Copy of TTY - 8 November 1957

I am giving you some advance notice of a project that will be coming up shortly. When the project hits it will have a high priority. We will need something like the TA-1 but with more power output. It will have to be capable of being keyed by a unit like the [redacted] We would like to have something smaller than the [redacted] but this may not be possible. We will be furnished the actual receiver to be utilized. The unit that we add must be small, removable, and easy to install and use. In our preliminary discussions about an

[redacted] I am passing this along now so that you can start thinking about the problem. I do not know at this time when we can expect to get the receivers. We will probably have a couple of months to do the job after we get the receivers. Any questions? K

25X1

Steer clear of any AC DC receivers if possible. The sooner we get the receiver the better. This is all for now. Do you have any more? KL

We do not have any control over the time element on getting the receivers. I do not think we will be faced with the AC DC problem because I don't think they use that type where these will come from. However will pass along a word of caution anyhow. That is all except get the brain factory going. K
