D-6498
Hsin-feng Processing Plant was built using foreign design and facilities during the first 5 year plan (1953 - 1957). Workers broke away from the "western influence" through technical reform movement and produced methods such as medium temperature rolling of aluminum alloy material. Products produced by this plant contribute toward the national construction. The quality of products has improved greatly.

Photo shows a large supply of alloy materials produced by the Hsin-fen Processing Plant
