DIARY NOTES

A-DD/S

2 May 1966

1. In reporting the move [redacted] to the Ames Building, 25X1A the DD/P asked about secure telephones. He was surprised to learn there was only one secure line. I verified that this is the case, and it only has two extensions. Commo is attempting to develop a system which will permit six extensions. The problem is really one of acquiring another circuit. These branches have access to the KY-26 link for hot cables, however.

2. Mr. Helms did not take exception to our paper on family visits, but he does question the advisability of the program at this particular time. He feels that newspaper treatment of it will relate to the reportedly bad morale in the Agency, and he opines that we do not need that kind of publicity at this time. He is going to speak to the DCI and we will hear more about it later.

3. I briefed Col. White on the CT problem which has developed with the DD/P. He cautioned not to let this be decided unfavorably at a level below the front office.

4. [redacted] came in with a R&D paper which as it stands is within the DD/S authority, but all GFE has been separated out, which, if added, would put the project over. I stated that I did not think that this was in violation of the principle especially since the entire project is in the R&D catalogue.

5. I went over [redacted]'s crisis management paper with him. He is quite excited about this and thinks it will be an interesting and valuable presentation.
