

RESCUE/SIGNAL DEVICES

25 YEAR  
RE-REVIEW

- A. URT-21 -- Installed in parachute
1. Set to automatically be turned on at main parachute deployment, i.e., approx 16,000 feet above sea level.
  2. Beacon bracket designed to allow pilot to remove the beacon from the parachute harness upon reaching the ground/water, for manual operation.
  3. Transmitter has a peak power output greater than 200 milliwatts and a life of 24 hours or more at 0°C.
  4. Single Frequency (243 mc) Transmitter. Ground-to-air range to an aircraft at 10,000 feet exceeds 80 nautical miles on tone and 50 nautical miles on the automatic direction finder (ADF).
- B. ACR RT-10 (UHF - 250 mc) Transceiver
1. Carried in leg pocket of pilot's pressure suit as an optional item.
  2. Battery life of 20 hours at 20°C and 4 hours at 0°C at a duty cycle of  $\frac{1}{2}$  hr Transmit and  $\frac{1}{2}$  hour receiver.
  3. Transmitter power output 200 milliwatts minimum and a beacon mode of transmission which transmits a swept tone modulated signal (300-1000 cps 2-3 times/second) for alerting and direction finding by rescue aircraft.
  4. Ground-to-air range to an aircraft at 10,000 feet altitude exceeds 80 nautical miles on tone and 40 nautical miles on voice and ADF.
- C. ARS-100 (UHF/VHF Transceiver 121.5 mc/243 mc)
1. Carried in seat kit.
  2. Operating characteristics essentially the same as the RT-10 above.
- D. FLARES
1. Various flares/smoke signals are carried in the seat kit and/or ASKIT (auxilliary survival kit) which may be carried in the leg pocket of the pilots pressure suit.

FLOTATION/LIFE RAFT

A. UNDERARM LIFE PRESERVERS

1. LPU-3P preservers attached to the parachute harness and located under both arms are worn on all overwater flights.
2. Activation requires pulling a lanyard on each packet to inflate both sides of the LPU. This would be done during parachute descent (i.e. below 15,000 ft.)

B. UNDERSUIT FLOTATION GARMENT

1. The undersuit flotation garments were recently modified so the actuating lanyard is centrally located on the front of the coverall and accessible with either hand.
2. This flotation garment is used as a backup for the LPU's and generally would not be inflated until desired in the water (after loosening parachute chest strap, getting out of parachute, or boarding the life raft).

C. LIFE RAFT

1. The new open-ended life raft is carried in the seat kit on all overwater flights.
2. It is automatically inflated when the seat kit is released prior to water entry.
3. The sequence of life raft boarding is shown in the attached photographs numbers 1 through 5. Also the use of the flotation devices is seen in these photographs.
