

September 12, 1963

Dear Wil:

STATINTL

The proposal from [redacted] Incorporated for Review of Study Phase of 4X Enlarging Laser Printer has been received and reviewed by the Staff.

While a need existed for such a study at one time, recent and intended additions to our Staff will provide the scientific capabilities necessary for critical evaluation. [redacted] field of specialization for the past several years has been the theory and application of coherent optical systems. We also anticipate the services of a physicist whose interests and background are especially suited to the problem. Both are capable experimentalists. The evaluation of the Laser Enlarger will therefore be made "in-house."

STATINTL

This action should not discourage similar proposals in the future. There are several areas in which our Staff will not be technically expert, and they will require aid from time to time. Under these conditions, proposals will always be welcome.

STATINTL

Very truly yours,

*Signed*

STATINTL
