PAR 246

RT-12 and RT-24 - Operational Improvements

28 December 1966

Declass Review by NGA.

PROJECT AUTHORIZATION REQUEST

PAR 246

28 Dec 66

SUBJECT: RT-12 and RT-24 - Operational Improvements

TASK/PROBLEM

1. Conduct necessary design, fabrication, and test effort to implement operational improvements to the RT-12-inch and RT-24-inch Processors as requested by the customer.

PROPOSAL

2. The RT-12 and RT-24 Processors have been installed at the customer's facility for approximately one year. Prolonged production usage of such equipment generally reveals areas of improvement which, if implemented, would increase efficiency, reduce maintenance or improve quality. Since it is anticipated that requests for operational improvements will be forthcoming from the customer, it is the intent of this PAR to provide the means of making such improvements.

3. Since the objective of this PAR is to make design improvements as requested by the customer and since at the present time these improvements are unknown, a tentative schedule cannot be prepared. This project will be active on the date of approval and will continue until funds are exhausted or upon termination.

4. No final report will be submitted. Documentation of individual improvements will be made in the Monthly and Quarterly Reports.
