SECRE	UNCLASSIF
	Approved For Release 2004/03/26 : CIA-RDP78B04747A002200020017-8 MARRATIVE REPORT
	Progress reports for October, November, and December have been received.
	Inspection visit of 11 February 1966:
	Attendees:
	l. The instrument design was reviewed and again was told that the vibration of the stereoscope was extremely critical and if the instrument transmitted any vibration to the optical assembly the viewer would be completely unsatisfactory and not acceptable. The contractor is planning to mount the microscope transport assembly on a single ball bushing rod; mounting the opposite side on a free roller bearing. was told that with this one brake system (on the ball bushing rod), it is doubted that sufficient stability can be achieved.
	2. Since the high intensity tracking light source will not follow the rhomboid in theta motions, will provide a one inch diameter light spot.
	3. The total height of the instrument must continue to be reduced. The knee space will be 24" wide and 20" deep.
	4. The glass pressure plate lowering mechanism (polynoid) will be connected into a one second delay line to prevent that glass from oscillating when film motion is stopped.
