Model 45 Multi-motion Twin 70 Light Table.

On Tues July 2 the Light Table was complete except for a couple of break knobs that they expected to have on Wed. If the knobs came in they would ship the table Wed, otherwise it would be Mon after the holiday.

This table is ruggedly built and has adequate motions. The tilt forward motion is a little jumpy but all the other motions are very smooth and have adequate control. All the motions have adjustable drag and brakes. The hand wheels are not perhaps as convenient as they might be but this is minor.

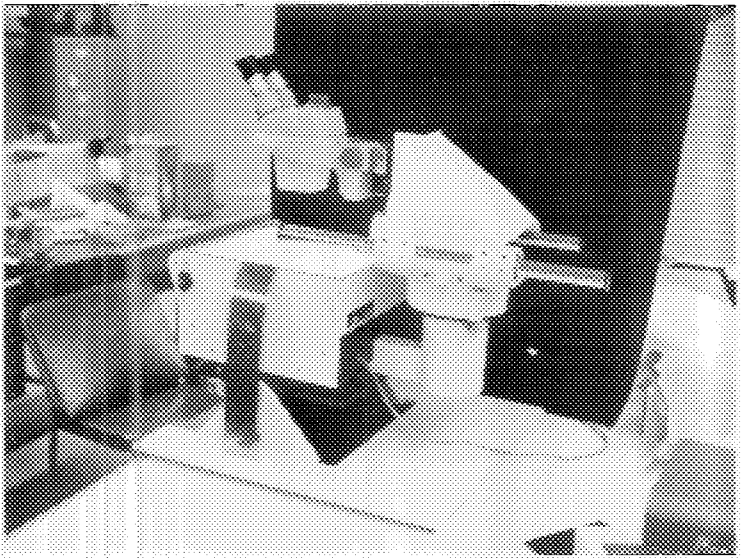

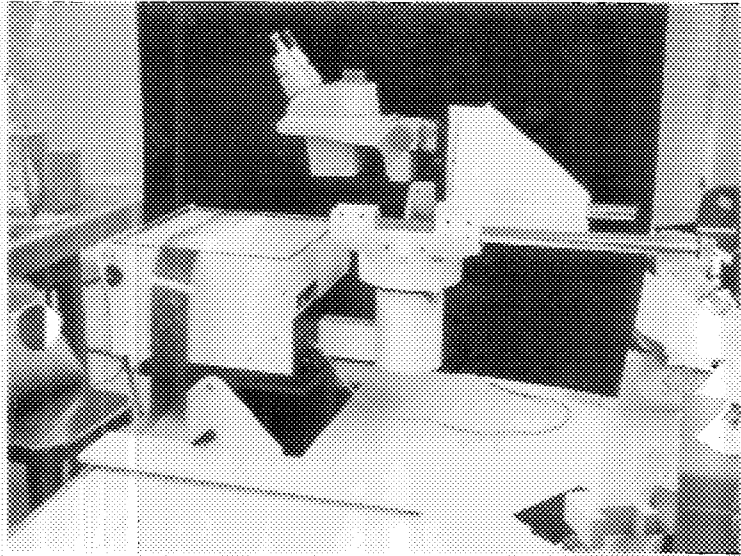

There four fluorescent lamps, 8 watts each, and four switches to control light distribution. I would say that this is the weakest part of the design. It is not clear what value four distributions of the lights would have. This is particularly true since curtains are provided under the glass top to mask the light down to the size required for viewing.

The microscope mounting is convenient and easy to use. The rods extending out the back require considerable room however.

Altogether it will probably be a satisfactory instrument. It is versatile and rugged. It is a rather complicated solution to what should be a simple problem, but simplicity is harder to achieve than complexity in most cases. I would not say it is a brilliantly executed design, but it is however acceptable.
