PHOTOGRAPHIC INTERPRETATION REPORT

NPIC/R-261/66 SEPTEMBER 1966 Approved For Release 2000/05/10: CIA-RDP78B04560A005300010022-6

WARNING

This document contains information affecting the national defense of the United States, within the meaning of Title 18, sections 793 and 794, of the U.S. Code, as amended. Its transmission or revelation of its contents to or receipt by an unauthorized person is prohibited by law.

SUMMARY OF ACTIVITY IN CUBA (1 JANUARY 1966 - 30 JUNE 1966)

Introduction

This summary is a report of significant activity observed on photography from 37 high altitude missions flown over Cuba between 1 January and 30 June 1966, and updates prior publications covering 1963, 1964, and 1965.

Highlights of activity observed during this reporting period include the following:

- 1. SA-2 missile activity
- 2. Cruise-missile activity
- 3. Airfield activity
- 4. Port activity
- 5. Electronics activity
- 6. Military activity

SA-2 Missile Activity (Figures 1 and 2)

Conversion of unrevetted SAM sites to permanent sites and utilization of adjacent temporary sites during the construction phase occurred at the following sites:

La Catalina

La Salud

Campo Florido

Guara

La Cachimba

Ranchuelo

Constancia

SAM sites that remained unrevetted are as follows:

Alquizar

Majana 2

Santiago de Cuba

Holguin

Los Angeles

Permanent revetted facilities were constructed at the following SAM sites:

Punta Brava

Santa Isabel de las Lajas

Santa Fe

San Pedro de Cacocum 2

No apparent change in launch and support facilities was observed at the following SAM sites:

Holguin

Los Angeles

Maldonado

Palma Soriano

was partially vacated on

San Diego del Valle SAM Site. This site

25X1D 25X1D 25X1D 25X1D 25X1D 25X1D	site was being revetted and the temporary site remained occupied on Campo Florido SAM Site. The original site was vacated and a temporary field-type site was established 0.2 nm west-northwest on The original site was in the initial stage of being revetted on Construction was apparently complete and the temporary site remained occupied on Guara SAM Site. The original site was vacated and in the early stage of construction, with	consisting of 6 launch revetments, 1 missile-hold revetment, and 1 other revetment, all apparently in the midstage of construction. This site will probably replace Siguanea SAM Site (Figure 4). San Pedro de Cacocum SAM Site 1. This site was first identified on Although support facilities include 2 barracks and 5 support buildings, it is apparently a temporary field-type site (Figure 5). San Pedro de Cacocum SAM Site 2. First identified on this site consisted of 1 completed launch revetment, 5 launch revetments in the early-to-midstage of	
25X1D	1 launch position being excavated, and a temporary field-type site was established 0.1 nm west	construction, and 1 missile-hold revetment under	
25X1D	on	construction (Figure 6). No missile-associated vehicles or equipment was observed. This site	
25X1D	while the temporary site re-	will probably replace San Pedro de Cacocum	
25X1D	mained occupied. La Cachimba SAM Site. On	SAM Site 1. Majana SAM Site 1.	25X1D
25X1D	1 launcher was removed and the	all launch and guidance equipment was	25X1D
25X1D 25X1D 25X1D 25X1D	central guidance area was partially vacated. The original site was completely vacated on and a temporary field-type site was established 0.2 nm east-northeast. As of the original site remained in the late stage of construction and the temporary site remained occupied.	removed and the site has not been reoccupied. Majana SAM Site 2. Five launch positions and the central guidance area were vacated on and all missile-associated vehicles and equipment were removed on The site was reoccupied on	25X1D 25X1D 25X1D 25X1D 25X1D 25X1D
25X1D 25X1D 25X1D	Mariel SAM Site 2. Three missile-hold positions were in the initial stage of construction on No temporary field-type site was observed during this reporting period. Preston SAM Site. All missile-associated equipment was removed on The site remains abandoned. Alquizar SAM Site. This site was vacated	For the first time, a dummy SAM Site was reported in Cuba. On a dummy site was observed 1.1 nm south-southeast of La Salud consisting of 6 dummy missiles on props in a circular pattern, a simulated central guidance area, and a missile-hold area with 2 dummy missiles. No prime movers, vehicles, radar, or other missile-associated equipment was	25X1D
25X1D 25X1D	on but subsequently was returned to operational status. Siguanea SAM Site. This site was partially vacated on and approximately 15 probable missile canisters and 50 cargo	observed (Figure 7). Victoria de las Tunas SAM Assembly Area. On the site was vacated and remained abandoned throughout the reporting period.	25X1D
25X1D	trucks remained.	La Veguita SAM Assembly Area. This SAM assembly area was first identified on	25X1D
25X1D	this site was unrevetted and appeared to be temporary. On the same date, a revetted site was observed 0.4 nm east-southeast	The vehicles and equipment were probably brought from Victoria de las Tunas SAM Assembly Area.	25X1D

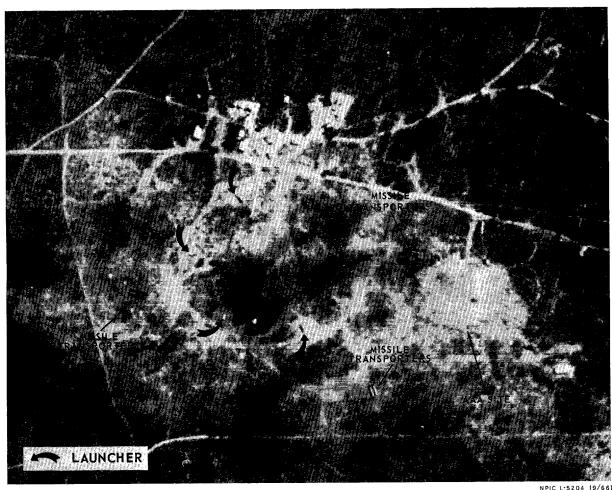

FIGURE 5. SAN PEDRO DE CACOCUM SAM SITE 1,

25X1D

25X1D

Santiago de Cuba SAM Assembly Area. all missile-associated vehicles and equipment were moved to an area 1 nm north of the original SAM assembly area.

The 2 SAM training areas, Santiago and El Cano, remained active; however, no unusual activity was observed during this reporting period.

Cruise-Missile Activity

The following installations were active during this reporting period:

Guanajay Cruise-Missile Site Siguanea Cruise-Missile Site Santa Cruz del Norte Cruise-Missile Site Guanabo Cruise-Missile Site San Jose de las Lajas Cruise-Missile Storage

Airfield Activity

Airfield activity was generally routine during this reporting period. San Antonio de los Banos remained the primary military airfield in Cuba. , a maximum number of aircraft including 37 FISHBED, 3 FARMER, and 18 FAGOT/FRESCO were observed at this 25X1D airfield. On 1 partially assembled COKE and 2 COKE fuselages were observed at Campo Libertad Airfield. This is the first time that COKE aircraft have been observed in Cuba.

the PF and 1 large freighter anchored alongside were observed approximately 15 nm west-northwest of Siguanea off the Isla de Pinos. All 5 hatches were open on the freighter and part of the superstructure was apparently removed.

Port activity was routine, with the exception

, a PF of the U.S. Takoma class was ap-

proximately 200 feet offshore at La Fe Port

Electronics Activity

Three EW/GCI radar sites were first identified during this reporting period. On Los Angeles Radar Site

1, located immediately northeast of Los Angeles SAM Site, was observed consisting of 1 TOKEN radar, 1 van truck, and 6 van trailers.

Holguin EW/GCI Radar Site 2, located

0.2 nm southeast of Holguin Airfield, was observed consisting of 1 TOKEN-type radar, 1 van trailer, and 1 associated building on The site was vacated on and the equipment was probably moved to the original, reactivated Holguin EW/GCI Radar Site at the northeast

25X1D 25X1D 25X1D

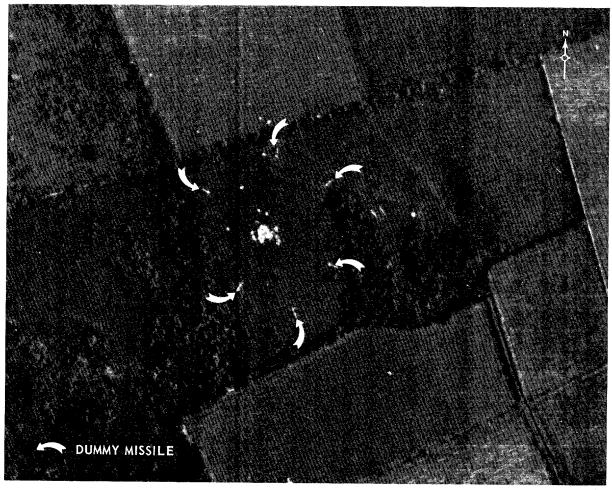

FIGURE 7. LA SALUD DUMMY SAM SITE,

NPIC L-5206 (9/66)

end of the Holguin Airfield runway. The original site now contains 1 BAR LOCK early warning radar, 1 ROCK CAKE/STONE CAKE height-finding radar, 1 FLAT FACE radar, 4 van trucks, and 14 van trailers.

San Antonio de los Banos EW/GCI Radar Site 2 was observed 0.5 nm north-northeast of San Antonio de los Banos on

radar, 1 probable ROCK CAKE/STONE CAKE radar, 6 van trucks, 4 van trailers, and 2 large and 1 medium Soviet tent. The site was vacated

Also of interest were 6 EW/GCI radar sites where radar and associated equipment were removed. Since ________, no radar or associated equipment has been observed at Santiago de Cuba EW/GCI Radar Site. The only activity observed was the presence of cargo and utility trucks. the site contained 14 tracked prime movers, 39 cargo trucks, and 5 van trucks.

No radar or associated equipment has been observed at Cayo Largo Radar Site and Sagua la Grande EW/GCI Radar Site 2 since
