2. The first unit of the 16 deliverable battery chargers is nearly completed and it will be shipped the week of 18 May 1959. The present configuration of the battery charger is such that the battery sits on top of the charger. Charging is started by the battery weight on a microswitch. The battery charger will provide a 600 ma charging rate at 12 or 14 volts. When the battery is completely charged, an indicator light will go out. This battery charger is quite rugged. It is possible to short the output with no effect on the charger. The charger is designed for 115/230 volt operation, 45 to 65 cycles per second.
