ABSTRACT

1. This report describes defensive strongpoints associated with the Significant Unidentified Installations (SUIs) near Shuangchengtzu, China. The report contains a table, a location map, three annotated photographs, and three sketches. The information is based upon available KEYHOLE photography and is current through April 1970.

INTRODUCTION

2. Twelve defensive strongpoints have been identified in the Shuangchengtzu area of China. Most of the strongpoints are near Significant Unidentified Installations (Figure 1). The number and types of structures at the defensive strongpoints vary (See Table 1).

BASIC DESCRIPTION

3. Defensive strongpoints were first observed under construction near Shuangchengtzu in late 1967. Most of the strongpoints, however, were first observed under construction in 1969. By late 1969, all but defensive strongpoints 1 and 12 (Table 1) had been completed.

4. The three types of structures found in association with the defensive strongpoints are weapons shelters, automatic weapons positions, and bunkers. Although eleven of these strongpoints are similar in content, all do not contain the same type or number of structures. The weapons shelters and automatic weapons positions are similar to those found at several of the SUIs.

5. The one defensive strongpoint not like the others is a ditched, triangular-shaped strongpoint currently under construction (Figures 2 and Table 1, item 1). No structures are observed.

6. Three variations of bunkers are observed at the defensive strongpoints. These have not been observed at any of the SUIs. The most common type is shown on Figure 4.

*Each letter represents a 1 nautical mile increment measured from the SUI; the number indicates the orientation of the strongpoint relative to the SUI measured to the nearest ten degrees. Example: D28 means 4 nm from the SUI at a bearing of 280 degrees.
