Office Memorandum • UNITED STATES GOVERNMENT

TO : DG/MS

DATE: 26 September 1952

FROM : AG/PCD

SUBJECT: Training in Care and Maintenance of Radiologic Equipment [redacted] 25X1A6b  
25X1A

25X1A6b 1. At the present time there is considerable electronic  
25X1A equipment [redacted] for use in the Emergency Plan. This equipment  
consists of Geiger counters and other devices used in radiologic  
screening. The Medical Office is lacking in a trained individual  
to properly standardize, calibrate and operate this equipment.  
The need for such an individual is immediate.

2. It is assumed that the Medical Office is responsible  
for this equipment. It is further assumed that some of this  
equipment will be transferred to [redacted] 25X1A

25X1A9a 3. Mr. [redacted] took care of the equipment until his  
resignation in late July of this year. Since that time this  
Office has had no one qualified to continue his work. Dr.  
25X1A9a [redacted] resignation in September left this Office bereft of tech-  
nical knowledge about this equipment. [redacted] presented 25X1A9a  
the problem to PCD and requested that action be taken to procure  
someone to handle the equipment as soon as possible.

4. There is a need for an individual in the Medical Office  
to be trained in the care and maintenance of the aforementioned equip-  
ment.

5. It is recommended that Mr. [redacted] after his assignment 25X1A9a  
to PCD, be sent to the AEC School at Oak Ridge for training in  
the care and maintenance of this equipment. This Division is  
informed that AEC offers a course of approximately three weeks  
duration and that it is free to members of Government agencies.  
The next course will be offered in December of this year. 25X1A9a
