4. To sir activity was observed on 6 Tovember when the possibilities of observation were limited. The former Lufthanss administrative building was located in the southeastern corner of the lending field. A radio installation was on the highest of the 3 towers. The antennas were definitely observed. An An gun presumably 37-mm was on top of the middle tower. Aircraft of an unidentified type were parked in the northern section of the field. 5. The barr acks area of the former Luftkriegsschule could scarcely be observed because the terrain was entirely surrounded by walls and board fences. Furthermore, sentries and patrols guarded the area and the barking of doys indicated that a dog kennel was also available. 6. Comment. The To-2s which are rememently stationed at Drescen-Motzsche airfield are believed to be courier aircraft of the headquarters of the First Gds Mech Arry. The presence of about 10 11-2s between 9 September and 31 October 1954 cannot be explained from information swailable. No air activity was conducted with the Li-2s. 2. Comment. The moor vehicle driving school in the area of the
observation were limited. The former Lufthanss administrative building was located in the southeastern corner of the lending field. A radio installation was on the bighest of the 3 towers. The antennas were definitely observed. An AA gun presumably 37-mm was on top of the widdle tower. Aircraft of an unidentified type were parked in the northern section of the field. 5. The barricks area of the former Luftkriegsschule could scarcely be observed because the terrain was entirely surrounded by walls and board fences. Furthermore, sentries and patrols guarded the area and the barking of dogs indicated that a dog kennel was also available. 6. Comment. The 3 Fo-2s which are permanently stationed at Dresden-Klotzsche airfield are believed to be courier aircraft of the headquarters of the First Gds Mech Army. The presence of about 10 Li-2s between 9 September and 31 October 1954 cannot be explained from information available. No air activity was conducted with the Li-2s.
