MEMORANDUM FOR THE RECORD

SUBJECT: Contract [redacted] Research in Vision and Related Areas,
[redacted]

1. The level of effort on this time and materials contract has been substantially lower than anticipated at its inception. Nevertheless, significant results from the literature search have been reported by the principal investigator. Large volumes of material on visual perception and related areas have been filtered to yield extremely important information for imagery interpretation research. Future efforts under this contract also promise to be of considerable value in guiding our Human Factors Program into some specifically salient areas.

2. In view of the judged worth of the results obtained so far under this comparatively inexpensive contract, it is recommended that sufficient FY-1967 funds be appropriated for its continuation. Neither increased nor decreased level of effort is considered essential at this time. In the event of potential or actual overlap between [redacted] work and [redacted] the findings stated here will, of course, be re-evaluated.
