Ad Hoc #43 - [redacted]

25X1

The oscillator is going and linearity checks are being run. A meter has been ordered for making accurate frequency checks.

Three circuits have been designed for the switch to save on battery life. While these circuits do have low current drain, they present the problem of taking up more space. Incorporating the switch in the transducer still appears to be the best solution.

In only one out of three [redacted] have they been able to put the antenna. On this basis, it appears that substitute [redacted] will have to be made for each job.
