CIA IMAGERY ANALYSIS DIVISION

FU-SHUN IRON AND STEEL PLANT
FU-SHUN, CHINA

The Fu-shun Iron and Steel Plant is located at 41 50N - 123 48E in the western section of Fu-shun, China.

The complex consists of two separate sections: the east section contains one side blown converter shop, one probable blooming/rolling mill, a forge/foundry complex, a fabrication section, and numerous support buildings. The west section includes two blast furnaces, a possible rolling mill, a probable ore processing or sintering plant, a large unidentified monitor roof building, one building under construction [] and numerous support buildings.

Photography [] revealed heavy smoke emanating from most of the facilities in the east section. On the same photography, the west section appeared to be idle. The rail and road traffic was at a moderate level. Photography [] revealed that most of the facilities in the east section were emitting heavy smoke while the western section again appeared idle. Road and rail traffic appeared to be at a moderate level in both sections of the plant. The new building (Figure 2, annotation 5) appeared completed. Photography [] revealed the addition of a few small buildings in the east section. Small scale and poor quality precluded a determination of facilities operating or the amount of traffic on this mission.

On photography [] the only facilities emitting smoke were the forge/foundry complex and the fabrication section. The east section of the steel plant appeared to have a moderate amount of rail and road activity and the west section appeared to be void of any vehicular activity. The building under construction in [] (Figure 2, annotation 6) is either at the same stage of construction as reported previously or has been dismantled.
