SOVIET LOGISTIC INSTALLATIONS ALONG THE CHINA BORDER

ABSTRACT

1. A preliminary survey from KEYHOLE photography has been made of 204 logistic installations in those Soviet military districts along the China border and in Mongolia. These installations support the buildup of ground and air forces which has been taking place since 1965. Brief descriptions of the principal storage facilities at each installation are listed in tables by military districts.

INTRODUCTION

2. Increasing levels of Soviet military activity in the areas of the USSR that border on China and inside Mongolia have been observed on KEYHOLE photography since 1965. The extent of this activity, as observed on photographic coverage of Soviet combat forces, has been summarized previously in NPIC reports.¹⁻³ Accumulating photographic coverage of logistic installations and corresponding mission exploitation by NPIC have now provided sufficient information to conduct a study of the Soviet logistic installations in the border area that support this buildup.

3. This report is a preliminary review from KEYHOLE photography of Soviet military logistic installations in the military districts (MD) along the China border and within Mongolia and will be followed by a separate report on each military district. When possible, the facilities described will be related to the Soviet depot classification system.

OBSERVATIONS FROM PHOTOGRAPHY

4. Selected Soviet logistic installations along the China border and in Mongolia were reviewed from the latest available KEYHOLE photography (December 1967 through April 1970, [redacted]). The photography shows that these installations are deployed in areas of troop concentration, at urban complexes, and along major routes of communication such as the Trans-Siberian and the Kazakhstan rail systems (Figures 1 and 2).

25X1

5. A total of 204 logistic installations were included in this review. A breakdown of this number by categories of storage includes 87 general depots, 63 POL depots, and 54 ammunition and explosives depots. Within the category of general depots are some specialized depots, [redacted] ten artillery depots, five vehicle-storage depots, three vehicle-repair installations, one engineering equipment depot, and five multipurpose storage depots. The numbers of depots by type in each district are as follows:

25X1
25X1

| Location | Kind of Depot | | | Total |
|-----------------------------------|---------------|-----------|-------------------------|------------|
| | General | POL | Ammunition & Explosives | |
| Turkestan and Central Asian MDs** | 11 | 6 | 7 | 24 |
| Siberian MD | 1 | 5 | 4 | 10 |
| Transbaikal MD | 13 | 8 | 5 | 26 |
| Mongolia | 1 | 4 | 1 | 6 |
| Far East MD | 61 | 40 | 37 | 138 |
| | <u>87</u> | <u>63</u> | <u>54</u> | <u>204</u> |

6. The storage facilities observed at each installation are summarized in a table for each district by category of storage (Tables 1-5). The installations within a category are listed in a sequence corresponding to their geographical locations as shown on Figure 1 or 2.

*The Soviet depot classification system involves a hierarchy wherein military equipment and supplies enter the Soviet supply system at central depots from which they are distributed to subordinate unit depots which supply the user. All depots are required to maintain a prescribed level of material sufficient for normal operational requirements of subordinate units and to stockpile material for contingency operations.⁴

**The installations in these two military districts are not separated because the exact boundary of the new Central Asian MD is undetermined at this time.
