Re: Tasker Proposal on Image Recognition

STAT

I read the draft [ ] sent me. It is the same
as the one I forwarded to you a couple of weeks ago.

It describes his proposed experimental approach quite
clearly. I talked to Tracy on the phone about it and
suggested he make an analytical example of looking for
straight lines or corners (i.e., man-made objects).

This would, in effect, be a prediction of what filters
would be used to detect straight lines and what the
result would look like. He said this would be easy to
do. He had already done some similar analytical work
and he would write it up and send it to you this week.
