USSR RAIL LINE SEARCH FOR ICBM ACTIVITY

25X1D

25X1D

This report presents the results of a search for ICBM activity along rail lines in the USSR on KEYHOLE photography from

25X1D

Examination was made of all segments of rail line (broad-gauge main, branch, and spur lines connected to or a part of the main USSR rail network) which were at least 8 nautical miles (nm) long and were covered for a distance of 15 nm on both sides by photography of sufficient quality to determine with a confidence the existence of ICBM complexes with launch areas resembling the soft launch areas, hard launch areas, or single silo construction at Tyuratam Missile Test Center.

25X1B

25X1B

25X1B

This search has negated, in terms of ICBM activity, approximately 2,700 nm of Soviet rail line and has produced no evidence of ICBM activity that has not been previously reported.

Twelve overlays of World Aeronautical Charts have been prepared showing all rail lines searched with negative results. These overlays also show the location of all ICBM launch complexes identified to date and the KEYHOLE mission pass number on which the rail lines were covered. Copies of the 12 overlays, which constitute a graphic supplement to this report, have been forwarded to the CIA requester and to the TALENT Control Officers of the Army, Navy, Air Force, DIA, and NSA. Further reproduction and dissemination of these overlays to subordinate commands will be the responsibility of the above agencies.
