Office Memorandum • UNITED STATES GOVERNMENT

TO : Chief, Engineering Division, OC

10# SEP 7-266
DATE: 12 December 1957

FROM : Chief, Supplemental Programs Division, OC

SUBJECT: Proposal for Three-foot Parabolic Dishes

Request to Procure

REF: 11239 R&D (Attached)

25X1

1. The original concept of having five dishes made with one feed for for immediate use, and the remaining four as shelf items has changed.

25X1

2. This is due to the possibilities of inflatable dishes being made in sizes considerably larger than is practicable with metal dishes in pouchable packaging.

who accompanied the writer to will undoubtedly confirm this fact in his report.

25X1

3. The crash requirement still exists for a dish with a feed. It is therefore requested that one dish only be procured. The polarization should continually rotate from vertical to horizontal. This requirement must be met, as the received signal is a reflected one and polarization on arrival is unknown, it could well be anywhere between true horizontal and true vertical.
