SUPP. TO REPORT NO.

25X1

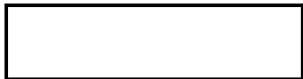

1. Under trade agreements the Zeiss-Ikon Works at Dresden produce chiefly movie projection equipment, motion picture camera equipment, and cameras for scientific purposes. The Soviet Union requires above all high-power cameras for airplane equipment, especially multiple telecameras with interchangeable tele object glasses and specially treated lenses. Specifications for the development, especially with infrared material, come from the Soviet Union.
2. The production of infra radar search apparatus, which was carried out in conjunction with Zeiss Jena, is finally ended. The production designs have had to be returned to the Soviet Union.
3. In Oct. 53, about 2,000 eccentric curve potentiometers were delivered to the Soviet Union. They are designed for 24 volts load. Mechanical parts for optical aiming devices are also manufactured. Production in October was 44 pieces.
