Command bunker No 7

The bunker was separated from the other barracks area by a high board fence. The course of the fence could not be observed because the terrain was partially hilly and partially covered with woods. In January, a German electrician received permission from Lieutenant Colonel Zevatkin (fmu) to enter the bunker to determine if the transformer had been switched off by the Soviet electricians. This was done because the German electricians presumed that other barracks buildings were supplied with electric power from this transformer. Somewhat later, however, the permission was withdrawn. Since that time, the German electricians have refused to do repair work in some of the barracks buildings. They asked that the transformer in the bunker be switched off during their work. But no German was allowed to enter the bunker and the Soviets refused to give any information concerning the installation. Therefore, it has not been determined whether the bunker has a heating installation of its own or whether it is heated from building No 2. The occupation of the bunker was also unknown.

Buildings No C

The buildings housed families and individual dependents.

Building No 9

The installation housed classrooms.

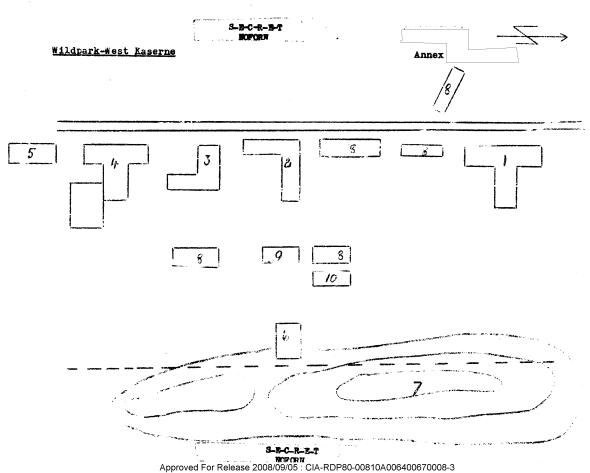

Building No 10

The installation was unoccupied . 1

25X1 2. The following rail shipments were observed at Wildgark railroad station: 24 January. At about 2345, a shipment of 3 caterpillar tractors, 1 tank truck, 2 truck trailers, 2 snow plows, 1 concrete temping machine, 1 boxcar with about 25 air force soldiers and truck errived 25X1 at Wildperk railroad station, coming from Rothenburg/Lausitz. The shipment was unloaded between 0130 and 0330 on the following merning. 2 29 January. During the morning, the following railroad care from Tutow were being unloaded: 3 flatears with sideracks loaded with building equipment and machines. 1 boxcar with billeting equipment and 12 air force soldiers. Also during the morning, the following railroad cars from Vogelsong mere unloaded: 5 flatears with sideracks loaded with building equipment and machines. 2 boxcars with billeting equipment and about 20 air force sold ars. The two shipments observed on 29 January arrived with the regular freight 1. Comment. For layout sketch of barracks area, see Amex. The numbers contioned 25X1 in the report are keyed to this sketch. 25X1 3. Corment. These shipments carried rear details of the air force 25X1 construction units that were transferred to Wildpark-West. 25X1
