

CONFIDENTIAL

July 10, 1957

Dear Sir:

Attached are two copies of our "artist's conceptions" of the AB-3. This particular sketch illustrates the use of the transistorized receiver, combines the two power supplies and removes the recognition control from the function switch. Please note the high degree of functional engineering that results from this system packaging.

We do not wish to imply that this particular packaging is specifically recommended but we feel that it does convey the type of "functional system packaging" desired. You no doubt have several ideas of your own and [redacted] advised in a recent phone conversation that he would like to discuss packaging techniques as early as possible.

Please advise [redacted] that we will be available on 15, 17, and 19 July and should anyone of these dates be convenient for a Washington visit, please let us know.

SM, WJ
