ENCLOSURES: None

REQUIREMENT RR/HTA/E/R99/56: Report evidence of new construction or plant expansion since 1944 at Kherson Petroleum Refinery, USSR.

REMARKS:

The Kherson Petroleum Refinery is located approximately one mile northwest of Kherson, a river port situated 15 miles upstream from the mouth of the Dneiper. The photography covering this installation is on the oblique at small scale and hazy, not permitting detailed interpretation. However, the following items of interest are noted:

1. Three new large storage tanks, approximately 100 feet in diameter, have been added to the five similar tanks in the north section of the refinery.
2. Ten new small storage tanks have been added in the northeast section of the refinery, making a total of 19 small storage tanks of varying capacity in this area.
3. Some unidentified construction activity appears to be currently in progress in the east central section of the refinery area.
