NARRATIVE REPORT

On my last visit to the contractor, the contract administrator accompanied me. We reviewed what work had been done and checked their inventory. I also gave a brief explanation of why we refused to approve the expenditure of additional money to buy new [redacted] CRT's. Nothing unexpected came up during the visit.

By refusing to allow an overrun in the purchase of new [redacted] CRT's, we have essentially blocked any more experimenting with the electronic breadboard printer. The choice was whether to approve the purchase of the tube and a future overrun of at least [redacted] in hopes of gaining more information from an open loop modulated light printer of about 50 lines/mm resolution or to cut the project off. The latter course was chosen due to the performance of the contractor and the negative results gained so far.

There is a large amount of GFE at the contractors facility which will have to be removed at the end of the contract. The contractor expressed a desire to purchase some of the equipment, and we told him to submit a bid or bids on the equipment he wanted. We have not received any bids yet. Good use can be made of most of the equipment; however, the electronic circuitry and the special CRT tubes and associated gear have little value for NPIC at present.
