CONSTRUCTION STATUS OF SOVIET SINGLE SILO ICBM SITES

Introduction

This PIR is part of a continuing series to evaluate the progress of the Type III-C and III-D ICBM deployment programs. The preparation of this report primarily utilized [redacted]

[redacted] Only two of the single silo complexes (Perm and Kostroma) were not covered, either wholly or in part by these missions.

A full explanation of the construction timing charts which are included in this report can be found in CIA/PIR-61119 [redacted], June 1966. The cable trace study of all the single silo complexes has been completed through [redacted] and is portrayed on the complex maps. These studies will be maintained on a continuing basis and presented in future issues of this report. The cable traces on the maps should be regarded only as indicative of a definite connection between sites, since the actual cable locations have only been approximated.

The list of TDI designators includes all numbers assigned through 10 November 1966.

Highlights

Photographic coverage of Kostroma is urgently needed. Usable coverage has not been acquired over this complex [redacted] when deployment of the III-D sites were just being initiated. Only seven sites have been identified at Kostroma as compared to 31 known sites at Svobodnyy where deployment began at about the same time.

The identification of a fourth group at Svobodnyy on [redacted] within some seven months from initial deployment, had no precedent in the previous two years of III-D deployment. The confirmation of a tenth group and identification of a probable eleventh group at Tatishchevo underlined the greatly increased rate of deployment this year.

TOP SECRET

TOP SECRET

CIA/PIR-71017

CIA IMAGERY ANALYSIS DIVISION

The first interconnection of Type III-D groups was found at Olovyannaya. Cable scarring is evident between the control site of the 'E' and 'G' groups in much the same pattern previously seen at the Type III-C groups.

Due to heavy clouds, Kozelsk and Yedrovo were not covered well, and no new sites were observed. The western portion of Olovyannaya, partially covered on three different missions, did not encompass the area where evidence of new deployment or new sites in the 'I' group is most likely to be found.

Aside from a rather unusual number of Type III-C Starts during the [redacted] (due partly to the deployment of the fourth group at Zhangiz Tobe) there was only one outstanding item relating to the large single silos. This concerned Aleysk A4 (TDI 12) which was almost completed within an eight month period. This is by far the fastest rate at which any Type III-C silo has ever been built, including Tyuratam.

TOP SECRET

TOP SECRET

CIA/PIR-71017

CIA IMAGERY ANALYSIS DIVISION

Single Silo Construction Starts

The following is a continuing compilation of sites, by complex, begun this year. Only probable and confirmed sites are included, so that these figures must be considered as absolute minimums. Clear and total coverage of such complexes as Kostroma, Yedrovo, Gladkaya, Perm, Tatishchevo, Olovyannaya, and Uzhur should increase the totals appreciably.

Type III-C

<u>Complex</u>	<u>J</u>	<u>F</u>	<u>M</u>	<u>A</u>	<u>M</u>	<u>J</u>	<u>J</u>	<u>A</u>	<u>S</u>	<u>O</u>	<u>N</u>	<u>D</u>

TOP SECRET

TOP SECRET

CIA/PIR-71017

CIA IMAGERY ANALYSIS DIVISION

Type III-C ICBM Deployment

A total of six confirmed and one probable Type III-C sites were newly identified. Included in these totals are elements of one new confirmed Type III-C group. Current potential for the Type III-C sites is 144 (23 groups). Fifteen more Type III-C sites are now carried as complete.

Type III-C Complexes

Aleysk

All sites in the 'A' group and launch site 'X' were covered [redacted]. Of most interest was the nearly completed status of launch site A-4 (TDI 12) which was begun in [redacted] this year. This effort, which lessened by a year the normal construction time for an 'A' group site, was apparently made to complete the site concurrently with the last of the other five in the group.

[redacted] also revealed the removal of site support facilities at both launch sites A-1 (TDI 3) and A-6 (TDI 2). Also, at the latter site, the exhaust vents are clearly visible.

Subsequently, [redacted] two additional sites in the 'C' group were identified, bringing the number of sites in this group to four. Both were [redacted] starts.

TOP SECRET

TOP SECRET

CIA/PIR-71017

25X1

CIA IMAGERY ANALYSIS DIVISION

Imeni Gastello

All [] missions covered portions of the complex. One site in the 'B' group was complete on [] and from the status of the rest of the group on [] they should also be complete by this time.

One confirmed and one probable site were added to the 'D' group. The confirmed site was started in [] and the probable site in [] Two more sites are needed to fill out this group.

25X1

Kartaly

Partial coverage of the 'B', 'C', and 'D' groups was obtained on [] Three sites observed in the 'B' group were complete. The three sites seen in the 'C' group are preceeding at a pace which will apparently take about 14 months for completion. One new site was added to the 'D' group, leaving two to be identified.

Uzhur

At least five sites in the 'B' group are complete, and the first two completions in the 'C' groups were noted. The areas on the extreme east and west sides of the complex, where deployment is known or suspected, were obscured by clouds on [] and not covered on [] At least two sites in the 'D' group have not been identified, although the group has been under construction for seven to twelve months. A [] absence of usable coverage precludes identification of the full group. A suspected group east of the rail line may presage the deployment of more than four groups at all Type III-C complexes. Here again, lack of coverage prevents confirmation of this suspect group. Dombarovskiy is the only other complex where such a development might be expected in the near future.

25X1

25X

Zhangiz Tobe

Initial identification of the deployment of a fourth group, which began [] was made on [] Three sites in this group remain to be identified. Clear, fair quality coverage of [] failed to reveal any additional site support facilities or excavations. A complex command control center has not yet been started at the transfer point.

25X1

TOP SECRET

25X1

TOP SECRET

CIA/PIR-71017

CIA IMAGERY ANALYSIS DIVISION

At least four sites in the 'B' group were complete by the end of [redacted] and the remaining two should now be complete.

Type III-D ICBM Deployment

A total of 34 confirmed, three probable, and four possible Type III-D sites were newly identified and one probable, four possible, and five suspect sites were confirmed. Included in these totals are elements of one new probable and three new confirmed Type III-D groups. Two probable Type III-D groups were confirmed and a complex command control center was identified. Current potential for the Type III-D sites is 439 (43 groups). Thirteen more Type III-D sites are now carried as complete.

Type III-D Complexes

Svobodnyy

The identification of a fourth group at Svobodnyy on [redacted] was the most significant discovery of these missions. In addition, four confirmed sites were added to the 'J' group, which still lacks two sites. One possible site was confirmed and two confirmed sites were added to fill out the 'K' group. No indication of an 'L' shaped interferometer was observed at any of the control sites, and it now seems probable that Svobodnyy will not have these associated facilities. This is based upon the identification some months ago of an interferometer at Yedrovo, where Type III-D deployment started about the same time. Continuing coverage is needed to identify nine more sites within the 'J' and 'L' groups and to observe, within a narrow time span for construction timing, the first completions in the 'I' group.

Kozelsk

This complex was almost completely obscured by heavy clouds on [redacted]. One probable site (TDI 30) was confirmed. Kozelsk is among those complexes where an additional group may well be under construction. Three probable and three possible sites remain unconfirmed, and one site has not been located in the 'G' group. Coverage has not been sufficient to make a reasonable assessment as to whether Kozelsk will have an 'L' shaped interferometer associated with the control sites.

TOP SECRET

25X1

Kostroma

Kostroma was not visible on any mission during this period. It has not been seen since [redacted] photography. Due to spacing of the presently identified sites, it is evident that at least 13 additional sites, some of which may have been started as early as [redacted] of this year, must be under construction. Unfavorable weather on the next few missions could result in some of these sites being completed without being seen under construction. The probabilities also favor at least a third group being deployed. The need for immediate photographic coverage over this complex is obvious.

25X

Yedrovo

Only two sites were visible [redacted] and the need for coverage here is nearly as critical as that at Kostroma. Yedrovo also is a prime suspect for an additional unidentified group.

25X1

Drovyanaya

[redacted] disclosed a fifth (K) group under construction in the center of the complex, although the coverage was of poor quality. The first starts in this group were probably in [redacted]. Part of the 'J' group was covered by [redacted] photography and appears to be preceeding at a slower than normal pace for groups started this year. The 'I' group was covered only [redacted] while the completed 'G' and 'H' groups were covered by excellent [redacted] photography [redacted]

25X

25X1

Olovyannaya

Portions of the complex were covered by good quality photography of [redacted] and by poor quality photography [redacted]. One new site was identified, filling out the 'K' group. Many of the newer sites have had excellent continuing coverage in the first few months of construction, which has proven valuable in understanding construction techniques associated with the silo headworks.

25X1

The first indication of inter-group connection among the Type III-D sites was observed between the 'E' and 'G' groups [redacted]. It is apparently the same system as that used to connect the Type III-C sites. Such a connection should also exist between the 'D' and 'E' groups, but cannot yet be identified.

25X1

25X1

TOP SECRET

CIA IMAGERY ANALYSIS DIVISION

CIA/PIR-71017

Four more sites were established as being complete. Six sites remain to be identified in the 'I' group, which had its initial deployment in [redacted]. It is also possible that a new group may be under construction in the area west or south of the 'I' group.

Gladkaya

The first clear search coverage since [redacted] confirmed the probable 'I' group east of the 'H' group and disclosed an additional fifth (J) group to the north. Five sites, all in stage 9, were observed in the latter group. The earliest site started a full year ago, and these-plus five others as yet unidentified due to poor quality coverage-may well be completed within the next 2-3 months. Continuing [redacted] coverage of the 'F' group disclosed that at least two of the sites which had been re-excavated now again appear complete.

A complex command control center was also identified at the transfer point, for a total of one possible, two probable, and twelve confirmed new sites. Seven sites to fill out groups have yet to be located and one possible and three probable sites remain to be confirmed. Although the quality of the photography over the 'G' and 'H' groups did not permit a definite judgment, the former should be complete, and as many as seven sites in the latter group may be complete.

Perm

Perm was either not covered or cloud covered on those missions included during this reporting period. If it has followed the pattern of Gladkaya and Drovyanaya, there should now be a fifth group under construction.

Tatishchevo

This complex received excellent coverage [redacted]. The probable tenth (J) group was confirmed, and a probable eleventh (K) group was identified south of the 'E' group. This is based on the construction stage and location of TDI site 121, which appears to have started [redacted]. Other sites in this group will probably appear south of the 'J' group, which is still missing four sites. It now appears that Tatishchevo alone, [redacted] will have started sites (45 [redacted] equaling 50-55 percent of all III-D starts [redacted].

TOP SECRET

TOP SECRET

25X1

CIA/PIR-71017

CIA IMAGERY ANALYSIS DIVISION

Seven sites are now complete in the 'C' group. Although the control bunker at launch site C-5 (TDI 26) appears complete, no L-shaped interferometer has yet appeared at this site.

Tyuratam Missile Test Center

Construction of an apparently new type of single silo at launch group 'I' began [redacted] It presently consists of three excavations, in line, with the southernmost having a coring. If the pattern established by the Type III-C, III-D, and 'M' group silos holds, one or more additional sites of this type can be expected shortly. Nearby, launch sites I-2, I-3, and I-6 remain in stage III. It now definitely appears that they have been abandoned. Significantly, there has also been no appreciable progress on the 'M' group silos which have remained in stage III since [redacted] Since construction of prototype silos has in most instances proceeded at an accelerated rate at the range, and deployment began nearly simultaneously, the possibilities now seem to favor either a long purposeful delay due to problems with a proposed vehicle, or abandonment of the site design concept.
