SURVEY OF AGRICULTURAL DATA FOR THE USSR, DECEMBER 1953

[The following report presents information, from December 1953 Soviet newspapers and a periodical, on agriculture in the USSR as a whole and in nine union republics. Progress and statistical data are given on the following: sown area, crops, mechanization, fertilization, agricultural specialists, and number of kolkhozes, MTS, and specialized stations. A list of the Ministers of Agriculture and State Farms is also given.]

Numbers in parentheses refer to appended sources.]

USSR

The area devoted to vegetables in kolkhozes of the USSR in 1954 is to total 1,003,400 hectares.(9)

On 21 December 1953, the first session of a meeting of the State Commission for Agricultural Plant Variety Testing took place in the Ministry of Agriculture in Moscow.

More than 1,600 variety-testing plots have been created in the USSR. About 3,500 varieties of agricultural plants are being tested on these plots. As a result of these tests, the highest yielding varieties are selected for introduction into production in conformity with the diverse climatic and soil conditions of the country.

The commission, composed of eminent scientists, selection workers, and agronomists, met for the purpose of discussing a program of introducing new varieties of grain, grain-legume, oleaginous, sugar-beet, tobacco, and other crops into production in 1954.(10)

In 1953, 70 billion rubles from budget funds, other state funds, and kolkhoz funds are being invested in the further development of agriculture in the USSR. In 1953, USSR agriculture is to receive a total of 150,000 tractors (in terms of 15-horsepower units), 42,000 combines, and more than 2 million units of other types of agricultural machines and equipment.(11)

Lithuanian SSR

As of 30 November, the Ministry of Agriculture Lithuanian SSR was completing the staffing of MTS with veterinarian workers. Specialists with higher or secondary educations had been confirmed for duty as senior veterinarians in 109 MTS; in the following days, senior veterinarians were to be sent to the remaining MTS of the republic.

As of 30 November, there were veterinarian points in the zone of each MTS and about 370 such points in the republic, or 100 more than in 1950.(12)

Ukrainian SSR

In 1953, kolkhozes of the republic expanded the area sown to sugar beets by 60,000 hectares.

Kolkhozes of Chernovitskaya Oblast, where 19 metric tons of local fertilizer had been applied to each hectare sown to sugar beets obtained an average yield of 247.5 metric quintals of beets per hectare. The plan for delivery of beets to the state was fulfilled 126 percent.

Kolkhozes of Volynskaya Oblast obtained an average yield of 252 metric quintals per hectare and fulfilled the plan for delivery of beets 136 percent.(13)

Republic as whole	87.8	99.8	99.9	100.6

In December 1953, there were 15,770 kolkhozes and 1,347 MTS in the republic. (17)

In December 1953, there were 1,347 MTS and specialized stations in the republic; they had 68 percent more tractors and 63 percent more combines than before the war. (18)

As of 30 November, capital construction in MTS of the republic was proceeding at an ever increasing tempo. By the end of 1953, 88 repair shops, 2 interrayon repair shops for capital repairs, 20 shops at repair plants, 113 sheds for machines, and 11,570 square meters of housing are to be ready for use. (19)

[The following table shows percentage fulfillment of 1953 plans for plowing of winter fallow and procurement of fodder in kolkhozes of the republic:]

<u>Operation</u>	<u>1 Dec (20)</u>	<u>5 Dec (21)</u>
Winter fallow plowed	68.6	69.4
Coarse fodder procured	70.2	75.2
Succulent fodder procured	69.7	70.7

RSFSR

The area sown to flax in Vologodskaya Oblast was only one half as large in 1953 as in 1950. (22)

Kazakh SSR

In 1953 as compared with 1950, the area sown to all grain crops in Severo-Kazakhstanskaya Oblast increased 28.5 percent and that sown to spring wheat by 128,000 hectares.

In 1950, the yield of all grain crops in the oblast was 13.2 metric quintals per hectare and that of spring wheat 13.9 metric quintals per hectare. (23)

[The following information was contained in the decree of the Seventh Plenum of the Central Committee of the Communist Party Kazakh SSR "On Progress Made in Fulfilling the Decree of the September Plenum of the Central Committee of the CPSU With Regard to Strengthening MTS and Kolkhozes With Agricultural-Specialist Cadres":]

Due to the solicitude of party and government, a large body of agricultural-specialist cadres has been created. More than 10,000 specialists with higher or secondary educations are working in the agricultural-organ system of the republic. However, this great army of agricultural specialists has thus far been utilized in an improper manner. Most of them are still located in the various links of the administrative apparatus. Only 1,611 specialists are working in kolkhozes and only 3,109 in MTS and MZHS (mechanized animal husbandry stations), or only 44.6 percent of the total number. More than 38 percent of the total number of MTS and MZHS directors and 73 percent of the MTS and MZHS chief engineers do not have specialized educations.

The Ministry of Agriculture Kazakh SSR and its local organs, the oblast and rayon party committees, and the oblast and rayon executive committees are unsatisfactorily carrying out the work of selecting and directing specialists to MTS, MZHS and kolkhozes. To execute the decree of the September Plenum of the Central Committee of the CPSU, 3,500 agronomists and zootechnicians should have been sent to MTS and MZHS for the purpose of serving the kolkhozes of the republic. However, as of 15 November 1953, only 3,083 persons had been selected and even fewer actually sent to work in kolkhozes. The appointment of better qualified people as kolkhoz chairmen, MTS and MZHS directors and chief engineers, and repair-shop chiefs is also progressing unsatisfactorily; as yet, only 19 percent of the kolkhoz chairmen are specialists. Only 18 percent of the engineers and mechanics who were to have been sent to MTS and MZHS from industrial enterprises have been sent. Only 2,500 out of more than 7,000 former tractor drivers, combine operators, and other agricultural-machine operators have been returned to MTS and MZHS. All these shortcomings have occurred although 3 months have passed since the September Plenum of the Central Committee of the CPSU.

CONFIDENTIAL

The plenum of the Central Committee of the Communist Party Kazakh SSR decrees and instructs the appropriate party, state, and agricultural organs of the republic, its oblasts, and its rayons:

1. By 1 January 1954, to complete staffing of MTS and MZhS with specialists, concentrating particularly on sending highly qualified specialists to remote, lagging MTS and MZhS;
2. To fix personal responsibility for selecting and directing specialists to MTS, MZhS, and kolkhozes as follows:
 - a. In oblasts, on the first secretary of the oblast party committee and the chairman of the oblast executive committee,
 - b. In cities, on the first secretary of the city party committee and the chairman of the city executive committee, and
 - c. In rayons, on the first secretary of the rayon party committee and the chairman of the rayon executive committee.(24)

In early December 1953, there were 459 MTS and MZhS in the republic; they were serving more than 95 percent of all kolkhozes; in these kolkhozes were concentrated 99.6 percent of the total sown area and more than 90 percent of all collectivized livestock.(25)
