INTRODUCTION

This publication consists of a detailed breakdown of the decimal classification system used by Washington Document Center for the purpose of organizing documents, mainly in Japanese but also in other languages, into readily accessible subject categories. It is based on the 1942 edition of the Japanese MORI-Kiyoshi Decimal Classification System (NIPPON JUSHIN BUNRUI HO) - chosen because of its design for application to Japanese material - modified to suit the needs of a mainly military and naval library.

The chief modification was made in the Military, Naval, Air and Civil Defense blocks (i.e., 396, 397, 398 & 399), where the final digit chanced to correspond with the initial digit of the appropriate blocks of the IG System. Thus a more detailed subdivision was simply and practically attained by the combining of the MORI-Kiyoshi and IG Systems in these blocks. Further additions were made where the system proved to be insufficiently detailed or out of date - as, for example, on the subject of nuclear physics.

It is believed that the system as it stands in the following publication is adequate for the classification of material on any subject at the present time.
