REMARKS:

1. [] CGS, presented me with the attached draft requirements on Soviet SAM Systems boiled down from the batch of material that OSI reviewed for CGS last December. ORR and DD/S&T are being asked to comment on these requirements and offer suggestions as appropriate. For example, [] thinks that OSI may wish general questions to be more specific or even eliminated. He also asks your views on security classification: specifically, whether the NOFORN could be dropped.
