SEARCH FOR NUCLEAR TESTING IN AREAS OF SEISMIC EVENTS
SINO-SOVIET BLOC
(June, August, September 1961)

This report presents the results of a search of available photography covering the areas of 18 unidentified seismic events in the periods 8-28 June, 30 August, and 11-13 September 1961 submitted with OSI Requirement R-175/61. The search was for any signs of preparations for, or effects of, any clandestine nuclear testing in the Sino-Soviet Bloc. No indications of nuclear testing were identified.

Where photography was available, an area having a radius of approximately 25 nautical miles from the coordinates of the epicenter of each event was searched. In several cases only part of the area was covered, and in some cases the area was partially or completely covered by clouds and/or haze. Photography dated more than 2 years prior to the dates of the events was not included in the search.

It should be kept in mind that characteristics of some of the photography (small scale, poor image, obliquity, partial coverage, weather conditions, etc.) considerably hindered the photographic search.

The following is the status of photographic coverage of the epicenters:

1. Epicenters with partial or complete photographic coverage	16
2. Epicenters without photographic coverage	<u>2</u>
Total	18

Table 1 is the list of seismic events in the order of occurrence, giving the location, photographic coverage available, and results of the photographic interpretation search.
