MEMORANDUM FOR THE RECORD

Declass Review by NGA.

DATE: 10 May 1966

PLACE:

1. As a buyer from the U.S. Government, I talked to

25X1

about the characteristics and capabilities of the Video Disc

Recorder. manufactures only two items: a tape recorder and the video disc recorder. This corporation does no R&D work, and is not interested in doing any. It is a small, specialized company.

2. The Videodisc Recorder (approximately 10,000) is a dual channel recorder (two heads-one on top and one below) will record 20 seconds of real time imagery, and will "Freeze" or provide stop motion playback on any selected frame for as long a period as desired. This equipment has a standard 2:1 interlace and can record any world standard broadcast system by changing plug-in modules or circuit cards within the recorder.

3. It appears that the disc recorder will fill all the requirements necessary for the system for hard copy video tape system, without any extensive modifications or "black-boxing."
