TS-159228/64THE TECHNICAL INTELLIGENCE DIVISION  
MONTHLY REPORT FOR FEBRUARY 1964

1. During the month of February 1964 the Technical Intelligence Division (CB, TAB, TSB) received a total of 96 new projects, a drop from 119 received last month. The Division completed 92 projects as compared to 98 in January. To date the Division has received a total of 215 projects, while completing 190. Of interest to note this month is the increase in support projects completed: 30 during the month of January, to 50 in February. It will be noted from the "Projects Completed" graph that this month there was a considerable drop in national projects completed. This was due primarily to a drop-off of projects received during the month and also to the improvement in liaison between TID/PAG and TID/PID. The establishment of this close working liaison has resulted in improved timing for the submission of projects, the establishment of more realistic completion dates and project requirements. The drop-off does not signify that TID worked on departmental projects to the detriment of national projects. Three other conditions that each month will influence projects completed, particularly TAB, are the size of the work effort required, the complexity of the work required to obtain the answers and input of new missions requiring immediate processing.

2. Because the projects worked by the Computer Branch are considerably different from those worked in TAB and TSB, the Computer Branch project figures will be reported separately throughout the remainder of this report. During this month the Univac 490 logged 35 hours production time, 160 hours assembly and debug time and 14 hours other time. Additionally, during the month the Real Time program was available for use 25 hours concurrently with the assembly and debug time.

3. General Work Effortsa. Materials Prepared

TID Monthly Report  
for February 1964

Attachment to  
TS-159228/64

In addition, TID has in preparation three publications describing new collection systems soon to become operational.

b. TSB plotted 70,738 frames of photography divided by type as follows:

KH-4	-	11,295
T	-	59,443

c. During the month TID sent 10 people to the processing activity to assist in processing three missions for a total of 10 working days.

#### 4. Operating Equipment

TAB employed 492 hours instrument time on projects related to measurements and processing incoming missions (over 100 hours higher than in January 1964). TSB logged 80 hours instrument time in work related to film evaluation and product assessment (107 hours last month).

#### 5. Visitors and Meetings

TID accommodated 23 visitors during the month of February. The Division hosted eight meetings related to operations and incoming missions and five other meetings on related technical subjects. TID personnel participated in three meetings outside NPIC, including one in California attended by Chief, CB. TID also participated in several meetings within NPIC. Chief, TAB went to New York to interview a senior grade prospective employee.

#### 6. Training

On 10 February 1964 the two Photogrammetry classes resumed.

#### 7. Project Report Summary and Graphs

The attached table is based on assigned project work: national projects and support projects. The attached graphs are direct feed-offs from this summary table. The largest portion of TID overtime this month is directly related to two new inputs, received in rapid succession, the preparation for a third input that was not completely successful, and the weekend work on GOLDEN TREE. TID must work overtime during these peak periods of input in order to accomplish the required work on or close to schedule.
