MEMORANDUM FOR: Chief, Development Branch

SUBJECT: [] Filar Eyeiece for Twin Dynazoom

1. The Development Branch was recently able to meet an immediate operational requirement for a filar measuring system (to be used on the [] Twin Dynazoom) in a rather effective and expeditious manner. We developed an acceptable system in approximately 6 weeks, most of which was spent awaiting the delivery of the filar from []

2. We were able to accomplish the project within this time frame because of team work.

a. [] of ISS/DB obtained the proper filar, made all arrangements and coordinated the project.

b. [] of EDLB designed the necessary special adapters required to mount the filar and produced the necessary engineering drawings -- all within a period of 3 days.

c. [] of EPS/DB machined the prototype adapter and did an excellent job.

3. It is the intent of this memo to record their efforts and to thank and commend these individuals for a job well done. Such fast responses to operational requirements can only enhance P&DS's stature within NPIC.

[]
Chief, Interpretation Systems Section,
Development Branch, P&DS
