17 May 1966

Dear Colin and Al,

In accordance with the provisions of the Contract FH-2510 concerning procurement of "off-the-shelf" test equipment, you are authorized to procure in our behalf the following items in a quantity of one (1) each:

a. Power supply (5015-S) 1-50 VDC, 0-1.5 amp	\$235.00
b. Power supply (28 volt)	200.00
c. Power supply (6 volt)	200.00
d. Microvolter (5466)	220.00
e. Oscillator (200 CD)	195.00
f. Counter (522B)	950.00
g. Function generator (202A)	550.00
h. Black body & controller	2,375.00
i. Decade voltage divider (1454A)	162.00
Total	<u>\$5,087.00</u>

There may be a possibility of ordering an oscilloscope and its peripheral equipment in the future. However, I would like you to review the need for an oscilloscope such as the 545. It has been my experience that most engineers "require" a 545 when, in the majority of cases, a Heathkit would suffice.

Even though I have authorized the procurement of the function generator, I request a phone call describing its use and the amount of use anticipated for this item.

It may be desirable to order standard rack mounted units instead of cabinet mounted units. I would like you to evaluate this "trade off" for me on the basis of cost and operational considerations prior to engaging in the procurement of cabinet mounted units. Usually the rack configuration is much easier to use in a maintenance situation.

If I can be of further assistance, please call.

Yours truly,

SIGNED

Clay
