MEMORANDUM FOR: Chief, Defensive Systems Division, OSI

ATTENTION: Mr. [REDACTED] 25X1A

THROUGH: Chief, Requirements Branch, Reconnaissance Group, CGS

FROM: Chief, CIA/PID (NPIC)

SUBJECT: Evaluation of Similarity Between the SA-3 Guidance Radar at Site A-16A on Nargin Island, Baku and the Radar at the Missile Site at Mys Set Navolok, USSR.

REFERENCES: (a) Requirement C-SI-3-80,599  
(b) CIA/PID Project C 1276-63

25X1D

1. This memorandum is in response to your requirement dated [REDACTED] and supplement to the above requesting a comparison of the SA-3 guidance radar at Site A-16A on Nargin Island, Baku and the radar at the missile site at Mys Set Navolok, USSR. Also requesting the best possible drawings of the radar, missiles and missile launchers at both facilities.

2. (a) The best possible sketch of the radar and launcher at Baku is shown in Figures 1 and 3 attached. The SA-3 launcher was barely discernible on the photography available and only a shadow drawing is submitted.

(b) The best possible sketch of the radar at the missile site at Mys Set Navolok is shown in Figure 2. A sketch of the missiles is shown in Figure 3.

(c) A graphic comparison was made of the radar guidance components at the Mys Set Navolok site and the Baku site and it is concluded that most of the radar components at the two locations are similar. However, though most of the components compare favorably, there are some differences which cannot be resolved at this time due to photographic limitations. Upon acquisition of better quality photography these minor differences may be resolved.

(d) A comparison of Mys Set Navolok photography with photography of the SA-3 site A-05A at Odessa revealed no confirmed similarities with the exception of gross form due to the poor quality and scale of the photography. The site configuration at Mys Set Navolok cannot be determined at this time. A comparison of Mys Set Navolok with Palanga and other SA-3 sites revealed the same results. It is felt at this time that the problem of a comparison with any other SA-3 sites, with the exception of Baku, cannot be resolved until better photography becomes available.

M/EB 461/63**

(e) No measurements are submitted with this report due to the poor quality of the long range ground photography and the lack of photo data that would enhance accurate mensuration.

3. All attachments are classified **SECRET/NOFORN**. The viewgraphs requested with this requirement have been submitted under separate cover.

4. The photo analysts on this project are [REDACTED] and they may be contacted on extension 2421 should you have further questions regarding this project. 25X1A

5. This project is considered to be complete.
