Attention:

STAT

Gentlemen:

We are sending in the attached package two prototype 13X Magnifiers. The prototype with identification by taped label #1 is according to the production lot now being processed. Prototype Magnifier designated as #2 is according to original plan. As explained to you by telephone, the illumination on opaque copy is somewhat of a problem. To improve this, the construction in #1 has been resorted to. The reticle blank is larger and there are extra operations to spot face it, put on the wide flat bevel on the rear side and apply black lacquer. There is a noticeable improvement over the original model (#2).

The production instruments will be cleaner and appear more finished. Please return the prototypes at your earliest convenience.

Sincerely yours,

STAT
