WARNING

This document contains information affecting the national security of the United States within the meaning of the espionage laws U. S. Code Title 18, Sections 793 and 794. The law prohibits its transmission or the revelation of its contents in any manner to an unauthorized person, as well as its use in any manner prejudicial to the safety or interest of the United States or for the benefit of any foreign government to the detriment of the United States. It is to be seen only by personnel especially indoctrinated and authorized to receive information in the designated control channels. Its security must be maintained in accordance with regulations pertaining to TALENT-KEYHOLE Control System.

**NOVOSYSOYEVKA IRBM COMPLEX, USSR
LAUNCH AREA NO 2**

25X1A

Launch Area No 1 (TDI name: Novosysoyevka IRBM Launch Site 1) -- Type III 44-11-30N 133-26-00E

Launch Area No 2 (TDI name: Novosysoyevka IRBM Launch Site 2) -- Type IV 44-07-45N 133-27-30E

25X9

This report supplements NPIC/R-388/63, 1/ which discusses the Novosysoyevka IRBM Complex, consisting of 1 Type III and 1 Type IV IRBM launch area, together with an associated rail-to-road transfer point (Figure 1). An area previously included in the complex as Possible Launch Area No 3 appears to have been abandoned in an early stage of construction.

25X1D

Launch Area No 1 was first observed in [redacted] and was complete at that time. Launch Area No 2 was initially observed in [redacted] and was complete in [redacted]

25X1D

25X1D

Launch Area No 1 is located 35 nautical miles (nm) southeast of Spassk-Dalnyi, and 7 nm east-northeast of Arsenyev. Launch Area No 2 is 4 nm south-southeast of Launch Area No 1. Both areas are located in very rugged terrain.

25X1D

The launch site (Figure 2) is oriented on an azimuth of approximately [redacted] and appears to be doubly fenced. Each of the launch silo covers measures approximately 60 by 55 feet, and a rectangular structure is observed in the eastern portion of the launch site.

[redacted] A mounded building and a drive-through building with an external overhead crane appear to be complete. Additionally, 3 structures appear to be under construction in the area, which may imply that the facility will resemble a Class D type configuration. No security fence is observed around the facility. However, the surrounding foliage is quite dense and could obscure any fencing present.

25X9

The site support facility, located farther to the west, consists of at least 23 structures. The largest structure measures approximately 220 by 65 feet, and 2 other structures are approximately 145 by 50 feet. Further analysis of this facility is restricted because of the poor interpretability of available photography. A probable construction camp is located still farther to the west.

A rail-to-road transfer point is located 6 nm to the northwest. Improved roads link the transfer point to the launch area.
