

STAT

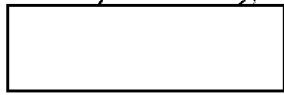

will supply

- Histogram of density traces
- 5 and 95% occurrence pts. (Density at)
- 50% pts (Density at 50% occurrence)
- Exposure for 50% occurrence pts.  
mean Log Exposure  
(will use R-2 from bucket)
- $\Delta$  log Error from 1.34

DECLASS REVIEW by NIMA/DOD

FOR.

Visit week of 29 March 71

- 1- Does his analysis consider only the T.34 exposure criterion or is the T.02 option considered when appropriate?
- 2- At what point does the conversion of Macro-Micro Densities occur - before or after histogram?
- 3- Is table of macro vs micro available?
