciously granted by the Senator from Montana, I only say that this does not inhere in what the parties may momentarily think they will do. They will do a lot more if we do not deploy than if we do.

AMENDMENT OF FEDERAL AVIATION ACT OF 1958, AS AMENDED

Mr. MANSFIELD. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on S. 1373.

The PRESIDING OFFICER laid before the Senate the amendment of the House of Representatives to the bill (S. 1373) to amend the Federal Aviation Act of 1958, as amended, and for other purposes, which was to strike out all after the enacting clause, and insert:

That the Federal Aviation Act of 1958, as amended, is further amended as follows:

SECTION 1. Section 407(b) (49 U.S.C. 1377 (b)) is amended by adding the following additional sentence: "Any person owning, beneficially or as trustee, more than 5 per centum of any class of the capital stock or capital, as the case may be, of an air carrier shall submit annually, and at such other times as the Board may require, a description of the shares of stock or other interest owned by such person, and the amount thereof."

Sec. 2. Section 408 (49 U.S.C. 1378) is amended by striking subsection 408(a) (5) in its entirety, and inserting in lieu thereof the following:

"(5) For any air carrier or person controlling an air carrier, any other common carrier, or any person engaged in any other phase of aeronautics, or any other person, to acquire control of any air carrier in any manner whatsoever: *Provided*, That the Board may by order exempt any such acquisition of a noncertificated air carrier from this requirement to the extent and for such periods as may be in the public interest."

Sec. 3. (a) Section 408 is further amended by deleting the first sentence of subsection 408(b) and substituting in lieu thereof the following: "Any person seeking approval of a consolidation, merger, purchase, lease, operating contract, or acquisition of control, specified in subsection (a) of this section, shall present an application to the Board, and thereupon the Board shall notify the persons involved in the consolidation, merger, purchase, lease, operating contract, or acquisition of control, other persons known to have a substantial interest in the proceeding, and the Attorney General of the time and place of a public hearing."

(b) Section 408 is further amended by inserting in the third proviso of subsection 408(b) after the words "determines that no person disclosing a substantial interest" the following: "or the Attorney General".

Sec. 4. (a) Section 408 is further amended by adding the following new subsection 408 (f):

"Presumption of control

"(f) For the purposes of this section, any person owning beneficially 10 per centum or more of any class of the capital stock or

3. [redacted] Attempted to call Chairman Rivers, House Armed Services Committee, regarding Representative Clement Zablocki's request that we testify concerning the Soviet MIRV program before Zablocki's Subcommittee on National Security of House Foreign Affairs Committee. Since Rivers was not available I referred the question to Mr. Blandford who called back later to say that he had taken the matter up with Rivers who would neither approve nor disapprove our complying with Zablocki's request, but would recommend that we take up the problem with Speaker McCormack since it raised a jurisdictional question.

SECRET

July 25, 1969

CONGRESSIONAL RECORD—SENATE

S 8579

unanimous consent, the second time, and referred as follows:

By Mr. MUNDT (for himself and Mr. McCLELLAN):

S. 2701. A bill to establish a Commission on Population Growth and the American Future; to the Committee on Government Operations.

(The remarks of Mr. MUNDT when he introduced the bill appear earlier in the RECORD under the appropriate heading.)

By Mr. MONDALE:

S. 2702. A bill for the relief of Mrs. Rose May Fang-Yen; to the Committee on the Judiciary.

By Mr. HARRIS:

S. 2703. A bill for the relief of Antonia Galicia Rodriguez; to the Committee on the Judiciary.

By Mr. PROXMIRE:

S. 2704. A bill to provide incentive for devotion of nonresidential reuse project land, to low- or moderate-income housing; to the Committee on Banking and Currency.

(The remarks of Mr. PROXMIRE when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. GORE:

S.J. Res. 141. A joint resolution proposing an amendment to the Constitution of the United States extending the right to vote to citizens 18 years of age or older; to the Committee on the Judiciary.

(The remarks of Mr. GORE when he introduced the joint resolution appear earlier in the RECORD under the appropriate heading.)

S. 2704—INTRODUCTION OF A BILL RELATING TO SITES FOR LOW-INCOME HOUSING

Mr. PROXMIRE. Mr. President, one of the critical problems in building housing for low- and moderate-income families is the lack of suitable sites. The unavailability of land in our large central cities makes it extremely difficult to build housing for the poor. When land is available, developers are frequently forced to resort to monolithic high-rise structures in order to bring the rents within the reach of low-income families.

One excellent source of land for low-income housing is the urban renewal program. The Douglas commission on urban problems has pointed out that over one-half of the land on urban renewal sites is vacant. It would be a simple matter to use some of this land for low- and moderate-income housing sites.

The problem with this approach is that much of this land is classified for eventual commercial reuse. The resale value of the land is, of course, higher when the reuse is classified as commercial as opposed to residential. Therefore, if cities were to reclassify the land on the existing urban renewal sites from commercial to residential, land values would drop and net project costs would increase.

In order to remove this barrier and provide our cities with an incentive to use more urban renewal land for low- and moderate-income housing sites, I am introducing a bill to amend the Urban Renewal Act. The bill would make it possible for the Federal Government to reimburse cities for any added cost entailed by reclassifying urban renewal land so as to provide for more low- and moderate-income housing sites.

HUD has already shifted its urban renewal priorities from commercial proj-

ects toward building residential housing, particularly for low- and moderate-income families. The bill I have introduced would effect a similar reordering of priorities for urban renewal projects already in the pipeline. The bill is entirely in keeping with the goals set forth in the 1968 Housing Act of solving our housing problems within the next decade.

I ask unanimous consent that the bill be printed in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 2704) to provide incentive for devotion of nonresidential reuse project land to low- or moderate-income housing, introduced by Mr. PROXMIRE, was received, read twice by its title, referred to the Committee on Banking and Currency, and ordered to be printed in the RECORD, as follows:

S. 2704

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Section 103 of the Housing Act of 1949 is amended by adding at the end thereof the following new subsection:

“(e) Notwithstanding any other provision of this title, for any urban renewal project under contract for capital grant on the date of enactment of this subsection, involving real property which is to be devoted to non-residential use pursuant to the applicable urban renewal plan existing on the date of this subsection’s enactment, and, which, by urban renewal plan changes adopted after this subsection’s enactment, is to be devoted to residential use, the Secretary is authorized to increase the capital grant otherwise payable by an amount equal to one-third (or one-fourth in the case of an urban renewal project on a three-fourths capital grant basis) of the difference between the disposition proceeds of any such real property sold or leased pursuant to section 107(a) and the estimated fair value, as determined by the Secretary, of such real property as of the date of this subsection’s enactment.

“The local public agency shall not be required to provide any additional local grant-in-aid due to the increase in capital grant authorized by this subsection.”

ADDITIONAL COSPONSORS OF BILLS

S. 2667

Mr. DIRKSEN. Mr. President, on behalf of the Senator from Colorado (Mr. DOMINICK) I ask unanimous consent that, at the next printing, the name of the Senator from Utah (Mr. BENNETT) be added as a cosponsor of S. 2667, to provide additional penalties for the use of firearms in the commission of certain crimes of violence.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2691

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Wisconsin (Mr. PROXMIRE) I ask unanimous consent that, at the next printing, the name of the Senator from Ohio (Mr. YOUNG) be added as a cosponsor of S. 2691, to provide for the establishment of a National Academy of Medical, Dental, and Allied Sciences within the Department of Defense.

The PRESIDING OFFICER. Without objection, it is so ordered.

SENATE RESOLUTION 224—RESOLUTION COMMENDING THE APOLLO 11 ASTRONAUTS ON THEIR SUCCESSFUL LUNAR EXPEDITION

Mr. MANSFIELD (for himself and Mr. DIRKSEN) submitted a resolution (S. Res. 224) commending the Apollo 11 astronauts on their successful lunar expedition, which was considered and agreed to.

(The remarks of Mr. MANSFIELD, when he submitted the resolution, appear earlier in the RECORD under the appropriate heading.)

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH—AMENDMENT

AMENDMENT NO. 107

Mr. PROXMIRE. Mr. President, on behalf of myself, and Senators CASE, COOK, YOUNG of Ohio, and MONDALE, I submit today a disclosure amendment, intended to be proposed by us, jointly, to the pending military procurement bill, which would affect three classes of persons. Specific annual disclosure statements would be required from former high-ranking military officers and all former military procurement officers who go to work for major defense contractors.

The amendment would also apply to former high-ranking civilian officers and all former civilian procurement officers who work for the major contractors.

Finally, it would apply to former employees of defense contractors who come to work for the Pentagon.

Let me outline the major provisions.

RETIRED MILITARY OFFICERS

The amendment would require retired officers of the rank of colonel or Navy captain and above and procurement officers and former military plant representatives of lesser rank who work for companies doing more than \$10 million a year business with the Pentagon, to disclose certain facts to the Secretary of Defense, by March 1 of each year. This would include their name, the title and description of their work during the 3 years prior to retirement, the date of their retirement, the date of employment with the contractor, and the title and description of their work with the contractor. In addition the amendment would require a declaration of any work on planning, research, or decisionmaking on any product, contract, weapon system or component in which the officer was involved while at the Pentagon and in which his employer has a substantial interest.

Mr. President, much of the information this amendment seeks from former officers is now submitted by retired officers under a statement of employment—Defense Department form 1357. What this amendment does is to require additional information about the nature of their work while they were at the Pentagon with special reference to the details of any procurement work they

S 8530

CONGRESSIONAL RECORD — SENATE

July 25, 1969

were involved in in which their civilian employer has a substantial interest.

Of course this requirement would apply only to those high ranking officers and procurement officers of lower ranks who go to work for defense contractors.

FORMER CIVILIAN OFFICIALS

The amendment calls for disclosure of the same information from former civilian employees of the Pentagon of grade 15 or above. It also calls for disclosure by former civilian officials of whatever rank who were involved in procurement and who work for or represent companies doing more than \$10 million a year business with the Pentagon. The amendment would apply not only to former high ranking civilians who work directly for the contractors, but also to those who "represent" them in any transaction for services or materials. Its intention is to require disclosure by lawyers and others who are involved in procurement.

If a former Assistant Secretary of the Air Force, Army, or Navy left the Pentagon and went into private law practice he could be required to report under this amendment.

If he represented the contractor on an income tax or a bond issue matter, he would not have to report. But if he was retained to represent, or did represent, the contractor on a matter involving a weapons system or services or materials to the Pentagon, he would be required to report.

The test is whether he is retained by and represents the contractor in a transaction.

If a contractor retains him and he makes a phone call to the Pentagon or takes an admiral to lunch or plays golf at Burning Tree Country Club on behalf of his client contractor, the former high ranking official would have to file an annual disclosure statement so long as his services were retained.

I think such a requirement is long overdue. And in fairness to former high ranking military officers, it is just as important if not more so to require disclosure from former high ranking civilians.

FORMER CONTRACTOR'S EMPLOYEES

The amendment calls for similar disclosure by present Pentagon civilian employees who previously worked for a contractor doing more than \$10 million in business with the Pentagon. It requires disclosure by them of any work by them on specific products, research, weapon systems or components in which his previous employer had a substantial interest, in order that conflicts may not develop.

FREEDOM OF INFORMATION

The amendment requires that the information be open to inspection by the press and public at the Pentagon.

The amendment also calls for the Secretary to make an annual report to Congress by May 1 of each year giving the information in an organized and tabulated form. While the reporting requirement in the bill has been written in general terms, in order to avoid requiring an excessive amount of data, it is nonetheless the intent of this provision that the pertinent information be provided or summarized.

SUNLIGHT IS A GREAT DISINFECTANT

Mr. President, while I believe that it is extremely important that the very weak conflict of interest laws now on the books should be strengthened, I also believe that disclosure can be of great help. There is an old saying that sunlight is a great disinfectant.

Furthermore, this amendment is appropriate to this bill while the proposal I made yesterday for tightening the conflict of interest laws would apply to the Government as a whole and should properly have hearings to consider them before they are passed.

Basically what my amendment does is to require more detailed information from high ranking officers and all former procurement officers and plant representatives who go to work for the big companies than is now required. As I have said, much but not all of the information is now in the hands of the Pentagon.

But the major change is to require the same detailed data from the former civilian employees. This, I think, is a very proper requirement and is long overdue.

But more important is the fact that the amendment requires the Pentagon to make the data open to inspection by the press and the public, which they have formerly refused to do. In addition, it requires that an annual report be made to the Congress. This, I believe, will make it possible for Congress and the public to gain an overall view of the situation.

REGULAR FLOW OF INFORMATION

Mr. President, what my amendment would do is to make information available on an annual basis which, in the past has been available only when insisted upon by Members of Congress.

In 1969 I asked for and received from the Pentagon a list of high ranking former military officers now employed by the 100 largest defense contractors. The list given to me totaled 2,124 former officers in the employ of the 100 largest contractors. Ten companies alone employed 1,065 or over half of them.

It has been 10 years since similar information has been made public. In 1959, during the hearings on the Renegotiation Act, former Senator Paul H. Douglas asked for and received similar details. In that year there were 721 former high ranking officers employed by the top 100 companies—88 out of 100 reporting.

In the meantime, efforts by the press and public to get such information from the Pentagon failed even though the Pentagon had such information available from the data from the statement of employment it requires each retired officer to make and to keep up to date.

My amendment will regularize what I think is a proper disclosure practice. In addition, it will extend disclosure requirements to civilian as well as former military officers.

The PRESIDING OFFICER. The amendment will be received, printed, and will lie on the table.

ADDITIONAL COSPONSOR OF AMENDMENT NO. 101

Mr. HART. Mr. President, I ask unanimous consent that the name of the Sena-

tor from Wisconsin (Mr. NELSON) be added as a cosponsor of the pending amendment (No. 101).

Through inadvertence, his name was omitted both from the initial and the modified amendments when they were submitted.

The PRESIDING OFFICER. Without objection, it is so ordered.

NOTICE OF HEARING

Mr. McCLELLAN. Mr. President, the Committee on Government Operations has scheduled a hearing on S. 1707, a bill to establish a Commission on Government Procurement, for July 31, 1969. The hearing will begin at 10 a.m. in room 3302, New Senate Office Building.

The purpose of the hearing is to receive testimony from the Comptroller General and officials of the executive branch with respect to the bill. Statements from other interested parties will be received for inclusion in the hearing record.

NOTICE CONCERNING NOMINATION BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. DIRKSEN. Mr. President, the following nomination has been referred to and is now pending before the Committee on the Judiciary:

David A. Brock, of New Hampshire, to be U.S. attorney for the district of New Hampshire for the term of 4 years, vice Louis M. Janelle.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in this nomination to file with the committee, in writing, on or before Friday, August 1, 1969, any representations or objections they may wish to present concerning the above nomination, with a further statement whether it is their intention to appear at any hearing which may be scheduled.

ONE GIANT LEAP FOR MANKIND—NOT ONE BACKWARD STEP

Mr. ANDERSON. Mr. President, more than 100 years ago, the celebrated science fiction writer, Jules Verne, wrote a book entitled "From the Earth to the Moon." In it, he had three intrepid explorers take a trip in a capsule to the moon. Although some of his facts were wrong, this Frenchman unhesitatingly selected America as the country that would undertake such a mission. That was the image America had 100 years ago: Vital. Growing. Enterprising. Building. Willing to undertake new things. Restless to explore new horizons.

Jules Verne was right. Americans have gone to the moon. But the question is: "What does America do now?"

Here is what Jules Verne said:

The American people will never rest quietly until they have pushed to its last result and to every logical consequence the astounding step so daringly conceived and so wonderfully carried out.

Well, I hope he will be right about that too, but I am not so sure. Our courageous astronauts had hardly set foot on the moon before some people were saying,

Schultz, "The Fragmentation of the BAE"—*Journal of Farm Economics*, Vol. XXXVI, Feb. 1954, no. 1, pp. 1-22. From this paper come all direct quotations of Msgr. Miller on the re-organization of USDA.

ORDER FOR RECOGNITION OF SENATOR COTTON IN EXECUTIVE SESSION ON TUESDAY NEXT

Mr. BYRD of West Virginia. Mr. President, with respect to the order which has been previously granted, under which the able senior Senator from New Hampshire (Mr. COTTON) will be recognized on Tuesday next immediately following the prayer and the disposition of the reading of the Journal, that debate of 2½ hours should be in executive session. Therefore, I ask unanimous consent that it be in executive session.

The PRESIDING OFFICER. Without objection, it is so ordered.

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Hackney, one of its reading clerks, informed the Senate that, pursuant to the provisions of 42 United States Code 2251, the Speaker had appointed Mrs. MAY of Washington as a member of the Joint Committee on Atomic Energy, to fill the existing vacancy thereon.

The message also informed the Senate that, pursuant to the provisions of section 1, Public Law 689, 84th Congress, as amended, the Speaker had appointed Mr. DEVINE, of Ohio, as a member of that U.S. Group of the North Atlantic Assembly, to fill the existing vacancy thereon.

The message announced that the House had passed a bill (H.R. 12964) making appropriations for the Depart-

ments of State, Justice, and Commerce, the Judiciary, and related agencies for the fiscal year ending June 30, 1970, and for other purposes, in which it requested the concurrence of the Senate.

HOUSE BILL REFERRED

The bill (H.R. 12964) making appropriations for the Departments of State, Justice, and Commerce, the Judiciary, and related agencies for the fiscal year ending June 30, 1970, and for other purposes, was read twice by its title and referred to the Committee on Appropriations.

ACM

AUTHORIZATION FOR APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the unfinished business be laid before the Senate.

The PRESIDING OFFICER. Without objection, the Chair lays before the Senate the unfinished business, which will be stated.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. STENNIS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. Mr. President, it is very clear that we have had a wholesome debate on the pending bill and on several of its main features, but more particularly on an item that has become known as the ABM.

There have been presentations from the technical and scientific viewpoint, debates from the international and political viewpoint and the situation with reference to the timing, research, and development end of the minor part of the initial beginning of the deployment work.

I think that both sides have been presented in excellent fashion. We had an unusually fine discussion in the closed session, which had to be held because of some very sensitive information.

I think there has been no contest here as to time. Everyone has had as much time as they wished to take, even though I know that properly some of us want to

speaking and maybe some who have already spoken will address themselves to another aspect of the matter.

I frankly think that the subject matter has certainly passed a stage where we ought to consider, if at all possible—and I believe it is possible—having a vote on the pending amendment, which is the Cooper-Hart amendment.

And in a full and wholesome spirit and wanting everyone to have a chance to say everything he wishes, after conference with the Senator from Kentucky and the Senator from Michigan and the Senator from Texas and others, I want to express a very strong hope that we can begin to dispose of the matter. I want them to respond if they will as to how they feel about the matter.

I do not know that we can dispose of the matter without giving prior notice. We should not just try to get an agreement now. And that is not my purpose. However, certainly we can bring the matter up at the next session of the Senate and perhaps then make a proposal and agree upon it.

I think there ought to be at least 48-hours notice in advance of an exact time to vote.

The Cooper-Hart amendment presents the whole issue in one bite.

There has to be notice and there has to be time for debate and we have to allow for the crowded airports and skyways. That is the sentiment of those of us who have a special responsibility here in connection with the pending bill.

I will be glad to yield to the Senator from Kentucky or the Senator from Michigan, or they may have the floor in their own right if they would rather do that.

Mr. COOPER. Mr. President, I thank the Senator. I am sure the Senator from Michigan will also respond.

I have discussed the matter several times with the Senator from Mississippi and, of course, the Senator from Michigan (Mr. HART) and I have talked about it many, many times.

This is the third week of the debate. We considered that during the first week the Senator from Mississippi, as the distinguished chairman of the Armed Services Committee, would present the bill and discuss various sections, including the ABM. And, of course, that was done during the first week.

The Senator from Michigan and I intended to offer our amendment and ask that it be made the pending business last week. However, I think it was clearly understood that last week would not be satisfactory for the serious discussion of the amendment or any part of the bill. While it was a great week for the Nation and the world because of the moon landing, many were away, there was a holiday on Monday and with the closed session there was little time for debate.

On Wednesday, the Senator from Michigan called up the amendment and, on his motion, it was made the pending business.

It is my position—and while the Senator from Michigan will speak for himself, I think that he agrees with me—that we should proceed expeditiously to a vote.

July 25, 1969

CONGRESSIONAL RECORD — SENATE

-S 8597

Meyer Kestnbaum takes over CED in new era of influence, reads page 104 of *Business Week*, page 104, January 24, 1953.

Meyer Kestnbaum, president of Hart Schaffner & Marx, this week took over as the fourth chairman of the Committee for Economic Development has had in its 10-year history. Kestnbaum had served nearly three years as chairman of CED's principal working group, the Research & Policy Committee. Before that, he had been a member of this committee for two years. So he's no newcomer to leadership of CED.

Continuing CED's "New Era of Influence":

This continuity of management of CED—by the businessmen who belong to it, as distinct from its paid staff—is a big reason why CED has risen to high esteem and influence in national policy-making since 1942. . . .

CED's financial support comes from industry as a whole. . . . CED works on the premise that "What's good for the country is good for business". . . .

When a study is finished, the report is analyzed by members of the full committee who alone can submit memoranda, comment or dissent. . . . The theory behind this rule: Businessmen are qualified to pass judgment on the results of basic economic research.

The article writes of the impact of CED influence in the Marshall Plan:

. . . a deadlock in 1948 between Congress and the State Dept. over how the Marshall Plan should be implemented. A CED policy statement, an American Program for European Economic Cooperation suggested middle ground that was accepted happily by both sides. Paul Hoffman, was still chairman of CED, was selected to head the resulting Economic Cooperation Administration.

Mr. Yntema might choose to call CED's activities education. I choose to call it power. Mine is not a mathematical equation. It reads as follows:

CED (Meyer Kestnbaum) + Kestnbaum: Report = ACIR (economics planning, based on economic progress and growth).

NOTE II

While preparing this paper, I received in the mail, an excellently-written paper by a British economist, Dr. E. F. Schumacher, economic advisor National Coal Board of England. The address was a Des Voeux Memorial Lecture, *Clean Air and Future Energy*, presented to the National Society for Clean Air's annual conference 1967, Blackpool England. Dr. Schumacher's qualifications: Rhodes scholar at Oxford, repeatedly called upon to act as Economic Adviser to Governments and planning commissions in developing nations such as Burma and India "convinced him that aid and development policies need to be given a new slant as they tend to by-pass those most in need—the people in the rural areas." He describes himself as an economist "concerned with people rather than goods."

I enclose his material because he says so much better than what I tried to convey:

"Going back into history we may recall that when there was talk about founding a professorship for political economy at Oxford some 150 years ago, many people were by no means happy about the prospect. Edward Copleston, the great Provost of Oriol College, did not want to admit into the University's curriculum a science "so prone to usurp the rest"; even Henry Drummond Esq. of Albany Park who endowed the professorship in 1825, felt it necessary to make clear that he expected the University to keep the new study "in its proper place". (Dr. Schumacher lists quote source as Dwight Culler's "The Imperial Intellect." Yale U. Press, p. 250, 1955).

The first professor, Nassau Senior, was certainly not to be kept in an inferior place. Immediately, in his inaugural lecture, he predicted that the new science "will rank in public estimation among the first of moral sciences in interest and in utility" and claimed that "the pursuit of wealth . . . is,

to the mass of mankind, the great source of moral improvement". (source—John Stuart Mill autobiography, 1924 ed, p. 165).

Here I think relevant to add to Dr. Schumacher's comments on Nassau Senior. I quote from Cecil Woodham-Smith's masterful study of the Irish Potato famine, *The Great Hunger*: "I have always felt a certain horror of political economists," said Benjamin Jowett, the celebrated Master of Balliol, "since I heard one of them say that he feared the famine of 1848 in Ireland would not kill more than a million people, and that would scarcely be enough to do much good." The political economist in question was Nassau Senior, one of the Government's advisers on economic affairs."*

Dr. Schumacher continued:

And the great John Maynard Keynes, some 80 years later, admonished us not to "over-estimate the importance of the economic problem, or sacrifice to its supposed necessities other matters of greater and more permanent significance". (source here: Keynes, *Essays in Persuasion*, London 1933, p. 373).

It is hardly an exaggeration to say that, with increasing affluence, economics has moved into the very centre of public concern, and economic performance, economic growth, economic expansion, and so forth have become the abiding interest, if not the obsession, of all modern societies. In the current vocabulary of condemnation there are few words as final and conclusive as the word "uneconomic". If an activity has been branded as uneconomic, its right to existence is not merely questioned but energetically denied. Anything that is found to be an impediment to economic growth is a shameful thing, and if people cling to it, they are thought of as either saboteurs or fools. Call a thing immoral or ugly, soul-destroying or a degradation of man, a peril to the peace of the world or to the well-being of future generations; as long as you have not shown it to be "uneconomic" you have not really questioned its right to exist, grow and prosper.

I am asking what it means, *what sort of meaning the method of economics actually produces*. And the answer to this question cannot be in doubt: something is uneconomic when it fails to earn an adequate profit in terms of money. The method of economics does not, and cannot, produce any other meaning. Numerous attempts have been made to obscure this fact, and they have caused a very great deal of confusion; but the fact remains, Society, or a group or individual within society, may decide to hang on to an activity or asset for *non-economic reasons*—social, aesthetic, moral or political. . . . The judgment of economics, in other words, is an extremely *fragmentary* judgment.

Even within the narrow compass of the economic calculus, these judgments are necessarily and *methodically* narrow. For one thing they give vastly more weight to the short than to the long term . . . and then, secondly, they are based on a definition of cost which excludes all "free goods", that is to say, the entire God-given environment, except for those parts of it that have been privately appropriated. This means that *an activity can be economic although it plays hell with the environment*, and that a competing activity, if at some cost it protects and conserves the environment, will be uneconomic.

Economics, moreover, deals with goods in accordance with their market value and not in accord with what they really are . . . among primary good no distinction is made between renewable and non-renewable goods. . . .

*Cecil Woodham-Smith, *The Great Hunger*, Signet Edition, Harper & Row, 1964, page 373. Here I am grateful for Mr. Rossiter's pointing out the economist's attitude at that time.

We teach our children that science and technology are the instruments for man's battle with nature, but forget to warn them that, being himself a part of nature, man could easily be on the losing side. . . .

Something like an explosion has to occur before warning voices are listened to, the voices of people who had been ridiculed for years and years as nostalgic, reactionary, unpractical and starry-eyed.

The religion of economics . . . promotes an idolatry of rapid change, . . . the burden of proof is placed on those who take the "ecological viewpoint". . . .

You know, Dr. Hardin, the sad thing about Dr. Schumacher's paper is that it came from the Anti-Pollution League of the Connecticut River Valley, Brattleboro, Vermont. Citizens, at their own expense, have to do battle with their own-tax-supported Big Education—to publish the truths society has a right to. And we are further insulted by picked up the price-tag of the CED's power in the prices of their goods and services. CED is tax-exempt too.

James Kuhn wrote: "Advocacy of the market ethic is understandable, and insofar as it contributes to the continuous debate of public interest, it is desirable; but apotheosis of the market is dangerous and idolatrous. In suggesting that the competitive market was an institution of nature, guided by an invisible hand, Adam Smith provided his later disciples with the rationalization that it was the direct creation of God—a holy instrument for fulfilling His purposes. They forgot that men had created the market, and in raising it high, had fashioned a Golden Calf. They alienated themselves from the fulfillment of Smith's hope, which was that the free market would bring an increase in the wealth of the nation; and in turn the market alienated them from each other and their fellow men who bore the market's injustice.

James Kuhn, "What's Wrong With the Old Business Ethic," *Catholic Mind*, March 1965, reprinted from the Columbia University Forum. Mr. Kuhn was associate professor of industrial relations, Graduate School of Business, Columbia.

July 25, 1969

CONGRESSIONAL RECORD — SENATE

S 8599

Many Senators are interested in the amendment. They should have the opportunity to be present in the Senate at the time we discuss the time for a vote.

I agree with the suggestion that has been made, which, as a result of the discussion here today, will appear in the printed Record. It is to announce that on next Monday there will be a discussion on the floor as to a definite date to vote. Everyone will be notified and advised to be present and make their position clear.

I can say for myself I wish we would proceed as expeditiously as is possible to a vote.

Mr. STENNIS. Mr. President, I certainly thank the Senator. I know that has been his sentiment.

Mr. President, I am glad to yield to the distinguished Senator from Michigan.

The PRESIDING OFFICER. The Senator from Michigan is recognized.

Mr. HART. Mr. President, the able Senator from Kentucky has expressed, I think, fully the attitude which is mine with respect to assuring first that everyone who has an interest in this amendment, on either side of it, be given the opportunity to voice it; that the vote be established at a time sufficiently in advance to insure that anyone with travel problems or scheduled commitments will be able to be present.

I concur in the suggestion made by the Senator from Kentucky, that with this exchange in the Record today, we plan on Monday next to develop further the discussion, and at that time any Senator on either side of the amendment, who has a problem, a concern, or a suggestion be here to voice it. I think that all of us then will feel clear in our consciences that everyone has had an opportunity, and the Senate will have the benefit fully of the opinions of any of its Members on this subject before we proceed to fix a date.

Mr. STENNIS. I thank the Senator from Michigan.

As has been true with respect to the Senator from Kentucky all along, the Senator from Michigan has taken the high road, has given the utmost cooperation, and has given the utmost consideration to every Senator, regardless of which side he is on, to have full time for discussion.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. STENNIS. I yield to the Senator from Texas.

Mr. TOWER. I thank the distinguished Senator.

I believe we are probably all in concurrence. There seems to be no disposition on the part of anybody to engage in any dilatory moves or debate.

The Senator from Kentucky just suggested that perhaps we sort of informally agree on something like 3 o'clock Monday afternoon to discuss this matter, which will give anyone out of town a chance to return, and we can work it out to everyone's satisfaction.

Perhaps we can get a line on how many Senators have additional remarks to make. Considering that, we perhaps can arrive at a time certain for the vote.

Speaking for those whose views I express, we are ready to discuss it Monday afternoon. I think that is eminently fair, and I think the Senate is adequately on notice that that is what we are going to do on Monday.

Mr. STENNIS. I thank the Senator from Texas.

I think this reflects an attitude that we should not let a staleness develop about this matter. No Senator wants to do that. I believe that if we go on much longer, it will become stale. It will be stale with the Senators; it will be stale with the public. The matter is fully understood.

With the allowance of this time, everyone will have notice that there will be a request; and then with the allowance of more time for discussion, the outlook for proceeding is very good.

I think we should state that this has been mentioned to the majority leader and the minority leader, and they like the idea of proceeding as expeditiously as possible to a vote.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. STENNIS. I yield to the Senator from Kentucky.

Mr. COOPER. The Senator from Texas has just said that we should fix the time certain as 3 o'clock on Monday afternoon and ask unanimous consent at that time that time be given for discussion.

Mr. STENNIS. I think that is a good suggestion. I want to agree to it, subject to this possible adjustment: The Senator from Mississippi has mentioned 48 hours as a minimum time of notice—that is, the lapse of time between the time of the actual agreement and the time of voting. If we set it for 3 p.m. and we have a good deal of discussion, that would run into late afternoon. Would it be just as well to say we will begin that discussion at 1 o'clock on Monday, with the idea that if we could conclude the discussion about a date within an hour or two, perhaps then a vote could be agreed upon for Wednesday? If we do not, it will take it into Thursday, and the week will be nearly gone.

What is the response to that? Is there any particular reason why the Senator wants 3 o'clock?

Mr. TOWER. It seems to me that we could go ahead and proceed at 1 o'clock, if everybody's interest is protected, and we could postpone the discussion to later on. I would be willing to set a time later in the afternoon. One o'clock sounds all right to me. I think we can all agree to protect everyone's interests, if someone cannot get here for the discussion at that time.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. STENNIS. I yield to the Senator from Kentucky. He may have a special reason.

Mr. COOPER. I think a time certain should be set. The Senator from Texas (Mr. Tower) suggested 3 o'clock, so that anyone who might be away could get back in time.

I have stated my position. I believe we should move forward as quickly as we can and come to a vote. But I cannot

speak for others who are interested in this amendment, either for it or against it.

I do know—I must be very frank—of a situation which I would think would postpone the vote until after Wednesday; because I understand that the Senator from Tennessee (Mr. GORE) is to hold a hearing on this subject on Wednesday morning. He has not spoken to me, but I have this information, and if that is correct, I would assume that he would object to any vote until after that time. I have stated the position as well as I can, and my own position.

Mr. STENNIS. The Senator from Kentucky has been very earnest and concerned about this matter all the way through, as has the Senator from Michigan and others.

I am pleased that we can set Monday for a genuine discussion of this matter, and give notice, so that everyone who wishes to can be present.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. FULBRIGHT. I just entered the Chamber. I did not hear the discussion.

Mr. STENNIS. We just started an around-the-floor discussion of the prospects for getting an agreement on a vote on the Cooper-Hart amendment. We were not asking for any agreement now. We were going to give notice that on Monday this matter would be brought up and a request made for some agreement as to voting. Certainly, we would not even request it with less than 48 hours elapsing before the agreement was reached, in order to provide travel time and speaking time. Among ourselves, it seems agreeable to have this discussion on Monday and to proceed as I have said.

Mr. COOPER. May I add to that?

Mr. STENNIS. Yes.

Mr. COOPER. The Senator from Mississippi, the Senator from Texas, and I were discussing providing means for all Senators interested to be present at a time which is known, and we have agreed upon Monday—I am not sure whether we have agreed upon the hour as yet—when we will discuss the issue of trying to agree upon a time to vote.

I have stated, and so has the Senator from Michigan (Mr. HART) that our position is that we should proceed as expeditiously as we can toward a vote. I have made it clear that I do not speak for others who are interested in this matter, and I have just said that I have been informed that the Senator from Tennessee plans to secure further information at a hearing; and I would assume from that that he would not consent to vote before that hearing is held.

Mr. TOWER. All we are doing now is talking about agreeing on a time to talk about a time to vote.

Mr. FULBRIGHT. I see.

Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. FULBRIGHT. I am very glad to have that information. I, too, am thinking of a hearing and trying to set up a hearing for Monday.

Just yesterday, a man who I think is well informed about the matters of com-

S 8600

CONGRESSIONAL RECORD — SENATE

July 25, 1969

munication told me that he believes with respect to the national communications systems—and he is well informed—that the effect of radiation upon radars, upon electrical communications, is very significant in this debate and it is a matter we overlooked. I do not believe the subcommittee heard much of anything on that subject. But to give an illustration of the immense importance of it, in order to overcome or destroy the effectiveness of an ABM, all you have to do, Mr. President, is to send over one precursor weapon, as he calls it, explode it well above the radars and it would nullify and throw out of communication for 30 minutes to 2 hours the effectiveness of the radars, and during that time they could do anything they like.

I understand it is a slight effort, and it could be overcome. The Russians have discovered this and have withheld going along and building their ABM. The CIA has reported in secret session—I do not think it is secret, because this has been publicly stated—that the Soviets have held up proceeding with the deployment of their ABM. Anyway, it is an interesting further item about the effectiveness of it.

No one is alleging, as has been said here, that the ABM will not work. No one is saying an ABM could not be created that would work under normal conditions. The day before yesterday the Senator from Arizona asked, "How can anyone question our ability to build an ABM after what we have seen on the moon?" It seems to me that is totally irrelevant. As a matter of fact, if the Russians or anyone else cared to interrupt the moon shot with very slight interference electrically, they could have done it, because it is not possible to interdict electrical interference. We heard a good deal about that in the hearings on the Vietnam war.

There are items I would like to go into. What I would like to suggest to the Senator from Mississippi, for that reason and other reasons, is that we arrange to call up other amendments on this same bill. I have some amendments and I know other Senators have amendments; and we could defer the vote on this one—which has been discussed quite well, although new facts are coming up—until after the President returns.

I say that for the following reasons. I think it might be unwise and inappropriate, with the President out of the country, and more particularly behind the Iron Curtain, as has been said here—I understand he will be there next week—to take action on a matter in which he has involved himself, as in this matter. He has taken no position on a number of other matters. I do not think he has taken a position on some of the matters I have in mind, such as research projects, which have been discussed superficially on the floor. There are amendments which I think the Senator from Wisconsin is going to submit in which the President is not involved. He certainly is not directly involved in them and has not taken a position.

I think it would be bad policy to bring up a measure he is interested in and vote on it while he is abroad. He is due back on the 3d of August, as I understand.

I recommend to the Senator from Mississippi that, if there is the urge to go on with this measure, we discuss and vote on other amendments, reserving the vote on this amendment, which is the most important of all the amendments, until after the President returns.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. TOWER. Mr. President, I can say with certainty that the administration would not mind if we voted while the President is absent from the country. I do not think the administration has objection to our voting perhaps in the middle of next week. All we are saying is that now we would like to set a time to discuss this matter and put Members of the Senate on notice. We are not making a decision on voting. At that time the Senator from Arkansas can come up with whatever suggestion he wishes.

Mr. FULBRIGHT. I was not making my suggestion simply to please the President. He has expressed himself on the ABM positively. It is a matter in which he is interested.
