Dear John:

25X1 I have asked to prepare the attached resumé of our analysis of our Type II Configurations. In our opinion, these are desirable improvements and are not of the "make-work" variety. In two cases (UTB and color), we do not suggest that the work be done at this time, but include the discussions for information. A third is as a result of user requests and we cannot make a recommendation. The other five points, as emphasized in the letter to Lou, should be given consideration.

I hope that you will find time to thoroughly evaluate these proposals yourself. If we are to stay in business, I think we should be given an opportunity to improve the quality and reliability and to make the product more useful to the Customers.
