1. Dual Screen Measuring Projector. They were pleased to know that the machine was received well during installation. They have high hopes for its good operation. The Ferranti units are the items they are most concerned about. (Development of the Telecomputing linear Phasolvers should be pushed on an urgent basis.) They learned a great deal during the development of this machine and subsequent machines will benefit from this development experience.

2. Variable format film reader. They were very happy for the continuity provided by this job. They will be able to retain their hard won skill and experience and the machine should be better for it. This is one of the few outfits whose machines have the ruggedness, stability and quality required by your very exacting requirements. They were expecting a man named [Redacted] any day, to discuss this contract they presumed.

3. There was no mention of [Redacted] leaving. Ed seemed thoroughly engrossed in the technical problems and didn't sound like a short termer. [Redacted] has returned full time to the Rad Lab and is no longer connected to [Redacted]. They are expecting [Redacted] about Tues. June 11.
