Dear Ray:

Per our telephone conversation Friday, we understand that you can accommodate our request for 22-1/2 KVA, three phase, 60 cps, 240/416 volt four-wire Wye power. We will take our entire power requirements at this voltage.

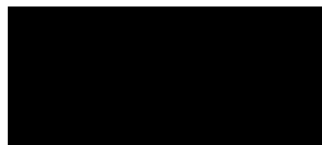

This is very helpful for it allows us to use a fairly standard constant voltage transformer instead of specials, which would cause considerable problems.

Two copies of this letter are enclosed. Will you please send one to Mr.

 for me. Thanks.

STATOTHR

Sincerely,
STATOTHR

Project Engineer
