CUSTOMER VISIT NOTES

DATE: 23 February 1966

ATTENDEES: BB, ED - Customer Representatives

[REDACTED]

1) Discussed interfacing of encoders with customer's counters. Gave customer Data Tech encoder output and connection information and clarified encoder wiring needs. Apparently, vendor building interface network does not know much about Data Tech encoder used in the 552A #103 system. There is also a question whether encoder will drive encoders, therefore, customer was given an encoder to help settle some of the problems.

2) Customer given 552A check-out procedure for his personal use, and suggestions of improvement and additions to cover system check-out with encoders. We suggested that encoder interface and counter equipment be present at [REDACTED] during the final debugging and check-out phases at acceptance so that problems at customer's facility can be minimized.
