CORONA REPORTS CONTROL MANUAL

I MAY 1970

WARNING

This document contains information affecting the national security of the United States within the meaning of the espionage laws U. S. Code Title 18, Sections 793 and 794. The law prohibits its transmission or the revelation of its contents in any manner to an unauthorized person, as well as its use in any matter prejudicial to the safety or interest of the United States or for the benefit of any foreign government to the detriment of the United States. It is to be seen only by personnel especially indoctrinated and authorized to receive information in the designated control channels. Its security must be maintained in accordance with regulations pertaining to the designated controls.

FOREWORD

GENERAL

This manual will be used to exchange information between interested parties regarding a highly classified project. Each recipient is responsible for safeguarding this manual in accordance with existing regulations and directives.

OBJECTIVE

This manual should provide an organized flow of operational information which is clear, concise, and presented in a simple and standard format.

REVISIONS

Revisions may be proposed by any addressee. Recommendations for changes should be forwarded to the NRO Satellite Operations Center for evaluation and approval. Manuals will be revised only by the authority of the Satellite Operations Center. Revisions will be sent by the Satellite Operations Center to applicable manual holders in one of two formats - interim changes or page-for-page changes. Interim changes will be implemented by a  message for pen-and-ink changes to the manual. Page-for-page changes will be published and distributed by the Satellite Operations Center for insertion into the manual. Page-for-page changes will include all previous interim changes. For example, Interim Changes 1-1, 1-2, and 1-3 would be included in a

page-for-page Change 1. The holder is responsible for the destruction of superseded pages resulting from a page-for-page change. Revisions will be recorded on the Record of Revisions page.

PRECEDENCE

Precedence listed for each message is the precedence recommended under normal conditions; however, the originator of the message may increase or decrease precedence as the situation demands. Flash precedence has not been used in this manual. It is authorized only in extreme cases. All dates and times transmitted in messages will be by the Greenwich date/time group (Zulu time).

EFFECTIVE DATE

This manual becomes effective upon receipt. All previous editions of this directive will be destroyed in accordance with appropriate regulations and directives.

TRANSMISSION OF MESSAGES

Messages are assumed transmitted by cable unless specifically noted otherwise in message format.

GLOSSARY

I. INTRODUCTION

It is imperative that all using organizations are in complete agreement when using certain terms or designations found in this manual. If there is a conflict between terminology used in a message format and those listed below, the ones listed below will be considered as correct and will be used.

II. DEFINITIONS AND DESIGNATIONS

A. CORONA Operations

The operational reports contained in this manual apply to CORONA J-3 systems. To differentiate between the first and second recovery package of a mission, the first recovery payload will use the suffix 1, e.g., 1112-1, and the second recovery payload of the mission will use suffix 2, e.g., 1112-2.

B. Orbit Pass (Revolution)

The chronological orbit phase will begin with the satellite's first northbound crossing of the equator. Orbit pass numbers will increase sequentially at each northbound crossing of the equatorial plane for the duration of the vehicle's orbit life.

C. Quadrant Designations

For the purpose of defining ascending and descending passes by latitude, the following quadrant system will be utilized in all operational reports:

CORONA

TOP SECRET

CONTROL NO. 

COPY _____ OF _____ COPIES

6 PAGES

25X1

TOP SECRET

CORONA

<u>Quadrant</u>	<u>Latitude</u>	<u>Direction</u>	<u>End of Quadrant</u>
1	North	Northbound	Tangent Point
2	North	Southbound	Equator
3	South	Southbound	Tangent Point
4	South	Northbound	Equator

Example: 262.5 is 62 1/2 degrees North Latitude Descending.

D. Camera On-Off Latitudes

The points of camera turn on and off are designated by the latitude desires of the programmer. To avoid confusion, the quadrant system, paragraph C above, will be used to designate on-off latitudes.

Example:

<u>On</u>	<u>Off</u>
262.5	257.0

The example would designate a descending pass camera program with camera on at 62 1/2 degrees North and off at 57 degrees North.

E. UNIVAC 9300

Wherever this statement appears it refers to transmission via the UNIVAC 9300/DLT (Data Link Terminal) tape/card transmission system.

HPA QUICK READOUT LIST

(REAGIN-2)

1. Purpose: To provide the team at with a list of high-priority targets that were photographed in the first SRV which require a quick initial readout. This permits the remainder of the mission to be directed more effectively against other priority areas and targets.

2. Point of Origin:

3. Classification: Top Secret

4. Precedence: ACTION: Immediate on final message only.

Priority on all others.

INFO: Immediate on final message only.

Priority on all others.

5. Submitted For: First SRV of each mission

6. Report Due Time:

a. The first list will be transmitted during Day 3 of the mission.

b. Supplemental lists will be transmitted every other day, e.g., Day 5, Day 7, etc., to update the first list.

c. The final supplemental list will be sent on recovery day.

7. Submitted to: ACTION:

UPDATED ORBITAL ELEMENTS

(REAGIN-3)

1. Purpose: To provide interested agencies with parameters required for orbit computation.

2. Point of Origin:

3. Classification: Top Secret

4. Precedence: Action: Immediate

5. Submitted For: Each mission attaining orbit

6. Report Due Time:

a. Within 30 minutes after the last acquisition on each of the following revs:

(1) Rev 1

(2) Rev 2

(3) First acquired rev after orbit parameters are adequately determined.

b. Within 45 minutes after the best (highest acquisition elevation) pass each day (in direction indicated) over the following station acquisitions:

(1) Northbound acquisition

(2) Southbound acquisition

(3) Southbound acquisition

ORBITAL ELEMENTS FOR CTP

(REAGIN-8)

1. Purpose: To provide with breakwell elements and station acquisition data for input to the CORONA Targeting Program (CTP) prior to and during each mission.

2. Point of Origin:

3. Transmission of Message: UNIVAC 9300/DLT

4. Classification: Top Secret

5. Precedence: Action: Immediate

6. Submitted For: Each mission

7. Report Due Time: a. Planning Data: Upon request by

b. Nominal Mission Data: Within 48 hours after mission selection.

c. In-Flight Data: Within 4 hours of the last descending pass over primary area of interest for mission.

8. Submitted To: Action:

9. Data Coverage: a. Planning and nominal data: Will cover a minimum of 325 revs.

b. In-Flight Data: All transmissions will start with the current rev at the time of transmission and will end on Rev 325 or later.

FAILURE TO ACHIEVE ORBIT REPORT

(REAGIN-46)

1. Purpose: To provide interested agencies with general information regarding the failure of a launched satellite to achieve orbit, and to provide  with the predicted impact coordinates on which to base a weather forecast for possible recovery operations.

2. Point of Origin: 

3. Classification: Top Secret

4. Precedence: Action: Immediate

Info: Priority

5. Submitted For: As required

6. Report Due Time: This report will be transmitted as soon as possible and may be submitted in supplements, if required. However, the initial report for a failed orbit will be submitted NLT 2 hours after launch.

7. Submitted To: 

8. Contents Format:

a. Mission number

b. A detailed narrative report explaining the reason the satellite did not attain orbit, based on available information.

c. Coordinates of predicted impact point and approximate time.

CAMERA-OFF FRAME NUMBER MESSAGE

(REAGIN-48)

1. Purpose: To provide interested parties with last titled frame number of each camera operation and to list any processing abnormalities which may affect the number of frames in a mission.

2. Point of Origin: 

3. Classification: Top Secret

4. Precedence: Action: Immediate

Info: Routine

5. Submitted For: Each capsule filmload

6. Report Due Time: As soon as possible after arrival of film

at processing site

7. Submitted To: 

8. Contents Format:

a. Mission number.

b. List, pass-by-pass, in order of exposure sequence, the last titled frame number in each camera operation of the forward pan camera.

c. List same as b. above for aft pan camera.

d. The last numbered frame of the stellar exposures.

CORN RECAP SUMMARY

(REAGIN-51)

1. Purpose: To provide  with list of CORN targets that were photographed on a mission.

25X1

2. Point of Origin: 

3. Classification: Top Secret

4. Precedence: Action: Immediate

Info: Priority

5. Submitted For: Each capsule

6. Report Due Time: Not later than 24 hours after each

recovery

7. Submitted To: 

25X1

8. Contents Format:

a. Mission number

b. Target name

(1) Zulu date/time span when the target was on display

(2) USGS map designation on which the target can be

located, i. e., map name, number, and scale

(3) Exact coordinates of target

(4) Description of target panels

(5) Reason for deviation from requested display, if any

(1) Operations summary of forward-looking pan camera
 number: Rev, camera operation number, total frames in operation
 (first line only); frame number for which balance of line data applies
 (frame number recycle at ascending node of each orbit revolution);
 quadrant and geodetic latitude at center of format; longitude at center
 of format; altitude in feet; range in feet from vehicle to center of
 format on the ground; day of month; system time in hours, minutes,
 seconds (GMT); local time at center of format; systems time in
 seconds (GMT).

(2) Operations summary of aft-looking pay camera
 number: same as forward camera.

(3) Photographic summary of forward-looking pan
 camera number: Rev, camera operation number, total feet of film in
 operation (first line only); total frames in operation (first line only);
 frame number for which balance of line data applies; slit width in
 inches; filter type; film type; estimated exposure time in milliseconds;
 solar elevation at center of format in degrees; solar body angle - the
 delta - azimuth angle between vehicle and sun (angle between longitudinal
 axis and sun measured in plane perpendicular to radial vector to vehicle)
 measured -180 to +180 degrees with flight direction at zero and
 increasing angles clockwise; estimated exposure value of pan frame;
 ground track azimuth-direction of ground track measured 0 to 360 degrees

TOP SECRET

clockwise from north (this angle includes directional change in ground track from inertial azimuth which results from earth's rotation).

(4) Photographic summary of aft-looking pan camera number: same as forward camera.

d. Section 2 - the rate and clock summary:

(1) Forward-looking pan camera rate estimate: Rev, camera operation number, ramp start level, ramp half-cycle level, total frames in operation (first line only); frame number for which balance of line data applies; time from start of operation to frame; seconds up ramp from start of primary sine-function generator; seconds up ramp from start of secondary sine-function generator; estimated instrument cycle rate; estimated FMC rate in radians per second; estimated scan rate in radians per second; estimated scan rate in inches per second; estimated instrument-to-orbit match (this data may be slightly in error).

(2) Aft-looking pan camera rate estimate - same as forward camera.

(3) Pan camera ramp profile data (one profile for each ramp) - period of the secondary sine-function generator (P); secondary sine-function generator multiplicative factor (K); time up ramp for secondary sine-function generator (T); cycle rate (or period) output of

CORONA

TOP SECRET

EXCLUDED FROM AUTOMATIC REGRADING

CONTROL NO. 
 COPY 3 OF 13 COPIES
 PAGE 3 OF 13 PAGES

TOP SECRET

CORONA

primary sine-function generator (R); the universal constant (PI); time up ramp in seconds; output cycling data of primary sine-function generator for forward- and aft-looking pan cameras; cycle period for forward-looking; cycle rate for forward-looking; angular velocity of forward-looking (same info as aft-looking).

NOTE: The true instrument cycle rate (or period) (C) is computed as follows:

$$C = R (1 + (K (1 - \cos (2 T PT/P))))$$

(4) Clock to systems - time

Correlation Data - Preliminary clock

Correlation - First order fit-seconds system time adjusted for transmission time and the corresponding clock time as read from telemetry data; seconds system time adjusted by least squares fit of clock and system time; difference between input and adjusted systems time; rev; and tracking station. Second-order fit is run in the same format as first-order fit.

(5) Forward-looking pan camera clock operation

summary: Rev, camera operation number, total frames in operation (first line only); frame number for which balance of line data applies; system time in hours, minutes, seconds (GMT) at center of format; decimal clock time at center of format; binary clock reading.

(6) Aft-looking pan camera clock operation summary -

same as forward-looking.

CORONA

TOP SECRET

CORONA

e. Section 3 - The DISIC operations and photographic summary.

(1) The DISIC operations summary: Rev, operation number, total terrain frames in operation (first line only); terrain frame number for which balance of line data applies; stellar frame number taken at the time of this terrain frame (each stellar frame consists of one exposure from the starboard stellar plus one from the port stellar where port and starboard are left and right respectively, looking ahead in orbit); forward-looking pan frame which has a center of format most nearly at the same location as the center of format on this terrain frame; if no forward pan frame covers the terrain center of format this report will contain minus ninety-nine (-99); aft-looking pan frame contains same data as forward-looking; quadrant and geodetic latitude at center of terrain format; longitude at center of format; height in feet from a point on the ground corresponding to the center of terrain format; systems time (GMT) at center of terrain format; local time at center of terrain format.

(2) The DISIC photographic summary: Rev, operation number, total terrain frames in operation (first line only); terrain frame number for which balance of line data applies; stellar frame number taken at the time of this frame; forward-looking pan frame which has a center of format most nearly at the same location as the center of

format on this terrain frame; if no forward-looking pan frame covers the terrain center of format, this report will contain minus ninety-nine (-99); aft-looking pan frame contains same data as forward-looking pan; exposure time coded and identified in heading; solar elevation at center of terrain format; solar body angle as described in 9. c. (3); estimated exposure value of terrain frame; ground track azimuth as described in paragraph 9. c. (3); estimated right ascension at center of port stellar camera exposure; estimated declination at center of stellar exposure; estimated orbit angle at which stellar frame was taken (orbit angle is measured from 0 to 360 degrees along the direction of flight, with 0 degrees at the ascending node, 90 degrees at the highest northern latitude achieved, 180 degrees at the descending node, and 270 degrees at the highest southern latitude achieved).

10. Sample Cable:

NOTE: All data records will be 80 columns with columns 73 thru 80 containing an eight-digit identification number in accordance with the following rules:

- a. Column 73 will contain the version number (1 thru 9).
- b. Column 74 - section identification as follows:

<u>SECTION NAME</u>	<u>NUMBER</u>
Pan Camera Operations Summaries	1
Pan Camera Photographic Summaries	2
Pan Camera Rate Summaries	3

question. (The ramp defined by start level 1 half cycle level 1 will be number 001, start level 2 half cycle level 1 will be 021, etc.)

e. Columns 79 thru 80 are for line item numbering within sections 1 and 2. (Sections are determined by a. thru d. above.)

All line items will be numbered consecutively, except that the first frame line data for each pan camera operation will always be numbered 01 and the last frame line data will always be number 99.

f. Line item numbering for DISIC summaries will be as follows:

Column 73 as above.

Column 74 as above.

Columns 75 thru 77 will contain a non-recycling operation number for DISIC operations:

Columns 78 thru 80 - The first frame line data for each DISIC camera operation will always be numbered 001 and the last frame line data will always be numbered 999.

g. The data to be provided in each of the summaries will consist of headers, prelaunch data (if applicable), plus line data for each camera operation as follows-- (The line data for all pan camera operations will consist of one data line for the first frame one data line for the last usable frame, plus one data line for each intervening point of photographic change. The line data for DISIC camera operations will consist of one data line for each terrain frame.)

SNOW COVER REPORT

(REAGIN-129)

25X1

1. Purpose: To provide with estimated snow cover in target areas photographed.

25X1

2. Point of Origin:

3. Classification: Top Secret

4. Precedence: Action: Priority

5. Submitted For: Each successful payload recovery.

6. Report Due Time: Immediately following payload recovery.

25X1

7. Submitted To: Action:

8. Contents Format:

a. Mission number

b. Rev numbers and areas within each pass where snow

cover is estimated to be four inches or greater. Areas are denoted by latitude bands. Snow cover of four inches or greater will cover 50 to 100 percent of the areas reported. No snow cover information is available for China, hence only an estimate will be provided for this area.

9. Sample Cable:

SATELLITE PHASE PROGRAM DATA

(REAGIN-131)

1. Purpose: To inform of weather satellite support for proposed orbits for next mission.

2. Point of Origin:

3. Classification: Top Secret

4. Precedence: Action: Priority

Info: Routine

5. Submitted For: Each mission

6. Report Due Time: L-27 days

7. Submitted To:

8. Contents Format:

a. Mission number

b. Weather satellite support analysis for proposed

inclination angles, which includes:

(1) A table showing one specific rev of the reconnaissance satellite and a number of revs of the weather satellite for each day on orbit. Data include a letter designator for all weather satellite revs, nodal times in GMT and local time, and indication as to whether interrogation is possible on the rev.

(2) A chart which plots relative timing vs. latitude for those weather satellite revs listed in the table which view a portion of the primary track.

(3) Local time and solar elevation of the area under the reconnaissance satellite as a function of ascending and descending latitude.

9. Sample Cable:*

REAGIN-131

A. 1111

B. INCLINATION ANGLE 80 DEGREES, 20 DAYS,
8 AND ONE-HALF DAY SYNC.

C. (Data on following pages)

* - Example Interpretation:

From the table: Portions of rev 275 of the primary (reconnaissance vehicle) will be viewed by the letter-designated revs of a 1219 Local Sun Time weather satellite.

From the graphical presentation: The lefthand column indicates the time difference in hours between the weather satellite (TS) and the primary satellite (TP) viewing of the latitudes shown in the top row. For primary rev 275, rev K of the weather satellite will view the area between 40° N. and the equator 3 hours prior (TS - TP = -3) to the primary. The sun angle for the primary over those latitudes (bottom row) will be greater than zero from 57° N. southward.

CTP DAILY SWATH PLOT

(REAGIN-201)

25X1

1. Purpose: To provide [Redacted Box] with a visual computer plot of targets, search and Mapping and Charting areas; their value criteria; location of emergency and DISIC camera operations, if selected; and nominal film consumption data for each revolution of the mission.

25X1

2. Point of Origin: [Redacted Box]

3. Transmission of Message: UNIVAC 9300/DLT

4. Classification: Top Secret

5. Precedence: Action: Priority

6. Submitted For: Each day of the mission

7. Report Due Time: Daily beginning one day prior to launch and covering a 24-revolution increment.

25X1

8. Submitted To: Action: [Redacted Box]

9. Contents Format:

a. Mission statistics

(1) Mission number

(2) Revs covered in this report

(3) Perigee height and latitude

(4) Inclination, eccentricity and period

(5) Date of computer run

b. The following data are provided for each revolution:

- (1) Mission number and rev number
- (2) TCOP and KCOP values
- (3) DP number
- (4) Latitude for each 10-second time interval (function

of vehicle V/h) with longitude being provided for each ninth line of data.

(5) Sun angle at nadir in degrees

(6) Graphic display of swath content, bounded by asterisks. Each line represents a 10-second interval or approximately 40 nautical miles in-track distance. Each HSMA column, denoting HPA's, Semiannual search, Mapping and charting, and Annual search, respectively, covers a 6-degree segment of scan (the end columns are 5-degree scan segments) totaling the full 70-degree scan. The S and A positions in each column have values ranging from 0.00 to 0.99, if a search cell center falls within the DP and scan sector. The value is printed out only as an integer representing tenths of the value, e.g., "9" represents a value of 0.90 to 0.99. The HPA position in each column will contain an A or B, priority one and two, respectively, if an HPA falls within the DP and scan sector. The mapping and charting position in each column will contain a V, W, X, or Y, priorities one thru four, respectively, if a required mapping and charting WAC cell center falls within the DP and scan sector.

H-TIMER PROGRAM DATA (CLOVER)

(REAGIN-204)

1. Purpose: To provide the nominal camera operations data, which is programmed on the H-timer, to be used with the CORONA Targeting Program (CTP).

2. Point of Origin:

3. Transmission of Message: UNIVAC 9300/DLT

4. Classification: Top Secret

5. Precedence: Action: Immediate (Priority for premission only)

6. Submitted For: Duration of each mission

7. Report Due Time:

a. Premission covering the entire mission

b. Daily, covering the next two days of the mission

8. Submitted To: (premission only)

9. Contents Format:

a. Mission number

b. Rev span covered by this message

c. H-timer data - Part I

(1) Rev number

(2) Program number (0 = Station acquisition program;

1 or 2 = Emergency Program 1 or 2; 6 = program; 10 =

Intermix step; 11 = DISIC program).

(3) Operation number of program each rev

(4) Program name, i. e., station name, OPER for emergency programs,

(5) In-orbit-times for

(a) Program 0, station acquisition and station fade.

(b) Program 1 and 2, camera on and off punches

(c) Program 6, first and last punches

(d) Program 10, brush 14 punch

(e) Program 11, camera on and off punches

(6) punch increment size in seconds for program 6, maximum elevation in degrees for program 0.

(7) Flag, "9," to indicate that is followed by a redundant "off."

(8) In-orbit-times

(a) Paragraph (5), above, is repeated for programs 0, 6, and 10.

(b) For programs 1 or 2, times to latitudes of first and last usable stereo frames of photography are listed.

(c) For program 11, times to first and last latitude covered by two DISIC frames are listed.

(9) Latitudes corresponding to

(a) Station acquisition and station fade, program 0

(b) First and last usable stereo frames, programs

1 and 2.

(c) First and last  punch, program 6

(d) Brush 14 punch, program 10

(e) First and last point covered by two DISIC frames, program 11.

(10) Sequence number of data line

d. H-timer data for station acquisitions - Part II

(1) Rev number and vehicle direction of travel

(2) Name of tracking station

(3) Primary or backup designation

(4) H-timer data, same as Part I, paragraphs 9c(5)(a), 9c(6), 9c(5)(a) repeated, and 9c(9)(a).

CTP POSTPASS DATA

(REAGIN-205)

25X1

1. Purpose: To provide [] with a daily status report of mission performance to include film consumption, area coverage summaries, and predicted coverage of high-priority targets.

25X1

2. Point of Origin: []

3. Transmission of Message: UNIVAC 9300/DLT

4. Classification: Top Secret

5. Precedence: Action: Priority

6. Submitted For: Each mission

7. Report Due Time: Daily, covering previous day of operation

25X1

8. Submitted To: Action: []

9. Contents Format:

a. Mission number

b. Cycles of pan film consumed on pad prior to launch

c. Mission resources summary

(1) Total pan film used (frames)

(2) Total number of main camera operations

25X1

(3) Total percent of [] used thus far in the

mission

(4) Total percent of film used thus far in the mission

CORONA

(5) TCOP summary, listing maximum, minimum and average TCOP values thus far this mission.

d. Coverage summary

(1) Requirement category, i. e. , 6-month, 12-month, HPA, extraordinary, mapping and charting.

(2) Total number of unique cells photographed to date

(3) Percent of 6-month and 12-month category unique cells photographed which were overdue.

(4) Total number of redundant cells photographed to date.

(5) Total number of unique cells photographed having unconfirmed probabilities of accomplishment (based on assessed weather data) of 85 to 100 percent, 70 to 84 percent, and 0 to 69 percent.

e. Age distribution of 6-month search cells

(1) Age categories are in 30-day increments from one thru 900, plus a "greater than 900" category. For each category, the following data is provided:

(a) Age category, e. g. , 91 - 120

(b) Total number of cells in age category

(c) Total cells (redundant) of age category

photographed to date

(d) Total unique cells and percent by age category photographed.

(e) Number of unique cells photographed in each weather category (assessed weather), i. e., 85 to 100, 84 to 70, and 0 to 69 percent probability of having been photographed under 90 percent or better cloud-free conditions.

(2) Totals line shows total cell count for all age categories. Percentages are now expressed as percentage of total number of cells in 6-month search areas.

(3) Total overdue line totals those cells in age categories greater than 6 months, i. e., all age categories subsequent to the 151- to 180-day age group. Percentages remain based on total number of cells in 6-month search areas.

f. Age distribution of 12-month search cells

(1) Same as paragraph 9. e. (1).

(2) Total line shows total cell count for all age categories. Percentages are now expressed as percentage of total number of cells in 12-month search areas.

(3) Total overdue line totals those cells in age categories greater than 12 months, i. e., all age categories subsequent to the 331- to 360-day age group. Percentages remain based on total number of cells in 12-month search areas.

g. Main camera operation summary

- (1) Rev number
- (2) Operation number within a rev
- (3) Number of pan frames of film used during the

operation.

- (4) TCOP value in effect for the operation
- (5) Mean cloud-free probability forecast and

assessment in percent.

- (6) Stereo latitudes on and off for camera operation
- (7) Cell count by category of cells photographed by the

operation.

h. High-priority area (HPA) summary

- (1) Sequential number of HPA
- (2) HPA identification (name or number)
- (3) Total number of cells in HPA
- (4) Current cumulative probability that HPA has been

successfully photographed.

(5) HPA thresholds, i. e. , desired probability of accomplishment, required cloud-free forecast, and required incremental increase in probability of accomplishment.

- (6) Number of cells in HPA photographed uniquely to

date.

NOTIFICATION OF INACTIVE STATION ACQUISITIONS

(REAGIN-207)

1. Purpose: To provide

25X1

with 24-hour advance notification of those passes, by rev number, for which there are no requirements or anticipated camera operations for the following 24 hours. Such notification will permit optimum management and computer maintenance and decrease communications traffic.

2. Point of Origin:

3. Classification: Top Secret

4. Precedence: Routine

5. Submitted For: The 24-hour period beginning at 1800Z the following day.

6. Report Due Time: Not later than 1700Z and at least 24 hours in advance of the period being reported.

7. Submitted To: Action:

25X1

8. Contents Format:

a. Mission number

b. Rev span being reported. This must include all revs and portions of revs within the control segments being reported.

c. List of acquisitions, by rev number and station, which will not require enabling of the primary command system.

PREMISSION STATISTICS

(REAGIN-208)

25X1

1. Purpose: To provide with premission statistical data regarding status of semiannual and annual search satisfaction.

25X1

2. Point of Origin:

3. Transmission of Message: UNIVAC 9300/DLT

4. Classification: Top Secret

5. Precedence: Action: Routine

6. Submitted For: Each mission

7. Report Due Time: Normally one day prior to launch

25X1

8. Submitted To:

9. Contents Format:

a. Mission number

b. Mission requirement summary. Lists total number of WAC cells and corresponding area in square nautical miles of each of the following categories:

(1) Search areas

(a) Quarterly

(b) Semiannual

(c) Annual

(2) High-priority areas

(a) Extraordinary

25X1

- (b) Priority 1
- (c) Priority 2
- (3) Mapping areas
 - (a) Priority 1
 - (b) Priority 2
 - (c) Priority 3
 - (d) Priority 4
- (4) Equatorial belt area
- (5) DISIC area
- (6) Total nonredundant

(c) Search age distribution for current mission and for next scheduled mission, assuming current mission does not fly. Age distribution is expressed in 30-day increments from one to 900 days, with the last two increments being "greater than 900" and "never seen." Cells listed as "never seen" are also included in the "greater than 900" age increment. "Never seen" is arbitrarily chosen as those cells not seen 90 to 100 percent cloud free since 1 February 1966. For each age category there is provided the number of cells having this age (by search category) and its percent of the total semiannual or annual search cells.

d. The following data is provided for the current mission and for the next scheduled mission, assuming current mission does not fly:

(1) Total area for semiannual and annual search expressed in total number of cells and percentage (always 100 percent). Also provided is the average cell age in months and the standard deviation in months.

(2) Total area overdue for semiannual and annual search expressed in number of cells and percentage of total search. Also provided is the average age of overdue cells in months and the standard deviation in months.

(3) Total area for those semiannual and annual cells which are not overdue, by cell count and percent, with average age and standard deviation, both expressed in months.

e. Age distribution graphs are provided with percent of total cells plotted against age in five-day increments for each of the following requirement categories:

- (1) Semiannual search, current mission
- (2) Annual search, current mission
- (3) Semiannual search, next mission
- (4) Annual search, next mission
